An end line interview with a panchayat member associated with GC over the years revealed that panchayats in the GC project areas do have an overall idea of its activities, though they might not be actively working with it at present.

Score: 0

2.2 Level of Organisation

2.2.1 Relations with other organisation

What has been the most intensive interaction Gene Campaign had with another civil society organisation working on the same issue/topic?

In general, GC has strong interactions with national and international social movements and close linkages with farmers' organisations across the country. But, the Jharkhand branch interacts mostly with local organisations—among which are Sahiya, Chetna, Sidha and Krishi Gram Vikas Kendra (KGVK).

The executive leadership and field coordinators, based in Jharkhand, said that these interactions—as also those with CBOs such as FCs, SMCs and SHGs associated with GC Jharkhand—have improved over the past two years.

Unlike earlier, for instance, GC now shares not just SHG formation information, but also provides livelihood guidance to the SHGs associated with it.

With other local NGOs, GC continues to seek informal support towards gathering and disseminating information. Such as asking farmers to register their seed varieties under the Plant Protection Variety and Farmers' Rights Act (PPVFRA) 2001, so that they are paid royalty if seed companies use their seeds. Or, requesting these NGOs to relay to GC the demands of farmers for seeds. The two local NGOs that GC has collaborated intensely with over the past two years were named, Sidha and KGVK. Given that the objectives of both are aligned with those of GC's, and both have their own FCs, resource sharing is natural.

It was made clear, however, that such interactions with other NGOs happen only at the level of the leadership. Expectedly therefore, the field staff regretted that GC Jharkhand's relationships with other organisations have deteriorated. They, in fact, said that not only have no new working alliances been formed, GC, at least at their level, has even stopped working with the NGOs that were its partners at the time of the baseline evaluations.

Functionaries from local NGOs corroborated this, stating that, unlike earlier, they are now not in the know on much of GC's current activities because the interactions between GC and their organisations have declined in the last about one and a half years. They attributed GC's shifting its office out of Ranchi city to the Ormanjhi block as a probable reason for the organisation's isolation. But the primary reason for GC's neglecting smaller local NGOs like theirs, they reasoned, was typical of big NGOs that

host posh workshops with lavish lunches for local NGOs when they begin work in a new area. This is done to fulfil funder demand that they 'Network'. Funds are also allocated to smaller local NGOs initially, only to be withdrawn later, and the local NGOs are abandoned.

A Ranchi-based subject expert observed that some of the local NGOs GC Jharkhand works with are very weak, lacking capacity and understanding of farming practices; and that the past two years have seen a downslide in GC's already weak networks. It is regrettable, he added, that problematic personal equations between GC's founder chairperson Sahai and renowned environmentalist Vandana Shiva have prevented them from joining causes despite the fact that Shiva's is the only other prominent organisation working in Jharkhand on similar issues.

Score: -1

2.2.2 Frequency of dialogue with closest civil society organisation

How many meetings did Gene Campaign have with the civil society organisation that Gene Campaign has most intensive interaction with? What is the name of this organisation?

The baseline evaluations had found the field staff out of the loop when it came to interactions with other CSOs. GC had conducted 30 to 40 meetings with other CSOs in the year 2012, according to the leadership; a minimum of two to three in a month, according to the coordinators. While the field staff had been unaware of how many meetings GC had had with other CSOs.

Keeping to this pattern, the end line evaluations had the executive leadership and the field coordinators reporting an improvement in the frequency of their interactions with the local NGOs over the past two years, while the field staff felt that the situation had deteriorated considerably.

The leadership noted GC now tries to organise at least one combined meeting with all the partner organisations on quarterly basis. The coordinators stated that the meetings with partner organisations are held as and when the need arises. The field staff stated that there was no interaction with other NGOs at their level.

Functionaries from some of the local NGOs that GC claims are its partners said that they had barely been in contact with the organisation over the past one and a half years.

Score: -1

2.2.3 Defending the interests of marginalised groups

Which civil society organisations are most effective in defending the interests of Gene Campaign's target groups? Why?

During the end line evaluations, the executive leadership said that earlier GC Jharkhand staffers would spend a bulk of their time training communities to manage seed banks. This has now resulted in the community-managed FCs and SMCs—two each in Angara and Ormanjhi blocks—effectively managing, and taking ownership, of the seed banks. The SMCs were a consequence of the maturing of the seed banks and were formed in February 2013. This has meant that some villagers now earn through the seed bank activities.

Compared to earlier, the SHGs too are now much more self-reliant, and some like the Saraiphool Mahila Samiti in Mailghongsa village of Angara block, Ranchi district, have graduated beyond mere thrift activities to embark upon profitable livelihood activities like raising nurseries, selling plants and vermin-compost.

The field coordinators and field staff, meanwhile, named KGVK that is working in Angara and Ormanjhi blocks, doing significant work with farmers on sustainable agriculture.

A Ranchi-based subject expert, however, estimated a less than five per cent adoption rate of SRI agriculture by farmers despite the efforts of organisations, including GC and the CBOs associated with it. Even in 2014, he said, the rare FCs that practice SRI, use hybrid and not organic or desi (indigenous) seeds, thus defeating the larger cause that GC is trying to promote. As the campaigns and marketing strategies of hybrid seed companies grow increasingly powerful, GC and its IOs are barely able to match up to be able to defend the best interests of their target groups.

Score: +1

2.2.4 Composition financial resource base

How does Gene Campaign finance institutional costs such as workshops of the General Assembly, if applicable; attendance to workshops with other civil society actors; costs for organisational growth and/or networking?

The GC Jharkhand staff, both at the time of the baseline and the end line evaluations, was uninformed about the organisation's larger funding situation, and whether it had been able to diversify its funding sources beyond that of MFS II. Fund raising and allocation were, and continue to be, seen as matters in the purview of the GC's Delhi headquarters.

At state level, however, the GC Jharkhand staff knew that workshops and trainings are funded project-wise, because the headquarters have asked them to maintain records accordingly.

The Jharkhand executive leadership shared its impressions of the regional office's situation vis a vis projects/funds: a) NABARD's orchard-related WADI²⁵ programme with a grant of Rs 17,5 million and a Rs 1 million component towards loans to be given to the SHGs involved b) NABARD's seed production programme with a Rs 956,000 lakhs funding; to end in 2016 c) NABARD's zero-energy seed banks programme with Rs 2,139 million funding, to end in September 2014.

Having said which, the executive leadership and coordinators described the current situation as a funding crisis. They shared that the organisation had seen a disturbingly huge turnover because it could not meet the demands for increase in salaries. The staff strength had reduced from 14 in 2012 to 8 currently; the vacancies created over time had not been filled up.

Independent interviews with local partner NGOs had them opining that GC Jharkhand did not seem in good financial health. GC would earlier involve them in its activities, and pay for their services, not any more.

Score: 0

²⁵ As an integral component of NABARD's Natural Resource Management policy of providing sustainable livelihoods, NABARD laid special emphasis on providing support for holistic development of tribal communities with orchard cultivation as the core element. The implementation of comprehensive Adivasi Development Programmes (ADP) in Gujarat since 1995 and in Maharashtra since 2000 had provided several insights for NABARD in framing strategies for holistic development of tribal regions. The central focus of ADPs is "wadi" (small orchard) together with suitable soil conservation, water resource development measures and other measures for improving the quality of tribal life such as community health & sanitation, women development, institutional development, etc. The wadi model of tribal development has been acclaimed worldwide as a sustainable and replicable model for poverty alleviation. Based on the successful experience of Adivasi Development Programmes, NABARD embarked upon an ambitious program of replicating the wadi model across the country. In this direction, NABARD created a Tribal Development Fund (TDF) with a corpus of Rs. 50 crore, out of its profits for 2003-04. The corpus was augmented from time to time. All projects under TDF are implemented by partnering with State Governments, Government of India, NGOs and Corporates. See https://www.nabard.org/english/livelihood_Support.aspx

2.3 Practice of Values

2.3.1 Downward accountability

To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask Gene Campaign's executive leaders to be accountable to them?

In 2014, as at the time of the baseline evaluations, the organisation's headquarters in Delhi continues to be the repository of GC's larger vision, mission and funding.

A GC 2011-2012 Narrative Report does document outreach activities towards implementation and generation of awareness about GC's programmes, referring to meetings organised in 25 villages of Ormanjhi, 32 village of Angara and 17 villages of Karra block where a total of 958 community members were contacted.

However, the target groups interviewed for the end line evaluations—even at the FC, SMC and SHG levels—are mostly uninformed about project progress and funding situation.

The GC Jharkhand staff, also, does not seem to have a bigger picture awareness regarding the organisation's research and dissemination ambitions, or funding; limited as they are by their roles as field-level implementers and facilitators.

The field staff saw the situation as having remained unchanged since 2012. The coordinators complained that approvals need to be taken for small things. If for instance, workshops and trainings costs exceed the allocated amount, they have to be stopped because approvals for these cannot be sought or received on an urgent basis. GC Jharkhand's executive leadership, however, reported some improvement vis-à-vis downward accountability, observing that the organisation's decision making process has been decentralised over the past two years. Important decisions related to drafting project proposals and implementations are now taken after consulting staff at every level. The field coordinators and staff were unaware of such consultations.

A Ranchi-based resource person for GC observed that the organisation's centralised structure and decision making was causing huge staff turnover. The few who remain are under tremendous pressure and demotivated because "the vision from the top is hardly ever transmitted to the ground levels".

Score: -1

2.3.2 Composition of social organs

What percentage of members of Gene Campaign's mandatory social organs belongs to the marginalised target groups?

The People Unlimited Hivos Alliance Strengthening Civil Society baseline says: 93 per cent of (their) partners involve their target groups in analysis and programming, of which 59 per cent in a decision making position (in the board or other governing body) and 41 per cent have their target groups involved in an advisory role.

During the baseline as well as the end line evaluations, however, none of the GC staffers in the Jharkhand branch knew about the composition of their organisation's social organs. They observed that their Delhi headquarters had such information. They offered that the local staff comprises farmers, locals and people from the tribal communities.

Score: 0

2.3.3 External financial auditing

How regularly is Gene Campaign audited externally?

Both in the baseline and end line evaluations, GC's Jharkhand-based staff, including its executive leadership, said this question was irrelevant to them because audits happened in their head office in Delhi, and they had no information of these.

Score: Not Applicable

2.4 Perception of Impact

2.4.1 Client satisfaction

What are the most important concerns of Gene Campaign's target groups? How do Gene Campaign's services take into account those important concerns?

The most important concerns of GC's target groups continue to be food security, lack of income, lack of irrigation and seed purchase issues. GC Jharkhand's services have sought to address these concerns by assisting the formation of FCs and SHGs so that, organised as such, communities can benefit themselves through the adoption of sustainable farming practices, in turn generating income and food security in the long run.

The last two years have added not only to the numbers of FCs and SHGs formed by GC, but also seen the formation of four village-level SMCs mandated to manage the seed banks they are each associated with. Three new community-built seed banks, have also, been built with GC's support between 2012 and 2014.

GC continues to propagate the value of conserving and sowing indigenous seeds among these—as indeed through these—FCs, SHGs, and now also SMCs. Members of these bodies are also trained in the SRI techniques, and livelihood activities such as poultry, nursery raising and vermi-compost manufacturing. Exposure visits are organised for them on the issues of integrated farming model, horticulture, drip irrigation, modern agricultural techniques and equipment, poultry, duckery, and other livelihood activities. Over and above which, such bodies are taught the value of collecting and conserving indigenous seeds, and propagating them. GC has also guided the building of jal kunds (ponds) in the Ormanjhi block over the past two years, towards catering to the local demands for irrigation.

These above-mentioned activities, said the GC staffers, have lessened the target group's worries about income, seed purchase issues and lack of irrigation over the past two years. Some among the SMCs, for instance, are on the path to taking ownership of the seed banks, and have even started making and selling vermi-compost, and are profitable. At least one SHG has started commercial activities in the nursery it has raised.

These FCs, SHGs and SMCs, now, more than earlier, have the confidence that that GC is always available as a resource, and can be approached for information, and seeds. Pointing out a qualitative difference in GC's services, the field staff observed that the seed banks were distributing desi dhan (indigenous paddy seeds) earlier too, but now they are distributing more unnat beej (developed seeds) through the FCs.

GC's 2012-2013 Work Plan showcases how gaps are being identified and addressed to better the organisation's services. It notes that capacity building of small and marginal farmers in seed production techniques takes time, and that some farmers do not entirely follow all the guidelines as per seed crop cultivation calendar. More monitoring and onsite seed production supervision is therefore prescribed—this instead of increasing the area and number of participating farmers.

Members of the FCs interviewed during the end line evaluations corroborate GC's claims to having honed its services. They said that GC informs them about new issues and schemes, trains them and also provides them with resources to facilitate earning. Members from an SHG said that the GC's staffers pay them weekly visits and are always available on phone and that their nursery would not have started without GC's support and guidance.

The GC's Jharkhand staff, including the regional executive leadership, was unanimous that their performance pertaining to client satisfaction had somewhat improved over the past two years.

But the peer perception in Jharkhand's development sector is contrary. One of GC's local NGO partners was categorical that despite having dedicated grassroots workers GC's work has seen a downslide in the past two years. He complained that GC had aborted its past relationships with most local NGOs. A Ranchi-based development academic regretted that GC has not been able to achieve more than five per cent adoption of SRI among the state's farmers. Some FCs might have adapted the SRI technique of farming but they use hybrid seeds which require less labour inputs and have higher yields, he pointed out.

Score: +1

2.4.2 Civil society impact

What impact did Gene Campaign have on building a strong civil society?

GC Jharkhand promotes sustainable farming by organising farmers such that the community itself begins practicing, and eventually propagating, organic farming using indigenous seeds.

Towards this, the past two years have seen GC expanding the numbers of the CBOs it supports and guides by establishing 16 new FCs, 16 new SHGs, four new SMCs, three new seed banks and adding 78 new varieties to the 972 varieties of indigenous seeds they have collected and conserved over the years. It is to be noted that these increases in the number of CBOs that are GC's intermediate organisations (IOs), in turn, means enhancement in the target group population that is now availing of GC's services through the new FCs, SMCs and SHGs.

GC's efforts at promoting SRI have also seen success over the last two years. In 2012 only 44 farmers in the Angara block were using the SRI technique in 2012, now 210 are. Only three to four farmers had adopted SRI in Ormanjhi 2012, now 117 have.

The GC Jharkhand staff, including the executive leadership, was unanimous that their impact over civil society had improved over the past two years.

They pointed out that some of the GC-supported CBOs stand significantly more strengthened compared to two years ago. A member the Saraiphool SHG in the Mailghongsa village of Angara block confirmed this. Having graduated beyond mere thrift activities her SHG, she said, is now turning a profit by running a commercial nursery selling plants and vermi-compost. An FC member from Id village in Angara block of Ranchi district said they have also started earning by selling seeds and vermi-compost.

The field staff said they constantly engage with the FCs and SHGs to train them in income generating activities like poultry, orchards, kitchen gardens, vermi-compost making etc. GC also continues to involve these CBOs in the Wadi programme financed by NABARD, under which these bodies are given saplings, training and resources to raise guava, litchi and mango orchards.

The field coordinators, meanwhile, spoke of GC's continuing networking efforts with local NGOs on issues of SRI and preservation of indigenous varieties. Over the past two years, GC has been using this network to disseminate information among farmers on the need to register their seed varieties under the Plant Protection Variety and Farmers' Rights Act (PPVFRA) 2001, so that companies using their seeds are legally bound to pay them a royalty. Many local NGOs have also begun approaching GC with the demands of farmers in their areas of work for seeds. NGOs Chetna, Sahiya and Vikas Samiti were specifically named in this regard.

The field staff, however, qualified that their own contact with other NGOs is almost absent presently. The local NGOs interviewed for the end line evaluations agreed. They said that they had barely had any formal contact with GC since 2012.

Score: +1

2.4.3 Relation with public sector organisations

What interaction did Gene Campaign have with public sector organisations to realise its programme and organisations' objectives?

During the baseline, GC's Jharkhand staffers said that they work with the state agriculture department, ICAR (Indian Council of Agricultural Research), state universities such as the Birsa Agriculture University (BAU) and also NABARD (National Bank for Agriculture and Rural Development).

Two years later, the staff said that the situation had remained unchanged.

Generally, because of the nature of its work GC continues to engage with various departments in the agriculture ministry. Specifically, GC Jharkhand's project with the Government of India's Department of Science and Technology (DST) ended in March 2014, this was for trials of drought-free seed varieties, nursery raising, seed banks, registration of varieties etc. It still has three ongoing projects with NABARD, the last of which will end in 2016. GC's relations with BAU, however, seemed to have embittered; unlike at the time of the baseline, BAU academics were not forthcoming to be interviewed for the end line evaluations.

Score: 0

2.4.4 Relation with private sector agencies

What interaction did Gene Campaign have with private sector organisations to realise its programme and organisations' objectives?

As in 2012 so in 2014, all levels of staff at GC Jharkhand said the organisation does not work with the private sector. They elaborated that since GC's objectives do not match with those of private sector organisations there is no point coordinating or collaborating with them.

Score: Not applicable

2.4.5 Influence upon public policies, rules, regulations

How successful has Gene Campaign been in influencing public policies and practices in the past 2 years?

GC enjoys an eminent track record with regard to influencing public policies at the national, and even the international levels, especially so in the first decade of the millennium²⁶. Over the years, it established credibility as a research organisation in agriculture and brought out numerous case studies and publications. GC members have in the past served on various expert committees of the central government and legislative bodies. In Jharkhand, however, which is the evaluation's focus area, GC's influence in the sphere of public policies has been extremely limited.

The Jharkhand staff, in fact, remained as unaware in 2014 as it was in 2012, of the organisation's work in research and lobbying at the national and international levels.

A Ranchi-based development academic commented that GC's Jharkhand personnel don't write papers, "they only prepare data which is used by others in Delhi to write papers". Most of them, including the leadership, however, were ignorant even of the papers being authored and published, if at all, by GC vis a vis the data that they had been generating from the field. This disconnect was summed when the field staff said, "We do not know about things like policies and policy changes etc. as these are high level things".

²⁶ Gene Campaign has a track record with regard to preserving and strengthening the biodiverse resource base and has given shape to national policies and legislations on agriculture, food and livelihood issues. It began its work by conducting awareness and education programmes on Intellectual Property Rights issues raised in GATT/WTO, especially with regard to seeds and agriculture. GC subsequently led a coalition of civil society organisations and farmer's organisations that succeeded in bringing on to the national radar the dangers of seed patents and its effects on seed sovereignty. GC rallied for a national legislation that recognised the rights of farmers and breeders. Its efforts bore fruit when the Biological Diversity Act was passed by the Indian government in 2002. It succeeded in having a Biotechnology Policy framed for the country on a basis of a Supreme Court directive after its writ petition on the issue. It has also provided inputs on the Patent Amendment Act, especially on the protection of products developed from indigenous knowledge.

GC has not organised any seminar or conference in Jharkhand on the issues that they work on in the last two years.

All levels of GC staffers, however, pointed out that they had encouraged and facilitated the registration of many a farmer's ownership over indigenous seeds under the PPVFRA (Protection of Plant Varieties and Farmers' Rights Act, 2001). The number of such registrations had increased from 18 to 144 in the past two years. This rise, the executive leadership and the field coordinator's felt, implied that the organisation's capacities to influence public practices had improved.

Contrarily, a subject expert who had also been interviewed for the baseline assessment, maintained that the complexity of the issues involved in GC's work had far from been inculcated in, or imbibed by, the regional staff. None among them currently possess either the language or the larger vision to lobby with the highest levels of government. Only Gene's founder has this capacity to engage with high level officials in Jharkhand state but has omitted to do so during the period under evaluation. This is very unfortunate since lobbying is the need of the hour in Jharkhand given that the government is looking to raise the state's low agricultural productivity, this through pushing hybrid seeds. That increase in productivity is possible through indigenous seeds and farming practices, needs influencing, documentation and dissemination of such documented information by an organisation like GC. This is sorely missing, the academic regretted.

Score: 0

2.4.6 Influence upon private sector agencies' policies, rules, regulations

How successful has Gene Campaign been in influencing private policies and practices in the past 2 years?

Both during the baseline and the end line evaluations, all levels of staff at GC Jharkhand said the organisation does not work with the private sector.

Score: Not applicable

2.5 Environment

In the past 2 years, what were important factors/actors/trends (socio-economic, socio-political and socio-cultural factors) that have driven or hampered the achievement of Gene Campaign's organisational objectives? Are these positive or negative?

It is to be noted that only the staff of GC's Jharkhand branch participated in the baseline and the end line evaluation processes. Their perception of the evolving challenges in GC's external environment between 2012 and 2014 continued to be restricted to the geographical region of their work. They were largely unaware of changes in the national and international contexts with regard to the overarching issues—such as seed patenting, biodiversity, climate change etc.— that are involved in their work.

GC Jharkhand' executive leadership and field coordinators reported slight and considerable deterioration respectively with regards to their external environment over the past two years. They said that unpredictable weather and pressure by mining brokers on farmers to quit farming has negatively impacted GC's work; and added inappropriate marketing channels and improper implementation of policies for farmers to this list. The field staff, on the other hand, spoke of some improvement in the situation compared to the baseline since more farmers are now adopting the SRI technique because its success is becoming evident over the past years.

The disadvantages that GC's Jharkhand staffers have faced in the field over the past years, including the last two, are better understood keeping the states peculiar shortcomings in mind.

Carved out of Bihar just 14 years ago, the new state of Jharkhand has the second highest poverty headcount ratio in India at 36.96 per cent²⁷. Education is low at 66.4 per cent, with female literacy at

²⁷ http://mospi.nic.in/Mospi_New/upload/mdg_2014_28jan14.pdf

56 per cent²⁸. This extreme poverty and illiteracy has been increasingly exploited by vested interests looking for quick, often illegal, profits in this state that is rich in coal, iron, copper and bauxite—32 per cent of India's coal is mined in Jharkhand²⁹. Corporates and brokers are increasingly eyeing tribal communities for their mineral-rich land and cheap labour. Jharkhand has also become a fertile ground for human trafficking, and women and children are being trafficked into the various cities to be used as domestic help, and labour. In 2013, Jharkhand was the worst hit state by Naxal violence with 383 incidences of Left wing violence and 150 related deaths³⁰.

A 2011-12 Narrative Report authored by GC for Hivos lists some of the specific challenges faced by its Jharkhand unit vis a vis the environment they function in. These remain the same in 2014: a) farmers are not able to hold on to their harvest till the end of seed processing and certification period because of immediate financial need, a revolving "Buy Back Fund" is required to buy up the seed from farmers and settle accounts with them after seed sale; there are currently no funds for this b) because of the poor market infrastructure and connectivity, majority of the farming communities prefer to restrict production for family use c) non availability of agromet services makes farmers more prone to the vagaries of climate change d) small land holdings of majority of farmers makes it difficult to organise farmers for seed production e) drought, erratic rainfall and lack of support from government is leading to increased rice fallows every year f) in the changing climatic conditions farmers are keen to cultivate and produce seeds of high yielding varieties (read GM and hybrid seeds).

Also, out of the two districts and three blocks that GC Jharkhand works in, two blocks continue to be affected by the Naxalism. Farmers have been known to be affected adversely by this in the past; Naxals have reportedly even set fire to the fields of farmers who they don't get along with. But, the GC staffers, during the baseline and the end line, maintained that the Naxals have never questioned their work because they see it as beneficial to the community.

Quoting a positive development, the executive leadership said since 2011-2012 the Jharkhand government has started running a programme of financial incentives for promoting SRI, through NGOs as implementing agencies. The government pays Rs. 1250 per hectare (2.5 acres) for SRI implementation, Rs. 1000 for the farmer who adopts this farming technique, Rs. 200 for facilitating NGO and Rs. 50 for the resource scientist. The leadership qualified that the actual implementation of this whole programme is very poor.

Report CDI-15-023

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Report CDI-15-025

Klaver, D.C., Hofstede, M., Wadhwa S., Madaan A., Pandey R., Mohapatra B.P., Kalra A., February 2015, *Gram Vikas end line report: MFS II country evaluations, Civil Society component*, Centre for Development Innovation, Wageningen UR (University & Research centre) and International Development Foundation (IDF). Report CDI-xx-xxx. Wageningen.

This report describes the findings of the end line assessment of Gram Vikas (GV) in India that is a partner of ICCO.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses Gram Vikas' efforts to strengthen Civil Society in India based upon the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2012. Key questions that are being answered comprise changes in the five CIVICUS dimensions to which Gram Vikas contributed; the nature of its contribution; the relevance of the contribution made and an identification of factors that explain Gram Vikas's role in civil society strengthening.

Keywords: Civil Society, CIVICUS, theory based evaluation, process-tracing

Acknowledgements

IDF and CDI are thanking the staff and the leaders of all Southern Partner Organisations that participated in collecting information for the evaluation of the contribution of these partner organisations to creating a vibrant civil society in India. They also thank the Co-Funding Agencies and the Dutch Consortia they are a member of for making background documents available. We hope that this evaluation can support you in better positioning yourself in the Civil Society Arena of India.

1 Introduction

This report presents the civil society end line findings of Gram Vikas in India which is a partner of ICCO under the ICCO Alliance. It is a follow-up to the baseline assessment that was carried out in 2012. According to the information provided during the baseline study, Gram Vikas is working on the MDG 1, governance.

These findings are part of the overall evaluation of the joint MFS II evaluations to account for results of MFS II-funded or co-funded development interventions implemented by Dutch Co-Funding Agencies (CFA) and/or their Southern Partner Organisations (SPO) and to contribute to the improvement of future development interventions. The civil society evaluation uses the CIVICUS framework (see appendix 1) and seeks to answer the following questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- What factors explain the findings drawn from the questions above?

The CIVICUS framework that comprises five dimensions (civic engagement, level of organization, practice of values, perception of impact and contexts influencing agency by civil society in general) has been used to orient the evaluation methodology.

Changes in the civil society arena of the SPO

In the 2012 – 2014 period the two most important changes that took place in the civil society arena of Gram Vikas are related to the Civicus dimensions 'level of organisation' and 'perception of impact'.

With regards to 'level of organisation' the evaluators observe that Gram Vikas considerably improved its networking capacity within the Odisha state, in other states of India and in two African countries. The SPO engaged with NGOs working in Jharkhand, West Bengal, Nagaland and Madhya Pradesh on a wide range of issues. In Odisha state it signed a partnership agreement with another NGO, addressing the water and sanitation sector and it received assistance to train SHGs from members of the Orissa Development Action Forum of which it is still a member. In the same period the organisation expanded its financial resource base, by means of supporting the government with the implementation of government schemes and programmes, as well as by means of receiving funding from public and private companies to expand its water and sanitation programme MANTRA. The main reasons that explain its increased engagement with other actors is the office move from a remote village to the capital of Odisha.

With regards to 'perception of impact', Gram Vikas has been able to connect 4003 new households to water and sanitation systems, achieving a total of 62,900 households in 1,095 villages since the beginning of the programme. About 48 per cent of its target groups belong to tribal communities. Due to the October 2013 Cyclone Phailin, Gram Vikas will not be able to reach its 100,000 households target by 2015, starting in 2000. In the past two years, communities' demand for water and sanitation systems covering the entire village at once (100 percent coverage) has increased, because they experience the impact upon people's health, nutritional intake and time employment, because water is easily accessible for both consumption and production activities. Apart from the water and sanitation programme, Gram Vikas continued to increase people's access to government schemes and services. The Village Executive Committees increasingly help families to obtain access to these schemes and address corrupt practices of government officials that prevent their villages of accessing these schemes.

Gram Vikas expanded its collaboration with the public sector by supporting the implementation of a wide range of government schemes and programmes and by receiving grants for the implementation of their MANTRA programme. Apart from this they have been able to influence national water and

sanitation policies that now recognise the need to implement the full package, comprising water availability for sanitary, consumptive and productive purposes for entire villages rather than individual households.

These findings were obtained through an analysis of documents, a workshop and follow-up interviews with the SPO, and interviews with external resource persons working in civil society organisations that receive support from the SPO; other civil society organisations with whom the SPO is collaborating; public or private sector agents and; external resource persons capable of overlooking the MDG or theme on which the SPO is concentrating.

Attribution-contribution question

Based upon an analysis of the projects and programmes financed by the Dutch CFAs a selection was made of SPOs to be included in an in-depth process tracing trajectory and those to be included for a quick contribution assessment. Gram Vikas was amongst those SPOs selected for in-depth-process tracing.

With regards to civic engagement the first outcome assessed is that of the increased outreach of the water and sanitation model (MANTRA) that has been promoted by Gram Vikas for the last 15 years. Between 2012 and 2014, 5036 new households from 107 new villages were covered under this model and the total number of households that now have access to water (for consumption and production) and sanitation has attained 62,900 households by March 2014. The most important explaining factor for this are ICCO's support to Gram Vikas, not only for the last two years; Gram Vikas' collaboration with the Odisha Tribal Empowerment and Livelihoods Programme (OTELP); the capacity of user groups trained by Gram Vikas to maintain their infrastructure and resources; the replication of the entire or parts of the model by other NGOs working under the same OTELP programme; the positive reputation that the model has obtained; and subsidies increasingly becoming available that help to ensure a 100 percent water and sanitation coverage per village.

The evaluators also observe that the growth of the number of villages and households covered by water and sanitation facilities has slowed down since March 2011, which may be due to missing resources available with Gram Vikas or a decreased demand of such systems.

The second outcome consists of students of two of the four residential schools created by Gram Vikas having now access to Below Poverty Line rice in line with the government scheme for other schools as of 2013. This outcome is to be explained by Gram Vikas, informing the parents of these students about the scheme and supporting them to file applications to claim their rights.

With regards to 'strengthening intermediate organisations', the evaluators looked at the capacity of the village extension committees put in place by Gram Vikas to defend the interests of their constituents, households. In total 1095 VECs in the same number of villages have been created, including 107 new VECs in the 2012 – 2014 period. Several examples have been confirmed that VECs are capable of defending the interests of their constituents beyond that of managing water supply infrastructure. Unfortunately Gram Vikas has not kept documents that show the performance of all VECs it trained. Major actors and factors that explain the outcomes achieved (at least the examples given) consist of training received from Gram Vikas, the relations VECs members possibly have with Panchayat members or their position in the Panchayat and; more subsidies becoming available from government schemes and programmes, requiring a more proactive role of VECs.

Relevance

Interviews with staff of Gram Vikas, with external resource person, with the liaison officer of ICCO, as well as contextual information helped to assess the relevance of Gram Vikas's interventions in terms of; its Theory of Change (ToC) for Civil Society (SC) as designed during the baseline study; the context in which CSA is operating; the CS policies of ICCO.

With regards to the baseline ToC, the interventions and outcomes achieved are relevant because Gram Vikas has continued working in line with its MANTRA model that informed the 2012 ToC.

With regards to the context in which Gram Vikas is operating, its interventions and outcomes in the water and sanitation sector are relevant, however information is missing that shows how these interventions influence the morbidity of water-borne diseases in the rural areas where the organisation is working. 48 % of Gram Vikas' target groups belongs to scheduled caste of tribe, which is higher than the average representation of these groups in Odisha state.

Gram Vikas's interventions align with ICCO's MFS II Food Security programme which aims to improve local food systems and to strengthen communities to claim their right to food. Therefore civil society strengthening by Gram Vikas is an important component of this programme, as well as the SPOs' focus on water and sanitation which directly relate to the nutritious quality of food and health issues.

Explaining factors

Internal factors that will explain Gram Vikas future orientations are the stepping down of the executive director and founder of Gram Vikas in June 2014, and the office moving to the capital of Odisha. The former director was a well-known person and for 35 years was strongly associated with Gram Vikas and its reputation. The new office in Bhubaneswar is expecting to make collaboration with other organisations easier.

A major external factor which has impacted Gram Vikas' work was the cyclone Phailin, which struck Odisha in October 2013. Gram Vikas therefore shifted its focus from the water and sanitation sector to that of the rehabilitation and reconstruction sector with a government programme funded by the World Bank.

Relations between ICCO and Gram Vikas have been functional and did not influence upon the findings of this evaluation.

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the governance issues Gram Vikas is working on. Chapter three provides background information on Gram Vikas, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with ICCO. An evaluation methodology has been developed for the evaluation of the Civil Society component which can be found in appendix 2 in the main report; however, deviations from this methodology, the choices made with regards to the selection of the outcomes for contribution analysis, as well as difficulties encountered during data collection are to be found in chapter 4. The answers to each of the evaluation questions are being presented in chapter 5, followed by a discussion on the general project design in relation to CS development; an assessment of what elements of the project design may possibly work in other contexts or be implemented by other organisations in chapter 6. Conclusions are presented in chapter 7.

2 Context

This paragraph briefly describes the context Gram Vikas is working in. A description of the Civil Society Context assessed according to the CIVICUS framework is provided in appendix 3 of the country report for Civil Society.

2.1 Political context

Politically, there has not been a major overhaul in the state's context in the past two years. The 2014 General Elections had the state continuing to show a preference for the regional party, Biju Janta Dal (BJD), which has been in power since 2000. The Chief Minister of Odisha's BJD party, won 20 out of 21 Lok Sabha seats in the elections. With this they have ensured that the right wing Bharatiya Janata Party (BJP) which gained power at the Centre in the national elections of 2014 has limited influence in the state. In order to extend gratitude towards the female population that voted in high numbers during this election¹, the government has introduced a new policy called the Odisha State Policy for Girls and Women 2014. Under this new policy, "the stamp duty for registration of a house or land purchased in the name of a woman or gift deeds of immovable property would be lower than that of men".²

Odisha is one of India's poorest states, with 63.2 per cent people living below the poverty line.³ High prevalence of poverty is considered to be mainly a rural phenomenon—the state's level of rural poverty being the country's worst at 60.8 per cent—but it also has regional variations. The rise of Left extremism or Naxalism⁴ in India is sharply linked to the poverty and the lack of development in the regions where it became prominent. With the evolution of the movement, most of the Naxals have come to adopt the Maoist ideology; the Maoists are banned in India. In Odisha, however, they exercise control in the western districts of Nuapada, Bargah, Sambalpur, Bolangir and Kalahandi. Here, the state's presence is at a minimum, and the Maoists run their own courts, "Jan Adalats", and levy taxes on traders.⁵ In the 2005-2014 period, across India, there have been 6606 casualties related to Maoist activities.⁶

2.2 Civil Society context issues with regards to the MDG

The civil society in Odisha continues to face much of the same issues that it did at the time of the baseline. Adding to the challenges that come with poor social and human indicators, Odisha has long been the site of a battle over land grab, Naxalism and natural disasters, the harshest of which struck the state a year after the baseline in the form of Super Cyclone Phailin.

According to Census 2011, 83.31 per cent of Odisha's population is rural, where land is an important commodity, providing not only housing but also sustenance to the people. The issue of land grabbing in Odisha has garnered attention due to its often exploitative and insensitive nature. Odisha is a resource rich state of India, offering iron-ore, bauxite, coal and manganese in abundance. The state industrialisation drive has been hampered due to protests by the tribal population on whose land it hopes to set up industries. A long drawn battle has been going on against the proposed POSCO steel

⁴ The Naxalite movement traces its origins from the Naxalbari uprising in 1967, the Maoist struggle in India is an outcome of this uprising. Naxalism was borne out of the marginalisation of the forest dwellers in Naxalbari village in West Bengal. It picked up support in the surrounding areas with the common cause of fighting marginalisation, lack of development and poverty faced by rural India. With the adoption of the Maoist ideology the movement became violent.

⁶ Refer, http://www.satp.org/satporgtp/countries/india/maoist/data_sheets/fatalitiesnaxal05-11.htm

plant in Paradip and Vedanta Groups bauxite plant in the Niyamgiri hills. Recently in January of 2014, the Union Environment Ministry rejected the bid for corporate Vedanta's bauxite plant whereas it has renewed the environmental clearance for POSCO steel plant. The rejection for Vedanta came following the decision of the 12 village councils of Dongriya Kondh tribes that lived in the region against the plant.⁷ The anti-POSCO protests are still on, these over the years have also been violent, where just last year in 2013, four activists working against the plants construction were murdered by "hired musclemen" of POSCO in collaboration with local policemen.⁸

Odisha is part of the "red corridor" in India, considered the hub of Naxalite activities. In 2013, there were 22 civilian deaths due to Naxal-related activities and in 2014 so far there have been 30 civilian deaths.⁹ Although, there has been a lull in Naxal activities compared to the 2011-2012 period, they still occupy a strong position in the state.

Odisha which is prone to natural calamities like floods and cyclones was hit by cyclone Hudhud on 18th October 2014. Dealing with regular natural disasters, hampers much of the other work, as time and effort is then spent in dealing with the problems in the aftermath of a disaster. Phailin, a Very Severe Cyclonic Storm (VSCS), hit Odisha on the 12th of October 2013 with a wind speed touching almost 220 kmph. The intensity of the cyclone placed it inside category 5 of the Saffir-Simpson Hurricane Wind Scale (SSHWS).¹⁰ The cyclone affected the lives of about 13.2 million people, causing 44 casualties, destroying 256,600 homes and resulting in damages worth INR 89,020 million (equivalent US\$ 1,450 million) in its wake.¹¹ The strong winds and heavy torrential rains were responsible for the maximum amount of structural and physical damage. Due to the efforts of the Odisha government large-scale evacuation of people had taken place in the days leading up to the cyclones entry into the state, thus, avoiding major loss of life. During and after the cyclone, numerous NGOs came together to rehabilitate and provide relief to victims of the disaster. ActionAid formed a consortium of NGOs like ADRA, Oxfam, Christian Aid and Plan, this was along with another consortium formed by the NGO Save the Children to help the government in the post-Phailin period in providing relief work, rebuilding infrastructure and rehabilitation.¹²

Sanitation becomes a major issue after any natural calamity. Due to the already existing problem of large incidences of open defecation in the state, the possibility of disease becomes even higher in the aftermath of a disaster. The work for the civil society the disaster struck state therefore has been exacerbated, where initially the resources could have been used for permanent solutions they have now been diverted towards immediate solutions to return a sense of normalcy quickly.¹³

3 Gram Vikas and its contribution to civil society/policy changes

3.1 Background of Gram Vikas

Gram Vikas' founders came to Orissa in the early 1970s as student volunteers with the Young Students' Movement for Development (YSMD), Chennai, to serve victims of a devastating cyclone. Their extensive activism and relief work motivated them to form Gram Vikas, which was registered under the Indian Societies Registration Act of 1860 in 1979. The organisation is active in 4 States: Odisha where the head office is located, as well as most of the interventions (see map below), Madhya Pradesh (Chhatarpur), Jharkhand (Sareikela Kharsuan) and Andhra Pradesh (Srikakulam).

Gram Vikas' vision is to have an equitable and sustainable society where people live in peace with dignity. Its mission statement is to promote processes which are sustainable, socially and gender inclusive to enable critical masses of poor and marginalized rural people or communities to achieve a dignified quality of life.

This mission is realized through the programme MANTRA - Movement and Action Network for the Transformation of Rural Areas. It was initiated in 1993 with water and sanitation as an entry point. Over the last 15 years the programme has demonstrated scalability and has covered over 787 villages and over 48,000 families as on 31st March 2010; 988 villages and 57,793 families have access to water and sanitation facilities as of March 2012. By March 2014, 62,900 households were covered by its programme.

The core values in the MANTRA programme are:

- **Inclusion:** All households take part in the development process and must benefit equally. Participation of all households of a village is a non-negotiable condition of the programme.
- **Social Equity:** Representation of all sections of the community in decision-making processes across caste, economic status and other barriers to ensure that a level playing field is created.
- **Gender Equity:** Equal representation and participation of men and women in community level decision-making and control.
- **Sustainability:** Development processes have built-in institutional and financial mechanisms for sustainability, and are necessarily based on sound environmental values.
- **Cost sharing:** Poor people can and will pay for beneficial development services but there are some social costs which society at large must meet.

MANTRA unites communities to overcome barriers of social exclusion. Water and sanitation, as an entry point intervention in new settlements, is not only a vehicle for improved health, but also a way of transforming hierarchical caste and gender based exclusion into equitable development.

The overall objective is to ensure access to safe and hygienic sanitation and protected piped water supply to the rural communities. This will have a direct bearing on the health of the population and in turn on their quality of life.

The MANTRA programme is based on 100 per cent coverage of all families in a village and has cost sharing, equity and sustainability aspects as its core approach. The programme is planned to cover an additional 30,000 families within the next three years (2010 – 2013).

3.2 MFS II interventions related to Civil Society

This evaluation looks at the third phase of the MANTRA programme, which focuses on safe water and sanitation facilities in Odisha. Gram Vikas is working on constructing sanitation facilities in 30

villages, targeting 1800 households in total as a means to ensure safe water supply for the entire village. Village Executive Committees (VECs) are being established that receive training to manage the project themselves. This evaluation looks in particular at two of the four objectives of the project financed by ICCO, namely the formation of socially inclusive, gender equitable and capable village development institutions and empowerment of these institutions. These objectives are directly related to the Civicus dimensions ‘civic engagement’ and ‘level of organisation’.

3.3 Basic information

Table 1

Basic information.

Criterion	Basic information
Name of SPO	Gram Vikas
Consortium	ICCO Alliance
CFA	ICCO
Start date of cooperation	Since 1984 through EZE (Evangelic Centre for Development Aid) and with ICCO as lead agency since 1992
MDG/theme	MDG 1 Governance
MFS II project name	MANTRA phase 3 – Access to safe water and sanitation facilities in Odisha
Contract period	2011-2014
Total budget ICCO	€ 249,243, which represents 25 % of total project costs
Other donors if applicable	Community contribution and government contribution (total of €737,500)
Estimation of % of budget for Civil Society ¹⁴	0,76 %

Source: contract intake form, project documents

¹⁴ Costs that relate to civil society development or policy influence are those costs that possibly contribute to the development of the CIVICUS dimensions, excluding coordination and office costs; staff costs and financial reserves.

4 Data collection and analytical approach

4.1 Adjustments made in the methodology of the evaluation

The documents which were used for the initial input-output-outcome analysis were not sufficient as the 2013-2014 annual report was missing. Moreover, the available reports did not mention exact numbers for the VECs and SHGs which were planned to be formed. This made it difficult to measure the outcomes in terms of planned outcomes and actual achievements.

4.2 Difficulties encountered during data collection

The Gram Vikas evaluation challenged the evaluators on many counts, language being the first among them. Though one among the evaluators spoke Odiya, there were numerous interviews to be conducted with people who spoke only this language. Not just time, but nuances might also have been lost in translation; this was even more so during telephonic interviews with those who could not understand either Hindi or English.

Secondly, identifying external resource persons who would comment on GV's work proved remarkably difficult. Those who were interviewed during the baseline seemed to have lost touch with GV's work. A new set of interviewees had to be found. But even most among them were unable to provide feedback on the entirety of GV's work, knowing only parts of it.

Thirdly, identifying rival or alternative explanations was a challenge. Neither GV nor any of the external resource people interviewed would provide these. One reason for this seemed to be that very few NGOs in Odisha work on sanitation, those who do are very local and small and can barely match GV's resources and experience. In fact, relevant policy changes in sanitation are generally attributed to GV's advocacy efforts. Naturally therefore none would question GV if it were claiming that certain outcomes in this sector were the consequence of its work. Another explanation for the lack of rival pathways to GV's claimed outcomes is linked to Phailin, the Very Severe Cyclonic Storm (VSCS)¹⁵ cyclone, which devastated Odisha in October 2013. Property and infrastructure were damaged on a humungous scale in the state's coastal areas. Obviously then, the primary and urgent concern of most actors in the state's development sector became reconstruction and rehabilitation. Preoccupied such, not many seemed to have kept track of GV's progress. Unsurprisingly, most external resource persons had information about GV's recent collaboration with OSDMA (Odisha State Disaster Management Agency) for reconstruction work in cyclone hit areas. But these same people could only offer a general impression on GV's other activities.

¹⁵ The intensity of the cyclone placed it inside category 5 of the Saffir-Simpson Hurricane Wind Scale (SSHWS). There are five categories on the SSHWS scale, fifth being the highest category on the scale. Any cyclone inside this category is capable of causing catastrophic damage.

5 Results

5.1 Results obtained in relation to intervention logic

The project which this evaluation focuses on is the third phase of the MANTRA programme. A lot of the work for this programme was done before the baseline, and the new phase basically builds on the previous work. Most of the preparations for the sanitation facilities were done before 2012 and in the 2012-2014 time-span these facilities had to be finished.

The 3rd phase MANTRA programme focuses on four specific objectives. The first is the establishment of sanitation facilities for 1800 villages in 30 villages in Odisha. In total 5036 households in 102 villages have benefitted from these facilities in the 2012 – 2014 period of which 56 villages are said to have been supported by ICCO (number of households covered unknown). Also, Gram Vikas planned to train 75 youth as skilled masons in order to guarantee sustainability of the programme. The annual reports are available until 2012 and at that time 101 household toilets were completed and 406 were in progress. Also, they had held masonry training with 21 youth participants.

Linked to the first objective is the objective of providing access to safe water supply for the 30 selected villages in Odisha. This should result in a decrease of waterborne diseases, improvement of health status of the villagers and a reduction of time women need to spend on fetching water for their families. However, the annual reports indicated that the water supply was not yet secured, which resulted in this objective not being reached.

In order to strengthen the impact of the programme Gram Vikas aimed to form Self Help Groups (SHGs) and Village Executive Committees (VEC). These institutions should become financially independent of Gram Vikas and capable of doing the maintenance of the sanitation units themselves. At the end of 2012 Gram Vikas had formed 20 female SHGs. A corpus fund was set up for all families involved in the programme. Also, 20 VECs of the 30 planned were formed that held 106 meetings in two years' time. The VECs were in the process of getting registered in 2013.

No information is available with regards to the constitution of the corpus fund: the amount planned is 1,800,000 Rs.

5.2 Changes in civil society in the 2012-2014 period

5.2.1 Civic Engagement

Civic engagement describes the formal and informal activities and participation undertaken by individuals to advance shared interests at different levels. Participation within civil society is multi-faceted and encompasses socially-based and politically-based forms of engagement.

In the past two years, Gram Vikas has contributed to changes in civic engagement: Gram Vikas ensures 100 percent village coverage with its water and sanitation programme. Gram Vikas mainly works in villages with a higher concentration of poor and marginalised communities, particularly Dalits¹⁶ and Adivasis.¹⁷ About 48 per cent of its target groups belong to tribal communities.

¹⁶ The word Dalit means broken, oppressed and downtrodden. The word is nowadays adopted by the depressed classes who were previously under the caste system termed as untouchables. Dalits are considered "outcastes" falling out of the traditional Varna or caste system. They have been associated with those belonging to castes that have traditionally done menial and "polluting" jobs. As such, they have faced rampant discrimination in Indian society. Dalits form 16.6% of Indian population. Refer, <http://www.ncdhr.org.in/dalits-untouchability/>

¹⁷ Adivasis, or the original inhabitants, is the collective name used to describe people belonging to various tribes in India. They are found throughout India but are mainly concentrated in central and north-eastern states. The Adivasis vary greatly and are not one homogenous group, they speak different languages, have different culture and ethnicity. Often

Since the beginning of the third programme in 2011, 4003 new households got access to water and sanitation facilities. By March 2014, 62,900 households in 1,095 villages had access to these facilities compared to 48,000 households in 787 villages across 21 districts of Odisha by March 2010. The initial target aimed for 100,000 households by 2015, which will however not be reached¹⁸. With ICCO support, Gram Vikas started working in 20 villages of 30 villages planned. In those 20 villages a 'village body' is in place, comprising all head women and head men of the households to discuss water and sanitation issues and to ensure that every family commits to the construction of those facilities at household level. All families also contribute Rs.1000 to a corpus fund that is deposited in the bank and interests are being used to extend financial assistance to new families in the future. In each of these 17 villages a Village Executive Committee (VEC) is in place for the implementation and monitoring of the water and sanitation works. The VEC has 12 members, 6 women and 6 men, as well as a representation of castes and tribes. The organisation further continued the support to 20 female SHGs with ICCO funding. Gram Vikas' model of taking community contribution and maintenance of toilets is said to foster a sense of ownership and responsibility of these communities, which is not always found with other NGOs.

In the past two years Gram Vikas has expanded its scope of action: the October 2013 Cyclone Phailin hit the Odisha state very hard and the organisation engaged with rehabilitation and reconstruction works as of that moment, explaining why they (temporally) discontinued their water and sanitation programme. Apart from that organisation engaged in a wide range of government programmes, varying from school sanitation and hygiene education programmes; supporting families to obtain access to the national health insurance scheme; organising health camps; supporting girls on reproductive health issues and; implementing livelihoods programmes for tribal people. National Rural Health Mission (NRHM)¹⁹.

Increasingly, Gram Vikas engages with local political entities such facilitating meetings of the 'Palli Sabhas', formed under the Odisha Gram Panchayat Act, which has the mandate to provide advice to the annual meeting of the Gram Panchayat. Apart from this it helps the VECs to engage with local members of legislative assemblies to lobby for financial sources for their own villages, including those needed for water and sanitation.

Score end line 2014, relative change on a scale of -2 → +2 0

5.2.2 Level of Organisation

This dimension assesses the organisational development, complexity and sophistication of civil society, by looking at the relationships among the actors within the civil society arena.

In 2012 many respondents pointed out that Gram Vikas was not capable of networking with other organisations, and therefore did not expand the scope of its interventions beyond Odisha state. The past two years show that Gram Vikas worked hard at overcoming this shortcoming, by shifting its headquarters from its isolated campus in Behrampur to the capital Bhubaneswar and by recruiting staff for the management of new collaborations.

Since the baseline Gram Vikas has expanded its collaboration with NGOs working in Jharkhand, West Bengal, Nagaland and Madhya Pradesh. These NGOs address a wide range of issues and not exclusively the water and sanitation sector.

In Odisha state, Gram Vikas also signed a four year partnership agreement with another NGO in another district with a clear division of tasks with Gram Vikas providing technical support and the other being in charge of mobilising communities on water and sanitation. The organisation is still part of the Orissa Development Action Forum, addressing drought and sustainable development and which

classified under "Scheduled Tribes" status, but this again differs from state to state. Refer, <http://www.faq.s.org/minorities/South-Asia/Adivasis-of-India.html>

¹⁸ No exact figures are available as regards to the number of households and villages covered under the ICCO financed programme which aimed for 1800 households in 30 villages.

¹⁹ National Rural Health Mission (NRHM) was launched in April 2005. The main goal of NRHM is to provide health care to the rural population, especially the disadvantaged groups, including, women and children. It integrates ongoing vertical health care programmes to address the issue of sanitation, safe drinking water and nutrition. Refer, http://pib.nic.in/archieve/flagship/faq_nrhm.pdf

is now assisting Gram Vikas with the training of SHG. However interactions with the FAN (Freshwater Action Network) that addresses water and sanitation policies seem to have become less intensive since the 2012 baseline study.

Gram Vikas also engaged with NGOs in Gambia and Tanzania to implement its MANTRA model.

When the SPO realised that its 30 year partnership with ICCO would come to an end in March 2014, it was successful in expanding its financial resources, by not only cooperating with a number of government schemes, but also by attracting new donors, including foundations (Bill & Melinda Gates Foundation for example), and foreign NGOs. Gram Vikas in the meanwhile increased its financial reserves to ensure the functioning of its governing body and the board and it continues to have a provision for raising funds through donations: Whereas Gram Vikas reported deterioration of its resource base in 2012, during the 2014 end line assessment, programme officers report a healthier financial situation, but the executive leadership is still less positive about its resource base.

Since the baseline assessment the Village Executive Committees have become more effective in supporting families to access various government schemes, ensuring a better implementation of government projects and filing Rights to Information. VECs are, according to Gram Vikas the best defendants of interests of marginalised people. Apart from these, many other NGOs were mentioned of defending the interests of these people, and the fact that the Orissa Tribal Empowerment and Livelihood Programme (public sector) which is working with many NGOs, puts these NGOs into competition with each other and therefore improves their services to marginalised groups in society.

Score baseline 2012 on an absolute scale from 0-3: 2
Score end line 2014, relative change on a scale of -2 → +2 1

5.2.3 Practice of Values

Practice of Values refers to the internal practice of values within the civil society arena. Important values that CIVICUS looks at such as transparency, democratic decision making, taking into account diversity that are deemed crucial to gauge not only progressiveness but also the extent to which civil society's practices are coherent with their ideals.

No changes occurred with regards to this dimension since the baseline. Gram Vikas has been known as a transparent organisation that distributes quarterly reports along the organisation. At the time of the end line evaluation the executive leadership indicated an improvement of the organisation's transparency and downward accountability. However, the staff and management at field level questioned this and some indicated that reporting had become a problem because of high staff turnover. Gram Vikas continued to send reports to donor agencies but the evaluators did not find evidence of these reports being shared within the organisation. Financial auditing is done by keeping an archive on the website of Gram Vikas.

The governing board of Gram Vikas consists of development practitioners, academia and professionals from the field of management and law. Two of the eight members two are women. The Governing board is elected by the General Body members, which has also eight members of which two are women. This situation remains the same as during the baseline.

Score baseline 2012 on an absolute scale from 0-3: 3
Score end line 2014, relative change on a scale of -2 → +2 0

5.2.4 Perception of Impact

Perception of Impact assesses the perceived impact of civil society actors on politics and society as a whole as the consequences of collective action. In this, the perception of both civil society actors (internal) as actors outside civil society (outsiders) is taken into account. Specific sub dimensions for this evaluation are the extent to which the SPO has contributed to engage more people in social or political activities, has contributed to strengthening CSOs and their networks, has influenced public and private sector policies.

Since the baseline study, Gram Vikas has obtained a positive impact for its beneficiaries and for the organisations it helped to create. It has also been able to influence public policies and practices. No

changes occurred with regards to the private sector or the collaboration between Gram Vikas and the public sector organisations.

Civil society arena

After the super cyclone Phailin that hit Odisha in October 2013, local people's concerns have increased considerably; apart from chronic concerns as water and sanitation, health, education, food security, caste and gender discrimination, communal violence, lack of transportation and communication facilities and accessing government schemes, other concerns were added such as disaster resistant shelter, agricultural and horticultural production, access to more and different seeds (not hybrid), access to government's welfare schemes and electricity supply.

GV caters to all these concerns through awareness building and social mobilisation around sanitation, water, livelihood improvement, health care and facilitating interface with government departments and elected representatives.

Community demand and in particular that of tribal people for proper water and sanitation systems has increased over the past two years, because community members are themselves promoting these systems and because neighbouring villages have witnessed the positive effects of these systems (no figures available). As a result the health situation of people, especially of women and children, has improved, because; households improved their hygiene practices; women can invest time in their children's education and other livelihoods activities instead of fetching water from remote sources, and; families started their kitchen gardens due to the availability of water, which improves their nutritional intake (no figures available).

As has been mentioned above, Gram Vikas has exported its MANTRA development model, starting with water and sanitation, in other states of India and in Africa.

The organisation further directly introduces alternative renewable energy applications grid energy is not available and is the socio-technical support agency to the Odisha State Disaster Management Authority (OSDMA) for the construction of social housing (with toilets) and for the promotion of micro life insurance to rural populations, reaching 1671 individuals since the beginning of the programme in 2010.

Apart from the water and sanitation sector, Gram Vikas continued to increase people's access to government schemes and to government schools (the SPO still has four village-based residential schools, but reduced the number of day schools to one, thereby ensuring that children get access to good quality education at the government schools).²⁰ Youth have received vocational training in order to finalise the water and sanitation in their village or to maintain these systems as well as to assist the Odisha Disaster Recovery Project.

An important number of new and already existing VECs have received training by Gram Vikas since 2012, which increasingly become effective in their villages. Apart from the mobilisation of community corpus funds (Rs 1,000 per family connected to the water and sanitation system), the VECs have proven to be capable of filing RTI (Right to Information) applications which helped to obtain the electrification in many tribal villages; improved village infrastructure (roads) and connectivity; land being allotted to tribal persons under the Forest Rights Act (FRA). Other examples are known where VECs addressed corrupt practices of government officials; where public funds were released; where communities now monitor teacher attendance at school and the mid-day meal quality. VECs increasingly are being consulted by families living in their village.

Public sector collaboration and influence

The relations Gram Vikas has with the government are three-fold: they support government schemes and programmes; they receive grants to expand their MANTRA programme and they influence the government policies in place at state and national level. Changes occurred in particular with regards to policy influencing.

In the first they are supporting government schemes and programmes with their implementation such as the state government's disaster management agency for the construction of 22000 houses; programmes on health, nutrition, water and sanitation sector, targeting school children, adolescent girls, ill people and ensuring access to the micro health insurance scheme; supporting agricultural and

²⁰ No figures available about people getting access to government schemes

horticultural programmes for tribal people and other agricultural programmes; ensuring that villages get access to the states rural electrification project and; making youth aware of the biodiversity, wildlife and environment in which they grow up.

In the second place at one national plant and one development council provide Gram Vikas with subsidies to expand its MANTRA programme, and some six other plants have invited Gram Vikas to collaborate with them on the MANTRA programme as an element of their social corporate responsibility mandate.

In the third place, elements of the MANTRA programme, partly because its executive director is the Chairman of the Working Group on Rural Drinking Water and Sanitation for India's Twelfth Five Year Plan (2012-17), have gained recognition in the national policy on sanitation, the Nirmal Bharat Abhiyan (NBA). One element is the principle of reaching 100 percent water and sanitation coverage in villages as a means to ensure social inclusion of all tribes and casts, for which the NBA has subsidies in place as well as the Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA). In relation to the first element, water and sanitation are now considered as a package under NBA, implying that water is not only made available for toilets but also for kitchens. The 100 percent coverage has also been facilitated under the Orissa Tribal Empowerment and Livelihood Programme (OTELP). Another element that became the government's policy is the use of sanitary dug well (open wells) instead of deep bore or tube wells as a means to reduce the contamination risks of ground water.

Gram Vikas however observes failures in the implementation of the NBA and the MGNREGA schemes, because the procedures for implementation are not clear and because subsidies from both schemes do not come easily available for communities.

Private sector collaboration and influence

Gram Vikas is very selective in engaging with private sector companies, given the fact that Odisha has been the site of conflicts between tribal populations and corporates for quite some time now²¹. The organisation still interacts with TATA steel on the implementation of water and sanitation programmes and has initiated discussions with two new companies. The introduction of the new Corporate Social Responsibility (CSR) Act that rules every company, private or public, with a net worth of Rs 500 crore or a turnover of Rs 1,000 crore or net profit of Rs 50 million, is required to spend at least 2 per cent of its average net profit from preceding three financial years on corporate social responsibility.

Score baseline 2012 on an absolute scale from 0-3:	3
Score end line 2014, relative change on a scale of -2 → +2	1

5.2.5 Civil Society Context

The social, political and economic environment in which civil society operates affects its room for manoeuvre. The civil society context has been described in chapter 3. In this section we describe how CSA is coping with that context.

Gram Vikas' room for manoeuvre increased slightly since the baseline study. In the first place the 2013 Companies Act and the 2014 Companies Corporate Social Responsibility Policy Rules 2014 now require every company, private or public—with a net worth of Rs 500 crore or a turnover of Rs 1,000 crore or net profit of Rs 5 crore—to spend at least 2 per cent of its average net profit from preceding three financial years on social projects. These regulations led to the expansion of Gram Vikas' collaboration with both public and private sector companies.

Due to the Super Cyclone Phailin, Gram Vikas engaged in rehabilitation and reconstruction works that in turn partially derailed its water and sanitation work. However its own villages have shown to be capable to rebuild their partially or fully destroyed houses and water and sanitation systems in collaboration with OSDMA and the World Bank.

²¹ Protests against land acquisition for industries have been taking place across India. In Orissa, the site of protests are over the POSCO steel plant in Jagatsinghpur and the Vedanta's Bauxite Mine in Niyamgiri. In January this year the government gave environment clearance for the POSCO project but Vedanta didn't get its clearance after India's first environmental referendum in 2013, where the Dongria Kondh tribe rejected Vedanta mining in their area. *Refer,* <http://www.thehindu.com/news/national/posco-cleared-vedanta-loses-bid-for-niyamgiri-project/article5561906.ece>

Increasingly communities that received 100 percent water and sanitation systems are changing their behaviour and start demanding and promoting clean practices. This was seen as a consequence of the ripple effect created by GV's efforts over the years.

Score baseline 2012 on an absolute scale from 0-3: 2

Score end line 2014, relative change on a scale of -2 → +2: 1

5.3 To what degree are the changes attributable to the Southern partner

5.3.1 Strategic Orientation Civic engagement

In this paragraph two outcomes are being explained, as well as the role of Gram Vikas in realising these outcomes. The first outcome concerns the outreach of the MANTRA programme, to which ICCO contributed in the past years, and the second is about parents claiming subsidies for their children studying at the residential schools of Gram Vikas.

Outcome one – outreach of the MANTRA programme

Gram Vikas (GV) initiated its flagship MANTRA programme in 2004 with focus on comprehensive habitat development and governance that uses the common concerns of clean water and community sanitation to unite and empower communities and promote better health. Its first target was set in 2010, covering 100,000 households with water and sanitation facilities. This target was rescheduled to 2015, but by March 2014 Gram Vikas had covered 62,900 households in total, covering about 5036 new households from 107 new villages between 2012 and 2014.

Factors that explain these outcomes consist of the following:

- ICCO supported water and facilitation systems for 56 of the 107 new villages in the 2012 – 2014 period in Odisha;
- Under the umbrella of the Odisha Tribal Empowerment and Livelihoods Programme (OTELP), Gram Vikas has covered 70 new villages in two districts between 2012 and 2013;
- External respondents state that Gram Vikas' MANTRA approach creates user groups to maintain the resources and ensures indirect follow-up after the project has finished. This approach comprises the mobilisation of people, informing and orienting them to be a part of the initiative, followed by supervision of construction works by the project;
- Other NGOs that are working under OTELP in adjacent localities have replicated elements of Gram Vikas' water and sanitation model, and Gram Vikas signed a memorandum of understanding with one NGO to provide technical support with the construction of water and sanitation facilities;
- The MANTRA model and its recognition by the district administrations helps Gram Vikas to implement the programme on a large scale: The model has established a reputation, and GV has decided to expand its coverage outside Odisha by collaborating with partners who can assist the programme's implementation in other states;
- Increasingly subsidies become available to construct individual household latrines. Subsidies are not only available for Below Poverty Level households but also Above Poverty Level households, making it easier to ensure a 100 percent water and sanitation coverage per village. These subsidies became available in 2013 under the NBA.

The reputation that Gram Vikas' MANTRA model has gained over the past 15 years with the support of ICCO, followed by financial support coming through government programmes and subsidies, as well as other NGOs collaborating with Gram Vikas to copy the model entirely or elements from it, all explain the increased outreach. The outcome has been achieved through the MANTRA model being development by Gram Vikas and a network that Gram Vikas has forged for itself.

Some narrative evidence has been collected that villages increasingly start to demand water and sanitation facilities as a result of the promotion of these facilities by community members in villages where Gram Vikas has intervened. However the analysis of the data available in the annual reports of Gram Vikas show that more villages and households *per year* were covered *before* March 2011 than in the four years *after* March 2011. These figures either indicate that Gram Vikas did not avail of the

funding necessary to introduce the water and sanitation package in demanding villages, or that such demand does not exist²².

Outcome two-subsidies become available for students attending Gram Vikas' residential schools.

Students from two out of GV's four residential schools now get BPL rice in line with the government scheme that rules students hailing from BPL households as eligible for rice at subsidised rates. Before 2013, the students would receive Rs. 500 as stipend that covered their food expenditure, soap, oil and medical expenditure. But they were not getting rice at subsidised rates even when they were eligible for it. Gram Vikas informed parents of this lacuna, and encouraged them to approach village and block level officials and file applications to avail their entitlements. The parents followed up with the help of the organisation. Because of continuous efforts, starting from year 2013, two out of four residential schools have started obtaining rice at subsidised rate. Additionally, the stipend amount has been raised from Rs. 500 to Rs. 650 per student. Gram Vikas also facilitates the process of accessing the money by the students, directly in their accounts. Evidence was provided that this outcome has been achieved and that Gram Vikas has been involved in reaching the outcome.

The outcome can therefore be explained as a collaborative effort of parents and Gram Vikas, with Gram Vikas as the initiator and the coordinator of the interventions.

5.3.2 Strategic Orientation Intermediate organisations

In this paragraph, one outcome achieved is being explained, including the role of Gram Vikas.

Outcome – VECs are capable of defending the interests of their constituents

The present coverage of GV (GV) under its flagship MANTRA constitutes 1095 villages. Accordingly, the total number of VECs formed till date is 1095. The coverage expanded to include another 107 villages between 2012 and 2014 and the corresponding increase in the number of VECs is 107 during this period. There are 12 members in a VEC, and women and men constitute 50 per cent membership each, caste find proportional representation in VECs.

Examples have been provided in paragraph 5.2.2 that Village Executive Committees have become more effective in supporting families to access various government schemes, ensuring a better implementation of government projects and filing Rights to Information. Other examples of proactive involvement of VECs in community welfare were narrated as anecdotes by VEC members. One such instance is that of the Tarba village Panchayat in Gajapati district where GV's MANTRA has managed to cover 90 per cent households. Villagers in Tarba earn their income from their cashew plantation. But the past few years have seen a descent in yields. As a result, the VEC members and villagers collectively decided to diversify and undertake rubber plantation to support their income. The VEC, it was assumed, would take a lead in this, as it did, by obtaining subsidies on the inputs required for rubber cultivation from ITDA (Integrated Tribal Development Agency).

Some VEC members have also been contesting in Panchayat elections. A girl, Shashi Malik, from Tamana village in Ganjam district (one of the first villages where GV began its work in 1978) now is now a sarpanch and a VEC member. Surat Subarao of Rayagaha block, Gajapati district has progressed from being an executive member of the VEC to becoming a sarpanch (an elected village representative). A tribal woman from Digposi village who is a sarpanch continues to be a VEC member and has played an instrumental role in ensuring 100 per cent water-sanitation coverage for villages under her Panchayat. Apart from this, there have been instances where the VEC members have actively filed RTI applications to uncover corruption.

A variety of documents have been provided by GV to substantiate this outcome. Copies of certificates issued by government offices for the registration of a VEC under different Panchayat Samitis as well as copy of VEC by-laws (in the Odiya script) show that such VECs are functioning in the target areas. Copy of a sanction letter issued by GV to a VEC member for the implementation of water and sanitation programme on an incentive basis shows the active engagement of such VECs and their responsibility thereof for the 100 per cent coverage under water and sanitation programme in a particular village. Unfortunately Gram Vikas has not kept documents that show the performance of the VECs to defend the rights of their constituents.

²² Annual reports available at the website of Gram Vikas.

With regards to the role of Gram Vikas in explaining these outcomes, different answers were obtained:

- A woman sarpanch confirmed Gram Vikas' role, stating that working as a VEC member enabled her to create a positive image for herself in the village which later helped her to win the Panchayat election. She also credited the capacity building trainings and exposure given by GV for her success. She provided copies of RTI applications filed by VEC members in her village to check malpractices and corruption in government departments. Apart from this, VEC members agreed that trainings and exposure they got from Gram Vikas has enabled them to feel more confident in terms of dealing with government departments and officials and take on leadership roles;
- A government official from the ST & SC Development department agreed that VEC members are capable of managing resources like water supply infrastructure created by the community with the help of GV, but not much beyond that. A resource person from one of the partner organisations said that the VECs were empowered in handling the water and sanitation infrastructure created by GV, but were still learning to sustain it;
- An academic knowledgeable about GV's work said that the VEC members are indeed capable of leadership in their community and have been successful in implementing changes such as prohibition of liquor. However, he also mentioned that the reason behind increased capacities of VEC members may not only be explained by the trainings and exposure provided by GV, but could have stemmed from other factors, like their relations with Panchayat members or VEC members also having roles in their Panchayats;
- GV staffers credit GV as being the main actor capacitating VECs in the MANTRA villages. Apart from this, the changed pattern of financial assistance from the government has meant a more proactive role for VECs in terms of liaising, negotiating or actual implementing the programme and this is also a factor, according to Gram Vikas, that has contributed towards the outcome.

According to the evaluators, all of the above mentioned actors—a combination of them—are responsible for the achievement of this outcome.

5.4 What is the relevance of these changes?

5.4.1 Relevance of the changes in relation to the Theory of Change of 2012

The Theory of Change (ToC) prepared in 2012 covers the same activities as Gram Vikas has been working on for the past two years. According to that ToC the following needs to be in place to achieve a sustainable and equitable development: strong local level institutions such as the village bodies and VECs to obtain a 100 % coverage of water and sanitation facilities per village; access to information, by reinforcing people's capacities to make use of the Right to Information Act, the Forest Rights Act, the National Rural Employment Act and the services of other government programmes; the fulfilment of basic needs which in the first place requires interventions by Gram Vikas to raise people's awareness; secured livelihoods through (more equitable) market linkages, agricultural-horticultural and agroforestry development that protect existing soil fertility and that local people can keep a control on; inclusive development processes that take into account castes, tribes and women; making people capable to claim their rights to services delivered by pro people schemes and policies and through lobby and advocacy by Gram Vikas itself, and; networking by Gram Vikas to expand its MANTRA model in and outside Odisha.

In the past two years, Gram Vikas has made progress on all above elements that need to be in place for the achievement of sustainable and equitable development. The realisation of their ToC has been hampered by the Cyclone Phailin in October 2013, urging Gram Vikas to enter into reconstruction and rehabilitation activities.

5.4.2 Relevance of the changes in relation to the context in which the SPO is operating

Odisha is one of India's poorest states, with 63.2 per cent people living below the poverty line²³ and poverty is a rural phenomenon. Approximately 86 % of the 37 million people of Odisha live in rural areas. According to studies conducted in the early 1990s, over 80% of the cases of morbidity and mortality in rural Odisha could be traced to poor quality of drinking water, which was largely a consequence of poor sanitation, especially inadequate disposal of human waste. A 2004 study revealed that less than 1 % of the population had access to safe and protected water supply.

Gram Vikas states that it has had a positive impact on the quality of life, reducing the incidence of water-borne diseases, such as skin conditions and diarrhoea with 85 % in villages that are 100 % covered with water and sanitation facilities²⁴. However consistent monitoring of water-borne diseases is missing, as well as the monitoring of the water quality and behavioural changes at household level. More information on these data would help to further assess the impact of Gram Vikas' interventions on health.

In the past 1,5 years Odisha state was hit by the Phailin Cyclone which might have led to the contamination of drinking water in flood affected areas²⁵ as well as by drought in May 2014, in particular in areas where the maintenance of water and sanitation systems is not being ensured²⁶. No information is available as to what extent the VECs in Gram Vikas' intervention zones are maintaining their systems and are capable of facing floods and droughts.

Although Gram Vikas' interventions with regards to water and sanitation are very relevant, more information is needed to ensure that these lead indeed to a decrease in water-borne diseases, to improved hygiene practices at household level, as well as to the maintenance of these systems.

Gram Vikas' MANTRA model is very relevant to combat social exclusion taking place in villages: its model ensures that all families of a village obtain access to water and sanitation infrastructures. Apart from this the organisation ensures that 48 % of these families belong to scheduled tribes or castes. At state level 22% of the population has a tribal background and 17% are Dalits or scheduled castes.

5.4.3 Relevance of the changes in relation to the policies of the ICCO alliance and ICCO

ICCO's MFS II programme has three core strategies: policy influencing, civil society and poverty alleviation. These three strategies are integrated into each programme of ICCO. Gram Vikas falls into the Food Security Program. This programme aims to create civil society by strengthening and improving local sustainable food systems and communities to claim their right to food. It is about how civil society – Gram Vikas and target groups – is strengthened and capacitated through addressing their own issues, whether it is economic justice, WASH or other livelihood issues. ICCO emphasises in particular the strategies needed to address issues of target groups and to mobilise community members.

The justification of Gram Vikas being part of this Food Security programme is twofold. One reason is their work being based in Odisha, where many problems around food security are eminent. As ICCO was already working on projects in this area with regards to food security it was logical to place Gram Vikas in the same portfolio. Further, Gram Vikas uses water and sanitation as a direct link to health and hygiene. Water is a very important part of food security and is directly linked with health and hygiene. This is the second reason for Gram Vikas to have been placed in the food security programme. The work of Gram Vikas is very well aligned with the policy of the ICCO coalition.

5.5 Explaining factors

5.5.1 Internal factors

Gram Vikas faced two important changes since the baseline assessment; the first consisted of its founder and executive director stepping down after 35 years in June 2014, the second consists of Gram Vikas moving to the capital of Odisha, also in June 2014.

GV's Governing Board had, in fact, initiated a search process to recruit the new executive director in 2013, and Shubhasis Pattnaik was recruited as the new executive director (ED) with effect from May 2014. Pattnaik is an engineer and MBA and has 12 years of experience at senior positions in Infosys. The choice of a GV head from outside the development sector and from the corporate world, is expected to, amongst other things, provide inputs such that the organisation is better able to meet the increasingly professional demands of the donors, multilaterals, bureaucracy etc. At the time of the end line, Pattnaik had already recruited a new Human Resource (HR) Head. The head office shift, meanwhile, was made to enable better coordination with state government and other stake-holders, as also to attract professionals who usually don't want to work and live in the isolated Mohuda campus. Madiath wants to promote a Centre for Excellence in Academics and Sports for tribal children at the Mohuda campus.

The ramifications of both changes will unfold over time. While positive intent underlies both moves, they are fraught with the danger of changing the very character of GV. The former executive director and Gram Vikas have been synonymous till date, and this has always been the organisation's advantage given his credentials, contacts and influence. He is, for instance, currently serving as the Chairman of the Working Group on Rural Drinking Water and Sanitation for India's Twelfth Five Year Plan (2012-17). An Odisha-based development professional interviewed by the evaluators corroborated that Gram Vikas has always been centred around the former executive director's personality, and done well for this given his reputation in civil society. While his stepping down means an image change, whether the new Gram Vikas can cope without him is still to be seen. On the other hand, if the former director's considerable influence over the organisation continues despite the change in stewardship then it might be interpreted as merely cosmetic. The change in staffing strategy is also bound to raise questions regarding the widening disparity between the relatively smaller remunerations for the field workers and the compensation packages being offered to personnel being hired from the corporate world. Also, the growing overheads that will be the consequence of running an office in the capital as compared to running one in a district. However these issues are resolved, it is clear that Gram Vikas in the past two years has been introspecting and evolving internally to keep up with the times.

5.5.2 External Factors

The period between the baseline and the end line in Odisha was marked by Super Cyclone Phailin hitting the state and its neighbour Andhra Pradesh (AP) in October 2013. Over thirteen million people were affected, millions evacuated, properties ruined and damaged. Gram Vikas remained not just undeterred by this external circumstance, but embraced it as an opportunity to use its knowledge and skills to assist the state in dealing with it. The organisation started working on social housing in collaboration with Odisha State Disaster Management Agency (OSDMA) and the World Bank. And at the field level, it collaborated with government line departments on repair and rehabilitation work in affected villages, as also assisted villagers avail compensations that were delayed or denied.

These past two years also saw Gram Vikas recognise that donors increasingly do not want to invest in institutional costs such as rents, staff salaries, etc, preferring to focus on project funding. This has made the organisation decide on diversifying its funding sources such that they are not reliant on any one funder for their establishment costs. GV's staffing strategy has also been revisited; fresh recruitments are being made with a view to have in-house access to documentation skills that are now becoming an important part of donor demand.

5.5.3 Relations CFA-SPO

The cooperation between Gram Vikas and ICCO started before the baseline, and has been a good relationship. The evaluation team does not see evidence for this relationship to explain the changes made by Gram Vikas

6 Discussion

6.1 Design of the intervention

This section discusses whether the project is well designed and suitable for the environment in which it was implemented.

The evaluation team believes that the greatest strength of Gram Vikas' work is their MANTRA model - Movement and Action Network for the Transformation of Rural Areas – that starts with the water and sanitation sector. Its unique approach to cover entire villages rather than individual households (100 percent coverage rule) is the key factor of their success. This ensures social inclusion of marginalised categories in society and should lead to an accelerated reduction of water borne diseases. Starting with water and sanitation as a full package, including access to water for toiletry, consumption and production, helps to both secure food, nutrition and health issues. Although some testimonies are available with regards to the performance of the 1095 VECs, no data are collected on a structural basis that explain the extent to which the VECs are capable of defending the interests of their constituents at large, and of maintaining the water and sanitation infrastructure. These data are important to understand the extent to which the MANTRA model has materialised.

6.2 Replication of the intervention

Gram Vikas' model is at the moment expanding to other states in India and even to other countries in Africa. It is beyond the mandate of this evaluation team to assess the extent to which the model is replicable in these locations where other NGOs are in charge, although it would provide many insights.

In order to be able to replicate this intervention, at first sight the following competencies need to be available:

- Strong leadership, with a clear development vision (MANTRA model), capacity to relate with a wide range of actors and to network with these;
- Capacity to organise people at village level into democratic structures that are capable of claiming their rights as a means to improve their livelihoods and that are capable of maintaining water and sanitation infrastructure;
- Technical expertise with regards to the construction of water and sanitation facilities.
- Capacities to collect data with regards to the water quality, the performance of village structures such as the VECs, the prevalence of water-borne diseases and behavioural changes with regards to water and sanitation;
- An organisation that is being trusted by its target groups and that understands the root causes of inequality.

With regards to the institutional environment in which such an organisation would operate:

- Good working relations with state government, district administration and lower administrative levels;
- A government that prioritises water and sanitation as a key entry point for development; adheres to the 100 % coverage principle and has subsidies in place to cater for these interventions.

7 Conclusions

Changes in the civil society arena of the SPO

In the 2012 – 2014 period the two most important changes that took place in the civil society arena of Gram Vikas are related to the Civicus dimensions 'level of organisation' and 'perception of impact'.

With regards to 'level of organisation' the evaluators observe that Gram Vikas considerably improved its networking capacity within the Odisha state, in other states of India and in two African countries. The SPO engaged with NGOs working in Jharkhand, West Bengal, Nagaland and Madhya Pradesh on a wide range of issues. In Odisha state it signed a partnership agreement with another NGO, addressing the water and sanitation sector and it received assistance to train SHGs from members of the Orissa Development Action Forum of which it is still a member. In the same period the organisation expanded its financial resource base, by means of supporting the government with the implementation of government schemes and programmes, as well as by means of receiving funding from public and private companies to expand its water and sanitation programme MANTRA. The main reasons that explain its increased engagement with other actors is the office move from a remote village to the capital of Odisha.

With regards to 'perception of impact', Gram Vikas has been able to connect 4003 new households to water and sanitation systems, achieving a total of 62,900 households in 1,095 villages since the beginning of the programme. About 48 per cent of its target groups belong to tribal communities. Due to the October 2013 Cyclone Phailin, Gram Vikas will not be able to reach its 100,000 households target by 2015, starting in 2000. In the past two years, communities' demand for water and sanitation systems covering the entire village at once (100 percent coverage) has increased, because they experience the impact upon people's health, nutritional intake and time employment, because water is easily accessible for both consumption and production activities. Apart from the water and sanitation programme, Gram Vikas continued to increase people's access to government schemes and services. The Village Executive Committees increasingly help families to obtain access to these schemes and address corrupt practices of government officials that prevent their villages of accessing these schemes.

Gram Vikas expanded its collaboration with the public sector by supporting the implementation of a wide range of government schemes and programmes and by receiving grants for the implementation of their MANTRA programme. Apart from this they have been able to influence national water and sanitation policies that now recognise the need to implement the full package, comprising water availability for sanitary, consumptive and productive purposes for entire villages rather than individual households.

These findings were obtained through an analysis of documents, a workshop and follow-up interviews with the SPO, and interviews with external resources persons working in civil society organisations that receive support from the SPO; other civil society organisations with whom the SPO is collaborating; public or private sector agents and; external resource persons capable of overlooking the MDG or theme on which the SPO is concentrating.

Contribution analysis

Based upon an analysis of the projects and programmes financed by the Dutch CFAs, four orientations strategic for civil society development were identified: Ensuring that more people from more diverse backgrounds are engaging in civil society activities; ensuring that the organisations that receive support from the SPO are capable of playing their role in civil society – intermediate organisations; strengthening the relations with other organisations in civil society to undertake joint activities, and; influencing policies and practices of public or private sector organisations. For India the focus is on enhancing civic engagement and strengthening intermediate organisations.

Based upon an estimation of the percentage of the MFS II project budget related to interventions that are relevant for civil society, those SPOs whose absolute budgets for civil society were most important

were selected for in-depth process tracing on two outcomes related to the above mentioned strategic orientations. The evaluation team conducted a quick assessment on contribution for the other SPOs.

Gram Vikas was amongst those SPOs not selected for in-depth-process tracing and the evaluators looked at two outcomes achieved that relate to 'civic engagement' and one outcome achieved that relates to the performance of intermediate organisations.

With regards to civic engagement the first outcome assessed is that of the increased outreach of the water and sanitation model (MANTRA) that has been promoted by Gram Vikas for the last 15 years. Between 2012 and 2014, 5036 new households from 107 new villages were covered under this model and the total number of households that now have access to water (for consumption and production) and sanitation has attained 62,900 households by March 2014. The most important explaining factor for this are ICCO's support to Gram Vikas, not only for the last two years; Gram Vikas' collaboration with the Odisha Tribal Empowerment and Livelihoods Programme (OTELP); the capacity of user groups trained by Gram Vikas to maintain their infrastructure and resources; the replication of the entire or parts of the model by other NGOs working under the same OTELP programme; the positive reputation that the model has obtained; and subsidies increasingly becoming available that help to ensure a 100 percent water and sanitation coverage per village.

The evaluators also observe that the growth of the number of villages and households covered by water and sanitation facilities has slowed down since March 2011, which may be due to missing resources available with Gram Vikas or a decreased demand of such systems.

The second outcome consists of students of two of the four residential schools created by Gram Vikas having now access to Below Poverty Line rice in line with the government scheme for other schools as of 2013. This outcome is to be explained by Gram Vikas, informing the parents of these students about the scheme and supporting them to file applications to claim their rights.

With regards to 'strengthening intermediate organisations', the evaluators looked at the capacity of the village extension committees put in place by Gram Vikas to defend the interests of their constituents, households. In total 1095 VECs in the same number of villages have been created, including 107 new VECs in the 2012 – 2014 period. Several examples have been confirmed that VECs are capable of defending the interests of their constituents beyond that of managing water supply infrastructure. Unfortunately Gram Vikas has not kept documents that show the performance of all VECs it trained. Major actors and factors that explain the outcomes achieved (at least the examples given) consist of training received from Gram Vikas, the relations VECs members possibly have with Panchayat members or their position in the Panchayat and; more subsidies becoming available from government schemes and programmes, requiring a more proactive role of VECs.

Relevance

Interviews with staff of Gram Vikas, with external resource person, with the liaison officer of ICCO, as well as contextual information helped to assess the relevance of Gram Vikas's interventions in terms of; its Theory of Change (ToC) for Civil Society (SC) as designed during the baseline study; the context in which CSA is operating; the CS policies of ICCO.

With regards to the baseline ToC, the interventions and outcomes achieved are relevant because Gram Vikas has continued working in line with its MANTRA model that informed the 2012 ToC.

With regards to the context in which Gram Vikas is operating, its interventions and outcomes in the water and sanitation sector are relevant, however information is missing that shows how these interventions influence the morbidity of water-borne diseases in the rural areas where the organisation is working. 48 % of Gram Vikas' target groups belongs to scheduled caste of tribe, which is higher than the average representation of these groups in Odisha state.

Gram Vikas' s interventions align with ICCO's MFS II Food Security programme which aims to improve local food systems and to strengthen communities to claim their right to food. Therefore civil society strengthening by Gram Vikas is an important component of this programme, as well as the SPOs' focus on water and sanitation which directly relate to the nutritious quality of food and health issues.

Explaining factors

Internal factors that will explain Gram Vikas future orientations are the stepping down of the executive director and founder of Gram Vikas in June 2014, and the office moving to the capital of Odisha. The

former director was a well-known person and for 35 years was strongly associated with Gram Vikas and its reputation. The new office in Bhubaneswar is expecting to make collaboration with other organisations easier.

A major external factor which has impacted Gram Vikas' work was the cyclone Phailin, which struck Odisha in October 2013. Gram Vikas therefore shifted its focus from the water and sanitation sector to that of the rehabilitation and reconstruction sector with a government programme funded by the World Bank.

Relations between ICCO and Gram Vikas have been functional and did not influence upon the findings of this evaluation.

Design

Gram Vikas' model is already being copied in other states of India and in African countries. An analysis of the implementation of its model in these locations would increase the understanding of the extent to which the model is replicable. Important conditions for success are the 100 percent coverage of villages with water and sanitation facilities that Gram Vikas works with as a means to ensure social inclusion of all groups in society.

Table 3
Summary of findings.

When looking at the MFS II interventions of this SPO to strengthen civil society and/or policy influencing, how much do you agree with the following statements?	Score
The CS interventions were well designed	
The CS interventions were implemented as designed	
The CS interventions reached their objectives	
The observed outcomes are attributable to the CS interventions	
The observed CS outcomes are relevant to the beneficiaries of the SPO	

Score between 1 to 10, with 1 being "not at all" and 10 being "completely".

Appendix 1 Civil Society Scores

This table presents the appreciation of the evaluation team regarding changes occurred for each indicator between 2012 and 2014 on a scale of -2 to +2

- 2 = Considerable deterioration

- 1 = A slight deterioration

0 = no change occurred, the situation is the same as in 2012

+1 = slight improvement

+2 = considerable improvement

Dimension		Indicators	Question	Change in the indicators in the 2012 – 2014 period
Civic engagement	1	Needs of marginalised groups	How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies?	+1
	2	Involvement of target groups	What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities?	0
	3	Political engagement	How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups?	0
Level of organisation	5	Relations with other organisations	In the past 12 months what has been the most intensive interaction you had with other CSOs?	+1
	5	Frequency of dialogue with closest CSO	In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with?	0
	6	Defending the interests of marginalised groups	Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs?	+1
	7	Composition current financial resource base	How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendance to workshops of other CSOs; costs for organisational growth and/or networking?	+1
Practice of Values	8	Downward accountability	To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them?	0
	9	Composition of social organs	What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for?	0
	10	External financial auditing	How regularly is your organisation audited externally?	0

Perception of impact	11	Client satisfaction	What are the most important concerns of your target groups? How do your services take into account those important concerns?	+1
	12	Civil society impact.	In the past 12 months, what impact did you have on building a strong civil society?	+1
	13	Relation with public sector organisations.	In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives?	0
	14	Relation with private sector organisations	In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective?	0
	15	Influence upon public policies, rules, regulations	How successful have you been in influencing public policies and practices in the past 2 years?	+1
	16	Influence upon private sector agencies' policies, rules, regulations.	How successful have you been in influencing private sector policies and practices in the past 2 years?	0
CS context	17	Coping strategies	In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society.	+1

Appendix 2 Changes in civil society indicators between 2012 and 2014

2.1 Civic Engagement

2.1.1 Needs of marginalised groups SPO

Gram Vikas (GV) works with a continued focus on sanitation and holistic empowerment of villages with an aim for self-sustenance. GV ensures that it covers 100 per cent of all families in the villages where it works. Addressing the centuries-old problem of exclusion of the poor and the marginalised, such as women and the scheduled castes/tribes, from developmental processes is key in these programmes and it culminates into the establishment of “a general village body” that proportionally represents all categories. GV’s project document with ICCO, in fact, states that it selects villages with higher concentration of poor and marginalised communities, particularly Dalits²⁷ and Adivasis²⁸. About 48 per cent of its target groups belong to tribal communities.

According to its Annual Report 2013-2014, Gram Vikas’ (GV) outreach expanded to cover over 62,900 households in 1,095 villages by March 2014, including 2,908 households in 55 villages in 2012-13 and 2,128 households in 52 villages in 2013-14. Given that the objective of GV’s MANTRA programme is to cover 100,000 households by 2015, the GV personnel frankly admitted that covering the remaining 37,100 households within deadline is unachievable. This shortfall, however, must be understood in context; Odisha was struck by Cyclone Phailin²⁹ in October 2013, the second-strongest tropical cyclone to make landfall in India, next only to the 1999 Odisha Cyclone. Rehabilitation and reconstruction have since been the priorities, in turn derailing most development work in these states. But GV has risen to meet the needs of the occasion by expanding its scope of work to include social housing for disaster victims by collaborating with the state government’s disaster management agency Odisha State Disaster Management Agency (OSDMA)³⁰. GV has committed to habitation planning for 22000 houses in three districts and has trained 2000 masons for it.

Emphasising the increase in the number of households that had benefitted through GV’s interventions, the field staff said that the period between 2012 and 2014 had seen GV focusing its work on women and children. Over 4,433 children received health and hygiene education training through the school sanitation and hygiene education programme; 5,093 families were supported in applying for the health smart cards under the Rashtriya Swasthya Bima Yojana (RSBY)³¹; 10,005 people were treated

²⁷ The word Dalit means broken, oppressed and downtrodden. The word is nowadays adopted by the depressed classes who were previously under the caste system termed as untouchables. Dalits are considered “outcastes” falling out of the traditional Varna or caste system. They have been associated with those belonging to castes that have traditionally done menial and “polluting” jobs. As such, they have faced rampant discrimination in Indian society. Dalits form 16.6% of Indian population. Refer, <http://www.ncdhr.org.in/dalits-untouchability/>

²⁸ Adivasis, or the original inhabitants, is the collective name used to describe people belonging to various tribes in India. They are found throughout India but are mainly concentrated in central and north-eastern states. The Adivasis vary greatly and are not one homogenous group, they speak different languages, have different culture and ethnicity. Often classified under “Scheduled Tribes” status, but this again differs from state to state. Refer, <http://www.faqs.org/minorities/South-Asia/Adivasis-of-India.html>

²⁹ Phailin, graded a Very Severe Cyclonic Storm (VSCS), hit Orissa on the 12th of October 2013 with a wind speed touching almost 220 kmph. The intensity of the cyclone placed it inside category 5 of the Saffir-Simpson Hurricane Wind Scale (SSHWS). The cyclone affected the lives of about 13.2 million people, destroying 256,600 homes. The strong winds and heavy torrential rains were responsible for the maximum amount of structural and physical damage.

³⁰ Orissa State Disaster Management Authority (OSDMA) was set up by the Orissa government in 1999 as an autonomous authority to not only take up mitigation activities when a disaster takes place but also be involved in restoration, relief and reconstruction. Refer, <http://www.osdma.org/ViewDetails.aspx?vchglinkid=GL000&vchplinkid=PL000&vchslinkid=SL000>

³¹ Rashtriya Swasthya Bima Yojana (RSBY) literally translated as National Health Insurance Programme. It was launched by the Ministry of Labour and Employment, its main purpose is to provide health insurance to Below Poverty Line (BPL)

in the health camps organised under the National Rural Health Mission (NRHM)³². GV also took to implementing the government programme SABALA³³ that provides for training adolescent girls on reproductive health issues. In the past two years GV trained 1721 adolescent girls under SABALA, organised 16 exposure trips for 452 girls to learn about basic services like bank saving and benefit, post offices, police stations. The programme managers said that the past two years saw GV focusing on strengthening the 20 women's SHGs constituted by it earlier. GV conducted 19 SHG management trainings which included record keeping, financial training, literacy training. Also 12 income generation/vocational trainings were conducted in 2012-13, women were trained to identify business opportunities, micro plan for business development and undertake credit planning. Such trainings have helped women initiate new enterprises. Two SHGs in the Gajapati district have taken bank loans and invested in tractors and machinery for business, others have started nursery raising and kerosene dealerships, yet others are maintaining defunct SHGs micro-hydro units.

The leadership, meanwhile, said that GV's work with the state government's OTELP (Odisha Tribal Empowerment and Livelihoods Programme)³⁴ has enabled it to go beyond water and sanitation issues and diversify into work around agriculture and non-agriculture based livelihoods.

Score: +1

2.1.2 Involvement of target groups SPO

As at the time of the baseline, so also now, decentralisation and subsidiarity continue to be the core of GV's vision. MANTRA is a comprehensive habitat development and governance programme that uses concerns of clean water and total village sanitation as a tool to unite and empower communities. It ensures target group participation through the 100 per cent coverage and inclusion principle.

Social mapping, baseline surveys and meetings are conducted to identify target group concerns before interventions are implemented. To enable decision making at community level, General Bodies are constituted in each village with the head man and head woman from each household as the representative. Further, Village Executive Committees (VECs) are formed in every village with equitable participation of women and different caste groups in the community. The 12 member VECs—which are registered under the Societies Registration Act, 1860—are entrusted with the task of monitoring the implementation of the water and sanitation programme. And, corpus funds, with an average contribution of Rs.1000 per family, are generated in every village and upon completion, the amount is deposited in the bank and the interest utilised to extend financial assistance to new families in the future.

GV's Annual Project Update 2012-2013 cites intensive community mobilisation and motivation meetings during the reporting period in order to obtain consensus of all the households to implement the water and sanitation programme. This resulted in over 700 families agreeing on constructing individual sanitation blocks. Also in these meetings, needs assessment with respect to water and sanitation was conducted with the community and based on an understanding of the issues of health, water availability and hygiene, plans were formulated for each village.

An Odisha-based bureaucrat who has worked with sundry CSOs in the state said that GV's model of taking community contribution for construction and maintenance of toilets fosters a sense of ownership and responsibility, thus giving GV an extra edge over other NGOs.

families. The scheme is mainly meant to cover the financial liabilities that BPL households suffer from in case of health shocks. The scheme started functioning from 1st April 2008. Refer, <http://india.gov.in/spotlight/rashtriya-swasthya-bima-yojana>

³² National Rural Health Mission (NRHM) was launched in April 2005. The main goal of NRHM is to provide health care to the rural population, especially the disadvantaged groups, including, women and children. It integrates ongoing vertical health care programmes to address the issue of sanitation, safe drinking water and nutrition. Refer, http://pib.nic.in/archieve/flagship/faq_nrhm.pdf

³³ SABALA is an adolescent girls integrated development programme, it comes under the Integrated Child Development Scheme (ICDS). The main aim of the scheme is to empower girls in the age group of 11-18 by providing them training on life management, nutrition, education, personal hygiene and skill development. Refer, <http://www.thehindu.com/todays-paper/tp-national/tp-andhrapradesh/sabala-scheme-a-boon-for-tribal-girls/article2803265.ece>

³⁴ Odisha Tribal Empowerment & Livelihoods Programme (OTELP) was introduced in the state of Odisha in 2004. The programme aims to empower the tribals, providing them with livelihood support and food security through watershed mode approach. The purpose is to improve their overall quality of life, ensure food security and increase their incomes. Refer, <http://www.otelp.org/about.asp>

Score: 0

2.1.3 Intensity of political engagement SPO

GV is apolitical. However, GV continues to work with PRIs (Panchayati Raj Institutions) towards the advancement of its work. The GV field staff often act as a facilitators in the monthly Palli Sabhas³⁵. The past two years have, in fact, seen the organisation invest additional time and manpower in informing communities of the importance of participation in Palli Sabhas and encouraging engagement with local MLAs (Member of Legislative Assembly) across political parties to channel resources for the development needs of their villages. As a result, said the GV programme managers, certain VECs have been able to access MP (Member of Parliament) and MLA funds for water and sanitation programmes - though no concrete examples of this were provided to the evaluators. GV conducted a workshop for convergence of the employment guarantee scheme MGNREGA (Mahatma Gandhi National Rural Employment Guarantee Act)³⁶ with the sanitation programme NBA (Nirmal Bharat Abhiyan)³⁷ in 2014, ward members from various panchayats were called to participate in it.

A sarpanch from one of GV's intervention villages acknowledged GV as being her political-social trainer and support structure.

Score: 0

2.2 Level of Organisation

2.2.1 Relations with other organisations SPO

During the baseline evaluations, many respondents, both external as well as from within GV, had seen GV's inability to network successfully as a major reason for the organisation not having been able to expand the scope of its activities, if not influence, beyond Odisha where it began work about thirty years ago. The end line found that GV had worked hard at overcoming this shortcoming over the past two years. Indeed, the GV personnel, across hierarchies, felt that its relations with other organisations have improved since the baseline. To begin with, they said, this period saw GV shifting its headquarters from its isolated Mohuda campus in Behrampur to the capital Bhubaneswar; this itself was done with an aim to become more connected with and accessible to others.

Between 2012 and 2014 GV started work with the NGOs PRADAN³⁸, Bithari Disha³⁹, People in Need Foundation⁴⁰ and SAMARTH⁴¹ in Jharkhand, West Bengal, Nagaland and Madhya Pradesh respectively.

³⁵ Palli Sabhas were formed under the Orissa Gram Panchayat Act, 1964, it's a provision that creates a meeting of all electorates of a revenue village, and these villages may comprise one ward or more than one wards. Palli Sabhas will give recommendations to the gram panchayat at its annual meeting in February on issues of development work to be taken up in the coming year. Refer, <http://odisha.gov.in/e-magazine/Orissareview/2010/Feb-Mar/engpdf/13-16.pdf>

³⁶ Mahatma Gandhi National Rural Guarantee Act (MGNREGA), 2005, is designed to provide a guaranteed job (non-skilled) to all adult members of a family living in a rural area for at least 100 days. Refer, <http://www.mgnrega.co.in/>

³⁷ The Nirmal Bharat Abhiyan (NBA) is a programme by the government to ensure sanitation facilities in rural areas, and in the long term to eradicate the practice of open defecation. The programme is demand driven and people-centred. Earlier, it was known as the Total Sanitation Campaign (TSC), 1999. Refer, http://www.tnrd.gov.in/schemes/cen_nba_13.html

³⁸ PRADAN is a voluntary organisation established in New Delhi in 1983. The main aim of the organisation is to remove "economic poverty by enhancing livelihood capabilities of the poor and giving them access to sustainable income earning opportunities". PRADAN has been at the forefront of "promoting and nurturing Self-Help Groups (SHGs) of poor women". Refer, http://www.pradan.net/index.php?option=com_content&task=view&id=17&Itemid=3

³⁹ Bithari Disha is a Kolkata based NGO formed in 2002. It was created under the NGO Voluntary Health Association of India (VHAI). It works on the issues of education, basic health care, water quality management and water, sanitation, and hygiene promotion. Refer, <http://www.bitharidisha.org/about.htm>

⁴⁰ People in Need Foundation is a Nagaland based organisation working to create awareness on arts and culture, women's empowerment, health issues like HIV/AIDS, nutrition and vocational training etc. The organisation has launched a community care centre in Nagaland's Dimapur, where it caters to those suffering from AIDS and other diseases. Refer, <http://www.indiamapped.com/ngo-in-nagaland/kohima/people-in-need-foundation-21447/>

⁴¹ Samarth is an NGO based out of the state of Madhya Pradesh. Its main aim is the socio-economic empowerment of women through capacity/skill building, training, health education, mobilisation and organisation. Refer, <http://samarthmp.in/vision/>

The Watershed Organisation Trust (WOTR)⁴², an organisation based in Ahmed Nagar in Maharashtra, has been training the GV field staff since 2013 under the OTELP project. Also under the OTELP, GV is now collaborating with Washington-based Landesa—Rural Development Institute⁴³ to help landless tribal families claim rights over homestead land. It may be noted here that some of GV's new collaborations with other NGOs might have been initiated due to its work with the state government, but have expanded in scope since. For instance, GV initially collaborated with PRADAN under OTELP to work in Kandhamal district of Odisha, but the two have since agreed to work for the period 2013 to 2017 in Jharkhand as partners independent of government. GV provides technical inputs and support to PRADAN's project villages as the latter mobilises public opinion on issues of water and sanitation. Such expansion has also found new funders for GV. The Skoll Foundation⁴⁴ has agreed to support GV's expansion in Madhya Pradesh and Nagaland—in collaboration with PRADAN. And the Bill and Melinda Gates Foundation⁴⁵ is supporting GV's plans for expansion in Jharkhand and Odisha; staff deployment for both locations is over. This, even as the Star Foundation⁴⁶ is supporting GV's expansion in West Bengal with Bithari Disha.

GV's work with Prayas⁴⁷, a Pune-based NGO working on issues of energy, health, learning and parenthood, saw it building power utilities in the tribal districts to expand coverage and respond to quality issues faced by rural consumers. This collaboration had ended in 2013, but given its success it has been renewed in 2014.

GV continues to be a part of ODAF (Orissa Development Action Forum), a collective of NGOs, constituted in 1988 to address drought in the state and evolved to address sustainable development issues. ODAF currently funds some of GV's SHG training workshops. GV is still a part of FAN (Freshwater Action Network)⁴⁸, however, the field staff said they had no idea about interactions with FAN since the baseline.

Starting 2013, GV has forged collaborations with Riders for Health (RIH)⁴⁹ in The Gambia and a faith-based organisation in Tanzania towards the expansion of MANTRA. Three persons from these countries visited GV's Mohuda campus for technical training, and two GV staff members are currently positioned in these countries to implement MANTRA. Two other international donors, One Drop Foundation⁵⁰ and Charity: Water⁵¹ has partnered with GV since 2012; they have been funding GV to spread awareness

⁴² The Watershed Organisation Trust (WOTR) is an NGO founded in 1993 and currently functioning in six states—Maharashtra, Andhra Pradesh, Madhya Pradesh, Jharkhand, Rajasthan and Orissa. It works to support “a large-scale multi-actor, multi-level, multi-sectoral, community led watershed development program for poverty reduction called the **Indo-German Watershed Development Program (IGWDP)**”. Refer, <http://www.wotr.org/about>

⁴³ Landesa started under the name of Rural Development Institute by Roy Prosterman, a University of Washington Professor, in 1981. In 2010, the name was changed to Landesa. The organisation works towards securing land rights for the “world's poorest poor”. In India it works with local government and local organisations to help landless families obtain small plots of land. Refer, <http://www.landesa.org/about-landesa/>

⁴⁴ The Skoll Foundation was founded by Jeff Skoll, founder of eBay, in 1999. It is a foundation which supports “social entrepreneurship, driving large-scale change by investing in, connecting, and celebrating social entrepreneurs and other innovators dedicated to solving the world's most pressing problems”. Refer, <http://www.skollfoundation.org/staff/jeff-skoll/>

⁴⁵ Bill & Melinda Gates Foundation, is one of the largest private foundations in the world established in 2000. In India, the foundation partners with state and central governments, non-profit institutions, academic institutions, community groups and the private sector. The foundation started off in India by working towards controlling the spread of HIV/AIDS but over the years it has expanded towards issues of maternal and child health, nutrition services, vaccines and immunisation, family planning, sanitation and agricultural development etc. Refer, <http://www.gatesfoundation.org/What-We-Do/Global-Policy/Regional-Offices/Our-Work-in-India>

⁴⁶ Star Foundation is an independent charity founded in 2001 by Al-Dabbagh Group based out of London. It supports organisations and ideas which are aiming to transform the lives of disadvantaged children. Refer, <http://www.starsfoundation.org.uk/about>

⁴⁷ Prayas meaning “focused effort”, is an NGO based out of Pune, Maharashtra. The organisation has four core themes that it works on: energy, health, resources & livelihoods and learning & parenthood. Refer, <http://www.prayaspune.org/>

⁴⁸ Freshwater Action Network (FAN) is a network of people around that world working towards building better water & sanitation policies by helping the civil society gain decision-making powers. GV is a governance partner of the organisation. Refer, <http://www.freshwateraction.net/content/governance-partners-india>

⁴⁹ Riders for Health (RIH) is a non-profit organisation empowering rural communities in Africa through reliable transportation. It provides health-care to rural villages in Africa using motorcycles and motorcycle ambulances. It was an idea of Barry and Andrea Coleman that took root in the late 1980s. Barry was a journalist and Andrea a professional rider. Refer, <http://www.riders.org/about-us/the-beginnings>

⁵⁰ One Drop Foundation aims to “ensure everyone has access to water”. It is a non-profit organisation established in 2007 by Cirque du Soleil Founder Guy Laliberté. Refer, http://www.onedrop.org/en/DiscoverOneDrop_Canada/WhoWeAre.aspx

⁵¹ Charity: Water was founded in 2006 by Scott Harrison. The aim of the non-profit organisation is to bring safe and clean drinking water to people in developing countries. Refer, <http://www.charitywater.org/about/mission.php>

towards setting up chlorinators in the organisation's project areas. Karl Kübel Stiftung⁵², a German organisation, has renewed its funding to GV towards implementing watershed and livelihood implementation programmes; they had stopped funding in the pre-baseline years.

The executive leadership said that the expansion of GV's network is consequence of other NGOs having observed the success of GV's MANTRA programme with relation to its sustainability. It was pointed out that a senior person has, in fact, been recruited to work dedicatedly at managing new collaborations. An Odisha-based development professional said that that GV seemed to have finally accepted that it was perceived as a loner, centred around the personality of its founder Joe Madiath, and had now started working to correct this image.

Score: +1

2.2.2 Frequency of dialogue with closest civil society organisation SPO

The GV executive leadership had reported intermittent meetings with no more than two NGOs during the baseline. The past two years, according to the leadership, have had GV staffers keeping a much busier meeting schedule, especially so given its plans of expanding beyond Odisha. The leadership now has two meetings a month on an average with partner NGOs; additionally senior managers visit them on site to guide programme implementation. The field staff, however, had no information regarding these meetings with other NGOs. Neither did the programme managers; GV now has a separate resource mobilisation department, they said, which focuses on networking, and it is only this department that is in the know of all such meetings. No documented evidence of these meetings could be made available for the evaluators.

Score: 0

2.2.3 Defending the interests of marginalised groups SPO

GV maintained that the VECs continue to be the best defendants of the interests of the marginalised. The past two years, they recounted, has had the VECs increasingly assisting villagers avail government schemes, ensuring better implementation of government projects and filing RTIs (Right to Information)⁵³ effectively. For the rest, GV personnel listed the same CSOs in 2014 that they had in 2012: a) Vasundhara⁵⁴ for working on issues of forestry, forest rights, conservation, environmental governance, etc. b) The Odisha RTI coalition, called Utha Orissa, which is an alliance of CSOs to ensure that the RTI Act is activated for every citizen of Odisha, particularly among the most marginalised; c) Arghyam⁵⁵ that works with a range of stakeholders including the government to improve the water sector; it has helped in drafting the recommendations of the civil society for the Twelfth Finance Plan; d) Water Aid⁵⁶ for actively working on issues of water and sanitation and playing a key role in influencing policy at the country level; e) FAN (Freshwater Action Network) which has been active at the regional as well as national level to influence policy in the water and sanitation sector.

Some fresh additions were: a) The Washington-based Landesa—Rural Development Institute that works to secure land rights for the world's poorest rural people who live on less than two dollars a day, it partners with developing country governments to design and implement laws, policies, and

⁵² Karl Kübel Stiftung is a German charitable trust founded by Kar Kübel, former industrial entrepreneur. The organisation aims at improving family life to therefore, build a better society. Based on this promotes various self-help and parents initiatives. Refer, <http://www.kkstiftung.de/30-1-About-us.html>

⁵³ The Right to Information act (RTI), 2005, "mandates timely response to citizen requests for government information". It has been hailed as boon by many, and has come to serve as another tool in the hand of the citizens to ensure transparency in the government functioning. Refer, <http://righttoinformation.gov.in/>

⁵⁴ Vasundhara was formed in 1991, it started off as an organisation focusing on research on institutional and policy changes in community forest management, soon enough, it expanded its scope of work to networking on the issue as well. Refer, <http://vasundharaodisha.org/overtheyear.asp>

⁵⁵ Arghyam is a Bengaluru based foundation working through a personal endowment of Rohini Nilekani. It is a public charitable foundation which has made grants to organisations in 22 states across India since its inception in 2005. Those organisations are chosen which manage groundwater and sanitation projects in the country. Refer, <http://arghyam.org/about-us/>

⁵⁶ Water Aid is an international non-profit organisation aiming to improve the quality of life by providing access to safe water, hygiene and sanitation. Refer, <http://www.wateraid.org/where-we-work/page/india>

programmes concerning land that provide opportunity, further economic growth, and promote social justice; b) PRADAN; c) ODAF; d) Prayas; e) Surakhya⁵⁷; f) Behrampur-based NGO Sacal⁵⁸ (Social Action for Community Alternative Learning).

The overall assessment of the GV personnel was that the numerous NGOs presently working under OTELP were competing to outperform each other, thus creating better environment for the target communities.

Score: +1

2.2.4 Composition financial resource base SPO

ICCO has been a GV funder since 1984; MANTRA began with support provided by ICCO. This funding ceased in March 2014. Uncertain as to whether it will be renewed again, GV's executive leadership reported deterioration in the organisation's financial situation since the baseline. A change in the overall international donor-aided funding scenario, the leadership observed, has affected institutional support that was provided by long standing partners like ICCO, Christian Aid, etc, with current donors more focused on their respective programmes than organisations as a whole. Also, said the leadership, the Indian government's enhanced scrutiny⁵⁹ over funding sources and expenditures of NGOs has added impediments to the organisation's sustainability and operations.

Having said which, GV's MANTRA model is based on the contribution from community for building and maintenance of every individual sanitation unit; village level corpus funds are collected with an average contribution of Rs.1000 per family. Also, expansion of GV's work on the MANTRA model beyond Odisha has earned it funders such as the Skoll Foundation, Star Foundation, Vitol Foundation⁶⁰ and the Bill and Melinda Gates Foundation. Donors such as Karl Kuber Stiftung, Practical Action⁶¹, One Drop, Governance and Transparency Fund⁶², Arghyam, NABARD (National Bank for Agriculture and Rural Development)⁶³ etc fund workshops, trainings, staff support, mobilisation, programme costs etc. This even as two ongoing government projects—OTELP and Odisha Disaster Recovery Project (ODRP)⁶⁴—have been a major source of growth and revenue for GV these past two years. Also, GV has built a core or reserve fund over the years; this is used to support General Body and Governing Board meetings. Workshops, meanwhile, are mostly supported by the host organisations. The GV website continues to have a provision for raising funds through donations: <http://www.gramvikas.org/donate>. Quoting many of the revenue sources mentioned above, the

⁵⁷ Surakhya is a project launched in collaboration with UNICEF and Orissa Voluntary Health Association (OVHA), in 2011, towards reducing infant and child malnutrition in the state of Orissa. *Refer*, <http://www.thehindu.com/todays-paper/tp-national/tp-otherstates/surakhya-launched/article2131138.ece>

⁵⁸ <https://www.facebook.com/sacal.ngo>

⁵⁹ The Ministry of Home Affairs (MHA) acting on a recent Intelligence Bureau (IB) report, which claims that funding is being used to create hype over issues and is creating alienation in Jammu & Kashmir and the North-East states. The government is investigating NGOs on the basis of Foreign Contribution (Regulation) Act (FCRA), many sections of the civil society believe that this is an attempt by the government to muffle dissent. *Refer*, <http://www.newindianexpress.com/nation/Mysterious-NGOs-Under-MHA-Radar/2014/05/25/article2243524.ece>; http://articles.economictimes.indiatimes.com/2014-06-14/news/50581806_1_foreign-contribution-foreign-funding-ngos

⁶⁰ Vitol Foundation of the Vitol Group an energy and commodities company, works with 157 partner organisations in 65 countries. It works towards child development through building education, wash (water, sanitation and hygiene), and livelihoods. *Refer*, <http://www.vitol.com/about-us/vitol-foundation/>

⁶¹ Practical Action was founded by economist and philosopher E.F. Schumacher more than 45 years ago in the UK. It works in more than 45 developing countries across the world. It uses technology to tackle poverty in these countries. It works on issues of markets, disaster risk reduction, climate change, energy access and food & agriculture. *Refer*, <http://practicalaction.org/who-we-are>

⁶² The Governance & Transparency Fund (GTF) is a 130 million pound fund created by the government of UK in 2007. The aim of the fund was to help citizens hold their governments accountable by supporting the organisations that can empower them. In 2008, 38 organisations were chosen around the world, to which they provided support. *Refer*, <https://www.gov.uk/governance-and-transparency-fund-gtf>

⁶³ The National Bank for Agriculture and Rural Development (NABARD) was set up by the Reserve Bank of India (RBI) in 1982, for the upliftment of rural India by increasing the credit flow for improving agriculture and rural non-farm sector. *Refer*, <https://www.nabard.org/english/mission.aspx>

⁶⁴ The Odisha Disaster Recovery Project (ODRP) aims to "restore and improve housing and public services in targeted communities of Odisha, and increase the capacity of the state entities to respond promptly and effectively to an eligible crisis or emergency. In July, India signed a loan agreement with the World Bank which will provide assistance \$153 million to ODRP. *Refer*, <http://www.worldbank.org/projects/P148868?lang=en>

programme managers, unlike the leadership, said that GV's financial health had in fact improved in the past two years.

Score: +1

2.3 Practice of Values

2.3.1 Downward accountability

During the baseline, the GV staffers had agreed that 100 per cent accountability existed in the organisation with quarterly reports being submitted to the Governing Board and strong internal governance and accountability norms in place. All this, they had said, was a part of their formal obligation and a value which the organisation has pursued since long. At the time of the end line, barring the executive leadership which reported considerable improvement in the organisation vis a vis downward accountability since the baseline, other staff at the managerial and field level said that there had been no change. The leadership substantiated its opinion by citing that efforts had been made to recruit more staff in the Administration and Finance departments to streamline reporting needs. While the programme managers said that though transparency and accountability continue to be ensured at every level in GV activities, high staff turnover in the past two years has made consistent and quality documentation, and thus reporting, a problem. Despite which, monthly reports are generated, and consolidated, and bi-monthly reports sent to donor agencies without missing deadlines. The evaluators, however, found no evidence of these reports being shared with the field staff or indeed the target community.

Score: 0

2.3.2 Composition of social organs SPO

As at the time of the baseline, so also now, GV has a Governing Board comprising development practitioners, academicians and professionals from the field of management and law. Currently, the Governing Board has eight members, including one woman. The Governing Board is elected from the General Body members, which also has eight members, including two women.

The GV leadership reiterated that members from their target group are not a part of Governing Body—and that as per the by-laws of Societies Registration Act, 1860 governing GV, it is not mandatory for them to have client representation in their board.

Score: 0

2.3.3 External financial auditing SPO

As during the baseline, so also now, India's statutory laws make it mandatory for GV to audit its financial records each year. GV has an audit report archive uploaded on its website.

Score: 0

2.4 Perception of Impact

2.4.1 Client satisfaction SPO

At the time of the baseline, GV staffers listed the following as the main concerns of their target groups: water and sanitation, health, education, food security, caste and gender discrimination, communal violence, lack of transportation and communication facilities and problems in availing government schemes. Being chronic, these concerns remain. And given that Super Cyclone Phailin hit Odisha in 2013, GV added the following to the present concerns of their target groups: need for disaster resistant shelter, livelihood training especially with regards to agriculture and horticulture, improved variety of seeds (not hybrid), proper implementation of government's welfare schemes and

electricity supply. GV caters to all these concerns through awareness building and social mobilisation around sanitation, water, livelihood improvement, health care and facilitating interface with government departments and elected representatives.

The GV staff said that community demand and contribution for proper water and sanitation systems have increased over the past two years; community members are promoting water and sanitation system in their villages by contributing more despite increasing costs of cement and other construction material required to build toilets. Neighbouring non-project villages who have been witness to the benefits reaped by GV's project villages have also started demanding quality construction of toilets by GV. Tribals of the project and non-project villages, who never used to give importance to sanitation, have now started demanding individual toilet units. Further, GV has entered into a number of partnerships and collaborations, nationally as well internationally, to expand the outreach of MANTRA and benefit communities beyond Odisha in states such as West Bengal, Madhya Pradesh, Jharkhand, Nagaland and the Gambia and Tanzania.

GV's work has also affected the health of its target communities, especially of women and children. Women now have privacy provided by the individual toilet and bath units. The availability of water facilitated by installation of water and sanitation systems has promoted health-friendly hygiene practices within the households such as hand-wash practice by children. Nutritional intake—and income—has increased because households have been encouraged by GV to start kitchen gardens due to availability of water. Such availability has also greatly reduced women's drudgery in fetching water, leaving them extra time to be devoted to their children's education and other livelihood activities.

The past two years have also seen GV continue creating awareness amongst the target group about entitlements under government schemes. Many, including VECs, have filed RTI applications, which resulted amongst others in a) the electrification in many tribal villages; b) better implementation of MGNREGA, PMGSY (Pradhan Mantri Gram Sadak Yojana)⁶⁵, which has in turn, improved village infrastructure and connectivity; c) land being allotted to tribal persons under the Forest Rights Act (FRA).⁶⁶ GV has followed up on many who have been allotted land under FRA with trainings on horticulture or agriculture.

GV has four (Konkia, Koinpur, Rudhapadar and Thuamul Rampur) village-based residential schools. During the baseline workshop, the executive leadership said that as of 2011, the organisation also had 11 day schools. Over the past two years, the number of residential schools has remained constant; however, the day schools have been reduced from 11 to 1. This has been done to promote government schools by encouraging their students to join them. Additionally, GV organised community level discussions on how government schools can be improved. To this effect, GV organises meetings with villagers and VEC members to influence the administration to improve the functioning of government schools. In some cases, this has meant better implementation of the mid-day meal and free uniform schemes. Also, with support from GV, parents succeeded in obtaining Below Poverty Line (BPL) rice for the children in two out of the four GV residential schools. Dropout rates in the GV schools have gone down during these two years. GV initiated the "Khel Vikas" (Sports Development) programme in 2012 that aims at promoting adoption of sports amongst the rural and tribal youth. Through this programme, sports like weightlifting, volleyball, athletics etc. were introduced to the tribal children. Benefitting from the programme, some of the children have won national level awards in weightlifting.

GV's continues to work on alternative renewable energy applications training where grid energy is not available. Solar, micro hydro, smokeless chulha and bio gas infrastructure is created by the organisation for the community for lighting and cooking. Large numbers of people rely on renewable sources of energy such as smokeless chulhas, solar energy etc in GV project villages.

⁶⁵ The Pradhan Mantri Gram Sadak Yojana (PMGSY) is a flagship scheme introduced by the National Democratic Alliance (NDA) in 2000 to create all-weather roads connecting rural villages which are often inaccessible. *Refer*, <http://pmgsy.nic.in/>

⁶⁶ The Scheduled Tribes (Recognition of Forest Rights) Bill, 2005 seeks to recognise forest rights of forest dwelling Scheduled Tribes (FDSTs) who have been occupying the land before October 25, 1980. *Refer*, http://www.prsindia.org/uploads/media/1167469383/legis1167477829_legislative_brief_scheduled_tribes_bill.pdf

With regards to disaster resistant housing, GV's experience in social housing in '90s and early 2000s led the government recognising GV as a partner in implementing the social housing project in collaboration with OSDMA (Odisha State Disaster Management Authority) and the World Bank post Phailin. The project aims at building 22000 houses (with toilets) in about 250 villages in Odisha's Ganjam, Puri and Khordha districts by 2016. GV is the socio-technical support agency to OSDMA for this project. Also, the disaster aftermath saw GV promoting micro life insurance, at a low premium, to rural populations; in 2013-14, 1587 households opted for micro-insurance, thus providing insurance coverage to a total of 1671 individuals since the beginning of the programme in 2010.

Score: +1

2.4.2 Civil society impact SPO

There has been both quantitative and qualitative enhancement of the CBOs established by GV—namely the VECs—since the baseline, as also the GV's target communities. GV registered 64 new VECs were under Societies Registration Act, 1860 in 2013-14; each VEC comprising equal representation of women and men. The community corpus fund collected by VECs added up Rs 50.36 lakhs between 2012 and 2014.

Towards the qualitative development of their roles, VEC members interviewed for the end line confirmed having received trainings by GV. In May 2013, 120 VEC members received three days of training in leadership development and skills that would enable them to inform and convince the community of the importance of sanitation and hygiene. In February 2014, 250 VEC members participated in a one day workshop to be trained to help their community's access MGNREGA funds for toilet building. The respondents gave examples to substantiate that working with GV has capacitated the VECs. A member said that his VEC had identified a MGNREGA official's corrupt practice of forging signatures to embezzle funds, confronted the official to no effect, so followed up the complaint with the district collector, who suspended the official. Another VEC member spoke of the VECs having evolved into bodies that villagers now increasingly approach for guidance and assistance. He cited an instance where, in 2013, after receiving complaints about state officials who were refusing to release money for toilet construction under MNREGA without bribes, VEC members from Karanjiya and Jhalkani villages organised a protest rally mobilising over 100 villagers in front of the block office at Harichandanpur in Keonjhar district. The administration came under pressure and released the funds.

GV's leadership believes that training civil society actors in the use of RTI is relevant and has widely done so over the past two years. For this, six leadership trainings were organised for 275 villagers in 2012-13. Further, 20 RTI applications were filed after the provision of four trainings to the villagers (including VECs) in the same year.

GV continues to train people in five livelihood skills: masonry, plumbing, stone dressing, bar bending and house painting or toilet painting. In some areas women themselves take up the task of completing the construction of toilets and bathrooms. GV brings in trained masons from neighbouring villages to train young men and women in their villages. Despite practical difficulties, the project has been able to set off a positive change in the attitude and behavioural practices of target communities. In 2012-13, there were 90 youth trained in masonry for the water and sanitation programme. Also, 2000 people have been given training in 2013-14 to become masons as a part of the Odisha Disaster Recovery Project (ODRP).

Over the years while its focus on quality education continued, GV also played a role in strengthening communities to ensure accountability and quality in the government education system. Many of GV's target communities now monitor teacher attendance and mid-day meal quality. Also, a joint initiative of parents and GV has helped facilitate a change in government practice, whereby students in GV run residential schools are now getting subsidised BPL rice from the government since 2013. The increase in demand for enrolment in GV run schools has also led to request for permission to increase school capacity from 7th grade to 8th grade in the middle level schools.

According to a government resource person, GV's practice of teaching and orienting villagers to the use and proper maintenance of toilets and holding its staff responsible for the spread of such values as well as its proper implementation has worked as an advantage for GV programme, where systems established by them are well maintained by the community, which is not the case with other NGOs.

Score: +1

2.4.3 Relation with public sector organisations SPO

GV has continued to interact with public sector organisations over the past two years. The Rourkela Steel Plant (RSP)⁶⁷ was supporting the financial costs of water and sanitation programme in some remote villages during the baseline, this collaboration is now in its second round in new locations in the Sundergarh district. Also, at the time of the baseline GV had been sanctioned to work in three blocks under OTELP, it is now working with OTELP in four blocks in the Kalahandi and Gajapati districts. The Western Odisha Development Council (WODC)⁶⁸ is supporting the ongoing MANTRA programme in Jharsuguda district for the past 12 months. GV has received invitations from OTPCL (Odisha Thermal Power Corporation Limited)⁶⁹, OPGC (Odisha Power Generation Corporation)⁷⁰, Bokaro Steel Plant Ltd.⁷¹, Bhilai Steel Plant⁷² and NALCO (National Aluminium Company Limited)⁷³ for the implementation of MANTRA programme in villages peripheral to their workers' campuses and colonies. GV's Annual report 2012-13 states that there is a request from SAIL⁷⁴ to extend the pilot project that GV was collaborating with them on at the time of the baseline. GV continues to be supported by the National Bank for Agriculture and Rural Development (NABARD) towards implementing the government's WADI⁷⁵ project.

2.4.4 Relation with private sector agencies SPO

Like at the time of the baseline, GV continues to selectively engage with private sector companies to avoid conflict of interest issues, especially in tribal pockets given that Odisha has been the site of conflict between tribal populations and corporates for quite some time now⁷⁶.

GV's interactions with TATA steel⁷⁷ are still on; the collaboration is aimed at implementing water and sanitation programmes in villages. Further, GV has initiated discussions with Bharti Infratel Ltd⁷⁸ and

⁶⁷ Rourkela Steel Plant was set up in 1955 as the first integrated steel plant in the public sector in the country with German collaboration. Refer, <http://www.sail.co.in/rourkela-steel-plant/about-rourkela-steel-plant>

⁶⁸ The Western Odisha Development Council (WODC), the council was formed on 3rd July 1999, for the development of Western Orissa and to correct the regional imbalance in the state. There has been lots of criticism levelled against the requirement of the council as not one "noteworthy project has been implemented" since its inception. Refer, <http://www.newindianexpress.com/states/odisha/article353819.ece>

⁶⁹ Odisha Thermal Power Corporation Limited (OTPCL), is a joint venture company of Odisha Hydro Power Corporation Ltd. and Odisha Mining Corporation Ltd. Refer, <http://otpcl.com/web/AboutUs/AnnualReports.aspx>

⁷⁰ Odisha Power Generation Corporation Limited (OPGC) was set up on November 14, 1984. It is the only thermal power generating company of the government of Orissa. Its main purpose is to "establish, operate and maintain thermal power generating stations". Refer, <http://www.opgc.co.in/>

⁷¹ Bokaro Steel Plant is considered India's first indigenous steel plant. It is located in Bokaro in Jharkhand. It is India's fourth integrated steel plant built with the help of the Soviet Union, the plant was founded in 1964. Refer, <http://www.sail.co.in/bokaro-steel-plant/about-bokaro-steel-plant>

⁷² The Bhilai Steel Plant is located in Bhilai, Jharkhand. It is the first and sole provider of rails in the country. This plant was also set up with the help of the Soviet Union in 1955. Refer, <http://www.sail.co.in/bhilai-steel-plant/about-bhilai-steel-plant>

⁷³ National Aluminium Company Limited (NALCO), a government of India enterprise, was incorporated in 1981, is "Asia's largest integrated aluminium complex, encompassing bauxite mining, alumina refining, aluminium smelting and casting, power generation, rail and port operations". Refer, <http://www.nalcoindia.com/>

⁷⁴ Steel Authority of India Limited (SAIL) is India's largest steel producing company founded in 1954. SAIL is made up of five integrated steel plants, three special plants, and one subsidiary in different parts of the country. Refer, <http://www.sail.co.in/>

⁷⁵ WADI (fruit orchard) is a project under NABARD for upliftment of the tribals and poor. This is done through the promotion of horticulture and plantation in tribal dominated districts. Refer, http://www.gvtindia.org/wadi_nabard

⁷⁶ Protests against land acquisition for industries have been taking place across India. In Orissa, the site of protests are over the POSCO steel plant in Jagatsinghpur and the Vedanta's Bauxite Mine in Niyamgiri. In January this year the government gave environment clearance for the POSCO project but Vedanta didn't get its clearance after India's first environmental referendum in 2013, where the Dongria Kondh tribe rejected Vedanta mining in their area. Refer, <http://www.thehindu.com/news/national/posco-cleared-vedanta-loses-bid-for-niyamgiri-project/article5561906.ece>

⁷⁷ Tata Steel Limited is part of the Tata Group founded by Dorabji Tata in 1907. It is India's first integrated steel plant. Refer, <http://www.tatasteel.com/corporate/tata-steel-group.asp>

Welspun Group⁷⁹ for collaborations. The GV leadership said that the introduction of the new Corporate Social Responsibility (CSR) rule⁸⁰ has opened up new possibilities for GV.

Score: 0

2.4.5 Influence upon public policies, rules, regulations SPO

GV's website lists the following as its policy intervention issues: water and sanitation, rural housing, rural electricity, use of government wasteland for afforestation and mining and rehabilitation. GV continues to lobby with the state and central governments for change by demonstrating the effectiveness of its operations in its project area around these issues. It organises events for bureaucrats, politicians, experts and media so that they too become advocates of change.

With GV's executive director, Joe Madiath, serving as the Chairman of the Working Group on Rural Drinking Water and Sanitation for India's Twelfth Five Year Plan (2012-17), some significant elements of MANTRA have gained recognition in the national policy on sanitation, the Nirmal Bharat Abhiyan (NBA).

GV has been successful in advocating for social inclusion and thereby 100 per cent coverage for sanitation. The Total Sanitation campaign (later renamed NBA) had provided for subsidies to be given only to BPL households, whereas under NBA the subsidies are available to Above Poverty Line (APL) families too, with big farmers being an exception. The amount of subsidy to build individual Individual Household Latrines (IHHL) has been increased from Rs. 3200 to Rs. 4600 in 2013. Beginning 2013 an additional subsidy of Rs 4500 can also be availed to build such units under MGNREGA. Emulating the GV model, 'Water and Sanitation' are now considered as a package rather than independent issues under NBA. Provision of piped water facility has been made for villages with 100 per cent coverage; earlier, the government's provision of water was sufficient only for toilets, now, it has been increased it to support kitchens as well.

Similarly, 100 per cent coverage has been facilitated under the government's OTELP programme.

GV promotes the use of sanitary dug well (open wells) instead of deep bore or tube wells because they do not deplete the aquifer and reduce contamination risks. Protected sanitary dug wells, along with tube wells, are now accepted as the norm by the Odisha government.

GV's MANTRA programme has had a widespread impact in terms of promoting water and sanitation amongst a large number of rural households especially in tribal pockets. As a result, a number of public sector companies have been appreciative of GV's water supply work and have come forth to forge partnerships with GV under their corporate social responsibility mandate such as Rourkela, Bokaro and Bhilai steel plants, OTPCL, NALCO and SAIL.

The past two years have seen GV actively persuading communities to make use of the RTI; to that end they organise RTI workshops to assist communities in filing applications, liaising with government officials on the progress of RTI applications, organising trainings for community and disseminating collected information to the public. The initiative of GV towards proper implementation of RTI has led to electrification of some villages by the Odisha government.

GV supported the parents of children to further improved implementation of the government practice of giving rice at subsidised rates to students of GV run residential schools, where starting from year 2013, two such schools have started obtaining BPL rice for their students.

⁷⁸ Bharti Infratel Limited is a provider of tower and related infrastructure. It is engaged in "building, acquiring, owning and operating these towers and providing access to these towers to wireless telecommunications service providers". Refer, <http://www.bharti-infratel.com/cps-portal/web/overview.html>

⁷⁹ Welspun Group founded in 1985 by BK Goenka is a multinational company. It has a dominant presence in 50 countries across the world. Its core industries are textiles, energy and steel. Refer, http://welspunindia.com/about-us.php#We_at_Welspun

⁸⁰ The Companies Act 2013 as well as Companies Corporate Social Responsibility Policy Rules 2014 rules that every company, private or public, with a net worth of Rs 500 crore or a turnover of Rs 1,000 crore or net profit of Rs 5 crore, is required to spend at least 2 per cent of its average net profit from preceding three financial years on corporate social responsibility. Refer, http://www.business-standard.com/article/companies/an-overview-of-csr-rules-under-companies-act-2013-114031000385_1.html

The past two years have seen GV assisting government in effective implementation of programmes such as: a) SABALA aimed at improving the nutritional and health status of adolescent girls; b) WADI under NABARD to promote development of horticultural gardens for individual households to help community secure additional, long term sources of income; around 600 farmers in Ganjam district have been supported through WADI in 2012-13, the GV staff provides financial-technical support and assists in the development of irrigation facilities through the techniques of gravity fed systems or by pumping water from open wells. They also provide periodic trainings to the farmers on planting and after care methods in village meetings; c) creating awareness about the rights and responsibilities with regards to electricity in tribal pockets of Odisha under the Rural Electrification project; d) the state government's Youth for Environment programme for the conservation of rich biodiversity and rich wildlife in and around the area of Similipal Tiger Reserve located in Mayurbhanj district; e) the Rashtriya Krishi Vikas Yojna⁸¹ to support 1904 farmers to take up improved paddy cultivation practices in the Ganjam district.

Score: +1

2.4.6 Influence upon private sector agencies' policies, rules, regulations SPO

Like in 2012, the GV personnel reiterated that GV has not influenced any private policies and practices.

Score: 0

2.5 Civil Society context

2.5.1 Coping strategies

The single largest challenge that Odisha, and GV, had to face since the baseline was Super Cyclone Phailin hitting the state and its neighbour Andhra Pradesh (AP) in October 2013. Over thirteen million people were affected, with more than 550,000 people evacuated from the coastline in Odisha and Andhra Pradesh to safer places. Rehabilitation and reconstruction have since been the priorities, in turn derailing most development work in these states. GV's own target group, ready to construct toilets and bathrooms, are now looking to rebuild their partially or fully destroyed houses. But instead of letting this disturb the organisation's agenda, GV's leadership has found an opportunity in the Phailin aftermath to impact communities by working on social housing in collaboration with OSDMA and the World Bank. The field staff, meanwhile, spoke of working with the government line departments on repair and rehabilitation at the village level. Attending to destroyed toilets and water tanks, uprooted electricity lines made pumping water for the village supply tanks difficult, ravaged trees, ruined orchards. Also, assisting villagers avail government compensations that are delayed or denied due to corruption and administrative callousness.

The period between 2012 and 2014 has seen certain positive policy changes around water and sanitation. The subsidy for an individual toilet unit, under NBA, has been increased from Rs. 3200 to Rs. 4600. Plus, earlier only for BPL households, the subsidy has been extended to include Above Poverty Level households. Also, an additional subsidy of Rs. 4500 per household under MGNREGA for building a toilet has been announced. A significant lobbyist for and contributor to these policy changes, GV regrets their inefficient implementation. According to GV, lack of clear procedures has made routing funds from two different government streams—NBA and MGNREGA—a major hurdle for expansion. Because GV has worked hard at disseminating information on the enhanced subsidy at the local level, communities now want to wait to avail both the subsidies. But delay in fund allocation restricts flow of resources, making it difficult for GV to bank on this support to expand its programme.

Meanwhile, the recently introduced Companies Act 2013 as well as Companies Corporate Social Responsibility Policy Rules 2014 now require every company, private or public—with a net worth of Rs

⁸¹ The Rashtriya Krishi Vikas Yojana or National Agriculture Development Scheme was launched in 2007 as a part of the 11th five-year plan of the government. It aimed to achieve 4% annual growth in agriculture through development of agriculture and its allied sectors. Refer, <http://rkvy.nic.in/#>

500 crore or a turnover of Rs 1,000 crore or net profit of Rs 5 crore—to spend at least 2 per cent of its average net profit from preceding three financial years on social projects. The GV leadership observed that this has given fillip to investment by companies in social development projects—GV's own portfolio of such collaborations has expanded. It has also seen both public and private sector companies, altering their perception of development interventions, moving from a charity based approach to appreciating the fiscal and physical contribution from local community for programme ownership and sustainability.

During the baseline, GV personnel had identified behavioural changes in terms of using and maintaining water and sanitation infrastructure within communities as a major challenge. The end line had the same personnel noting a gradual change in behaviour of communities as they have now started demanding and promoting clean practices. This was seen as a consequence of the ripple effect created by GV's efforts over the years.

Report CDI-15-025

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Klaver, D.C., Hofstede, M., Wadhwa S., Madaan A., Pandey R., Mohapatra B.P., February 2015, *Ninasam end line report: MFS II country evaluations, Civil Society component*, Centre for Development Innovation, Wageningen UR (University & Research centre) and International Development Foundation (IDF). Report CDI-15-040. Wageningen

This report describes the findings of the end line assessment of the Indian theatre and arts organisation Ninasam that is a partner of Hivos.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses Ninasam's contribution to Civil Society in India and it used the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2012. Key questions that are being answered comprise changes in the five CIVICUS dimensions to which Ninasam contributed; the nature of its contribution; the relevance of the contribution made and an identification of factors that explain Ninasam's role in civil society strengthening.

Keywords: Civil Society, CIVICUS, theory based evaluation, process-tracing

1 Introduction

This report presents the civil society end line findings of Ninasam in India which is a partner of Hivos under the Dutch Consortium People Unlimited 4.1. It is a follow-up to the baseline assessment that was carried out in 2012. According to the information provided during the baseline study Ninasam is working on MDG 1, good governance and on civil society building.

These findings are part of the overall evaluation of the joint MFS II evaluations to account for results of MFS II-funded or –co-funded development interventions implemented by Dutch CFAs and/or their Southern Partner Organisations (SPO) and to contribute to the improvement of future development interventions. The civil society evaluation uses the CIVICUS framework (see appendix 1) and seeks to answer the following questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- What factors explain the findings drawn from the questions above?

The CIVICUS framework that comprises five dimensions (civic engagement, level of organization, practice of values, perception of impact and contexts influencing agency by civil society in general) has been used to orient the evaluation methodology.

Changes in the civil society arena of Ninasam

In the 2012 – 2014 period the two most important changes that took place in the civil society arena of Ninasam are related to civic engagement and perception of impact.

With regards to civic engagement, the evaluators observe that the number of alumni, people attending different theatre shows, participants attending workshops have increased in the past two years. Moreover those that take part in the education activities, courses and workshop increasingly represent scheduled tribes, castes and women, hence ensuring an increased diversity. Most of Ninasam's cultural activities rely upon community members working as volunteers to make things happen. Its audience mostly consists of rural people who do not speak English. As Ninasam performs in the local language, they are contributing to the knowledge of these local people on social issues such as gender and casts.

With regards to perception of impact, NINASAM's concern that its alumni would become increasingly unemployed did not materialise, because its general network is expanding, its reputation increased; it managed to attract celebrities to make contributions to events that become more popular. It has expanded its network with other NGOs in the sector, as well as intensified its collaboration with both public and private sector organisations. Concrete examples of collaboration are its initiative to organise Study Tours together with the India Theatre Forum, which became a successful event within the two years of their existence; exchange visits between public and private sector colleges and universities on the one side and Ninasam on the other side; as well as joint workshops and courses. In terms of policy influencing Ninasam, through the India Theatre Forum, lobbies the government to implement an insurance scheme for artists and their families. Ninasam, through its collaboration with private colleges and universities that want to duplicate its curriculum model is changing the educational practices of these institutions.

These findings were obtained through an analysis of documents, a workshop and follow-up interviews with the SPO, and interviews with external resources persons working in civil society organisations that receive support from the SPO; other civil society organisations with whom the SPO is collaborating; public or private sector agents and; external resource persons capable of overlooking the MDG or theme on which the SPO is concentrating.

Contribution-attribution question

Based upon an analysis of the projects and programmes financed by the Dutch CFAs a selection was made of SPOs to be included in an in-depth process tracing trajectory and those to be included for a quick contribution assessment. Ninasam was not amongst those organisations selected for in-depth-process tracing but for a quick contribution analysis.

The fact that more villages and inhabitants are exposed to political and social themes through Tirugata traveling theatre and are becoming aware of how these themes relate to their day-to-day livelihoods can be explained by Ninasam's traveling theatre in the first place. The theatre was formed in 1985 and continued expanding upon request of theatre groups in villages. These organisations in their turn continue to exist and organise cultural events in their villages.

Ninasam's expanded network can be explained by its expanding alumni network that has people working on many locations; the Tirugata traveling theatre; the culture course; and intense collaboration with drama schools and universities. This expansion also needs to be positioned in a context where many drama schools are currently being created.

Relevance

Interviews with staff of Ninasam, with external resource person, with the liaison officer of Hivos, as well as contextual information helped to assess the relevance of Ninasam's interventions in terms of; its Theory of Change (ToC) for Civil Society (SC) as designed during the baseline study; the context in which Ninasam is operating; the CS policies of Hivos.

With regards to the 2012 ToC, Ninasam's most important interventions consist of ensuring holistic education, engaging communities as volunteers and ensure networking with a wide range of actors. The past two years have seen that Ninasam has continued these interventions successfully and that the organisation is still grounded in Heggodu, the village where the organisation is based. One important condition in its ToC has however not been removed, which is the 'culturally conditioning apparatus' which also increasingly employs Ninasam's alumni. This refers to the influence of TV broadcasts and the increasing use of mobile phones by youth, which disorients people from their original cultures and roots.

With regards to the context in which Ninasam is operating, its interventions and outcomes achieved are relevant because they are bringing theatre to local, often rural people. These people would normally not have access to such productions as they are limited in their travelling and often do not speak English. Ninasam works with local artists to bring productions to their audience in their local language.

With regards to the Hivos Civil Society policies, Ninasam's interventions and outcomes are relevant because they contribute to its 'pluralism' programme, which helps to make people aware of India's population being diverse and culturally rich. Ninasam's productions contribute to this by educating people about issues related to a diverse society.

Explaining factors

The information related to factors that explain the above findings was collected at the same time as the data were gathered for the previous questions. The evaluation team looked at internal factors within Ninasam, the external context in which it operates and the relations between Ninasam and Hivos.

The most important internal factor that explains the findings comprises in the first place the leadership of Ninasam by mister KV Akshara who is the lynchpin holding together Ninasam's beliefs and vision. He is the only person with the capacity to engage with the larger external world. The organisation is a family -driven organisation with leaders and staff who share the same strong vision. Being based in a small village they are close to their target groups and are able to adjust their productions to the needs of their target groups. However no definite plans seem to be drafted yet regarding K V Akshara's succession plan.

External factors that explain the findings are most importantly the attitude of Karnataka towards arts and theatre. The region is highly perceptible to theatre productions which results in high attendance levels of the productions. The government had started decreasing their financial support for arts and

theatre productions over the past years. Together with the growth in television popularity this is a worrying development for organisations as Ninasam.

Factors that explain the findings that are related to the relation between Ninasam and Hivos are the closing of Hivos' Bangalore office in 2013. However, even without their donor they managed to carry on with their work and achieve important outcomes in their project. The staff does however worry about the continuing of their work as funding from Hivos is uncertain.

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the MDG/theme Ninasam is working on. Chapter three provides background information on Ninasam, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with Hivos. An evaluation methodology has been developed for the evaluation of the Civil Society component which can be found in appendix 2 of the country report; however, deviations from this methodology, the choices made with regards to the selection of the outcomes for contribution analysis, as well as difficulties encountered during data collection are to be found in chapter 4. The answers to each of the evaluation questions are being presented in chapter 5, followed by a discussion on the general project design in relation to CS development; an assessment of what elements of the project design may possibly work in other contexts or be implemented by other organisations in chapter 6. Conclusions are presented in chapter 7.

2 Context

This paragraph briefly describes the context Ninasam is working in. A description of the Civil Society Context assessed according to the CIVICUS framework is provided in appendix 3 of the country report for Civil Society.

2.1 Political context

The most important change in the political context of Karnataka, since the baseline, has been the defeat of the right-wing Bharatiya Janata Party (BJP) in the 2013 Assembly Elections. The constant internal bickering, scam allegations, corruption, subtle promotion and leeway to communal elements in the state ended the reign of BJP and brought into power another national party, the Indian National Congress, which won by gaining 121 seats in a house of 225.¹

Karnataka has been racked in the past few years over the issue of illegal mining. The Supreme Court has been scrutinising several government officials and ministers, including former Chief Minister BS Yeddyurappa for their involvement in the racket. According to the report of the Karnataka Lokayukta (an anti-corruption ombudsman organisation), this has resulted in the loss of 122,228 crores (1 crore is 10 million) to the state where there are other sources claiming that the figure actually stands at Rs 1 lakh crore (1 lakh is 100,000 x 1 crore is 10 million = 10¹²). Apart from a major loss in revenue this has also caused irreparable damage to the environment.² The industry-political nexus is so strong that during the rule of the BJP, there were four chief ministerial changes in the course of four years due to allegations of corruption.

The decadence and corruption of the political class has become obvious in the last few years, with minister after minister being inspected for their involvement in some scandal or a scam. With the issue of gender rights and safety of women in India making news, the ministers in the state have been quite unaffected by the issue. For instance, ministers have been caught on camera watching porn during a session of the Karnataka state assembly.³ Also, former Minister Haratalu Halappa was arrested following an allegation of him sexually assaulting the wife of a friend.⁴

2.2 Civil Society context issues with regards to the MDG

The challenges that are faced by civil society in Karnataka, have not evolved dramatically since 2012. The issue of—communal violence, land acquisition and rural/urban imbalance—still continue as a matter of concern.

In Karnataka, the right-wing party BJP's stint in power was marked by an increasing number of attacks on churches and Christians across the state. In 2011, it topped the list of incidences persecuting the Christian community in India. The persecution has continued over the years, with some variation in intensity for the better. In 2014, Karnataka still accounts for the highest number of incidences against the Christian community, in the form of, murder, assault, rape, and church attacks.⁵

⁵ Refer, <http://www.thehindu.com/news/national/karnataka/43-cases-of-antichristian-violence-in-karnataka-csf/article5631448.ece>

The stories around land acquisition and the consequent protests have been rampant all across India. The government in its rush towards “development” and nexus with the corporates, often tries to acquire land which the people are unwilling to part with, or it doesn't offer adequate compensation and rehabilitation, leading to protests. In Karnataka, protests have erupted over the government's move to acquire land in Mysore in 2008. The farmers accused the government of acquiring more land than they paid for including the fertile lands, which are their source of livelihoods.⁶ The POSCO steel plant in 2011 which failed clearances in Orissa at the time, was also denied entry in Karnataka, as the farmers refused to part with their land.⁷

The state of Karnataka is known around the world due to Bangalore's image as India's Information Technology (IT) hub. The population of the state stands at 6.11 crore, of which 61.43 per cent live in rural areas.⁸ There has been a growing imbalance as the population has been rapidly moving from rural to urban areas, this is largely due to the economic opportunities that these cities offer. According to the 2011 Census, urbanisation in Karnataka has increased from 33.99 per cent in the 2001 Census to 38.57 per cent in 2011. The literacy rate is also higher in the urban areas at 85.78 per cent than that of rural areas at 68.73 per cent.⁹

Due to the growing emphasis on its IT tag most of the public resources are spent on the development of these cities which has resulted in the rest of the state suffering the brunt created from an uneven distribution of resources. The rest of the state is lagging behind in terms of infrastructure, growth, development and access to health & education. The monthly per-capita expenditure in rural Karnataka is even lower than the all India average.¹⁰

Education that drew from the state's diverse linguistic and religious ethnicities— apart from Kannadigas, Karnataka is home to Tuluvas, Kodavas and the Konkanis— and was imbued with lessons in song, dance, story-telling and theatre is fast becoming an industry; geared towards promoting ‘professionals’ in the IT sector. Apart from Bangalore, smaller towns like Belgaum, Mangalore, Mysore, Hubli-Dharwad and Davangere boast of producing manpower for the IT industry. Karnataka has one of the largest concentrations of medical and engineering colleges. This thrust on the sciences, especially given the state's IT success, has come at the expense of the arts and humanities being neglected. In this rush towards a modern state, culture has taken a back seat and the quality of the Kannada news channels has not helped in this cultural decline. There has been a rush for Targeting Rating Point which in consequence led to decline in the quality of the content that is televised.¹¹

3 Description of Ninasam and its contribution to civil society/policy changes

3.1 Background of Ninasam

Ninasam is a community theatre institute with 'no gates' located in a small town called Heggodu in Shimoga district of Karnataka. It nurtures young theatre practitioners and develops theatrical productions reaching a rural audience of at least 100,000 in Karnataka. Since 1949 it has emerged into the organisation it is today. Until 1968, it grew from being a humble band of rural culture enthusiasts into an amateur, voluntary cultural organisation investing its energies mainly in theatre and literary activities. The second phase, 1969-79, saw Ninasam branching out in three other directions besides consolidating its earlier work. It built a full-fledged auditorium of its own; it began to organise film festivals and annual 10-day film appreciation courses, and; started publishing film literature, all showcasing world cinema classics. Between 1980 and 1992, Ninasam took a strong initiative in the propagation of theatre and film culture and adding certain semi-professional features to its basic amateur character. In 1980 the Ninasam Theatre Institute was created, followed by 'Tirugata' in 1985, after which the institute widened its range of cultural activities. In the 1993-2004 period, Ninasam gained high recognition, with its co-founder and guiding spirit K V Subbanna being conferred the prestigious Ramon Magsaysay Award for his contribution to the field of Arts, Culture, Journalism and Creative Communication. The cash prize that accompanied the award was used as the corpus fund for initiating and running yet another extension programme under Ninasam: Prathishthana, a foundation that to date has conducted more than 200 short-term literature appreciation courses for educational and cultural organisations located across the state.

In the fifth phase as of 2003, Ninasam received funding from Hivos which enabled it to support some of its major projects. These included the annual culture course, the visiting fellowships, the summer theatre workshop, the children's summer workshop and infrastructural development.

Vision

While the larger vision of Ninasam is that of a world which is egalitarian, just, richly diverse and humane, its specific vision is one of harnessing the inherent socio-political power of culture towards the creation of such a world. Essentially a cultural organisation, Ninasam is nevertheless of the firm conviction that culture is but another way of engaging in socio-political activity of a deeper and far-reaching kind. It strongly believes that poetics and politics differ only in degree and dimension and not in kind or intent. An 'organic' institution that has grown out of the genuine needs of a traditional, rural community continually and vitally responding to changing times, Ninasam values, above all else, that state of being where the community and the individual enrich each other through a constant, critical negotiation; the old lends life to the new and the latter revitalises the former; the sacred and the secular complement, not compete with, each other, and action and knowledge sustain each other continually.

Ninasam is a highly creative and innovative theatre institute and always strives to create a larger communitarian base for theatre. Some of their prominent interventions have been as follows:

- Ninasam Theatre Institute (1980) enables theatre students from rural areas of Karnataka to be part of a state government recognised 10 month course on theatre arts. Some of the graduates of these courses have begun their own unique initiatives in their hometowns and have also achieved national and international acclaim;
- Tirugata (1985), a travelling theatre troupe made up mostly of the graduates of the Ninasam Theatre Institute, which takes major theatre productions to different rural and semi-urban centers in Karnataka every year.

The organisation is promoted by a family which is reputed for their contribution to theatre and literary culture in India. The Board of Trustees comprises one woman and fourteen men. All issues/concerns related to professional services are periodically discussed between the Secretary and the Board of Trustees in both formal and informal meetings.

3.2 MFS II interventions related to Civil Society

The evaluation looks at the project ‘Creating a larger communitarian base for theatre’ which aims to increase the outreach of theatre productions Karnataka. Ninasam’s interventions aim to improve civil society by bringing theatre productions to remote areas. These productions often have social or political themes and try to educate people on the issues in the production. The main interventions are the training of teachers and artists in Ninasam’s Theatre Institute, and the productions of their travelling theatre group Tirugata. These interventions are year round, whereas the culture course and Summer Theatre Workshop are seasonal activities.

The Theatre Institute can house 20 students per course, which limits the possibilities to increase the impact of this intervention. Because of this the number of Ninasam alumni has increased with only 40 new alumni. However, as many alumni are coming back as teacher, or are starting their own organisations there has been an increase in the outreach of the Theatre Institute. Tirugata has 91 productions in 2014 and has increased their staged shows from 3000 in 2012 to 3557 in 2014. Also, they are performing in 20 more locations. The culture course has seen a rise in participants from 148 in 2012 to 182 in 2014.

The partnership between Ninasam and Hivos is ongoing.

¹² Costs that relate to civil society development or policy influence are those costs that possibly contribute to the development of the CIVICUS dimensions, excluding coordination and office costs; staff costs and financial reserves.

4 Data collection and analytical approach

4.1 Adjustments made in the methodology of the evaluation

The documents which were received from Ninasam and Hivos were of sufficient quality to orient the in-country evaluation team to conduct a quick contribution analysis and it was decided to focus the evaluation on Ninasam's main interventions: Theatre Institute and the Tirugata productions.

Nine Ninasam staffers participated in a workshop held by IDF, comprising four members of executive leadership, two programme managers and three field staff. The respondent strength was small because Ninasam is a theatre institute based in the small Heggodu village in Karnataka's Sagara district with no branches, the field outreach it makes is only indirect, and it employs as few faculty members as needed to run a sufficient and efficient organisation.

The plenary had the workshop participants agreeing with the choice of the two pre-selected Civil Society Strategic Orientations through which the organisation's outcomes would be evaluated, namely Civic Engagement and Strengthening Intermediate Organisations (IOs). They listed the outcomes Ninasam had achieved over the past two years under these.

Though only the executive leadership and middle management had been requested to be available for detailed interviews on the claimed outcomes on the second day of the workshop, all nine Ninasam functionaries chose to be present. They explained that there were no effective hierarchies in work around culture and arts, and insisted that any meaningful discussion on the organisation's achievements or failures would have to include everyone's perspectives in the institute.

The evaluators decided to club the views of respondents in one interview form instead of separate forms for each of them, because barring technical details and specific figures, they were equally informed and unanimously agreed on most issues.

The alternative or rival explanations to the outcomes Ninasam claimed as their achievements were that these were: a) the result of the spurring of the demand for more theatre professionals by the TV channels b) the natural consequence of high levels of cultural consciousness in Karnataka c) the result of the efforts towards promoting theatre by other theatre practitioners, cultural organisations, educational institutions etc.

4.2 Difficulties encountered during data collection

The primary challenge for the evaluators was that the subject of evaluation was a cultural organisation, and calculating the impact of work in the sphere of the arts and culture through focused outcomes, that are often required to be quantifiable, tested the methodology. The evaluators, therefore, attempted to measure the impact of Ninasam's work through its influence on other cultural and educational institutions, and by narrowing down a range of outcomes to the organisation's assistance in building new institutions and cultural practices.

Since personal accounts and impressions become very important because documents alone cannot measure the impact of such work, the evaluators sought to solicit as many views as was possible by interviewing a large number of external resource persons (eight in total) to build a broader picture.

Again, given the nature of Ninasam's artistic and cultural ambitions, many of these interviews had to be free-flowing open ended discussions that were a departure from the semi-structured interviews that the methodology had prescribed.

Also language issues constituted a problem. Most resource persons were conversant only in Kannada, a language unknown to the evaluators. Though translators were available, nuances might have been lost, which is regrettable because the themes and issues under discussion were sophisticated and needed to be captured in their entirety.

The difficulties of evaluation, however, were reduced to a great extent by the willingness and cooperation of the Ninasam personnel and all resource persons contacted, as also and by the fact that the evidence made available was considerably strong and varied, ranging from documents to newspaper reports and documentary films.

5 Results

5.1 Results obtained in relation to intervention logic

Part of the end line evaluation consisted of an inventory of results achieved by Ninasam in comparison with outcomes and outputs planned. This section shortly describes the main findings of this document analysis.

The first *planned* output is the organisational development of Ninasam itself. The 2012 proposal mentions that they wish to improve their management and decision making capabilities. For this to happen, two organisational workshops were conducted, one exclusively for the Ninasam board and one with both Ninasam's board and representatives from other organisations. As a result of these meetings the board members divided their tasks and all worked on their own expertise, which improved the engagement of each board member. This output was completed in 2013.

The second *planned* output is the culture course, which aims to stimulate and facilitate dialogue with the theatre community on arts practice and cultural activism. Both in 2012 and in 2013 this culture course was held with respectively 167 and 178 participants. On average 75 resource persons were involved; mainly artists, writers and thinkers. The 2012 – 2013 annual report mentions unintended beneficiaries such as delegates from other educational and cultural organisations who gained experiences through the culture course, possibly contributing to their own programme and at the same time possibly increasing Ninasam's outreach. Increasingly the course becomes a networking event for new organisations, formed during previous culture courses. In terms of *planned* participants this output is difficult to evaluate. The proposals stated a goal of 1500 participants during the contract period. At the time of this analysis a total of 500 beneficiaries were accounted for, raising the question whether Ninasam is reaching its target by the end of 2014.

The last *planned* output in the analysis was the Summer Theatre Workshop, which targets young theatre practitioners and aimed to reach 25-30 young practitioners per workshop. During the two workshops which were held in 2012 and 2013 respectively 36 and 38 participants were registered. This shows that the workshop reached more beneficiaries than envisioned.

The results mentioned in this paragraph show that Ninasam is doing very well in terms of reaching their outputs and targets. Moreover, their work is reaching more beneficiaries and is resulting in new organisations and networks being set up.

5.2 Changes in civil society in the 2012-2014 period with particular focus on the relevant MDGs & themes in the selected country?

5.2.1 Civic engagement

Civic engagement describes the formal and informal activities and participation undertaken by individuals to advance shared interests at different levels. Participation within civil society is multi-faceted and encompasses socially-based and politically-based forms of engagement.

Generally speaking over the past two years, Ninasam's network of people engaged with the organisations in various ways has considerably increased. Since the baseline study:

- The number of alumni has increased from 400 to 440 persons, including 12 girls. Numbers of students cannot increase because the facilities are not enabling Ninasam to do so;

- The Tirugata traveling theatre increased its plays from 75 to 90 productions; increased its number of stages from 3000 to 3557 stages and; increased the number of locations from 250 to 270 locations. The audience attending the theatre increased from 2,000,000 to 2,200,000 persons of which 80 % are rural people, in particular women and youth;
- The October festival attracted 148 participants in 2010 and 182 participants in 2014;
- Its annual May Theatre workshop, sponsored by Hivos, had 33 participants in 2013 and 2014, of which 45% belong to the scheduled tribes or castes;
- Theatre groups of scheduled tribes or castes were formed that started to organise shows.

Apart from these figures, the Tirugata traveling theatre, the annual neighbourhood festival and other activities require the involvement of many volunteers that help to make these events a success. Ninasam collects informal and formal feedback from participants, resource persons, visiting artists, patrons, and NINASAM workers.

Score baseline 2013 on an absolute scale from 0-3 **3**
Score end line 2014, relative change on a scale of -2 → +2 **1**

5.2.2 Level of organization

This dimension assesses the organisational development, complexity and sophistication of civil society, by looking at the relationships among the actors within the civil society arena.

Generally speaking, Ninasam expanded its network in civil society considerably since the baseline. Much of Ninasam's work is focussed on cooperation with other organisations. It was doing so at the time of the baseline and has been continuing this during the contract period, especially through its culture course and the productions of Tirugata. Also, new relationships were established with 1) Mumbai Drama School which participated in the Theatre Workshop in May 2014, 2) India Theatre Forum with whom Ninasam started conducting Theatre Tours in 2013, and 3) Ninasam participated in several festivals and seminars of different organisations in Karnataka. Also, they have cooperated with the Manipal University to set up a Master programme in art.

Not only the number of organisations with whom Ninasam engages has improved, but also training institute has more applications and students enrolling from the scheduled tribes or castes and more female students; a theatre group of scheduled tribes and castes running shows on Dalit and transgender issues and, increased female participation in the culture course.

Ninasam's funding sources have become more diverse since the baseline, but it raised its concerns about ten ending of its partnership with Hivos in March 2015.

Score baseline 2013 on an absolute scale from 0-3 **3**
Score end line 2014, relative change on a scale of -2 → +2 **1**

5.2.3 Practice of Values

Practice of Values refers to the internal practice of values within the civil society arena. Important values that CIVICUS looks at such as transparency, democratic decision making, taking into account diversity that are deemed crucial to gauge not only progressiveness but also the extent to which civil society's practices are coherent with their ideals.

Ninasam as an organisation is very transparent and is. Their website contains most of the information about the organizations functioning and evolution. Reports and project data are readily available. Also, they hold meetings with local people and staff which help to change or modify their programmes. Both the staff and executive leadership indicated that the accountability in the organization has improved since the baseline when they organized as special workshop in 2013 dealing with downward accountability. The situation for this dimension stayed the same for many of the indicators, as Ninasam was already doing really well during the baseline.

Score baseline 2013 on an absolute scale from 0-3 **2**
Score end line 2014, relative change on a scale of -2 → +2 **0**

5.2.4 Perception of Impact

Generally speaking Ninasam has considerably increased its impact upon civil society in the past two years, has increased its engagement with both the private and the public sector and managed to influence private sector organisations. Although the organisation is trying to influence the government, no policy changes were observed during the end line.

Impact upon Civil Society

A major concern expressed by Ninasam mentioned in the 2012 baseline study was finding employment, which proved to be solved in 2014. Alumni find employ with Ninasam itself or in other arts institutes and schools; in television shows and serials. Alumni also joined other theatre repertories or founded their own troupes. Employment opportunities are even expanding because: Ninasam's courses and outreach programmes are popular and increase its credibility; the explosion of television channels in the South of India has created an enormous need for programming, and; Ninasam are passing selection procedures for higher studies at the National School of Drama (NSD). Another indicator to prove that unemployment is not a concern anymore is the difficulty that Ninasam currently experiences to mobilise its alumni to join the Tirugata traveling theatre, created in 1985 to help alumni gain working experience. Ninasam has become a brand in the sector, and helps alumni to find jobs, though opportunities within the public sector remain limited.

Apart from this, the popularity of Ninasam's activities, such as the culture course is increasing, and therefore also attracting celebrities to participate in debates on caste, politics and empowerment, which on one occasion was used by a leading newspaper and later published in a book. Alumni are returning to their native places and become artists in their own environment, and private theatre groups have been created across Karnataka state. Private colleges and universities integrate cultural education in their curricula. Ninasam touches base with its annual Neighbourhood Festival, which also helps identifying rural talents.

Apart from this increasing network across the state, Ninasam initiated the Study Tour over the past two years with the India Theatre Forum, enabling theatre practitioners across the country to visit other places. Participants pay they own fees and the tour has already had eminent theatre personalities and intellectuals attending and lecturing in it.

Collaboration and influencing public sector organisations

Collaboration with government institutes such as Academies and Universities has intensified since 2012. Joint seminars and workshops have been conducted; exchanges were organised; alumni are increasing being employed in these academies and they are present in government committees; college and university staff and students are attending Ninasam's activities; government entities are promoting Ninasam's activities and financial support is made available to support the Tirugata traveling theatre and the Ninasam Institute.

Since October 2012, Ninasam, through the India Theatre Forum, developed a participatory insurance scheme for artists and their families. It is currently influencing the government to implement the scheme, one of its activities being the organisation of an online petition.

Collaboration and influencing private sector organisations

Eminent corporate personalities have started to attend Ninasam's culture course and workshop, which is to be interpreted as a first step of further engagement with the private sector. Other collaboration consisted of organising workshops, art sessions and exchanges with private education centres. Influencing these private institutes consists of supporting these institutes in following its curriculum model and to deliver courses similar to those of Ninasam to their students. This type of influencing helps to further expand the Ninasam network but also its practices.

Score baseline 2013 on an absolute scale from 0-3	2
Score end line 2014, relative change on a scale of -2 → +2	1

5.2.5 Civil Society Environment

The social, political and economic environment in which civil society operates affects its room for manoeuvre. The civil society context has been described in chapter 3. In this section we describe how Ninasam is coping with that context.

India's government has implemented a disinvesting policy in the field of arts, culture and theatre for the past two years. As a result of this it has become difficult to get state grants, which is delaying staff payments.

The past two years has however also seen the endorsement of a new corporate policy that stipulates that every company, private or public, with a net worth of Rs 500 crore or a turnover of Rs 1,000 crore or net profit of Rs 5 crore, will be required to spend at least 2 per cent of its average net profit from preceding three financial years on corporate social responsibility issues.¹³ This could provide an opportunity for Ninasam that has not yet been seized.

Another challenge posed to theatre groups is the satellite tv, which is shifting the attention of audience from theatre to television.

In general, Ninasam's way of coping with the environment has not changed. They have always been dealing with the governmental and cultural challenges towards arts and theatre.

Score baseline 2013 on an absolute scale from 0-3	3
Score end line 2014, relative change on a scale of -2 → +2	0

5.3 To what degree are the changes attributable to the Southern partners?

This paragraph describes two outcomes achieved, as well as the role of Ninasam in realising these outcomes.

5.3.1 Increased exposure to political and social themes through Tirugata traveling theatre

The outcome achieved

The outcome is: More villages and inhabitants are exposed to political and social themes through Tirugata traveling theatre and are becoming aware of how these themes relate to their day-to-day livelihoods.

Tirugata, Ninasam's travelling theatre was formed in 1985 to support the students who have been trained with the Institute and were unable to find employment. The traveling theatre provided them the opportunity to work for about two years to obtain working experiences throughout the state.

In 2014 some of these are also appointed as full time teachers at the Institute. Over the years, Tirugata has also helped in spawning, rejuvenating and sustaining local organisations—variously local theatre troupes, cultural groups, festival organising committees, residents' associations etc—that are interested in hosting its shows and are likely to benefit from it.

Tirugata agrees to stage its performances upon invitation of local organisations. Wherever Tirugata goes, one or more local organisations that have shown interest are asked to provide money to meet Tirugata's expenses (Rs 16,000 in 2013, Rs 20,000 in 2014) along with food, lodging, theatre space and publicity related arrangements. These organisations manage ticket sales, and any money they make over and above Tirugata's fee is part of their profit. Through this process, the local organisations get publicity and an opportunity to interact with the broader community in town or village. If a local

¹³ Refer, http://www.business-standard.com/article/companies/an-overview-of-csr-rules-under-companies-act-2013-114031000385_1.html

theatre organisation is the host, it also performs with Tirugata, thus reaching a wider audience. After Tirugata's departure, local audiences have been known to ask for more shows, which Ninasam personnel interpret as Tirugata's contribution to the creation of an appetite for theatre amongst local communities. The Ninasam staff recalled over a dozen instances where villagers came together and formed "cultural organisations" with the sole purpose of inviting Tirugata to perform in their villages; some of these local bodies have continued to exist post the Tirugata performance and are still organising cultural activities. An example of this is Ranga Satkara Balaga (RSB) in Raichur district of Karnataka; its Chief Functionary Raghavendra Bhat says that he formed RSB inspired by Tirugata's plays. An academic, said that he is aware of local organisations that have been influenced by Tirugata; he does not remember the name of these organisations but recalls that there is a college in a place called Ujire in South Canara district and they have started their own theatre training programme, influenced by Tirugata. Another academic, confirmed the same. However, another resource person, who occasionally directs Tirugata plays, said that, "In general, this (Tirugata spawning/rejuvenating/sustaining cultural groups) has happened... but I cannot recollect groups/organisations that opened up between 2012 and 2014."

Moreover, the local and vernacular press reports the Tirugata performances, thus adding to the cultural awareness affected by the repertory.

There is an increase in the total number of productions of Tirugata in the last two years. Compared to 75 plays during the baseline, Tirugata has now 91 productions to its credit and the number of its staged shows has risen from 3000 to 3557, spread over 270 locations from 250 in 2012. The cumulative audience Tirugata has reached over the years of its existence has also grown from 2 million to 2.2 million persons in the past two years; 80 per cent of this audience is rural, with women and youth being its bulk.

The Tirugata manager keeps a thorough record of the new places being visited and other information related to the performance such as audience strength, infrastructural status of the theatre where the performance is staged etc. These records have been maintained since 1985, documented and published in the form of annual Tirugata reports. Such records are available for the years 2012-13 and 2013-14 that show that ten new places have been added to the list of places visited by Tirugata. It is to be noted that Tirugata performs two new plays each year, plays that it has not performed before—though the number of times they are performed might vary year to year. The names of four new plays staged between 2012 and 2014 are—Vigada Vikramaraya, Mukkam Post Bombilwadi, Gandhi vs. Gandhi and Seetha Swayamvaram.

Apart from Ninasam, other respondents attribute local theatre organisations to be contributing towards expansion in the number of sites. Ninasam connects with such organisations whose audience wants to come to Ninasam shows and such organisations undertake activities inspired by Tirugata which feeds into Ninasam's activities. Resource persons associated with Ninasam's activities confirm the role of such local organisations, even as they credit Ninasam for taking the more proactive role in exploring new territories.

Another contributing factor, according to Ninasam staff and a visiting freelance director at the campus, has been the increased awareness regarding theatre in the state as also a healthy cultural mindset and supporting socio-political climate that provides encouragement to theatre in the state. According to the evaluators, all of the above mentioned actors and factors—a combination of them— are responsible for the increase in Tirugata's performance sites and its staged productions between 2012 and 2014.

Inventory of explanations

There are mainly two explanations for the increased exposure of more villages and inhabitants. In the first place Ninasam's traveling theatre that was formed in 1985 and continued expanding upon request of theatre groups in villages. These organisations in their turn continue to exist and organise cultural events in their villages.

5.3.2 Ninasam's network has increased over the past two years

The outcome achieved

Ninasam's network is a very important aspect of the organization. The institute now has over 440 alumni, many of which are teachers and office bearers in Ninasam and other theatre institutes, while others are directors and have their own theatre troupes. Many of its alumni come back to teach in the Ninasam courses or are setting up local level theatre productions and companies. Ninasam's alumni find a space for their talent in popular culture forms such as television series; movies etc. and prefer to stay in big cities such as Bangalore where such art forms thrive. Some of them, however, aim to spread theatre in small towns and villages and set up local theatre production companies in remote backward villages and towns. Such groups and companies maintain relations with Ninasam and keep coming back to direct, teach, participate in workshops and perform at Ninasam. Some of the students of such theatre companies also come to Ninasam for pursuing the state-government-recognised-one-year-course in theatre at the Ninasam Institute. Both Ninasam and such local production groups can be credited for the achievement of this outcome¹⁴.

External resource persons state that there has been an upsurge in the level of interest in theatre in smaller communities in remote areas and small towns, largely generated by Ninasam. The organisation serves as a source of inspiration and the organisation trains its students to take up theatre activities and spread these in the state. One of the production companies also confirmed the ongoing resource sharing relationship between Ninasam and their organisation whereby students from such groups attend Ninasam's one-year course and ex-students take up work in Tirugata.

Ninasam's 1 year training model that incorporates theory and practice of theatre is a source of inspiration for other training institutes from both the public and the private sector and increasingly Ninasam engages with these centres to support the design of new courses and to start joint projects.

Through the annual study tour and other events that Ninasam organises with the India Theatre Forum (ITF), other Drama schools also seek collaboration with Ninasam in multiple ways. One example is collaboration with two drama schools, one of which contracted a Ninasam alumni as the principle and alumni as teachers.

NINASAM's network also increases through the annual cultural courses that started 24 years ago. Another important outcome is the increase in participants in the culture courses. These started 24 years ago. It hosts renowned artistes and academics as its participants, which also helps attract a number of their fans. Over the years, the popularity of the course has led to an increased participation from 148 persons in 2010 to 182 in 2013.

Most people interviewed credited Ninasam solely for the sustained success of the culture course. One resource person, however, suggested that there might be some connection, albeit a very weak one, between the increases attendance of the culture course and the general rise in the number of college students due to a proliferation of newer colleges in smaller towns.

Inventory of explanations

The above description of the outcome identifies roughly four explanations for the expanded network of Ninasam. These are the Ninasam alumni network; the Tirugata traveling theatre; the culture course; and intense collaboration with drama schools and universities. This expanding network also needs to be seen in the context of a proliferation of newer colleges for drama.

¹⁴ Ninasam and other respondents

5.4 What is the relevance of these changes?

5.4.1 Relevance of the changes in relation to the Theory of Change of 2012

NINASAM's 2012 dream is "world with cultural sensitivity". Cultural sensitivity means that people should care about enabling and including everyone. Direct prerequisites for achieving this dream are 'a balanced cultural ecology' and "natural resource management with people". Both signal that culture is directly attached to natural resources and to indigenous culture. People from outside are welcome, but they should not impose their lifestyle, thinking and culture upon the people NINASAM is working with. And communities cannot hold to their culture when forests, hills, land and water are taken away from them. One important condition to ensure the linkage between culture, natural resources and lifestyle is that the 'culturally conditioning apparatus is removed', which includes television or other factors and actors that 'condition' the mindsets and behaviour of people and the acceptance as agriculture as a lifestyle rather than a business.

In order to achieve this, existence of diversity, networking, and favourable policies are necessary and representing one layer. Favourable policies will be the result of healthy decentralised autonomous institutions like Panchayats, health centres or schools, as well as of a functional democratic system. The other layer to remove the 'culturally conditioning apparatus' are basic economic security, holistic education (meaning the integrated study of the sciences, humanities and the performing arts), democracy and community engagement.

Ninasam's most important interventions mentioned in 2012 consist of ensuring holistic education, engaging communities as volunteers and ensure networking.

The past two years have seen that Ninasam has continued to ensure holistic education model that is now increasingly being used in private colleges and universities in the state. The organisation mobilises volunteers when having Tirugata performances in their place and it engages deeply with its own village Hegoddu during the yearly neighbouring festival and during other activities. Its network has become bigger and more diverse over the past two years. Apart from these, those that receive their education from Ninasam, increasingly represent scheduled castes, tribes and women, which will help to expand the cultural diversity in its network.

One important condition in its ToC has however not been removed, which is the 'culturally conditioning apparatus' which also increasingly employs Ninasam's alumni.

5.4.2 Relevance of the changes in relation to the context in which the SPO is operating

The main audience of Ninasam's work are rural people and local artists. This group is normally not able to attend theatre as most of the productions are in English. Ninasam performs in the local language as they work with local artists, which makes it possible for their target group to attend the productions.

Also, the productions of Ninasam often focus on issues which are relevant for society. They try to make issues such as gender and casts known to people by using it in their productions. As they work in the local language, they are educating people who would normally not have access to intellectual productions as they are mostly in English. This has been a large contribution to society. The changes made by Ninasam's productions are therefore very relevant to rural people. Moreover, as these productions are performed in local language most of the artists participating are also local. This gives small artists a chance to perform in large productions and become really involved in the world of arts and theatre. Through its increasing reputation, Ninasam's alumni increasingly find jobs in the arts sector, which helps Ninasam also to expand its network.

5.4.3 Relevance of the changes in relation to the policies of the MFS II alliance and the CFA

Ninasam had not been supported by other organisations before Hivos started financing them. Hivos framed the programme 'pluralism' for India, under which the work of Ninasam is important. Pluralism

focuses on the fact that there is a lot of diversity in the population, and it supports organisations that emphasise the strengths of this diversity. The programme does not only look at arts as a sector but it ties it back to social issues such as casts and gender.

The changes achieved by Ninasam are highly relevant in relation to the Hivos policy or pluralism. They bring diversity in the population, such as cast diversity and gender roles, to the attention of their public. With this work, they are contributing to the programme of Hivos.

5.5 Explaining factors

5.5.1 Internal factors

Ninasam is promoted by a family reputed for their contribution to theatre and literary culture in India. Ninasam's current treasurer, KV Akshara, is regarded as the head of the organisation. He is the son of late KV Subbanna (1932–2005), an acclaimed Kannada dramatist and writer, founder of the Ninasam theatre institute and Akshara Prakashana a publishing house that continues to promote Kannada literature related to theatre, including translations of plays from other languages. Both the theatre institute and the publishing house are based in the Subbanna's native village Heggodu. A small village where KV Akshara, alumnus of the prestigious National School of Drama (NSD) and UK's University of Leeds, chose to return to ensure that Subbanna's legacy lives on.

Over the years, Ninasam has contributed to the vitality of the cultural life of Heggodu and, indeed, the state. Hivos' programme titled "Ninasam: Creating a larger communitarian base for theatre" is, in fact, the organisation's mission in many senses. The institute now has over 440 alumni, most of them from rural parts of the state, some from Heggodu. Its travelling theatre troupe, Tirugata, established in 1985, has most of Ninasam's alumni working in it for about two years after passing out. It provides them with opportunity and exposure to perform before large audiences through the state, while promoting theatre in the larger community. This even as Ninasam organises Oorumane Utsava or The Neighbourhood Festival, a four-to-five-days-long festival held in the Ninasam campus in February-March every year that has local artists putting up performances without taking any fee/honorarium and the entire expenditure being borne through local donations. Ninasam's week-long annual October festival, culture course, meanwhile, has many nationally acclaimed artistes and intellectuals performing and attending it, and it attracts participants from across the country. The latest addition to the Ninasam's activities is the annually-held May Theatre Workshop in 2013 and 2014, organised using Hivos funds.

The evaluators' interactions with the Ninasam personnel during the evaluation workshops, both the baseline and the end line, made it evident that the organisation was democratic. For instance, though only the executive leadership and middle management had been requested to be available for detailed interviews on the claimed outcomes on the second day of the end line workshop, Ninasam functionaries from all levels chose to be present, explaining that work around art and culture had no hierarchies. Everyone participated with equal enthusiasm and ownership.

Even so, it was also evident that KV Akshara is the lynchpin holding together such beliefs and vision. He also seems to be about the only person in the organisation with the credentials and language to negotiate the larger external world comprising national and international artistes, bureaucracy and funders, among others. No definite plans seem to be drafted yet regarding K V Akshara's succession plan. A lot of the vision is passed on through the family, but the experience of changing hands in Prithvi Theatre shows that vision and mission change between generations (Klaver et al, 2013).

5.5.2 External factors

Karnataka has a long history of numerous traditional art forms that are today protected and promoted by organisations like Ninasam. But the organisation continues to face a growing challenge resulting from government disinvestment in the field and increasing competition from films and television.

The Karnataka government in the past two years has withdrawn its support significantly to the states arts, culture and theatre organisations. This process has been taking place over the last decade where

the government has been diverting funds towards the Kannada film industry rather than the previously vibrant theatre groups.¹⁵ This has created a major problem for organisations like Ninasam which rely partly on state grants that gradually drying up or getting delayed.

The state today is mainly identified nationally and internationally because of the Information Technology (IT) tag attached to its cities like Bangalore. As such, there has been an increasing emphasis on developing this sector further. This has resulted in other sectors like arts and culture suffering in comparison. Not only that, there has also been slow and gradual divergence of state resources towards the development of cities. This has led to the rest of the state, especially its rural parts, lagging behind in terms of infrastructure, development, access to health and education. The monthly per-capital expenditure in rural Karnataka is lower than the all India average.¹⁶

With easy access and availability of satellite television has led the audience to shift their focus from theatre to television. It has also meant growth of cultural insensitivity amongst the people, only to be further aggravated by affinity of the youth towards right-wing politics and alienation from social problems. There has been an increasing intolerance towards minorities like Christians. This is visible in the growing number of attacks against the community in the form of murder, assault, rape, and church attacks in the state.¹⁷ Trying to confront this challenge, Ninasam has tried to revitalise theatre culture through its activities like Oorumane Utsava featuring a medley of plays and other cultural activities.

There has also been cultural breakdown partly resulting from the type and quality of Kannada news channels and television series, which are consumed widely by the people.¹⁸ In the rush for TRPs (Television Rating Points) the channels in the name of news focus on cheap political drama, crime and even household quarrels as "breaking news".¹⁹

5.5.3 Relations CFA-SPO

The contract with Hivos will end in 2015, and no new contract has been approved. This results in worries from Ninasam staff and management in terms of their financial security. As the culture course was funded with Hivos money, the future of this part of the work is uncertain. The executive leadership, however, shared that Ninasam might now have to look for multiple sources to fund the culture course.

Since the baseline study Hivos closed its office in Bangalore in December 2013, and expected to open its new office in the first semester of 2014 in Mumbai.

6 Discussion

6.1 Design of the intervention

Ninasam has developed its programme in such a way that they have set realistic goals and have not deviated from these goals. The evaluators believe that this is an important part of the design as it makes the project workable. A lot of the intervention is based on working with local artists and staff, which makes it possible to trigger debate on social issues in rural areas which would normally not have access to such productions.

6.2 Replication of the intervention

Ninasam's focus and determination are key to the successes of the project and as been mentioned mister KV Akshara is holding together the beliefs and the vision of the organisation. All the outcomes achieved in the 2012 -2014 period have been built upon investments made in the past, such as the Tirugata traveling theatre which was created in 1985, the culture course which started 24 years ago and its Theatre Institute in 1980. Al these years have contributed to the expansion of the network and the reputation Ninasam has today.

Ninasam is a family based organisation and a lot of its vision is passed on through the family, but new generations, like new leaders in other organisations may change their vision and mission, as was the case with Prithvi Theatre (Klaver et al, 2013).

A particular feature of Ninasam's vision is that it is grounded into its 'balanced cultural ecology' and "natural resource management with people" which are then conditioning indigenous culture. It vision also states that communities cannot hold to their culture when forests, hills, land and water are taken away from them.

Based upon the aforementioned information a replication of this programme run by Ninasam would require long term investments beyond a project modus of working; would require a leadership with a strong vision and mission and the competencies to relate with the outside world and competencies to understand the culture in which it is grounded. Apart from these, staffers need to be enthusiastic and take ownership of the interventions.

Chances of successful replicability of this programme seem rather limited.

7 Conclusion

Changes in Civil Society

In the 2012 – 2014 period the two most important changes that took place in the civil society arena of Ninasam are related to *civic engagement* and *perception of impact*.

With regards to *civic engagement*, the evaluators observe that the number of alumni, people attending different theatre shows, participants attending workshops have increased in the past two years. Moreover those that take part in the education activities, courses and workshop increasingly represent scheduled tribes, castes and women, hence ensuring an increased diversity. Most of Ninasam's cultural activities rely upon community members working as volunteers to make things happen. Its audience mostly consists of rural people who do not speak English. As Ninasam performs in the local language, they are contributing to the knowledge of these local people on social issues such as gender and casts.

With regards to *perception of impact*, NINASAM's concern that its alumni would become increasingly unemployed did not materialise, because its general network is expanding, its reputation increased; it managed to attract celebrities to make contributions to events that become more popular. It has expanded its network with other NGOs in the sector, as well as intensified its collaboration with both public and private sector organisations. Concrete examples of collaboration are its initiative to organise Study Tours together with the India Theatre Forum, which became a successful event within the two years of their existence; exchange visits between public and private sector colleges and universities on the one side and Ninasam on the other side; as well as joint workshops and courses. In terms of policy influencing Ninasam, through the India Theatre Forum, lobbies the government to implement an insurance scheme for artists and their families. Ninasam, through its collaboration with private colleges and universities that want to duplicate its curriculum model is changing the educational practices of these institutions.

Contribution analysis

A quick contribution analysis was conducted for Ninasam.

The fact that more villages and inhabitants are exposed to political and social themes through Tirugata traveling theatre and are becoming aware of how these themes relate to their day-to-day livelihoods can be explained by Ninasam's traveling theatre in the first place. The theatre was formed in 1985 and continued expanding upon request of theatre groups in villages. These organisations in their turn continue to exist and organise cultural events in their villages.

Ninasam's expanded network can be explained by its expanding alumni network that has people working on many locations; the Tirugata traveling theatre; the culture course; and intense collaboration with drama schools and universities. This expansion also needs to be positioned in a context where many drama schools are currently being created.

Relevance

Interviews with staff of Ninasam, with external resource person, with the liaison officer of Hivos, as well as contextual information helped to assess the relevance of Ninasam's interventions in terms of; its Theory of Change (ToC) for Civil Society (SC) as designed during the baseline study; the context in which Ninasam is operating; the CS policies of Hivos.

With regards to the 2012 ToC, Ninasam's most important interventions consist of ensuring holistic education, engaging communities as volunteers and ensure networking with a wide range of actors. The past two years have seen that Ninasam has continued these interventions successfully and that the organisation is still grounded in Heggodu, the village where the organisation is based. One important condition in its ToC has however not been removed, which is the 'culturally conditioning apparatus' which also increasingly employs Ninasam's alumni. This refers to the influence of TV broadcasts and the increasing use of mobile phones by youth, which disorients people from their original cultures and roots.

With regards to the context in which Ninasam is operating, its interventions and outcomes achieved are relevant because they are bringing theatre to local, often rural people. These people would normally not have access to such productions as they are limited in their travelling and often do not speak English. Ninasam works with local artists to bring productions to their audience in their local language.

With regards to the Hivos Civil Society policies, Ninasam’s interventions and outcomes are relevant because they contribute to its ‘pluralism’ programme, which helps to make people aware of India’s population being diverse and culturally rich. Ninasam’s productions contribute to this by educating people about issues related to a diverse society.

Explaining factors

The information related to factors that explain the above findings was collected at the same time as the data were gathered for the previous questions. The evaluation team looked at internal factors within Ninasam, the external context in which it operates and the relations between Ninasam and Hivos.

The most important internal factor that explains the findings comprises in the first place the leadership of Ninasam by mister KV Akshara who is the lynchpin holding together Ninasam’s beliefs and vision. He is the only person with the capacity to engage with the larger external world. The organisation is a family -driven organisation with leaders and staff who share the same strong vision. Being based in a small village they are close to their target groups and are able to adjust their productions to the needs of their target groups. However no definite plans seem to be drafted yet regarding K V Akshara’s succession plan.

External factors that explain the findings are most importantly the attitude of Karnataka towards arts and theatre. The region is highly perceptible to theatre productions which results in high attendance levels of the productions. The government had started decreasing their financial support for arts and theatre productions over the past years. Together with the growth in television popularity this is a worrying development for organisations as Ninasam.

Factors that explain the findings that are related to the relation between Ninasam and Hivos are the closing of Hivos’ Bangalore office in 2013. However, even without their donor they managed to carry on with their work and achieve important outcomes in their project. The staff does however worry about the continuing of their work as funding from Hivos is uncertain.

Table 2
Summary of findings.

When looking at the MFS II interventions of this SPO to strengthen civil society and/or policy influencing, how much do you agree with the following statements?	Score
The CS interventions were well designed	8
The CS interventions were implemented as designed	8
The CS interventions reached their objectives	8
The observed outcomes are attributable to the CS interventions	8
The observed CS outcomes are relevant to the beneficiaries of the SPO	8

Score between 1 to 10, with 1 being “not at all” and 10 being “completely”.

Appendix 1 Civil Society Scores

This table presents the appreciation of the evaluation team regarding changes occurred for each indicator between 2012 and 2014 on a scale of -2 to + 2

- 2 = Considerable deterioration
- 1 = A slight deterioration
- 0 = no change occurred, the situation is the same as in 2012
- +1 = slight improvement
- +2 = considerable improvement

Dimension		Indicators	Question	Change
Civic engagement	1	Needs of marginalised groups	How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies?	+2
	2	Involvement of target groups	What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities?	0
	3	Political engagement	How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups?	0
Level of organisation	5	Relations with other organisations	In the past 12 months what has been the most intensive interaction you had with other CSOs?	+2
	5	Frequency of dialogue with closest CSO	In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with?	+1
	6	Defending the interests of marginalised groups	Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs?	+1
	7	Composition current financial resource base	How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendance to workshops of other CSOs; costs for organisational growth and/or networking?	+1
Practice of Values	8	Downward accountability	To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them?	+1
	9	Composition of social organs	What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for?	0
	10	External financial auditing	How regularly is your organisation audited externally?	0

Perception of impact	11	Client satisfaction	What are the most important concerns of your target groups? How do your services take into account those important concerns?	+2
	12	Civil society impact.	In the past 12 months, what impact did you have on building a strong civil society?	+1
	13	Relation with public sector organisations.	In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives?	+1
	14	Relation with private sector organisations	In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective?	+1
	15	Influence upon public policies, rules, regulations	How successful have you been in influencing public policies and practices in the past 2 years?	0
	16	Influence upon private sector agencies' policies, rules, regulations.	How successful have you been in influencing private sector policies and practices in the past 2 years?	+1
CS context	17	Coping strategies	In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society.	0

Appendix 2 Changes in civil society indicators between 2012 and 2014

1. Civic Engagement

1.1 Needs of marginalised groups

The NINASAM Theatre Institute admits 20 students every year with most coming from Karnataka's small towns and villages, some from Heggodu, the village NINASAM is based in. It is committed to taking at least six girls in every batch. Earlier there wouldn't be applications to fill up even these seats; but the Institute has now started receiving unsolicited applications from aspiring girl students. There are currently six girl students in NINASAM.

The number of students, including girl students, has remained constant between 2012 and 2014, because the NINASAM campus has limited space that is already being used to its optimum. The Institute also admits non-Kannad students to encourage learning and assimilation of varied cultures²⁰. The current batch has students from Puducherry and Kerala.

Despite the Institute's static student strength, the programme managers and field staff observed that NINASAM's outreach has improved since the baseline.

For one, the NINASAM Institute that had produced more than 400 theatre graduates from rural Karnataka in 2012, now it has over 440 alumni. Many among these are teachers and office bearers in NINASAM and other theatre institutes, while others are directors and have their own theatre troupes. These alumni keep coming back to direct, teach, participate in workshops and festivals and perform at NINASAM, and carry the Institute's values forward through their work in the world outside.

Secondly, there is an increase in the total number of productions of Tirugata²¹, NINASAM's travelling theatre troupe, in last two years. Compared to 75 plays during the baseline, Tirugata now has 91 productions to its credit and the number of its staged shows has risen from 3000 to 3557, spread over 270 locations from 250 in 2012. The cumulative audiences Tirugata has reached over the years of its existence has also grown from 2,000,000 to 2,2000,000 persons in the past two years; 80 per cent of this audience is rural, with women and youth being its bulk.

Thirdly, NINASAM's seven-days-long annual October festival, culture course, that has many nationally acclaimed artistes and intellectuals performing and attending it, continues to attract participants from across the country. Its participant strength has grown from 148 in 2010 to 182 in 2014. It has to be qualified here that because of the campus' limited accommodation area the participant numbers are unlikely to grow substantially from now on given that a saturation point has already been reached.

Fourthly, the annually-held May Theatre Workshop in 2013 and 2014, organised using Hivos funds, had 45 per cent SC/ST (Scheduled Castes/Scheduled Tribes) students among its 33 participants, many of whom many were selected for the Institute's year-long programme. Eleven of the 33 participants were women.

Fifthly, the Institute's alumni from the SC/ST communities have added to the body of work around the issues related to these communities. In 2013, Janamanadata, a troupe founded by a former teacher

²⁰ The medium of instruction at the NINASAM Theatre Institute is Kannad. All students are therefore committed to learning Kannad when they join the Institute.

²¹ Tirugata, NINASAM's travelling theatre troupe was established in 1985. The institute came about when 100 trained students had passed out and were unemployed. Most alumni work in the repertory for about two years after passing out. It provides them with opportunity and exposure to perform before large audiences through the state. *Refer*, http://www.ninasam.org/pdf/Ninasam__tirugata_Consolidated_report_2013.pdf

and NINASAM alumnus belonging to the SC community, staged the plays Baba Saheb Ambedkar²² and Urukeri, the latter based on the autobiography of a famous Kannada Dalit poet. Another production Badukubaiyalu was based on the life of a transgender person named Revati. These productions were well received.

Score: +2

1.2 Involvement of target groups SPO

As during the baseline, so also now, community engagement and volunteerism remains the intrinsic core of NINASAM's work. NINASAM ensures this at various levels while planning and implementing their activities: a) whenever and wherever Tirugata stages shows, local residents and groups who invite it are asked to pay an upfront sum for the show, and then manage other operations themselves. This includes getting sponsorships, ticketing, booking of venue, formalities with the police and licensing authorities etc; b) Oorumane Utsava²³ (The Neighbourhood Festival)—a four-to-five-days-long festival held on the NINASAM campus in February-March every year—has local artists putting up performances without taking any fee/honorarium and the entire expenditure being borne through local donations; c) apart from the feedback session on the last day of the October culture course, every year NINASAM makes it a point to collect feedback from participants, resource persons, visiting artists, patrons, and NINASAM workers concerning all aspects of the culture course and it does this through informal as well as formal means.

Given that NINASAM was already performing remarkably well with regard to involving its target groups in decisions regarding its activities at the time of the baseline, the fact that the executive leadership and field staff reported no change in the situation is expected. The programme managers, however, observed an improvement in the quality of involvement of their target groups. They shared that two theatre troupes, founded by their alumni belonging to the SC/ST communities, Janamanadata and Attamata, had done very well over the past two years. Of the plays these groups had produced and performed, one was based on Baba Saheb, the second on the life of an illustrious Dalit poet, and the third on the struggles of a transgender person.

Score: 0

1.3 Intensity of political engagement

NINASAM is apolitical. While the organisation does interact with certain departments of the state government on a regular basis for funding etc, its interaction with locally elected bodies is very limited.

Score: 0

2. Level of Organisation

2.1 Relations with other organisations

The past two years have seen NINASAM constant in its belief that existence of diversity is at the centre of all cultural and artistic endeavour. And that shared interests, common causes and united purpose—despite differences—can be discovered only if conscious and sustained efforts are made to create a networked society.

So like in 2012, most of NINASAM's interventions, outside its Institute, are around facilitating networks with other theatre, art and culture groups and communities. The annual culture course

²² Dr. Bhimrao Ramji Ambedkar was an Indian freedom fighter who fought against discrimination meted out to 'untouchables' and lower castes in Indian society. He was also the main architect of the Indian Constitution.

²³ The Neighbourhood festival or Oorumane Utsave which began six years ago by NINASAM attracts artists and cultural groups from its immediate surroundings. These presenters perform a number of folk songs, dances, ritual observances, classical dances and plays etc.

continues to bring together people and groups from across the country, while the Oorumane Utsava (Neighbourhood Festival) has local residents and troupes flocking to the NINASAM campus every February-March. And as Tirugata goes to newer places each passing year to stage its plays, the tasks of box-office collections and organising the performances are entrusted to newer local organisations based in towns and villages of Karnataka; these organisations often continue to communicate with NINASAM.

This even as NINASAM's interactions with the following continue: a) Karnataka Yakshagana Bayalata Academy²⁴, established by the government of Karnataka; b) Rangayana²⁵, the state sponsored repertory company from Mysore; c) the Folklore Department of the Karnataka University²⁶, Dharawada; d) Attakkalari²⁷, the movements arts training and performance organisation from Bangalore; e) Trivi Acts²⁸, Trivandrum; f) India Foundation for the Arts²⁹, Bangalore; g) Puppet House³⁰, Dharwad.

Over and above its past alliances, however, NINASAM forged new relationships through its activities in the past two years: a) The Drama School³¹, Mumbai, associated with NINASAM informally, and its productions were brought to the May Theatre Workshop in 2014; b) In association with India Theatre Forum (ITF)³², NINASAM started conducting Study Tours since 2013, in which members of various theatre organisations from across the country come together for about a week, and see and discuss each other's work; c) NINASAM has been participating in the festivals and seminars conducted by various organisations in Karnataka, which include the National Festival at Mudabidre at Rangayana, Mysore; d) Ninasam has tied up with the Manipal Centre for Philosophy and Humanities (MCPAH) at the Manipal University³³ to start a Masters in arts and performance from academic year 2015-16; e) NINASAM's production of Rabindranath Tagore's Babugiri was sent to the prestigious National Theatre Festival³⁴ in Kolkata in 2013.

Also, beginning 2013, NINASAM started a new fellowship programme under which two of its outstanding students are appointed to assist in teaching the fresh batch of students with the Ratan Tata Trust (SRTT)³⁵ financing their salaries.

²⁴ The Karnataka Yakshagana Bayalata Academy, established by the state government is based in Udipi. It works towards promoting Yakshagana, a traditional theatrical art form originating in Karnataka. It presents mythological and historical stories.

²⁵ The Rangayana drama school was established as a repertory funded by the Karnataka government which later on was set up as a theatre institute. The school was established in Mysore, Karnataka. Most of the teachers at the school are NINASAM alumni. *Refer*, <http://www.mysoresamachar.com/dramainst.htm>

²⁶ The department of folklore studies aims to study and research folklore and to create awareness about traditional knowledge in society. It was established in 1996. *Refer*, <http://www.kud.ac.in/Docs/About%20Dep%20of%20Folklore.pdf>

²⁷ Attakkalari Centre for Movement Arts is an organisation working in the field of contemporary movement arts. The main aim of the centre is to make dance a viable career option for today's youth. It was established in 1992. *Refer*, <http://www.mybangalore.com/article/0711/echoes-of-music-and-dance-at-attakkalari-centre-in-bangalore.html>

²⁸ Trivi Acts is an arts management group. Its main aim is to promote new perspectives in art appreciation. It is also involved in art education programmes through workshops and seminars. *Refer*, <http://triviartconcerns.blogspot.in/p/about-us.html>

²⁹ India Foundation for the Arts is an NGO that supports practice, research and education in the arts in India. *Refer*, <http://www.indiaifa.org/about-us/about-ifa.html>

³⁰ Puppet House, a Centre for Theatre and Puppetry specialises in leather shadow puppetry which is quite prevalent in Dharwad and its surrounding areas. It uses puppetry not only to educate but also to sustain the traditional art form. *Refer*, <http://www.thehindu.com/todays-paper/tp-features/tp-fridayreview/art-of-puppetry/article869210.ece>

³¹ The Drama School was started in 2013 with the aims of creating "a new generation of theatre makers" and "to promote the awareness of theatre". There is close interaction between the school and NINASAM, as both schools perform plays at each other's campus. *Refer*, <http://thedramaschoolmumbai.in/?portfolio=the-vision>

³² India Theatre Forum (ITF) is an "attempt was to understand 'Indian Theatre' in all its multiplicity and diversity, bringing these several faces of Indian theatre face to face, and problematise the issues that arise therein." *Refer*, <http://www.theatreforum.in/>

³³ Manipal Centre for Philosophy and Humanities (MCPAH) was established in 2010 in Manipal University. It offers programs in philosophy, sociology and English etc. They are also collaborating with NINASAM to start a drama course at the centre. *Refer*, <http://manipal.edu/mcph/department-faculty/department-list/manipal-centre-for-philosophy-and-humanities.html>

³⁴ The Nandikar National Theatre Festival in Kolkata is one of the biggest theatre festival in the country. It was started in 1984. It is a ten-day festival that brings performers from all around the country and abroad. *Refer*, <http://nandikar.net/about-the-nandikar-national-theatre-festival/>

³⁵ Sir Ratan Tata Trust (SRTT), named after the younger son of Tata Empire founder Jamsetji Tata was established in 1919 and today it exists as one of India's oldest grant bestowing foundation. *Refer*, http://www.srtt.org/about_us/overview.htm

Score: +2

2.2 Frequency of dialogue with closest civil society organisation

Like in 2012, NINASAM interacts with other organisations throughout the year, and such interactions are accentuated during the October culture course and Oorumane Utsava held in February-March.

The programme managers and field staff said that the past two years had seen newer and frequent interactions with some organisations, one being the Manipal Centre for Philosophy and Humanities (MCPAH). The facilitation of a collaborative course with MCPAH had NINASAM conducting two workshops, and in preparatory consultations before that, with it. It may be noted though that technically MCPAH is an educational institute and not a CSO. Another set of frequent interactions was with The Drama School, Mumbai, and Rangayana, Mysore.

Score: +1

2.3 Defending the interests of marginalised groups

The past two years have seen an improvement in NINASAM's involvement with defending the interests of marginalised groups and communities. Some manifestations of these are: a) of the 120 who applied to the Institute during 2014, 40 applications were from SC/ST aspirants; of these, 11 SC/ST students were selected for the 20 seats on offer; b) Janamanadata, a group run by an alumnus and now a teacher at the NINASAM Institute, mounted two productions, one on the biography of a transgender activist, and another on Dalit issues, and the shows travelled to some 50 places in Karnataka; c) an entirely OBC³⁶ (Other Backward Classes) troupe mounted a Tala Maddale³⁷ performance (which is a form dominantly practiced by upper caste people) for the Oorumane Utsava; e) the last two culture course had an 60 per cent women participation.

Score: +1

2.4 Composition financial resource base

In 2012, funding for NINASAM was drawn from various sources. The NINASAM funded its productions, Oorumane Utsava, lectures, buildings and maintenance of infrastructural developments with the help of voluntary inputs and small ad-hoc support. They also generated income from activities such as ticket revenues. The NINASAM Theatre Institute received grants and funding from the department of Kannada & Culture, Government of Karnataka (GoK) and Hivos. These funds took care of the teachers' and visiting faculty salary, student stipends, production and workshop expenses (partial) and administrative expenses (partial). The Tirugata repertory covered its production, travel and other miscellaneous expenditures like publicity and administrative expenses from the show revenue and publicity sponsorships. Salary for the actors and visiting faculty was taken care of, by the Hivos and Government of India (GOI) funds. The local organisations that invited them to perform were asked to manage all operations after paying the repertory an upfront sum for the show. All expenses related to

³⁶ The Other Backward Classes (OBCs) a category that includes the underprivileged, the marginalised castes, tribes and communities. The state under article 15(4) and 16(4) of the Indian constitution is empowered to create special provisions for their upliftment. Refer, <http://www.teindia.nic.in/Files/Reports/CCR/Sachar%20Committee%20Report.pdf>

³⁷ Tala-Maddale is an ancient form of art of Karnataka and Kerala. It is a derived form of Yakshagana—a classical dance or musical form of art from the same region. A typical Tala-Maddale show consists of veteran artists sitting in a circular fashion along with a Bhagavata (the singer, with 'Tala' or pair of small hand cymbals) and a 'Maddale' (a type of drum) player. Artists play the roles of characters in stories, typically, from Ramayana, Mahabharata and other puranas. The show is a superb presentation of oratorical skills. Artists are normally well versed with the Hindu epics and puranas. Kannada language is the normal medium of communication.

the culture course and other timely workshops and programmes were also covered by the Hivos funding and support from NINASAM Pratishtana³⁸ and other sources of small grants.

The situation remains much the same, except that NINASAM's Hivos funding faces imminent end in March 2015, even as NINASAM has found new funders.

Understandably, therefore, despite the continuing multiplicity of funding sources, the programme managers and field staff interviewed for the end line felt NINASAM's financial situation had deteriorated since 2012. The field staff was apprehensive about a scenario bereft HIVOS support, a crucial if not the only funder for over 12 years. The programme managers echoed the worry, and regretted that NINASAM's applications for the renewal of HIVOS funding and larger support from the Ratan Tata Trust, had seen no progress yet—even though beginning 2013, the Ratan Tata Trust is financing a new NINASAM fellowship programme under which two of its outstanding students are appointed to assist in teaching the fresh batch of students. Also, an application to the state government for inputs like buses is still awaiting a positive outcome. The executive leadership was much more optimistic. And, in fact, saw improvement in NINASAM's funding situation, citing as an example, NINASAM's newfound support from Sir Dorabji Tata Trust³⁹ for a Visiting Fellowships project during 2013. Also, in 2013, the Central-government-funded Sangeet Natak Academy issued a grant to support and promote Tirugata.

Score: +1

3. Practice of Values

3.1 Downward accountability

As it was in 2012, the NINASAM executive leadership continues to be fully accountable to the social organs. Also, the organisation's website, www.NINASAM.org, contains all the organisational details, by-laws, history and evolution of NINASAM with information on the executive committee and staff. Detailed information on the various units, such as the Theatre Institute, Tirugata, culture course and other projects including various reports and databases are also readily available for scrutiny. Besides this, NINASAM also shares information about its accounts, activities, success and shortcomings with the beneficiaries and other stakeholders by circulating annual reports to all the stakeholders and by keeping in touch with all the stakeholders and members of the NINASAM community through their newsletter Maathukathe. On an informal level, meetings and discussions are held with the local people, trustees and staff. These interactions help NINASAM to change/modify certain programmes.

The NINASAM staffers, including its executive leadership, however, reported an improvement vis a vis accountability issues in the organisation since the baseline. They reasoned that a special workshop in 2013 had made downward accountability an important discussion topic in many meetings held since then. The day-long workshop had four invitees—a theatre director, creative thinker, socialist thinker and sociologist—and NINASAM executive and advisory committee members discussing the organisation. It was a feedback session. All activities of Ninasam were discussed there. The consequent analysis was very powerful and future plans were drawn up, including several measures to include a cross section of people from various rungs of NINASAM's organisation have been developed.

Score: +1

³⁸ K.V. Subbanna of NINASAM was give the Ramon Magsaysay award for creating greater public awareness about arts, culture and education. He passed on the entire purse of the award to NINASAM which used it to create a trust—NINASAM Pratishtana. The money is being used for extension programmes of NINASAM like, literature appreciation courses on culture and education across the state. Refer, <http://www.ninasam.org/history/brief-history/>

³⁹ Sir Dorabji Tata Trust was established in 1932 by Sir Dorabji Tata, the elder son of group founder Jamsetji Tata. The trust offers monetary assistance to students, economically disadvantaged patients and NGOs across the country. Refer, <http://www.tata.in/aboutus/articlesinside/Sir-Dorabji-Tata-Trust-and-the-Allied-Trusts>

3.2 Composition of Social Organ

NINASAM is promoted by a family reputed for their contribution to theatre and literary culture in India. The Board of Trustees has 15 members. In 2012, the Board included one woman, it now has two women.

Score: 0

3.3 External financial auditing

As in 2012, so also now, auditing in NINASAM is done periodically and statutory accountants are made to audit and certify the accounts. External financial auditing is an annual event. A general body meeting is held twice a year where the annual report and audited accounts of the previous year are approved along with the next year's budget.

Score: 0

4. Perception of Impact

4.1 Client satisfaction

Baseline interviews with NINASAM staffers, its partners, its alumni and theatre veterans revealed that the most important concern for NINASAM's target groups—namely its students and alumni—was finding employment. Towards this, NINASAM had set up Tirugata, its travelling theatre repertory, in 1985; graduates from the Institute could join Tirugata and gain practical experience in performing before varied audiences. Some alumni were also employed as teachers at the NINASAM Institute. Others—thanks to the state-government-recognised ten-month certificate course in Theatre Arts from the NINASAM Institute—found employ and assignments in other Institutes, schools, and television shows and serials. Many alumni joined other theatre repertories and some founded their own troupes such as the Theatre Samurai, Bhoomi, Janamanadata and Attamata.

In 2014, not only do these avenues of employment continue to remain open to the NINASAM alumni, they have expanded.

To begin with, the increasing credibility and popularity of NINASAM's courses and outreach programmes over the past two years have seen a zoom in the number of applicants for these.

For instance, the number of applications for NINASAM's theatre course increased from 70 before 2012 to 121 in 2013-14. Similarly, the number of applications for its annual 21-day May Theatre Workshop has gone up from 80 before 2012 to 240 in 2013-14. These growing numbers are both the reason for—and consequence of—NINASAM's untiring work over the years to promote theatre and the arts among Karnataka's small and large communities. This present upsurge in the level of interest in theatre has, in turn, considerably improved employment opportunities for its alumni.

For one, improvement in the quality and impact of Tirugata shows has led to an increase in the demand for such shows by locals—variously local theatre groups, cultural organisations, festival committees, residents associations etc. This growing demand and appreciation for its performance, has also seen the salaries of the Tirugata artists—many of whom are NINASAM alumni—being raised; from Rs. 6000 a month in 2012 to Rs. 10,000 since 2013.

Second, as compared to 2012, NINASAM now finds it hard to get its alumni to join Tirugata. The NINASAM staffers said this is due to many more lucrative employment opportunities being on offer over the past two years. These include teaching in other theatre institutes (some of NINASAM's alumni have even become principals and in-charges of such institutes), teaching in colleges and schools, conducting theatre workshops, setting up short term theatre courses and theatre schools cum production companies and informal travelling troupes on the lines of Tirugata. For instance, Bhoomi, a theatre group started by two NINASAM ex-students, began conducting evening classes for theatre in Tunkur district since 2012.

Third, the explosion of television channels in the South of India has created an enormous need for programming. Most Kannad television serials in today feature NINASAM graduates, some work in movies, and yet others in theatre groups. Many among these are successful, and some have even adopted NINASAM as their last name to earn recognition. A case in point is Sathish Ninasam, an alumnus and actor who debuted with the film *Madesha* (2008), appeared in small but significant roles in films like *Manasaare* (2009), *Pancharangi* (2010), *Lifeu Ishtene* and *Drama* (2012), till shot to fame after his performance in the 2013 film *Lucia*⁴⁰ which received huge critical acclaim. This, in turn, has fed back into NINASAM's popularity amongst others who want to emulate these successful artists.

Fourth, many of the NINASAM students are now getting selected for higher studies at the National School of Drama (NSD)⁴¹, Delhi. This in itself opens up a plethora of career possibilities across the nation for such students.

Despite this proliferation of opportunities, the NINASAM staffers felt that government departments and institutions were yet to open their doors to the Institute's graduates in a meaningful and sustained fashion. They were, however, satisfied that anxiety over work opportunities for NINASAM graduates have been allayed greatly over the past two years.

A NINASAM alumnus, interviewed for the end line, said that NINASAM serves as an inspiration for its former students who take up the task of spreading theatre in Karnataka's remote villages and towns, sharing an emotional bond with the Institute and its faculty as they do. This alumnus himself runs a theatre production company in a small town in Karnataka's Tumkur.

Score: +2

4.2 Civil society impact

In 2012, NINASAM staffers refused to make any claims with regards to the organisation's civil society impact stating that they do not know what, or whether they have indeed, made any impact on civil society. While maintaining that NINASAM cannot and does not have any mechanisms of measuring the changes that it affects in civil society, they did offer certain qualitative indicators that could help gauge NINASAM's impact. These included i) the prestige carried by NINASAM's seven day culture course that sees most Karnataka cultural organisations, locals as well as visitors from other parts of the state and from outside the state, visiting Heggodu to participate; ii) the spur in the quality of debate in certain circle of youngsters, teachers, professionals involved in theatre and allied arts in Karnataka, attributed in part to NINASAM's presence in the state; iii) the democratisation of theatre and the arts through engagement of people from different strata of society in NINASAM's activities as performers, audience, delegates and volunteers.

While the above-mentioned criteria still remain the qualitative, if ambiguous, measures of NINASAM's impact on civil society, the end line evaluations had the organisation's personnel offering the following towards a more substantial assessment of the same:

- a) increasing demand for NINASAM's productions;
- b) rise in applications for its courses and programmes.

Over and above which, however, the staff agreed that NINASAM's impact continues to be acknowledged in indirect ways in the public realm. They presented some examples:

Increasing popularity of the culture course, which attracted eminent literary figures such as social scientist Ashis Nandy⁴² and poet-painter Ghulam Sheikh⁴³ to participate and give talks on the subject.

⁴⁰ [http://en.wikipedia.org/wiki/Lucia_\(2013_film\)](http://en.wikipedia.org/wiki/Lucia_(2013_film))

⁴¹ The National School of Drama (NSD) is a theatre training institute. It was set up as a constituent body by the Sangeet Natak Akademi in 1959 which falls under the control of the erstwhile Ministry of Education and Culture. The school has over the years produced some of the most talented actors, directors and script-writers etc. of Bollywood film industry. Refer, http://nsd.gov.in/image/Eng_Annual_Report_2014.pdf

⁴² Ashis Nandy is sociologist and clinical psychologist. He has a large and varied body of work to his name bringing into focus issues of nationalism, modernity, secularism, and development etc. He has written numerous books, to name a few, *The Intimate Enemy* and *The Illegitimacy of Nationalism* etc. Refer, <http://www.csds.in/ashis-nandy>

The culture course has evolved as a platform to discuss and debate issues of social importance—caste, politics, empowerment etc—that could contribute towards improvement of the quality of community life. For instance, during the 2012 culture course, a debate on caste in Indian society was initiated by Professor Gopal Guru⁴⁴ and Sundar Sarukkai⁴⁵, and the editor of the leading Kannada newspaper *Prajavani*⁴⁶ was present. As a result, this debate was carried forward in that newspaper between January and July 2013. This debate is now published as book.

The NINASAM personnel and those who have known the organisations over the years vouch that the students who have been trained at the NINASAM Institute, as well as those who have been delegates at the culture course or training workshops at NINASAM have gone back to their native places and enriched the general quality of life especially in the field of arts.

Deriving inspiration from NINASAM's work, private theatre groups have been set up across the state. The founder of The Drama School, Mumbai, told the evaluators that his institute set up in 2013 was based on the NINASAM model. Also, private colleges and universities have started focusing on cultural education and awareness as an integral part of their curriculum for holistic development of students. As an instance, the Manipal Centre for Philosophy and Humanities (MCPAH) at the Manipal University has proposed a tie up with NINASAM to start a Masters in arts and performance from academic year 2015-16.

Oorumane Utsava has helped promote the revival of theatre and cultural sensitivity within the local community. Over the past two years, it has seen an increasing audience base as well as growth in the level of interest amongst actors to perform at such festivals. It has served as a platform for showcasing of rural talent in theatre activities, sharing of resources and learnings, cultural enrichment and broadened the communitarian base of theatre in the state.

NINASAM, along with the India Theatre Forum (ITF), initiated the Study Tour over the past two years. Theatre practitioners from across the country visited the NINASAM campus for the week-long Tour. The delegates, including NINASAM students, interacted, saw and learnt from each other's performances, participated in workshops, and in special Kannada literature sessions etc. In 2013 and 2014, 10 and nine people attended the Study Tour respectively, they paid their own fee. The announcement of the Tour is made on the NINASAM website, inviting response. The Tour has already had eminent theatre personalities and intellectuals attending and lecturing in it.

NINASAM, through its Institute, workshops, festivals, and even through the informal evening gatherings of the residents from around Heggodu in its campus has, and continues to, enable people to come up, talk, discuss and disagree, and make for a vibrant cultural life.

Score: +1

4.3 Relation with public sector organisations

Before 2012, NINASAM engaged with public sector organisations in Karnataka and collaborated with them to conduct seminars and workshops. These included the Yakshagana Academy (established by the Government of Karnataka), to organise a three-day seminar on Yakshagana at Heggodu in 2011, and the Folklore Department of the Karnataka University, Dharawada, to organise a three-day seminar

⁴³ Ghulam Sheikh is a poet-painter. He published and co-edited a journal of arts and ideas called *Vrishchik* between 1969 and 1973. He also taught fine art and history at the Faculty of Fine Arts, M.S. University, Baroda. *Refer*, <http://vadehraart.com/artist/artistDetails/38>

⁴⁴ Gopal Guru is a professor at Jawaharlal Nehru University. He has researched and written extensively on social movements and Indian political thought. He is the author of the book – *Humiliation: Claims and Contexts*. *Refer*, <http://www.jnu.ac.in/Faculty/gguru/>

⁴⁵ Sundar Sarukkai is the director of the Manipal Centre for Philosophy and Humanities (MCFPAH) at the Manipal University. He is trained in physics and philosophy. He is also the author of *Translating the World: Science and Language, Philosophy of Symmetry and Indian Philosophy and Philosophy of Science*. *Refer*, <http://www.nias.res.in/aboutnias-people-faculty-past-sarukkai.php>

⁴⁶ *Prajavani*, the oldest Kannada daily newspaper was founded in 1948 in Bangalore alongside sister publications – *Deccan Herald*, *Sudha* and *Mayura*. It's a family run newspaper and is under the ambit of The Printers (Mysore) Private Limited. *Refer*, <http://www.indiapress.org/gen/news.php/Prajavani/>

cum workshop on the women's performing traditions at Heggodu in 2012. NINASAM also had a series of exchanges with Rangayana, a state sponsored repertory company from Mysore.

Over the past two years, NINASAM's presence, directly or indirectly, has increased in public sector organisations and discourses. For instance: a) in the Central Government constituted Sangeet Natak Academy⁴⁷, there are more than five NINASAM alumni. This presence has also been registered in many other government committees such as Gubbi Veeranna Award⁴⁸ Selection Committee; b) government colleges and public universities have started deputing their staff and students to NINASAM activities such as the culture course and workshops organised in the NINASAM campus; c) grants given by the state government for the NINASAM Institute have also increased, albeit by a small amount. These grants are used to support the salaries of the staff. Government departments such as culture and Human Resource departments promote Tirugata within the state. In 2013, the Sangeet Natak Academy issued a grant to support and promote Tirugata.

Score: +1

4.4 Relation with private sector agencies

NINASAM, which saw no interactions with private sector before 2012, has witnessed an upsurge in the level of interest of the corporate world. The past two years saw eminent corporate personalities such as N.R. Narayana Murthy from Infosys, T.V. Mohandas Pai from Manipal Global Education, and Chandrashekhar Kakal from L&T Infotech attending the culture course and workshops. Presently this has not translated into actual funding or collaboration, although, NINASAM staffers think that it is a first step towards a more fruitful involvement of the private sector in NINASAM's activities and with its target groups which include the culturally sensitive community spread all over Karnataka, and even outside. Moreover, the staffers feel that with the recent changes in the CSR (Corporate Social Responsibility) rules⁴⁹, NINASAM is ready to play the conduit between an interested corporate sector and indigenous communities and the folk arts.

Apart from this, the following definite interactions have taken place over the past two years: a) with the Manipal Centre for Philosophy and Humanities (MCPAH), Manipal University to organise workshops on Philosophy and Natyashastra (sessions on poetry and dramatics); b) with the Roopashree Pre-University College⁵⁰, Kedralasara, Heggodu to organise cultural programmes for its students in 2012 and 2013, whereby the students visit NINASAM campus and receive training in poetry, theatre and music from the organisation's faculty; c) with The Drama School, Mumbai to organise student performances in NINASAM campus in May, 2014; d) with Shri Dharmasthala Manjunatheshwara (SDM) College⁵¹, Ujire in February, 2013 towards a theatre workshop organised by Tirugata for the students of the college.

Score: +1

⁴⁷ The Sangeet Natak Academy is an autonomous body with the Ministry of Culture. It was India's first national academy of dance, music and drama set up by the government of India in 1953. Its main purpose is the preservation of traditional art forms across India. *Refer*, <http://www.sangeetnatak.gov.in/sna/sna1.htm>

⁴⁸ The Gubbi Veeranna Award is bestowed by the Karnataka Government. Eminent theatre and film personality and founder of Rangayana, the late B V Karanth was a recipient of this prestigious award.

⁴⁹ The Companies Act 2013 as well as Companies (Corporate Social Responsibility Policy) Rules 2014 demands that every company, private or public, with a net worth of Rs 500 crore or a turnover of Rs 1,000 crore or net profit of Rs 5 crore, will be required to spend at least 2 per cent of its average net profit from preceding three financial years on corporate social responsibility. *Refer*, http://www.business-standard.com/article/companies/an-overview-of-csr-rules-under-companies-act-2013-114031000385_1.html

⁵⁰ <http://www.vshsk.in/about>

⁵¹ <http://www.sdmcjire.in/>

4.5 Influence upon public policies, rules, regulations

NINASAM has been instrumental in inspiring the setting up of many theatre institutes in Karnataka. The NINASAM repertory, Tirugata, was the first theatre company in Karnataka which then influenced many people like B V Karanth⁵² who started the first state-funded repertory in Mysore named Rangayana in 1989.

NINASAM, through the India Theatre Forum (ITF), has played a pivotal role in developing a social security module—named Kala Kalyana since the 2012 baseline. This project has been initiated to develop a participatory insurance scheme for artists and their dependents to provide security against ill health, accidents, infirmity, death and old age. NINASAM has developed the proposal and is working towards influencing the government to implement the scheme: petition started in October 2012 and recorded 1,000 supporters in July 2013⁵³.

Seven years ago, the Karnataka government introduced a new scheme of appointing drama teachers in over 50 or 60 schools in Karnataka. Most of the recruits for those posts were graduates from NINASAM. However, according to NINASAM staffers, this practice stopped after an initial few appointments. Towards this, the NINASAM Old Students' Association passed a resolution in 2013 to begin lobbying with the government to reinstate the process and submitted a letter in this regard to the Minister of Education, Government of Karnataka; the result is awaited.

Score: 0

4.6 Influence upon private sector agencies' policies, rules, regulations

As compared to the baseline, where NINASAM staffers saw no role for them in influencing private sector policies, rules or regulations, positive changes have taken place in this context over the past two years. Between 2012 and 2014, NINASAM has influenced private institutes and groups to follow its curriculum model and come up with similar courses for their students.

For instance: a) NINASAM is working in collaboration with the Manipal University to start a Masters programme in Arts and Performance studies from the academic year 2015-16. The proposal involves NINASAM engagement with the planning of curriculum, teaching, and as a signatory in the final certification; b) NINASAM alumni have been appointed as teachers in private colleges which have started culture courses and/or have come up with (or are planning to come up with) exclusive dramatic drama departments or dramatic clubs. Two such colleges are the DVS College of Arts and Science⁵⁴, Shivamogga, Karnataka and SDM College, Ujire c) the private theatre group, Ghooni Rangasanshodhna Kendra, has started its own school following the NINASAM model; d) new theatre groups have evolved such as Subbanarangsamuh and Voddoallaga; e) some private institutions conduct smaller courses influenced by NINASAM's culture course, such as a group in a village called Manchkeri.

It may be noted that instances listed c, d and e could not be verified independently by the evaluators.

Score: +1

5. Environment

The primary problem faced by NINASAM is the government's policy of disinvestment in the field of arts, culture and theatre in the past two years. This has led to a problem of mobilising basic funds.

⁵² Babukodi Venkataramana Karanth (1929–2002) was a renowned film and theatre personality. He was director, actor and musician of modern Indian theatre both in Kannad as well as Hindi, and one of the pioneers of Kannada and Hindi new wave cinema. He was decorated with the Padmashri (1981), the Kalidas Samman, the Sangeet Natak Akademi Award (1976) and the Karnataka government's Gubbi Veeranna Award. In 1989, the Karnataka government invited him to set up a repertory in Mysore, which he named Rangayana and headed until 1995.

⁵³ http://theatreforum.in/m/itf-core/?tab=projects&object_id=3

⁵⁴ <http://www.dvsdegreecollege.org/>

The Institute employees do not get salaries on time because of the delay in state grants. Understandably, therefore, though the amount of grants provided by the state government to the NINASAM Institute has gone up slightly, this remains an insignificant relief for the staffers.

The Companies Act 2013 as well as Companies (Corporate Social Responsibility Policy) Rules 2014 provide an opportunity for organisations as Ninasam to obtain financial support. The Act and the Rules demand that every company, private or public, with a net worth of Rs 500 crore or a turnover of Rs 1,000 crore or net profit of Rs 5 crore, will be required to spend at least 2 per cent of its average net profit from preceding three financial years on corporate social responsibility⁵⁵.

Recognising the need for social security for theatre professionals, NINASAM has been working on influencing the government to implement a participatory insurance scheme for artists and their dependents, namely Kala Kalyana. The scheme aims to provide security against ill health, accidents, infirmity, death and old age. NINASAM has also been working on a proposal towards advocacy with the government on issues concerning filling of vacant positions—teaching as well as non-teaching—left by permanent employees in theatre and arts. The government at the moment allows such positions to be filled on an ad-hoc basis, thereby negatively impacting association and motivation of theatre professionals with the institute.

Another problem faced by the organisation is the arrival of satellite television and increasing affinity to such media attractions as television and mobiles. This easy availability has led to the audience shifting their focus from theatre to television. It has also meant growth of cultural insensitivity amongst the people, only to be further aggravated by affinity of the youth towards right wing politics and alienation from social problems. Trying to confront this challenge, NINASAM has tried to revitalise theatre culture through its activities like Oorumane Utsava featuring a medley of plays and other cultural activities.

NINASAM has always evolved contextually rather than focusing on one big vision which has led to a greater acceptance of difference and plurality.

To cope with the challenges posed from the outside world, NINASAM devised some small but significant activities over the past two years. For instance, in July 2012, NINASAM invited some critical thinkers and activists from various parts of Karnataka, and conducted a brainstorm session with them to ponder on the challenges being faced by contemporary arts organisations and the possible ways to cope with such problems.

Report CDI-15-040

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Report CDI-15-063

Klaver, D.C., Desalos, C., Wadhwa S., Madaan A., Kalra A., Mohapatra B.P., February 2015, *Network of Northeast Tribes end line report; MFS II country evaluations, Civil Society component*, Centre for Development Innovation, Wageningen UR (University & Research centre) and International Development Foundation (IDF). Report CDI-15-063. Wageningen.

This report describes the findings of the end line assessment of the Network of Northeast Tribes (NNET) in India that is a partner of Mensen met een Missie.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses NNET's efforts in strengthening Civil Society in India based upon the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2013. Key questions that are being answered comprise changes in the five CIVICUS dimensions to which CSA contributed; the nature of its contribution; the relevance of the contribution made and an identification of factors that explain CSA's role in civil society strengthening.

Keywords: Civil Society, CIVICUS, theory based evaluation, process-tracing

1 Introduction

This report presents the civil society end line findings of the Network of Northeast Tribes (NNET) in India which is a partner of Mensen met een Missie under the Communities of Change alliance. It is a follow-up to the baseline assessment that was carried out in May 2013. According to the information provided during the baseline study NNET is working on the theme good governance and civil society building.

These findings are part of the overall evaluation of the joint MFS II evaluations to account for results of MFS II-funded or –co-funded development interventions implemented by Dutch CFAs and/or their Southern Partner Organisations (SPO) and to contribute to the improvement of future development interventions. The civil society evaluation uses the CIVICUS framework (see appendix 1) and seeks to answer the following questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- What factors explain the findings drawn from the questions above?

The CIVICUS framework that comprises five dimensions (civic engagement, level of organization, practice of values, perception of impact and contexts influencing agency by civil society in general) has been used to orient the evaluation methodology.

Changes in the civil society arena of the SPO

In the 2012 – 2014 period the two most important changes that took place in the civil society arena of the SPO are related to Civic Engagement and Perception of Impact. NNET was able to reach out to more Adivasis people, including more youth and women, as well as to more other marginalised groups although the involvement of these beneficiaries has not changed and remains very limited. Besides 3 members of NNET having won panchayat elections, NNET in Tripura has continued involving local political bodies. The number of applications filed by PLPs more than doubled between the period 2012-2013 and 2013-2014 and is to be interpreted as an increased satisfaction of the direct beneficiaries of NNET's programmes. PLPs are also involved in more complicated cases and have been able to trigger collective action which has been successful. Nevertheless, relationship and influence on public or private sector organisations have not improved and a change like ensuring ST status to Adivasis in Assam have not been achieved yet.

These findings were obtained through an analysis of documents, a workshop and follow-up interviews with the SPO, and interviews with external resources persons working in civil society organisations that receive support from the SPO; other civil society organisations with whom the SPO is collaborating; public or private sector agents and; external resource persons capable of overlooking the MDG or theme on which the SPO is concentrating.

Contribution analysis

Based upon an analysis of the projects and programmes financed by the Dutch CFAs a selection was made of SPOs to be included in an in-depth process tracing trajectory and those to be included for a quick contribution assessment. NNET was amongst those SPOs selected for in-depth-process tracing.

The outcome that tribal communities in Assam and Tripura in the villages where PLPs are active avail of their legal rights and entitlements can be explained by the following:

Factors valid for all villages in the state consist of; the above mentioned laws that create a conducive environment for both Adivasis and for NNET; improved accessibility of Tripura in terms of roads and mass media, which increases people's awareness about their rights and duties; easier access to education, and local governments showing commitment. All these factors are *necessary but not sufficient (conditions)* to ensure Adivasi households their access to the schemes and welfare programmes.

Several actors, including NNET, support Adivasi to avail of their rights, whilst using different strategies: the PLPs of NNET file applications or if necessary RTI applications, other NGOs work as pressure groups or use the same approach as NNET does. All these interventions are sufficient on their own to explain the outcome (after the above mentioned conditions have been met). It is to be observed that the effectiveness of the NNET programme largely depend upon the capacities and the motivation of PLPs to support Adivasi communities.

Relevance

Interviews with staff of NNET, with external resource person, with the liaison officer of Mensen met een Missie (MM), as well as contextual information helped to assess the relevance of NNET's interventions in terms of; its Theory of Change (ToC) for Civil Society (SC) as designed during the baseline study; the context in which NNET is operating; the CS policies of MM.

With regards to the baseline ToC, the interventions and outcomes achieved are relevant because most of the interventions align with the condition 'legal awareness'. They have also partly contributed to the conditions 'gender equality', 'economic equality' and 'socio-cultural-political equality' but unfortunately, they have not been to achieve successes to align under the condition 'favourable policies'

With regards to the context in which NNET is operating, its interventions and outcomes achieved are relevant because they benefited the women and the Adivasi community, considered the poorest of the poor.

With regards to the CS policies of MM, NNET's interventions and outcomes are relevant because they align with MM's India overall strategy which is about strengthening the Adivasi group so that they are aware of their rights. Nevertheless, MM would have liked NNET to go beyond helping the community reaching programmes and schemes towards handling atrocities.

Explaining factors

The information related to factors that explain the above findings was collected at the same time as the data were gathered for the previous questions. The evaluation team looked at internal factors within NNET, the external context in which it operates and the relations between NNET and MM. Internal factors within the SPO that explain the findings are: constant change in leadership, poor internal cohesion, disengagement between the two components of the programmes and possibly tensions between the partners and the resource team (LCHR).

External factors that explain the findings in both states are poor infrastructure, connectivity and lack of adequate modes of transportation. Specific to Assam, flooding and riots have interfered with NNET's work. In Tripura, the cadre-based party makes functioning difficult for organisations like NNET to work on rights-based issues and holding the government accountable.

Factors that explain the findings that are related to the relation between NNET and MM are the long relationship between the two organisations and investment in building the capacity of NNET which unfortunately but consciously is ending with MFS II.

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the MDG/theme NNET is working on. Chapter three provides background information on NNET, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with MM. An evaluation methodology has been developed for the evaluation of the Civil Society component which can be found in the appendix to the country report; however, deviations from this methodology, the choices made with regards to the selection of the outcomes for contribution analysis, as well as difficulties encountered during data collection are to be found in chapter 4. The answers to each of the evaluation questions are being presented in chapter 5, followed by a discussion on the general project design in relation to CS development; an assessment of what elements of the project design may possibly work in other contexts or be implemented by other organisations in chapter 6. Conclusions are presented in chapter 7.

2 Context

This paragraph briefly describes the context NNET is working in. A description of the Civil Society Context assessed according to the CIVICUS framework is provided in appendix 3 of the country report for Civil Society.

2.1 Political context

Assam

Assam is a north-eastern Indian state that has protested long for being deprived of central government attention. Poverty has risen in most of the north-eastern part of India, including Assam which now counts 11.6 million persons below the poverty line¹.

The 2014 general elections unravelled the most important political change in Assam since the baseline. The Indian National Congress, which dominated the state's politics for most of its political history, was defeated in the state and the centre, the Bharatiya Janata Party (BJP) came to power in both.

The Assam Movement began with the United Liberation Front of Assam (ULFA) in 1979, because the northeast felt disconnected with mainstream India. The All Assam Students Union (AASU) raised the foreigners issue (Indian Bengalis and Bangladeshi immigrants), demanding their deportation. This anti-alien feeling shaped Assam's politics since, to be resolved on paper with the Assam Accord² in 1985. Agitations, however, turned militant. The State imposed the Armed Forces Special Powers Act³ in 1990, unleashing human rights violations by the army.

The state has witnessed a number of ethnic clashes and riots. In July 2012, wide-scale violence took place targeting the Bengali immigrants. Riots broke out between the immigrants and the indigenous Bodo community. It pushed 400,000 people into relief camps and resulted in the death of 77 people. Since 2001, 2400 persons have been killed (2095 civilians and 306 security personnel) and over 5500 injured due to militancy related violence in Assam.⁴ In May 2014, 31 people were killed in another ethnic violence against "outsiders".⁵

Tripura:

Tripura, another north-eastern state, has 19 tribal communities. Tripuri is the largest tribe, followed by the Reangs. The government has termed them as "primitive tribes"⁶. According to the 2011 census 31.8 per cent of Tripura's population are tribal groups and 69 per cent ethnic Bengalis.

Tripura's political context has not undergone dramatic changes since the baseline. The dominance of the Communist Party of India-Marxist (CPI-M) continues since 1993. In the state Assembly elections of 2013, CPI-M won 49 seats of 60 seats. The vote was for a status quo as Chief Minister Manik Sarkar's term since 1998 has seen peace and development.

¹ The Planning Commissions Tendulkar Report of 2011,

² Assam Accord was a Memorandum of Settlement (MoS) signed in 1985 by the government of India and the representative of Assam movement. Refer, <http://indianexpress.com/article/india/india-others/assam-accord-bjp-state-unit-chief-disowns-subramaniam-swamys-comments/>

³ AFSPA (Armed Forces Special Powers Act) is a 1958 act of Parliament imposed in the states of Manipur, Assam and Jammu & Kashmir which has witnessed many insurgent protests. On account of the many powers it gives to the armed forces there have been many human rights violations committed by them. Refer, http://www.hrdc.net/sahrdc/resources/armed_forces.htm

⁴ According to the State Forest and Panchayat Minister Rockybul Hussain.

⁵ Bodoland militants who have been demanding greater autonomy for themselves are suspected of the attack.

⁶ Due to their economic dependence on hunting, shifting cultivation and poor literacy

The non-tribal ethnic Bengalis who have benefitted from CPI-M's rule is their major support base. The Indigenous Nationalist Party of Twipra (INPT) and Nationalist Socialist Party of Twipra are tribal parties opposed to Bengali domination.

The "the insurgency-politics nexus and the external support mechanism of insurgency" has shaped the politics of Tripura. The nexus between political parties and insurgent groups like the National Liberation Front of Tripura (NLFT) and All Tripura Tiger Force (ATTF) is clear when violence is often used as a method to change poll dynamics. Insurgent groups in neighbouring states of Mizoram and Manipur have fuelled the movement of arms and ammunitions in the region. The porous border with Bangladesh that many north-eastern states share is often held responsible for weaponry in the region; many also believe that Bangladesh serves as training ground for insurgency.

2.2 Civil Society context issues with regards to the theme good governance and civil society building

Assam:

Assam faces the same civil society issues as it did during the baseline: communal riots, Adivasi rights, and floods.

There are 23 Scheduled Tribes (ST) in Assam; Adivasis, also called "Tea Tribes" are a sub-group among them and considered outsiders by Assam's indigenous tribes as their ancestors were brought from the Chotanagpur region to work in the state's tea gardens. They mainly inhabit the state's Kokrajhar, Nagaon, Darrang, Tinsukia, Jorhat, Dibrugarh, North Cachar and KarbiAnglong regions. Adivasis are denied the ST status because "...tribal identity is forever linked to her or his place of origin". The Adivasis have been fighting for their status because they suffer abject poverty, illiteracy and political disenfranchisement. Indigenous tribes like Boros and Bodos have threatened the government with dire consequences if Adivasis are given the same ST status as them.

In 2012 Assam had witnessed massive riots between the Bengali-speaking Muslims and the indigenous Bodos. 2014 also witnessed violence when Naga insurgents attacked villages killing 15 people in August and made 10,000 villagers internal refugees. Student groups blocked the highway leading to Nagaland in response. The police used batons and tear gas to clear the highway, which resulted in the death of two protestors.

The 2013 floods also exacerbate the civil society situation in Assam, destroying agricultural harvests, infrastructure and livelihoods: 11 out of 27 districts were inundated at that time. The September 2014 flash floods again caused landslides in many areas.

Tripura:

Tripura has a primarily agrarian economy, is geographically isolated, has poor infrastructure and high incidences of poverty. Despite its poor economic growth leading to rising poverty, the state has an encouraging Human Development Index (HDI): according to the 2001 and 2011 censuses the ratio of women per 1000 men has increased from 948 to 961 respectively, the literacy rate has risen from 73.19 per cent to 87.75 per cent.

Civil society continues to cope with the effects of poor development whilst the cadre-based CPI (M) party that has ruled the state since 1993 still exercises strong control over the local politics and government machineries.

Insurgency has declined over the years, although political parties continue to use it as an election issue to garner votes. In the last decade, the government has attacked insurgency and pushed for development. The Tripura Tribal Areas Autonomous District Council has been created to design development programmes for the state's tribal population. More than 95 per cent of population now has access to drinking water, and 80 per cent have electricity. Tripura is considered one of the best implementers of the employment guarantee scheme MNREGA.

3 Description of the SPO and its contribution to civil society/policy changes

3.1 Background of the SPO

The Network of North East Tribes (NNET) was founded in 2007 with a concerted focus on the Tribal community in the North East of India. Various organisations involved with the cause of the Adivasis and tribes of Assam, Tripura and Manipur⁷ decided to work together on these complex issues.

At the moment of the endline, NNET is formed of 10 civil society organizations based in Assam or Tripura. These civil society organisations are mostly religious organisations/branches. Since the baseline, two partners have been replaced in Assam but the organisations in Tripura have remained the same. At the time of the end-line, NNET Assam is made of: SMI sisters (at Baganpara), Fatima sisters (at Kumarikatta) - replacing GanaChetanaSamaj and Human Empowerment and Development Centre (HEDC) at Mazbath, Sisters of our Lady of Fatima, Auxilium convent HEDC (at Tinsukia) and FAsCE India at Chapar in Bongaigaon District.

In Tripura, the partners are: Deepika Social Service Centre/ Bethany Sisters, PabitraAtma Society (both in Moharpara and in Gandacherra), Association for Social and Human Advancement (ASHA) - social department of the Society of the fathers of Holy Cross and St. Joseph of Annecy sisters in Kamranga.

The Network started with the women literacy programme in Assam and Tripura, and after much consultation it was decided to focus on understanding the rights of the Adivasis and tribes, safeguarding their rights and bringing justice. In 2010-2011, the Network with the help of Legal Cell for Human Rights (LCHR) implemented a pilot on capacity building and legal assistance for Adivasis in the areas where the co-partners are active.

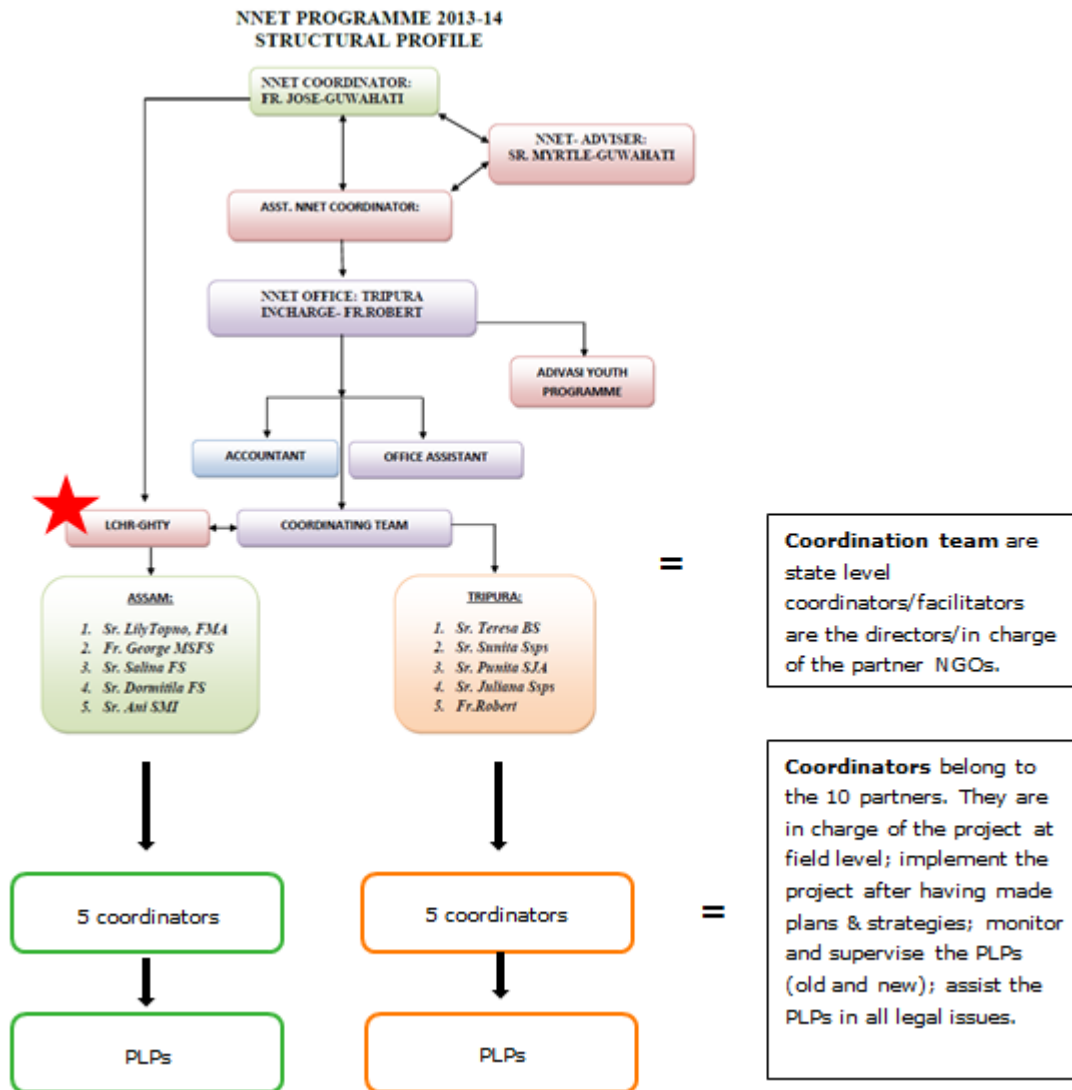

NNET is a network of a number of organisations with one vision 'to work as a catalyst in promoting Right Based Development to the Adivasis and indigenous tribal communities'.

NNET adopts a number of strategies that have been developed over time:

- Educational Empowerment- Adult Education and Educational Sponsorship;
- Legal Awareness, education and accompaniment to achieve the rights;
- Training of Para Legal activists in rural areas;
- Empower tribal leaders to analyse the social situations and understand the partisan system that denies them their rights;
- Generation of confidence and opportunities for skill development for youth and women.

⁷ At the start of the project Manipur was also included, but due to small results and an instable area, it was decided to leave this state out of the project after the first year.

As of the 2013-2014 project is concerned, the structure is as follow⁸:

The resource team of the project is from LCHR-Legal cell for Human Rights, Guwahati. It has a distinct role in Assam and Tripura. At Tripura it serves only as a resource team responsible to provide legal training. However, in Assam it has accepted the responsibility of organizing, and conducting of the trainings as well as, implementing and following up of the legal components of the project at grass root level. It will also distribute the honorarium to the coordinators and PLPs and submit quarterly/ half yearly and annual reports to the NNET coordinator.

⁸ This representation is based on the project proposal for the 2013-2014 period. Only some of the roles and responsibilities are mentioned. For all information please look at the project proposal.

3.2 MFS II interventions related to Civil Society

The 'Capacity building of tribal leaders through para legal & skill trainings' project is financed by MFS II and its goal is to build the legal capacities of Adivasis and other marginalized communities in Tripura and Assam as a means to empower them to claim their constitutional and legal rights. The project follows a rights based approach whose main strategy is to train local leaders (Para Legal Personnel) in new villages on a yearly basis who are in charge of addressing legal issues in their village. A recently added strategy is to organize women and youth groups in respective areas so that they can serve as pressure groups.

The project objectives are as follow:

1. To disseminate legal knowledge to the grass root level communities and individuals.
2. To train local leaders from villages in legal knowledge and advocacy skills
3. To empower local leaders to take up legal issues to fight for justice and protect human rights
4. To train and capacitate Para–Legal Personnel with legal knowledge, information and legal procedure.
5. To empower women and youth to organize themselves as pressure groups to take up issues of their community and also enhance their livelihood opportunities.
6. To build up legal capacity of voluntary organizations and MM partners

The first four objectives are closely linked to the CIVICUS dimensions 'civic engagement', whereas the last two objectives are associated with 'level of organisation'.

4 Data collection and analytical approach

4.1 Adjustments made in the methodology of the evaluation

The evaluators had to adapt the field work such that it accommodated the following:

1. Home to tension and strife between different ethnicities, Assam went through an especially turbulent phase in 2012 with communal violence in two districts of Assam adjoining the Bangladesh border; displacing 400,000 people and with 73 dying in clashes by August 2012¹⁰. In consequence the MFS II baseline workshops which were supposed to take place in the second half of 2012 had to be postponed till May 2013. This, in turn, meant that the evaluators needed to push NNET's end line evaluation as far as possible to maximise the time gap between NNET's baseline and end line; the end line was finally held between 29 October to 6 November 2014, ensuring a one and a half year space between the two points of assessments as against two years for the other Indian SPOs being evaluated.
2. NNET (Network of North Eastern Tribes) is a network of 10 organisations working in Assam and Tripura. So, unlike for other SPOs being assessed, two evaluation workshops had to be conducted for NNET, one in Guwahati with the five Assam-based partners and the other in Agartala with the remaining five Tripura partners—this for both the baseline and the end line evaluations. There were 14 and 13 respondents for the Guwahati and Agartala workshops respectively; these included partners, executive leadership, coordinators, and personnel from the legal resource centre employed for the intervention (in the Guwahati workshop).

¹⁰ The North Eastern part of India has been the site of unusual violence and natural calamities recently. In 2012, the Brahmaputra River basin flooded displacing 700000 people in four districts of Assam. About 70000 people were living in government camps and rehabilitation centres till July 2012. Before the floods could recede, communal violence started in two districts of Assam, adjoining the Bangladesh border. By August 2012, the national media had reported 400,000 displaced and 73 dead due to this violence, 15 among the dead killed in relief camps, seven of them children, and four in police firing. By the Assam Chief Minister Tarun Gogoi's own admission in a statement released by him beginning August 2012, 65 companies of para-military forces were deployed in the affected districts and 95 police pickets set up in all the sensitive areas of the districts, with more pickets to be set up. The North Eastern part of India consists of seven states that are inhabited by multi ethnic and multi religious groups. Here tribalism and contesting territorial claims coexist with fear of losing identity and loss of land. The bone of contention is that under the Indian Constitution, Schedule V, people of these regions are entitled to special privileges regarding protecting their culture, land, and heritage. Illegal migration from Bangladesh and other parts of the country, like the 'Tea Tribes' brought in by the British, has resulted in the Bodos (an ethnic group) becoming a minority in their territory and losing out their land and resources to the "outsiders". The ongoing violence in Assam between the Bodos and Muslims has exposed the fault lines of the fragile social fabric of the Indian state and its policy of secular democracy. Communities in the Northeast live on the edge because of a number of contesting territorial claims. The states of Assam, Meghalaya, and West Bengal share a porous border with Bangladesh and migration to adjoining districts by Bangladeshis has given birth to conflict over identity and land. Small skirmishes by individuals from different communities erupt into major clashes. For example, the clashes between New Year revelers belonging to the Garos and Rabhas on the night of December 31, 2010, led to a full-scale ethnic conflict and displacement of about 50,000 Garos and Rabhas along the Assam-Meghalaya border. In the last one decade, Karbi Anglong, NC Hills and the Bodo Tribal Autonomous region have seen riots after riots but none of these was given a communal colour. There have been at least five major riots in Assam since 2005, including two between the Bodos and Muslims in 2008 and the recent one, but the fallout of these riots (except the latest) has never been felt outside the affected districts, not even in other districts of Assam. But in the riots last year, over 50000 people belonging to these regions fled from the southern states of India, after receiving anonymous messages threatening retaliatory vengeance for what has been done to the Muslims in Assam. The All Assam Students' Union (Aasu) has been raising the issue of illegal immigration since the 1970s. The United Liberation Front of Assam (Ulfa) was a product of the anti-foreigner agitation of the time and on that issue the Aasu leaders went on to occupy the state government seat straight from the university campuses, the first time anywhere in the world. The Bodoland movement was not started against illegal immigrants. It started against the failure of the Assamese leadership to address the plight of the Bodos. The founder of the All Bodo Students' Union (Absu), late Upendranath Brahma, was a leader of Aasu, but founded Absu after his colleagues in Aasu failed to address the demands of the Bodos for an autonomous region status in the state of Assam. The current situation in these states remain volatile and despite resource support. Political parties dare not resolve the issue fearing loss of votes and repercussions across India.

3. A decision was taken against filing separate data collection formats for the post-plenary interviews. Indeed, while macro-level information and perspective—in the case of both states—were concentrated with the executive leadership, others present could at best supplement these with field level anecdotes.
4. Information from data collection was compiled to make a combined MoC for both states, given that NNET’s MFS II-funded interventions are not designed differently for Assam and Tripura.

4.2 Difficulties encountered during data collection

NNET’s assessment presented the evaluators with the following challenges:

1. Mother tongue, for most participants, in Assam was Assamese and Kokborok in Tripura. For the workshop, however, the Assam participants spoke in Hindi and English to the extent they could manage. The participants in Tripura spoke largely in Bangla, one of the state’s official languages. Fluent in English, Hindi and Bangla, the IDF facilitators asked the Reverends present to help with translation whenever necessary. Some of the nuances might have been lost in translation;
2. All ten partners in NNET are faith-based NGOs affiliated to different Catholic congregations, and are represented by nuns and priests temporarily deputed to service NNET by their respective congregations. Therefore, many who had represented their organisations during the baseline had been replaced by their newer counterparts at the time of the end line;
3. The nature of NNET’s intervention is such that community youth are recruited as Para Legal Personnel (PLPs) for a term of one year. So, PLPs who were interviewed for the baseline had ceased to be a part of the project by the end line. Also, and understandably so, the current batch of PLPs was too new to have information or insight on the changes in the intervention with the baseline period (2012) as a reference point. The evaluators, thus, conducted interviews with former PLPs who were still pursuing the NNET’s mandate in their villages in their independent capacity; these interviews were conducted over and above those with the presently deputed PLPs;
4. Sourcing documentation was a challenge on two counts: in the first place NNET was initially using the Assam-based NGO LCHR (Legal Cell for Human Rights) as its resource centre for all PLP related work, including training, in both states. In 2013, Tripura started managing its own planning and activities around PLPs. Until so far LCHR continues to be involved in Assam. Documentation on PLPs, therefore, had to be collected from two sources, with reporting formats that were often different. In the second place the women and youth capacity building component is being managed by nuns who are representatives of NNET’s partner organisations. They are neither trained, nor temperamentally inclined to keep rigorous records of their activities in written. The coordinators in both Assam and Tripura therefore regretted the lack of comprehensive documentation for this component of the programme;
5. No other NGOs work on legal issues with Adivasis and tribals in Assam and Tripura. In Tripura, in fact, no other NGOs work in the remote regions that NNET works in. And NNET does not really interact with many other NGOs. These factors made identifying rival pathways particularly difficult; those that were finally offered were weak;
6. Not many among the external interviewees were aware of NNET as an entity. They were more familiar with the names of the individual partners that collaborate in NNET. Most external interviewees knew of the Legal Cell for Human Rights (LCHR), the Assam-based legal resource centre for NNET;
7. Most organisations that the NNET partners and personnel named as being occasional contacts/part contributors to NNET’s claimed outcomes were impossible to reach for interviews. None of these organisations had registered landlines, email ids, or websites. Their mobile phone numbers (provided by NNET) were mostly out of coverage range, on the rare occasion that the evaluators got through the calls these were not received. The evaluators had to give up on pursuing some of these organisations after numerous failed attempts, including futile follow-up requests to NNET to connect the concerned organisations with the evaluators.

4.3 Identification of two outcomes for in-depth process tracing

Based on the percentage of MFS II funding allocated for civil society related activities it was decided to select NNET for Process Tracing.

At the time of preparing the end-line assessment in September 2014 and therefore reviewing the project documents, few new documents had been made available for analysis, as compared with the ones of the baseline.

Based on these, the following potential outcomes had been selected to assess the extent to which more people and more diverse people engage in NNET's activities and outcomes: the number of persons that received assistance from PLPs so that they can access government schemes and programmes; the extent to which NNET has been able to recruit more female PLPs and; the extent to which the voluntary character of the PLPs ensures the long term support of PLPs to those that ask for legal support.

With regards to strengthening of organisations supported by NNET, the evaluators thought of assessing whether the youth and women pressure groups mentioned in the progress reports were operational and performing. A second option was to look at the organisational capacity of NNET itself and how it engages in the wider CS arena.

During field work it became clear that the youth and pressure groups had only been recently created and that no outcomes had been clearly reported yet. The organisational capacity of NNET itself was not assessed either because no concrete plan existed for strengthening NNET, making it irrelevant to assess contribution according to the evaluation team. Results

4.4 Results obtained in relation to intervention logic

As explained under paragraph 4.2, the quality of the reports provided as well as the fact that most of these documents are Assam or Tripura specific made it challenging to draw a comprehensive overview of the results achieved. Moreover the reports do not reflect on results achieved, which is also complicated because those described in the 2013-2014 proposal are not specific enough. These shortcomings have been acknowledged by MM who provided a training on results based management in the end of 2013 which unfortunately and to the knowledge of the evaluators has not been translated into actions.

In general, NNET has implemented the interventions planned for the Para Legal Personnel (PLP): In the three year programme, 90 villages have been targeted and in each village a PLP was trained; the selection of the villages was based upon a needs assessment and social mapping and the PLP selection included a leadership assessment and orientation programme, a consultation programme, 3 trainings in each state, guided field work, a follow-up programme and an evaluation. Most PLP related activities are well planned in specific months. Only the follow-up meetings have not taken place every 12 months: in Tripura it seems to take place every October but not information is available for 2014¹¹ but in Assam it took place in February 2013 and was expected to take place in December 2014. The interactions between old and new PLPs do not seem to be planned structurally either.

With regards the youth and women programme and the creation of pressure groups, the strategy is different in each state with the team in Assam having quarterly meetings whereas the team in Tripura having monthly meetings for example. Some more activities have taken place but how they fit together is unclear so as the broader strategy sustaining this component.¹²

¹¹ Feed-back from NNET indicated that the follow up program for Tripura was conducted on Feb 3rd-6th 2015.

¹² Feed-back from NNET indicated the following "Partners meet quarterly in Assam due to distance. Tripura they plan their activities with coordinators every month. Village visits are planned accordingly."¹³ Feed-back from NNET indicated the

5.1 Results obtained in relation to intervention logic

As explained under paragraph 4.2, the quality of the reports provided as well as the fact that most of these documents are Assam or Tripura specific made it challenging to draw a comprehensive overview of the results achieved. Moreover the reports do not reflect on results achieved, which is also complicated because those described in the 2013-2014 proposal are not specific enough. These shortcomings have been acknowledged by MM who provided a training on results based management in the end of 2013 which unfortunately and to the knowledge of the evaluators has not been translated into actions.

In general, NNET has implemented the interventions planned for the Para Legal Personnel (PLP): In the three year programme, 90 villages have been targeted and in each village a PLP was trained; the selection of the villages was based upon a needs assessment and social mapping and the PLP selection included a leadership assessment and orientation programme, a consultation programme, 3 trainings in each state, guided field work, a follow-up programme and an evaluation. Most PLP related activities are well planned in specific months. Only the follow-up meetings have not taken place every 12 months: in Tripura it seems to take place every October but the 2014 session was postponed to February 2015; in Assam it took place in February 2013 and was expected to take place in December 2014. The interactions between old and new PLPs do not seem to be planned structurally either.

With regards the youth and women programme and the creation of pressure groups, the strategy is different in each state with the team in Assam having quarterly meetings whereas the team in Tripura having monthly meetings for example. Some more activities have taken place but how they fit together is unclear so as the broader strategy sustaining this component.¹³

5.2 Changes in civil society in the 2012-2014 period

5.2.1 Civic engagement

Civic engagement describes the formal and informal activities and participation undertaken by individuals to advance shared interests at different levels. Participation within civil society is multi-faceted and encompasses socially-based and politically-based forms of engagement.

Since the baseline assessment in 2013, NNET has made slight improvements in advancing the interests of Adivasis and other marginalised groups in Assam and Tripura.

Both in Assam and Tripura 70 villages now have their Para Legal Person (PLP), which is 40 more villages reached out to in each state than during the baseline. The number of female PLPs increased from 1 person in 2011 to four persons in each state in 2014. The PLPs trained in the period 2013-2014 have been able to file more applications (including RTIs) than in the period before: 1327 applications were filed in the 2012-13 period and 3172 applications were filed in the 2013-14 period benefiting 9734 people directly and 7337 people indirectly. Generally speaking PLPs are more motivated and capable to work on their own, which also encourages more people to come for support. However challenges that hinder PLP's capacity to work appropriately consist of political inference in their work; PLP's being recruited lacking the education level needed to be able to communicate and report (16

following "Partners meet quarterly in Assam due to distance. Tripura they plan their activities with coordinators every month. Village visits are planned accordingly."¹⁴ source: Evaluation Report 2013-2014 NNET Project – Assam Unit

¹³ Feed-back from NNET indicated the following "Partners meet quarterly in Assam due to distance. Tripura they plan their activities with coordinators every month. Village visits are planned accordingly."¹⁴ source: Evaluation Report 2013-2014 NNET Project – Assam Unit

PLPs recruited in a batch of 20); PLPs not taking their work seriously; ethnic violence keeping people away from awareness raising activities and; non-cooperation of village headmen and villagers. On the other hand, better education and more serious PLPs have helped to create legal awareness but are more likely to leave NNET for better paying jobs.

Since the baseline, NNET has put more emphasis on working on/with youth and women: 4 women groups were formed in each state and 4 youth groups were formed in Assam. These should play the role of pressure groups supporting PLP work but the strategy behind the component of the programme keeps on being unclear for MM. Five youth clubs have been registered in Tripura and specific activities for youth were implemented, for example a skill training programme that enabled boys and girls to start their own business or find work. Since the baseline, NNET has become more aware that other marginalised groups than Adivasi also need their attention; NNET in both states is reaching out to many communities other than the Adivasi: Nepalis, Boros, Assamese and other linguistic groups are also attending NNET meetings. Target group' involvement in NNET's programme is rather limited and did not change since the baseline: PLPs are only involved in the yearly evaluation of the programme: The executive leadership considers that target groups don't have the knowledge to plan for the legal education programme. Involvement of youth and women groups in decision making over the programme is said to have increased because they can voice their concerns and needs, however no evidence was found. Since the baseline it was acknowledged that the population is participating more in NNET activities.

NNET continues to invite panchayat members, ward members and village council members (Tripura) to participate in legal awareness programmes organised for the target groups. Three members of NNET have contested and won panchayat elections and some of them had difficulties in merging their PLP work to advance the causes of the marginalised groups with their new responsibilities. However after the initiation period in their new functions they identified ways to do so.

Score baseline 2013 on an absolute scale from 0-3:	2
Score end line 2014, relative change on a scale of -2 → +2	+1

5.2.2 Level of organization

This dimension assesses the organisational development, complexity and sophistication of civil society, by looking at the relationships among the actors within the civil society arena.

In general, NNET has shown almost no improvement in this dimension.

Since the baseline, NNET has intensified the relations between partners operating in each state although it showed to be difficult: "We learned that 'Networking' certainly is harder than individually operating."¹⁴ In Assam joint trainings, followed by telephone calls and e-mailing are used for communication, and in Tripura the monthly prayer meeting is the time to come together. Relations between the partners between the two states have again proven to be very challenging and they only meet once a year as a team. The end line assessment showed again the sharp differences in network(ing) within NNET with the Tripura team being isolated whereas the Assam team having more contact with other organisations. NNET partners in Assam have engaged with 7 new organisations since the baseline (among which NEDSSS, partner of Cordaid under the Communities of Change alliance) and continues working with LCHR) and with 4 other organisations, based upon needs. NNET in Tripura has discontinued LCHR services since March 2013 and has only worked with one other organisation since the baseline. Partners in Tripura repeated the fact that hardly any other organisations work in the far-flung unconnected areas where they are working in. The PLPs have been mentioned as the ones being able to defend the best the interest of the marginalised groups. NNET has not diversified its financial resource base and Mensen met een Missie still is the only funder of the programme, apart from some contributions made by villagers.

Score end line 2014, relative change on a scale of -2 → +2	0

¹⁴ source: Evaluation Report 2013-2014 NNET Project – Assam Unit

5.2.3 Practice of Values

Practice of Values refers to the internal practice of values within the civil society arena. Important values that CIVICUS looks at such as transparency, democratic decision making, taking into account diversity that are deemed crucial to gauge not only progressiveness but also the extent to which civil society's practices are coherent with their ideals.

No changes occurred with regards to practice of values since the baseline: information is only passed and shared between the partners and the executive leadership on finances and project progress and not to the programme coordinators and the PLPs. So it can be concluded that no such information is being passed to NNET's target groups¹⁵. NNET is a network of partner organisations with partners having an equal say over issues pertaining to its functioning but it does not have a board, or any other form of permanent structure. External auditing keeps on taking place as requested by the government.

Score baseline 2013 on an absolute scale from 0-3:	1
Score end line 2014, relative change on a scale of -2 → +2	0

5.2.4 Perception of Impact

Perception of Impact assesses the perceived impact of civil society actors on politics and society as a whole as the consequences of collective action. In this, the perception of both civil society actors (internal) as actors outside civil society (outsiders) is taken into account. Specific sub dimensions for this evaluation are the extent to which the SPO has contributed to engage more people in social or political activities, has contributed to strengthening CSOs and their networks, has influenced public and private sector policies.

In general, the dimension on "perception of impact" shows no to slight improvements since the baseline.

The key concerns of NNET's target groups have remained the same: inability of the tribal communities to avail their rights and legal entitlements among others the right to education, right to information, land rights, and the right to livelihood as well as to access government schemes and programmes such as MGNREGA, Indira AwasYojana (IAY), Public Distribution System (PDS), Midday Meal Scheme, widow and old age pensions, student scholarships etc. The number of applications filed more than doubled between the period 2012-2013 and 2013-2014 is to be interpreted as an increased satisfaction of the direct beneficiaries of NNET's programmes. Apart from this PLPs are involved in more complicated cases (like kidnapping, rape, out of court settlement) and approached by non-project villages and non-Adivasi villagers for their support. NNET has triggered communities to organise themselves to take collective action like the women groups in the Kathalcherra centre of Dhalai district, which succeeded in getting liquor shops closed in their respective villages in October 2013. These communities increasingly dare to talk to other communities and to government officials and children parliaments become more performing, all indications that changes are happening at the level of the society as a whole.

PLPs, together with NNET coordinators, have also dared to put to light profound society problems such as human trafficking, school drop-outs or corruption in the tea gardens. These successes may have been due to the increased performance of the PLPs but their sustainability is questioned; political interference remains one of the obstacles to lasting changes. In short, an external resource person said that NNET's work has helped people develop awareness about rights, legalities, government schemes with respect to education, health, nutrition etc, as also increased the confidence and courage of communities to fight for their rights.

¹⁵ Feed-back provided by NNET in February 2015 pointed out at the language barrier, documents being in English but actors not being fluent in that language. "You may take into account that we share the whole project with all concerned. Unfortunately many of them (Coordinators and PLPs) are not fluent in English to read up and follow on their own, nor are they capable of participating in the planning of the research designs. That makes it impossible to be totally transparent. All the communication of the project is done in English. At the project orientation time and training the whole concept is explained and the budget shared. More participation would be impractical due to the above mentioned reasons."

Since the baseline, there have not been any outstanding developments in regards to NNET’s relationship with public or private sector organisations. In both state NNET continues to face resistance from the panchayats and the government in terms of the use of public funds for what they are meant for. By claiming that they are working for people’s welfare, NNET manages to get more support. NNET until so far lobbied in vain to ensure ST (Scheduled Tribe) status for the Adivasi community which is a politically charged issue in the state of Assam. The Public Interest Litigation (PIL) filed at the time of the baseline to stop child labour and trafficking in Assam has been combined with two others by the Chief Justice of India for further process. NNET’s work on the PDS system has continued as before. Although NNET mentioned to have been involved in influencing the policies on minimum wages in tea gardens, all other interviewees stated that NNET’s role on that issue of influencing private companies has been very limited. PLPs on their part have been active in solving problems between workers and companies like in Simna, near Agartala, where the manager of an electric company was forced to pay adequate wages to his workers.

Score baseline 2013 on an absolute scale from 0-3: 2
Score end line 2014, relative change on a scale of -2 → +2 +1

5.2.5 Civil Society Environment

The social, political and economic environment in which civil society operates affects its room for manoeuvre. The civil society context has been described in chapter 3. In this section we describe how NNET is coping with that context.

The factors affecting negatively NNET’s work have remained the same since the baseline: a) huge distances and poor connectivity between places, b) political tension resulting in regular shutdowns and road blocks, c) ethnic turmoil, d) trafficking of women and children, and e) suspicions over NNET as a faith-based organisation trying to convert people.

An additional issue affecting both States is the change in FCRA (Foreign Contribution Regulation Act) Rules which do not allow the transfer of funds from one state to another. In the first year of the project, the funds would be put in LCHR’s FCRA account and then transferred to the partners in Tripura. To overcome this problem, partners in Assam receive cash after it has been withdraw in Tripura. Specific to Assam, floods that occurred in October 2014 and inter-communities violence in NNET’s target area of Kumarikata, Baganpara and Bodo districts created frequent disruptions to NNET’s work. In Tripura and due to the political context, NNET coordinators and field staff have often been threatened by officials but still continued their work.

5.3 To what degree are the changes attributable to Southern partners?

This paragraph assesses the extent to which some outcomes achieved can be “attributed” to NNET. Starting with an outcome, the evaluation team developed a model of change that identifies different pathways that possibly explain the outcome achieved. Data collection was done to obtain evidence that confirms or rejects each of these pathways. Based upon this assessment, the evaluation team concludes about the most plausible explanation of the outcome and the most plausible relation between (parts of) pathways and the outcome. The relations between the pathways and the outcomes can differ in nature as is being explained in table 2.

Table 2

Nature of the relation between parts in the Model of Change

Nature of the relation between parts and other parts or outcome	
The part is the only causal explanation for the outcome. No other interventions or factors explain it. (necessary and sufficient)	
The part does not explain the outcome at all: other subcomponents explain the outcomes.	
The part explains the outcome but other parts explain the outcome as well: there are multiple pathways (sufficient but not necessary)	
The part is a condition for the outcome but won't make it happen without other factors (necessary but not sufficient)	
The part is a contributory cause it is part of a 'package' of causal actors and factors that together are sufficient to produce the intended effect.	

Sources: Mayne, 2012; Stern et al, 2012

The following paragraph assesses NNET's contribution to the outcome linked to civic engagement. The paragraph first describes the outcome achieved and the evidence obtained to confirm that the outcome has been achieved. It then presents the pathways identified that possibly explain the outcomes, as well as present information that confirms or refutes these pathways. The last section concludes in the first place about the most plausible explanation of the outcome, followed by a conclusion regarding the role of the SPO in explaining the outcome.

5.3.1 Civic engagement

The outcome achieved and information that confirms this

The outcome chosen is the 'improved engagement of Para Legal Personnel (PLPs) between 2012 and 2014so that people covered by the project access government schemes and programmes'. NNET's programme mandate is to expand its coverage to include 40 new villages every year¹⁶.

In the year 2013-14, 3175 applications were filed (including RTIs) which is more than two times the amount filled in the period 2012-2013 (1327 applications had been filed)¹⁷. Based upon information obtained through interviews it can be concluded that the new PLPs are more educated¹⁸, motivated and proactive¹⁹ in their involvement with the community and their problems than those of earlier phases of the project. Some of the PLPs have filed RTI applications and deputations on their own²⁰. Some of them continue to work on the NNET mandate (that is to say continuing serving their communities so that they access government schemes and programmes) even after their one-year involvement in the project is over and therefore without receipt of any remuneration from NNET²¹. The

¹⁶ It should be noted that the list of villages for Assam is incomplete and that the information with regards Tripura does not include the name of the administrative boundaries.

¹⁷ We can only compare number of applications filed and not the number of beneficiaries met or the number of issues solved since the figures are not available for each state and for both periods. We also lack comparative information between PLPs, between villages and between states.

¹⁸ The evaluators were not provided with the level of education of each PLP and it does not seem that NNET keeps such a record. During interviews PLPs in Assam collectively said: "Unlike the previous requirement of recruiting PLPs who have at least passed their matriculation, the PLPs that are entering in the Assam programme (now) are much more educated." The increase level of education of the PLPs does not seem to apply to Tripura, according to Tripura staff.

¹⁹ To sustain improved level of motivation and proactivity the evaluators used the following information: NNET in Assam stated the following: "Earlier we did not have the option to choose, but now, young boys apply to become PLPs, we have more than one option to choose from. We see the difference, the young generation now is keen to work with us, this was not the case initially. In the earlier phases of our programme we had to convince young people to become PLPs. Now we have large numbers offering their services, some are even ready to work just as volunteers. Now we ensure that a prospective PLP is at least a matriculate. The difference also shows up in the way the PLPs work now. Earlier, in 2012, we had to teach PLPs what RTI meant, how to file RTI applications. By 2014, the new batch seems to know much more about RTIs even at the time of joining." In Tripura, the following was shared "In terms of quality of PLP engagement in Tripura. In our context, they are class 8-10th educated, well known and identified among the villagers; they are most vocal and display leadership qualities among the villagers to be chosen as a PLP"

²⁰ NNET and Interview with a resource person associated with NNET and founder of Jana Kalyan Sansthan. Nevertheless, the evaluators don't have information about which PLPs have done this and for which villages.

²¹ sources: NNET, Report field visit Mensen met een Missie – NNET, November 2012, Assam; Interview with Assam PLPs; interview with MM; field observation by evaluation team. The evaluators were nevertheless not provided with figures of PLPs and the work each of them do. It seems NNET does not monitor this aspect structurally.

success and sustainability of the programme depends therefore on PLPs' willingness and ability to continue working.

Information that confirms or rejects pathways

The first pathway that potentially explains the outcome consists of a variety of activities carried out by NNET and PLPs to implement the project, as well as to strengthen the capacities of PLPs that enable them to educate communities on their legal rights and entitlements. This is done through the provision of trainings to PLPs on legal knowledge, information and legal procedures that help to file RTIs and deputations; guided fieldwork and monitoring of their work which in turn has helped communities obtain benefits of government schemes relating to education, health, employment, housing etc. and services such as supply of drinking water, electricity, street lighting etc.²²

The following information provides evidence *in favour of this pathway*:

- In every project village that NNET enters, they organise meetings with the villagers where they conduct a needs assessment. Based on this they identify the issues and concerns of the villagers. The coordinators and the PLPs then pursue these issues by filing applications, and if that does not work, they follow up with filing RTI applications and then, armed with the information obtained through such RTIs they approach officials to redress or resolve the problem at hand.²³ In Tripura heads of Panchayats were also involved as a means to obtain their support and consent for the PLP programme in their respective villages²⁴.
- NNET interacts with the government at various levels for ensuring entitlement of the beneficiaries, often even "forcing" government officials to do their duties.²⁵ NNET coordinators and PLPs interact with district magistrates, sub-division magistrates, BDOs (Block Development Officials), the women and child welfare department, the revenue department, electricity department, water supply department, agriculture department, public banks. etc. to achieve desired results for the communities. NNET's coordinators and PLPs also organised meetings with government officials of the Assam State Legal Services Authority²⁶ on mediation and resolving issues without approaching courts.²⁷
- NNET networks with other organisations such as PAJHRA (Promotion and Advancement of Justice, Harmony and Rights of Adivasis)²⁸ and AAWAA (All Adivasi Women's Association of Assam)²⁹ to conduct surveys on the situation of Adivasis creates awareness about their rights and help them avail of such rights.³⁰
- NNET's PLPs and coordinators in Assam organised village meetings to spread awareness on specific issues and subjects, like, human trafficking, women's rights etc. Six such village meetings have been organised for 2013-14 and these took place alongside other trainings and guided fieldwork.³¹
- NNET recruited interested PLPs (40 new PLPs for 40 new villages) on confirmation of basic level of education and a willingness to further NNET's programme mandate³². The final recruitment took

²⁶ The National Legal Services Authority (NALSA) has been constituted under the Legal Services Authorities Act, 1987 to provide free Legal Services to the weaker sections of the society and to organize LokAdalats for amicable settlement of disputes. In every State, State Legal Services Authority has been constituted to give effect to the policies and directions of the NALSA and to give free legal services to the people and conduct LokAdalats in the State. The State Legal Services Authority is headed by Hon'ble the Chief Justice of the respective High Court who is the Patron-in-Chief of the State Legal Services Authority. Refer <http://nalsa.gov.in/directory.html>

²⁷ NNET Assam staff, *LCHR: Annual Report (2013-14)*

²⁸ PAJHRA, which in Adivasi (Sadri) language means 'life Spring', stands for Promotion and Advancement of Justice, Harmony and Rights of Adivasis. PAJHRA was formalized on 9th April 2002. It is an initiative of Adivasis of Assam from all walks of life. Adivasis who have lived peacefully and whose contribution is substantial to the economy of Assam believe that they deserve and can have a better status in North East India and it is up to them, in collaboration with other agencies to change their lot. Refer, <http://www.pajhra.org/>

²⁹ AAWAA was started in November 2002. They work with the Adivasi community, especially women of the community. They conduct awareness programmes on child care, cultural strengthening, child education, domestic violence, and women's health and status in society.

³⁰ Interview with PAJHRA, AAWAA

³¹ NNET

place after an orientation programme in April-May 2013.³³ At the end of May the recruited PLPs received in-depth details about the programme and were briefly introduced to schemes like MGNREGA³⁴, PDS, IAY etc.³⁵

- Former PLPs shared their experiences and learnings with new PLPs in March and May 2013.³⁶
- PLPs received three trainings throughout the year, each training being followed by the preparation of an action plan, guided fieldwork and monitoring of PLPs' work. The purpose of these trainings and monitoring was to gauge the progress of PLPs' involvement with community issues and identify any new issues that might come up and take them up in subsequent trainings.³⁷ During the course of such trainings, PLPs were taught about basic rights, government schemes and entitlements, use of RTI, FIR and applications to avail access to rights and schemes and any community specific issue.³⁸ NNET continued to conduct follow up courses to train PLPs on specific topic such as human trafficking, PDS etc.^{39,40} after their financial support to these PLPs ended by the end of the year;
- NNET evaluated the whole programme in March 2013 and March 2014.⁴¹ NNET coordinators continued to monitor PLPs' work of those who finished their trainings to ensure sustainability of the programme.⁴²
- Through the course of their training, the PLPs are capacitated to file applications independently without the support of the coordinators.⁴³

Information that rejects the lasting role of NNET towards facilitating the community's access to their rights and legal entitlements is the following:

- Some PLPs are dropping out of the programme whereas they are being trained⁴⁴ and it is unclear how many old PLPs continue their work after the training trajectory ended and if there is structured contact between new and old PLPs⁴⁵. These points question the design and the sustainability of the changes witnessed.
- The government has, over the years, passed some important laws and legislations like the RTI Act (2005)⁴⁶, the Protection of Women from Domestic Violence Act (2005)⁴⁷, MGNREGA (2005), Food Security Bill (2013)⁴⁸, Forest Rights Act (2006)⁴⁹, Right to Education (2009)⁵⁰, Protection of Children

³² NNET and Interview with Tripura new PLPs. As mentioned earlier this figure could not be triangulated with the reports provided. In Assam only 17 PLPs seem to have taken part in the project in the period 2013-2014 (see 'Assam- 1 qtrly report NNET Assam-sent to floor', 'Assam 2nd Quaterly report NNET Assam July -Sept 13', etc)

from Sexual Offences Act (2012)⁵¹ which has created a conducive environment where villagers are much more inclined to accept NNET's mandate and messages.⁵²

- Tripura now enjoys better infrastructure, roads are being built in the tribal areas. Today, accessibility to education is easier, and also, the spread of and access to mass media has increased awareness and knowledge, making people more curious towards understanding their rights and duties. In colleges and schools, students are given trainings on the purpose of RTIs and how to utilise them to bring transparency to government departments.
- The panchayats have become increasingly proactive in helping people access schemes for the betterment of the adivasis and marginalised communities.⁵³
- Other organisations in Assam like PAJHRA, AAWAA, AASAA (All Adivasi Students Association of Assam)⁵⁴, Bosco Reach Out⁵⁵ have also been working on the rights of the Adivasis.⁵⁶ PAJHRA started by a group of Adivasi social activists, leaders and academicians works for the Adivasis in the tea gardens and villages of Assam on issues such as identity, Adivasis' constitutional rights, human trafficking, health, education and livelihood. AAWAA started in November 2002 work with the Adivasi community, especially women of the community and conduct awareness programmes on child care, cultural strengthening, child education, domestic violence, and women's health and status in society. AASAA, formed in 1996, is an Adivasi students organisation working in 17 districts of Assam. They mainly work as a pressure group, organising dharnas, roadblocks on issues of minimum wage for tea garden workers and the Scheduled Tribe (ST) status for Adivasis.
- In Tripura, Adivasi Unnayan Samiti (AUS)⁵⁷ in Unakoti district conducts surveys on Adivasi people and their literacy levels, how many live in tea estates, wages in tea estates, land ownership etc. SBU for the Reang community, an NGO which is based out of the North District's Kanchanpur village and Bru Student Union (BSU) also work on Adivasi rights and upliftment, although at a small scale.⁵⁸

⁴⁹ A BILL to recognise and vest the forest rights and occupation in forest land in forest dwelling Scheduled Tribes and other traditional forest dwellers who have been residing in such forests for generations but whose rights could not be recorded; to provide for a framework for recording the forest rights so vested and the nature of evidence required for such recognition and vesting in respect of forest land. *Refer*, <http://www.forestrightsact.com/the-act>

⁵⁰ The Constitution (Eighty-sixth Amendment) Act, 2002 inserted Article 21-A in the Constitution of India to provide free and compulsory education of all children in the age group of six to fourteen years as a Fundamental Right in such a manner as the State may, by law, determine. The Right of Children to Free and Compulsory Education (RTE) Act, 2009, which represents the consequential legislation envisaged under Article 21-A, means that every child has a right to full time elementary education of satisfactory and equitable quality in a formal school which satisfies certain essential norms and standards. *Refer*, <http://mhrd.gov.in/rte>

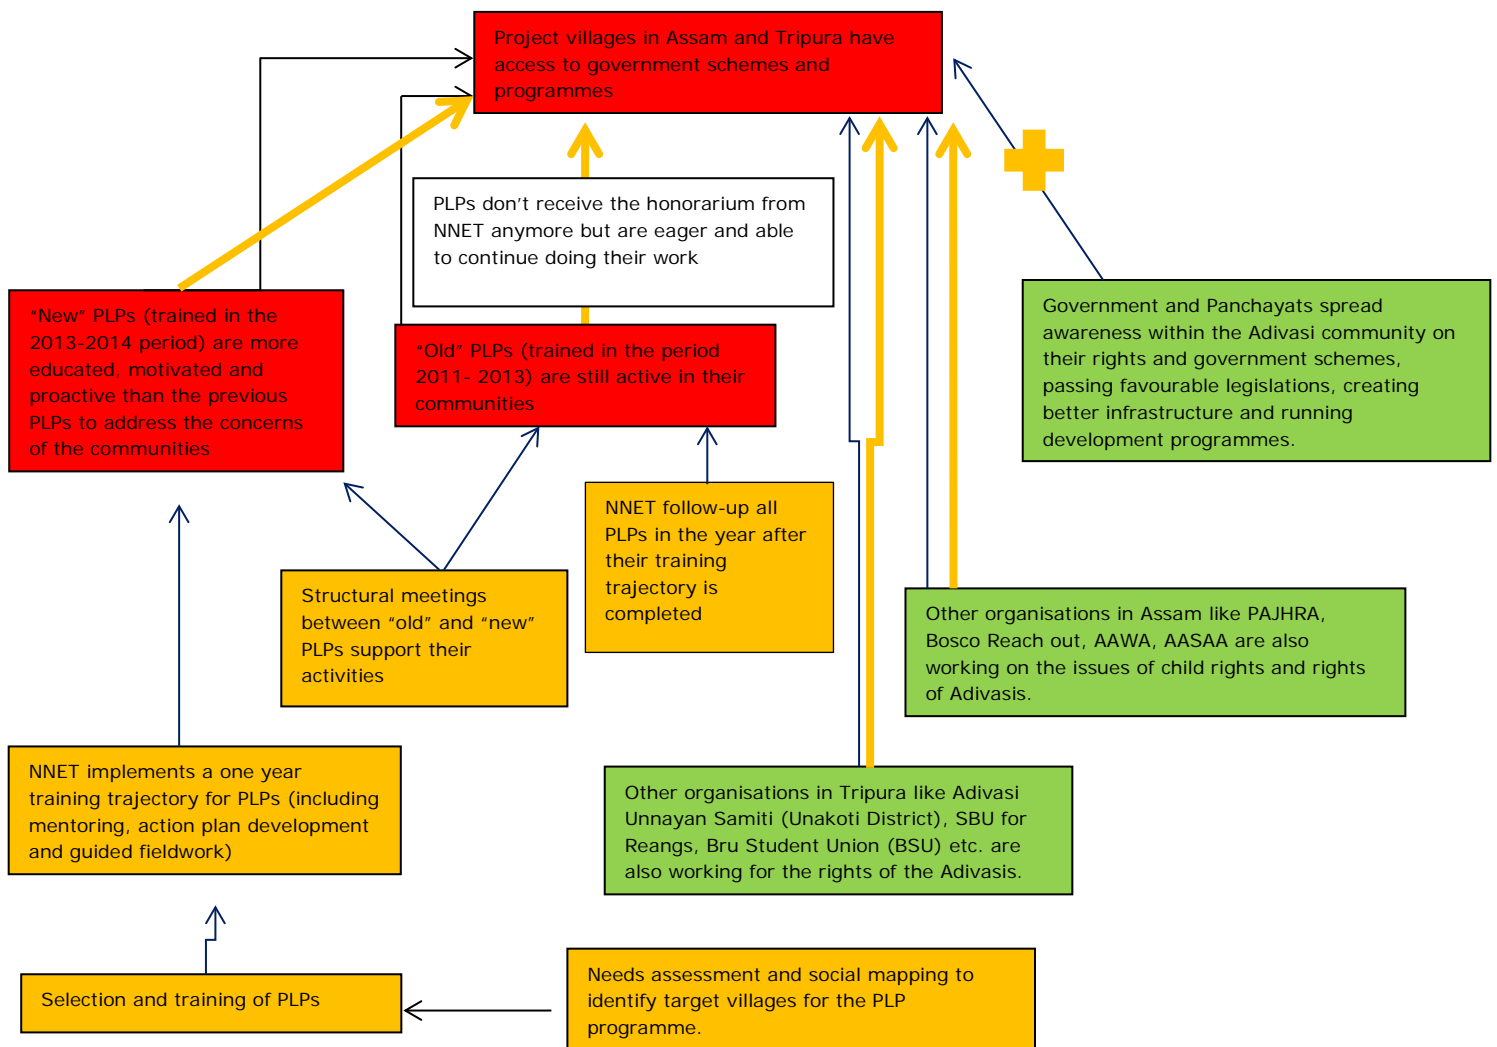

Figure 1: Pathways that possibly explain outcomes and conclusions about the nature of the relations between pathways and the outcome, Adivasi claiming their rights

Conclusion

The outcome that tribal communities in Assam and Tripura in the villages where PLPs are active avail of their legal rights and entitlements can be explained by the following:

Factors valid for all villages in the state consist of; the above mentioned laws that create a conducive environment for both Adivasis and for NNET; improved accessibility of Tripura in terms of roads and mass media, which increases people's awareness about their rights and duties; easier access to education, and local governments showing commitment. All these factors are *necessary but not sufficient (conditions)* to ensure Adivasi households their access to the schemes and welfare programmes.

Several actors, including NNET, support Adivasi to avail of their rights, whilst using different strategies: the PLPs of NNET file applications or if necessary RTI applications, other NGOs work as pressure groups or use the same approach as NNET does. All these interventions are sufficient on their own to explain the outcome (after the above mentioned conditions have been met).

NNET through its legal awareness programme has trained and monitored PLPs in a selected number of villages. In these villages, the people have benefited from government schemes and programmes. As

noted by an external resource person and as concluded by the evaluation team, NNET is one of the organisations that support Adivasi to claim their rights. It is to be observed that the effectiveness of the NNET programme largely depend upon the capacities and the motivation of PLPs to support Adivasi communities.

5.4 What is the relevance of these changes?

5.4.1 Relevance of the changes in relation to the Theory of Change of 2013

According to the respondents from Assam and Tripura the changes achieved by NNET are in line with the ToC prepared in 2013. Since the baseline NNET's work has focused on enhancing 'legal awareness' described in the ToC with the PLP programme and to some extent on the condition 'gender equality' with the work done with women (pressure) groups and more female PLPs taking part in the programme. The increased number of people benefiting from government schemes and programmes and increased client satisfaction helped to make contributions to 'economic equality' and to some extent to 'socio-cultural-political equality'. NNET however has had limited influence on public and private policies and practices which would have been relevant under the condition 'favourable policies'. Maybe the fact that some NNET staff have won panchayat elections will influence some practices leading to favourable policies in the villages of the programme.

5.4.2 Relevance of the changes in relation to the context in which the SPO is operating

Most respondents agreed that the changes benefited the women and the Adivasi community in the villages targeted by the project. One has to keep in mind that the Adivasi community in the North East is not yet recognised as a tribe; all respondents said that the changes were relevant for the poorest of the poor. Women have become more confident and proactive in their communities and the villages are more aware of their rights, an initial step towards development said some respondents. Besides individual being aware of their rights, the communities have also started taking collective action which resulted in some cases in more children going to school, toilets being available in the villages and even closing liquor shops (alcoholism is a severe problem among men in the villages). Whereas changes might have been slow, some respondents hope that villages will become fully aware and that these villages could be seen as examples for other who have not benefited from the project.

5.4.3 Relevance of the changes in relation to the policies of the MFS II alliance and the CFA

Mensen met een Missie does not have per se a vision document on strengthening civil society but is developing every year a specific country strategy plan. In India and specific to the North East region it is about strengthening the Adivasi group so that they are aware of their rights⁵⁹. Mensen met een Missie's website also mentions women as another of their target groups⁶⁰. Complementing what the State is offering in terms of services is essential to MM.

As seen earlier, NNET's programme managed to secure access to some government schemes and programmes for Adivasi families and has been addressing gender issues. As such NNET's work and the changes seen are relevant to the overall strategy of MM. Nevertheless, the rights-based approach advocated by MM has yet to be fully utilized by NNET. Most results achieved are at the level of schemes and programmes accessed by the communities whereas MM would like to see "atrocities" also picked up.⁶¹

⁵⁹ interview with MM respondent

⁶⁰ <http://www.mensenmeteenmissie.nl/land/india>, (23012015)

⁶¹ Interview with MM respondent

5.5 Explaining factors

5.5.1 Internal factors

NNET is a network of 10 partner organisations in Assam and Tripura; all the partners in NNET are faith-based NGOs affiliated to different Catholic congregations, and are represented by nuns and priests temporarily deputed to service NNET. These routine transfers, in turn, make for constant changes in leadership.

The partners in the two states mainly work as independent units and not as one single organisation. The resource team, the Assam based Legal Cell for Human Rights (LCHR) initially was responsible for the training and mentoring of the PLPs in both the states. Tripura ceased to use LCHR's services in March 2013 after having built legal resources internally. LCHR is contracted to work with Assam NNET till October 2015.

Poor internal cohesion is also evident on examining the documentation provided by the partners in Assam and Tripura. The difference in formats is quite problematic as it prevents any pattern or single thread of information to emerge. This is for instance observable with regards to record keeping of numbers of applications filed and RTIs filed and the number of beneficiaries reached. Apart from this report formats differ from one year to another. This disconnect between the two shows how loosely connected the network is.

Another disconnect in NNET's work is the disengagement between the two components of its programmes—PLP programme and the women and youth capacity building programme. The women and youth capacity building programme has only taken off in 2013-14 in Assam, and for Tripura in 2014. The purpose of the programme was to work in tandem with the PLP programme and serve as a support system to it in the villages. This has not happened. The tensions between the partners and the resource team (LCHR) might be partly responsible for this, but also the almost informal nature of functioning of the women and youth programme. Since the programme is just taking off no results have been obtained yet.

5.5.2 External factors

NNET's external context poses challenges to its performance, and most so to its organisational cohesiveness. Assam and Tripura have poor infrastructure, connectivity and lack of adequate modes of transportation, making travelling tedious and time-consuming. This prevents the NNET partners from meeting frequently. The change in the FCRA (Foreign Contribution Regulation Act) Rules⁶² has also made the cohesion between the partners in the two states problematic, as the new rules do not allow the transfer of funds from one state to another. In response to this, NNET's coordinator in Tripura is transferring these funds in cash to the Assam based coordinator.

Assam is marked with protests and demonstrations against the ignorance of the central government towards the northeast. Over the years, the region has paid socio-economically for this. According to the Planning Commission's Report of 2011, poverty has risen in most of the states in the north-east, including Assam which now has 11.6 million persons living below the poverty line.⁶³

The two main problems that affect any and every form of organisation and people in the state are consist of flooding, ethnic clashes and riots. The state has had a long history of ethnic riots and violence between the various tribes and has been racked with demands for separation from the Indian state and faced violence because of this insurgency from the militants and the army.

Politically, Tripura has been ruled by the Left front (Communist Party of India-Marxist, CPI-M⁶⁴) which has been in power in the state since 1993. As the ruling party is a cadre-based party, it often makes

⁶² FCRA 2010, an act to regulate the acceptance and utilisation of foreign contribution by certain persons or associations. Refer, <http://indianexpress.com/article/india/india-others/only-11-of-22-ngos-in-ib-report-are-fcra-compliant-none-filed-13-14-statement/99/>

⁶³ Refer, http://www.telegraphindia.com/1120320/jsp/frontpage/story_15270991.jsp#.VCPEMhZFEuc

⁶⁴ Communist Party of India-Marxist (CPI-M) is a leading left party of India. It has a strong presence in the states of Kerala, Tripura and West Bengal.

functioning difficult for organisations like NNET to work on rights-based issues and holding the government accountable. Due to this, NNET coordinators and field staff have often been threatened by these officials to desist from creating trouble for them. The same happened in 2013, when a coordinator was threatened by members of the ruling party to discontinue trainings or workshops while election campaigning was taking place.

5.5.3 Relations CFA-SPO

Mensen met een Missie has been working with NNET since 2007, the inception of the network. According to the MM respondent and at least during the MFS II period, MM has visited NNET every year. MM also provided NNET with some trainings like in 2013 on results-based management. During the interview with MM respondent it appeared that MM would not finance NNET after MFS II funding is over. Whereas MM does not phase out of India they decided to focus on states in the South where partners are stronger and pick up atrocities directed to the Adivasi (in comparison with NNET partners who are more focusing on access to government schemes as success stories). According to MM respondent, the rights based approach (advocated by MM) has been picked up with difficulties by the partners of NNET who are more used to work on a needs based approach. The evaluators have not seen the official communication of the end of the partnership but it appeared clear when looking at the answers provided by NNET to the inquiries from MM. "Secondly, we are not in a position to redraft the project at this last phase of the project. Hence I believe that MM would consider the rationale"⁶⁵.

⁶⁵ Answer to Explanation asked by MM

6 Discussion

6.1 Design of the intervention

NNET works in two remote States of India where there is unrest, whether ethnical or political. NNET's works focuses on the Adivasi tribe which is not recognized by the government in these States. Their legal awareness programme with capacity building of para legal persons takes place every year in different villages with some follow-up done with the PLPs trained the year before. To strengthen the work of the PLPs some women and youth pressure groups are formed and trained.

The evaluation team noticed some limitations with regards the design of the programme. Whereas the PLP component is well structured, the pressure groups component lacks information and linkages with the PLP component. This has also been observed by MM. According to NNET the pressure groups also aim to raise the awareness of women and youth and in consequence help them to claim their rights. Moreover, besides some follow-up done with the PLPs trained the year before, no specific activities have been foreseen in the programme to sustain the work of the PLPs: are they also empowered enough to stay updated with the schemes and programmes set by the government? How are they going to pay for the costs linked to filling deputations up? Having said this, the programme is suitable for the environment in which it is implemented where local leaders are trained for the legal work. This legal work is necessary for the population targeted. However more attention need to be paid to sustain the network of the PLPs after they have worked for one year with NNET.

With the necessary will to work in these remote villages, other organizations would be able to implement a similar programme, thinking more through the sustainable aspect of it.

7 Conclusion

Changes in the civil society arena of the SPO

In the 2012 – 2014 period the two most important changes that took place in the civil society arena of the SPO are related to Civic Engagement and Perception of Impact. NNET was able to reach out to more Adivasis people, including more youth and women, as well as to more other marginalised groups although the involvement of these beneficiaries has not changed and remains very limited. Besides 3 members of NNET having won panchayat elections, NNET in Tripura has continued involving local political bodies. The number of applications filed by PLPs more than doubled between the period 2012-2013 and 2013-2014 and is to be interpreted as an increased satisfaction of the direct beneficiaries of NNET's programmes. PLPs are also involved in more complicated cases and have been able to trigger collective action which has been successful. Nevertheless, relationship and influence on public or private sector organisations have not improved and a change like ensuring ST status to Adivasis have not been achieved yet.

Contribution analysis

The outcome that tribal communities in Assam and Tripura in the villages where PLPs are active avail of their legal rights and entitlements can be explained by the following:

Factors valid for all villages in the state consist of; the above mentioned laws that create a conducive environment for both Adivasis and for NNET; improved accessibility of Tripura in terms of roads and mass media, which increases people's awareness about their rights and duties; easier access to education, and local governments showing commitment. All these factors are *necessary but not sufficient (conditions)* to ensure Adivasi households their access to the schemes and welfare programmes.

Several actors, including NNET, support Adivasi to avail of their rights, whilst using different strategies: the PLPs of NNET file applications or if necessary RTI applications, other NGOs work as pressure groups or use the same approach as NNET does. All these interventions are sufficient on their own to explain the outcome (after the above mentioned conditions have been met).

NNET through its legal awareness programme has trained and monitored PLPs in a selected number of villages. In these villages, the people have benefited from government schemes and programmes. As noted by an external resource person and as concluded by the evaluation team, NNET is one of the organisations that support Adivasis to claim their rights.

Relevance

Interviews with staff of NNET, with external resource person, with the liaison officer of Menseen Missie (MM), as well as contextual information helped to assess the relevance of NNET's interventions in terms of; its Theory of Change (ToC) for Civil Society (SC) as designed during the baseline study; the context in which NNET is operating; the CS policies of MM.

With regards to the baseline ToC, the interventions and outcomes achieved are relevant because most of the interventions align with the condition 'legal awareness'. They have also partly contributed to the conditions 'gender equality', 'economic equality' and 'socio-cultural-political equality' but unfortunately, they have not been able to achieve successes to align under the condition 'favourable policies'

With regards to the context in which NNET is operating, its interventions and outcomes achieved are relevant because they benefited the women and the Adivasi community, considered the poorest of the poor.

With regards to the CS policies of MM, NNET's interventions and outcomes are relevant because they align with MM's India overall strategy which is about strengthening the Adivasi group so that they are aware of their rights. Nevertheless, MM would have liked NNET to go beyond helping the community reaching programmes and schemes towards handling atrocities.

Explaining factors

The information related to factors that explain the above findings was collected at the same time as the data were gathered for the previous questions. The evaluation team looked at internal factors within NNET, the external context in which it operates and the relations between NNET and MM. Internal factors within the SPO that explain the findings are: constant change in leadership, poor internal cohesion, disengagement between the two components of the programmes and possibly tensions between the partners and the resource team (LCHR).

External factors that explain the findings in both states are poor infrastructure, connectivity and lack of adequate modes of transportation. Specific to Assam, flooding and riots have interfered with NNET's work. In Tripura, the cadre-based party makes functioning difficult for organisations like NNET to work on rights-based issues and holding the government accountable.

Factors that explain the findings that are related to the relation between NNET and MM are the long relationship between the two organisations and investment in building the capacity of NNET which unfortunately but consciously is ending with MFS II.

Table 2

Summary of findings.

When looking at the MFS II interventions of this SPO to strengthen civil society and/or policy influencing, how much do you agree with the following statements?	Score
The CS interventions were well designed	5
The CS interventions were implemented as designed	8
The CS interventions reached their objectives	7
The observed outcomes are attributable to the CS interventions	6
The observed CS outcomes are relevant to the beneficiaries of the SPO	8

Score between 1 to 10, with 1 being "not at all" and 10 being "completely".

Appendix 1 Civil Society Scores

This table presents the appreciation of the evaluation team regarding changes occurred for each indicator between 2012 and 2014 on a scale of -2 to + 2

- 2 = Considerable deterioration

- 1 = A slight deterioration

0 = no change occurred, the situation is the same as in 2012

+1 = slight improvement

+2 = considerable improvement

Dimension		Indicators	Question	Change
Civic engagement	1	Needs of marginalised groups	How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies?	+1
	2	Involvement of target groups	What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities?	+1
	3	Political engagement	How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups?	+1
Level of organisation	5	Relations with other organisations	In the past 12 months what has been the most intensive interaction you had with other CSOs?	0
	5	Frequency of dialogue with closest CSO	In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with?	0
	6	Defending the interests of marginalised groups	Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs?	+1
	7	Composition current financial resource base	How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendance to workshops of other CSOs; costs for organisational growth and/or networking?	0
Practice of Values	8	Downward accountability	To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them?	0
	9	Composition of social organs	What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for?	0
	10	External financial auditing	How regularly is your organisation audited externally?	0

Perception of impact	11	Client satisfaction	What are the most important concerns of your target groups? How do your services take into account those important concerns?	+1
	12	Civil society impact.	In the past 12 months, what impact did you have on building a strong civil society?	+1
	13	Relation with public sector organisations.	In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives?	0
	14	Relation with private sector organisations	In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective?	0
	15	Influence upon public policies, rules, regulations	How successful have you been in influencing public policies and practices in the past 2 years?	0
	16	Influence upon private sector agencies' policies, rules, regulations.	How successful have you been in influencing private sector policies and practices in the past 2 years?	0
CS context	17	Coping strategies	In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society.	+1

Appendix 2 Changes in civil society indicators between 2012 and 2014

1. Civic Engagement

1.1 Needs of marginalised groups

As at the time of the baseline, so also now, NNET continues to be a network of 10 organisations that works at “spreading legal awareness among Adivasis and primitive tribes in states of Assam and Tripura in the North Eastern part of India”. Towards this NNET has two specific programme components. First, recruiting, training and guiding a Para Legal Personnel (PLP) in each of its project villages, who is paid an honorarium⁶⁶ for spreading awareness on rights and entitlements under government schemes, and assisting villagers avail of these. Second, capacitating women and youth in the project villages such that they evolve into pressure groups that complement the PLPs’ work⁶⁷.

The PLP programme’s outreach since the baseline has increased as per its fixed mandate. The PLP programme pilot in 2011 was implemented in 10 villages, with 10 PLPs recruited. Since then, the programme’s expansion in geographical terms has been laid down—20 new villages are to be reached out to every year by each of the two states, and one PLP is to be employed per village. So, the period between 2011 and 2014 have seen NNET Assam and Tripura cumulatively reaching out to 140 villages (70 Assam and 70 Tripura), and 140 PLPs recruited and trained.

According to NNET Assam’s Quarterly Reports and Tripura’s Report for MM 2013-14 there has been improved engagement of PLPs so that 40 villages in Assam and Tripura have had access to government schemes through filing 3172 applications in 2013-14 (including RTIs) to benefit 9734 people directly and 7337 people indirectly. In comparison and in the period 2012-2013, 1327 applications were filed and through the awareness programme 5,586 people were reached (no similar figures as in 2013-2014 are available).

NNET staff reported improvement in the performance of the PLPs associated with its programme. The Tripura coordinators said that many PLPs now file applications on their own, motivate and mobilise people to participate in awareness programmes, and conduct follow-ups. The new PLPs, they said, are proactive, keen learners and motivated to help the community access their rights and entitlements. The villagers approach PLPs for receiving assistance in filing RTIs since they know that PLPs have the technical know-how and legal knowledge that can help them claim their rights. Community hesitation has also come down since PLPs do not charge anything for their services. The action plan and guided fieldwork has helped the PLPs in devising ways to solve issues on their own and take charge of situations. Such initiatives have helped for example revive the Anganwadi system in the Kamranga centre, Cachar district, in 2014. Moreover, some PLPs have graduated to the position of being full time employees of NNET and are now working as coordinators, assisting new PLPs in their work.

Even as these improvements in PLPs’ performance were registered, NNET staff reported some challenges that still pose a problem for sustainability of the programme and as such supporting the changes the civil society is experiencing. The Assam coordinators feel that there is a need to expand the number of PLPs that are employed per village, but that is not possible unless funding constraints are released. The year-end evaluation of the 2013 PLP programme saw NNET Tripura partners, coordinators and PLPs discussing the strengths, weaknesses, opportunities and threats associated with the 20 PLPs that were hired for the programme. While the PLPs’ dedication, enthusiasm and rapport

⁶⁶ The PLP honorarium is Rs 400 per month, and expenses incurred for travel, meeting’s organised etc.

⁶⁷ This aspect includes according to us the skill training programme for youth implemented by one of Tripura’s partner (ASHA)

with the target population formed the areas of strength of PLPs' work, political interference posed a problem for PLPs. Moreover, out of 20 PLPs who were recruited, only four had passed matriculation exams and most lacked good communication and reporting skills, creating a problem in mapping the success of their work. Similar difficulties were identified during evaluation of NNET Assam where in some cases, PLPs' lacked seriousness in their work and in others, ethnic violence kept people from participating in awareness programmes and non-cooperation from village headman and villagers led them to miss their mark in stopping human trafficking and sending drop-out children to schools.

The capacity building programme for women and youth, meanwhile, has been a more recent addition with money having been first budgeted for it in 2012 and ground activities beginning only in 2013.

The Assam partners spoke of having selected around 20 to 25 women in Kumarikata in Nalbari district, in 2013-14, based on their leadership⁶⁸ qualities. The Assam reports available⁶⁹ mention the formation of four women groups. An initial capacity building workshop was organised for them. After that monthly trainings were held; the subjects taught were decided by the partners and included issues such as domestic violence, human trafficking and women leadership. The women were also trained on dealing with local issues. For instance, in Kumarikata last year, about 50 people had worked under MNREGA without getting paid. The women and youth supported the PLPs in the struggle to get these people their dues. In Assam, four youth groups were formed and received quarterly meetings. 45 young people also attended a 3-day training.

The Tripura personnel had varied versions on what had been done under the women and youth programme component in 2013 and 2014. In that state four women groups were formed. According to the (April-September 2013) report, legal awareness meetings have been organised by them for the youth and women every month, in the four villages, under every centre. The programme managers said that these two years had seen them: a) holding meetings with 80 women and youth from their project villages in 2013 and 2014, on issues such as domestic violence, women's rights, health and hygiene; b) organising annual camps for about 40 to 45 Adivasi youth, the last held in October 2014, where the participants interacted with PLPs and coordinators and were lectured on subjects like tribal culture, leadership skills etc; c) organising four-days long workshops in May 2013 and January 2014 where 10 boys were taught mobile repairing and 10 girls were given trainings on embroidery and tailoring (Final Report for MM: 2013-14). This sub-component corresponds to the skill building training programme run by ASHA since 2013 and that helped 32 youth, including 11 girls, turn entrepreneurs and earn an average daily income of Rs. 250 to 350 in 2013. The field staff, on the other hand, stated that annual training had been organised for women, 24 monthly issue-based village meetings with both women and youth. At any rate, there seemed to be a consensus that this year would see a combined training organised for women and youth.

The participation of its target group, the Adivasis, is central to NNET which has, from its inception year, recruited unemployed youth, mostly Adivasis, from the project villages as PLPs. But the period since the baseline has seen NNET reflecting on its strategy to focus on a particular community alone. A NNET Field Report dated November 2013 asks: "Are we only concentrating on the Adivasis? There are multi communities where some partners work; therefore awareness programme (should reach out to) to all without any discrimination. Awareness programme may prevent stereotypes in the minds of the other communities."

And both states are indeed reaching out to many communities other than the Adivasis, as also more women, since the baseline. For instance, NNET Assam conducted a survey in July 2014 on human trafficking in Baganpara in Nalbari district aimed at identifying people and children who had left their homes for work but had not returned with their whereabouts unknown; the exercise had made no distinctions between Adivasis and non-Adivasis. With regards to women, in 2011 there was one female PLP in Assam and none in Tripura. In 2012, there was only one female PLP in Assam, but in the 2013 and 2014 batches there were four each. In Tripura, data is not available for 2012, but there were

⁶⁸ On further probing "leadership quality" was described being articulate, willingness and capability to attend meetings and maybe even travel out of the village if such a need arises. Education was seen as a contributing to the "leadership quality" but not an imperative, because there aren't many educated women in the villages.

⁶⁹ See 'Assam- Report of women group formation'; 'Assam-Report of Women'; 'Assam-Women's Capacity building Training'; 'Assam-women's Exposure Programme'

three in 2013 and four women PLPs in 2014. Over the past two years Assam has had nine women PLPs and Tripura has had seven women PLPs. The NNET Tripura Report for MM 2013-14, in fact, states that 50 per cent of women in project villages now attend meetings and programmes. The Assam programme managers also said that larger numbers of women presently attend NNET meetings, they attribute this to a growth in the community's trust for NNET. They add that people from non-Adivasi communities have also now started attending NNET meetings. Tripura's leadership and field staff corroborate this and shared that the NNET beneficiaries have now expanded to include not just the Adivasis, but also Nepalis, Boros⁷⁰, Assamese and other linguistic groups⁷¹.

Everyone across the NNET hierarchies in both states was unanimous that there had been considerable improvement vis a vis outreach since the baseline. While NNET Assam admitted that the numbers had not risen remarkably because of a set geographical expansion plan, they emphasised that they looked at their work as a process and not just a multiplication of numbers—one PLP has the capability of influencing many people, so the expansion has been in qualitative terms.

Score: +1

1.2 Involvement of the target groups

Beginning 2011 till date, NNET continues to ensure the involvement of its target groups by selecting educated and unemployed youth from within the project villages as PLPs.

The improvement in PLP profile and work now finds reflection within the larger target group. NNET personnel in both states said that the participation and interest of target groups has risen since the baseline. Having said which, the executive leadership in both states was categorical its target group has had no role in the analysis, planning and evaluation of NNET's activities in the PLP component since the baseline. This part of the programme is about "legal education"—the target group is not considered to have competent technical knowledge to be planning project activities for this presently. They, however, qualified that this was not so for the women and youth capacity building component, and that the target population is consulted at planning and evaluation levels for it. The evaluators found no evidence, either by way of documentation or interview, backing this claim. It may be noted however that, according to the project documents, the PLPs take part in the evaluation of the PLP component of the programme.

Score: +1

1.3 Intensity of political engagement

NNET personnel across hierarchies, in both states, said that the network's engagement with elected representatives has improved since the baseline. This even as NNET has from the beginning, in fact, invited panchayat members, ward members and village council members (Tripura) to participate in legal awareness programmes organised for the target groups. Coordinators and PLPs have also, since the programme was initiated, routinely obtained information on government schemes available through the village panchayat and Village Development Centre (VDC), and passed it on to villagers.

The only remarkable change since the baseline seems to have been that some NNET personnel have contested and won panchayat elections. In 2013, a NNET Assam coordinator was elected ward member and another became Gaonburah (headman) of his village's VDC (Village Council Development Committee) in 2014. A woman who was a participant in Tripura's capacity building workshop became a panchayat member in 2013 in a project village under the Gandacherra centre in Dhalai district. But these victories have also brought in a new set of challenges, said the Tripura

⁷⁰Boro (Bodo) is the largest tribe in the Brahmaputra valley of Assam. The boro 's have been economically and socially deprived compared to other communities in the region, giving rise to the Bodoland Movement. A Bodoland Territorial Council is a "territorial privilege" guaranteed to the Bodos' of Assam to protect their culture. *Refer*, <http://www.indianmirror.com/tribes/bodotribe.html>

⁷¹With regards the extension of NNET work to other groups than Adivasi, MM staff did not see it as part of a clear strategy. She agreed that as such NNET is a network not only for Adivasi but she questioned the relevance of such an expansion mentioning that often the Adivasi live in villages where no other groups are living.

personnel. A colleague became the Kamranga village (Dhalai District) sarpanch in 2014, only to realise that NNET's work, often done by pressurising the government to work effectively for people, stood to disconnect him from the state's larger politics. His subsequent efforts at stalling NNET's work had to be stymied through discussions. Convinced, he now informs villagers of government schemes and also, recently, gave a talk on land rights.

Score: +1

2. Level of Organisation

2.1 Relations with other organisations

As in the baseline, so also now, NNET's most intensive relations are amongst its own network partners, followed by that with LCHR which is the resource organisation for the network's collective project under MFS II. And though the NNET teams largely gave positive scores for this indicator these scores seem to be incongruous given that the period since the baseline, in fact, saw a stress in the primary relations within the network. An Evaluation Report 2013-2014 NNET Project – Assam Unit states: "The NNET project in Assam was operated in 20xx⁷² under lots of new circumstances. New 'working arrangements' were required to enhance networking among the stakeholders such as NNET team, partners and LCHR. There were occasions of strains and misunderstanding among these stakeholders. It taught all of us new lessons of cooperation and working together. We learned that 'Networking' certainly is harder than individually operating."

As they had during the baseline, NNET teams in both states continued to cite the partners' inability to intervene in or influence each other's work as a major weakness. Remote locations and long distances, meanwhile, continue to keep the partners from physically meeting each other frequently. LCHR was active in both Assam and Tripura at the time of the baseline, but NNET in Tripura discontinued its LCHR services in March 2013 having built a legal resource team within its staff. Whether NNET Assam continues to seek LCHR's services post its contract ending in October 2015 remains to be seen; the evaluators got no clear response pertaining to this either from NNET or LCHR.

Meanwhile, NNET Assam's interactions with other organisations appeared to be informal. Most of these collaborations, moreover, are new, in that they were not named during the baseline. The Assam field staff said that they work with: a) Discover in Kokrajhar on women's issues, livelihoods and marginalised communities; b) Bongaigaon Gana Seva Society (BGSS)⁷³ on women's issues, livelihoods and rights-based issues; c) EkalVidyalayaAbhiyan (EVA)⁷⁴ on education and RTI in Tinsukia District; d) Seva Kendra (SK)⁷⁵ in Dibrugarh on awareness programmes on legal rights. The programme managers said they work with: a) Human Empowerment and Development Centre (HEDC)⁷⁶ on legal awareness, children's parliament and vocational issues; b) North Eastern Community Health Association (NECHA)⁷⁷ on women's health and hygiene. Assam's executive

⁷² This information remains missing, also after feed-back provided by NNET.

⁷³ BongaigaonGanaSeva Society (BGSS) is an NGO based out of Bongaigaon in Assam. It works on the issues of dalitupliftment, disaster management, legal awareness, tribal affairs and women empowerment etc. It was registered in 1998. Refer, <http://www.indiamapped.com/ngo-in-assam/guwahati/bongaigaon-gana-seva-society-2616/>

⁷⁴ EkalVidyalayaAbhiyan (EKA) is part of the EkalVidyalaya Foundation, a not-for profit organisation working to bring basic education and village development to rural India.

Refer, https://www.google.co.in/search?q=kamranga&aq=chrome..69i57j0i5.1553j0j4&sourceid=chrome&es_sm=93&ie=UTF-8#q=Ekal+Vidyalaya+Abhiyaan+

⁷⁵ Seva Kendra (SK) in Dibrugarh was established in 1982. It's a not-for profit organisation, and "an official organ of the Diocese of Dibrugarh for planning social and development programmes". Refer, <http://sk-dib.org/>

⁷⁶ Human Empowerment and Development Centre (HEDC) based out of Guwahati in Assam, works on "social transformation and economic development of backward communities" in the states of Assam, Nagaland, Manipur and Arunachal Pradesh. Refer, <http://fmandf.org/guwahati/origin/>

⁷⁷ North Eastern Community Health Association (NECHA) works as a not-for profit. Its goal is to, "community health a people's initiative in the village of North East India". Refer, <http://nechaindia.org/vision.htm>

leadership spoke of a newfound cooperation with the Guwahati-based NEDSSS (North East Diocesan Social Service Society)⁷⁸ towards monitoring the situation in the North East.

Apart from these new alliances, NNET Assam seems to have had continued collaborations with five organisations since the baseline: i) AIDA-ANMA (Integrated Development Association-Assam, Nagaland, Manipur, and Arunachal Pradesh)⁷⁹ which also works to provide legal awareness to the marginalised communities; ii) All Adivasi Women's Association of Assam (AAWAA), which was commissioned by NNET to conduct a survey in 2014 on trafficking/migration out of the region for domestic work. The survey was conducted in GuhaibitiBasti, Dahelua and Kampour of Naigaon district; iii) PAJHRA (Promotion and Advancement of Justice, Harmony and Rights of Adivasis)⁸⁰ with whom NNET in Assam has been collaborating on the advocacy concerning hike in minimum wages for tea workers; iv) GanaChetnaSamaj⁸¹

The Tripura team, meanwhile, said hardly any organisations work in the far-flung unconnected areas they work in, which makes forging and nurturing relationships difficult. According to the partners and field staff, 12 health camps were organised in July-August 2014, for malaria affected villages, with the social service organisation called JUST based out of Agartala. Also, in October 2014, in Kamranga, Cachar district, they organised a health camp and through all of health camps combined they managed to reach out to 1200 people. Apart from this, most of Tripura's interactions with others since the baseline seem to have been through one-of exposure visits. One was for the coordinators, organised in collaboration with JeevanVikasSanstha (JVS)⁸² in Amravati, Pune and Central India, in March 2013, objective being to observe the income generation activities and work with farmers' suicides families by JVS. Another was a programme managers' visit to observe SHG groups in Shillong, in November 2013, on an exposure programme with Bethany Development Society⁸³ who work on forming SHGs and livestock promotion. The field staff reported occasional interactions with BSU (Bru Student Union) on legal awareness (the evaluators could not connect with BSU to confirm this despite many attempts). No mention was made of SHAKTI—Legal Aid and Human Rights Centre (LAHRC) in Surat, Gujarat and TUDI (Tribal Unity and Development Initiative) in Kerala, the two organisations NNET Tripura had said it was working with at the time of the baseline.

Score: 0

2.2 Frequency of dialogue with closest civil society organisation

Remote locations and long distances continue to keep the NNET partners from physically meeting each other frequently. The Assam partners usually come together only during training programmes, but keep in touch over regular emails and phone calls. The Tripura partners manage to meet once in a month at the office of a partner, ASHA Holy Cross⁸⁴, in Agartala, a day before the Bishops Monthly Recollection (monthly prayer meeting) where the congregations meet. By having the partner meeting

⁷⁸ The North East Diocesan Social Forum is a voluntary non-governmental organisation. "It is the official organisation of all the Catholic Dioceses of North East India, for the facilitation and promotion of the integrated development of the region. The Social Forum is collectively owned by all the dioceses of the North East". Refer, <http://www.nedsf.net/>

⁷⁹ ANMA (Assam, Nagaland, Manipur, and Arunachal Pradesh) Integrated Development Association (AIDA) is the social development wing of the Salesians of Don Bosco, Province of Dimapur. Refer, <http://aidasdb.org/>

⁸⁰ PAJHRA (Promotion and Advancement of Justice, Harmony and Rights of Adivasis) is an organisation which was started by a group of Adivasi social activists, leaders and academicians. The main issues that they address are similar to the ones picked by NNET like – identity, Adivasis' constitutional rights, human trafficking, health, education and livelihood. They work with Adivasi institutions, strengthening them and promoting those that require it. Refer, www.pajhra.org

⁸¹ GanaChetanaSamaj (GCS) is an offshoot of the Nagaland Jesuit Society (NJS). It works with tea tribe workers and also helps tribal and Adivasi women to form self-help groups (SHGs). Refer, http://www.jesaonline.org/index.php?option=com_content&view=article&id=632:case-study-ii-chapaguri-village-community&catid=14:programmes&Itemid=18

⁸² JeevanVikasSanstha (JVS) is a voluntary, not-for-profit, social development wing of the Catholic diocese of Amravati in Maharashtra. Refer, <http://www.ngojvsindia.org/>

⁸³ Bethany Development Society is based in East Garo Hills of Meghalaya and is a not-for profit charitable trust. It works with disabled people, training and strengthening SHGs, training teachers etc. Refer, <http://bethanysociety.in/highlights/>

⁸⁴ Asha (Association for Social and Human Advancement) is an official social service wing of the Society of the Fathers of Holy Cross, North-East India. They have been involved in formal and informal education and performance of social service, aimed towards a higher socio-economic and human development in north-east India since 1937. Refer, <http://www.ashaholycross.org/>

at the same time as the prayer meetings, they have managed to increase communication and contact between the partners in Tripura. And partners from both the states meet once a year in Guwahati. NNET Assam's interactions with other organisations seem largely on a needs basis. While one or two weekly phone calls are made to Discover on work related issues, BGSS is met on a monthly basis, or whenever the need arises, and KS is met three to four times a year. HEDC meets three to four times a year and NECHA about four times a year. NNET Assam's interactions with AIDA-ANMA and AAWAA have been consistent and frequent since the baseline. The Tripura team, meanwhile, seems to have very minimal interactions with other organisations. The Tripura field staff, for instance, regretted that their last interaction even with their Assam counterparts, or indeed LCHR, had been in 2010-11. Some coordinators, however, claimed to be interacting with BSU on a monthly basis; the evaluators could not establish contact with BSU for a confirmation of this claim.

Barring the Tripura programme managers who saw no change as compared to the baseline, NNET teams across hierarchies in both states reported an improvement in the frequency of interactions with other organisations. However, there seemed to be little by way of evidence to substantiate this.

Score: 0

2.3 Defending the interests of marginalised groups

At the time of the baseline, the NNET executive named the ten partner organisations that comprise the network as best defendants of the interests of the marginalised. The end line had them highlighting the PLPs' work as illustrative of the best efforts made to defend the interests of NNET's target groups.

The other organisations named by the Assam and Tripura NNET partners and staff in this context were: PAJHRA, Chetna Society (CS), Guwahati-based NEDSSS (North East Diocesan Social Service Society), and Seva Kendra (SK), GramyaVikashManch⁸⁵, BongaigaonGanaSeva Society (GSS) and EkaVidyalayaAbhiyan (EVA).

Score: +1

2.4 Composition of Financial Resource Base

As in the baseline, MM continues to be the sole funder of NNET. This funding is being utilised for the PLP trainings as well as capacity building trainings for youth and women. Apart from this staff salaries, programme costs and consultation costs etc. are also being sustained with the help of MM funding. This funding will be ending in March 2015; NNET is yet to arrange for alternative funding when this happens.

The executive leadership also listed their religious congregations as another monetary source for the network partners but the Tripura executive leadership disagreed.

The field staff and programme managers in Assam also added that, at times, the community also takes responsibility for a particular programme. As such, the villagers would make arrangements on their own for venues, seating, and snacks etc. As for the field staff, they said that little information is passed to them in terms of finances and monetary entitlements which often force them to pay out of their own pockets for official work.

Score: 0

⁸⁵GramyaVikash Mancha is a non-profit people oriented development organization working in rural areas of Assam, it has mainly worked to train people in disaster management and also, provides support to help strengthen SHGs.
Refer, <http://www.aidprojects.org/ngos-edit.aspx?cmd=0&login=guest&id=430>

3. Practice of Values

3.1 Downward accountability

Since the baseline, NNET's leadership has continued to consider the organisation's structure horizontal rather than vertical, with all the ten partners being equal. Although, information is passed and shared between the partners and the executive leadership on finances and project progress, no such information is being passed to the programme coordinators and the PLPs. And it can, therefore, be concluded that no such information is being passed to NNET's target groups.

The programme coordinators and the PLPs claimed that they are not provided any information with regards to funding. They are given a fixed amount and are required to make all and any arrangements for the project through that. They make monthly reports which are passed on to the executive leadership but once these field reports are compiled they are not shared with the field workers and PLPs. Also, as in the baseline, the PLPs continued to regret that there is little information passed on to them, in terms of, funds, budgets, travel expenses etc, and that they are often forced to spend out of their own pocket for official work.

Score: 0

3.2 Composition of Social Organs

NNET is a network of partner organisations with the partners having an equal say over issues pertaining to its functioning. NNET does not have a board, or any other form of permanent structure. The partner organisations belong to different Catholic congregations and are represented by nuns and priests, liable to be transferred to other posts by their respective congregations. The coordinator and assistant coordinator of the network are priests.

Since the baseline, there has been no change in this structure.

The field staff in Assam continued to insist that the leadership should preferably be from the target villages and the marginalised communities as they will be more readily accepted by the people. But this has not happened, as the partners or the coordinators after almost two years are still not chosen from the marginalised communities or the target groups. What also becomes apparent is the disconnect between the Assam and Tripura partners, as according to the field staff in Tripura, they do not have any idea about the leadership of Assam partners.

Score: 0

3.3 External financial auditing

As at the time of the baseline, external auditing continues to take place once a year.

Score: 0

4. Perception of Impact

4.1 Client satisfaction

At the time of the baseline, the NNET executive leadership mentioned the inability of the tribal communities to avail their rights and legal entitlements as the most important concern of their target groups. Their rights and entitlements include, among others, the right to education, right to information, land rights, and the right to livelihood. The target groups also need to get access to government schemes and programmes such as MGNREGA⁸⁶, Indira AwasYojana (IAY)⁸⁷, Public

⁸⁶ Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA), 2005, is designed to provide a guaranteed job (non-skilled) to all adult members of a family living in a rural area for at least 100 days. *Refer*, <http://www.mgnrega.co.in/>

Distribution System (PDS)⁸⁸, Midday Meal Scheme⁸⁹, widow and old age pensions, student scholarships etc. Towards this, NNET aims to empower Adivasi and marginalised tribes to build their legal skills and knowledge so they are able to exercise and claim the above mentioned rights and entitlements.

During the end line workshop, NNET maintained that the key concerns of its target groups have remained the same but that NNET's work since the baseline has expanded its outreach such that many more people now have access to their rights and entitlements. Showcasing the varied nature of their work, the Tripura team shared that the PLPs' efforts in the period between 2012 and 2014 brought BPL (Below Poverty Line) cards for 27 families in Kathalcherra in Dhalai district of Assam, old age pensions for 60 families, widow pensions for 21, job cards under NREGA for 60 families, permanent residence certificate for 30 people, panchayat certificates for 35 families, income certificate for 40 families, handicapped pensions for 25 families, death and birth certificates for 15 and 21 families respectively.

Other examples were cited by the Assam PLPs: several people from a project village recovered dues for their NREGA work from the Panchayat head; women benefitted from the National Rural Health Mission (NRHM)⁹⁰ scheme after a RTI was filed by the PLPs and coordinators to help them get their dues since 2009. According to the quarterly reports for Assam and Tripura, the PLPs have in the period of 2013-14, helped 105 people open bank accounts, irrespective of which community they belonged to. The Assam staff reported having assisted 76 girls and boys in Saint Mary's in Margherita town receive scholarships reserved for minority communities. For this they helped the students obtain the required paperwork such as minority certificate, income certificate etc, and facilitated the opening of bank accounts for them so that their scholarships could be deposited for the 2013-14 academic year.

Beyond getting access to government schemes and programmes there is an increased number of examples where PLPs (sometimes together with communities as collective action) took action in more complicated cases (like atrocities): In July 2014, PLPs in Simna intervened when a teacher was found treating children belonging to the "lower castes" as untouchables and throwing their midday meal at them. The PLPs and coordinators built community opinion against the teacher, and the teacher had to stop under such pressure. Another new issue that was dealt with was kidnapping, which is common in these regions of Tripura. In August 2014, the project village Gandacherra, in Dhalai district, saw two men who had been kidnapped for three months being released only after a ransom was paid. This was followed by two more kidnappings in a neighbouring village. The PLPs decided to intervene by campaigning with people about the ills of kidnapping, how to protect oneself against such an eventuality, and speaking to concerned authorities on the matter. On their part, the Tripura team narrated an instance when a PLP lodged an FIR (First Information Report) with the police in September 2014 after two adolescent girls were raped in his project village of Purna Kishore Para. The PLP was beaten up by the villagers, upon which he filed yet another FIR which saw the accused being arrested, and the girls being admitted into a hospital. PLPs from Assam shared instances of Jagun centre of Tinsukia district, where they served as mediators to settle local issues of under-age girl marriage and domestic violence after the plaintiffs approached them for assistance.

All the successes achieved have reinforced the villagers' trust in PLPs' and NNET's work and they have started approaching PLPs for assistance on a number of legal issues concerning their rights and entitlements and the PLPs then help them take necessary action. Also, an increase in the number of participants for the awareness programmes, especially women (NNET Tripura said that women's

⁸⁷Indira AwaasYojana (IAY) was launched during 1985-86 as a sub-scheme of Rural Landless Employment Guarantee Programme (RLEGP) and continued as a sub-scheme of JawaharRozgarYojana (JRY) since its launching from April, 1989. It is a social welfare programme aimed at providing housing for the poor. Refer, <http://odishapanchayat.gov.in/english/IAY.asp>

⁸⁸Public Distribution System (PDS) in the country facilitates the supply of food grains and distribution of essential commodities to a large number of poor people through a network of Fair price shops at a subsidised price on a recurring basis. Refer, <http://epds.nic.in/>

⁸⁹The Midday Meal scheme was introduced in 1952. Through this, the *State Governments/Union Territories have to provide every child in every Government and Government assisted Primary School with a prepared mid-day meal.* Refer, <http://mdm.nic.in/>

⁹⁰The National Rural Health Mission (NRHM) was launched in 2005. Its aim was to provide affordable and quality health care to the rural population, especially the vulnerable groups. Refer, <http://nrhm.gov.in>

participation has reached an average of 50 per cent in most of their village meetings), has been registered over the past two years as people have developed confidence and are eager to learn about schemes beneficial for them. Increasing numbers of people now enquire as to when NNET will conduct its next trainings. Like during the baseline, the changes that took place in the villages supported by the programme led people from non-project villages to approach the PLPs with their problems as well as non-Adivasi groups to solicit NNET's help.

Overall, NNET partners and staff in both Assam and Tripura agreed that there had been considerable improvement vis a vis client satisfaction since the baseline. NNET personnel in both states said that the participation and interest of target groups has risen since the baseline. Also, that there is lot more repeat participation in the village meetings compared to earlier.

Score: +1

4.2 Civil Society impact

The objective of NNET's programmes and campaigns is to spread general awareness on rights and entitlements at the community level, while ensuring that individual claims to government schemes and benefits are realised.

As a result of the interventions made by PLPs and the coordinators, village communities at large have claimed various benefits provided under government schemes and programmes by using RTI (see descriptions of the results under indicator 4.1). The capacity building tribal youth initiative of NNET Tripura has enabled a number of Adivasi youth to become entrepreneurs and to become financially independent⁹¹ in 2013 after having undertaken skills training in mobile repairing, computer applications and working as beauticians. The example cited earlier (see under indicator 1.3) of a colleague who became the Kamranga village (Dhalai District) sarpanch in 2014 but did not automatically embrace the cause of the Adivasi and has needed some extra sensitization shows the difficulty in bringing changes but is a great behavior and mind change example of the impact of NNET's work on society.

Beyond individual changes, the knowledge shared through the programme has helped the communities to organise themselves to take collective action to achieve desired results in many instances such as closing down liquor shops, getting mid-day meals and uniforms for their children etc. Former Tripura PLPs reported to have contributed towards organising women groups in the Kathalcherra centre of Dhalai district, which succeeded in getting liquor shops closed in their respective villages in October 2013. PLPs, with the help of the communities, have also picked up some more complicated problems which deal with recurrent behaviors among villagers (please refer to the examples of rape and kidnapping under indicator 4.1). Apart from this, the PLPs and coordinators succeeded in establishing communications with government officials and ministers to uncover corruption in the tea gardens of Assam where one labourer is made to do the work of two at minimal wages, reported Assam coordinators. Moreover, the surveys on human trafficking and school drop-outs⁹² conducted with the help of PLPs have borne positive results: NNET Assam field staff reported having being able to send six students back to school and in the sense that the survey on human trafficking in July 2014 in the villages covered under the Baganpara centre of Nalbari district also included non-Adivasi communities. According to MM, the fact that the backward communities are willing and able to talk to other communities, that these marginalized people dare to talk to government officials or that children parliaments seem to be functioning are more example of improvement of the society.

Despite challenges linked to PLPs as mentioned under indicator 1.1, staff from both the states agreed that the intensity of PLPs' engagement as also the quality of their work has improved since the baseline. The former PLPs from Tripura, residents themselves from the project villages, said that their work has helped empower people and created a positive impact for the communities of villages

⁹¹ As quoted in Asha's report (2013) "[...] students have become self-entrepreneurs by earning their livelihood. They also help the family to be stable in terms of finance and status".

⁹² The survey was conducted in Kumarikata centre of Nalbari district, in September 2014

associated with Kathalcherracentre, Dhalai district, where people have managed to get toilets for their homes through the knowledge given by the PLPs. Most importantly, they said, members from the marginalised groups, especially women, have learnt to actively fight for their due as citizens.

An external resource person said that NNET's work has helped people develop awareness about rights, legalities, government schemes with respect to education, health, nutrition etc, as also increased the confidence and courage of communities to fight for their rights.

Score: +1

4.3 Relations with Public Sector Organisations

As at the time of baseline, there have not been any outstanding developments in regards to NNET's relationship with public sector organisations.

NNET in both the states faces resistance from the panchayats and the government in the process of their work that involves getting the panchayats and the government to work with diligence, and use funds for what they are meant for, instead of corrupt officials pocketing it for themselves. This often creates friction between the state machineries and the organisation. NNET has tried to cope with this by getting the officials involved in their work, making it clear that they are apolitical and are only working for the people's welfare. In some areas, the panchayats now support NNET in carrying out their mandate.

One new development has been a one-off interaction with NABARD (National Bank for Agriculture and Rural Development). The bank got in touch with the PLPs of Assam and informed them about certain schemes relevant to the target groups NNET works with, and asked them to spread this information to Self-Help Groups (SHGs) in their area.

Score: 0

4.4 Relations with Private Sector Agencies

At the time of the baseline, NNET partners in Assam said their relationship with private sector agencies was on a case to case basis and at times only limited to receiving donations from them. An organisation called IDEA, in Dimapur (Nagaland) was casually mentioned by the executive leadership with whom they have started initial discussions. The Tripura staff had denied having any relationship at all with the private sector. Similarly, almost two years later, the situation remains the same; there has been no interaction with the private sector in the period since the baseline either in Tripura or Assam.

Score: 0

4.5 Influence upon public policies, rules, regulations

In terms of influencing public policies, rules and regulations NNET, at the time of the baseline, was working to ensure ST (Scheduled Tribe) status for the Adivasi community through advocacy and networking. They were also filing a Public Interest Litigation (PIL) with child-rights NGO BachpanBachaoAndolan (BBA)⁹³ to stop child labour and trafficking in Assam. Apart from this they had been able to strengthen the functioning of the Integrated Child Development Scheme (ICDS) and the Public Distribution System (PDS) by filing RTI applications.

There has not been much progress over the ST status issue. This issue is a politically charged matter in the state of Assam, preventing any rapid developments. The Assam partners on their part interacted with a member of parliament on the issue. Also, a group of its staff had visited the Andaman & Nicobar Islands to study the Adivasi communities there and thus, understand the issue better. But no change in public policy has been achieved.

⁹³BachpanBachaoAndolan (BBA) is a child rights NGO formed in 1980, to fight against slavery, forced labour and trafficking of children. Refer, <http://www.bba.org.in/?q=content/about-us>

In Tripura, the issue of rights of Adivasis' is comparatively not as politically charged a matter as in Assam. Nevertheless, NNET partners in Tripura organised a five-day awareness programme on culture, in March 2014, in an effort to influence and shape opinions of the people over the issue of recognition of Adivasi and linguistic groups' rights by the state.

External resource persons interviewed during the workshop did not have any information about NNET's role in relation to the ST status movement for the Adivasi community. The name of All Adivasi Students Association of Assam (AASAA) was mentioned for spearheading this movement by PAJHRA who NNET collaborates with on building legal awareness over the minimum wage issue.

On the issue of PIL on child trafficking and labour there have been new developments since the baseline. The PIL filed by NNET in 2013 has now been clubbed by the court with two other PILs submitted on the matter—a suo-moto and a letter written on the matter by another organisation to the Chief Justice of India. These three have now been combined and will be treated as a single case file.

NNET's work on the Public Distribution System has continued as before, by bringing changes in its functioning in areas where NNET operates. For instance, in Margherita in Tinsukia district of Assam, NNET coordinators spoke to the Sub-Divisional Officer in-charge of ration shops which were before located far away and inaccessible and managed to get them shifted to their area.

Score: 0

4.6 Influence upon private sector agencies' policies, rules, regulations

NNET's executive leadership, at the time of the baseline, was involved in trying to influence the policies on minimum wages for tea garden labourers. During the period since the baseline, the minimum wage has increased from Rs 62 in 2012 to Rs 94 in 2014 for tea garden workers and Rs 120 in 2012 to Rs 167 for NREGA workers.

NNET on its part has been involved in advocacy on the issue of minimum wage of tea garden workers along with PAJHRA. PAJHRA confirmed that they had taken support of and consulted with LCHR (NNET's resource organisation) on this issue. PAJHRA, however, qualified that the change in wage is mainly been driven by AASAA which has played a very active role in ensuring a wage hike. AASAA, meanwhile, made available to the evaluators a number of news clippings outlining their efforts for this cause; NNET has not been mentioned in these news clippings, nor was the AASAA representative interviewed aware of NNET.

NNET's executive leadership mentioned that their role on changing policies of tea garden workers' wages has been only as a supportive organisation: together with PAJHRA they focused on creating legal awareness on the issue. Even NNET's field staff in Assam has named AASAA as the main runner behind this change.

In Tripura, the PLPs have been involved in ensuring that the existing policies of private agencies are being followed. For instance, in Simna, near Agartala, an electric company was not paying its workers the promised wages. The workers brought this to the attention of the PLP who took the manager of the company to the police station, following which he was forced to pay adequate wages to the workers.

Also, Reangs⁹⁴, a scheduled tribe, working in Jhum⁹⁵ cultivation were not receiving adequate wages. The PLPs from Kathalchhera, Dhalai district, Assam, filed a complaint with the labour office following which the workers started getting Rs 200; this was an increase from Rs 75 which they were getting earlier.

NNET has had very limited, if any role over influencing private policies, rule and regulations.

⁹⁴The Reangs are the second largest tribal community of Tripura. Most of them even today are nomadic and involved heavily in Jhum cultivation. Refer, <http://www.tritripura.in/tri/Tribes/Reang.aspx>

⁹⁵Jhum cultivation is also referred to as slash and burn, shifting cultivation. It is a cultivation practice mostly prevalent in the north-eastern hills of India. Refer, <http://indiatgether.org/jhum-agriculture>

Score: 0

5. Environment

5.1 Coping Strategies

At the time of the baseline, the challenges that the environment in which NNET works were as follows: a) huge distances and poor connectivity between places, b) political tension resulting in regular shutdowns and road blocks, c) ethnic turmoil, d) trafficking of women and children, and e) suspicions over NNET as a faith-based organisation trying to convert people.

In the past two 1,5 years, these same challenges continued to pose problems in addition to a new set of issues.

Assam and Tripura, like most of the north-east states, have poor infrastructure, connectivity and lack of adequate modes of transportation from one place to another, making travelling tedious and time-consuming. Some of these issues are chronic problems in the region with no immediate resolution. The NNET partners from both the states only meet once a year, as they are situated far-away from each other making physical meetings difficult. This is especially problematic for a network like NNET, as according to its executive leadership, coordinating the different and often conflicting interests of the partners is quite a demanding task which reduces efficiency.

The change in FCRA (Foreign Contribution Regulation Act) Rules ⁹⁶ has also made the cohesion between the partners in two states problematic, as the new rules do not permit transfer of funds from one state to another. In the first year of the project, the funds would be put in LCHR's FCRA account and then transferred to the partners in Tripura. They have managed to overcome these new regulations, as for now, the funds are first transferred to ASHA FC in Tripura, and then they are given by Cheques to Father Jose in Assam, who distributes it to the Assam partners.

Issues relevant from the baseline still affect the workings of NNET. There is still a fear of conversion when NNET enters a new target area; they try to counter this by making it a point to talk about people's rights rather than religion.

According to external resource persons, the positive has been that the youth are today more aware and educated which has helped in creating legal awareness easier to a more attentive audience. NNET has also had to make peace with the fact that with increasing levels of education of the PLPs, they are more likely to leave for better paying jobs.

Score: +1

⁹⁶ FCRA 2010, an act to regulate the acceptance and utilisation of foreign contribution by certain persons or associations. Refer, <http://indianexpress.com/article/india/india-others/only-11-of-22-ngos-in-ib-report-are-fcra-compliant-none-filed-13-14-statement/99/>

Report CDI-15-063

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Klaver, D.C., Desalos, C., Hofstede, M., Wadhwa S., Kalra, A., Mohapatra B. P., February 2015, *Prithvi Theatre end line report; MFS II country evaluations, Civil Society component*, Centre for Development Innovation, Wageningen UR (University & Research centre) and India Development Foundation (IDF). Report CDI-15-027. Wageningen.

This report describes the findings of the end line assessment Prithvi Theatre, former partner of Hivos.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses Prithvi Theatre's contribution towards strengthening Civil Society in India and it used the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2012, when in fact its partnership with Hivos was already ended. This report presents very briefly the situation as it is in 2014.

1. Introduction

This report presents the civil society end line findings of Prithvi Theatre in India which is a partner of HIVOS under the People Unlimited 4.1 Alliance. It is a follow-up to the baseline assessment that was carried out in 2012. According to the information provided during the baseline study Prithvi Theatre is working on the theme good governance.

These findings are part of the overall evaluation of the joint MFS II evaluations to account for results of MFS II-funded or –co-funded development interventions implemented by Dutch CFAs and/or their Southern Partner Organisations (SPO) and to contribute to the improvement of future development interventions. The civil society evaluation uses the CIVICUS framework (see appendix 1) and seeks to answer the following questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- What factors explain the findings drawn from the questions above?

The CIVICUS framework that comprises five dimensions (civic engagement, level of organization, practice of values, perception of impact and contexts influencing agency by civil society in general) has been used to orient the evaluation methodology.

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the governance issues Prithvi Theatre is working on. Chapter three provides background information on Prithvi Theatre, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with Hivos. Chapter 4 provides the analysis of information available. Conclusions are presented in chapter 5.

2. Context

This paragraph briefly describes the context Prithvi Theatre is working in. A description of the Civil Society Context assessed according to the CIVICUS framework is provided in appendix 3 of the country report for Civil Society.

2.1. Political context

The state of Maharashtra which had been a Congress (a national political party) bastion for the last three assembly elections lost the recent assembly elections of 2014 to the right-wing, Bharatiya Janata Party (BJP). The BJP fell a little short of majority but has now formed the government with its long-term ally, the regionally dominant and ultra-right-wing Shiv Sena party. The new Chief Minister of the state is Devendra Fadnavis of the BJP. Although the impact of this political change on the state's theatre and cultural life has been unremarkable yet, intolerance is considered to be increasing. For instance, *Ali J*, a play produced by the Chennai group Evam, was banned from being performed in Mumbai and Chennai in early 2014 after a fundamentalist group called Hindu Janajagruti Samiti, called it "anti-national".

But the political context for theatre in India cannot be restricted to Maharashtra alone. The story of arts and theatre in India begins with Jawaharlal Nehru, India's first Prime Minister, establishing the Sangeet Natak Akademi (Music and Performing Arts Academy) and National School of Drama (NSD), both in Delhi, in an effort to ensure that culture continues to flourish in independent India. The two are funded by the government and they function autonomously. These academies keep the theatre culture alive by giving awards, having theatre festivals, providing funds and NSD as a theatre repertory trains young students from across the country.

In January 2011, former Prime Minister Manmohan Singh announced a studio theatre scheme for performing arts groups in the country. The scheme aims at helping such groups to build "creative spaces for themselves" with the government footing the major share of the project cost. With theatre groups often facing the problem of non-availability of space to either rehearse or perform, he said, he hoped the scheme will enable to build creative spaces. Towards this end, the government under the scheme will be chipping in with up to 60 per cent of the project cost with a grant that can go up to INR 5 million in the metropolitan towns and INR 2,5 million in other places if the performing groups contribute 40 per cent of the project cost. The scheme seeks to address the long felt need by creative groups engaged in the performing arts to have their own space for their shows. In August 2013, the government extended the grants under this scheme to the tune of INR 200,000,000.

For its part, the Maharashtra state government does not levy entertainment tax on theatre unless a foreigner/foreign troupe is performing. Then a tax of 25 per cent per ticket is levied. Also, apart from the entertainment tax on tickets, there are no exemptions or concessions on electricity and water charges, property taxes etc. for theatre spaces and institutions. Prithvi Theatre, considered as a Trust because of ticket sales, continues not qualifying for income tax exemptions.

2.2. Civil Society context issues with regards to the theme

There have been no significant changes in the civil society context in which Prithvi Theatre functions since the baseline. The multi-lingual Mumbai theatres roughly stage 1500 to 1800 shows every year in Marathi, English, Gujarati and Hindi.

Over the years, Bollywood—at least as far as popular perception and engagement are concerned—has taken over the cultural landscape of Mumbai. This at the expense of the rich tradition of theatre in the city; especially Marathi theatre (Marathi are the people and culture of Maharashtra) that had seen playwrights like Vishnu Das Bhave pioneering innovations by including everyday ordinary encounters in his plays while exaggerated theatrics were the norm, and introducing western theatre production techniques, like changeable scenery. Anna Saheb Kirloskar had laid the foundation of commercial repertoires in Marathi theatre with his theatre group Kirloskar Natya Mandal, starting regular theatre as early as 1880 with the play *Abhigyan Shakuntalam*. Among the notables who continued Kirloskar's tradition forward were renowned playwrights like V V Shirwadkar, Satish Alekar, Jayavant Dalvi and Govinda Deshpande. During this period Marathi troupes began to travel to other states, including Andhra Pradesh and met with great acceptance and success. Till, in the contemporary context, Marathi playwright Vijay Tendulkar's plays evoked popular response despite Bollywood's onslaught; Tendulkar passed away in 2008.

Apart from Marathi theatre, Mumbai had also been the stage for many other theatre traditions from across the country. Gujarati theatre and Parsi theatre had thrived here. IPTA (Indian People's Theatre Association), the cultural wing of the Communist Party of India, has always had strong presence in Mumbai since its inception in 1942. Its ideology has motivated its workers to use theatre for the education, entertainment and inspiration of the people in the hope of achieving a finer sensibility in each citizen. Prithvi Raj Kapoor was himself associated with IPTA, and he went on to set up the Prithvi Theatres, a travelling theatre company based in Mumbai, in 1942.

Over the years, some of the best known theatre spaces in the country came up in Mumbai: the Prithvi Theatre in Juhu, Dinanath Natyagruha at Vile Parle, Shanmukhananda Hall at Matunga, Prabhodankar Thackeray Theatre at Rang Sharda in Bandra and the theatres at the National Centre of Performing Arts (NCPA) in Nariman Point.

Theatres in Mumbai have witnessed a departure from their main themes of focus in the 1950s of—“Hindu-Muslim relations, the modernisation of farming and the problems of current life and politics in the villages”. But theatre in Mumbai today is unable to reap benefits from its rich roots. The Gujarati theatre that does well in the city now is unabashedly commercial, mostly just playing to the galleries through bawdy humour. For the rest, experimental theatre has been confined to some small enclaves, with a very niche (mostly English speaking) audience patronising it. Most actors see theatre as a stepping stone to a career in television and movies, given that the current theatre economy cannot provide sustenance as fulltime occupation. Corporate sponsors too see less and less financial sense in investing in plays that reach such small numbers. Many theatre spaces have started opening themselves up to functions like award ceremony, fashion shows, and even marriages, to make money. There are hardly any spaces that can be afforded by young, new and experimental theatre groups; and even less so for rehearsals. And though builders in the ever-expanding metro today are putting in theatre spaces to up the attraction quotient of their new properties, these are uninspired and uninformed by theatre aesthetics.

3. Prithvi Theatre and its contribution to civil society/policy changes

3.1. Background of Prithvi Theatre

History

Prithvi Theatre (PT), a registered Trust, was established in Mumbai in 1975 for the development of Hindi theatre in India. PT was promoted by a family having formidable reputation for their contribution to theatre culture in India. The work started with a 200-seat theatre in Mumbai with a view to bring-in professionalism in theatre culture, and to provide a base for sustaining theatre groups. Nowadays, an average of 550 theatre performances is held every year. PT constantly tries to promote alternative performance venues and reaches out to diverse audiences. Since 1991, summer-time children's workshops are conducted using theatre-related skills, focusing on child growth, building theatre appreciation and a future audience for theatre. An annual Prithvi Festival is organised since 1983, where the best of national and international theatre is brought in for performances at venues across the city.

PT has been successful in reaching out to audience of about 3,000 through monthly on-line news letters, about 150,000 per annum through plays and exhibitions, about 800 children per annum through summertime workshops and 10,000 children through season of plays. PT has established synergistic links with organisations having technical skills in the sector at the local, national and international level. PT has initiated a Theatre Forum –ITF (a network) to formulate a policy for Theatre in India by bringing the experts together.

Vision, mission and strategy (general)

The Vision of Prithvi Theatre is to build a vibrant theatre culture to enhance skills, capabilities, openings and opportunities for theatre groups “a catalyst for theatre” as said on their website. The strategy is to provide a sustainable platform for theatre groups to perform.

Prithvi's main aims are (a) Theatre to be embraced & sustained as a respected, vibrant and viable profession (b) Theatre community to take responsibility for the future of theatre. Within this broad vision, Prithvi will work towards (a) providing a low-risk, economically viable professional platform for theatre groups and audiences (b) creating an environment that provides exposure, experience and inspiration (c) Establishing the India Theatre Forum (ITF) as an enabling network for the sharing of ideas and resources amongst the theatre community.

3.2. MFS II interventions related to Civil Society

With the support of Hivos, Prithvi Theatre has in particular worked on the conditions 'development of artists', and on networking for productions. These are the CIVICUS dimensions civic engagement, level of organisation and impact upon civil society.

Key result areas for Prithvi Theatre relating to its partnership with HIVOS who provided core-funding are:

1. Prithvi Theatre established as a vibrant cultural hub by offering space and programming to old and new theatre groups to bring a diversity of rich cultural experiences and provide space for those who are unable to afford theatre space in Mumbai;
2. Prithvi Theatre to achieve self-sufficiency in maintaining its staff and its basic daily running and maintenance;
3. Restoration of Prithvi Theatre Building;
4. India Theatre Forum grows into an enabling network for the theatre community in India;
5. Professionalizing Prithvi Theatre Management so that new generation of audience and creative groups are able to interact in one space.

3.3. Basic information

Table 1

SPO basic information.

4. Results

4.1. Results obtained in relation to project logframe

The inputs-outputs-outcomes analysis which is based on the progress reports of the 2010 – 2012 contract shows the achievements along Hivos' objectives:

1. Prithvi Theatre (PT) established as a vibrant cultural hub by offering space and programming to other groups to bring a diversity of rich cultural experiences. Under this objective PT started to publish monthly PT notes (stopped at the end of the Hivos funding), to increase the number of partnership programmes from 6 to 7 partnerships, valid for 84 performances a year (out of 120 planned), including workshops and activities for children, performances in many languages (social diversity) and working with VIKALP, a network of documentary film makers to defend freedom of expression and to resist censorship;
2. Restoration of Prithvi Theatre Building: This improved the accessibility for artists and for the audience;
3. The India Theatre Forum grew into an enabling network for the theatre community in India. Of the 6 activities planned 4 were implemented. These are the launch of a website and e-journal, publishing guidelines for best practices and designing a proposal for a social security/welfare scheme for artists. A Theatre survey and an art management programme were not implemented (due to lack of funds and time). PT decided to dissociate itself from the India Theatre Forum in April 2012;
4. To support core costs of Prithvi to:
 - enable them to expand their staff strength (Prithvi was also able to hire three new staff in 2011);
 - diversify their fund sources. Corporates were not willing to fund core costs but because Hivos supported Prithvi core costs they were able to fundraise from corporates especially for their festivals and other events;
 - To ensure that in mainstream and yet alternate places like Prithvi there is still enough space for theatre in the regional languages.

4.2. Explaining factors

4.2.1. Relation CFA-SPO

The organisation's goals and objectives of promoting serious and wholesome theatre and creating a discerning audience have a high synergy with that of Hivos policy on Art and Culture¹.

Prithvi Theatre and Hivos ended their partnership by October 2012. The following reasons were mentioned for ending the eight year relationship²:

- Prithvi Theatre has been able to make considerable progress with regards to their financial sustainability;
- Originally the India Theatre Forum (ITF)³ was part of Prithvi Theatre and Hivos supported its formative stage but ITF and Prithvi Theatre became two independent organisations after a management change within Prithvi. Without this component of the project, it became less interesting for Hivos to support Prithvi Theatre.

¹ Keshets

² Devi K A" <devi@hivos-india.org> e-mail message dd 20 October 2012

³ ITF has not been able to secure a Foreign Contribution Regulation Act agreement which made it impossible for Hivos to support ITF directly. Nevertheless, Ninasam, who also received funds from Hivos and was included in the end line study, has become active in the ITF forum. Please see Ninasam's endline report.

-
- Hivos changed its policy in favour of supporting more art and culture spaces within rural areas, which meant an end of its support to Prithvi: It is easier to find resources in urban areas and as such to be financially sustainable;
 - A former Hivos staff, contact person for Prithvi Theatre, reflected back in 2014 by stating that the Hivos' partnership with PT was an uncomfortable one, because it is a family trust.

Since then and to the knowledge of the evaluators, no communication between the two organisations is taking place. The evaluation team has not been able to secure an interview with Prithvi Theatre to address questions about sustainability after Hivos withdrew. Instead, the evaluation team received a mail from Prithvi Theatre's leadership criticising the information included in the baseline report, feedback which was not received in 2012.

Since the baseline study Hivos closed its office in Bangalore in December 2013, and expected to open its new office in the second semester of 2014 in Mumbai.

4.2.2. External factors

Important external factors that impacted upon Prithvi and upon its establishment as a vibrant cultural hub to other groups and to bring a diversity of rich cultural experiences during the implementation of its programme with Hivos are the recession that reduced the purchasing power as well as difficulties to attract a younger audience. The new 2011 rule that stipulates that no tax exemptions are given to Trusts which act for profit is also an important factor that influences Prithvi' s impact upon building a strong civil society.

5. Conclusion

The end-line assessment for Prithvi Theatre did not take place as expected: since October 2012 the relationship between Hivos and Prithvi Theatre has ended and no communication between the two organisations seems to take place. The evaluation team was not able to secure an interview with the SPO on questions regarding sustainability and achievements made in 2014. The review of the progress reports of the two year- contract shows that objectives have been achieved partially. External factors that may explain these results are the recession that reduced the purchasing power as well as difficulties to attract a younger audience. The new 2011 rule that stipulates that no tax exemptions are given to Trusts which act for profit is also an important factor that influences Prithvi' s impact upon building a strong civil society.

Report CDI-15-076

Klaver, D.C., Desalos, C., Hofstede, M., Mohapatra B. P., Madaan A., February 2015, REDS *end line report; MFS II country evaluations, Civil Society component*, Centre for Development Innovation, Wageningen UR (University & Research centre) and India Development Foundation (IDF). Report CDI-15-076. Wageningen.

This report describes the findings of the end line assessment of Rural Education for Development Society (REDS) that is a partner of ICCO.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses REDS' contribution towards strengthening Civil Society in India for which it used the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2012. Key questions that are being answered comprise changes in the five CIVICUS dimensions to which REDS contributed; the nature of its contribution; the relevance of the contribution made and an identification of factors that explain REDS' role in civil society strengthening.

Keywords: Civil Society, CIVICUS, theory based evaluation, process-tracing

1 Introduction

This report presents the civil society end line findings of REDS in India which is a partner of ICCO under the ICCO Alliance. It is a follow-up to the baseline assessment that was carried out in 2012. According to the information provided during the baseline study REDS is working on Governance.

These findings are part of the overall evaluation of the joint MFS II evaluations to account for results of MFS II-funded or –co-funded development interventions implemented by Dutch CFAs and/or their Southern Partner Organisations (SPO) and to contribute to the improvement of future development interventions. The civil society evaluation uses the CIVICUS framework (see appendix 1) and seeks to answer the following questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- What factors explain the findings drawn from the questions above?

The CIVICUS framework that comprises five dimensions (civic engagement, level of organization, practice of values, perception of impact and contexts influencing agency by civil society in general) has been used to orient the evaluation methodology.

Changes in the civil society arena of the SPO

In the 2012 – 2014 period the most important changes that took place in the civil society arena of REDS are the following:

1. The number of Adijan Panchayats¹, hobli and taluk councils in Tumkur district declined from respectively 1000, 45 and 10 entities in 2010 to 165, 12 and 3 entities in 2014, the most important factor being the end of the support given by ICCO and Cordaid (*level of organisation*). Instead of supporting this Adijan Panchayat Movement (APM), REDS reoriented its interventions towards the implementation of a solar lamp project (also in Tumkur district), a land campaign and one for electoral reforms in India.
2. Yet those Adijan people still member of the APM where capable to claim their economic rights and they made a conscious vote during the 2013 state elections. Co-existence and acceptance of Adijan people by caste people is said to have increased since the baseline (*civic engagement*).
3. Collaboration with public authorities was constructive and intensified after the positive election results at Karnataka state level. Yet efforts to positively influence the land bill and proceed to electoral reforms at national level did not yet materialise. To this end REDS engaged with relevant networks at national level.

These findings were obtained through an analysis of documents, a workshop and follow-up interviews with the SPO, and interviews with external resources persons working in civil society organisations that receive support from the SPO; other civil society organisations with whom the SPO is collaborating; public or private sector agents and; external resource persons capable of overlooking the MDG or theme on which the SPO is concentrating.

Contribution analysis

Based upon an analysis of the projects and programmes financed by the Dutch CFAs a selection was made of SPOs to be included in an in-depth process tracing trajectory and those to be included for a quick contribution assessment. REDS was amongst those SPOs selected for in-depth-process tracing.

¹ In the 2012 – 2014 period, REDS decided to use the term Adijan people instead of Dalit people, the terminology still used in official texts and regulations, including the terminology of untouchables and scheduled castes or tribes

The first outcome achieved to some extent consists of Adijan (Dalit) people being better integrated and socially accepted in Tumkur district. Three rival pathways were identified: 1) During MFS II 76 Adijan youth were trained in install solar lamp systems in not only Adijan houses but also in non-Adijan houses who wanted to pay for these systems (4,163 families); 2) REDS has empowered the Adijan people and helped them to claim their rights and dignity in Tumkur district since 1984 and; 3) other actors and factors explain this outcome. Each of these pathways themselves provides a sufficient but not necessary explanation for the outcome achieved. Although the solar lamp project is part of contractual obligations signed between ICCO and REDS as well as being reported on in progress reports, two German NGOs, Bread for the World and Andheri Hilfe are said to have financially contributed to this project. However more substantial contributions come from interventions supported *before the MFS II* period and financed by ICCO and Cordaid.

The second outcome consists of Adijan Panchayats and their organisations at hobli and taluk level increasingly being capable of claiming their rights, in particular with regards to reclaiming their land. Three pathways were identified, being 1) interventions by REDS to create the Adijan Panchayat movement with structures at village, hobli, taluk, district and state level; 2) lobby and advocacy activities for improved policies and regulations that provide access to land, and; 3) a conducive environment caused by the state. Whereas the second explanation was rejected, the two other pathways provide a sufficient but not necessary explanation of the outcome. REDS has possibly been far more effective *before MFS II* in explaining this outcome than *during MFS II*.

Relevance

Interviews with staff of REDS, with external resource person, with the programme coordinator of REDS, as well as contextual information helped to assess the relevance of REDS changes achieved in terms of; its Theory of Change (ToC) for Civil Society (SC) as designed during the baseline study; the context in which REDS is operating; the CS policies of the ICCO alliance.

With regards to its Theory of Change, REDS' changes achieved are relevant to some extent, although REDS' strategic orientation has negatively impacted upon those changes important in the ToC, in particular relating to the creation of a strong Adijan Panchayat Movement, access to land and to other entitlements.

With regards to the external context in which REDS is operating, changes introduced are relevant. However these changes have not yet helped to create one not fragmented movement at Karnataka state level to further claim political, economic and social rights.

With regards to the policies of the ICCO alliance, the changes achieved by REDS are relevant, but the performance of the APM in Tumkur in terms of Adijan Panchayats operational and acreage of land claimed has declined, whilst women empowerment is still high on the agenda. No traces were found of REDS engaging with other ICCO partners in a programmatic coalition to address land issues.

Explaining factors

The information related to factors that explain the above findings was collected at the same time as the data were gathered for the previous questions. The evaluation team looked at internal factors within REDS, the external context in which it operates and the relations between REDS and ICCO.

The most important internal factors that explain the explanation of the rather diluted outcomes, such as the better integration of Adijan people in society and the acreage of land reclaimed consist of REDS having drastically changed its strategic orientation, its organogram and staff.

External factors that positively influence the outcomes obtained by REDS are the conducive environment provided by the government of Karnataka with regards to land rights and procedures to obtain land rights and an increased attention for the enforcement of the Prevention of Atrocities Act.

The relations between ICCO and REDS have been constructive until 2012, but the end of ICCO's financial support explains the shift in REDS strategic orientation.

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the MDG/theme REDS is working on. Chapter three provides background information on REDS, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with ICCO. An evaluation methodology has been developed for the evaluation of the Civil Society component which can be found in appendix 2 of the country report; however, deviations from this methodology, the choices made with regards to the selection of the

outcomes for contribution analysis, as well as difficulties encountered during data collection are to be found in chapter 4. The answers to each of the evaluation questions are being presented in chapter 5, followed by a discussion on the general project design in relation to CS development; an assessment of what elements of the project design may possibly work in other contexts or be implemented by other organisations in chapter 6. Conclusions are presented in chapter 7.

2 Context

This paragraph briefly describes the context REDS is working in. A description of the Civil Society Context assessed according to the CIVICUS framework is provided in appendix 3 of the country report for Civil Society.

2.1 Political context

The issues facing Karnataka as a state have largely remained the same since the baseline with, Dalit identities continuing to influence politics, scam allegations emerging against the political parties and continued decadence of the political class. The major change in the political context has been the defeat of the right-wing Bharatiya Janata Party (BJP) in the 2013 Assembly Elections. The BJP during its tenure was plagued with issues of scam allegations, corruption, internal bickering, subtle promotion and leeway to communal elements in the state. With voters pushing them out, the Indian National Congress has now come to power by winning 121 seats in a house of 225.²

Dalit identity plays an important role in influencing the vote banks of the political parties in Karnataka. Major political parties like the BJP, Janata Dal - Secular (a regionally strong party), and the Congress have not shied away from using caste as a political plank. The political battle between the Janata Dal (Secular) Party and the BJP has been discernible with them being seen as representatives of and supporting the interests of the two dominant social groups of Karnataka – Vokkaligas³ and Lingayats⁴, respectively.⁵

The dominant position of the above two communities has ensured that they have collectively controlled a high number of seats in the Assembly of the state.⁶ There has been documentation of various instances of violence and injustices committed against Dalits' in the state by the caste Hindus who hold political power. For instance, in August 2014, three Dalit houses in Markumbi village were set on fire, and 27 people were injured in retaliation to the Dalits' filing a complaint against caste discrimination in the village.⁷ According to figures published by the National Crime Records Bureau, 2566 atrocities have been committed against members of the Scheduled Castes (SC), in Karnataka, in 2013. This is an increase from 1643 such cases reported in 2004.

Apart from caste politics, the political context in Karnataka has also been shaped in a large way because of issues like, illegal mining and corruption. The Supreme Court has been scrutinising several government officials and ministers, including former Chief Minister BS Yeddyurappa for their involvement in the racket. According to the report of the Karnataka Lokayukta (an anti-corruption ombudsman organisation), this has resulted in the loss of Rs 12,228 crores to the state where there are other sources claiming that the figure actually stands at Rs 1 lakh crore. Apart from a major loss in revenue this has also caused irreparable damage to the environment.⁸ The industry-political nexus

² <http://www.hindustantimes.com/India-news/KarnatakaElections2013/Karnataka-casts-out-BJP-gives-Congress-absolute-power/Article1-1056593.aspx>

³ Vokkaligas constitute between 15 and 17 percent of the state population and they are concentrated in districts of South Karnataka.

⁴ "Lingayats constitute 17% of the total population in Karnataka and are the largest community followed by the Vokkaligas. They're dominant in close to 100 of the 224 assembly seats, mostly in North Karnataka, and there have been nine chief ministers from the community." <http://timesofindia.indiatimes.com/city/bengaluru/Lingayats-renew-demand-for-separate-religion/articleshow/23846654.cms>

⁵ <http://timesofindia.indiatimes.com/city/mysuru/Lingayats-and-Vokkaligas-rule-the-roost-in-Karnataka-politics/articleshow/14807930.cms>

⁸ <http://www.thehindu.com/news/national/karnataka/karnataka-lost-rs-1-lakh-cr-from-20062010/article4820758.ece>

is so strong that during the rule of the BJP, there were four chief ministerial changes in the course of four years due to allegations of corruption.

The decadence and corruption of the political class has become obvious in the last few years, with minister after minister being inspected for their involvement in some scandal or a scam. With the issue of gender rights and safety of women in India making news, the ministers in the state have been quite unaffected by the issue. For instance, ministers have been caught on camera watching porn during a session of the Karnataka state assembly.⁹ Also, former Minister Haratalu Halappa was arrested following an allegation of him sexually assaulting the wife of a friend.¹⁰

2.2 Civil Society context issues with regards to the MDG

The civil society in Karnataka, works in an environment that is widely influenced by its politics. There have not been any radical changes in its civil society context since the baseline. As communal violence, land acquisition, Dalit rights and rural-urban imbalance continue to be the main issues of concern.

The right-wing Bharatiya Janata Party's tenure was marked by an increasing and continued persecution of religious minorities. In 2011, the state topped the list of incidences targeting the Christian community. Their persecution has continued over the years, with a slight variation in intensity. As recent as the year 2014, the state still accounted for the highest number of incidences against the community, in the form of, murder, assault, rape, and church attacks.¹¹

The stories around land acquisition and the consequent protests have been rampant all across India. The government in its rush towards "development" and nexus with the corporates, often tries to acquire land which the people are unwilling to part with, or it doesn't offer adequate compensation and rehabilitation, leading to protests. In Karnataka, protests have erupted over the government's move to acquire land in Mysore in 2008. The farmers accused the government of acquiring more land than they paid for including the fertile lands, which are their source of livelihoods.¹² The POSCO steel plant in 2011 which failed clearances in Orissa at the time, was also denied entry in Karnataka, as the farmers refused to part with their land.¹³

The SCs and Scheduled Tribes (STs) in Karnataka make up 23.5 per cent of the total population and have lawful claims over 18 per cent reservation in government and educational sectors.¹⁴ Dalit rights are largely influenced by a lack of space for them in the political sphere but also the splintering interests of the various caste groups that come under the umbrella term of "Dalits", preventing the emergence of a unified leadership in the state.

The growing rural-urban imbalance has largely been linked to the growing shift and emphasis towards the development of Bangalore as an Information Technology (IT) hub. The government has been building upon this image of Bangalore as India's IT hub at the cost of development of other parts of the state. In 2013, the Raghuram Rajan panel, categorised Karnataka as a "less developed state" which came as quite a shock to many people, but this was a result of the differences in the human indicators of the urban and rural areas of the state.¹⁵

3 The SPO and its contribution to civil society/policy changes

3.1 Background of the SPO

REDS was created in 1984 to work on for the empowerment and liberation of Dalits and other marginalised people, by restoring the primacy of women in every field of its engagement with the world. Major highlights of REDS until 2015 are the following:

- The creation of a Dalit Panchayat Movement (DPM) in Karnataka for internal governance, for negotiations with the Indian society and for greater dignity, equality and peace to all human beings through Dalit values.
- The restoration of land rights for Dalits, which amounts up to 10,500 acres of lost land being given back to Dalit people
- REDS's implementation of a Clean Development Mechanism (CDM) project with the UNFCCC, which consists of providing rural communities in Karnataka with solar lamps.
- REDS's campaign for a proportional electoral system to strengthen democracy and inclusive governance in India.
- The creation of Booshakthi Kendra in 2003, for the promotion of Dalit values and the recovery of Dalit spirituality, Dalit history, Dalit culture, Dalit economy, Dalit Psyche and Dalit governance.
- The founders of REDS have written and produced more than 25 books and trained 15,000 leaders

REDS' Vision:

"We, who have been the victims of untouchability and caste inequality established by Brahminism, will establish a new society based on Dalitism. This will bring in Freedom born out of self-respect. From out of this freedom will emerge social equality of all people, especially the Dalit people through which will a holistic development be made possible. The two eyes of this new society will be gender equality and fraternity.

We, who have been the victims of Capitalism, which has established an inhuman society by constantly pushing the disempowered poor out of the development circle, will endeavour selflessly and with commitment to dream and realize a socialistic order in society. We visualize the establishment of a self-sustaining society, which will have human dignity and justice at its foundation".

REDS' 14 objectives are:

1. REDS will strive to enhance the political bargaining power of the Dalits
2. REDS will strive to bring about qualitative changes in the situation of women in an effort to bring about gender equality
3. REDS will grow more and more as a Resource Organisation for the holistic development of Dalits
4. REDS will work towards the realisation and actualisation of the Dalit potential in the community. However, its consistent effort will be directed towards the strengthening of the leadership capacities within the Dalit communities
5. Within its area of operation as well as outside REDS will make a concerted attempt to proclaim the 21st Century as Ambedkar Era (This was done in the year 2000)
6. The Ambedkar Era will aim at bringing about qualitative changes in the socio-economic and cultural situations of the Dalits by focusing on enhanced bargaining power for Dalit in all spheres.
7. REDS will strengthen its capacity to the extent that it will become an effective instrument of internationalizing the Dalit cause.
8. REDS will provide the necessary educational and organisational support to the Dalit movements in Karnataka and enable the movements to actively get involved in the struggles for the human rights of the Dalit people.

9. REDS will enhance the spread of Ambedkar's liberation philosophy and alternative Dalit thinking as brought out in Dalitology in different parts of India and other part of the world, especially Europe, South Africa and Bangladesh through research, training and an Ambedkar Academy.
10. REDS will develop pragmatic alternative models in the areas of agriculture, health, culture and Panchayat Raj, which will be in the course of time spread all over Karnataka to offset the negative influences of Globalisation.
11. REDS will create the necessary economic support services to the Dalit movements in Karnataka so that the educational, organisational and struggle dimensions will be sustained till the final liberation and development of the Dalits are achieved.
12. REDS will internationalise the Dalit cause by active propagation of the Dalit ideology all over the world. REDS will give a concrete shape to the history and culture of the Dalit people and will strive hard to evolve principles of internal governance of the Dalit communities. REDS will establish Dalit Panchayats as the instrument of internal governance and International Dalit Cultural Centre knows as Booshakthi Kendra as a springboard of all Dalit liberation endeavours.
13. REDS will get involved in all global efforts at Climate Change issues and global warming mitigation.
14. REDS will works towards the emergence of lasting peace among different caste groups on the basis of negotiations for a dignified life with rights for all caste people.

A major change that took place in the 2012 – 2014 period is that the Dalit Panchayat Movement decided to change all usage of 'Dalit' into the word 'Adijan'.

3.2 MFS II interventions related to Civil Society

REDS is working in 16 states of India, but started its movement in Karnataka state. ICCO has supported REDS' activities in Tumkur district in particular, which is in Karnataka state.

Major outcomes to be achieved in the 2008 – 2012 contract period address improved access to justice and to land, by means of Dalits in Tumkur district claiming their rights, and human rights violations of Dalits being put on the political agenda and local, national and international level.

The 2012-2013 contract was granted in order to empower members of Dalit communities through increased access to basic services such as, access to health insurance schemes, land ownership of a at least 5 acres for 80 % of the Dalit population and access to education, loans, solar lamps and the like.

Enhanced quality of life and dignity and making government policies and rules pro-poor are the two outcomes to be achieved in the 2013-2014 contract. Indicators for the first outcome will be measured through research conducted to measure increases in the self-esteem of Dalits and to identify cases of human rights abuses regarding self-esteem; an end to conflicts in villages where Dalit populations live with other casts and; the celebration of Dalit festivals in the 1000 Dalit Panchayats created at village level. Important policies and rules to change are India's electorate bill and a law for the redistribution of land at the rate of 5 acres per family.

These outcomes to be achieved fit well into the CIVICUS framework in the following sense:

- Interventions that aim to enhance the dignity and quality of life of Dalit population are part of the CIVICUS dimension 'civic engagement' and also 'perception of impact'.
- Interventions that aim to support Dalit communities to claim their rights are part of 'level of organisation' if social organisation is part of the intervention; and they are also part of 'perception of impact'.
- Interventions that aim to influence policies and practices or to ensure that Dalit populations have access to public services are part of the CIVICUS dimension 'perception of impact'.

Observations with regards to contracts between ICCO and REDS: Whereas several contracts signed between ICCO and REDS, as well as progress reports mention outcomes related to the solar lamp project, REDS categorically denies contributions made by ICCO in the 2012 -2014 period, and information from ICCO does not provide further clarification. Two German organisations, Bread for the World and Andheri Hilfe, are said to have paid for the solar lamps. This has implications for the contributions made under MFS II.

3.3 Basic information

Table 1

SPO basic information.

Criteria				
Name of SPO				
Consortium and CFA				
Project names	REDS programme 10.2008 - 09.2011 Advocacy on Dalit Rights - Part 2, extended until March 2012			
MDG/theme on which the CS evaluation focusses	Governance			
Start date of cooperation between the CFA and the SPO	28-10-2005			
Contracts signed in the MFS II period	Period	# months	Total budget	Estimation of % for Civil Society
71-03-03-010 (partially)	01/10/2008 – 01/09/2011	36	ICCO € 300,000 Cordaid € 300,000	56 %
71-03-03-033	01/04/2012 – 31/03/2013	12	€ 40,000 €	
71-03-03-040	01/04/2013 – 31/03/2014	12	€ 40,000 €	

Sources: project documents

4 Data collection and analytical approach

4.1 Difficulties encountered during data collection

REDS received support from ICCO and Cordaid until September 2011, after which ICCO continued its support for two more years as of April 2012. The end line workshop caused a lot of confusions and misunderstandings about ICCO and Cordaid's support being mixed up.

REDS informed the evaluation team that since the baseline study, the SPO has shifted from expanding and capacitating the Adijan Panchayat Movement (APM) towards implementing two programmes; that related to the Campaign for Electoral Reforms in India (CERI) on which REDS has been working since 2008 and the implementation of the Solar Lamp and Clean Development Mechanism (CDM) for which preparations were started in the 2008-2012 period with ICCO. REDS currently supports 550 Adijan Panchayats in Tumkur district whereas this used to be 1000. REDS supports another 500 Adijan Panchayats in other districts. In consequence, since the baseline, all senior staff has been replaced except for the founder and the executive director of REDS (his wife) and all staff that worked in the ICCO and the project have been given a 'golden handshake' early 2012.

With regards to the two programmes on which REDS is currently working, only German organisations were mentioned as partners, whereas both orientations also are part of the contracts with ICCO in the 2012 – 2014 period.

The consequences for this evaluation were as follows;

- It was difficult to obtain information in particular about the ICCO funded programme, because many of those knowledgeable about this programme and APM in Tumkur district had left REDS, which was felt during the end line workshop.
- At the end of the workshop it proved to be difficult for the evaluators to find outcomes that would have a relation with ICCO's programme, in particular with the APM and that would be appropriate to do an in-depth process tracing.

4.2 Identification of two outcomes for in-depth process tracing

A consultation between IDF and CDI, followed by a consultation with REDS to clarify existing misunderstandings led ultimately to the selection of two outcomes.

1. Adijan Panchayats at Hobli level are capable of claiming the rights of their constituents with regards to land. Adijans claiming their land back has been part of ICCO's programme since 2008 and was continued in the 2012 -2013 contract. This outcome also aims to say something about the capacity of the Adijan Panchayats as CBOs that are capable to file requests to local authorities to claim back their land.
2. Dalit people are better integrated and respected by other communities in the villages. In particular the 2013 – 2014 contract formulates objectives that aim to increase the self-esteem and dignity of life of the Adijan people. Other elements that support this outcome are related to interventions by REDS to end untouchability and atrocities since 2009 but explicitly mentioned in the 2012 -2013 and 2013 – 2014 contract, as well as the solar lamp programme that mentions a better integration of Adijan people in society (2012 -2013 contract).

5 Results

5.1 Results obtained in relation to intervention logic

Despite the change in RED's strategic orientation, the three contracts and progress reports provide information on the same indicators, reason for which we have clubbed together some of the outcomes and outputs against which reports have been made.

Table 2

Overview of major outcomes achieved 2008-2014, in particular in relation to Tumkur district

Contract	Outcome/output planned	Objective achieved		
2008-2011	Expanding the movement in Tumkur district	<i># of APs</i> 800 + 1 district AP 1000 + 1 State AP 616 550	<i>Year from April to March</i> 2009 - 2010 2010 - 2011 2013 - 2014 2014 October	<i>Objective not continued</i> after Cordaid withdrew in 2012
2008-2011	Functioning of the movement; frequency of meetings: norm = 1 per month Tumkur district	76 hobli, 24 taluk and 8 Tumkur district meetings held in 2012 - 2013 128 hobli, 24 taluk meetings held in 2013-2014. 616 of the 1000 APs are active and 350 are functioning effectively in 2010 -2011 800 APs monitor Tumkur district budget in 2010-2011 Motivation of volunteers (hobli coordinators is an issue 2009-2010)		<i>Not possible to measure functioning</i> in terms of frequency of meetings, because the # of taluk and hobli APs differs from one year to another and is not systematically reported.
2008-2011, 2012 - 2013 and 2013-2014	Contributions mobilised by Adijan people such as for transport to attend meetings; No targets set. Tumkur district	<i>Amount in Indian Rupees</i> 3,999,065 1,585,886 882,927 xxx 2,631,010	<i>Year from April to March</i> 2009-2010 2010-2011 2011-2012 2012-2013 2013-2014	A decline in local contributions in the 2009-2012 period, but an increase in 2013-2014. Figures from 6 of the 10 taluks in Tumkur district
2008-2011	# of examples where violations of rights have been put on the political and public agenda Tumkur district	In 2011 - 163 cases put on the agenda No other figures available		<i>Objective not measured</i>
2008 - 2011 and 202 - 2013	Reclamation of land Target in 2012 -2013 is 450 households @ 5 acres Tumkur district	<i>Acreage reclaimed</i> 8,341.25 acres 10,597.14 acres	<i>Year from April to March</i> Until September 2011 Until December 2014	<i>Not achieved:</i> • Target 2012 -2013 = 450 households @ 5 acres = 2,250 acres reclaimed, but in reality this is 16 acres for 7 families • In 2013 -2014 51 acres reclaimed for 145 households.
2013-2014	Passing the land redistribution bill in 2014	REDS has joined Ekta Parishad in 2012 to address the issue at national level. The central government has set up a National Task Force to work on this demand and the Director of REDS was nominated in this task force. With this movement, national campaigns are organised, but until so far without success. In Karnataka state, REDS' centre has become an advisory hub for people who want to reclaim their land. Bi-monthly meetings attract important numbers of people who file requests to reclaim their land. However with the new government in place as of 2014, private companies seem to gain priority in land access		<i>Partially achieved</i>
2008 - 2011 and 2012	# of Dalits who have improved access to 'justice' partly thanks to REDS: Access to government	<i>Amount in Indian Rupees</i> 10,611,830 8,227,730	<i># of families</i> 628 700 <i>Year from April to March</i> 2009-2010 2010-2011	<i>Partially Achieved:</i> • Figures seem to decline after 2012 • Figures from 6 of the 10 taluks in Tumkur district

-	schemes and subsidies	6,562,200	700	2011-2012 •	
2013	Tumkur district	2,320,700	579	2012-2013	
		6,274,500	858 in 338 villages ¹⁶	2013-2014	
2012-2013	Solar lamps, 500 (???) mentioned in the contract as a target without further specification	<ul style="list-style-type: none"> • In 2012-2013, 14652 solar lamps were installed for 3663 families in Tumkur district and 76 mechanics trained • In 2013-2014, in total 4163 families have solar lamps in Tumkur district. 		<i>Achieved, however it is not clear what financial contributions were made by ICCO</i>	
2013-2014	Quality of life and dignity enhanced: end to bonded labour	Year	# villages that Support from police	<i>Improvement of the enhancement of dignity, though no targets set</i>	
		2010	109		
		2011- 2012	116 529		
		2012-2013	148 649		
		2013-2014	64 182		
	Adijan People have increased self - esteem	Research not implemented		<i>Not achieved</i>	
	In at least 1000 APs no conflicts	Not measured, and in 2013 only 616 APs received support		<i>Not measured</i>	
2012-2013, 2013-2014	No cases of atrocities and untouchability practiced: target 2013	Year	Reduction of untouchability	<i>Objective achieved already in 2012, but not measured again in 2013.</i>	
		2009	80 %		
		2011	90%	<i>Not clear how 'reduction of untouchability is measured</i>	
		2012	100%		
2012-2013	Government passes bill for proportionate electorate	In 2012, REDS obtains support from major political parties and eminent government authorities. Support obtained from district and state government. CERI faces challenges in terms of dealing with different personalities and insecurities experienced in the party leadership. No information in 2013 report		<i>Many campaigns but objective not yet achieved</i>	

AP = Adijan Panchayat

5.2 Changes in civil society in the 2012-2014 period

5.2.1 Civic engagement

Civic engagement describes the formal and informal activities and participation undertaken by individuals to advance shared interests at different levels. Participation within civil society is multi-faceted and encompasses socially-based and politically-based forms of engagement.

The most significant changes that took place since the baseline study in 2012 consist of:

1. An increase of non - Adijan but poor people also being reached by the interventions of REDS and the Adijan Panchayat Movement.
2. A decrease in the number of APs and volunteers active in Tumkur district, the intervention zone of ICCO.
3. Contributions made by Adijan people and other backward castes increased nearly nine-fold since 2010, but did not increase with the same rate in Tumkur district.
4. The Adijan Panchayat Movement is increasing its political engagement

Increasingly, non Adijan people but poor or backward casts approach REDS for support: in 2014, REDS estimates that some 80 percent of the people who come for the two-monthly meetings at the centre of REDS are Adijans and the other 20 percent are from other castes. REDS also estimates that 80 percent of land reclaimed is being given back to Adijans and the remaining is for other castes. Similar percentages hold for the distribution of the solar lamps under the Clean Development Mechanism.

Since the baseline the number of Adijan Panchayats in Tumkur district actively involved in the APM

¹⁶ Figure obtained during field visit in October 2014

has declined, as did the number of volunteers involved of which 50 percent is female (ten volunteers per AP). In 2010 some 1000 villages had their own Adijan Panchayat¹⁷, but this number declined to 616 APs in 2013¹⁸ and to 550 in 2014. A decrease in the number of APs involved in Tumkur district also had implications for the number of volunteers working at hobli and taluk level, where APs decide upon actions to be taken during monthly meetings. From the 45 hobli leaders operational in 2009, 14 were left in 2014, and from the 10 taluk leaders operational in 2009, 3 were left in 2014^{19,20}. APs are in charge of creating the awareness of their constituents on government schemes and land issues.

Although the total amount of contributions mobilised by Adijan People to pay for their travel and food when attending REDS activities is said to have increased from IDR 715,154 in 2010 to IDR 6,467,878 in 2013-14, contributions in Tumkur district showed a decline in the 2009-2012 period but increased again in 2013 (see paragraph 5.1). These contributions clearly show the involvement of the Adijan People and other backward castes in REDS' programme.

The entire Adijan Panchayat Movement is politically engaged and trying to defend the interests of its constituents. In 2012 an Adijan Panchayat women leader was elected as the speaker for Karnataka Adijan Parliament. After weighing all pros and cons the APM members supported a representative of the Adijan people in the 2013 Karnataka state elections, after which a new party (instead of the congress party) gained power.

Over the years, Adijan people have been elected in the Gram Panchayats in Tumkur district. During the general Gram Panchayat elections in 2010, 296 Adijans of which 126 women were sworn in in Tumkur Gram Panchayats: In all 12 districts in total 1,039 AP leaders contested and 703 of them got elected, of which 10 were subsequently elected as President and 11 Vice-Presidents, amongst which 10 women. People's participation in the Gram Sabhas²¹ has increased manifold in the last two years with new Gram Panchayat elections being scheduled for 2015.

Score baseline 2013 on an absolute scale from 0-3: 3
Score end line 2014, relative change on a scale of -2 → +2 0

5.2.2 Level of organization

This dimension assesses the organisational development, complexity and sophistication of civil society, by looking at the relationships among the actors within the civil society arena.

According to REDS, the APM in Tumkur district has become rather autonomous from REDS in the 2012-2014 period, but there are no figures to substantiate this. The pace with which land reclamation is currently takes place is slowing down and the extent to which the movement is able to obtain access to government schemes decreased in 2012-2013, but recovered in 2013-2014. As already mentioned the numbers of Adijan Panchayats, hobli and taluk councils still supported by REDS also declined. REDS uses two arguments for this, in the first place stating that the end of support from Cordaid and ICCO meant a withdrawal of REDS' support to the APM for financial reasons, in the second place REDS advances that the structures created have become self-sustaining.

Unfortunately no recent figures are available to show the current performance of both supported and not supported APs in Tumkur district. In 2010-2011, 616 of the 1000 APs were active and 350 functioning effectively²². At that moment 19,606 families were members of Adijan Panchayats whereas the total number of families in these villages was 28,089 families at that moment.

In the meanwhile Adijan people are actively involved in the APM and take part in lobby and advocacy activities organized by REDS to introduce changes in the land bill such as in 2013, when 7000 people of which 5000 from Tumkur district gathered to take part in the state level land convention in the presence of amongst others the Karnataka Revenue Minister and the Law Minister.

²² ICCO, Feedback on progress report 2010-2011.

In Karnataka State many organisations are defending the interests of Adijan people, but in Tumkur district REDS is the only organization addressing these issues. Relations between REDS and these other organisations are weak or do not exist. The same applies for the collaboration of the Adijan Panchayat Parliament created in 2011 at Karnataka state level. This Parliament has not become visible during the end line evaluation, nor its relations with other Adijan networks existing at state level. REDS is active in 12 districts in Karnataka state where it supports the creation of APs and in 7 of these with the solar lamp initiative. In five of these districts district councils of Adijan people have been established.

Since the baseline REDS has increased its presence at the international and the national level. REDS became part of a solidarity network at international level including other Asian countries, European countries and the USA. Since the baseline REDS engaged in mutual exchange programmes with other indigenous communities. Its experience with the Tumkur based Adijan Panchayat Parliament and that of the SAMI Parliament in Norway became a real inspiration for having a World Parliament of Indigenous People.

At the national level, REDS engaged with Ekta Parishad in 2012 which regroups some 2000 land right organisations in the country to claim at least 5 acres of land for Adijan and poor people. In the same year the director of REDS was nominated in a national task force to work on this demand²³. Since then the 2014 change in government has pushed the issue to the back burner.

Since REDS started its Campaign for Electoral Reforms in India (CERI) in 2009²⁴, it became national in 2010 for the first time²⁵. As of 2012²⁶, REDS managed to obtain support from major political parties and government authorities as well as from the district and Karnataka state government. During the field visit REDS reported support from 20 states, from 3 national and 5 regional political parties. This coalition has taken a turn for more intensive confrontation with the government because of the recent amendments to the Land Acquisition Resettlement and Rehabilitation Act by the new government.

Since the baseline REDS has been able to diversify its resource base and it reduced its dependency upon ICCO to a maximum of 10 percent of its budget (2012-2013). In the first place Adijan people in Tumkur district increased their contributions to REDS' interventions from 882,927 Rps in 2012-2013 to 2,631,010 Rps in 2013-2014, but this increase does not equal contributions made in 2009-2010 (4,000,000 RPs). In the second place, REDS developed a business model for the solar lamp project, by creating a company called Cosmic Rumble which already sold 36,000 lamps in Karnataka state: Incomes received from solar lamp users by this company are used to create a revolving fund to be used for maintenance activities and to foresee the purchase of new solar lamps when donor support for the project comes to an end. In the third place REDS has attracted new donors.

Score end line 2014, relative change on a scale of -2 → +2 0

5.2.3 Practice of Values

Practice of Values refers to the internal practice of values within the civil society arena. Important values that CIVICUS looks at such as transparency, democratic decision making, taking into account diversity that are deemed crucial to gauge not only progressiveness but also the extent to which civil society's practices are coherent with their ideals.

Generally speaking no changes occurred with regards to 'practice of values' by REDS since the baseline.

REDS avails of a governing Board of seven members, 5 Adijans and two other castes of which four are female. The composition of the Board did not change in the past years, although this is mandatory according to REDS' bylaws²⁷ nor did it improve its effectiveness. REDS' executive director is a women seconded by her husband, the organisation having been managed by this couple for the last 30 years.

²⁵ Project / Programmatic Cooperation Update 2011

²⁶ ICCO feedback on progress report 2012-2013

²⁷ ICCO, (November 2012), Partner Visit Report

These are accountable to the Board and at the same time to the Adijan Panchayat Parliament of Karnataka state which was created in 2011. This change in accountability relations has apparently not been documented in organisational reports. Information about REDS is not trickling down through the Parliament to its constituent members (APs) and to the many volunteers that work with the movement.

REDS' financial reports have been audited by the same firm for the last 25 years whereas ICCO suggested changing the auditor every 3-5 years in November 2012²⁸. During the field visit in October 2014, no change was observed with regards to this aspect. Audits give the financial situation per project rather than by REDS as an entity.

The evaluation team did not obtain clarity with regards to the use of funds released by ICCO in the 2012 -2014 period. In the first place REDS states that the relationship came to an end in March 2013 instead of March 2014, and in the second place interventions related to the solar lamp project, CERI and the land bill are said to have been financed by other donors, whilst being explicitly mentions in the contracts between REDS and ICCO.

Score baseline 2013 on an absolute scale from 0-3: 3
Score end line 2014, relative change on a scale of -2 → +2 0

5.2.4 Perception of Impact

Perception of Impact assesses the perceived impact of civil society actors on politics and society as a whole as the consequences of collective action. In this, the perception of both civil society actors (internal) as actors outside civil society (outsiders) is taken into account. Specific sub dimensions for this evaluation are the extent to which the SPO has contributed to engage more people in social or political activities, has contributed to strengthening CSOs and their networks, has influenced public and private sector policies.

There are several indications that Adijan and other backward castes are satisfied with the services delivered by REDS.

1. Financial contributions made by Adijan people to attend meetings by REDS and to seek support to access government schemes and claim back their land has increased in Tumkur district.
2. Less convincing is the acreage of land reclaimed in Tumkur district in the March 2011 – 2014 period: whereas the 2012-2013 contract with ICCO aimed for 450 families having reclaimed at least 5 acres land each (2,250 acres in total), the total acreage successfully reclaimed between April 2012 and March 2014 is 67.23 acres for 152 families. Recently, in December 2014, REDS succeeded in claiming 800 acres of land from the Forestry Department.
3. 700 families on average in Tumkur district access various government schemes each year.
4. Significant advantages in terms of health, education, IGA and social integration of Adijan people have been reported with regards to the solar lamps introduced in 4163 households by March 2014.
5. The number of villages where bonded labour has stopped has increased. REDS claims that Tumkur district is 'atrocities free' as of 2012 but this could not be sustained by figures presented in the Karnataka status report on the prevention of atrocities for SCSTs.

As mentioned above, the APM on the one side is said to have become self-sustaining, on the other hand it seems to be functioning in a limited number of villages, hobli and taluks as compared to the baseline. There is evidence that land reclamation and obtaining access to government schemes is still happening and that the APM still financially contributes to activities organised by REDs. The APM has helped to raise the political consciousness of its members regarding the value of vote, as has been shown in the last state elections in Karnataka when Adijan People massively voted for an Adijan candidate.

Apart from these contributions towards building a civil society, REDS' work with regards to the national CERI campaign which is currently being joined by many organisations has become visible as well as its collaboration with Ekta Parishad. However, relations with civil society at Karnataka state

²⁸ ICCO, (November 2012), Partner Visit Report

level seem to be non-existent or weak, as well as the visibility of the Adijan Panchayat Parliament of Karnataka.

Relations between public sector officials, REDS and the APM have become more constructive and have resulted in claims regarding access to land or to government schemes being honoured, support to improve the wellbeing of Adijan girls, police supporting the APM to stop acts of bonded labour and a stronger enforcement of existing rules and regulations.

With regards to policy influencing activities at Karnataka state level, demands formulated by APM with regards to land are in the process of being answered by the new Government in place as of 2013. Apart from this, REDS' director was nominated in the national task force body for land reforms which is however currently defunct given the new regime in New Delhi that was elected in 2014. However the changes introduced in the new land bill are considered to be controversial by both civil society and companies changes. No policy changes have been realised with regards to CERI.

REDS, apart from having created its own company to run the solar lamp project, does not engage with private sector organisations, nor influence their policies.

Score baseline 2013 on an absolute scale from 0-3: 2
Score end line 2014, relative change on a scale of -2 → +2 1

5.2.5 Civil Society Environment

The social, political and economic environment in which civil society operates affects its room for manoeuvre. The civil society context has been described in chapter 3. In this section we describe how REDS is coping with that context.

Since the baseline the socio political environment of Karnataka has changed in favour of supporting marginalised categories in society when the new government came into power in 2013. Many laws which were disregarded by the previous government were re-established and the enforcement of existing policies was strengthened such as is the case with the PoA Act, SC/ST sub plan grants to local bodies, stricter and faster action in controlling crimes etc.

However, the APM movement, without continuing support from REDS (and donor organisations like ICCO and Cordaid who funded the movement in particular) is dwindling. Although the founders of REDS claim that the movement has become self-sustaining, at the same time the level of activities is decreasing.

5.3 To what degree are the changes attributable to the Southern partners?

This paragraph assesses the extent to which some outcomes achieved can be "attributed" to REDS. Starting with an outcome, the evaluation team developed a model of change that identifies different pathways that possibly explain the outcome achieved. Data collection was done to obtain evidence that confirms or rejects each of these pathways. Based upon this assessment, the evaluation team concludes about the most plausible explanation of the outcome and the most plausible relation between (parts of) pathways and the outcome. The relations between the pathways and the outcomes can differ in nature as is being explained in table 3.

Table 3
Nature of the relation between parts in the Model of Change

Nature of the relation between parts and other parts or outcome	
The part is the only causal explanation for the outcome. No other interventions or factors explain it. (necessary and sufficient)	
The part does not explain the outcome at all: other subcomponents explain the outcomes.	
The part explains the outcome but other parts explain the outcome as well: there are multiple	 

pathways (sufficient but not necessary)

The part is a condition for the outcome but won't make it happen without other factors (necessary but not sufficient)

The part is a contributory cause it is part of a 'package' of causal actors and factors that together are sufficient to produce the intended effect.

Sources: Mayne, 2012; Stern et al, 2012

The following paragraph assesses REDS' contribution to the outcome linked to civic engagement. The paragraph first describes the outcome achieved and the evidence obtained to confirm that the outcome has been achieved. It then presents the pathways identified that possibly explain the outcomes, as well as present information that confirms or refutes these pathways. The last section concludes in the first place about the most plausible explanation of the outcome, followed by a conclusion regarding the role of the SPO in explaining the outcome.

5.3.1 Civic engagement – Adijans are better integration and socially accepted by other communities in Tumkur district

The outcome achieved

One of the outcomes achieved according to REDS consists of Adijan people being better integrated and socially accepted in Tumkur district. Evidence provided for this achievement is very scarce and only confirmed by REDS' reports and oral information provided by REDS. Indications are the following:

- Adijan Panchayat leaders are invited by caste people to settle their disputes already as of 2010²⁹. The same observation was made in 2012³⁰.
- The trainings given to Adijan people have impacted their psyche and their self-esteem.³¹ Findings of a research planned to assess the self-esteem of Adijan people mentioned in the 2013-2014 contract have not been made available to substantiate this finding.
- In Tumkur district and the 12 other districts where REDS is intervening, the buffalo festival that represents the caste free labour to be provided by Adijan people to caste people was already stopped in 2010. Police were physically present in the villages together with AP leaders³². Also in 2012 the buffalo festival was stopped in other villages³³
- In 2010 one AP member, a woman was unanimously elected as the representative of all people in one Gram Panchayat³⁴
- Gram Panchayat representatives and local administration participate in monthly Adijan hobli council meetings in 2010. Also caste people accept invitations of APs to share their views and opinions³⁵. In 2012, 76 Hobli level council meetings were organized and 1727 Dalit Panchayat leaders participated in the council meetings. 33 Government officers also participated in these meetings and discussed about government schemes and policies³⁶. In 2013 only 27 Gram Panchayat representatives and local administration attended Hobli and Taluk Council meetings³⁷
- In 2012 some caste people have started to eat beef with Adijan people, whereas normally they do not eat beef and in particular do not eat together with Adijan people³⁸. In 2012 caste people are serving food to Adijan people inside their homes, whereas previously Adijans were not allowed to enter houses of castes^{39,40}.
- The solar lamp project teaches maintenance skills to Adijan youth who then provide technical support to both Adijan and caste families. This implies that caste households have to grant access to

these mechanics in their houses⁴¹. 76 mechanics were trained in 2012 and until so far have installed solar lamps in 4163 families in Tumkur districts (caste background of these families unknown)⁴².

- In 2012, REDS declared Tumkur an Adijan atrocity free district although they also mention that SC/ST increasingly make use of the Prevention of Atrocity Act to settle political scores⁴³.

The Karnataka status report of 2011 and 2012 contradicts REDS' claim that Tumkur is an atrocity free district⁴⁴. It states that Tumkur district had the highest number of reported cases compared to other districts in these two years (112 cases in 2011 and 121 cases in 2012). In line with these findings Tumkur was declared a sensitive district by the Government monitoring committee for atrocities against Adijan people. Most of the atrocities are said to be related to land issue where Adijan people are specifically targeted for occupying reclaimed land. REDS has not been a part of any legal proceedings defending Adijan rights over land. According to REDS, the recorded atrocity cases are not of the *untouchable* Adijans, but refer to *touchable* Adijans.

The above information questions the achievement of the outcome as stated above. It also highlights that if social integration is taking place, this already started *before MFS II*: Quantitative data are missing to a great extent. Despite this the evaluation team has made an effort to explain this outcome, taking into account that Tumkur district is *not* an atrocity free district which affects the social integration of Adijan people.

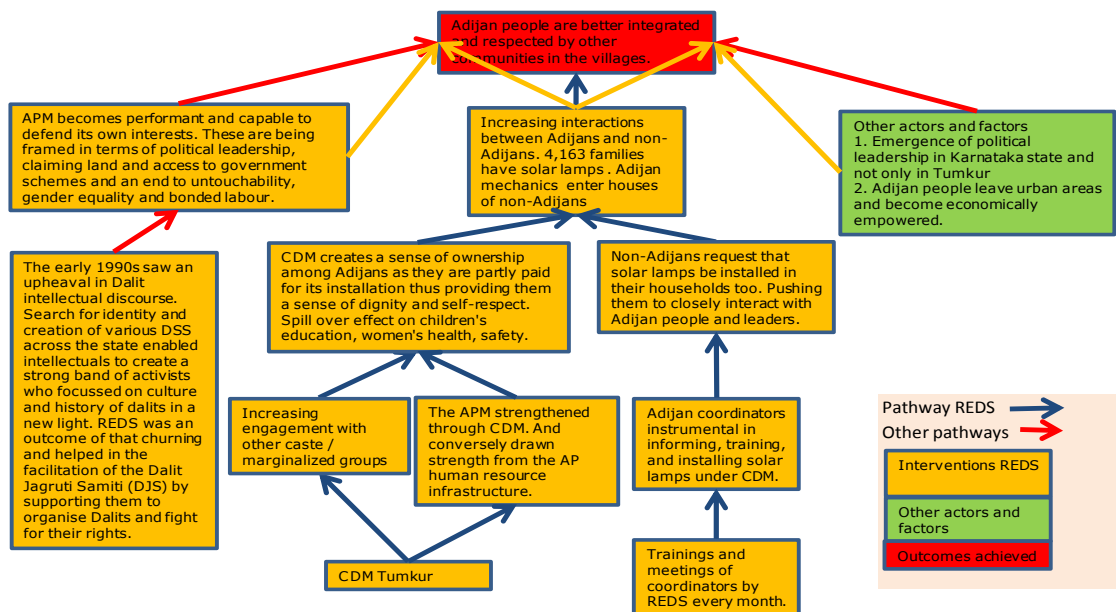

Figure 1: Pathways that possibly explain outcomes and conclusions about the nature of the relations between pathways and the better integration of Adijan people in society

Pathways that explain the outcome and information that confirms or rejects these pathways

1. The first pathway explains the outcome by the Clean Development Mechanism, the solar lamp project that was implemented in Tumkur district between March 2012 and 2014 with support from ICCO according to contractual obligations, although according to REDS also Bread for the World and Andheri Hilfe financed this intervention for the same number of households. In this period 12,489 solar lamps have been installed in 4,163 families and 76 mechanics were trained to ensure the installation and the maintenance of these lamps at household level. The AP coordinators at hobli level and its representatives were the first to be trained and educated about the solar lantern project and its usage and benefits. They were also trained to train others (mostly women) who could repair simple parts or rectify any technical faults. The lantern was not free of charge. One

⁴³ REDS, (2013), Narrative Report April – December 2012

⁴⁴ KDMV, SCST (PoA) Implementation in Karnataka status report 2013

had to pay 100 rupees a month for 23 months to REDS in order to own it. Any technical fault during this period was taken care of by REDS and the initial corpus was deposited by REDS.

Information that *confirms* the contribution of the solar lamp project towards a better integration is in the first place based upon the fact that the lamps are not only made available for Adijan people but also for other caste people who are poor but also can afford to pay 2300 rupees per lamp.⁴⁵

In the second place, only Adijan youth was trained for the installation and maintenance of these lamps, therefore they have to enter houses of Non-Adijan people. Until so far only 76 mechanics are operational in Tumkur district⁴⁶⁴⁷⁴⁸⁴⁹. This economic power in the hands of Adijans also is said to change social relations between Adijans and non-Adijans, because previously Adijans were the only ones to ask for support from non-Adijans, whereas now non-Adijans also seek support from the Adijans⁵⁰. Adijans are now able to mingle with other castes, including the dominant castes like Gowdas, Kurubas, Lingayats⁵¹, and Vokkaligas⁵² on an equal footing. These communities are now accepting Adijan leadership for solar lamp related issues⁵³.

In the third place due to the solar lamp project, social relationships are said to have changed. From being considered an "untouchable" Adijans are now being welcomed and even served food inside the homes of caste people. Adijan Panchayats have also started experiencing "mutual understanding, respect and harmony in their respective villages especially after the distribution of solar lamps".⁵⁴

Information that *rejects* the contribution of the solar lamp project is the following:

When taking into account that until so far only 76 mechanics are operational in Tumkur district, who are reaching 4,163 families of which their origin (Adijan or non-Adijan) is unknown, the contribution of the CDM project towards better integration of Adijan people seems to have a limited outreach.

Further it is to be observed from the evidence collected for the *outcome achieved* that many signs of better integration of Adijan people have been reported *before* the solar lamp project.

2. The second explanation for the outcome is that REDS has empowered the Adijan people and helped them to claim their rights and dignity in Tumkur district since 1984. Main interventions consisted of creating the APM, stopping the buffalo sacrifice festivals, ending other atrocities, supporting Adijan people to claim their rights with regards to land and access to government schemes.

Information that *confirms* this pathway has been already described in other sections of the report and mainly consists of the fact that REDS has been building the APM for the past 30 years, starting in Tumkur district. Based upon information only provided by REDS, this movement has shown to be; financially independent from REDS; able to reclaim land and obtain access to government schemes for an average of 700 people per year; able to stop the buffalo festivals that associate Adijan people with providing free of charge labour to caste people; able to end atrocities in Tumkur district, and to build relationships between Adijan Panchayats, Hobli and Taluk councils on the one side and Gram Panchayats and local administrations on the other site. Increasingly and in particular since 2012, non-Adijans have become aware of these results and have started to seek support with regards to land reclamation and other claims for themselves, whilst at the same time REDS has started to support these people. An external resource person also confirms that Adijan leaders know a lot about rights and processes and are able to clearly put forth their demands⁵⁵.

⁵¹ "Lingayats constitute 17% of the total population in Karnataka and are the largest community followed by the Vokkaligas. They're dominant in close to 100 of the 224 assembly seats, mostly in North Karnataka, and there have been nine chief ministers from the community." *Refer*, <http://timesofindia.indiatimes.com/city/bengaluru/Lingayats-renew-demand-for-separate-religion/articleshow/23846654.cms>

⁵² Vokkaligas constitute between 15 and 17 percent of the state population and they are concentrated in districts of South Karnataka.

⁵³ Interview with REDS Field Staff

⁵⁴ REDS Annual Report 2013-14

⁵⁵ Interview with Ekta Parishad

Information that *rejects* this is the following:

One of the respondents attributes the improved relations between castes to the fact that the Adijan people have been organised to address issues collectively, which the Gram Panchayats cannot ignore. Also the fact that Adijans obtain the support of REDS helps them to claim their rights and entitlements vis-à-vis Gram Panchayats⁵⁶. This does not automatically mean that Adijan people are being respected and better integrated in society.

Interventions by REDS in Tumkur district became less intensive as of 2012: the number of APs, hobli and taluk councils that are still being supported by REDS were considerably reduced from 1000 APs in 2011 to 550 in 2014; from 45 hobli and 10 taluk councils in 2011 to 14 hobli and 3 taluk councils in 2014. Two reasons mentioned by REDS are that at least 350 APs were capable to function autonomously from REDS as of 2010 and another reason is the withdrawal of Cordaid and ICCO.

3. The third explanation for the outcome achieved relates to other actors and factors not associated with REDS

A first explanation is provided by Prahalladappa (2013)⁵⁷ who states that 'the emergence of political leadership of Adijan and Backward classes is widely spread and equally popular in all districts of Karnataka state' (*and not only in Tumkur*). His conclusions are based upon the movement created in the 1980^{ties}, when REDS came into existence. According to him, this situation in the past explains the recent victories of Adijans and backward classes in assembly and parliamentary elections, where the Adijan Movement (not those associated with REDS) became a platform for other people belonging to deprived castes and sections in society. This statement kind of confirms the experiences witnessed by REDS since 2012, where also non-Adijan people started to engage with the movement and asked support to claim their rights, but it also highlights the fact that similar trends are being observed in other districts where REDS does not intervene.

A second explanation refers to increasing education levels amongst Adijan people providing them with opportunities to migrate to urban areas. Karnataka state is characterised by a shortage of agricultural labour force, reason for which people from other states migrate seasonally to Karnataka. In consequence, Adijan people have been partly liberated from socially binding activities to be fulfilled for upper castes, and have enhanced their economic position in society. These small changes have effectively brought the caste barrier down and allowed Adijan people to avoid discrimination and raise a voice against it if at all such things occur, with or without REDS' support.⁵⁸

Conclusion

Assuming that Adijan people are to some extent better integrated into society and socially accepted, although Adijan people in Tumkur district are victims of atrocities committed by caste people, its role in better integration and social acceptance of Adijans by other communities in Tumkur is to be categorized as *not necessary but sufficient*, implying that other actors and factors also explain this outcome. These include changing of the social landscape with increasing importance and evolution of discourse on Dalit rights, and the economic landscape that created a shortage of agricultural labour force in Karnataka state and increased education levels amongst Adijan people who moved to urban areas.

The contribution of the CDM project is the most recent contribution that according to the contracts has been financed under MFS II, but has been contradicted by REDS. This contribution only concerns 76 Adijan mechanics, entering houses of a maximum of 4,163 families in Tumkur district. A more substantial contribution seems to come from interventions that date from before the MFS II period, whereas these interventions did only partially continue during MFS II.

5.3.2 Intermediate Organisations – Adijan Panchayats increasingly are able to claim their rights

The outcome achieved

⁵⁶ Interview with Indian Social Institute

⁵⁷ M.H.Prahalladappa, Impact of DSS and Dalit Movement in Emerging Karnataka, Research Direction, vol-1, issue-2, August 2013.

⁵⁸ M.H.Suryanarayanan, K. Seeta Prabhu, Ankush Agarwal, Inequality Adjusted India Human development Index, 2013

One other outcome claimed by REDS is that Adijan Panchayats and their organisations at hobli level are increasingly capable of claiming their rights, in particular with regards to reclaiming their land. Between April 2010 and March 2014, 2163.25 acres were reclaimed for 1438 families in Tumkur district, and 1106.10 acres for 489 families in other districts. In the March 2012-2014 (24 months) period a total of 68.29 acres of land was reclaimed and given to 153 families in Tumkur district⁵⁹⁶⁰. This is a considerable *decrease* when compared to the April 2010 – March 2012 period (24 months) when 2084.36 acres of land were reclaimed for 886 families. More recently REDS reports a considerable increase of land reclamation in December 2014, when the Forest Department handed over 800 acres of land to Adijan and other poor people.

Reasons that explain the decline of the acreage of land being successfully claimed during the 2012 – 2014 possibly consist data not systematically being collected, because apart from organising a monthly gathering in the REDSs compound in Tumkur, APs and hobli councils increasingly deal with this issue at their own level as a means to reduce traveling costs and time, and because REDS only supported 550 APs in 2014.

During the same March 2012 – 2014 period, not only Adijan people were supported by REDS and the APs, also non-Adijan people started to seek support from REDS, but no disaggregated figures exist with regards to this variable⁶¹.

Pathways that explain the outcome and information that confirms or rejects these pathways

Three different pathways have been identified that possibly explain the outcome:

1. The first pathway consists of the interventions by REDS to raise the awareness and train the AP leaders and hobli and taluk council coordinators for at least the past 5 years.

Information that *confirms* this pathway is the following:

Hobli coordinators and AP representatives have been trained by REDS since the 2008 – 2012 project. Land related issues focused amongst others on the PTCL Act, different types of land classification and ownership titles and processes to reclaim land, including how to use the Right to Information Act to demand insight into land titles. Coordinators are in charge of making an inventory of landless people⁶². *Common land* resources are then being identified at the taluk office, after which the coordinator ensures that individual claims are filed in an organised manner with the revenue department and any other department that has been occupying that land. Once the applications are filed, REDS provides legal, para legal and interactions with officials to the claimants.

In the March 2012 – 2014 period monthly meetings of hobli and taluk councils continued to take place to discuss land issues and even are said to have intensified at the village level on the issue of land reclamation. The evaluation team did not obtain evidence that these meetings still take place in all 1000 APs, 45 hobli and 10 taluk councils; the most recent figures made available in October 2014 consisted of 550 APs still receiving support from REDS, 14 hobli councils are still meeting and three taluks⁶³⁶⁴.

Apart from these, monthly meetings take place at Booshakthi Kendra where land issues are being taken up as well as land reclaiming procedures are being explained⁶⁵. In the March 2013- 2014 period 49 land cases were identified, involving 716 families', resulting in 51 acres being successfully reclaimed for 145 families⁶⁶⁶⁷.

The most important information that *rejects* this pathway of capacitating APs and hobli and taluk coordinators consists of the above mentioned fact that hardly any detailed information is available about the functioning of the 1000 APs, 45 hobli and 10 taluk councils that have been created by REDS

in Tumkur district and that according to the information available, numbers have been reduced considerably.

An external resource person (who wants to remain anonymous)⁶⁸ states that many land conflicts in Tumkur target Adijan people for occupying reclaimed land, and that no cases are known where

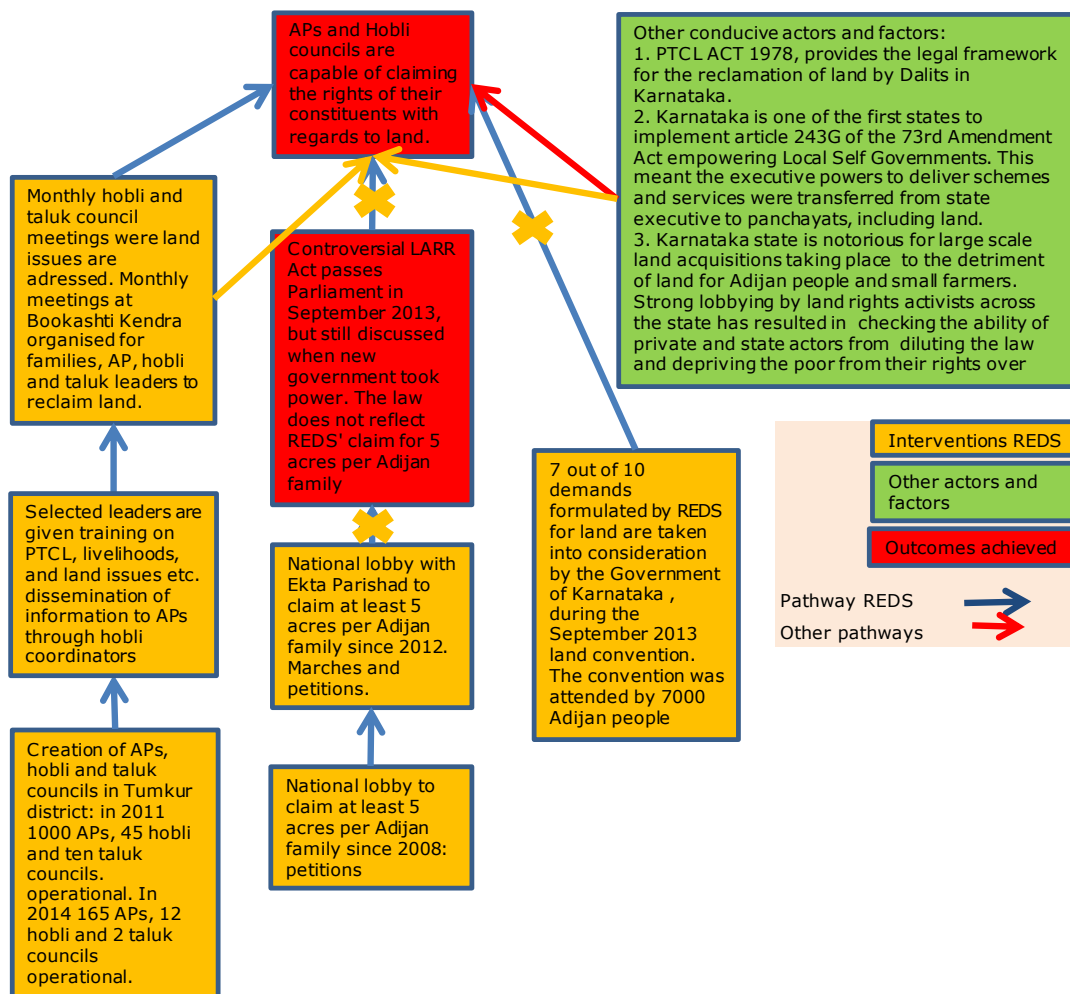

Figure 2: Pathways that possibly explain outcomes and conclusions about the nature of the relations between pathways and successful land reclamation by APs, hobli and taluk leaders

REDS is part of any legal proceedings to defend its constituents in Tumkur Special Court.

- The second pathway consists of the collaboration of REDS with Ekta Parishad to lobby for a land bill that entitles each Adijan household with at least 5 acres of land at the national level. REDS organised a land convention on 4th September 2013 in Tumkur.

REDS' campaign for 5 acres of land for each Adijan family was already part of the 2008 – 2012 contract with ICCO but was temporarily put on hold because REDS awaited the removal of the BJP government which only happened in May 2013. Despite of this situation, REDS organised a petition in 2009, collecting 170,000 signatures through the APs to be sent to the relevant authorities at state and national level, which according to REDS helped to table the issue⁶⁹(no evidence found). As of 2012, REDS started its collaboration with Ekta Parishad, which regroups 2000 land rights organisations of the biggest land rights movement in India under the leadership of Ekta Parishad⁷¹. In the same year the Director of REDS was nominated in the national task force for land reforms.

⁶⁹ ICCO, (2010), Feedback on progress report 2009 - 2012

⁷⁰ REDS, (2010), Progress report 2009-2010

⁷¹ REDS, (2013), Progress report on April – December 2012

In September 2013, the Government of India passed the Land Acquisition Rehabilitation and Resettlement Act which however raised severe opposition from both farmers and industry side that continue until to date. Until so far this campaign has not helped to realise REDS' ambition to give Adijan people the right to at least 5 acres per family.

In Karnataka state REDS organised a convention in January 2013 to lobby for access to land for women, followed by a convention in September 2013. 7000 people from the 12 districts where REDS intervenes attended this last convention during which a petition with 500,000 signatures was handed over to the Revenue Minister of Karnataka. A memorandum was also submitted to the state government that presented 10 demands formulated by Adijan people with regards to land, of which 7 demands were taken into consideration by the State Government⁷²⁷³. An external resource person observes that REDS failed to benefit from this momentum created in September 2014 to ensure appropriate follow up in 2014. REDS reoriented its energy to the CERI campaign and did not follow up on land issues.⁷⁴

3. The third pathway explains the outcome by the fact that Karnataka state has a conducive environment for granting Adijans access to land.

Several factors justify that Karnataka state has a conducive environment with regards to land access for poor people, including Adijan people.

In the first place the Prohibition of Transfer of Certain Lands (PTCL Act) provides the legal framework for land reclamation by Adijan people supported by REDS. Caste people have in consequence started to conform to rules in the fear of a PTCL case being filed against them.⁷⁵ However processes to effectively reclaim land are delayed because of land becoming scarce for this purpose⁷⁶.

Until so far REDS has taken advantage of this conducive environment by reclaiming land that was common property resource and by reclaiming only small plots that did not challenge the power relations between Adijan and caste people⁷⁷.

In the second place, Karnataka is one of the first states to implement article 243G of the 73rd Amendment Act empowering Local Self Governments as of 1992. This meant that executive powers to deliver schemes and services were transferred from state executives to panchayats.⁷⁸ Implications for REDS and other organisations defending the interests of Adijan people consist of APs, hobli and taluk councils being the appropriate channel to address land and other issues at Panchayat or taluk level. In the meanwhile the revenue department of Karnataka also has started to digitize land ownership titles and their transfers as requested by farmers. Taluks are in charge of keeping these digital records and serve farmers. The land ownership data base will become publicly available and is meant to make land deals more transparent. Until so far REDS has not mentioned this as a positive trend.

This conducive environment is however countered by large scale land acquisitions increasingly taking place by companies in Karnataka, including Tumkur district. Strong lobbying by land rights activists across the state has resulted in checking the ability of private and state actors from diluting the law and depriving the poor from their rights over land.

Conclusion

The outcome is in the first place to be explained by REDS' efforts since the past 30 years to create and train Adijan Panchayats, hobli and taluk leaders about possibilities to reclaim land. This strategy possibly has been more effective *before* 2012 than in the March 2012-2014 period, when REDS reduced its efforts to support the APs and the APM. It is a *sufficient but not necessary cause* that explains the outcome, because also the conducive environment provided by the government explains the outcome and is also a *sufficient but not necessary cause*. REDS' lobby and advocacy efforts until so far do not explain the outcome, since no changes have occurred in land policies and in particular their procedures.

5.4 What is the relevance of these changes?

5.4.1 Relevance of the changes in relation to the Theory of Change of 2012

REDS, in its 2012 Theory of Change aimed to ensure self-respect and dignity for Adijans and women in social, political, economic and cultural spheres'. In order to reach this goal, the most important condition to be fulfilled consists of 'reclaiming Dalit history and culture' which has been operationalised by the Booshakthi Kendra in 2003. This condition was further decomposed in six other conditions of equal importance: Increasing Dalit political participation; eradication of untouchability and reducing atrocities on Dalits by mobilizing them and making them aware of their Rights; strengthening internal governance within Dalit community; strengthening of women leadership in politics; economic development of Dalits and achieving basic (fundamental) rights' of Dalits.

Since the baseline study in 2012, REDS has changed its strategic orientation, intensifying its efforts on mainly two programmes: CERI coalition on electoral reforms on which it is working since 2008 and the Solar Lamp and Clean Development Mechanism (CDM) programme. These two programmes are very indirectly relating to the 2012 Theory of Change.

The changes obtained through the solar lamp project seem relevant in the ToC in terms of contributing to the economic development of the Adijan people. The CERI has not yet resulted in changes. Other changes that are relevant in the light of the ToC is the ongoing reclamation of land and claims to access government schemes , but the considerable dilution of the APM is negatively impacting upon these changes, weakening their relevance .

5.4.2 Relevance of the changes in relation to the context in which the SPO is operating

The changes introduced in Tumkur district are relevant in the context that Adijan people are living. SCST represent 23.5 percent of the total population but they are not sufficiently represented in the political domain, reason that their rights are regularly violated or not respected⁷⁹. Another factor however consists of SCST or Adijan people not being able to become operational as one movement at the state level.

Against this background the movement created by REDS in Tumkur district, for which REDS has been commended by external resource persons is just one relevant step towards the creation of a movement at state level. However, no traces were found that provide evidence of REDS engaging with other Adijan movements operational at Karnataka state level in in other districts, nor evidence about the relation of the Adijan Panchayat Parliament created at state level in 2011 with these networks such as Karnataka Dalit Mahila Vedike and Dalit Sangharsh Samiti.

The increased involvement of non-Adijan people in the movement is also relevant in terms of creating a bigger constituency as a means to enhance political leadership at state level.

5.4.3 Relevance of the changes in relation to the policies of the MFS II alliance and the CFA

REDS' partnership with the ICCO alliance is part of its global Conflict Transformation and Democratization programme. The program distinguishes four thematic areas of work, which are closely linked: Empowerment for conflict transformation; Human rights and rule of law; Gender and United Nations Security Council Resolution 1325 (UNSCR 1325) and; Democratic society.

In a number of countries coalition-forming of organisations working on similar issues is part of the CT&D programme we have stimulated the development of program coalitions in which civil society

⁷⁹ <http://timesofindia.indiatimes.com/city/bengaluru/Why-there-is-no-Jupiter-among-dalits-in-Karnataka/articleshow/24149666.cms>

organizations collaborate. Issues that could be addressed were for instance access to land and natural resources for marginalised groups, human rights or conflict transformation⁸⁰.

In India this programme has been translated into the democratisation and peace building programme, with a particular focus on addressing structural issues like caste, class and land issues.

Apart from this, ICCO supported the creation of an Empowerment & Entitlements Platform in 2008 aiming to take collective action on land issues and untouchability. REDS has been member of the platform and also held administrative functions⁸¹.

In its 2013 Alliance report, ICCO, the Karnataka State Assembly passed the Scheduled Castes Sub-Plan and Tribal Sub-Plan (SCP/TSP) Act that included a budget allocation to purchase land for an organization of landless Dalits. This enabled 3,086 Dalit families to attain ownership of 2,186 acres of land. Similarly, total 4104 acres of land was allocated as communal land, or forestland. This was the result of extensive lobbying and advocacy work in which several of ICCO's partners were involved.

According to the ICCO CT&D coordinator, REDS' interventions have been relevant in the light of the CT&D programme, because REDS addressed land issues, explicitly worked on women empowerment, was able to create an entire Adijan movement which is capable to engage with Gram Panchayat representatives and local administration and is currently working on CERI. Together with the National Campaign on Dalit Human Rights, land issues have been tabled at the national level.

The evaluation team observes however that since REDS made its strategic change in 2012 and only actively intervened in two programmes; CERI and the CDM; the performance of the APM in Tumkur has declined in terms of number of APs still supported and acreage of land reclaimed, whilst women empowerment still is on the agenda.

The field visitors to REDS did not find traces of REDS having participated in the Empowerment & Entitlements Platform, nor interventions that are associated with the Scheduled Castes Sub-Plan and Tribal Sub-Plan (SCP/TSP) Act of 2013.

The changes to which REDS contributed since the baseline study are still relevant for ICCOs MFS II policies, though were limited in scale.

5.5 Explaining factors

5.5.1 Internal factors

As mentioned in chapter 4, REDS informed the evaluation team that it has changed its strategic orientation since the baseline and concentrated on the the CERI campaign and the CDM by means of the solar lamp project. At the same time it limited its efforts to expand the Adijan Panchayat Movement.

In consequence the organogram has changed; senior and other staff has been replaced or sent away early 2012, whereas according to contractual obligations with ICCO, still interventions were planned in relation to the APM, access to government schemes and to land issues. According to REDS, the CERI and the CDM programmes have been implemented with support of German organisations, although they are also part of the contracts signed with ICCO.

Apart from these strategic and operational changes, the founders of REDS kept their executive leadership positions whilst at the same time creating a company to manage incomes generated through the solar lamp project.

Many people associate REDS with these founders according to the founders themselves and to some outsiders, although some also state that a change of leadership might also be necessary.

The shift in the strategic orientation of REDS might be one of the explanations of rather diluted outcomes reported like a better integration of Adijan people in society, a decrease in the acreage of

⁸⁰ ICCO Alliance Progress report 2011

⁸¹ Interview with programme coordinator CT&D India

land successfully reclaimed by Adijans and lobby activities with regards to land not having been successful.

5.5.2 External factors

No particular external factors have been identified that impacted negatively upon REDS' outcomes achieved.

Some conducive elements were identified, such as the Congress party taking over power in Karnataka state as of 2013, increased attention for land rights in the policies and procedures to be followed in order to obtain land titles, and increased attention for the enforcement of the Prevention of Atrocities Act.

5.5.3 Relations ICCO –REDS

Relations between ICCO and REDS have been constructive and until 2012 the programme was implemented appropriately. The end of financial support from ICCO explains the strategic reorientation of REDS and the non-convincing outcomes reported.

A major reason for ICCO to end the support to REDS is a change in geographic focus in India, in favour of the North East: although ICCO will not provide financial support to REDS, technical support is still possible and they will continue to engage with REDS as a member of the Empowerment and Entitlement coalition as well as on land issues because REDS is a member of the national commission on land reforms.

6 Discussion

6.1 Design of the intervention

The design of the intervention strategy has drastically changed since the baseline, the most important reason being an end to the financial support given to REDS to further support the APM. The introduction of the solar lamp project and the importance it gained in financial terms has resulted in another intervention design.

The change in the strategic orientation has not taken into account existing positive outcomes already achieved upon which to build, nor has foreseen an exit strategy that enabled the APM to continue on its own. For example, the creation of the Adijan Panchayat Parliament at Karnataka state in 2011, did not receive further material and technical support to become a performing apex body of the APM.

Whereas the business model developed for the solar lamp project is possibly replicable in other districts and states; that of creating the APM is not replicable in a time frame neither of five years nor by another organisation.

The APM is the result of a project of the two founders of REDS, who are the very charismatic leaders of REDS. This process started in 2001. It is curious to see how quickly this strategy for movement building came to an end when financial support became difficult.

7 Conclusion

Changes in the civil society arena of the SPO

In the 2012 – 2014 period the most important changes that took place in the civil society arena of REDS are the following:

1. The number of Adijan Panchayats, hobli and taluk councils in Tumkur district declined from respectively 1000, 45 and 10 entities in 2010 to 550, 14 and 3 entities in 2014, the most important factor being the end of the support given by ICCO and Cordaid (*level of organisation*). Instead of supporting this Adijan Panchayat Movement (APM), REDS reoriented its interventions towards the implementation of a solar lamp project (also in Tumkur district), a land campaign and one for electoral reforms in India.
2. Yet those Adijan people still member of the APM where capable to claim their economic rights and they made a conscious vote during the 2013 state elections. Co-existence and acceptance of Adijan people by caste people is said to have increased since the baseline (*civic engagement*).
3. Collaboration with public authorities was constructive and intensified after the positive election results at Karnataka state level. Yet efforts to positively influence the land bill and proceed to electoral reforms at national level did not yet materialise. To this end REDS engaged with relevant networks at national level.

Contribution analysis

Based upon an analysis of the projects and programmes financed by the Dutch CFAs a selection was made of SPOs to be included in an in-depth process tracing trajectory and those to be included for a quick contribution assessment. REDS was amongst those SPOs selected for in-depth-process tracing.

The first outcome achieved to some extent consists of Adijan (Dalit) people being better integrated and socially accepted in Tumkur district. Three rival pathways were identified: 1) During MFS II 76 Adijan youth were trained in install solar lamp systems in not only Adijan houses but also in non-Adijan houses who wanted to pay for these systems (4,163 families); 2) REDS has empowered the Adijan people and helped them to claim their rights and dignity in Tumkur district since 1984 and; 3) other actors and factors explain this outcome. Each of these pathways in themselves provide a sufficient but not necessary explanation for the outcome achieved. Although the solar lamp project is part of contractual obligations signed between ICCO and REDS as well as being reported on in progress reports, two German NGOs, Bread for the World and Andheri Hilfe are said to have financially contributed to this project. However more substantial contributions come from interventions supported *before the MFS II* period and financed by ICCO and Cordaid.

The second outcome consists of Adijan Panchayats and their organisations at hobli and taluk level increasingly being capable of claiming their rights, in particular with regards to reclaiming their land. Three pathways were identified, being 1) interventions by REDS to create the Adijan Panchayat movement with structures at village, hobly, taluk, district and state level; 2) lobby and advocacy activities for improved policies and regulations that provide access to land, and; 3) a conducive environment caused by the state. Whereas the second explanation was rejected, the two other pathways provide a sufficient but not necessary explanation of the outcome. REDS has possibly been far more effective *before MFS II* in explaining this outcome than *during MFS II*.

Relevance

With regards to its Theory of Change, REDS' changes achieved are relevant to some extent, although REDS' strategic orientation has negatively impacted upon those changes important in the ToC, in particular relating to the creation of a strong Adijan Panchayat Movement, access to land and to other entitlements.

With regards to the external context in which REDS is operating, changes introduced are relevant. However these changes have not yet helped to create one not fragmented movement at Karnataka state level to further claim political, economic and social rights.

With regards to the policies of the ICCO alliance, the changes achieved by REDS are relevant, but the performance of the APM in Tumkur in terms of Adijan Panchayats operational and acreage of land claimed has declined, whilst women empowerment is still high on the agenda. No traces were found of REDS engaging with other ICCO partners in a programmatic coalition to address land issues.

Explaining factors

The most important internal factors that explain the explanation of the rather diluted outcomes, such as the better integration of Adijan people in society and the acreage of land reclaimed consist of REDS having drastically changed its strategic orientation, its organogram and staff.

External factors that positively influence the outcomes obtained by REDS are the conducive environment provided by the government of Karnataka with regards to land rights and procedures to obtain land rights and an increased attention for the enforcement of the Prevention of Atrocities Act.

The relations between ICCO and REDS have been constructive until 2012, but the end of ICCO’s financial support explains the shift in REDS strategic orientation.

Design

The business model developed for the solar lamp project is replicable by other organisations and in other contexts. That of the creation of the APM however is not replicable.

Table 4

Summary of findings.

When looking at the MFS II interventions of this SPO to strengthen civil society and/or policy influencing, how much do you agree with the following statements?	
The CS interventions were well designed	5
The CS interventions were implemented as designed	5
The CS interventions reached their objectives	5
The observed outcomes are attributable to the CS interventions	5
The observed CS outcomes are relevant to the beneficiaries of the SPO	8

Score between 1 to 10, with 1 being "not at all" and 10 being "completely".

Appendix 1 Civil Society Scores

This table presents the appreciation of the evaluation team regarding changes occurred for each indicator between 2012 and 2014 on a scale of -2 to + 2

- 2 = Considerable deterioration

- 1 = A slight deterioration

0 = no change occurred, the situation is the same as in 2012

+1 = slight improvement

+2 = considerable improvement

Dimension		Indicators	Question	Change
Civic engagement	1	Needs of marginalised groups	How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies?	-1
	2	Involvement of target groups	What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities?	0
	3	Political engagement	How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups?	+1
Level of organisation	5	Relations with other organisations	In the past 12 months what has been the most intensive interaction you had with other CSOs?	+1
	5	Frequency of dialogue with closest CSO	In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with?	0
	6	Defending the interests of marginalised groups	Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs?	-1
	7	Composition current financial resource base	How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendance to workshops of other CSOs; costs for organisational growth and/or networking?	+1
Practice of Values	8	Downward accountability	To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them?	0
	9	Composition of social organs	What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for?	0
	10	External financial auditing	How regularly is your organisation audited externally?	0
Perception of impact	11	Client satisfaction	What are the most important concerns of your target groups? How do your services take into account those important concerns?	+1
	12	Civil society impact.	In the past 12 months, what impact did you have on building a strong civil society?	0
	13	Relation with public sector organisations.	In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives?	1
	14	Relation with private sector organisations	In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective?	0
	15	Influence upon public policies, rules, regulations	How successful have you been in influencing public policies and practices in the past 2 years?	0

	16	Influence upon private sector agencies' policies, rules, regulations.	How successful have you been in influencing private sector policies and practices in the past 2 years?	NA
CS context	17	Coping strategies	In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society.	0

Appendix 2 Changes in civil society indicators between 2012 and 2014

1.1. Needs of marginalised groups SPO

Between the period 2011 and 2014 REDS claims that there has been a dramatic increase in the number of poor, Dalits and other backward class people being attracted by its activities. REDS has adopted three main components which complement and incrementally support their objective of Dalit dignity. The first one is centered on education, the second on livelihood, and the third around clean environment. These three paths have sub paths which are complimentary to achieving its objective. The number of participants in meetings and trainings at Bhooshakthi Kendra, Nalihella village, on every 2nd Monday of the month, in 2013-14 for non Dalits have increased to 859, and in the same period the taluka office visitors' book shows more than 1000 people of all castes approaching for government entitlements and schemes out of which more than 500 were women. In only 2013-14, 12 489 solar lamps have been installed in 4163 households in 3 talukas of Tumkur.

In the case of land reclamation, REDS has made some progress. While in 2011, 2029 petitions for land were filed by APs in District and Taluka courts, by 700 families for 3353 acres. The total amount of land mentioned here are those that were taken up by the land department and not actually reclaimed or distributed. Till date (2011-2014) the total land cases filed by APs stands at 8341.24 acres with a total worth of INR 11,397,090. While at the same time Bhooshakthi Vedike, the wider platform which covers 9 districts, has been able to file cases for 10,38.04 acres worth INR 155,73,90,000 catering to 2786 families. (Source 2012-13 Annual Report; Feed Back Report 2012; the calculation of monetary amount is done through the revenue being received by the land department for these lands).

These numbers have been culled from the cumulative figures in annual reports to donor by REDS for 2012-13 and 2013-14. But overall land allotment by Karnataka Government and especially in the district of Tumkur in the period of 2011 to 2014 does not bear out the fact. Similarly accessing government schemes has also paid great results to REDS' claim to success. By 2013 it had accessed schemes worth INR 11,397,000 for the target groups. The conversion of accessing government schemes in monetary terms is calculated from total entitlements in terms of central, state, and SC/ST sub plan allocations in the district. Whether REDS can claim it as a success of its activities is doubtful, because Sanchaya Nelle's Report for 2013-14 states that for the first time in July 2012 the newly elected Chief Minister declared that the 30 year old central rule of special allocation for SC/STs were to be implemented seriously in the state. This was turned into an ACT and special allocations under SC/ST sub plan were distributed to all districts according to their population.

Here it must be clarified that while earlier REDS focused mainly on Dalits/untouchables only in the last two years other SC (touchable castes) and Other Backward Class and middle castes have received support.

Score: -1

1.2. Involvement of target groups SPO

REDS has created a structure of decision making through their Adijan Parliament and Hobli level Panchayats. There is more than 50 percent of representation of women in such groups. All the decisions regarding entitlement, needs, trainings and addressing specific local issues are taken at this level. REDS' executive leadership does not interfere in such processes according to their interviews to the evaluators. Decentralised decision making has been possible because over the last ten years REDS has created an accountable and equity based structure at all levels and made them self-sufficient. According to the executive leadership's assessment form conclusion of Cordaid funding and constant confusion regarding ICCO funding for 2013-2014 had forced their hands to give a golden handshake to most of the project staff. Their coverage of Talukas has also come down accordingly where ever they could find trained and committed volunteers.

Local contributions to REDS have increased from INR 715,154 in 2010 to INR 6,467,878 in 2013-14. People pay for their travel and food when attending functions and conventions and trainings. The estimated figure of the participants' travel and lodge has been calculated by REDS as contribution in the 2013-14 report. Whereas between 2009-12 the actual contribution through the APs, selling of literature and bearing the cost of REDS staff to Taluk and district offices were taken into account as contribution. (Source Half Yearly Report 2010; Annual Report 2012-13 and 2013-14).

There were taluk and district parliament level meetings held every month and twice in 3 months respectively. Bhooshakthi Vedike holds every second Monday the Adijan Darshan, which resolves concurrent problems faced by people. Celebration of land day in 2013, creating a human chain to state their demands in 2013, and land convention with attendance from all stake holders including government servants and coalition partners like Ekta Parishad has proven that Dalit Panchayat leaders are articulate and well informed about their rights. (Interview with Ekta Parishad).

Monthly meetings in Vedike level, taluka level, and district panchayat level, with training material and coordinators (85 locally recruited out of which only one is not adijan and more than 50 % are women) helped to achieve the decentralised governance and empowerment in decision making process. This is corroborated by the field staff and coordinators and the review report of 2013 by the donor. CMASK and Dalit Mahila Vedike and Sanchaya Nelle annual Report for 2013-14, suggest that these networks were responsible for pressuring the government to implement the decentralisation norms to be followed by government officials.

Score: 0

1.3. Intensity of political engagement SPO

In case of REDS, internal and external governance is most important in making a formal stake for empowerment. According to the Indian FCRA law organisations receiving foreign funding are barred from indulging in political activities. But as is evident every movement and action to reclaim rights and entitlements involves politics. Formally, these activities are undertaken through interventions of the SPO.

People's participation in the Gram Sabhas⁸² has increased in the last two years. This is also because of their political strength with which they managed to elect 703 Gram Panchayat members. REDS also conducts voter's education and promotes active participation of Adijans in the electoral processes. REDS claims that mobilising Adijans has resulted in their bargaining power during elections. Of particular achievement are the recently concluded elections to the Karnataka State Assembly. Two main contestants approached the Movement for support several times. One was a very powerful son of a former minister. The other one was from the Adijan community. After weighing all pros and cons it was decided to support the Adijan candidate. The Adijan people also voted as one force and he won against a very powerful candidate and also much against the general trend where people elected Congress party. But this candidate was from the Janata Dal party (Source: Self-Assessment form of REDS executive leadership)

Score: 1

2.1. Relations with other organisations SPO

REDS says it is operational in 12 districts in Karnataka state and for its solar lamp project it intervenes in 7 districts. In Tumkur district it worked with 1000 Adijan Panchayats in 2010 in 6 talukas, but in 2014 it still worked with 550 Adijan Panchayats in three talukas.

At the international level, REDS networks with organisations in the United Kingdom; the Netherlands; Germany; Belgium; Sweden; Norway; Bangladesh; Pakistan; Nepal; Thailand; Sri Lanka; Switzerland; the United States of America and Nepal.

In Karnataka, many organisations are working on dalit issues, such as Alternative Law Forum, Aneka, Environment Support Group, Garment and Textile Workers Union, Hengasara Hakkina Sangha, Jyothi

⁸² The Gram Sabha is the lowest level of Panchayati Raj system where every eligible voter in the village is a member. The gram sabha is empowered to put forward demands to the Panchayats. Two gram sabhas, at the least, in a year are mandatory under the law for each panchayat.

Mahila Sangha, Karnataka Dalit Mahila Vedike, Karnataka Komusouhardha Vedike, Karnataka Sexual Minorities Forum, Karnataka Sexworkers Union, LesBiT, Lawyers Collective, Openspace, Pedestrian Pictures, People's Democratic Forum, People's Union for Civil Liberties, Sadhane, Samanatha Mahila Vedike, Sadhana Mahila Gumpu, Samara, Samvada, Sanchaya Nele, Sangama, Suraksha, Vijaya Mahila Sangha, Vimochana and many other individuals and organizations. Although some of these organisations work in several districts, none of them works with REDS in Tumkur district, nor does REDS work with these organisations to join forces at state level.

An Adijan Panchayat State level Parliament was created in 2011, where each hobli elected 10 (5 men and 5 women) members to the taluk and each taluk to the state level parliament. The life of this elected body is 5 years. Dodamma, a REDS activist women was chosen as the speaker of the parliament. The Adijan Panchayat Movement supports the efforts taken up by one of the biggest land rights movement in India under the leadership of Ekta Parishad which has a network capacity of around 2000 land rights organizations in the country. (Source: Annual Report 2012-13, Interview with Executive leadership)

Score: 1

2.2. Frequency of dialogue with closest civil society organisation SPO

Ekta Parishad is the organization that REDS has interacted with most frequently in the last two years. There have been 13 mutual meetings both in Tumkur and in Delhi. It resulted in a meeting with Mr. Jairam Ramesh, then Environment Minister, twice and a policy document was prepared by the National Task Force for ministerial decision in the central government. Since then the change in government has pushed the issue to the back burner. The possible reason could be the fact that Tumkur elected an opposition candidate as MLA against the state trend.

As pointed out earlier, though many organisations work on Dalit issues in Karnataka, Tumkur is somehow left out by most of them and apart from REDS, as corroborated by Prakash Lewis, external interview, Dalit scholar, no other organisation's presence is evident. REDS does not engage with or is a part of CMASK and Dalit Mahila Vedike and Sanchaya Nelle, who work across 25 districts of Karnataka. This is corroborated by Yashoda.P who is the convenor of both the networks and is the founder of the third. (Source: Dalit Mahila Vedike and Sanchaya Nele)

Score: 0

2.3. Defending the interests of marginalised groups SPO

Number of Adijan Panchayats that know how to claim their land rights and acted upon it:

Though the annual reports do not share the exact data on the land claimed by each of the existing Dalit Panchayats, the statistics on land rights indicated petition for reclamation of 3353 (2028 in October 2010 to March 2011 and 1325 in April to September 2011) acres of land for the Dalit community which is a very significant achievement. In fact the grand total of land reclaimed is 10,382.04 acres for 2786 families until December 2014. In Tumkur districts 67.19 acres of land were reclaimed between 2012 and 2014 for 152 families. In addition to filing petitions for land Dalit Panchayat members are now aware of the legal protection to their land, under the PTCL Act which states that buying and selling lands occupied by Dalits is prohibited.

10 major demands related to land reclamation, protection, promotion and development were placed before the Government of Karnataka in September 2013 at a land convention held in collaboration with Ekta Parishad and out of these 10 demands 7 are under consideration by the State Government. Tumkur is also the only district to have laid down the land reclamation process to the minute details with functionaries, functions and financial allocations. www.tumkur.org

Number of Adijan Panchayats that know how to claim access to government schemes and acted upon it

REDS is able to motivate local administrations to ensure that facilities reach people in the villages. Of late REDS is also expanding their inclusive attitude of bringing all the poor together and not just Adijans. Every Gram Panchayats has to execute 22.75 % of its budget for Adijan issues. When the government announces relevant schemes for Adijan people, REDS immediately sends out pamphlets in the villages entitled to the scheme, to inform them about their rights and act on it. Trainings are organised for movement leaders to be able to approach the government accordingly. Until sofar

Government Schemes worth INR 6,274,500 have reached 858 families in 338 villages in Tumkur district in 2012 - 2013. (Source: Annual Reports 2012-13, 2013-14; interview with staff and executive leadership).

Crime against Dalits: a perspective

According to progress reports by REDS, untouchability practices were reduced in Tumkur district by 80 percent in 2009, by 90 percent in 2011 and the district was declared free of atrocities in 2012. Despite this outcome being achieved, the contracts with ICCO in the 2012 – 2014 period still include interventions to stop atrocities. The information provided by REDS is being contradicted by the SCST Prevention of Atrocities Karnataka status report that covers 2011 and 2012; This states that Tumkur district had the highest reported cases of atrocities in 2011 (112 cases) and 2012 (121 cases). This is a significant increase with 73 percent in just one year. In the same period however the district vigilance and monitoring committee meetings met the legal requirements of quarterly meetings for the first time.

There is one crime reported against the Scheduled Castes (SCs) or Scheduled Tribes (STs) every 5 hours. Almost every week sees an SC or ST person murdered (45 in 2012) and an SC or ST woman raped (47 in 2012). Bangalore City (126) and Tumkur (121) had the highest reported cases of atrocities in 2012. Tumkur was the highest (112) in 2011. There is a sharp variation in performance of the police and prosecution. While the police have a charge sheeting rate of over 97%, the prosecution has a conviction rate of just 7%. Though the police rate of charge sheeting is marginally higher in the case of crimes against SCs and STs under the Prevention of Atrocities Act compared to other crimes, the conviction rate of the special public prosecutors (SPP) is drastically lower for crimes against SCs and STs (7%) than for crimes under the Indian Penal Code (31.5%). This report, by CMASK, which is based on public domain data procured through RTI, reviews the performance of the Government of Karnataka in the discharge of its duties under POA for the years 2011 and 2012. The government has not held a single meeting of the State Vigilance and Monitoring Committee (SVMC) for the duration. Indeed, there has not been a single meeting of the SVMC at the designated time in the whole five year period from 2007-2013. This is despite several reminders and petitions to the highest levels of the government by CMASK. The present government has issued the notification constituting the SVMC under Rule 16(1) on 19 July 2013, and therefore could not hold the statutory meeting in July 2013.

Score: -1

2.4. Composition financial resource base SPO

Internal revenue generation model: The pattern of own contribution by the project shows the internal resource generation through members' contribution has been a big step towards sustainability. While REDS has used project support to train community members and to establish Adijan Panchayats, the expenses for the battle of justice fought by members are met from membership fees and internal contributions. Therefore, as REDS steps out, the struggle for demand for justice by the Dalit Panchayat will continue effectively in other districts through the membership fees. (Interview with Executive Leadership)

Linkage with the solar lamps project: As part of its initiative to answer the multiplicity of the problems like caste based discrimination along with enhancing access of Dalit community to basic needs and climate change, REDS started its solar lamp project which is now emerging as a business model. The intensive presence of the business model of the Solar Lamp project in 7 other districts of Karnataka will pave the way for self-sustainability of the Organization. Incomes received from solar lamp users are put in a separate company called Cosmic Rumble. REDS has also undertaken the sustenance of the project for the next 10 years through self-financing once the contract with present donors is over.

Apart from ICCO, REDS is receiving its funding from other donors such as Bread for the world, Misereor, Germany, and Andheri Hilfe, Germany etc. Therefore REDS has a wider donor base, which is good for long term sustainability of the organisation. Percentage of ICCO funds to total donor funds have come down substantially to 10% in 2012 -13, therefore dependency on ICCO funds is very low. In order to achieve self-sustainability in the project, REDS has made the members to pay for their own struggle from the beginning to make them independent from any grants. Therefore the matching grant for this project is high (82%). This increases the chances of sustainability of the project as internal revenue generation will continue even after the grant support ends. During this reporting period 5 taluks have mobilized INR 1,086,370 as local contribution in terms of kind. Leaders from Dalit

Panchayats attend special events, government programmes, visit to various departments to enable them to access support and services from government by contributing towards their travel, food cost etc. (Source: Annual Report 2012-13 and Project plan 2012)

Other interventions

Activities related to Adijan Panchayats in Tumkur district were supported by ICCO funding. Though the contract between REDS and ICCO for 2013-14 clearly mentions that the money will be used for CDM, APM, and Land Rights, repeatedly in interviews and the project plan for 2012, REDS insists that ICCO funding was only used for Land Rights training and conventions. The rest were managed by funding from German donors. CERI has a group of voluntary coordinators in 18 states. No one is paid a salary in CERI except the National Coordinator and M C Raj. The registration of REDS' solar lamp project with UNFCCC was a major milestone for REDS. Seeing the initial success of the project within two years, which was funded by Cordaid and ICCO, the German Government came forward to support another solar lamp project in 11 other districts of Karnataka with 46,000 solar lamps. Already 36,000 lamps have been distributed. None of these lamps is free. People contribute to a revolving fund which goes into training, maintenance and put in the Cosmic Rumble Company for further spread. (REDS Annual Reports 2012-13, 2013-14)

It is to be noted that while according to the contract available with us ICCO funding continued till 2014 March, according to the executive and field staff forms, it ended in 2013 March. This discrepancy of information gives rise to confusions in contributing Dutch funding for CDM, APM, Land activities for the year 2013-14. (ICCO Contract with REDS 2013-14)

Score: 1

3.1. Downward accountability SPO

REDS has a well-defined organizational structure that takes care of downward accountability. There is a Governing Body and its members are responsible for the performance of the Director. The Director is responsible for the overall functioning of the organization; for both external representations; alliance building; coordination and programme design and implementation; fund raising and; networking. The Director has departments headed by senior staff most of whom have come through the ranks and who are responsible for the functioning and performance of their own teams. Apart from this, auditing is the responsibility of the finance department and they engage an external firm to carry out the necessary audits and project specific audits.

The coordinators and staff are invited at annual general meetings with the board. Everything is shared; there is an information system where information on the monthly, weekly, financial meetings, sharing meetings, celebration meetings is made available widely. (Source: Interviews with Executive leadership, field staff and evaluators interviews with the APM leaders)

This above mentioned system was not borne out by the staff in private interviews. Nor were there documents showing clear cut job description and accountability structure. That it is an organisation which is solely run on the intellectual and informal capacity of the executive leadership, which by the way has not changed in the last 30 years, shows that downward accountability is far from achieved despite repeated nudges from the donors. The members of Adijan Panchayats who were interviewed were not aware of the financials or the programmatic outlays. Given the fact that the geographical area of operation for REDS has drastically reduced to 3 talukas now, and financial liability has reduced, and in fact the solar lamp project ensures a steady cash flow, down ward accountability in the structure has gone down.

Score: 0

3.2. Composition of social organs SPO

The Board of REDS comprises eminent people from different walks of life and they meet every quarter. The seven persons of the Board count 5 Adijans and two other castes, amongst which 4 are women.

It was pointed out in the final review report that REDS must make its board more effective and not have permanent members. "In the bye-laws, members of the board have permanent membership and there is no rotation policy for the appointment of members of board. Secondly REDS has not explored the possibility of seeking support from board members in its fund raising efforts to attain sustainability in the long run. It is suggested to REDS to look into these aspects in order to make its board more

effective". (Source: Review Report by ICCO for 2012-13) This has been partially followed by changing some members annually.

All Coordinators are from the Adijan community. The management of REDS consists of only Adijans except one person who is the CDM coordinator. Total staff strength is 50 including auxiliary staff. Most of the positions are occupied by Adijan people. The strength of departments has been reduced since the baseline.

Score: 0

3.3. External financial auditing SPO

As far as financial Management of REDS is concerned, REDS has a policy document but it is not printed. All the affairs of the REDS are conducted according to this policy document. This has been discussed in the board of REDS and approved. It is felt that over the years this document needs revision. With the appointment of new auditor in 2013-14, REDs will revise its policy document in the next year.

M A Braganza & Associates have been the auditors of REDS for the last 25 years. Half yearly and annual reports were prepared separately for all donors and then they were put together as one report for REDS' documentation. REDS is required to change its auditors for the next financial year and thereafter has to change auditor every 3-5 years. REDS has changed its auditors as of 2013.

Overall organizational audits for the last two years i.e. 2010-11 and 2011-12 have been submitted by REDS. REDS has introduced quarterly auditing recently. Thus we have quarterly, half yearly and annual auditing done by external auditors.

Score: 0

4.1. Client satisfaction SPO

There are several indications that Adijan and other backward castes are satisfied with the services delivered by REDS.

In the first place the contributions of these people in Tumkur district to attend meetings organised by REDS at its centre and to seek support in claiming their rights have increased since the baseline.

In the second place, more people have successfully claimed their land back, although by the end of 2014 only 10,597.04 acres had been successfully reclaimed out of 64,309.2 acres claimed. Table 5 shows that the acreage of land reclaimed in Tumkur district did not reach the target of set in the 2012-2013 contract with ICCO; 450 families receive 5 acres land each, which is 2,250 acres.

Table 5

Land reclaimed in Tumkur district and in all Karnataka state in acres Table caption (e.g. title).

Period	Acreage reclaimed in Tumkur per year	# of families benefitting Tumkur district	Total acreage reclaimed at state level	# of families benefitting at state level
April 2010 – March 2011	2028	834	286.30	52
April 2011 – March 2012	56.36	452	300	121
April 2012 – March 2013	16.04	7	357	150
April 2013 – March 2014	51.19	145	162.20	166

Sources: progress reports from REDS and feedback reports from ICCO.

In the third place, REDS has supported families to get access to government schemes, as can be seen in the following table which represents figures of only six of the ten taluks in Tumkur district. These figures show a significant decline in 2012-2013, which was recovered in the next year.

Table 6

Access to government schemes in Tumkur district.

Year	IDR	# of families
2009-2010	10,611,830	628
2010-2011	8,227,730	700
2011-2012	6,562,200	700
2012-2013	2,320,700	579

2013-2014	6,274,500	858 in 338 villages ⁸³
-----------	-----------	-----------------------------------

Sources: progress reports from REDS and feedback reports from ICCO.

In the fourth place, the solar lamp project reached 4163 families in Tumkur district by March 2014, who together received 12,489 lamps. Outside Tumkur district 36000 lamps out of 45000 planned have been solved. Advantages mentioned at household level consist of improved health conditions because kerosene lamps have been abandoned; children being able to study more at night and women having more time to prepare IGAs; Adijan people in charge of installing and repairing the lamps in the houses of other castes are better integrated in society and caste people starting to ask them questions instead of vice-versa (caste equation).

In the fifth place REDS claims a reduction in the presence of bonded labour, abusing Adijan people and declared Tumkur district 'atrocities free' as of 2012⁸⁴.

The number of villages where bonded labour was stopped increased from 109 to 148 villages in Tumkur districts between 2011 and March 2014. According to REDS this has a rippling effect to the seven to ten neighbouring villages that also decide to stop bonded labour. In the same period police has become more supportive to REDS to stop the practice.

However the SCST (PoA) Karnataka status report for 2011 and 2012 states that Tumkur district had the highest reported cases of atrocities in 2011 (112 cases) and 2012 (121 cases) in Karnataka state. This is a significant increase with 73 percent in just one year.

Score: 1

4.2. Civil society impact SPO

The Adijan Panchayat model has been spread to 12 other districts of Karnataka state.

The Adijan Panchayat Movement, since the creation of the AP Parliament at Karnataka State level in 2011, has become a well-structured movement (having Adijan Panchayats at village level, councils at hobli and taluk level and Parliaments at District and State level) with the following competencies:

- Each level knows how to claim its rights to government schemes and to land
- Each level negotiates with ordinary Panchayats, government departments and commissions.
- The APM is capable to mobilise and manage its own resources to be used for interventions serving the movement and its members.
- Members have become politically conscious and use their vote accordingly, as has been shown in the 2013 Karnataka Assembly elections (see 5.2.1)
- AP leaders and coordinators are capable to organise press conferences on their own.

On 15 April 2011 the Karnataka state Adijan Parliament was established by members of District Council from 12 Districts of Karnataka. The entire event was organized by REDS staff and the APM, coordinators from the Karnataka network and Tumkur.

The Parliament decided that in the year 2011, four important tasks would be taken up. Intensify land reclamation process by expanding the team. Secondly the signature campaign to be completed by September 2011. Thirdly, consolidate and regularize of District Council meetings and the parliament meetings. Fourthly link Coordinators meetings with council meetings to enhance accountability, transparency and collective action to enhance the strength of the movement. (Annual Report 2012-13).

The basis for human resource in the movement is the Dalit Community in General, the members of Dalit Panchayats, leaders at various levels, starting from village, Hobli, Taluk, District and Karnataka coordinators, REDS staff and with different departments and board of REDS. These resources are channelized into various councils and Parliaments to build the leadership within the Movement. With the help of the newfound leadership the leaders are able to negotiate with various government departments and commissions. As a result the Government Departments respond to the movement through written communication. (Source: Annual Report 2012-13, Interview with executive leadership).

⁸³ Figure obtained during field visit in October 2014

⁸⁴ REDS, progress report April – December 2012

The structured organizations of Dalit people called the Adijan Panchayat is now a popular body which has emerged as a strong and independent organization and can be described as the most prominent achievement of REDS. Through the creation of these APs, REDS has installed a permanent agent of change in the society which will continue the struggle because it is comprised of affected people and hence will always remain close to the ground. As a part of sustainability, Dalit people have also managed to mobilize resources which are raised and controlled by the members themselves. (There was no substantiation of the last fact while interviewing the APM members during evaluation.)

Socially, the Adijan people have started moving away from free caste labour to wage based labour. One positive result achieved in a particular hobli, taluk or district has its own impact on the entire area.

Culturally, the internalization of land as a mother has resulted in the celebration of land based festivals and resurgence. Accepting women leadership as part of a culture is increasing and women are recognized as important decision makers at all levels. This attitude was seen very clearly during the selection of leaders to the councillor and election to the parliament both in Tumkur and in Karnataka.

Economically, the understanding of the value of labour is increasing. No more rendering of free caste labour to the caste people, but demand for rightful wages for the work done. Dalit people are able to stand on their own with the attitude of self-reliance.

Political consciousness related to the value of vote is catching up. The Adijan people are able to discuss and assess the performances of individual candidates, parties and are able to negotiate and bargain on the basis of their strength. The AP leaders and coordinators are able to organize press conferences on their own both at the district and state levels.

With regards to the Campaign for Electoral Reforms in India, many political parties (DMK, CPI, CPI (M), IUML and TMMK) have made official declarations of support and have actually demanded a Proportional Electoral system for India. The All India Milli Council has publicly announced its support for CERI and PR system and invites REDS' founder M C Raj for many of its public debates. The National Alliance of People's Movements led by Medha Patkar has openly pledged its allegiance to Proportional Representation system. It was after many discussions. The All India Progressive Forum has partnered with CERI in the recent past to spearhead the CERI campaign all over India. Some of their members have taken up coordination of some States for CERI work. At least five hundred NGOs have joined hands in the CERI campaign all over the country. This is not substantiated by any research or publication or calculation made of organisations who are part of CERI across the country.

Score: 1

4.3. Relation with public sector organisations SPO

The APM has been the vehicle for building rapport with the government line agencies which are mandated to provide services and government schemes. In this regard, REDS has built over a period good relation with the line department officials and with the change in government in 2013, it has succeeded in getting major benefits for the Adijan people. Leakages are low since REDS trains people in the process of claiming rights. (Source: PDS and MGNAREGA data, Ministry of Panchayati Raj, GOI).

The government officials are increasingly attending the Adijan Panchayat, Hobli and Taluk Council meetings to discuss issues to be solved and to take into consideration the views of the Adijan people. The Police Department has taken a very special effort in stopping the buffalo sacrifice in the district. For example: 40 police personnel's and the Tahasildar took personal interest by visiting Naliganahalli in Pavagada taluk and stopped the sacrifice. This is yet another unprecedented impact in the entire district as it is for the first time in history that this sacrifice was stopped on a mass scale. REDS took it up as it is in this festival that the free caste labor system gets strengthened year after year. How far this could be attributed to REDS is a matter of debate. According to the 19 July 2013 GO notification, this is mandated in all districts of Karnataka.

People are directly demanding and receiving government facilities to their home and villages. Earlier people would go to government offices, now they invite them to their villages, or Hobli council or district parliaments to address their demands. Because of this the receiving of government facilities has increased. The rapport between the APM and government officials has improved. The political

party leaders are in direct contact with Adijan Panchayat leaders. Zilla Panchayat members, Taluk Panchayat members, Gram Panchayat members and presidents are in good rapport with Adijan Panchayats.

Since 2012, with the Social Welfare Dept, regular meetings take place every 3 months. In these meetings, the coordinators attend and raise the issue of girls' education and the need for starting more hostels for them. They also visit these hostels, therefore, the quality of food of these hostels have improved. The basic facilities within these hostels are being regularly upgraded. The Gram Panchayats have started giving extra support to children who are doing well in their studies. These hostels were started by governments, due to the intervention from the Adijan panchayat. Under SC/ST commission, the cases related to atrocities that have not been resolved at the district level have gone to the commission.

Under the SC/ST Atrocity Prevention Act, there is a provision for immediate compensation, the people are availing themselves of this provision. Before 2012 they were given INR 2,000 compensation which has been increased to INR 8,000-15,000. (Source: POA Act 1989, Amendment 2009). This is applicable in all states of India.

Score: 1

4.4. Relation with private sector agencies SPO

There is hardly any interaction with the private sector by REDS in India. They do not wish to take advantage of the CSR law which has recently come into force to promote private sector and NGO partnerships.

But they have had help from foreign private sector companies such as Villageboom, a German Company that supplied them with the 36000 solar lamps for the CDM project. Also a business deal with Grameen Surya Bijlee Foundation has successfully fructified in the implementation of REDS CDM Project.

REDS has become NGO supporter of Gold Standard Foundation. This has led to the successful verification of the CERs (Certified Emission Reduction) of REDS. (Source: Annual Report 2012-13)

Score: 0

4.5. Influence upon public policies, rules, regulations SPO

The director of REDS' nomination in the national task force body for land reforms is also an indication of its successful work on land rights. This task force is currently defunct given the change in the law brought about by the new regime in New Delhi.

Out of 10 demands, steps have been already taken for fulfilling 7 demands by the Government of Karnataka. Amongst these is the reservation of two acres of burial ground for Adijan people in every village in Karnataka.

REDS is a member of the Joint Committee of the Forest and Revenue departments to resolve the long pending problem between these two departments. But very little impact of this has come out. This is substantiated by the high number of cases regarding land still pending and the low amount of land reclaimed in last 2 years by REDS.

Score: 1

5.1 Civil Society Environment: Coping Strategy

There has been a sea of change in the socio political environment of Karnataka since the base line. The State Government then had the dubious reputation of being corrupt, casteist and anti-poor. Three Chief Ministers were changed in 5 years of BJP rule. Two chief Ministers and 8 Ministers were indicted by the Ombudsman (Lokpal) for participating and abetting communal violence and corruption. The then ruling party being a right wing one, gave an immense push to local organisations and fringe Hindutva elements, who committed violations of human rights without any fear of police action.

Intolerance in the name of Western civilisation was wide spread. Even in cities like Bengaluru, women were beaten up on camera for being in a pub or being with a boy on Valentine's Day. The most affected part was the prominence the previous government gave to mining in the name of industrial growth. But in reality it ended up allocating mines and minerals to big industry at a throw away price and shipping the oars to countries like China, while India's internal needs were not met by mining. Communal violence in the form of persecution of minorities and Dalits, disregarding rule of law, and encouraging conversion to Hinduism started in the rural areas. After the 2013 elections, the Congress Party came to power. There were major reshuffle in the government and bureaucracy.

Many laws which were disregarded by the BJP government earlier were re-established. Police, judiciary and Civil Society were given better platforms like implementation POA Act, SC/ST sub plan grants to local bodies, stricter and faster action in controlling crimes etc.

REDS believes that the present government in the state is favourable though the central government, which changed in the meanwhile is pro rich and anti-poor. Adijans, women and other marginalised groups are treated with less favourable policies by the centre. Since REDS works with Adijan people and organises them in a way that enhances their dignity, the friction at social level are imminent. The other level of fear is the co-option of Dalit youth into the Hindutva ideology. The withdrawal of funds by Cordaid and ICCO at this juncture, hurts the activities of Reds on the issue of Land Rights and the Adijan Movement. They squarely blame the donors for slowing down the pace of their work. "Dutch funding was involved more for its withdrawal than for its greater involvement with REDS". (Interview with Executive leadership) Their staff strength has reduced drastically.

At the same time REDS has been able to strategically find donors like Andheri Hilfe, Miserior, and Bread for the World to support their activities. It has also opened a company called 'Cosmic Rumble' which works as a revolving fund for the CDM project.

The most fruitful expansion beyond Karnataka for REDS has been through CERI and Land Rights movement allying with Ekta Parishad. While CERI has brought them to the fore of national map by attracting about 20 state organisations, the Land rights movement has found resonance in Ekta Parishad's wide network and reputation. The environment in Karnataka has also become favourable due to a progressive chief minister who happens to be from the OBC.

Report CDI-15-076

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Efforts to strengthen civil society	

1. Introduction

The paper evaluates the impact of an education program in three districts of Jharkhand in India. The objective of the program was increased access to relevant and quality education for marginalized children aged of 6 – 14 years. It also aimed to guarantee relevant vocational training for youngsters in the age group of 15 – 18 years. To achieve this objective, the program envisaged extending the existing curriculum to life-skills training and in skills that result in income generating activities. Teachers were to be trained and special courses organized on how to engage children with an educational disadvantage in the schools. Also, each village was to have a children's club and this was expected to improve and guard the quality of education that was being imparted.

The program had other objectives also but these could not be evaluated for a number of different reasons. (a) The program was implemented in a conflict zone by local NGOs who had credibility in these areas. It was, therefore, not possible for us, third party outsiders, to collect data on the ground for the entire area. (b) Given that there was no M&E framework built into the program design, it was impossible for us to get any information on certain outputs. It was also impossible for us to use the understanding gained from the areas we could go into in estimating possible impacts in regions we could not enter. With an M&E framework, we could have connected the MIS reports from the M&E framework to the evaluation results in the regions we could go into and use that relationship to estimate outcomes in the regions we could not go into.

Section 2 describes the context; section 3 describes the project and section 4 the survey design, descriptive statistics and the problems we faced with data collection. Section 5 gives our empirical results and section 6 discusses the implications. Our main finding is that with our evaluation design, we have positive results. However, the efficacy of the results have to be read along with the data caveats we mention in section 4. Section 7 concludes.

2. Context

Project D4 took place in Lohardaga, Latehar and Palamau districts of Jharkhand State, India. In 2000, Jharkhand, the twenty-eighth state of India had been carved out from the state of Bihar. This newly formed state has 79,714 sq. km. of area and is surrounded by Bihar in the North, Orissa in the South, West Bengal in the East and Madhya Pradesh in the West. It is situated at an altitude of approximately one thousand feet above the mean sea level. This state is very rich in its reserve of various natural resources, especially coal. Ranchi is its state capital. The state has a very rich population of different tribes, like Santhal, Oraon, Munda, Paharia, Kharia, Birhor, Ho and many more. Jharkhand has a population of 33 million, 28 percent of which are tribal peoples and 12 percent are scheduled castes.

Jharkhand was formed with 18 districts, which were formerly part of south Bihar. Presently, the state has 24 districts. Jharkhand is one of the thirteen states in which the Naxalite (Maoist) rebels have considerable influence. In 2007, a member of the national parliament was shot dead by Naxalite rebels in Jharkhand.

The majority of the population of Jharkhand is socio-economically deprived and falls well below the poverty line. Almost 80 per cent of Jharkhand's people are farmers. Although it contains 40 per cent of India's mineral reserves, it has some of India's poorest people. In 2009 the state was threatened by drought, with people criticizing the government for not providing food aid or assistance. The literacy rate in 2011 was 68 per cent. The literacy rates are even lower among scheduled castes and scheduled tribes, and is also lower for females (56 per cent in 2011). These low literacy rates (at least partly) reflect poor accessibility and quality of education at the primary level. Jharkhand has a network of government and privately run schools, although standards of teaching vary considerably from place to place, as also from school to school. Jharkhand has made primary education so accessible that 95 per cent of children aged 6–11 are enrolled in school, as opposed to 56 per cent in 1993–94, so this will likely improve literacy a lot over the coming years.

In certain areas of Jharkhand, poverty and consequent malnutrition have given rise to diseases like tuberculosis (TB). In fact, TB has assumed epidemic proportions in certain areas of the state.

3. Project description

The project initiators envisioned setting up an education program in the three districts to increase the access to relevant and quality education for marginalized children in the age group of 6 – 14 years. They also aimed to guarantee relevant vocational training for youngsters in the age group of 15 – 18 years. The existing curriculum was to be extended with life-skills training and in skills that result in income generating activities. Teachers were to be trained and special courses organized on how to engage children with an educational disadvantage in the schools. Also, each village was to have a children's club and this was expected to improve and guard the quality of education that was being imparted.

At the level of the community also activities that would impact the quality of learning were planned. The capacity of local organizations was strengthened to enable them to initiate changes in the educational policies at the local level and to participate in lobby activities for qualitatively better education. Finally, the community, its various councils, the parents, NGOs and local government were to be made aware of the importance of the availability of good and relevant education.

The final outcomes envisioned were:

- (a) Training of drop out children would lead to 80 per cent of the trained children either finding employment or starting their own business;
- (b) Formation of the SHGs would lead to 75 per cent of them (90 new SHGs) demanding relevant quality education from the education department and people's representatives; and
- (c) Workshops and meetings with stakeholders would lead to 75 per cent of the stakeholders addressing the issue of relevant quality education at the village level.

At the beginning, the project implementation was according to design. However, two things were not accounted for in the planning stage. First, when the local NGO entered the villages to implement the education project, it became apparent that a number of other issues (different from, but related to, education) also had to be resolved. Education could not be viewed as an

isolated activity. Children's needs needed to be viewed in the context of the family and the family's needs in the larger context of the community. Concomitant factors like child protection, care, health, development, and socioeconomic empowerment also needed to be considered. For marginalized children, educational mainstreaming together with protection, health care and socio-economic mainstreaming makes it more relevant and meaningful.

Second, teachers' striking work and Naxal activities were commonplace phenomena in the reporting period. The organizers of the project had good rapport with the target community and, hence, some of their adverse effects were mitigated but, due to the Naxal situation, government officials hesitated to visit the area. This kept the area isolated from the mainstream of development. Consequently, these had some impact on the implementation of the project.

The beneficiaries of the project included school going children; dropped out children; Bal Sabhas (children's clubs); child leaders; schools; self-help groups; village education committees; Gram Sabha (local government); traditional leaders and teachers. The beneficiaries were the same groups that had been targeted in the first phase of the project. The local NGO implementing the project (LGSS) ensured that various ratios that were planned were actually maintained. Thus, ratio of boys to total number of children was maintained at 0.48 (834/1734) while that of male teachers to total teachers was maintained at 0.76 (26/34).

The first phase of the project ran from May 2009 until April 2011 and was financed under MFS I with a total project budget of 136,000 Euros. The second phase of the project, which is financed under MFS II and which we are studying, was approved for the years 2011-2013 and was extended to 31 October 2014. For the first year (2011-12) MFS contributed 35,000 Euros and kept 20,000 Euros on the shelf (MFS – "op de plank"). For the second year (2012-2013), the project budget was 13,447 Euros. There was some local contribution as well but there were no records of this.

In terms of outputs,

- (a) 1280 drop-out youths were to be trained on soft and livelihood skills;
- (b) 120 new women Self Help Groups (SHGs) were to be formed; and
- (c) Village level advocacy workshops and meetings with stakeholders were to be organized in the 139 targeted villages.

4. Data collection

4.1 Description of the surveys

This project was implemented with the help of 7 cluster partner organizations ((LGSS, LEADS, BPYP, MSUS, MMKK, Vedic Society and SPARK) in 139 villages of three districts (Lohardaga, Latehar, Palamu) in the state of Jharkhand, India. Three of the 7 cluster partner organizations (LGSS, MMKK and SPARK) operated in 20 villages each in Lohardaga. LGSS's 20 villages are located in the "Sadar" Block; MMKK's 20 villages are located in the "Kuru" Block; and SPARK's 20 villages are also located in the "Kuru" Block. In the baseline survey of 2009, LGSS surveyed a total of 428 households in 20 villages of Lohardaga, MMKK surveyed a total of 309 households in 13 villages in Lohardaga (remaining 7 MMKK villages were not surveyed); and SPARK surveyed a total of 363 households in 20 villages of Lohardaga. Our own

2012 survey focused exclusively on the Lohardaga district as Palamu and Latehar districts were inaccessible for security reasons.

4.2 Sampling design and sample sizes

Observe that outcomes (b) and (c) (mentioned in the last paragraph section 3) were not measurable in outcomes though in terms of outputs they were. However, we were restricted to one district only for reasons explained in section 3. This created a problem for us as the outputs and outcomes were not described per district. In addition, there were more than one implementation partner in Lohardaga itself and it was not clear at all who was responsible for what. This forced us to design the evaluation in a way that will allow us to see the impact on the ultimate objective --- learning outcomes in children in villages where the program was carried out.

The evaluation method chosen was propensity score matching with difference-in-difference on the outcome variables (a) school attendance and (b) performance in tests. These methods were chosen because, given that the project had already started when we started our evaluation, a randomized controlled trial was not possible. There is a baseline survey that was done by the local NGOs but the interventions were not randomized and only households in the treatment villages were surveyed (no households in control villages). Our own October 2012 survey includes both treatment and control villages and we followed it up with an end-line survey in 2013. This allowed us a before/after comparison between matched control and treatment households. However, we do not have baseline data on control households but only in 2012 when the program was already under way.

Starting from the list of 1100 households (in the 60 villages) that were interviewed in 2009, we selected 450 of these households as “treatment” households. We did this in the following manner. We first randomly selected 10 of the 20 LGSS villages, 10 of the 13 MMKK villages and 10 of the 20 SPARK villages in Lohardaga that were surveyed in 2009. This gives us 30 “treatment” survey villages. Out of all households in all of these 30 villages that were interviewed in 2009, we randomly selected 450 households as “treatment” households to be interviewed as part of our 2012 survey.

In addition to the 450 “treatment” households, we selected a total of 225 control households in the following manner. We had received a list of 60 potential control villages: 20 to be used as control villages for the LGSS villages, 20 to be used as control villages for the MMKK villages, and 20 to be used as control villages for the SPARK villages. After eliminating the villages that are not included in the DISE1 dataset, we were left with 16 potential control villages for the LGSS villages, 17 potential control villages for the SPARK villages, and 19 potential control villages for the MMKK villages. Out of these 16, 17, and 19 potential control villages, we randomly selected 5, 5, and 5 control villages to be included in our 2012 survey. This gave us 15 control villages. In each village, we then randomly selected 15 households to be interviewed.

¹ The DISE data set is a census of the schools in a district.

In total we surveyed 45 villages. With a number of villages (“groups”) below 50, we run into a “grouped data” or “clustering” problem, i.e. each household is not an independent observation as all households within one village are certainly not independent of each other but depend on the common village characteristics, for example.

To assess the school attendance of children in the villages, we asked the survey team to return to the villages on a monthly basis to document attendance. So next to the “snap-shot” survey, we documented attendance every month for a total of 12 months.

The evaluation of the “vocational training” part of the Dahar (D4) project is particularly difficult because the vocational training has been targeted at those with high potential and so the selection is endogenous, making it difficult to establish a proper counterfactual. It is likely that high-potential candidates would have done better than others even in the absence of the vocational training, making it almost impossible to distinguish the progress that was due to the training from the progress that would have been made anyway.

4.3 Implication of power calculations

As stated in the data section, we were restricted to a sub-area of the entire project area as the project was being carried in the middle of a conflict zone. Also, our baseline was not a strict baseline as a prior phase of the project was already in existence when we did our first survey. Our power calculations were, therefore, conducted after the data were collected.

We have used three outcome variables:

- a. Average attendance (att_pc),
- b. Percentage of marks scored in the exam (pc_marks), and
- c. Score obtained in the math test (math_test_pc).

The power calculation being attempted is a *post hoc* or retrospective analysis and therefore, we have information on the sample means, standard deviations, and more importantly, whether the differences between the treatment and control units can be attributed to the programme or not. We will use this information and answer the following question:

Whether there was enough power to test hypotheses based on the outcome variables listed above?

Also note that the analysis followed a matching procedure which resulted in attrition to the sample size. Further, we know that in the matched sample, there is no significant difference in all the variables. It is only for the difference in difference estimate for attendance that we found positive impacts.

Algorithm:

In what follows, we follow a common algorithm. We will assume no cluster effects.

Step-1: We take the baseline means for att_pc, pc_marks and math_test_pc . The means and standard deviations are given below.

Comparison group	att_pc_b	pc_marks_b	math_test_b
Control Group	69.5	26.79	11.04
	12.13	4.91	8.98
Treatment Group	65.56	26.07	11.49
	13.92	6.37	9.98

Step-2: We calculate the power for different hypothetical magnitudes of differences between control group mean and treatment group mean. .

The actual sample size after matching (baseline) is given in the table below.

Status	Sample Size
Control	135
Treatment	257
Total	392

In the exercise below, we assume a hypothesis of equality of means with different standard deviations against a two-sided alternative.

$$H_0: \mu_0 = \mu_1, \text{ where } \mu_0 = \text{mean for control group}, \mu_1 = \text{mean of treatment group}$$

$$H_1: \mu_0 \neq \mu_1$$

Attendance:

We take the look at the most conservative scenario below. Here alpha is the type-1 error, N1 is the control group sample size and N2 is the treatment group sample size. "delta" gives the standardised effect size. m1 and m2 give the control and treatment means," diff" gives the difference in means, sd1 is the standard deviation for the control group and sd2 gives the standard deviation for the treatment group. The means and the standard deviations were plugged in from the data we have.

alpha	power	N	N1	N2	delta	m1	m2	diff	sd1	sd2
.05	.1137	392	135	257	.7364	69.5	70.5	1	12.13	13.92
.05	.3118	392	135	257	1.473	69.5	71.5	2	12.13	13.92
.05	.5958	392	135	257	2.209	69.5	72.5	3	12.13	13.92
.05	.8356	392	135	257	2.946	69.5	73.5	4	12.13	13.92
.05	.9564	392	135	257	3.682	69.5	74.5	5	12.13	13.92

For impacts of magnitude 4 (difference in means) or above, we do have enough power (>83%).

Exam Scores:

alpha	power	N	N1	N2	delta	m1	m2	diff	sd1	sd2
-------	-------	---	----	----	-------	----	----	------	-----	-----

0.05	0.4049	392	135	257	1.724	26.58	27.58	1	4.91	6.37
0.05	0.9303	392	135	257	3.448	26.58	28.58	2	4.91	6.37
0.05	0.9993	392	135	257	5.172	26.58	29.58	3	4.91	6.37
0.05	1	392	135	257	6.896	26.58	30.58	4	4.91	6.37
0.05	1	392	135	257	8.62	26.58	31.58	5	4.91	6.37

It can be seen that for impacts of magnitude 2 or above, we have enough power. But, this also corresponds to a standardised effect size (delta) of 3.44. A standardised effect size of 3.44 is a large impact. So, if the treatment resulted in smaller impacts in exam scores, our sample size corresponds to a power in the region of 40%.

Mathematics test scores

For the hypothesis mathematical test scores, we seem to have enough power if effect size (delta) is 3 or higher.

alpha	power	N	N1	N2	delta	m1	m2	diff	sd1	sd2
0.05	0.1713	392	135	257	1.008	11.04	12.04	1	8.97	9.98
0.05	0.5201	392	135	257	2.017	11.04	13.04	2	8.97	9.98
0.05	0.8543	392	135	257	3.025	11.04	14.04	3	8.97	9.98
0.05	0.9803	392	135	257	4.033	11.04	15.04	4	8.97	9.98
0.05	0.9989	392	135	257	5.042	11.04	16.04	5	8.97	9.98

4.4 Attrition to follow-up

Please see section 4.3

4.5 Other data problems

One big data issue that came up during the second survey was missing observations. For our evaluation we conducted learning outcome tests on the children who went through the project and those who did not. In the second survey, we were unable to conduct all the tests on all the children because of the volatile situation in the district.

4.6 Availability of financial data

Audited accounts were made available to us on the second phase of the project. This data was meticulously itemized according to the project activities and the corresponding amounts. This was done for all the partner groups separately and there were 8 of them one of which was the lead. One of the documents given was an auditor's report and a utilization certificate that certified the use of funds in accordance with the plan.

4.7 Descriptive analysis

The outcome data will be described in the next section as part of the analysis. In the Annexure an extensive overview of all the control variables is given for the control and treatment group, separated between baseline and endline.

5. Analyses and results

We have tried to measure the impact of D4 programme along 3 variables as given below. The hypothesis is that D4 will affect attendance and educational attainment of the participants positively. For this purpose, we will be utilising 3 outcome variables whose definitions are given below.

Variable Description	Connected hypothesis	In short
1. Average Attendance (Calculated as average over monthly attendance percentages. Monthly attendance percentage is the percent of days a participant is coming to school out of the number of working days in the month.)	Average attendance has increased because of programme D4	a. End line: att_pc_e b. Baseline: att_pc_b
2. Percentage of Marks scored in the last exam conducted by the schools	% of marks has increased because of programme D4	a. End line: pc_marks_e b. Baseline: pc_marks_b
3. Percentage of correct answers in the mathematics test conducted during the baseline and the end line	% of correct answers in the test has increased because of programme D4	a. Endline: math_test_pc_e b. Baseline: math_test_pc_b

Methodology and Results

Two exercises were conducted to combine double difference with matching. The details are given below.

Exercise-1

In the first exercise, we used a nearest neighbourhood algorithm. The distance metric utilised will be Mahalanobis distance.²

² The algorithm used was the default algorithm implemented in STATA command *teffects nnmatch*

Step-1: Take the baseline covariates that are exogenous to the treatment and perform the matching exercise. This process provides treatment and control observations that are closely matched to each other.

Step-2: Drop all observations that are not matched. This gives us a reduced baseline dataset.

Step-3: Locate end-line outcomes for the reduced dataset.

Step-4: Impacts at End-line: Calculate the impact of the programme (i.e. average treatment effect for treated or ATT) for the end-line outcomes (only) as a difference of averages of outcomes between treatment and control groups.

Step-5: Difference in Difference Impacts: Calculate the first differences as $\Delta_t = y_{1t} - y_{0t}$, where Δ refers to change, y refers to outcomes and the subscripts, $t, 1$ & 0 , refer to treatment status, end-line identifier and baseline identifier respectively. From the first differences, the ATT is calculated as:

$$ATT = Average(\Delta_{treatment}) - Average(\Delta_{control})$$

The table given below captures the results.

Indicator	ATT	z-value [#]
Attendance (End line)	0.98	1.37
Attendance Change (Endline-Baseline)	5.79	2.51*
Percentage of marks scored (End line)	-0.94	-0.95
Change in percentage of marks scored (Endline-Baseline)	-0.78	-0.58
Math test score (End line)	2.51	1.36
Change in math test score (Endline-Baseline)	4.27	1.6

*: Significance at 1%; #: The z-values were calculated using Abadie-Imbens (2012) standard errors

Exercise-2

A double difference estimation of average treatment effect was also implemented using a regression method to see if the results hold. The method combined propensity score matching with double differences. The algorithm followed was:

1. A PSM (nearest neighbourhood one-one match with replacement) routine was implemented on the baseline.³
2. All observations that were matched and were within the common support (i.e. [.17493, .9713]) were retained. This truncated baseline contained only the matched treatment-control cases.
3. The matched treatment-control cases were located in the end-line data and a panel was created.

The sample-size after matching is given below:

	Baseline	End-line	Total
Control	81	81	162
Treatment	257	257	514
Total	338	338	676

Note: Since the matching was with replacement, more than one control case was matched to some treatment cases. The weights were retained to be used in the regression below as frequency weights.

4. A regression with the following general specification was estimated under OLS.

$$\mathbf{Outcome}_{it} = \beta_0 + \beta_{Time}Time_t + \beta_{Treat}Treat_i + \beta_{dd}Time_t * Treat_i + \beta_{control}Control_{it} + \epsilon_{it},$$

In the equation above, the variables are defined as

- Outcome= attendance or marks obtained
- Time=time dummy (baseline=0; end-line=1)
- Treat=treatment identifier (treatment=1; control=0)
- Time*Treat=Interaction of time and treatment
- Control=control variables

Note that β_{dd} is the coefficient of interest and captures the double difference estimate of the impact of the programme on the outcome. The results are captured in the table below. One can see that the double difference estimation after propensity score matching using regression methods provide results in the line of the results reported earlier. The main results are:

- In all cases the change from baseline to end-line (i.e. change over time) is significant.
- The interaction term between time and treatment (i.e. the double difference estimate of the impact) is significant only for attendance.
- The result holds even after a host of controls were used.

³ We used PSMATCH2 (default set up) in STATA. This performs a nearest neighbourhood matching on estimated propensity scores. The procedure matches each treatment household to a specific control household with replacement. That is, it allows for the same control household to be matched to multiple treatment households.

VARIABLES	(1)	(2)	(3)	(4)	(5)	(6)
	att_pc	att_pc	pc_marks	pc_marks	math_test_pc	math_test_pc
time dummy	9.801*** (1.118)	10.09*** (1.312)	-8.373*** (0.616)	-8.539*** (0.715)	8.894*** (1.348)	9.059*** (1.425)
treatment dummy	-3.333*** (0.962)	-2.901*** (0.988)	-0.252 (0.545)	-0.441 (0.560)	0.783 (1.349)	1.425 (1.306)

6. Discussion

The project was well designed and, given the interventions planned through community participation, it should have made a difference. The region chosen being a conflict zone, some allowances, however, should have been made to innovate on the ground. Since there was no continual monitoring and evaluation (M&E) framework for capturing data (especially outputs), the fact that we could not visit some of the districts keeps us blind about how the program fared there. Creating an M&E framework along with the project design should be essential for all future projects. It is important to understand that the M&E framework is not to evaluate outcomes but to continually learn about what is happening on the ground, where one needs to innovate and what experiments to try to bring sagging programs back on track. For instance, we calculated attendance each month rather than wait for the end-line survey only and the very fact that this data was being collected resulted in greater attendance in schools. Obviously, a large part of this was due to the implementers working towards better attendance especially in schools and areas where attendance was flagging. Not surprisingly, this resulted in better learning outcomes as the end-line evaluation suggests.

This leaves us with commenting on the efficiency of the program. Recall that we could go into some regions only but found that the targets were more or less met in the places that we visited. The only problem was that there was some selection bias in the skilling of school dropouts. However, when we come to the total cost and the number of children affected by the program the range is between USD 1.56 and USD 2.15 making it favourably comparable to bench mark figures provided by the synthesis team.

7. Conclusion

The three specific evaluation questions were:

- (a) Did the program improve school attendance?
- (b) Did the language learning outcome improve?
- (c) Did the mathematics learning outcome improve?

Subject to certain data caveats referred to in the body of the report, we can say that the program did have positive results.

On a scale of 1 to 10, with 1 being “not at all” and 10 being “completely”, for this project, how much do you agree with the following statements?

Question	Point
The project was well designed	8 (No M&E framework)
The project was implemented as designed	6 (Program was in a conflict zone)
The project reached all its objectives	8 (For the measurable objectives only)
The observed results are attributable to the project interventions	7
The observed results are relevant to the project beneficiaries	10
The project was implemented efficiently	Do not know

Final Report MFS II Joint Evaluations

Country	India
Consortium	ICCO Alliance
Responsible Dutch NGO	ICCO
Project (if applicable)	VBN Poultry Coalition
Southern partner organisation	Pradan

The project/partner is part of the sample for the following evaluation component(s):

	X
Achievement of MDGs and themes	X
Capacity development of Southern partner organisations	
Efforts to strengthen civil society	

1. Introduction

This report presents the findings of the evaluation of a project funded and supported by ICCO and implemented by the VBN Poultry Coalition in rural areas of Jharkhand, India. The project was initiated to alleviate the poverty of women and also empower them by engaging them in small scale poultry farming. We begin the report by describing the context of the project. This is followed by a description of the data collection and analyses and results. The final section contains a discussion and concluding remarks. We find that the VBN project achieved two out of the three outcomes that were outlined in the initial project description. The third outcome which was of an increase in income was based on our results only partially achieved. Our results are based on a baseline survey only, as due to safety issues we were unable to conduct an endline survey.

2. Context

In 2000, Jharkhand, the twenty-eighth state of India was carved out from the state of Bihar. This newly formed state has 79714 sq. km. of area and is surrounded by Bihar in the North, Orissa in the South, West Bengal in the East and Madhya Pradesh in the West. This state is very rich in its reserves of various natural resources, especially coal. Jharkhand was formed with 18 districts, which were formerly part of south Bihar. Presently, the state has 24 districts. Jharkhand is one of the thirteen states in which the Naxalite (Maoist) rebels have considerable influence. The majority of the population of Jharkhand is socio-economically deprived and falls well below the poverty line. Although it contains 40 per cent of India's mineral reserves, it has some of India's poorest people. Jharkhand also lags behind in education with a 67.3 per cent literacy rate compared to the national average at 74.04 per cent. The literacy rates are even lower among scheduled castes and scheduled tribes, and are also lower for females (56 per cent in 2011). Jharkhand has 32 tribes, and among them eight are under the PGT (Primitive Tribe Groups) classification. The tribal population account for 26.3 per cent of the state's population of 33 million and the scheduled castes are 12 per cent.

The struggle for the formation of the state, in fact, dates back to India's pre-independence era. Adivasis (which means tribals but literally means 'the first inhabitants') of the region had

resisted British rule, as well as that of the landlords. The first ever struggle for the liberation of the adivasis was led by Tilka Manjhi in 1789, it was the result of a revolt against the exploitation of native resources. Later, Birsa Munda (1875-1900) led the struggle against British efforts at transforming the region's agrarian system from a tribal to a feudal one.

The tribal system of agriculture grew around small communities led by their chiefs; these groups practiced subsistence agriculture, often shifting agriculture, and the control over resources was shared by all the members in a group. Interactions within tribal communities were at this time not hierarchical and are still not. As opposed to this, the feudal agrarian system introduced by the British was based on marked differences in property, income, power and prestige among members of the community, with a minority of people known as feudal lords and rent seekers controlling resources. Even today, control over natural resources, protection of tribal culture and more autonomy for tribals still remain issues of struggle in Jharkhand.

Apart from these issues, Jharkhand faces many other challenges. Politically, Jharkhand has seen tumultuous times. The last ten years have seen the state go through nine coalition governments, two spells of President Rule, and the scam tainted tenure of Madhu Koda (the state's chief minister between 2006 and 2010) who is currently serving a jail term for disproportionate accumulation of assets against known source of income.

Poverty is the starkest of Jharkhand's problems. Even though the Planning Commission data earlier this year has been criticised for undercounting the nation's poor, it still shows Jharkhand's performance at poverty alleviation as dismal compared to states like Odisha, Tamil Nadu and Uttarakhand. The Commission suggests that the number of poor in Jharkhand dipped by only 6.2 per cent between 2004-05 and 2009-10: and this dip only in the rural regions by 10 per cent to log 41.60 per cent from 51.60 per cent, while its urban areas saw poverty levels rising to 31.10 per cent from 23.80 per cent.

One of the main reasons for the region's abject poverty is the large number of people engaged in agriculture despite the fact that most of its terrain is not conducive to agriculture. Ironically, as per the Planning Commission Report of 2011-12, this state, which is so rich in minerals, only employs 2.25 per cent of its people in its mining related workforce, and 9.8 per cent in its manufacturing sector, compared to 60 per cent in agriculture.

Even the available cultivable land, that is anyway only 47.6 per cent, is under-utilized, with the net sown area only a 29.63 per cent of it. Consecutive droughts and failures to implement irrigation schemes have adversely impacted the livelihood situation even more. In such a situation, livelihoods can only be protected through sustainable agriculture practices such as those implementing water management strategies or through alternative sustainable livelihood options such as small scale poultry farming.

Pradan, the SPO who initiated the VBN poultry project, specifically wanted to start a project in which women could be empowered and also alleviate poverty. In addition, increasing prosperity in cities has resulted in an increase in the demand for chicken. Small scale poultry farming is a suitable activity for rural women with very little land as the amount of land needed for this activity is very little. Pradan already has been working on community development, and the existence of self-help groups (SHGs) facilitates the progression of women into small scale poultry farmers. Pradan has also been working on the infrastructure and allied services needed for small scale poultry farming to be successful and sustainable by arranging a feed mill (so feed supply is reliable), ensuring the health of chickens by arranging access to veterinarians, and working on brand development (the brand "Fresco" chicken, which is marketed in cities and nearby towns in special shops).

3. Project description

a. Project duration and budget

The project was initiated in December 2009 and it is a follow-up of an earlier project. ICCO has a long association with Pradan (since 1985), the SPO associated with this project. This is a continuation of the project funded under MFS-I. VBN is based in Jharkhand and Orissa and is in fact a network of 16 partner NGOs. VBN serves as an administrative clearing house for the 16 NGOs (of which Pradhan is also member and

assists in administration). Since VBN is not yet a legal entity, Pradan serves as the channel for funds transfer from ICCO to the 16 partner NGOs.

ICCO funding for this project was supposed to end in September 2011 but was then extended until March 2012 and institutional support was extended till 2013. From this network of 16 partners associated with VBN only 7 partners are part of the poultry value chain development. The total budget of the project was EUR 230,629 and the amount funded by MFS II was EUR 111,486. The remaining part of the budget EUR 119,143 was funded by local government and other parties.

Project objectives, activities, theory of change

The VBN Poultry Project aimed to improve livelihood options and alleviate the poverty of women by introducing them to small scale poultry farming. More specifically, the project aimed to introduce 1030 women to poultry farming in order to enhance their income by 10,000- 15,000 INR per year. The project also aimed to build 70 sheds for poultry farming. A secondary goal is that seven member organizations would be engaged in poultry value chain development work to take it to a higher level.

The inputs for this project are financial resources from ICCO which are used towards institutional support. VBN engages in a number of activities. Among others, the actions envisaged were trainings given to women to teach them to become poultry farmers, construction of sheds to house poultry, veterinary support, organizing the women poultry farmers into cooperatives, brand promotion for chicken produced by the poultry farmers. In addition, the project also aimed at the development of a coalition on broiler poultry farming so that members can collaborate with each other on technical expertise.

Stylized result chain

Input:

Financial resources from ICCO which are used for institutional support.

Activities:

Among others, the actions envisaged were trainings given to women to teach them to become poultry farmers, construction of sheds to house poultry, veterinary support, organizing the women poultry farmers into cooperatives, brand promotion for chicken produced by the poultry farmers. In addition, the project aimed at the development of a coalition on broiler poultry farming so that members can collaborate with each other on technical expertise.

Output:

At the end of the project, 1030 women poultry farmers would be organized into 10 structured cooperatives. There would be 70 new sheds constructed for housing poultry. Income would be enhanced by 10,000- 15,000 INR per year.

Impact/outcomes:

Through this output, the final outcome of poverty alleviation would be achieved as the women would be trained in small scale poultry farming and through the sale of their poultry would be able to achieve additional income. The brand promotion activities are designed to foster the profitable sales of chicken.

4. Data Collection

a. Household Survey

Given that one of the aims of the project is that women experience an increase in income through raising poultry, we have tried to identify the effect of the project intervention on socio-economic well-being by measuring socio-economic indicators from a household survey administered in 2012. The region where the project was implemented was plagued by Naxalite activity. Even the collection of the baseline data was extremely challenging and the surveyors at a certain point refused to visit certain areas for risk of their lives. For this reason, we were not able to do an endline survey. The decision to not do an endline survey was approved by the Synthesis team and WOTRO.

The main focus of the evaluation is on measuring the differences in income between treatment and control groups as a result of participating in this program. To this end, we compare household-level outcomes in treatment and control households in 2012. Since

measuring income is fraught with measurement issue problems in this setting and there is very little saving, we instead measure monthly household consumption.

b. Field Visits

To obtain a better understanding of the context of the project, and to obtain qualitative data, we also visited project offices and made field visits. We first visited the local ICCO representative and the VBN office in New Delhi where we interacted with project staff and received a presentation describing the project. There was a later visit and discussion meeting to the local Pradan office where the head of VBN, Ms. Bala Devi and other partners of VBN such as NEEDS, LOKPRERNA, AGARGATI, TSRD, RDA and were also present. We also had a meeting with the ex-CEO of the poultry federation Mr. Pawan Ojha in which a presentation was made on the poultry value chain, the number of members in the federation, output figures, sales etc. We were also able to view the usage of database software which records accounting information on the production of chicks by the members.

We visited the village Tikko Pokhra Toli in the Kuru block of Lohardaga District where activities relating to this project were taking place. We interacted with women engaged in poultry production (poultry producers). We found that one of the motivations for participation is that mothers wish to supplement income to pay for children's education. All the members we interacted with had joined the associated self-help group (SHG) around 8 years ago which also gives credit in emergency situations.

All the women poultry farmers maintain record keeping. They each have a producer book having details of the vaccination schedule, feed, weight etc., which is filled by the supervisor who visits poultry producers in about 3-4 villages nearby. Given that the women are functionally literate, they vaccinate the chicks themselves. The mortality rate is marked by producers by marking lines on the wall for counting the number of chicks that die on a particular day. This is then recorded in the producer book at the time of the supervisor's visit to the producer. Producers typically raise about 300 chicks but this has been increased to 400-500 chicks in newer areas. We received documentation about the project during our visits to the project offices. Regarding financial data, detailed financial information is provided in the

annual reports of Pradan (the SPO) for the last 10 years which are downloadable from the website of Pradan.

c. Sampling Design

The sample decided by the project implementation team for this project was a total of 300 observations. Given this total sample size, we planned for a balanced split between controls and treatment (150 controls and 150 treatments). The survey collected a range of information on socio-economic characteristics and demographic structure of households. VBN Poultry had lists of all members of self-help groups associated with the SPO Pradan and among these also those who were beneficiaries of the project. From the list of beneficiaries, we randomly selected 75 beneficiaries for our sample for the treatment group from Gumla district. In a similar way, we selected 75 beneficiaries from Bokaro district (this was eventually reduced to 73 and 74). This was because there were not enough beneficiaries to sample from a single district. We also used the database of members of self-help groups associated with the SPO Pradan to select a control group. These were women who were not engaged in poultry farming. Similar to the selection of beneficiaries, we selected our sample for the control group by randomly selecting 125 from Gumla district and an additional 25 from Bokaro district due to shortfall of sufficient controls from Gumla district (we were able to sample an additional 3 controls making the total number of control group members from Bokaro a total of 28). To summarize:

Treatment groups

We divided the treatment group into two groups based on district.

1. 73 female poultry producers from Gumla district.
2. 74 female poultry producers from Bokaro district.

Control group

125 women who do not participate in poultry farming from Gumla district and 28 women who do not participate in poultry farming from Bokaro district.

d. Descriptive Analysis of Key Variables

We now briefly describe some features of the socio-demographic characteristics collected in the household survey and differences between the control and treatment groups. Regarding religion, we find that treatment group poultry producers are more likely to be Hindu while the control group is more likely to follow one of the tribal religions prevalent in this region.

Almost all households in both treatment and control groups own their homes and live in ‘pucca’ homes (solid/concrete constructed homes). Similarly, along other characteristics relating to the household there is no statistical difference between control and treatment groups. Both groups are most likely to use firewood and chips as the primary source of energy for cooking. The main source of energy for lighting is kerosene lamp with 68% of the respondents stating this to be the main energy source for lighting. However, 30% report electricity as the main source of lighting. There is no statistical difference between control and treatment groups in this regard. Similarly, most households both in the control and treatment groups report using a hand pump to access water and use open defecation.

Those in the treatment group are much more likely to have a bank account and are much more likely to have taken out a loan. In most cases, the reason for taking out the loan is to expand their business. The most common source for this loan is the self-help group, and in some cases a bank. Control group families are much less likely to have taken out a loan. The total amount of outstanding loans taken out by a treatment group household is Rs. 10,493.98 while this is Rs. 7,673.65 for a control group household (and is statistically significantly higher for the treatment group). Treatment group households and control group households do not differ in terms of their average monthly savings or average monthly expenditures.

We now present some descriptive statistics on our main outcome variable.

Table 1a. Summary Statistics on Monthly Consumption across Treatment and Control Groups measured at the time of the Baseline Survey

Treatment	Definition (Monthly Household	Sample size	Mean
------------------	--------------------------------------	--------------------	-------------

and control groups	Consumption)		(std. dev) in Rs.
Treatment Group	Poultry Producers	147	5824.60 (2536.70)
Control Group	Women not engaged in Poultry Farming	153	5269.87 (2330.38)

Table 1b. Summary Statistics on Monthly Consumption across Treatment and Control and District measured at the time of the Baseline Survey

Treatment groups	Definition (Monthly Household Consumption)	Sample size	Mean (std. dev) in Rs.
Treatment Group	Poultry Producers in Bokaro District	74	5622.37 (2617.51)
Treatment Group	Poultry Producers in Gumla District	71	6035.37 (2450.33)

Treatment groups	Definition (Monthly Household Consumption)	Sample size	Mean (std. dev) in Rs.
Treatment Group	Women not engaged in Poultry Farming in Bokaro District	28	5039.75 (2538.06)
Treatment Group	Women not engaged in Poultry Farming in Gumla District	128	5321.83 (2536.05)

Based on the tables, we note that treatment group households have on average Rs. 554.73 more in terms of average monthly consumption than control group households. This difference is statistically significant. Although based on the data, it appears that households in Gumla district have greater monthly consumption on average than households in Bokaro district, the differences are not statistically significant (this is the case even when we compare treatment and control groups within a district).

5. Analyses and Results

Given that we do not have endline data for this project, our empirical strategy has been to compare the treatment and control group households using the baseline data. We estimated a variety of regression models with average monthly consumption as the dependent variable and various subsets of the independent variables grouped by context. A subset of these results is given in the Appendix. Results for religion are omitted as they were statistically insignificant. Overall from the results we can conclude that average total consumption is affected by household size and by membership in the treatment group. The results are similar to the univariate results presented above. However, when we estimated a parsimonious regression model in which we included a subset of regressors corresponding to the different contexts, we found that the effect of the treatment group was no longer statistically significant. The only variable that is statistically significant in this case is household size. Larger households have larger monthly consumption. Therefore, in the presence of household size, the effect of the treatment group (or participating in the poultry project) does not have a significant effect on income. Across the models, the difference in average monthly consumption between treatment group households and control group households ranged from Rs. 500- Rs 350 per month. This translates into an annual difference of Rs. 6000 to Rs. 4200. This is lower than the outcome that the project had aimed for which is Rs. 10,000 to Rs. 15,000 a year. However, our measure is based on a single point in time. Based on literature on small scale sustainable farming, we know that the gains to participating in such activities may take some time to appear. Based on our baseline data, it appears that the households did not gain as much in terms of income from participating in the poultry project.

These findings are of course based only on the baseline data, and we do not have in this case the richness of an endline survey. We are also not able to say very much about the long term effects of participating in the project which may well be positive.

Efficiency of the Project

To assess the efficiency of the project, we use the benchmarks provided by the Synthesis Team (AIID, 2014) which are based on the studies of Tearfund (2013), Isern (2007) and Harper (2002). The estimated costs of such intervention based on these studies range from USD 105 to USD 1670 (based on studies on lending and empowering communities). We

apply the efficiency calculation to one of the outputs of the project which was to have 1030 women who would then participate in SHGs/cooperative and be trained in poultry farming. The MFS-II funding was EUR 111,486. This implies a cost of EUR 108.24 per woman in terms of assistance in becoming a member of an SHG/cooperative, training in poultry farming etc. The total budget for the project was EUR 230,629 as the project received funding from other sources as well. If we take this to be total budget for the project, we find the cost to then be EUR 223.91. In both cases, these values are well within the ranges based on the studies of Tearfund (2013), Isern (2007) and Harper (2002). They are on the low end of the range of the estimates from past studies. By these measures, the interventions to organize women into SHGs and train them in poultry farming can be deemed efficient.

The other outcome of the project was to build 70 sheds for poultry farming. During our field visit, we were told in fact that in fact 86 sheds were built. According to the benchmarks provided in the report of the Synthesis Team which are based on a report from the Ministry of Rural Development based on the construction of sheds for poultry in Lohardaga district (a neighbouring district to the ones from which we sampled our treatment and control groups), the costs of building such sheds is about USD 1937 for a 300 square feet shed (USD 6.50 per square feet). If we calculate the cost of such sheds based on the entire MFS II budget, we obtain a cost of building a shed to be EUR 1296.35. Applying the average annual exchange rate between the euro and the US dollar for 2012, we obtain USD 1507.38 which is below the benchmark of USD 1937.

From these calculations for both the organization of women into SHGs/cooperatives and training of women in poultry farming and the construction of sheds for poultry, we can infer that the project is efficient.

6. Discussion and Conclusion

In this paper, we have assessed the impact of the poultry value chain project of VBN funded by MFS II (through ICCO). The project had three outputs. It has achieved two of the outputs of building sheds for poultry and organizing women into SHGs/cooperatives and training them in poultry farming. Regarding the outcome of improving income, we were not able to discern this from our analysis of the baseline data. From our baseline data, it appears that the

gain in income is lower than the goal set by the project. This is to some extent also corroborated by qualitative data based on interviews with poultry farmers who told us that although they gained income, they also had more expenditures as a result of the project (due to illness of chicks etc.). We have seen from our baseline data that the treatment group is far more likely to have taken out a loan to expand their business, implying that participating in the poultry project involves financial investments by the participating women. This could also be a reason why the households reported lower than expected consumption as we assume that some of the income they earn is re-invested in the business via loan repayment.

Based mainly on the qualitative evidence based on our fieldwork, it is our conclusion that the project is well-designed and suitable for the environment in which it is being implemented. We are not able to assess the design of the project from the household survey. Poultry farming of this nature is well-suited to Jharkhand where most of the potential beneficiaries of this project own very little land. Poultry farming requires far less land usage than agricultural crops. Also, the climate in Jharkhand is prone to unpredictable rains and poultry farming is affected less by weather and rainfall than agricultural crops. Given changing diets in India and the increasing demand for poultry meat, a project such as this is a way to meet this demand in a small scale way which is also more sustainable than factory farming which we see in developed countries and see also as a growing trend in India (Kanchana and Yesodha Devi 2009, Jothilakshmi et. al. 2011). Women are introduced to poultry farming through experiencing it through their peers. Women also experience empowerment and participate in local governmental bodies such as gram panchayats.

We were of course hampered by the lack of an endline survey and for this reason are not able to expand on our findings from this study.

Regarding improvements to the impact evaluation, we were severely constrained by safety issues in the survey area. We realize that this is not an issue that can be anticipated but it this would be an issue to which we need to pay attention to in terms of future evaluations. Based on our findings, we assign the scores below.

The project was well-designed 10

The project was implemented as designed 10

The project reached all its objectives 7

The observed results are attributable to the project interventions 5

The observed results are relevant to the project beneficiaries 7

The project was implemented efficiently 10

Note that the score on “The observed results are attributable to the project interventions” reflects how well we could evaluate the program. Therefore, it is not a score of the program. The objectives used to score on this aspect are given in the country summary.

Kusters, C., Mohapatra, B.P., Sethi, S., Buizer, N.N., Das, A., Bhatra R. W., Sen P., 2014. *Endline report – India, NEDSSS MFS II country evaluations; Capacity of Southern Partner Organisations (5C) component*. Centre for Development Innovation, Wageningen UR (University & Research centre). Report CDI-15-020. Wageningen.

This report presents the findings of the endline of the evaluation of the organisational capacity component of the MFS II country evaluations. The focus of this report is India, NEDSSS. The format is based on the requirements by the synthesis team and NWO/WOTRO. The endline was carried out in 2014. The baseline was carried out in May 2013.

Key words: 5C (five core capabilities); attribution; baseline; causal map; change; CFA (Co-financing Organisation) endline; organisational capacity development; SPO (Southern Partner Organisation).

Acknowledgements

We are grateful to all the people that have contributed to this report. We particularly would like to thank the Southern Partner Organisation North East Diocesan Social Service Society (NEDSSS), and the Co-Financing Agency Cordaid for their endless patience and support during this challenging task of collecting the endline data. We hope that this endline report will provide useful insights to NEDSSS, Cordaid, the synthesis team, IOB and NWO/Wotro.

1 Introduction & summary

1.1 Purpose and outline of the report

The Netherlands has a long tradition of public support for civil bi-lateral development cooperation, going back to the 1960s. The Co-Financing System (*Medefinancieringsstelsel*, or 'MFS') is its most recent expression. MFS II is the 2011-2015 grant framework for Co-Financing Agencies (CFAs), which is directed at achieving a sustainable reduction in poverty. A total of 20 consortia of Dutch CFAs have been awarded €1.9 billion in MFS II grants by the Dutch Ministry of Foreign Affairs (MoFA).

The overall aim of MFS II is to help strengthen civil society in the South as a building block for structural poverty reduction. CFAs receiving MFS II funding work through strategic partnerships with Southern Partner Organisations.

The MFS II framework stipulates that each consortium is required to carry out independent external evaluations to be able to make valid, evaluative statements about the effective use of the available funding. On behalf of Dutch consortia receiving MFS II funding, NWO-WOTRO has issued three calls for proposals. Call deals with joint MFS II evaluations of development interventions at country level. Evaluations must comprise a baseline assessment in 2012 and a follow-up assessment in 2014 and should be arranged according to three categories of priority result areas as defined by MoFA:

Achievement of Millennium Development Goals (MDGs) & themes;

Capacity development of Southern partner organisations (SPO) (5 c study);

Efforts to strengthen civil society.

This report focuses on the assessment of capacity development of southern partner organisations. This evaluation of the organisational capacity development of the SPOs is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

The purpose of this report is to provide endline information on one of the SPOs involved in the evaluation: NEDSSS in India. The baseline report is described in a separate document.

Chapter 2 describes general information about the Southern Partner Organisation (SPO). Here you can find general information about the SPO, the context in which the SPO operates, contracting details and background to the SPO. In chapter 3 a brief overview of the methodological approach is described. You can find a more detailed description of the methodological approach in appendix 1. Chapter 4 describes the results of the 5c endline study. It provides an overview of capacity development interventions of the SPO that have been supported by MFS II. It also describes what changes in organisational capacity have taken place since the baseline and why (evaluation question is 1 and 4). This is described as a summary of the indicators per capability as well as a general causal map that provides an overview of the key organisational capacity changes since the baseline, as experienced by the SPO. The complete overview of descriptions per indicator, and how these have changed since the baseline is described in appendix 3. The complete visual and narrative for the key organisational capacity changes that have taken place since the baseline according to the SPO staff present at the endline workshop is presented in appendix 4.

Chapter 5 presents a discussion on the findings and methodology and a conclusion on the different evaluation questions.

The overall methodology for the endline study of capacity of southern partner organisations is coordinated between the 8 countries: Bangladesh (Centre for Development Studies, University of Bath; INTRAC); DRC (Disaster Studies, Wageningen UR); Ethiopia (CDI, Wageningen UR); India (CDI, Wageningen UR; Indonesia (CDI, Wageningen UR); Liberia (CDI, Wageningen UR); Pakistan (IDS; MetaMeta); Uganda (ETC). Specific methodological variations to the approach carried out per country where CDI is involved are also described in this document.

This report is sent to the Co-Financing Agency (CFA) and the Southern Partner Organisation (SPO) for correcting factual errors and for final validation of the report.

1.2 Brief summary of analysis and findings

Over the last year and four months NEDSSS has very slightly improved in its capability to act and commit. Important improvements have been that the leader is more responsive and provides more strategic guidance, financial incentives for staff increased very slightly, the funding situation improved and staff improved in their proposal writing capacity. In the capability to adapt and self-renew NEDSSS also improved very slightly. This was mainly due to solid M&E application in the Cordaid project and improved M&E input from now trained partners, more critical reflection and NEDSSS being more responsive to non-church stakeholders. NEDSSS showed a very minor improvement in the capability to deliver on development objectives, as through NEDSSS' direct project implementation they know better if services meet beneficiaries' needs and balancing quality and efficiency also improved. The organisation had a very minor improvement in the capability to relate because engagement with non-church stakeholders improved and NEDSSS has become more visible as an organisation in its network. Finally there was a very minor improvement in the capability to achieve coherence because they introduced a HIV/AIDS work policy.

The evaluators considered it important to also note down the SPO's perspectives on the most important changes in in the organisation since the baseline. During the endline workshop the key organisational capacity changes that were brought up by NEDSSS' staff were: improved systems in place, increased visibility and diversification of funding. An MFS II supported capacity development intervention has played a role in improved systems in place. MFS II co-funded with MISEREOR a training on Society Registration and Documentation for the Governing Board and General Body, which made the board and body more proactive in improving systems. Trainings on financial management FCRA and government regulations, mostly funded by Missio München also were important to increase the knowledge of the director and governing body and led to a legal way of documentations. These trainings were triggered by changes in government rules and regulations concerning foreign funded NGOs. NEDSSS improved its visibility because the organisation produced many publications and improved their networking. Of these publications the HRE Modules were funded by MFS II. The diversification of funding was triggered by a need to diversify funding because of a changing donor environment and changing government regulation on foreign funding. An organisational assessment funded by CARITAS India led also to NEDSS focussing more on financial sustainability of the organisation. Staff skills in proposal writing and diversification of intervention areas allowed NEDSSS to attract new donors. According to NEDSSS, MFS II funded capacity development interventions have played a role, particularly in terms of the governing board and general body becoming more proactive and in terms of part of the publications that helped NEDSS become more visible since the baseline in May 2013.

2 General Information about the SPO – NEDSSS

2.1 General information about the Southern Partner Organisation (SPO)

Country	India
Consortium	Communities of Change Alliance
Responsible Dutch NGO	Cordaid

Southern partner organisation	North East Diocesan Social Service Society (NEDSSS), the secretariat of NEDSSS is also referred to as "the Social Forum"

The project/partner is part of the sample for the following evaluation component(s):

Achievement of MDGs and themes	
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

2.2 The socio-economic, cultural and political context in which the partner operates

NEDSSS is the official organisation of 15 catholic Dioceses of North East India to support and promote development initiatives undertaken by member Diocesan Social Service Societies, partner NGOs and other CBOs (Community Based Organisations).

The North Eastern part of India comprising Assam, Manipur, Arunachal Pradesh, Tripura, Nagaland, Mizoram, Meghalaya and Sikkim, is a conglomeration of different tribal cultures and practices. In comparison to other regions, the states in North East have a high sex ratio¹ and literacy rate.² For the whole of India there are on average 940 females per 1000 males, while there are generally more females per 1000 males in the North Eastern states. The average literacy rate is 74.04 percent for India and in most North Eastern states this is higher. Despite a favourable literacy rate and with a potential for economic development the region continues to remain underdeveloped. Underdevelopment of the region is attributed to the instability caused by conflict.

This region has been under turmoil since independence with integration of North East with the Indian Union during independence of the country from British colonial rule marked the beginning of incessant struggle in the region. With Armed forces on the one side and the militants on the other side, the struggle continued with moments of ceasefire and signing of treaties. In addition to differences with the Indian Union, there are conflicts among different tribal groups in the region. For instance, the North Cachar (NC) Hills and Karbi Anglong inhabited by indigenous tribes Karbi, Dimasa, Kuki, Khasi,

¹ Sex Ratio (females per thousand males) of the North Eastern States as per 2011 Census are: Assam 954; Arunachal Pradesh 920; Manipur 987; Meghalaya 986; Mizoram 975; Nagaland 931; Sikkim 889; Tripura 961.

² Literacy rates of North East are: Assam 73.18%; Arunachal Pradesh 66.95%; Manipur 70.50%; Meghalaya 75.48%; Mizoram 91.58%; Nagaland 80.11%; Sikkim 82.2% and Tripura 87.75%.

Jaintia, Hmar, Bodo, Tiwa and Zeme Naga often face ethnic clashes over control of land. In Manipur the clashes between Kuki-Naga over years, continue to disrupt both peace and development in the region. At present, Kukis and Naga want separate administrative arrangements in the hills with Kukis fighting for Kukiland and Nagas for greater Nagaland. In Manipur the clash continues between Meiteis, Naga Tribes and Kuki-Chin-Mizo tribes. Different communities in Manipur are divided into hill and valley-based communities. While valley is inhabited by non-tribals Meitei and Meitei-Pangal (i.e. Muslims of Manipur), Kuki-Chin-Mizo and Naga tribes comprise the hill tribes in the region. These tribes are again sub-divided into several other tribes. Intra-group clashes and those between police/military and the insurgent groups have continued for years in this region. Mizoram tensions arise between Mizos and Reang (Bru) community, the latter claiming their autonomy in the state.

In addition to the tribal conflicts, geographical location of North East, surrounded by Bangladesh, Bhutan and China continue to remain a major law and order issue with illegal migration posing threat and demographic imbalance of the region. In July 2012, violence in the state of Assam (where NEDSSS is located) broke out with riots between the indigenous Bodos and Muslims. Between 20 July and 8 August 2012, 77 people had died and over 400,000 people were taking shelter in 270 relief camps, after being displaced from almost 400 villages. The Bodo tribe of Assam views this growing assertion of the migrant Muslims as a threat and have alleged that the Muslim population of the region has increased, boosted by refugees from the erstwhile East Pakistan (prior to the 1971 Indo-Pakistan War) and by subsequent illegal migrants from Bangladesh. Previously in 1983, more than 3000 people had been killed after the controversial Assam state elections as an outcome of the simmering anger and hatred between the two communities. Social tension and instability in Assam – themselves related to perceptions of difference that are generated by past migration – have also found uneasy and disturbing reflection in the rapid spread of rumours that affected migrants from the north-eastern region living in other parts of India. In order to address this issue, NEDSSS initiated the Peace and Reconciliation Dialogue on BTAD (Bodoland Territorial Autonomous District) in Assam held at TISS (Tata Institute of Social Sciences, North East Chapter). The aim of this dialogue was to weave together relationships that connect village elders, church leaders, women groups, citizens, resource persons for rebuilding and strengthening relationships among members of the community.³

While lack of peace and order has destabilised development of the region, spread of HIV has also led to detrimental impact on income, employment, savings and consumption of households, education of children and health. As per Report of the Workshop on HIV/AIDS Mainstreaming in Health and Development Work⁴, there is a slight decrease in reported cases in Manipur, Mizoram and Nagaland; there is a rise in cases of HIV in Assam. Women suffering from HIV are worst affected by social and family exclusion specially if these women are pregnant, widow or those from high risk groups.

NEDSSS has addressed the issue of HIV through its HIV/AIDS workplace policy, which states that employees with HIV/AIDS shall have the same rights and obligations as all other employees and it is mandated that there will be no discrimination of any form against them. This way it observes zero toleration against stigma attached and discrimination meted out to PLHIV people, remove fears and create awareness among the employees about HIV/AIDS.⁵

In these conflicts there are violations of human rights at various levels leading to loss of human lives, property and lack of development in the region. NEDSSS has also been working towards spread of human rights education, which in turn will lead to peace and development in the region. To that end, they have initiated programmes in schools, published a human rights manual (2014) with information on understanding, utilizing and disseminating information regarding human rights and also provided books for children. NEDSSS believes that it is only through an integrated analysis of development and peace-building that there could be mapping of economic development.

2.3 Contracting details

When did cooperation with this partner start: 1997

What is the MFS II contracting period: 2011-2015

The following projects fall in this period, some of which have started before 2011:

Name of the Project	Project number	From	Till	Covered by MFS II
Capacity Building of DSSS Phase III	Project No. 317/4909E	01/07/2009	01/09/2012	from January 2011 – September 2012
Peace Building through a Concerted Response of Organisations in North Eastern India	Project No. 317/10543	01/11/2008	01/11/2011	from January 2011 – November 2011
Human Rights Education in North Eastern States	Project No. 317/10562	01/10/2010	31/12/2014	From January 2011 – December 2014
Peace Initiatives in Northeast India	Project No: 321-903-1030zg/108102	June 2012	30/01/2014	Whole period

Did cooperation with this partner end? Yes.

If yes, when did it finish? 31 December 2014.

What is the reason for ending the cooperation with this partner: General phasing out of programme in India. Only some of the counterparts will be supported further during some months in 2015, in case they contribute in a very direct way to the planned achievements of Cordaid's Unit "Women's Leadership for Peace and Security." This is not the case for NEDSSS.

2.4 Background to the Southern Partner Organisation

History

North East Diocesan Social Service Society (NEDSSS), is a Church based NGO, playing the role of Facilitator. It facilitates in building capacity of the staff of partners and other NGOs of North East Region through trainings, workshops, exposures, seminars, guidance and coordination. It extends its arms to various agencies for financial support in order to provide support to its partner organizations. Inception of the organisation took place in 1986, with an unregistered office in Dimapur, Nagaland by the initiative of Fr. P. Remegius and Fr. Sebastian Ousepparampil, Diocesan director of Social Work and CRS, Diocese of Kohima and regional convenor for SW. Some amount of money was given for training purposes, the staff being 2 men and 2 women (the money was by Cordaid through CARITAS until registration had been done). The vision and the mission (see below) of the organisation have remained the same throughout the years.

In the beginning of 1986, the Directors of social works of the North East Dioceses felt the need of NEDSSS to coordinate the social activities in the dioceses. The idea of the forum originated from the then Executive Director of CARITAS India. NEDSSS was established with an aim to coordinate all programmes which are designed in a way to train community workers (referred to as Animators) at Diocesan level. However, it also undertook training programmes for resource persons who in turn trained the animators in the remote areas. From the beginning, they did not want to just restrict their activities to evangelism but also do value addition to the community life (e.g., education, health and other social interventions). Therefore, the Archbishop of Shillong decided to move the organisation in the direction of working for the community. In due course of time, the Shillong Diocese was divided into 5 Dioceses, which then were further divided into 15 Dioceses.

Caritas India has been one of the main donors for NEDSSS, as Caritas is the organisation of all Bishops of the country, whereas NEDSSS is the organisation of Bishops of the North East Region. Hence, there exists a direct link between NEDSSS and Caritas India.

In 1988, there was a plan to shift the office to Guwahati. A plan was proposed for NEDSSS Centre. Archbishop of Shillong was ready to part with the previously acquired land at Joypur, Kharguli in Guwahati and thus the process of shifting the office from Dimapur to Guwahati was put into action.

In 1989 the first Animator (Ms Myrtle Fernandez) was appointed. By the end of 1989, the temporary office of NEDSSS commenced functioning in the Bishop's House, Dimapur with two full time office staff – Ms Celine Concessio and Ms Jeanatte D'Souza.

By 1997-98, a lot had changed. The building of the NEDSSS had been inaugurated in Guwahati in 1994 along with bi annual newsletter. In 1996, staff consisted of a Director, 2 monitors, 2 Office Staff, 1 Driver and 2 Supporting Staff. In 1998, the CARITAS office started functioning from the office of the Social Forum. In the year 1997, one of the main changes was additional focus on Religion-cultural approaches to the problems of violence and communalism. A management course for Diocesan Directors was organized in 1995. A training course for the Diocesan Directors was organised by Caritas India in 1997. In 2002, an evaluation study was published of NEDSSS for the period of 1986-2002. (Evaluation study of NEDSSS, Fr Gerry and Dr Richard, 2002). Also by this time, NEDSSS started functioning independently. The staff then comprised of the Director, 2 coordinators at social forum, 5 support staff. DSS had 20 animators in the field.

In 2003-04, while the focus of earlier training programs was pastoral oriented awareness building and centred mostly around CRS Food Aid programme and projects like Tribal hostels, there emerged a significant paradigm shift towards the use of animators and awareness building among women and other marginalized groups to ensure sustainability of the projects. In 2003-04, the first annual report of NEDSSS was published. In 2004, Expansion of the office complex took place with construction of a conference hall on higher floors. The funders of NEDSSS in 2003 included DK Austria for women empowerment programme, Caritas India for Community disaster management programme and CRS for Peace Program. UNICEF funded for carrying out a need assessment survey for a project on Behaviour change communication for 10 NGOs in Assam. This project began in 2004 and is still in operation.

Capacity building programs were begun after an ASK Evaluation (in 2003), to carry out trainings for partner organisations and these programmes in turn developed capacity of NEDSSS staff (co funded by MISEREOR and Cordaid). In 2009 NEDSSS took steps to finalise strategic plans and streamlining the finance policy.

In 2011, financial management training was organised in NEDSSS Guwahati and funded by Cordaid. Based on this training NEDSSS is streamlining its processes. It has improved its documentation in the last two years (2012-2014). Better documentation has been a part of the process of change for bidding for new projects. NEDSSS has also worked towards developing the capacity of its 15 partners.

In 2011, the Social Forum revisited its Gender policy and HR Policy. There was also expansion of the office premises, with laying down of the foundation for the training venue. New programmes on Human rights education and HIV AIDS have been initiated and mainstreamed as one of the organisation's main programs. At present, the number of staff is 27 at the Social Forum. The Social Forum or North East Diocesan Social Forum is the secretariat of NEDSSS.

In 2012, NEDSSS conducted a two-day workshop for the director of DSSs on Society Registration and Documentation by Director of MASK, Nagpur. The training was on maintenance of registers of General Body Members, Governing Body Members, assets, minutes of annual general body meetings and governing body meetings. Emphasis was given on how to keep systematic records of the Minutes of the General Body and Governing Body meetings and the Amendments of Memorandum of the Organization. In these workshops, clarifications of Foreign Contribution Regulation Act 2010 were also made.

In 2013, NEDSSS introduced the HIV/AIDS Workplace policy with an aim to promote and respect the dignity of individuals irrespective of his/her status of HIV/AIDS and non-acceptance of any kinds of discrimination against PLHIV 1 and those affected by HIV and AIDS. The Policy outlines the procedures for interacting with employees who have medically been diagnosed with HIV or who are suspected of

being HIV positive or having developed AIDS and guidelines were provided to the staff on HIV/AIDS workplace policy.

In 2013, Cordaid extended the funding period of NEDSSS for its project on 'Human Rights Education in North Eastern States' from 1st January 2013 to 31st December, 2013. Staff of NEDSSS has been actively involved in the publication: Human Rights Manual-2014 (an understanding and guide to teachers) by Sr. Prema Chawalur, Chief Coordinator NEDSSS, Publication of Family Health Kit-2013 written Fr. S. Melookunnel SJ and team and Portraits of Change edited and compiled by Mr. Jaison Varghese M&E Officer NEDSSS, The Church in North East, Human Rights Mode-III. NEDSSS introduced Human Rights Education (HRE) in 258 schools and trained 253 teachers on the values of human rights (till date February 2015). NEDSSS also published HRE Modules—I and II for class IV and VII and Module III for class VIII. Training of Trainers on Human Rights as part of Human Rights Education in North East India programme in Madurai; exposure visits and workshops are organized for the staffs.

There had also been extension of Cordaid funding until 31 December 2014 for the project 'Peace Initiatives in North East India' of an amount of EUR, 52.000 (Rs.3894386.60). Now NEDSSS is in the process of implementing projects directly to sustain itself as well as to get more visibility through innovative ideas/models and will be developing operational plans independently.

Vision [Source: Annual report_2014]

A society where people live in unity amid diversity based on the Gospel values of justice and love.

Mission [Source: Annual report_2014]

To enable member associations to empower the poor and marginalised and ethnic groups in the region for promotion of peaceful just and equitable society through a participatory and sustainable development process.

Strategies

NEDSSS aims at building the capacity of the dioceses, strengthen the Human Resource system, Planning, Monitoring, Evaluation system and facilitate in developing the networks and linkages for the partners for mobilizing resources and schemes so that the poor and marginalised communities empowered and developed. To achieve these objectives it developed the following strategic plans:

1.Capacity building

a.Training

- I. Centre Based training at Forum
- II. Centre level training for new Dioceses at NEDSF
- III. Handholding support to strengthen/develop system in the Dioceses
- IV. Customized Need Based Training at Diocesan level
- V. Training for Forum personnel

b.Support system for new and weak diocesan organization:

The social Forum provides sustained support going beyond trainings. This support will mean working together with the diocesan staff, first to perform a task and demonstrate them to have the staff do in the facilitators' presence and finally beginning to do it independently.

c.Information, collection and dissemination:

This is a strategy which is planned to strengthen the RBA initiative among the dioceses.

d.Facilitating Inter-learning among members:

The team members of Social Forum periodically visits the Dioceses and identify success stories and role models, document them and circulate to all the member institutions so that those can be replicated by others.

e.Collective reflection:

Besides the capacity building support provided by the forum to the diocesan member organizations, the social forum plays a role in the reflection on the capacity building process.

f. Facilitating networking and linkage with outside agencies:

The Forum appoints a professional who will network and linkage with different Government department, NGOs and other institutions.

2. Lobbying and advocacy

The strategy for lobbying and advocacy would be as given below:

- Develop own capacity in this field
- Conceptual knowledge and skills in advocacy
- Evolve common strategies together with dioceses
- Achieve convergence of opinion and efforts
- Develop documentation on issues-researched by others
- Highlight the issues facing north East in general and the specific communities in the media
- Network with NGO's
- Use media to create public opinion and influence the policy makers
- Also create public opinion through poster, campaigns, and rallies
- Influence the policy makers by inter acting with them directly or in public meetings, seminars organised by Social Forum or by others.

3 Methodological approach and reflection

3.1 Overall methodological approach and reflection

This chapter describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

Note: this methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report A detailed overview of the approach is described in appendix 1.

The first (changes in organisational capacity) and the fourth evaluation question are addressed together through:

- **Changes in the 5C indicators since the baseline:** standard indicators have been agreed upon for each of the five capabilities of the five capabilities framework (see appendix 2) and changes between the baseline, and the endline situation have been described. For data collection a mix of data collection methods has been used, including self-assessments by SPO staff; interviews with SPO staff and externals; document review; observation. For data analysis, the Nvivo software program for qualitative data analysis has been used. Final descriptions per indicator and per capability with corresponding scores have been provided.
- **Key organisational capacity changes – 'general causal map':** during the endline workshop a brainstorm has been facilitated to generate the key organisational capacity changes as perceived by the SPO since the baseline, with related underlying causes. For this purpose, a visual as well as a narrative causal map have been described.

In terms of the attribution question (2 and 4), '**process tracing**' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to

focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

At the end of this appendix a brief methodological reflection is provided.

3.2 Assessing changes in organisational capacity and reasons for change - evaluation question 1 and 4

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?** And the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This is explained below. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

The evaluators considered it important to also note down a consolidated SPO story and this would also provide more information about what the SPO considered to be important in terms of organisational capacity changes since the baseline and how they perceived these key changes to have come about. Whilst this information has not been validated with sources other than SPO staff, it was considered important to understand how the SPOs has perceived changes in the organisation since the baseline.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information is provided for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the next session on the evaluation question on attribution, as described below and in the appendix 1.

How information was collected and analysed for addressing evaluation question 1 and 4, in terms of description of changes in indicators per capability as well as in terms of the general causal map, based on key organisational capacity changes as perceived by the SPO staff, is further described below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012⁶.

⁶ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 4) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 5) **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Please see appendix 1 for a description of the detailed process and steps.

3.3 Attributing changes in organisational capacity - evaluation question 2 and 4

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*** and the fourth evaluation question: ***“What factors explain the findings drawn from the questions above?”***

In terms of the attribution question (2), ‘process tracing’ is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Below, the selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

3.3.1 Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

For the detailed results of this selection, in the four countries that CDI is involved in, please see appendix 1. The following SPOs were selected for process tracing:

Ethiopia: AMREF, ECFA, FSCE, HUNDEE (4/9)

India: BVHA, COUNT, FFID, SMILE, VTRC (5/10)

Indonesia: ASB, ECPAT, PtPPMA, YPI, YRBI (5/12)

Liberia: BSC, RHRAP (2/5).

3.3.2 Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ‘general endline workshop. This workshop was carried out after the initial endline workshop and the interviews

during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained. More information can be found in Appendix 1.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

3.3.3 Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team. These can also be found in appendix 1.

Use of the 5 core capabilities framework and qualitative approach: this has proven to be a very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be a perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when

analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
 - Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
 - Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team

has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

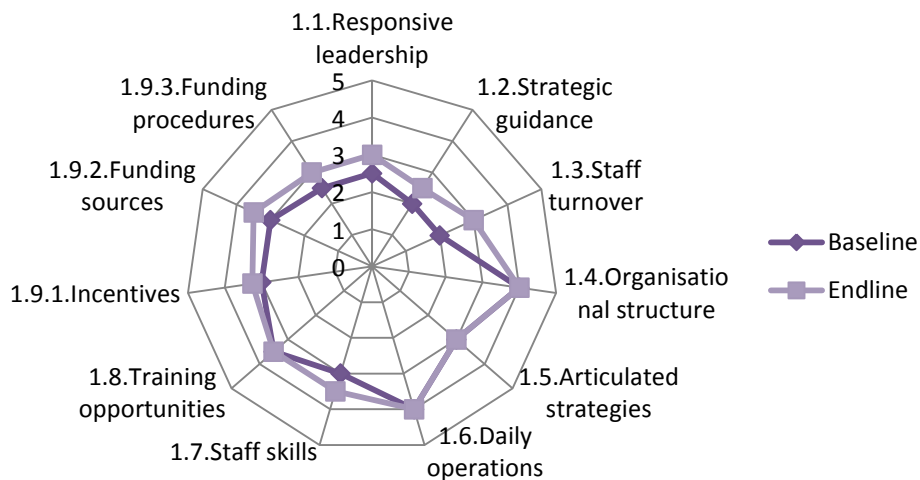

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

4.2 Changes in capacity and reasons for change - evaluation question 1 and 4

Below you can find a description of the changes in each of the five core capabilities. This information is based on the analysis of the information per each of the indicators. This detailed information for each of the indicators describes the current situation, and how and why it has changed since the baseline. See also annex 3.

4.2.1 Changes in the five core capabilities

Capability to act and commit

The current leader has now been leading the organization for four years and as the years passed the staff has become more free to express their opinions. He also has concern for NEDSSS's partners and his wider vision ensures that partners are made aware of changes in the external environment, e.g. with regard to changes in the law. The present Governing Body members have many years of experience in the field of development and their interaction with the leader keeps him up to date and creative. The leader has streamlined operations of the organisation by putting systems in place to streamline the work of NEDSSS so that it is governed professionally. With the introduction of positions like chief programme coordinator, second line leadership will be developed. The leader provides strategic guidance to both NEDSSS staff as well as its 15 partner organisations. There is an increased focus on developing the capacities of the partner organisations by organising workshops on legal and financial documentation. The leader has ample pastoral, administrative and teaching experience and has been working in the development sector for more than 14 years. The Governing Board provides guidance to the director through increased meetings of which proper minutes are taken. Staff are actively involved in the planning process and leadership is receiving positive responses on his functioning from the partner organisations. NEDSSS has less permanent staff as they work with interns and project related staff. After the baseline in May 2013 no staff has left the organisation. Staff has stayed have access to an increased Staff Welfare fund, health insurance and a rather decent salary. NEDSSS continues to base its strategies on its M&E findings (in case of the Capacity Building Project) and good situational analysis and learnings from previous experience (in case of the Peace Initiative project). The Revised Strategy Document from 2009 has, has to be revised as early as possible so that the organisation can go along with the changing trend and needs of the regions. The day to day operations continue to be in line with strategic plans. The organisation still has a well-defined and documented organogram in the HR policy that all staff members are aware of. In general,

staff have the necessary skills to do their work. Staff has been trained in financial management (on different intervals both before and after May 2013), gender policy development (in May 2014), and personality development (August 2013). Staff now share what they have learned after attending a training session, during the monthly staff meetings. If NEDSSS wants to become a resource centre that develops modules and conducts pilot projects that can be replicated by partners, staff needs to improve their skills on research methodology. Staff at NEDSSS continue to receive quite a lot of opportunities for training both on programme content as well as organisational development skills. It is unclear whether issues in selecting the right candidates for training were solved. During the baseline often staff members that were well versed in English or Hindi were sent for the training. As a result, sometimes the eligible participants would not attend the training. With increased surveillance by the government over foreign funding, tapping domestic funding sources has become necessary. NEDSSS has started to strengthen the capacity of their partner organisation in mobilising funds from government departments, semi-government departments and the corporate sector (through CSR). In total NEDSSS is funded by 15 funders compared to 8 during the baseline in May 2013. The organisation still has no clear procedures for exploring new funding opportunities. However, a dedicated staff member was hired to write project proposals and there is an improved capacity of other staff to showcase their work, prepare financial and legal documents needed for getting new funding and streamline their work for CSR rules. NEDSSS has initiated dialogues with various departments and organisations who can potentially fund them.

Score baseline: 3.0

Score endline: 3.3 (very slight improvement)

Capability to adapt and self-renew

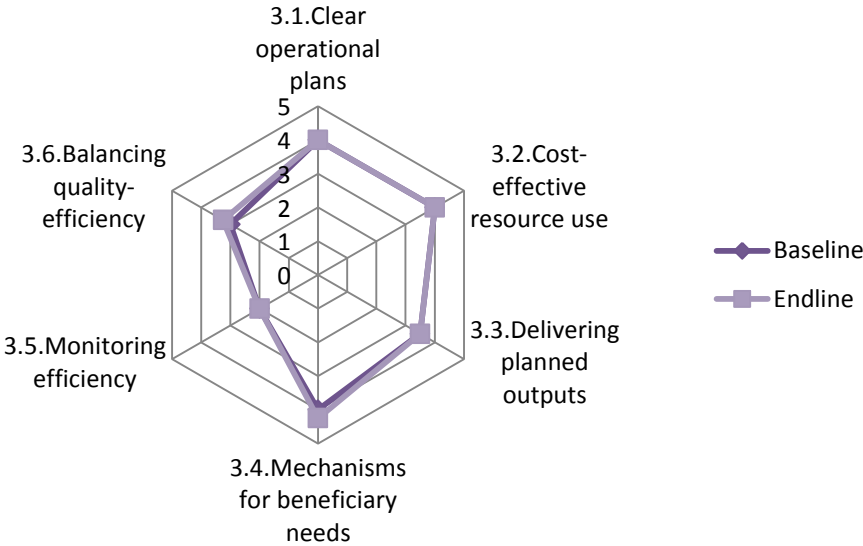

NEDSSS still has PME guidelines and staff have basic PME skills and have been trained in this, although there is no dedicated person in place for monitoring and evaluation. At the level of projects, M&E information is still used to improve and fine-tune project interventions. There is still a difference in how M&E is applied in different projects, which relates to different donor guidelines for M&E. In the Cordaid funded Peace Initiatives in North East India project, there is an elaborate and detailed M&E plan in place which looks at activities, outputs and outcomes and also has mechanisms in place to promote learning. As NEDSSS is dependent on its partners for the successful application of M&E, they have given trainings to their partner organisations in documentation for timely and good submission of reports. Reporting formats have been developed based on Results Based Management. There have been many external evaluations and the recommendations are used for project implementation and making strategic decisions. Most of the monitoring is done by partner organisations who are trained to deliver timely reports. Frequent changes in the formats for documentation because of donor demands, cause problems for partners in following a uniform pattern of documentation. Having different donor requirements in terms of monitoring and evaluation makes it difficult for the organisation to have an overall and comprehensive monitoring and evaluation system. The staff meet every month to discuss

the project progress, challenges and issues. The staff has become more self-confident and articulate since baseline in May 2013 and are given the space to share and discuss their concerns with the director and their colleagues. Most junior staff still do not feel comfortable to come up with ideas for the implementation of objectives. During the endline workshop the director gave space to the staff to present their views. Even though there is still no formal system to track developments, the organisation continues to be well-informed of general trends and developments at local, regional, national and international level through its extensive network of church based organisations, but now also through networks linking to research and government organisations. The organisation continues to be open and responsive to its stakeholders. NEDSSS interacts with leaders of civil society, leaders of NGOs, officials of different government departments, implementing partners, CBOs, religious heads, institutes – educational, research and scholars with an aim to address the issues in the target area effectively, to avoid duplication of work and create understanding among them.

Score baseline: 2.9

Score endline: 3.2 (very slight improvement)

Capability to deliver on development objectives

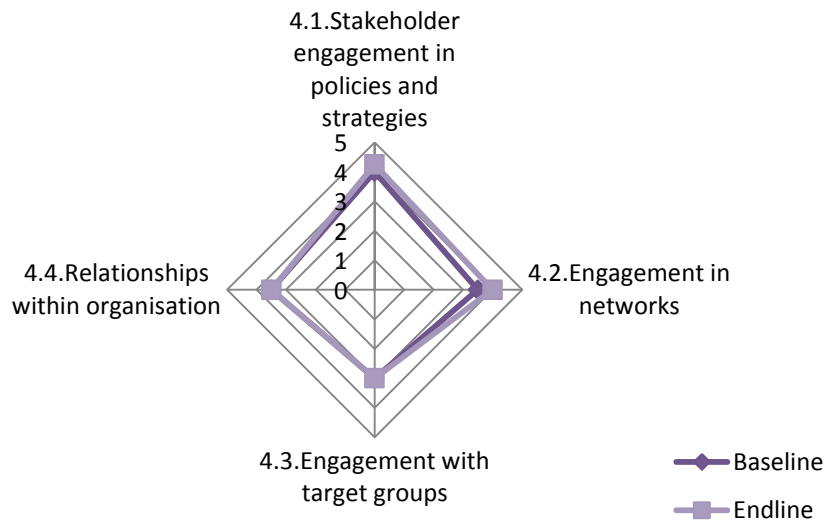

There continue to be clear operational plans for carrying out projects. Regular monthly meetings of the staff are held to discuss the project progress. In the projects where NEDSSS works through its partners the planning process is done in consultation with them. In two projects where NEDSSS is the implementing organisation the planning process is done independently. NEDSSS continues to make cost-effective use of its resources. Utilisation of funds are in line with the contract with the donor and expenses are kept low by multi-tasking and keeping travel costs low. A large percentage (around 80%) of planned outputs are still delivered as planned. There are several factors that prevent timely delivery of outputs, including natural disasters, protests and staff turnover. For instance, in September 2013 there were spurts of violence in the Bodo dominated districts and there was a flood in Assam in July 2014. NEDSSS still works mostly through its 15 partner organisations, who in turn work with the beneficiaries. For its partners, NEDSSS conducts meetings to make sure that the services NEDSSS offers its partners meet their needs. Over the last years, the organisation started implementing projects and working directly with beneficiaries. NEDSSS bases these projects on a needs assessment among the target group. Monitoring efficiency through relating inputs to outputs is not done, but NEDSSS balances quality with efficiency by efficient utilisation of the staff’s capabilities and of resources through multi-tasking and at the same time enhancing staff’s quality of work through trainings. Since the baseline, NEDSSS has worked towards increasing their quality and efficiency by streamlining their work, putting in place the legal documentation as per the FCRA and Indian Tax Laws.

Score baseline: 3.4

Score endline: 3.5 (very minor improvement)

Capability to relate

The organisation continues to have systematic engagement with its stakeholders. Their partner organisations actively participate to express their views and suggest required changes. NEDSSS gets input from other stakeholders like religious heads, leaders of civil society and NGOs, officials of different government departments and CBOs through consultation, workshops and one-to-one meetings. Apart from their immediate partners, they engage with various Faith Based Organisations and CBOs (SHGs, Farmers groups and Cooperatives) working in North East. They have started working with networks such as the North East Social Research Centre (NESRC), Tata Institute of Social Sciences (TISS) and other regional networks. As advocacy and lobbying plays a greater role in various projects, NEDSSS improved its relation with the government and has had meetings with various government departments like Government Medical College (GMC), NABARD and the Social Welfare Department. NEDSSS has two kinds of target groups: 1) their partner organisations which they visit regularly for monitoring and trainings, and 2) direct beneficiaries in recently started projects in which NEDSSS is the implementing organisations, here they have visited their target groups to do a situational analysis to develop appropriate strategies. NEDSSS continues to have a culture and office space that facilitates open interaction amongst its staff members. There are regular staff meetings each month where people communicate and express their ideas. Minutes of the meetings were circulated after some of these meetings.

Score baseline: 3.5

Score endline: 3.7 (very slight improvement)

Capability to achieve coherence

The organisation still has a clear vision and mission statement that has not changed over the years and staff members are made aware of them during induction programmes. NEDSSS has introduced a HIV/AIDS Workplace policy, which was developed on 12th July 2013 and was approved by the Governing Body on 9th September 2013. While achieving gender equity through women empowerment remains a mandate in their programmes, NEDSSS has failed to adopt a similar policy with regard to their internal governance. All projects and strategies remain to be in line with the vision and mission of NEDSSS and the church, as they are all aimed at strengthening the capacity of church (related) institutions to better address the needs of the population and to improve services for the poor. NEDSSS projects are still complimentary, and efforts in one project support another project. Based in a conflict region of North East India, NEDSSS work has been planned in a manner whereby impact of one project would be able to influence another.

Score baseline: 3.1

Score endline: 3.2 (very minor improvement)

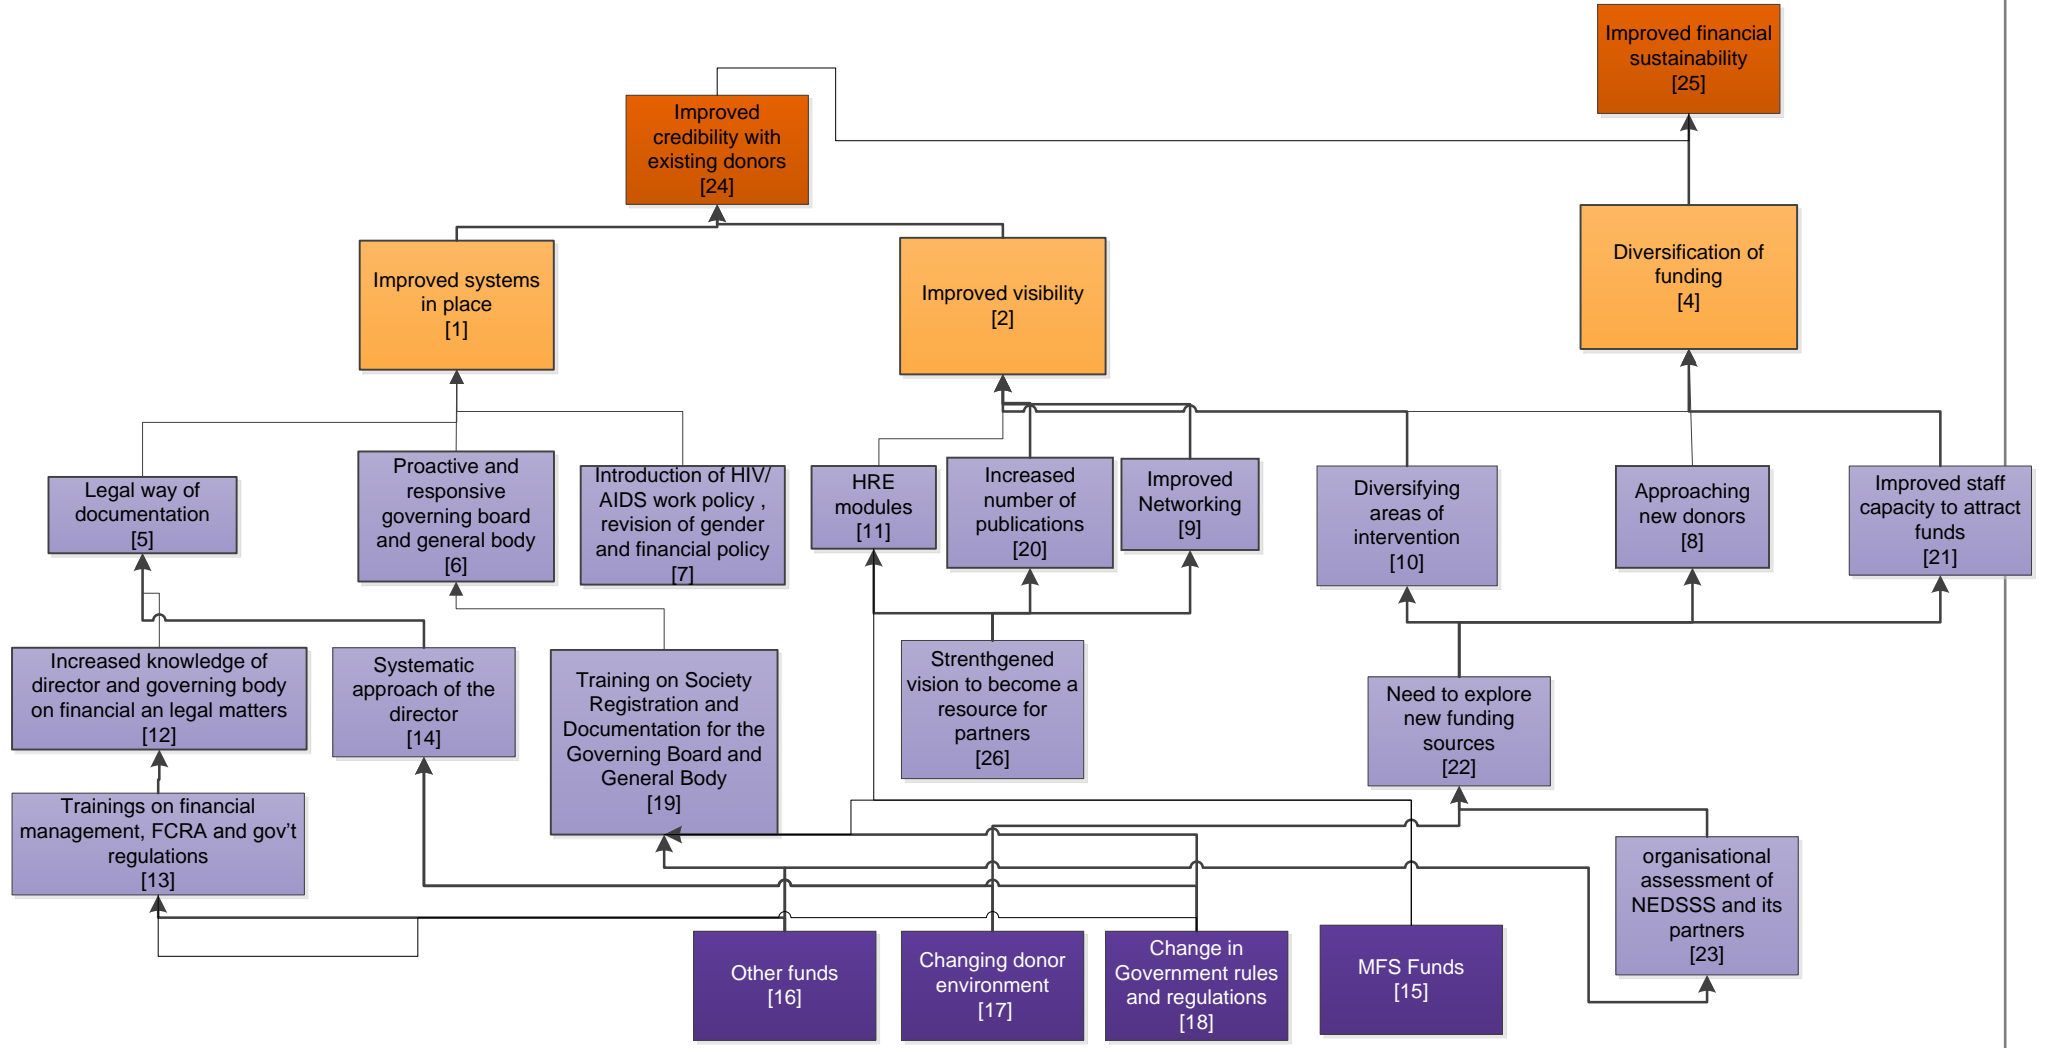

4.2.2 General changes in the organisational capacity of the SPO

During the endline workshop at the SPO, a discussion was held around what were the main changes in organisational capacity since the baseline and why these changes have taken place. The discussion was visualised in a general causal map as can be seen below. The narrative for the general causal map is also described below. It gives a more general picture of what was seen as important changes in the organisation since the baseline, and how these changes have come about, and that tells the more general story about the organisational changes in the SPO. The evaluators considered it important to also note down the SPO's story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provide by the evaluation team. The detailed narrative can be found in Annex 4.

The evaluation team carried out an endline assessment at NEDSSS from 23 to 24 September 2014. During this workshop, the team made a recap of key features of the organisation in the baseline in May 2013 (such as vision, mission, strategies, clients, partnerships). The gap between the baseline and endline was short (one year and four months). Therefore some of the changes that are discussed here started before the baseline and were further strengthened in the post baseline period. This was the basis for discussing changes that had happened to the organisation since the baseline. The three main changes that happened in the organisation since the baseline, as identified by the staff during self-assessments, interviews and during the endline workshop were:

- Improved systems in place [1]
- Increased visibility [2]
- Diversification of funding [4]

The three main organisational capacity changes are described in the light orange boxes and some of their key consequences are noted above these cards in dark orange. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the organisation are listed at the bottom in dark purple. The narrative describes per organisational capacity change, the contributing factors as described from the top down. The numbers in the visual correspond with the numbers in the narrative. Below each of these key changes and how these have come about are described.

Improved Systems in place [1]

The Director wanted to streamline the processes in the organisation. For this he wanted to ensure that the systems were in place [14]. He was able to convince the Governing body to change the way of working of NEDSSS from being a charity based organisation to a more professionally governed organisation. The grant agreement between Cordaid and NEDSSS for the project "Peace Initiative in North East India" demands submission of narrative and financial report and every 6 months NEDSSS is expected to submit a report with details of expenditure and to verify legal compliances of its 15 partners. Improved systems in place is expected to lead to improved credibility of NEDSSS with its existing donors [24], including MISSIO München, the Professionalising actors of Church Ministry, MISSIO Aachen and the Raskob Foundation. This in turn is expected to lead to improved financial sustainability [25].

NEDSSS improved its systems because they now have a legal way of documentation [5], a proactive and responsive governing board and general body [6], and a HIV/AIDS work policy, revised gender and financial policy [7]. Each of these changes are further discussed below.

Legal way of documentation [5]

There was a continuous improvement in the legal documentation of NEDSSS. This was due to the increased knowledge of not only the Director of NEDSSS but also that of the members of the governing body [12] and because of the systematic approach of the director [14]. This is further explained below.

- **Knowledge of the director and governing body [12]** increased because of trainings on financial management, FCRA, and government regulations [13]. The following trainings [13] were financed through other funds [16] such as MISSO München:

- **Accounting and Tally Management Training Workshop** was organised for 3 days on 29th to 31st August, 2013. There were 21 participants from NEDSSS who were trained in proper method of accounting and documentation. They were also equipped with basic accounting information on Tally. This training was funded by MISSIO München [16].
- **Legal Administration and Governance of Organizations/Trusts (FCRA/Income Tax) seminar** was organised and conducted by Chartered Accountant from Lancy D'Souza and Company and Director of Mask Organization from 5th to 7th February, 2014. This seminar highlighted the legal implication of FCRA and Income Tax laws on Religious Institutions. There were 76 participants from NEDSSS. This training was funded by MISSIO München [16].
- **Leadership and Communication Training** was held from 7th to 14th January, 2014 with 26 participants. The objective of the seminar was to train the participants on improving their leadership qualities and communication. This training was funded by MISSIO München [16].

These trainings [13] were triggered by the changes in government rules and regulations [18].

- **Systematic approach of the director [14]** to streamline processes led to a legal way of documentation [5] and was triggered by changes in the donor environment [17], with the donors demanding more transparency and accountability from the NGOs and the government rules and regulations with regard to the FCRA [18].

A Proactive and responsive governing board and general body [6]

The minutes of meetings of the General and the Governing Bodies are maintained in separate registers. The General and Governing body members are better informed on the changing trends in the development sector and the changes in government policies. The governing board and general body became more proactive and responsive because of a *training on Society Registration and Documentation for the Governing Board and General Body* [19]. On 18-19 October, 2012, NEDSSS conducted a two-day workshop for the director of DSSSs on Society Registration and Documentation by the Director of MASK Organisation, Nagpur. The training was on maintenance of registers of General Body Members, Governing Body Members, assets, minutes of annual general body meetings and governing body meetings. Emphasis was given to keeping systematic records of the Minutes of the General Body and Governing Body meetings and the Amendments of Memorandum of the Organization. In these workshop clarifications of Foreign Contribution Regulation Act 2010 were also made. This workshop was also triggered by changes in government regulations [18] with regard to the FCRA and was co-funded by MFS II (Cordaid) [15] and non-MFS II (MISEREOR) funds [16].

Introduction of HIV/AIDS work policy, revision of gender and financial policy [7]

In 2013, NEDSSS introduced the HIV/AIDS Workplace policy with an aim to promote and respect the dignity of individuals irrespective of his/her status of HIV/AIDS and non-acceptance of any kinds of discrimination against PLHIV⁷ and those affected by HIV and AIDS. The Policy outlines the procedures for interacting with employees who have medically been diagnosed with HIV or who are suspected of being HIV positive or having developed AIDS. This policy was developed to internally mainstream acceptance of HIV/AIDS in the organization. NEDSSS has revised and modified Gender and Finance policies.

Increased visibility [2]

During the endline workshop the staff of NEDSSS stated that they wanted to strengthen their vision of becoming a resource for their partner organisations [26]. This means for them that they would like their partners to be able to turn to them for any information or training they need on a particular topic or even turn to them for implementation of projects or resource mobilisation. NEDSSS wants to be looked upon as a role model and also implement innovative pilot projects so that their partners can replicate them in their respective areas. Thus in order to follow through with this vision, it was important to showcase their work and be well connected. This was possible if they increased their visibility [2]. This increased visibility is expected to lead to increased credibility with existing donors [24] like Missio München, Missio Aachen, Raksob Foundation and Professionalising Actors of Church Ministry. This increased credibility is in turn expected to lead to improved financial sustainability of the organisation [25].

In moving closer to that, NEDSSS has already started working towards increasing their number of publications [20]. NEDSSS, furthermore increased its visibility through their HRE modules [11], and through improved networking [9].

- *HRE Modules [11].*

For instance, NEDSSS introduced Human Rights Education (HRE) in 258 schools and trained 253 teachers on the values of human rights. NEDSSS also published HRE Modules—I and II for class IV and VII and Module III for class VIII, which were published in June 2013. These modules were developed under the MFS II, Cordaid funded project [15]: Human Rights Education in North Eastern States from 1st January 2013 to 31st December 2013. The development of these modules were also triggered by NEDSSS's strengthened vision to become a resource for its partners [26].

- *Increased number of publications [20].*

Staff of NEDSSS has been actively involved in the publication since the baseline in May 2013: Human Rights Education Book III, released on 16th May 2013; Portraits of Change, published in January 2014 edited and compiled by the M&E officer of NEDSSS; Herbal Medicine Family Health Kit-2013, published in February 2014 written by a member of the MASK organisation and team; Human Rights Manual (an understanding and guide to teachers), released on 22nd November 2014 by the Chief Coordinator NEDSSS; The Silver Milestones (History of NEDSSS), released on 22nd November 2014, compiled by the Project Manager Capacity Building at NEDSSS. The increased number of publication was triggered by NEDSSS's strengthened vision to become a resource for its partners [26].

- *Improved Networking[9].*

Apart from publications, NEDSSS has formed networks with a wide range of organisations such as: as NABARD, IIE (Indian Institute of Entrepreneurship), KVK (KrishiVigyan Kendra), NIRD (National Institute of Rural Development), and SIRD (State Institute of Rural Development). These networks were formed before May 2013 and in the last year (2014) these networks have improved because they are working more closely together. On 24 October 2013, NEDSSS staff and staff of Tezpur, AIDA had participated the training on Entrepreneurship conducted by IIE. NEDSSS has also held consultations, meetings and trainings with and by government departments, like NABARD and the Social Welfare department. In order to increase its visibility, NEDSSS is also working with networks such as North East Social Research Centre (NESRC), Tata Institute of Social Sciences (TISS) and other regional networks. NEDSSS interacted with North East women network for its gender programme and

⁷ PLHIV stands for "People Living with HIV". This abbreviation is used throughout the text.

with SarvaShikshaAbhiyan for Human Rights Education. The improved networking was triggered by NEDSSS's strengthened vision to become a resource for its partners [26].

Diversification of funding [4]

Over the last two years NEDSSS is trying to be self-reliant and diversify its funding sources given the changing donor environment in the country [17] and the change in government rules and regulations [18] concerning foreign funding. These two developments led to the need to explore new funding sources [22]. There have been efforts taken to widen the horizon of interventions in order to access government resources and CSR funding. The management feels that the staff capacities have also been increased for drawing funding opportunities such as the World Bank Grant Fund Award for the institution in India Market Development Place for replicating NEDSSS's health interventions.

Currently NEDSSS receives funding for different projects from the following diversified set of funders [4]:

- Caritas India is funding a project that supports 5 of NEDSSS's partner organisation to tap government resources.
- Shelter Project for Rickshaw Pullers is funded by IGSSS;
- Professionalising Actors of Church Ministry is funded by Missio München;
- Facilitating Regional Exercise towards an Effective Church in North East India is funded by Missio Aachen;
- The Income Generation Programme on financial empowerment of 80 families below poverty line is funded by Raskob Foundation;
- Community Health in Assam and Rural Meghalaya (CHARM) programme is funded by the World Bank;
- KINDERMISSIONWERK funds NEDSSS's work on education;
- Nursery Teacher Training for pre-primary and primary school teachers is funded by Advance Information in Early Childhood Care & Education, New Delhi;
- St. Peter Claver Foundation, MISEREOR, UNICEF, Dreikönigsaktion, Manos Unidas Spain are also funding NEDSSS's work.

In total NEDSSS is now funded by 13 funders compared to 8 during the baseline.

NEDSSS has diversified its funding [4] because they are approaching new donors [8], diversifying their of areas of intervention [10] and because staff have improved their capacity to attract funds [21]. These changes are further explained below

Approaching new donors [8]

NEDSSS has been supported by Caritas India for a period of time and many of the projects are funded by CORDAID and MISEREOR till date. With their active support the organization has grown and improved in their implementation of the development programmes. Within the last years NEDSSS has approached new donors to fund new projects such as the World Bank (CHARM Project Health, June 2014-May 2016), MISSIO Aachen, MISSIO Munchen (June 2013-May 2014) and Kindermission Germany (since 2012) and Raskob Foundation USA (since 2013). Since May 2013, NEDSSS is also working with organisations such as NACO (National AIDS Control Organisation); IIE (Indian Institute of Entrepreneurship); Indian Council for Agricultural Research (ICAR); Department of Social Welfare, Guwahati to identify opportunities for collaboration and support. NEDSSS continues to work with KVK (Krishi Vigyan Kendra) and NIRD (National Institute of Rural Development). NEDSSS started to approach new donors because of the need to explore funding sources [22]. This need was triggered by the changing donor environment [17] and change in government regulations [18], but the decision of NEDSSS management to focus towards improving the financial sustainability of the organisation was also triggered by an organisational assessment of NEDSSS and its partners. This assessment was done during the partners workshop 'A Way Forward' on 20th and 21st January 2014. The objective of the assessment was to have an in-depth knowledge of organisations. This assessment was done by NEDSSS with support and funding from CARITAS India [16].

Diversification of areas of intervention [10]

In order to increase its visibility [2], scaling up its work and diversify its funding, NEDSSS is intervening in new areas. To this end, NEDSSS is taking up projects in which they are the

implementing organisation. They have projects with rickshaw pullers, agriculture and children that have dropped out of school. As a resource centre, NEDSSS is not confined to training but has worked towards innovative interventions. These innovative ways are used for reaching out to the communities, which will be further replicated by the partners. For instance, the shelter project where rickshaw pullers were organised so that they could demand their rights from the government through increased ability to bargain. NEDSSS's approach was innovative with regard to adopting an innovative path in removing the misconceptions about communities or groups by going and finding out first from the target group the reasons behind their inability to access certain resources. In this project of NEDSSS, it was found out that it was not lack of knowledge of the available resources rather there was lack of advocacy or lobbying for them. There was a need to get attention from the government. There was lack of legal stand which was found out through the Public Interest Litigation. Through expanding into new projects in which NEDSSS is the implementer they have been able to attract funding from the World Bank and IGSSS. These are new and ongoing projects. NEDSSS started to diversify its areas of intervention [10] because of a need to explore new funding sources [22].

- *Improved staff capacity to attract funds [21]*

NEDSSS has trained its staff in proposal writing, showcasing their work, preparing legal and financial documents that are required for proposals and also prepare documentation in line with the CSR rules. As NEDSSS continues to work with and through its partner organisations, they have also started to strengthen their capacity in mobilising funds from government departments, semi-government departments and the corporate sector (through CSR). In support of this, NEDSSS does the dissemination of Caritas India's policy on Local Fund Mobilisation to its partners to implement the institutional Local Resource Mobilisation policy for all partner organisations. All efforts are taken to tap into more domestic sources (CSR and government) while also keeping an eye out for international donors. Improving the staff's capacity to attract funds [21] was triggered by the need to explore new funding sources [22], which in turn was because of changes in the donor environment [17] and in government regulations. With increased surveillance by the government over foreign funding, tapping domestic funding sources has become necessary.

5 Discussion and conclusion

5.1 Methodological issues

In order to get detailed information on the capacity development of the staff, self-assessment forms were filled out by the management (CEO and Director), programme staff (Programme Manager, Regional Coordinator, Technical cum Document officer, gender coordinator, peace coordinator, programme coordinator and city maker coordinator), and the HR/Administration staff (Account officer and two accountants). Except for the CEO, Technical cum document officer, city maker coordinator, one accountant, the rest participated in the baseline workshop. Except for CEO, Technical cum document officer, city maker coordinator, one accountant, the rest of the staff also participated in the baseline workshop. Self-assessment forms were filled in by the CEO and the Director separately, to get impartial views on the organisational changes and different perspectives on the key changes. The capacity development sheet was not filled in for the interventions under MFS II supported funding. NEDSSS did not fill this in as there were no MFS II supported capacity development interventions since the baseline.

During the workshop it was a challenge for the evaluation team to go back to the 5C methodology, the findings of the baseline report and the areas where the SPO was falling short. However, this effort made the job for the endline participants' work clearer. After filling up the forms, it became easier for the staff to identify and create the general causal map, based on their perceived key organisational capacity changes since the baseline. Two members of the governing body of NEDSSS were interviewed, as the Board Members of NEDSSS are also their partners. One Organisation Development Consultant of NEDSSS was interviewed.

The CFA was not able to provide information on the organisational capacity indicators as the officers in charge of NEDSSS could not visit the organisation due to complications and denial of visa by the government. The North Eastern part of the country is a sensitive area and hence there are restrictions. The person in charge for NEDSSS at Cordaid was transferred in 2012. The new person in charge could not provide any information on the capacity development interventions other than based on the project documents.

5.2 Changes in organisational capacity

This section aims to provide an answer to the first and fourth evaluation questions:

1. *What are the changes in partner organisations' capacity during the 2012-2014 period?*
4. *What factors explain the findings drawn from the questions above?*

Improvements took place in all of the five core capabilities. Below the changes in each of the capabilities are further explained, by referring to the specific indicators that changed.

Over the last year and four months some improvements took place in the indicators under the capability to act and commit. The leader of NEDSSS is now a bit more settled and staff feel more free to share their opinions with him. The leader considers these when making decisions. The leader now provides strategic guidance to NEDSSS and the 15 partner organisations. Second line leadership is being developed. There was an improvement in the indicator on staff turnover. No staff have left the organisation in the last year and 4 months (since the baseline in May 2013). There is less permanent staff but NEDSSS works more with interns and project staff. Some gaps in skills have been addressed since the baseline. There have been trainings on personality development and financial management. Staff are now better at sharing what they have learned during trainings and have improved their skills in writing proposals, showcasing their work and meeting financial and legal requirements. The incentives for staff improved very slightly. The amount of staff welfare fund has increased and health insurance is now covered. NEDSSS' funding situation improved slightly. They now receive funding from 13 different donors compared to 8 donors during the baseline in 2012. Although there are still no funding procedures, staff have been trained in writing proposals and a person has been hired who spends most of his time on preparing project proposals.

In the capability to adapt and self-renew NEDSSS also improved in many indicators. The application of M&E is different per project. In the Cordaid funded project there is a solid M&E system in place. NEDSSS is also dependent on its partners for good M&E applications. They have now trained them in many aspects of M&E so the input from partners is improving. Reporting formats are now based on RBM. Staff feels more confident and is more articulate to share concerns with their colleagues and director. There is slightly more freedom for ideas and critical reflection. There has been a very slight improvement in tracking NEDSSS' operating environment. They now have strengthened their network with non-church based actors to discuss trends. NEDSSS has also become more responsive to non-church stakeholders including civil society, NGO's, government, CBOs and educational institutions.

In terms of the capability to deliver on development objectives, there has been a very slight improvement in the mechanisms to ensure services meet beneficiary needs. NEDSSS is now involved in direct project implementation. For these projects, they first go to the project area to study what the needs are before implementing the project. There has also been a very slight improvement in balancing quality and efficiency because of improved legal and financial documentation and improved capacity of partners which leads to more quality and efficiency in the work of NEDSSS.

In the capability to relate, NEDSSS improved its engagement of stakeholders in policy development and has increased its network. The organisation now receives input for their policies and plans from non-church actors through workshops, seminars, one-on-one meetings with NGOs and governments. NEDSSS has more partners that they work with, e.g. with government through going to meetings and trainings organised by government agencies. They have in this way increased their visibility.

Finally, NEDSSS there was hardly any change in the capability to achieve coherence, and there was only a slight improvement in its operational guidelines. They introduced a HIV/AIDS work policy.

During the endline workshop some key organisational capacity changes were brought up by NEDSSS's staff, these have been captured in the general causal map in 4.2.2: improved systems in place, increased visibility and diversification of funding. NEDSSS staff experienced these as the most important capacity changes in the organisation since the baseline. The evaluators considered it important to also note down the SPO's story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provide by the evaluation team.

According to staff present at the workshop, the systems in place improved because of a legal way of documentation, a proactive and responsive governing board and general body; introduction of HIV/AIDS work policy and revision of gender and finance policies, which was also observed in the relevant indicator in the capability to achieve coherence. NEDSSS obtained a more legal way of documentation because of increased knowledge of the director and governing body on financial and legal matters and the systematic approach of the director. Their knowledge increased because of trainings on financial management, FCRA and government regulations, most of which were funded by Missio München. This was also partly reflected in the relevant indicators on training and staff skills in the capability to act and commit. These trainings were triggered by the changes in government rules and regulations. The governing board and general body became more proactive because of a training on Society Registration and Documentation for the Governing Board and General Body co-funded by Cordaid (MFS II) and MISEREOR.

NEDSSS wanted to increase its visibility because their vision is to become a resource for their partner organisations, so that their partners turn to them for any information or training they need on a particular topic. NEDSSS increased its visibility by publishing HRE Modules, other publications (for example human rights manual), and because of improved networking. The improved networking, which was also observed in the capability to relate, was triggered by NEDSSS's strengthened vision to become a resource for its partners.

NEDSSS diversified its funding base, and this was also reflected in the related indicator, where it was indicated that NEDSSS diversified its funding base from 8 to 13 donors. This was because they are approaching new donors, diversifying their of areas of intervention and because staff have improved their capacity to attract funds. NEDSSS started to approach new donors because of the need to explore funding sources, which was triggered by the changing donor environment and change in government regulations. With increased surveillance by the government over foreign funding, tapping domestic funding sources has become necessary. The decision of NEDSSS to focus on improving financial sustainability was triggered by an organisational assessment done by NEDSSS itself and its partners with funding from CARITAS India. NEDSSS started to diversify its areas of intervention because of a need to explore new funding sources. NEDSSS improved its capacity to attract funds because staff gained skills in proposal writing, showcasing their work, preparing legal and financial documents that are required for proposals and also preparing documentation in line with the CSR rules. This was also triggered by the need to explore new funding sources. MFS II funded capacity development interventions thus, according to NEDSSS, did contribute to the two of the key organisational capacity changes they experienced as important in the last year and 4 months, since the baseline in May 2013: improved systems in place (through the governing board and general body becoming more proactive) and to visibility of the organisation (funding of part of the publications).

Appendix 1 Methodological approach & reflection

1 Introduction

This appendix describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around four key evaluation questions:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

Note: the methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report. At the end of this appendix a brief methodological reflection is provided.

2. Changes in partner organisation's capacity – evaluation question 1

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?**

This question was mainly addressed by reviewing changes in 5c indicators, but additionally a 'general causal map' based on the SPO perspective on key organisational capacity changes since the baseline

has been developed. Each of these is further explained below. The development of the general causal map is integrated in the steps for the endline workshop, as mentioned below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012.⁸ Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 6) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 7) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 8) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 9) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 10) **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

16. Provide the description of indicators in the relevant formats – CDI team
17. Review the descriptions per indicator – in-country team & CDI team

⁸ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

18. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
19. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
20. Organise the field visit to the SPO – in-country team
21. Interview the CFA – CDI team
22. Run the endline workshop with the SPO – in-country team
23. Interview SPO staff – in-country team
24. Fill-in observation sheets – in-country team
25. Interview externals – in-country team
26. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
27. Provide to the overview of information per 5c indicator to in-country team – CDI team
28. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
29. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
30. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Below each of these steps is further explained.

*Step 1. Provide the **description of indicators** in the relevant formats – CDI team*

- These formats were to be used when collecting data from SPO staff, CFA, partners, and consultants. For each of these respondents different formats have been developed, based on the list of 5C indicators, similar to the procedure that was used during the baseline assessment. The CDI team needed to add the 2012 baseline description of each indicator. The idea was that each respondent would be requested to review each description per indicator, and indicate whether the current situation is different from the baseline situation, how this situation has changed, and what the reasons for the changes in indicators are. At the end of each format, a more general question is added that addresses how the organisation has changed its capacity since the baseline, and what possible reasons for change exist. Please see below the questions asked for each indicator as well as the more general questions at the end of the list of indicators.

General questions about key changes in the capacity of the SPO

What do you consider to be the key changes in terms of how the organisation/ SPO has developed its capacity since the baseline (2012)?

What do you consider to be the main explanatory reasons (interventions, actors or factors) for these changes?

List of questions to be asked for each of the 5C indicators (The entry point is the the description of each indicator as in the 2012 baseline report):

1. *How has the situation of this indicator changed compared to the situation during the baseline in 2012? Please tick one of the following scores:*
 - -2 = Considerable deterioration
 - -1 = A slight deterioration
 - 0 = No change occurred, the situation is the same as in 2012
 - +1 = Slight improvement
 - +2 = Considerable improvement
2. *Please describe what exactly has changed since the baseline in 2012*
3. *What interventions, actors and other factors explain this change compared to the baseline situation in 2012? Please tick and describe what interventions, actors or factors influenced this indicator, and how. You can tick and describe more than one choice.*
 - Intervention, actor or factor at the level of or by **SPO**:
 - Intervention, actor or factor at the level of or by the **Dutch CFA (MFS II funding)**:
 - Intervention, actor or factor at the level of or by the **other funders**:
 - **Other** interventions, actors or factors:

-
- Don't know.

Step 2. Review the descriptions per indicator – in-country team & CDI team

Before the in-country team and the CDI team started collecting data in the field, it was important that they reviewed the description for each indicator as described in the baseline reports, and also added to the endline formats for review by respondents. These descriptions are based on document review, observation, interviews with SPO staff, CFA staff and external respondents during the baseline. It was important to explain this to respondents before they filled in the formats.

Step 3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)

The CDI team was responsible for collecting data from the CFA:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet – CFA perspective.

The in-country team was responsible for collecting data from the SPO and from external respondents (except CFA). The following formats were sent before the fieldwork started:

- 5C Endline support to capacity sheet – SPO perspective.
- 5C Endline interview guides for externals: partners; OD consultants.

Step 4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team

The CDI team, in collaboration with the in-country team, collected the following documents from SPOs and CFAs:

- Project documents: project proposal, budget, contract (Note that for some SPOs there is a contract for the full MFS II period 2011-2015; for others there is a yearly or 2-yearly contract. All new contracts since the baseline in 2012 will need to be collected);
- Technical and financial progress reports since the baseline in 2012;.
- Mid-term evaluation reports;
- End of project-evaluation reports (by the SPO itself or by external evaluators);
- Contract intake forms (assessments of the SPO by the CFA) or organisational assessment scans made by the CFA that cover the 2011-2014 period;
- Consultant reports on specific inputs provided to the SPO in terms of organisational capacity development;
- Training reports (for the SPO; for alliance partners, including the SPO);
- Organisational scans/ assessments, carried out by the CFA or by the Alliance Assessments;
- Monitoring protocol reports, especially for the 5C study carried out by the MFS II Alliances;
- Annual progress reports of the CFA and of the Alliance in relation to capacity development of the SPOs in the particular country;
- Specific reports that are related to capacity development of SPOs in a particular country.

The following documents (since the baseline in 2012) were requested from SPO:

- Annual progress reports;
- Annual financial reports and audit reports;
- Organisational structure vision and mission since the baseline in 2012;
- Strategic plans;
- Business plans;
- Project/ programme planning documents;
- Annual work plan and budgets;
- Operational manuals;
- Organisational and policy documents: finance, human resource development, etc.;
- Monitoring and evaluation strategy and implementation plans;

- Evaluation reports;
- Staff training reports;
- Organisational capacity reports from development consultants.

The CDI team will code these documents in NVivo (qualitative data analysis software program) against the 5C indicators.

Step 5. Prepare and organise the field visit to the SPO – in-country team

Meanwhile the in-country team prepared and organised the logistics for the field visit to the SPO:

- **General endline workshop** consisted about one day for the self-assessments (about ½ to ¾ of the day) and brainstorm (about 1 to 2 hours) on key organisational capacity changes since the baseline and underlying interventions, factors and actors ('general causal map'), see also explanation below. This was done with the five categories of key staff: managers; project/ programme staff; monitoring and evaluation staff; admin & HRM staff; field staff. Note: for SPOs involved in process tracing an additional 1 to 1½ day workshop (managers; program/project staff; monitoring and evaluation staff) was necessary. See also step 7;
- **Interviews with SPO staff** (roughly one day);
- **Interviews with external respondents** such as partners and organisational development consultants depending on their proximity to the SPO. These interviews could be scheduled after the endline workshop and interviews with SPO staff.

General causal map

During the 5C endline process, a 'general causal map' has been developed, based on key organisational capacity changes and underlying causes for these changes, as perceived by the SPO. The general causal map describes cause-effect relationships, and is described both as a visual as well as a narrative.

As much as possible the same people that were involved in the baseline were also involved in the endline workshop and interviews.

Step 6. Interview the CFA – CDI team

The CDI team was responsible for sending the sheets/ formats to the CFA and for doing a follow-up interview on the basis of the information provided so as to clarify or deepen the information provided. This relates to:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet - CFA perspective.

Step 7. Run the endline workshop with the SPO – in-country team

This included running the endline workshop, including facilitation of the development of the general causal map, self-assessments, interviews and observations. Particularly for those SPOs that were selected for process tracing all the relevant information needed to be analysed prior to the field visit, so as to develop an initial causal map. Please see Step 6 and also the next section on process tracing (evaluation question two).

An endline workshop with the SPO was intended to:

- Explain the purpose of the fieldwork;
- Carry out in the self-assessments by SPO staff subgroups (unless these have already been filled prior to the field visits) - this may take some 3 hours.
- Facilitate a brainstorm on key organisational capacity changes since the baseline in 2012 and underlying interventions, factors and actors.

Purpose of the fieldwork: to collect data that help to provide information on what changes took place in terms of organisational capacity development of the SPO as well as reasons for these changes. The baseline that was carried out in 2012 was to be used as a point of reference.

Brainstorm on key organisational capacity changes and influencing factors: a brainstorm was facilitated on key organisational capacity changes since the baseline in 2012. In order to kick start the discussion, staff were reminded of the key findings related to the historical time line carried out in the baseline (vision, mission, strategies, funding, staff). This was then used to generate a discussion on key changes that happened in the organisation since the baseline (on cards). Then cards were selected that were related to organisational capacity changes, and organised. Then a 'general causal map' was developed, based on these key organisational capacity changes and underlying reasons for change as experienced by the SPO staff. This was documented as a visual and narrative. This general causal map was to get the story of the SPO on what they perceived as key organisational capacity changes in the organisation since the baseline, in addition to the specific details provided per indicator.

Self-assessments: respondents worked in the respective staff function groups: management; programme/ project staff; monitoring and evaluation staff; admin and HRM staff; field staff. Staff were assisted where necessary so that they could really understand what it was they were being asked to do as well as what the descriptions under each indicator meant.

Note: for those SPOs selected for process tracing an additional endline workshop was held to facilitate the development of detailed causal maps for each of the identified organisational change/ outcome areas that fall under the capability to act and commit, and under the capability to adapt and self-renew, and that are likely related to capacity development interventions by the CFA. See also the next section on process tracing (evaluation question two). It was up to the in-country team whether this workshop was held straight after the initial endline workshop or after the workshop and the follow-up interviews. It could also be held as a separate workshop at another time.

Step 8. Interview SPO staff – in-country team

After the endline workshop (developing the general causal map and carrying out self-assessments in subgroups), interviews were held with SPO staff (subgroups) to follow up on the information that was provided in the self-assessment sheets, and to interview staff that had not yet provided any information.

Step 9. Fill-in observation sheets – in-country team

During the visit at the SPO, the in-country team had to fill in two sheets based on their observation:

- 5C Endline observation sheet;
- 5C Endline observable indicators.

Step 10. Interview externals – in-country team & CDI team

The in-country team also needed to interview the partners of the SPO as well as organisational capacity development consultants that have provided support to the SPO. The CDI team interviewed the CFA.

Step 11. Upload and auto-code all the formats collected by in-country team and CDI team – CDI team

The CDI team was responsible for uploading and auto-coding (in Nvivo) of the documents that were collected by the in-country team and by the CDI team.

Step 12. Provide the overview of information per 5C indicator to in-country team – CDI team

After the analysis in NVivo, the CDI team provided a copy of all the information generated per indicator to the in-country team for initial analysis.

*Step 13. **Analyse the data and develop a draft description** of the findings per indicator and for the general questions – in-country team*

The in-country team provided a draft description of the findings per indicator, based on the information generated per indicator. The information generated under the general questions were linked to the general causal map or detailed process tracing related causal map.

*Step 14. **Analyse the data and finalize the description** of the findings per indicator, per capability and general – CDI team*

The CDI team was responsible for checking the analysis by the in-country team with the Nvivo generated data and to make suggestions for improvement and ask questions for clarification to which the in-country team responded. The CDI team then finalised the analysis and provided final descriptions and scores per indicator and also summarize these per capability and calculated the summary capability scores based on the average of all indicators by capability.

*Step 15. **Analyse the information** in the general causal map –in-country team & CDI team*

The general causal map based on key organisational capacity changes as perceived by the SPO staff present at the workshop, was further detailed by in-country team and CDI team, and based on the notes made during the workshop and where necessary additional follow up with the SPO. The visual and narrative was finalized after feedback by the SPO. During analysis of the general causal map relationships with MFS II support for capacity development and other factors and actors were identified. All the information has been reviewed by the SPO and CFA.

3. Attributing changes in partner organisation's capacity – evaluation question 2

This section describes the data collection and analysis methodology for answering the second evaluation question: **To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?**

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process. The box below provides some background information on process tracing.

Background information on process tracing

The essence of process tracing research is that scholars want to go beyond merely identifying correlations between independent variables (Xs) and outcomes (Ys). Process tracing in social science is commonly defined by its addition to trace causal mechanisms (Bennett, 2008a, 2008b; Checkle, 2008; George & Bennett, 2005). A causal mechanism can be defined as “a complex system which produces an outcome by the interaction of a number of parts” (Glennan, 1996, p. 52). Process tracing involves “attempts to identify the intervening causal process – the causal chain and causal mechanism – between an independent variable (or variables) and the outcome of the dependent variable” (George & Bennett, 2005, pp. 206-207).

Process tracing can be differentiated into three variants within social science: theory testing, theory building, and explaining outcome process tracing (Beach & Pedersen, 2013).

Theory testing process tracing uses a theory from the existing literature and then tests whether evidence shows that each part of hypothesised causal mechanism is present in a given case, enabling within case inferences about whether the mechanism functioned as expected in the case and whether the mechanism as a whole was present. No claims can be made however, about whether the mechanism was the only cause of the outcome.

Theory building process tracing seeks to build generalizable theoretical explanations from empirical evidence, inferring that a more general causal mechanism exists from the fact of a particular case.

Finally, explaining outcome process tracing attempts to craft a minimally sufficient explanation of a puzzling outcome in a specific historical case. Here the aim is not to build or test more general theories but to craft a (minimally) sufficient explanation of the outcome of the case where the ambitions are more case centric than theory oriented.

Explaining outcome process tracing is the most suitable type of process tracing for analysing the causal mechanisms for selected key organisational capacity changes of the SPOs. This type of process tracing can be thought of as a single outcome study defined as seeking the causes of the specific outcome in a single case (Gerring, 2006; in: Beach & Pedersen, 2013). Here the ambition is to craft a minimally sufficient explanation of a particular outcome, with sufficiency defined as an explanation that accounts for all of the important aspects of an outcome with no redundant parts being present (Mackie, 1965).

Explaining outcome process tracing is an iterative research strategy that aims to trace the complex conglomerate of systematic and case specific causal mechanisms that produced the outcome in question. The explanation cannot be detached from the particular case. Explaining outcome process tracing refers to case studies whose primary ambition is to explain particular historical outcomes, although the findings of the case can also speak to other potential cases of the phenomenon. Explaining outcome process tracing is an iterative research process in which ‘theories’ are tested to see whether they can provide a minimally sufficient explanation of the outcome. Minimal sufficiency is defined as an explanation that accounts for an outcome, with no redundant parts. In most explaining outcome studies, existing theorisation cannot provide a sufficient explanation, resulting in a second stage in which existing theories are re-conceptualised in light of the evidence gathered in the preceding empirical analysis. The conceptualisation phase in explaining outcome process tracing is therefore an iterative research process, with initial mechanisms re-conceptualised and tested until the result is a theorised mechanism that provides a minimally sufficient explanation of the particular outcome.

Below a description is provided of how SPOs are selected for process tracing, and a description is provided on how this process tracing is to be carried out. Note that this description of process tracing provides not only information on the extent to which the changes in organisational development can be attributed to MFS II (evaluation question 2), but also provides information on other contributing factors and actors (evaluation question 4). Furthermore, it must be noted that the evaluation team has developed an adapted form of ‘explaining outcome process tracing’, since the data collection and analysis was an iterative process of research so as to establish the most realistic explanation for a particular outcome/ organisational capacity change. Below selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

ETHIOPIA

For Ethiopia the capabilities that are mostly targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 1

The extent to which the Dutch NGO explicitly targets the following capabilities – Ethiopia

Capability to:	AMREF	CARE	ECFA	FSCE	HOA- REC	HUND EE	NVEA	OSRA	TTCA
Act and commit	5	4	5	5	5	3	4	4	3
Deliver on development objectives	2	1	1	1	2	1	1	2	1
Adapt and self-renew	4	2	3	4	2	5	3	3	3
Relate	3	1	2	2	3	2	1	3	1
Achieve coherence	2	2	1	1	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Ethiopia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: AMREF, ECFA, FSCE, HUNDEE. In fact, six SPOs would be suitable for process tracing. We just selected the first one per CFA following the criteria of not including more than one SPO per CFA for process tracing

Table 2

SPOs selected for process tracing – Ethiopia

Ethiopia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
AMREF	Dec 2015	Yes	Yes	Yes	Yes	AMREF NL	Yes
CARE	Dec 31, 2015	Partly	Yes	Yes	Yes – slightly	CARE Netherlands	No - not fully matching
ECFA	Jan 2015	Yes	Yes	Yes	Yes	Child Helpline International	Yes
FSCE	Dec 2015	Yes	Yes	Yes	Yes	Stichting Kinderpostzegels Netherlands (SKN); Note: no info from Defence for Children – ECPAT Netherlands	Yes
HOA-REC	Sustainable Energy project (ICCO Alliance): 2014 Innovative WASH (WASH Alliance): Dec 2015	Yes	Yes	Yes	Yes - slightly	ICCO	No - not fully matching
HUNDEE	Dec 2014	Yes	Yes	Yes	Yes	ICCO & IICD	Yes
NVEA	Dec 2015 (both)	Yes	Yes	Yes	Yes	Edukans Foundation (under two consortia); Stichting Kinderpostzegels Netherlands (SKN)	Suitable but SKN already involved for process tracing FSCE
OSRA	C4C Alliance project (farmers marketing): December 2014 ICCO Alliance project (zero grazing: 2014 (2 nd phase)	Yes	Yes	Yes	Yes	ICCO & IICD	Suitable but ICCO & IICD already involved for process tracing - HUNDEE
TTCA	June 2015	Partly	Yes	No	Yes	Edukans Foundation	No - not fully matching

INDIA

For India the capability that is mostly targeted by CFAs is the capability to act and commit. The next one in line is the capability to adapt and self-renew. See also the table below in which a higher score means that the specific capability is more intensively targeted.

Table 3

The extent to which the Dutch NGO explicitly targets the following capabilities – India⁹

Capability to:	BVHA	COUNT	DRISTI	FFID	Jana Vikas	Samar thak Samiti	SMILE	SDS	VTRC
Act and commit	5	3	4	4	4	4	4	3	5
Deliver on development objectives	1	5	1	1	1	1	1	2	1
Adapt and self-renew	2	2	1	3	1	1	4	1	4
Relate	3	1	1	1	1	1	2	1	2
Achieve coherence	1	1	1	4	1	1	1	1	2

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, India.

Below you can see a table describing when the contract with the SPO is to be ended and whether SPO and the CFA both expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BVHA, COUNT, FFID, SMILE and VTRC. Except for SMILE (capability to act and commit only), for the other SPOs the focus for process tracing can be on the capability to act and commit and on the capability to adapt and self-renew.

Table 4

SPOs selected for process tracing – India

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BVHA	2014	Yes	Yes	Yes	Yes	Simavi	Yes; both capabilities
COUNT	2015	Yes	Yes	Yes	Yes	Woorden Daad	Yes; both capabilities
DRISTI	31-03-2012	Yes	Yes	No	no	Hivos	No - closed in 2012
FFID	30-09-2014	Yes	Yes	Yes	Yes	ICCO	Yes

⁹ RGVN, NEDSF and Women's Rights Forum (WRF) could not be reached timely during the baseline due to security reasons. WRF could not be reached at all. Therefore these SPOs are not included in Table 1.

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew –by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Jana Vikas	2013	Yes	Yes	Yes	No	Cordaid	No - contract is and the by now; not fully matching focus
NEDSF							No – delayed baseline
RGVN							No - delayed baseline
Samarthak Samiti (SDS)	2013 possibly longer	Yes	Yes	Yes	No	Hivos	No - not certain of end date and not fully matching focus
Shivi Development Society (SDS)	Dec 2013 intention 2014	Yes	Yes	Yes	No	Cordaid	No - not fully matching focus
Smile	2015	Yes	Yes	Yes	Yes	Wilde Ganzen	Yes; first capability only
VTRC	2015	Yes	Yes	Yes	Yes	Stichting Red een Kind	Yes; both capabilities

INDONESIA

For Indonesia the capabilities that are most frequently targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 5

The extent to which the Dutch NGO explicitly targets the following capabilities – Indonesia

Capability to:	ASB	Daya ikologi	ECPAT	GSS	Lem bage Kita	Pt. PPMA	Rifka Annisa	WIIP	Yad upa	Yayasan Kelola	YPI	YRBI
Act and commit	4	4	4	5	4	4	5	3	3	2	5	4
Deliver on development objectives	1	1	1	2	2	1	2	1	1	1	1	1
Adapt and self-renew	3	1	2	4	2	3	4	4	1	1	4	3
Relate	1	1	2	3	3	2	1	2	2	2	3	2
Achieve coherence	1	1	1	2	1	1	2	2	1	1	2	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Indonesia.

The table below describes when the contract with the SPO is to be ended and whether both SPO and the CFA expect to focus on these two selected capabilities (MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: ASB, ECPAT, Pt.PPMA, YPI, YRBI.

Table 6

SPOs selected for process tracing – Indonesia

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
ASB	February 2012; extension Feb,1, 2013 – June,30, 2016	Yes	Yes	Yes	Yes	Hivos	Yes
Dayakologi	2013; no extension	Yes	Yes	Yes	No	Cordaid	No: contract ended early and not matching enough
ECPAT	August 2013; Extension Dec 2014	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	Yes
GSS	31 December 2012; no extension	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	No: contract ended early
Lembaga Kita	31 December 2012; no extension	Yes	Yes	No	Yes	Free Press Unlimited - Mensen met een Missie	No - contract ended early
Pt.PPMA	May 2015	Yes	Yes	No	Yes	IUCN	Yes, capability to act and commit only
Rifka Annisa	Dec, 31 2015	No	Yes	No	Yes	Rutgers WPF	No - no match between expectations CFA and SPO
WIIP	Dec 2015	Yes	Not MFS II	Yes	Not MFS II	Red Cross	No - Capacity development interventions are not MFS II financed. Only some overhead is MFS II

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Yayasan Kelola	Dec 30, 2013; extension of contract being processed for two years (2014-2015)	Yes	Not really	Yes	Not really	Hivos	No - no specific capacity development interventions planned by Hivos
YPI	Dec 31, 2015	Yes	Yes	Yes	Yes	Rutgers WPF	Yes
YRBI	Oct, 30, 2013; YRBI end of contract from 31st Oct 2013 to 31st Dec 2013. Contract extension proposal is being proposed to MFS II, no decision yet.	Yes	Yes	Yes	Yes	ICCO	Yes
Yadupa	Under negotiation during baseline; new contract 2013 until now	Yes	Nothing committed	Yes	Nothing committed	IUCN	No, since nothing was committed by CFA

LIBERIA

For Liberia the situation is arbitrary which capabilities are targeted most CFA's. Whilst the capability to act and commit is targeted more often than the other capabilities, this is only so for two of the SPOs. The capability to adapt and self-renew and the capability to relate are almost equally targeted for the five SPOs, be it not intensively. Since the capability to act and commit and the capability to adapt and self-renew are the most targeted capabilities in Ethiopia, India and Indonesia, we choose to focus on these two capabilities for Liberia as well. This would help the synthesis team in the further analysis of these capabilities related to process tracing. See also the table below.

Table 7

The extent to which the Dutch NGO explicitly targets the following capabilities – Liberia

Capability to:	BSC	DEN-L	NAWOCOL	REFOUND	RHRAP
Act and commit	5	1	1	1	3
Deliver on development objectives	3	1	1	1	1
Adapt and self-renew	2	2	2	2	2
Relate	1	2	2	2	2
Achieve coherence	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Liberia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Also, for two of the five SPOs capability to act and commit is targeted more intensively compared to the other capabilities. Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BSC and RHRAP.

Table 8

SPOs selected for process tracing – Liberia

Liberia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BSC	Dec 31, 2015	Yes	Yes	Yes	Yes	SPARK	Yes
DEN-L	2014	No	No	Unknown	A little	ICCO	No – not matching enough
NAWOCOL	2014	Yes	No	No	A little	ICCO	No – not matching enough
REFOUND	At least until 2013 (2015?)	Yes	No	Yes	A little	ICCO	No – not matching enough
RHRAP	At least until 2013 (2014?)	Yes	Yes	Yes	Yes	ICCO	Yes

Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ' general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

Some definitions of the terminology used for this MFS II 5c evaluation

Based upon the different interpretations and connotations the use of the term causal mechanism we use the following terminology for the remainder of this paper:

A **detailed causal map** (or **model of change**) = the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change.

A **causal mechanism** = is the combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome (Beach and Pedersen, 2013, p. 176).

Part or cause = one actor with its attributes carrying out activities/ producing outputs that lead to change in other parts. The final part or cause is the change/ outcome.

Attributes of the actor = specificities of the actor that increase his chance to introduce change or not such as its position in its institutional environment.

*Step 1. Identify the **planned MFS II supported capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

Chapter 4.1 and 4.2 in the baseline report were reviewed. Capacity development interventions as planned by the CFA for the capability to act and commit and for the capability to adapt and self-renew were described and details inserted in the summary format. This provided an overview of the capacity development activities that were originally planned by the CFA for these two capabilities and assisted in focusing on relevant outcomes that are possibly related to the planned interventions.

*Step 2. Identify the **implemented capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

The input from the CFA was reviewed in terms of what capacity development interventions have taken place in the MFS II period. This information was be found in the 'Support to capacity development sheet - endline - CFA perspective' for the SPO, based on details provided by the CFA and further discussed during an interview by the CDI team.

The CFA was asked to describe all the MFS II supported capacity development interventions of the SPO that took place during the period 2011 up to now. The CDI team reviewed this information, not only the interventions but also the observed changes as well as the expected long-term changes, and

then linked these interventions to relevant outcomes in one of the capabilities (capability to act and commit; and capability to adapt and self-renew).

*Step 3. Identify **initial changes/ outcome areas** in these two capabilities – by CDI team & in-country team*

The CDI team was responsible for coding documents received from SPO and CFA in NVivo on the following:

- 5C Indicators: this was to identify the changes that took place between baseline and endline. This information was coded in Nvivo.
- Information related to the capacity development interventions implemented by the CFA (with MFS II funding) (see also Step 2) to strengthen the capacity of the SPO. For example, the training on financial management of the SPO staff could be related to any information on financial management of the SPO. This information was coded in Nvivo.

In addition, the response by the CFA to the changes in 5C indicators format, was auto-coded.

The in-country team was responsible for timely collection of information from the SPO (before the fieldwork starts). This set of information dealt with:

- MFS II supported capacity development interventions during the MFS II period (2011 until now).
- Overview of all trainings provided in relation to a particular outcome areas/organisational capacity change since the baseline.
- For each of the identified MFS II supported trainings, training questionnaires have been developed to assess these trainings in terms of the participants, interests, knowledge and skills gained, behaviour change and changes in the organisation (based on Kirkpatrick's model), one format for training participants and one for their managers. These training questionnaires were sent prior to the field visit.
- Changes expected by SPO on a long-term basis ('Support to capacity development sheet - endline - SPO perspective').

For the selection of change/ outcome areas the following criteria were important:

- The change/ outcome area is in one of the two capabilities selected for process tracing: capability to act and commit or the capability to adapt and self-renew. This was the first criteria to select upon.
- There was a likely link between the key organisational capacity change/ outcome area and the MFS II supported capacity development interventions. This also was an important criteria. This would need to be demonstrated through one or more of the following situations:
 - In the 2012 theory of change on organisational capacity development of the SPO a link was indicated between the outcome area and MFS II support;
 - During the baseline the CFA indicated a link between the planned MFS II support to organisational development and the expected short-term or long-term results in one of the selected capabilities;
 - During the endline the CFA indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities;
 - During the endline the SPO indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities.

Reviewing the information obtained as described in Step 1, 2, and 3 provided the basis for selecting key organisational capacity change/ outcome areas to focus on for process tracing. These areas were to be formulated as broader outcome areas, such as 'improved financial management', 'improved monitoring and evaluation' or 'improved staff competencies'.

Note: the outcome areas were to be formulated as intermediates changes. For example: an improved monitoring and evaluation system, or enhanced knowledge and skills to educate the target group on

climate change. Key outcome areas were also verified - based on document review as well as discussions with the SPO during the endline.

*Step 4. Construct the **detailed, initial causal map** (theoretical model of change) – CDI & in-country team*

A detailed initial causal map was developed by the CDI team, in collaboration with the in-country team. This was based on document review, including information provided by the CFA and SPO on MFS II supported capacity development interventions and their immediate and long-term objectives as well as observed changes. Also, the training questionnaires were reviewed before developing the initial causal map. This detailed initial causal map was to be provided by the CDI team with a visual and related narrative with related references. This initial causal map served as a reference point for further reflection with the SPO during the process tracing endline workshop, where relationships needed to be verified or new relationships established so that the second (workshop-based), detailed causal map could be developed, after which further verification was needed to come up with the final, concluding detailed causal map.

It's important to note that organisational change area/ outcome areas could be both positive and negative.

For each of the selected outcomes the team needed to make explicit the theoretical model of change. This meant finding out about the range of different actors, factors, actions, and events etc. that have contributed to a particular outcome in terms of organisational capacity of the SPO.

A model of change of good quality includes:

- The causal pathways that relate the intervention to the realised change/ outcome;
- Rival explanations for the same change/ outcome;
- Assumptions that clarify relations between different components or parts;
- Case specific and/or context specific factors or risks that might influence the causal pathway, such as for instance the socio-cultural-economic context, or a natural disaster;
- Specific attributes of the actors e.g. CFA and other funders.

A model of change (within the 5C study called a 'detailed causal map') is a complex system which produces intermediate and long-term outcomes by the interaction of other parts. It consists of parts or causes that often consist of one actor with its attributes that is implementing activities leading to change in other parts (Beach & Pedersen, 2013). A helpful way of constructing the model of change is to think in terms of actors carrying out activities that lead to other actors changing their behaviour. The model of change can be explained as a range of activities carried out by different *actors* (including the CFA and SPO under evaluation) that will ultimately lead to an outcome. Besides this, there are also '*structural*' elements, which are to be interpreted as external factors (such as economic conjuncture); and *attributes* of the actor (does the actor have the legitimacy to ask for change or not, what is its position in the sector) that should be looked at (Beach & Pedersen, 2013). In fact Beach and Pedersen, make a fine point about the subjectivity of the actor in a dynamic context. This means, in qualitative methodologies, capturing the changes in the actor, acted upon area or person/organisation, in a non sequential and non temporal format. Things which were done recently could have corrected behavioural outcomes of an organisation and at the same time there could be processes which incrementally pushed for the same change over a period of time. Beach and Pedersen espouse this methodology because it captures change in a dynamic fashion as against the methodology of logical framework. For the MFS II evaluation it was important to make a distinction between those paths in the model of change that are the result of MFS II and rival pathways.

The construction of the model of change started with the identified key organisational capacity change/ outcome, followed by an inventory of all possible subcomponents that possibly have caused the change/ outcome in the MFS II period (2011-up to now, or since the baseline). The figure below presents an imaginary example of a model of change. The different colours indicate the different types of support to capacity development of the SPO by different actors, thereby indicating different pathways of change, leading to the key changes/ outcomes in terms of capacity development (which in this case indicates the ability to adapt and self-renew).

Figure 1 An imaginary example of a model of change

Step 5. Identify **types of evidence** needed to verify or discard different causal relationships in the model of change – in-country teams with support from CDI team

Once the causal mechanism at theoretical level were defined, empirical evidence was collected so as to verify or discard the different parts of this theoretical model of change, confirm or reject whether subcomponents have taken place, and to find evidence that confirm or reject the causal relations between the subcomponents.

A key question that we needed to ask ourselves was, "What information do we need in order to confirm or reject that one subcomponent leads to another, that X causes Y?". The evaluation team needed to agree on what information was needed that provides empirical manifestations for each part of the model of change.

There are four distinguishable types of evidence that are relevant in process tracing analysis: *pattern*, *sequence*, *trace*, and *account*. Please see the box below for descriptions of these types of evidence.

The evaluation team needed to agree on the types of evidence that was needed to verify or discard the manifestation of a particular part of the causal mechanism. Each one or a combination of these different types of evidence could be used to confirm or reject the different parts of the model of change. This is what is meant by robustness of evidence gathering. Since causality as a concept can bend in many ways, our methodology, provides a near scientific model for accepting and rejecting a particular type of evidence, ignoring its face value.

Types of evidence to be used in process tracing

Pattern evidence relates to predictions of statistical patterns in the evidence. For example, in testing a mechanism of racial discrimination in a case dealing with employment, statistical patterns of employment would be relevant for testing this part of the mechanism.

Sequence evidence deals with the temporal and spatial chronology of events predicted by a hypothesised causal mechanism. For example, a test of the hypothesis could involve expectations of the timing of events where we might predict that if the hypothesis is valid, we should see that the event B took place after event A took place. However, if we found that event B took place before event A took place, the test would suggest that our confidence in the validity of this part of the mechanism should be reduced (disconfirmation/ falsification).

Trace evidence is evidence whose mere existence provides proof that a part of a hypothesised mechanism exists. For example, the existence of the minutes of a meeting, if authentic ones, provide strong proof that the meeting took place.

Account evidence deals with the content of empirical material, such as meeting minutes that detail what was discussed or an oral account of what took place in the meeting.

Source: Beach and Pedersen, 2013

Below you can find a table that provides guidelines on what to look for when identifying types of evidence that can confirm or reject causal relationships between different parts/ subcomponents of the model of change. It also provides one example of a part of a causal pathway and what type of information to look for.

Table 9

Format for identifying types of evidence for different causal relationships in the model of change (example included)

Part of the model of change	Key questions	Type of evidence needed	Source of information
Describe relationship between the subcomponents of the model of change	Describe questions you would like to answer so as to find out whether the components in the relationship took place, when they took place, who was involved, and whether they are related	Describe the information that we need in order to answer these questions. Which type of evidence can we use in order to reject or confirm that subcomponent X causes subcomponent Y? Can we find this information by means of : Pattern evidence; Sequence evidence; Trace evidence; Account evidence?	Describe where you can find this information
Example: Training workshops on M&E provided by MFS II funding and other sources of funding	Example: What type of training workshops on M&E took place? Who was trained? When did the training take place? Who funded the training? Was the funding of training provided before the training took place? How much money was available for the training?	Example: Trace evidence: on types of training delivered, who was trained, when the training took place, budget for the training Sequence evidence on timing of funding and timing of training Content evidence: what the training was about	Example: Training report SPO Progress reports Interviews with the CFA and SPO staff Financial reports SPO and CFA

Please note that for practical reasons, the 5C evaluation team decided that it was easier to integrate the specific questions in the narrative of the initial causal map. These questions would need to be

addressed by the in country team during the process tracing workshop so as to discover, verify or discard particular causal mechanisms in the detailed, initial causal map. Different types of evidence was asked for in these questions.

*Step 6. **Collect data** to verify or discard causal mechanisms and develop workshop-based, detailed causal map – in-country team*

Once it was decided by the in-country and CDI evaluation teams what information was to be collected during the interaction with the SPO, data collection took place. The initial causal maps served as a basis for discussions during the endline workshop with a particular focus on process tracing for the identified organisational capacity changes. But it was considered to be very important to understand from the perspective of the SPO how they understood the identified key organisational capacity change/outcome area has come about. A new detailed, workshop-based causal map was developed that included the information provided by SPO staff as well as based on initial document review as described in the initial detailed causal map. This information was further analysed and verified with other relevant information so as to develop a final causal map, which is described in the next step.

*Step 7. **Assess the quality of data and analyse data**, and develop the **final detailed causal map (model of change)** – in-country team and CDI team*

Quality assurance of the data collected and the evidence it provides for rejecting or confirming parts of causal explanations are a major concern for many authors specialised in contribution analysis and process-tracing. Stern et al. (2012), Beach and Pedersen (2013), Lemire, Nielsen and Dybdal (2012), Mayne (2012) and Delahais and Toulemonde (2012) all emphasise the need to make attribution/contribution claims that are based on pieces of evidence that are rigorous, traceable, and credible. These pieces of evidence should be as explicit as possible in proving that *subcomponent X causes subcomponent Y* and ruling out other explanations. Several tools are proposed to check the nature and the quality of data needed. One option is, Delahais and Toulemonde's Evidence Analysis Database, which we have adapted for our purpose.

Delahais and Toulemonde (2012) propose an Evidence Analysis Database that takes into consideration three criteria:

Confirming/ rejecting a causal relation (yes/no);

Type of causal mechanism: intended contribution/ other contribution/ condition leading to intended contribution/ intended condition to other contribution/ feedback loop;

Strength of evidence: strong/ rather strong/ rather weak/ weak.

We have adapted their criteria to our purpose. The in-country team, in collaboration with the CDI team, used the criteria in assessing whether causal relationships in the causal map, were strong enough. This has been more of an iterative process trying to find additional evidence for the established relationships through additional document review or contacting the CFA and SPO as well as getting their feedback on the final detailed causal map that was established. Whilst the form below has not been used exactly in the manner depicted, it has been used indirectly when trying to validate the information in the detailed causal map. After that, the final detailed causal map is established both as a visual as well as a narrative, with related references for the established causal relations.

<i>Example format for the adapted evidence analysis database (example included)</i> Description of causal relation	Confirming/ rejecting a causal relation (yes/no)	Type of information providing the background to the confirmation or rejection of the causal relation	Strength of evidence: strong/ rather strong/ rather weak/ weak	Explanation for why the evidence is (rather) strong or (rather) weak, and therefore the causal relation is confirmed/ rejected
e.g. Training staff in M&E leads to enhanced M&E knowledge, skills and practice	e.g. Confirmed	e.g. Training reports confirmed that staff are trained in M&E and that knowledge and skills increased as a result of the training		

Step 8. **Analyse and conclude** on findings– in-country team and CDI team

The final detailed causal map was described as a visual and narrative and this was then analysed in terms of the evaluation question two and evaluation question four: "To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?" and "What factors explain the findings drawn from the questions above?" It was analysed to what extent the identified key organisational capacity change can be attributed to MFS II supported capacity development interventions as well as to other related factors, interventions and actors.

4. Explaining factors – evaluation question 4

This paragraph describes the data collection and analysis methodology for answering the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This has been explained in the first section of this appendix. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information was procured for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the process of process tracing as described in the section above.

5. Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team.

Use of the 5 core capabilities framework and qualitative approach: this has proven to a be very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in

the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
- Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
- Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a

result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

Appendix 2 Background information on the five core capabilities framework

The 5 capabilities (5C) framework was to be used as a framework for the evaluation of capacity development of Southern Partner Organisations (SPOs) of the MFS II consortia. The 5C framework is based on a five-year research program on 'Capacity, change and performance' that was carried out by the European Centre for Development Policy Management (ECDPM). The research included an extensive review of the literature and sixteen case studies. The 5C framework has also been applied in an IOB evaluation using 26 case studies in 14 countries, and in the baseline carried out per organisation by the MFS II organisations for the purpose of the monitoring protocol.

The 5C framework is structured to understand and analyse (changes in) the capacity of an organization to deliver (social) value to its constituents. This introduction briefly describes the 5C framework, mainly based on the most recent document on the 5C framework (Keijzer et al., 2011).

The 5C framework sees capacity as an **outcome** of an **open system**. An organisation or collaborative association (for instance a network) is seen as a system interacting with wider society. The most critical practical issue is to ensure that relevant stakeholders share a common way of thinking about capacity and its core constituents or capabilities. Decisive for an organisation's capacity is the context in which the organisation operates. This means that **understanding context issues** is crucial. The use of the 5C framework requires a multi-stakeholder approach because shared values and results orientation are important to facilitate the capacity development process. The 5C framework therefore needs to **accommodate the different visions** of stakeholders and conceive different strategies for raising capacity and improving performance in a given situation.

The 5C framework defines capacity as '**producing social value**' and identifies five core capabilities that together result in that overall capacity. Capacity, capabilities and competences are seen as follows:

Capacity is referred to as the overall ability of an organisation or system to create value for others;

Capabilities are the collective ability of a group or a system to do something either inside or outside the system. The collective ability involved may be technical, logistical, managerial or generative (i.e. the ability to earn legitimacy, to adapt, to create meaning, etc.);

Competencies are the energies, skills and abilities of individuals.

Fundamental to developing capacity are inputs such as human, material and financial resources, technology, and information. To the degree that they are developed and successfully integrated, capabilities contribute to the overall capacity or ability of an organisation or system to create value for others. A single capability is not sufficient to create capacity. All are needed and are strongly interrelated and overlapping. Thus, to achieve its development goals, the 5C framework says that every organisation or system must have **five basic capabilities**:

- The capability to act and commit;
- The capability to deliver on development objectives;
- The capability to adapt and self-renew;
- The capability to relate (to external stakeholders);
- The capability to achieve coherence.

In order to have a common framework for evaluation, the five capabilities have been reformulated in outcome domains and for each outcome domain performance indicators have been developed.

There is some overlap between the five core capabilities but together the five capabilities result in a certain level of capacity. Influencing one capability may have an effect on one or more of the other

capabilities. In each situation, the level of any of the five capabilities will vary. Each capability can become stronger or weaker over time.

Appendix 3 Changes in organisational capacity of the SPO - 5C indicators

Below you will find a description for each of the indicators under each of the capabilities, what the situation is as assessed during the endline, how this has changed since the baseline and what are the reasons for change.

Capability to act and commit

Level of Effective Leadership

1.1. Responsive leadership: 'Leadership is responsive, inspiring, and sensitive'

This is about leadership within the organisation (operational, strategic). If there is a larger body then you may also want to refer to leadership at a higher level but not located at the local organisation.

The current leader has now been leading the organization for four years and as the years passed the staff has become more free to express their opinions. The leader is open to the opinions and suggestions related to the projects whenever that is needed. He can give guidance and provide necessary support whenever asked for. Staff can express their views regarding the programme's activities and aspirations to the leader during staff meetings or stop by and discuss this with him personally. Opinions of staff are considered when the leadership makes decisions. Management level decisions are openly shared and communicated with staff. The present leader is responsive, efficient, vocal and genuine in expressing his vision. He also has concern for NEDSSS's partners and his wider vision ensures that partners are made aware of changes in the external environment, e.g. with regard to changes in the law. The leader gives freedom to project staff to plan and decide on project implementation as long as staff take into account the project's proposal and budget. During the endline process, the in evaluation team observed that the endline workshop was carried out in a democratic and participatory way. The director gave space to the staff to express their views. The present Governing Body members have many years of experience in the field of development. Their interaction with the leader keeps him up to date and creative. As the organisation is a coordinating body for 15 partners, they always have to be a step ahead. They do this by constant capacity building of the organisation.

Score baseline: 2.5

Score endline: 3 (slight improvement)

1.2. Strategic guidance: 'Leaders provide appropriate strategic guidance (strategic leader and operational leader)'

This is about the extent to which the leader(s) provide strategic directions

During the baseline in May 2013, the leader was still new and partners were still in the process of settling down to his style of functioning. Now, the leader provides strategic guidance to both NEDSSS staff as well as its 15 partner organisations. There is an increased focus on developing the capacities of the partner organisations by organising workshops on legal and financial documentation and sharing of knowledge related to the FCRA and Indian tax laws. The leader has worked in the development sector for more than 14 years and has pastoral, administrative and teaching experience. He is known among the people of the region as well as the leaders of the partner organisations and other institutions. While during the baseline there were ideas of developing a second line of leaders, now the positions chief programme coordinator and programme coordinator have been introduced to

strengthen this second line leadership. Furthermore, there is an institutional culture of following written documents and customary practices. For example the experienced Governing Board provides guidance to the director through increased interaction in meetings with the Governing Board and General Body. General Body Meetings are regular and proper minutes are being taken. There are discussions on which projects to undertake and on utilisation of resources among the leader and the staff. Staff are actively involved in the planning process of new interventions and undertakings. Leadership is receiving positive responses on his functioning from the partner organisations.

Score baseline: 2.0

Score endline: 2.5 (slight improvement)

1.3. Staff turnover: 'Staff turnover is relatively low'

This is about staff turnover.

During the baseline in 2013 staff turnover was high.

Now NEDSSS has less staff working permanently at the organisations. In 2013 they have started working with social work trainees as interns and they continue to work with project related staff that are only hired for the project. No staff has left the organisation since the baseline in May 2013. Having worked at NEDSSS, staff are valued better when they apply for a job elsewhere. Staff that stay with the organisation do so because their work is related to their qualification in social work and this gives them job satisfaction. The salary is rather decent and staff benefits have been introduced. Staff are now rewarded for their extra hours and input when they provide extra services to partners or other organisations. The Staff Welfare fund has increased in July 2014; staff is now contributing 540 INR a month (first 200 INR) and the organisation contributes 540 INR (200 INR before). Health insurance for staff has been introduced in 2013.

Score baseline: 2.0

Score endline: 3.0 (improvement)

Level of realistic strategic planning

1.4. Organisational structure: 'Existence of clear organisational structure reflecting the objectives of the organisation'

Observable indicator: Staff have copy of org structure and understand this

The organisation still has a well-defined and documented organogram in the HR policy. All the staff members are aware of the organisational structure. The Executive Director reports to a Governing Board and General Body. He is assisted by an Assistant Director who in turn is supported by a Programme Coordinator.

Score baseline: 4.0

Score endline: 4.0 (no change)

1.5. Articulated strategies: 'Strategies are articulated and based on good situation analysis and adequate M&E'

Observable indicator: strategies are well articulated. Situation analysis and monitoring and evaluation are used to inform strategies.

NEDSSS continues to base its strategies on its M&E findings (in case of the Capacity Building Project) and good situational analysis and learnings from previous experience (in case of the Peace Initiative project). In the Capacity Building of DSSS Phase III project, NEDSSS articulated its strategies based on the final evaluation of the second phase of the same project. The third phase of this project has ended in September 2012 and a new phase was started in October 2012. They continue to work on the capacity building needs that were identified for all the dioceses: common training for all DSSS (on e.g. system and policy development), customised trainings for individual dioceses (on e.g. team

building) and trainings based on the needs of sub-regions (based on location, issues or language). One of the other large projects that NEDSSS is working on is the Peace Initiative project. Based on the successes and learning of their past project "Research Study on Traditional Conflict Management Practices of three tribes of the North East", NEDSSS with its partner organisations has proposed the project "Peace Initiative in North East India." This project builds upon the first project and is reaching out to new areas and people. The main strategies of this project are: increase resilience of communities through greater understanding and interaction of co-inhabiting tribes and strengthened knowledge of rights and entitlements; sensitization, capacity and skill building to let communities develop and engage in peace building process and partners and other peace enablers like peace activist, professionals and media will improve their emergency understanding, skills and practices.

NEDSSS is now framing its strategies to tap into the Government and corporate sector resources and towards sustainability. The Revised Strategic Plan Document of 2009 has not been revised since 2009.

Score baseline: 3.0

Score endline: 3.0 (no change)

Level of translation of strategy into operations

1.6.Daily operations: 'Day-to-day operations are in line with strategic plans'

This is about the extent to which day-to-day operations are aligned with strategic plans.

The day to day operations continue to be in line with strategic plans. There is proper delegation of responsibilities to the concerned staff and they are exactly aware of their roles. The activities are planned on a yearly, half yearly, quarterly and monthly basis, based on project plans and their budget allocations. Regarding the strategic plan of the organization (last reviewed in 2009) this has to be revised as early as possible so that the organization can go along with the changing trends and needs of the regions.

Score baseline: 4.0

Score endline: 4.0 (no change)

Level of Staff Capacity and Motivation

1.7.Staff skills: 'Staff have necessary skills to do their work'

This is about whether staff have the skills necessary to do their work and what skills they might they need.

There has been a slight improvement in this indicator. In general, staff have the necessary skills to do their work. Some of the gaps that were identified in the baseline evaluation have been addressed. The leader has ample pastoral, administrative and teaching experience and has been working in the development sector for more than 14 years. Staff has received training on gender policy development from 27th to 29th of May 2014 and personality development from 19th to 21st of August 2013. Staff training on financial management was organised on different intervals before and after the baseline in May 2013. Staff that is hired is qualified and experienced in the social sector. While during the baseline there was a lack of institutionalised sharing of learning from trainings, staff now share what they have learned after attending a training session, during the monthly staff meetings. Staff feel confident and capable to conduct trainings and workshops themselves for the partner organisations. In order to deal with the decreasing funding situation, NEDSSS has trained their staff in writing project proposals, in showcasing their work, preparing legal and financial documents as per the changes in the FCRA rules and streamlining its work in accordance with the demand of CSR rules. If NEDSSS wants to become a resource centre that develops modules and conducts pilot projects that can be replicated by partners, staff need to improve their skills on research methodology and technical skills of data collection, analysis and building research questionnaires.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

1.8. Training opportunities: 'Appropriate training opportunities are offered to staff'

This is about whether staff at the SPO are offered appropriate training opportunities

Staff at NEDSSS continue to receive quite a lot of opportunities for training both on programme content (such as peace building) as well as organisational development skills (like strategy development). The following trainings, workshops and exposure visits were conducted since the baseline in 2013:

- Exposure visits for Health Coordinators to Vellore CHAD from 1st- 8th February 2013;
- Personality development workshop was organized for staff members from 19th to 21st of August 2013;
- Training on gender policy development from 27th to 29th of May 2014;
- NEDSSS's Capacity Building Team leader was sent to Hyderabad for almost a month long training on 'Community Driven Development' from 7th-31st January 2013.
- The Chief Coordinator was sent for training on the 'Community College' Concept, from 11 to 16 of June 2013 and to a training on 'Research Methodology' conducted by NERD from 9th-15th March 2013
- Project based training on Documentation Skills was offered to staff supported by Indo-Global Social Service Society (IGSSS) from 27th to 28th February 2014.

It is unclear whether issues in selecting the right candidates for training were solved. During the baseline often staff members that were well versed in English or Hindi were sent for the training. As a result, sometimes the eligible participants (for whom the training is meant) could not attend the training.

Score baseline: 3.5

Score endline: 3.5 (no change)

1.9.1. Incentives: 'Appropriate incentives are in place to sustain staff motivation'

This is about what makes people want to work here. Incentives could be financial, freedom at work, training opportunities, etc.

During the baseline in May 2013 there already was a variety of benefits mentioned in the human resource policy manual. The Staff Welfare fund has increased in July 2014; staff is now contributing 540 INR a month (first 200 INR) and the organisation contributes 540 INR (200 INR before). Health insurance for staff has been introduced in 2013. The salary is rather decent and staff are now rewarded for their extra hours and input when they provide extra services to partners or other organisations. Incentives in terms of skill building of the staff through training programs and exposure visits are in place to keep the staff motivated. Having worked at NEDSSS, staff are valued better when they apply for a job elsewhere. Staff that stay with the organisation do so because their work is related to their qualification in social work and this gives them job satisfaction.

Score baseline: 3.0

Score endline: 3.25 (very slight improvement)

Level of Financial Resource Security

1.9.2. Funding sources: 'Funding from multiple sources covering different time periods'

This is about how diversified the SPOs funding sources are over time, and how the level of funding is changing over time.

Changes in the donor environment have triggered the organisation to explore new funding sources. Cordaid was funding NEDSSS up to 31st of May 2014. With increased surveillance by the government over foreign funding, tapping domestic funding sources has become necessary. Towards that end, NEDSSS has focused on streamlining its work, improving its legal and financial documentation and capabilities of their staff. NEDSSS has started to strengthen the capacity of their partner organisation

in mobilising funds from government departments, semi-government departments and the corporate sector (through CSR). NEDSSS does the dissemination of Caritas India's policy on Local Fund Mobilisation to its partners to implement the institutional Local Resource Mobilisation policy for all partner organisations.

Currently NEDSSS receives funding for different projects from the following funders:

- Caritas India is funding a project that supports 5 of NEDSSS's partner organisation to tap government resources.
- Shelter Project for Rickshaw Pullers is funded by IGSSS;
- Professionalising Actors of Church Ministry is funded by Missio München;
- Facilitating Regional Exercise towards an Effective Church in North East India is funded by Missio Aachen;
- The Income Generation Programme on financial empowerment of 80 families below poverty line is funded by Raskob Foundation;
- Community Health in Assam and Rural Meghalaya (CHARM) programme is funded by the World Bank;
- KINDERMISSIONWERK funds NEDSSS's work on education; the "Bridge school project for tribal children in Kamrarup District."
- Nursery Teacher Training for pre-primary and primary school teachers is funded by Advance Information in Early Childhood Care & Education, New Delhi;
- St. Peter Claver Foundation, MISEREOR, UNICEF, Dreikönigsaktion, Manos Unidas Spain are also funding NEDSSS's work.
- World Bank: NEDSSS is the Awardee of "World Bank India Development Market Grand Award 2014"
- Caritas Denmark funds " Capacity building, coordination and advocacy for Civil Society Organizations in NE India".

In total NEDSSS is funded by 15 funders compared to 8 during the baseline in May 2013. 12 new projects are in the pipeline after the Director travelled to Europe at the end of 2014.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

1.9.3.Funding procedures: 'Clear procedures for exploring new funding opportunities'

This is about whether there are clear procedures for getting new funding and staff are aware of these procedures.

The organisation still has no clear procedure for exploring new funding opportunities. However, individual staff makes use of their knowledge and have their own methods and procedures for funding. During the baseline there were discussions about hiring a dedicated staff member who would explore opportunities and write proposals. This person is now hired and dedicates most of his time to project proposal writing. NEDSSS similar to other organisations has to work towards bidding for new projects. Shrinking of foreign funding has led to increased competition with other organisations working in the same field. NEDSSS has trained their staff in writing project proposals, in showcasing their work, preparing legal and financial documents as per the changes in the FCRA rules and streamlining its work in accordance with the demand of CSR requirements. NEDSSS has initiated dialogues with departments and organizations such as IFAD, UNDP, UNICEF, NABARD, IIE, State Institute of Rural Development of Assam (SIRD) and other international donors.

Score baseline: 2.5

Score endline: 3.0 (slight improvement)

Summary of capability to act and commit

The current leader has now been leading the organization for four years and as the years passed the staff has become more free to express their opinions. He also has concern for NEDSSS's partners and his wider vision ensures that partners are made aware of changes in the external environment, e.g.

with regard to changes in the law. The present Governing Body members have many years of experience in the field of development and their interaction with the leader keeps him up to date and creative. The leader has streamlined operations of the organisation by putting systems in place to streamline the work of NEDSSS so that it is governed professionally. With the introduction of positions like chief programme coordinator, second line leadership will be developed. The leader provides strategic guidance to both NEDSSS staff as well as its 15 partner organisations. There is an increased focus on developing the capacities of the partner organisations by organising workshops on legal and financial documentation. The leader has ample pastoral, administrative and teaching experience and has been working in the development sector for more than 14 years. The Governing Board provides guidance to the director through increased meetings of which proper minutes are taken. Staff are actively involved in the planning process and leadership is receiving positive responses on his functioning from the partner organisations. NEDSSS has less permanent staff as they work with interns and project related staff. After the baseline in May 2013 no staff has left the organisation. Staff has stayed have access to an increased Staff Welfare fund, health insurance and a rather decent salary. NEDSSS continues to base its strategies on its M&E findings (in case of the Capacity Building Project) and good situational analysis and learnings from previous experience (in case of the Peace Initiative project). The Revised Strategy Document from 2009 has, has to be revised as early as possible so that the organisation can go along with the changing trend and needs of the regions. The day to day operations continue to be in line with strategic plans. The organisation still has a well-defined and documented organogram in the HR policy that all staff members are aware of. In general, staff have the necessary skills to do their work. Staff has been trained in financial management (on different intervals both before and after May 2013), gender policy development (May 2014), and personality development (August 2013). Staff now share what they have learned after attending a training session, during the monthly staff meetings. If NEDSSS wants to become a resource centre that develops modules and conducts pilot projects that can be replicated by partners, staff needs to improve their skills on research methodology. Staff at NEDSSS continue to receive quite a lot of opportunities for training both on programme content as well as organisational development skills. It is unclear whether issues in selecting the right candidates for training were solved. During the baseline often staff members that were well versed in English or Hindi were sent for the training. As a result, sometimes the eligible participants would not attend the training. With increased surveillance by the government over foreign funding, tapping domestic funding sources has become necessary. NEDSSS has started to strengthen the capacity of their partner organisation in mobilising funds from government departments, semi-government departments and the corporate sector (through CSR). In total NEDSSS is funded by 13 funders compared to 8 during the baseline in May 2013. The organisation still has no clear procedures for exploring new funding opportunities. However, a dedicated staff member was hired to write project proposals and there is an improved capacity of other staff to showcase their work, prepare financial and legal documents needed for getting new funding and streamline their work for CSR rules. NEDSSS has initiated dialogues with various departments and organisations who can potentially fund them.

Score baseline: 3.0

Score endline: 3.3 (very slight improvement)

Capability to adapt and self-renew

Level of effective application of M&E

2.1.M&E application: 'M&E is effectively applied to assess activities, outputs and outcomes'

This is about what the monitoring and evaluation of the SPO looks at, what type of information they get at and at what level (individual, project, organisational).

NEDSSS still has PME guidelines and staff have basic PME skills and have been trained in this. At the project and activity level, information is systematically gathered and processed by staff and used to improve activities. Monitoring is mostly project based and more can be done to systematically gather information regarding the long term impacts of projects in order to fine-tune strategies for programmes in the future for the organisation as a whole. There is still a difference in how M&E is applied in different projects, which relates to different donor guidelines for M&E. Cordaid's

reimbursements are linked to periodic submissions of the narrative and financial reports. For the Peace Initiatives in North East India project, which is funded by Cordaid, NEDSSS has had to develop a detailed M&E plan to assess activities, outputs and outcomes. In the M&E plan it is said that the proposed monitoring system will ensure: a) timely implementation of activities with appropriate technical and program management inputs; b) identification and addressing of any grassroots level implementation challenges; c) regular monitoring of program indicators; and d) learning exchange and appropriate documentation of project processes and learning. The following mechanisms are built into the project to promote learning:

- Quarterly meetings of a peace team of partner staff: to plan and better implement activities, half yearly meetings will be held among all partner peace teams at NEDSSS where the NEDSSS Coordinator will be present to review project progress and plan for the next half year based on progress toward targets.
- Quarterly meetings of CBOs at the state level will be organized in each project area for project monitoring information to be shared with project stakeholders for increased information dissemination and transparency.
- Partner level monitoring: The responsibility for day-to-day monitoring of the programme activities and outputs rests primarily with partner staff. They share their progress reports on a monthly basis with NEDSSS who will prepare the reports focussed on the outcome level indicators to send to the donor.
- Monitoring is done continuously to ensure quality results in all the peace activities through the tools already developed and evaluation is carried out at the end of every activity, one to one interactions and focus group discussions to check how much has been taken in, to enhance and improve further.

As NEDSSS is dependent on its partners for the successful application of M&E, they have given trainings to their partner organisations in documentation for timely and good submission of quarterly reports, financial report and receipts of their expenditures, which are used in the M&E of NEDSSS. Partners are now closely monitored and funds are only released to them when reports have been submitted. Reporting formats have been developed based on RBM (Results Based Management) in which timely performance and efficient fund utilisation are emphasised. There have been many external evaluations and the recommendations have been incorporated into the governance and policy framework of the organisation and these are taken into account in the project implementation. NEDSSS finances are inspected by auditing firms. Different donor demands in terms of monitoring and evaluation makes it difficult for the organisation to have one overall monitoring and evaluation system.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

2.2.M&E competencies: 'Individual competencies for performing M&E functions are in place'

This is about whether the SPO has a trained M&E person; whether other staff have basic understanding of M&E; and whether they know what information to collect, how to process the information, how to make use of the information so as to improve activities etc.

The staff continues to have basic skills in PME and has been trained on this. However, competence for conducting M&E efficiently remains to only lie with a few people. As NEDSSS is dependent on its partners for the successful application of M&E, they have given trainings to their partner organisations in documentation for timely and good submission reports. NEDSSS in the process of developing the M&E competencies of their partners, but often have to change the format of documentation because of donor demands, this causes frequent trainings and problems in following a uniform pattern of documentation for partners. The responsibility for day-to-day monitoring of the programme at the beneficiary level rests primarily with partner staff. They share their progress reports with NEDSSS who prepares the reports to send to the donor. There is still no mention of having one person specifically responsible for monitoring and evaluation, since this is mainly project based.

Score baseline: 3.0

Score endline: 3.0 (no change)

Level of strategic use of M&E

2.3.M&E for future strategies: 'M&E is effectively applied to assess the effects of delivered products and services (outcomes) for future strategies'

This is about what type of information is used by the SPO to make decisions; whether the information comes from the monitoring and evaluation; and whether M&E info influences strategic planning.

There has been no change in this indicator. At the level of projects, M&E information is still used to improve and fine-tune project interventions. Monitoring is mostly project based and there is a monthly, quarterly and half yearly review to assess the progress of the project. As an example for the peace project, NEDSSS holds meetings with the partners where they were required to present as well as review project progress and plan for the next half year based on the achievement of targets. Thus data that is collected is reviewed and analysed by partners to allow for project coordinators to make mid-course correction, if and when required. NEDSSS also continues to use information obtained from external evaluations for making strategic decisions.

Score baseline: 2.5

Score endline: 2.5 (no change)

Level of openness to strategic learning

2.4.Critical reflection: 'Management stimulates frequent critical reflection meetings that also deal with learning from mistakes'

This is about whether staff talk formally about what is happening in their programs; and, if so, how regular these meetings are; and whether staff are comfortable raising issues that are problematic.

The staff meet every month to discuss the project progress, challenges and issues. Project Review meetings continue to be held quarterly and half yearly in case of some projects. Often the staff faces implementation issues which require a timely solution as directions have to be given to their implementation partners in the field. While during the baseline in May 2013, staff was uncomfortable in raising problematic issues with the leadership, staff has now become more self-confident and articulate and are given the space to share and discuss their concerns with the director and their colleagues.

Score baseline: 2.0

Score endline: 2.5 (slight improvement)

2.5. Freedom for ideas: 'Staff feel free to come up with ideas for implementation of objectives'

This is about whether staff feel that ideas they bring for implementation of the program are welcomed and used.

Most junior staff still do not feel comfortable to come up with ideas for the implementation of objectives. This is related to the way the church is structured, but this is changing. The evaluation team noticed that the endline workshop was carried out in a democratic and participatory way. The director gave space to the staff to present their views.

Score baseline: 2.0

Score endline: 2.5 (slight improvement)

Level of context awareness

2.6.System for tracking environment: 'The organisation has a system for being in touch with general trends and developments in its operating environment'

This is about whether the SPO knows what is happening in its environment and whether it will affect the organization.

Even though there is still no formal system to track developments, the organisation continues to be well-informed of general trends and developments at local, regional, national and international level through its extensive network of church based organisations. NEDSSS, being a coordinating body and resource for 15 partners, has to keep in touch with general trends and developments in its operating environment. Besides this, being in the North Eastern part of India, which is sensitive to ethnic clashes, human rights violation and struggle between the militants and army, NEDSSS leadership has to be aware of the latest developments. Further, being a faith based organisation and receiving foreign funding the organisation it is under the scanner of the Government. This means NEDSSS has to be aware of any changes in laws or requirement of compliances under the FCRA Act.

The director interacts regularly with the governing body members who are very experienced and he participates in network meetings and workshops to keep himself posted about the changes in the development sector. NEDSSS is closely working with the North East Social Research Centre (NESRC), Tata Institute of Social Sciences (TISS) and other regional networks. The Inter Agency Group (IAG) allows NEDSSS to get invited and informed about government programmes. NEDSSS has thus strengthened its networks with non-church organisations to discuss changing trends in its operating environment.

Score baseline: 4.0

Score endline: 4.25 (very slight improvement)

2.7. Stakeholder responsiveness: 'The organisation is open and responsive to their stakeholders and the general public'

This is about what mechanisms the SPO has to get input from its stakeholders, and what they do with that input.

The organisation continues to be open and responsive to its stakeholders. Since NEDSSS works on issues like peace as in the North East region it cannot work in isolation. All the partners come together for meetings for discussions, preparation of plans and setting of priorities in the quarterly and yearly meetings. NEDSSS gives scope to express their stakeholders concerns in the General Body Meetings. The NEDSSS staff also still visits the beneficiaries to understand whether the programme benefits are being transferred to them. While during the baseline engagement with other non-church stakeholders like other civil society and government was lacking, NEDSSS interacts now not just with religious heads but also with leaders of civil society, leaders of NGOs, officials of different government departments, implementing partners, CBOs, institutes – educational, research and scholars with an aim to address the issues in the target area effectively, to avoid duplication of work and create understanding among them.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

Summary of capability to adapt and self-renew

NEDSSS still has PME guidelines and staff have basic PME skills and have been trained in this, although there is no dedicated person in place for monitoring and evaluation. At the level of projects, M&E information is still used to improve and fine-tune project interventions. There is still a difference in how M&E is applied in different projects, which relates to different donor guidelines for M&E. In the Cordaid funded Peace Initiatives in North East India project, there is an elaborate and detailed M&E plan in place which looks at activities, outputs and outcomes and also has mechanisms in place to promote learning. As NEDSSS is dependent on its partners for the successful application of M&E, they have given trainings to their partner organisations in documentation for timely and good submission of reports. Reporting formats have been developed based on Results Based Management. There have been many external evaluations and the recommendations are used for project implementation and making strategic decisions. Most of the monitoring is done by partner organisations who are trained to deliver timely reports. Frequent changes in the formats for documentation because of donor demands, cause problems for partners in following a uniform pattern of documentation. Having different donor requirements in terms of monitoring and evaluation makes it difficult for the organisation to have an

overall and comprehensive monitoring and evaluation system. The staff meet every month to discuss the project progress, challenges and issues. The staff has become more self-confident and articulate since baseline in May 2013 and are given the space to share and discuss their concerns with the director and their colleagues. Most junior staff still do not feel comfortable to come up with ideas for the implementation of objectives. During the endline workshop the director gave space to the staff to present their views. Even though there is still no formal system to track developments, the organisation continues to be well-informed of general trends and developments at local, regional, national and international level through its extensive network of church based organisations, but now also through networks linking to research and government organisations. The organisation continues to be open and responsive to its stakeholders. NEDSSS interacts with leaders of civil society, leaders of NGOs, officials of different government departments, implementing partners, CBOs, religious heads, institutes – educational, research and scholars with an aim to address the issues in the target area effectively, to avoid duplication of work and create understanding among them.

Score baseline: 2.9

Score endline: 3.2 (very slight improvement)

Capability to deliver on development objectives

Extent to which organisation delivers on planned products and services

3.1. Clear operational plans: 'Organisation has clear operational plans for carrying out projects which all staff fully understand'

This is about whether each project has an operational work plan and budget, and whether staff use it in their day-to-day operations.

There continue to be clear operational plans for carrying out projects. Regular monthly meetings of the staff are held to discuss the project progress. The operational plans are streamlined through Results Based Monitoring and monitoring tools with an emphasis on timely delivery. Since NEDSSS is still implementing projects through its partners and in these projects the operational plans are made in consultation with the partners. Now NEDSSS is in the process of starting to implement projects themselves to get more visibility through using innovative models. One example is the CHARM project supported by the World Bank in which the combination of mother, child and community health has been identified as a model that can be scaled up. Another example is the Rickshaw project funded by IGSSS. In these projects NEDSSS does not involve their partners in the planning process, as NEDSSS is the implementer.

Score baseline: 4.0

Score endline: 4.0 (no change)

3.2. Cost-effective resource use: 'Operations are based on cost-effective use of its resources'

This is about whether the SPO has the resources to do the work, and whether resources are used cost-effectively.

Since NEDSSS has to follow a proper procedure of documentation to be submitted to the donor, resource use has to be done judiciously. The funds utilised are already pre-determined as per the contract. Trainings on how to use funds and how to document, results and expenditures are given to their 15 partner organisations. The details of the expenditure are scrutinized by an auditor. All expenses including travel expenditure will be reported according to actual expenses, expenditure on travel is kept as low as possible. The organization makes use of human resources and material resources diligently in implementation and in planning so that no resources are wasted. Multi-tasking is appreciated and encouraged. With easier monitoring formats, expenses could be reduced. Staff members still have desk tops, laptops, internet access at their disposal to do their work.

Score baseline: 4.0

Score endline: 4.0 (no change)

3.3.Delivering planned outputs: 'Extent to which planned outputs are delivered'

This is about whether the SPO is able to carry out the operational plans.

There has been no change in this indicator. A large percentage (around 80%) of planned outputs are still delivered as planned. There are several hurdles that prevent timely delivery of outputs. These include natural calamities that bring in gaps in communications, strikes and protests due to the volatile situation in State, distant projects locations which limit the number of interactions with their implementing partners, etc. For instance, there was a flood in Assam in July 2014 and the Bodo tribe dominated the district which spurred violence in September 2013. There have also been instances of curfew and bandhs (general strike) called by different groups in Assam every year. One or more of these reasons may mean that activities have to be rescheduled resulting in a delay of outputs.

Score baseline: 3.5

Score endline: 3.5 (no change)

Extent to which delivered products and services are relevant for target population in terms of the effect they have

3.4.Mechanisms for beneficiary needs: 'The organisation has mechanisms in place to verify that services meet beneficiary needs'

This is about how the SPO knows that their services are meeting beneficiary needs

NEDSSS still works mostly through its 15 partner organisations, who in turn work with the beneficiaries. For its partners, NEDSSS conducts meetings for situational analysis, capacity building need assessment and training needs assessment to make sure that the services NEDSSS offers its partners meet their needs. Trainings to partners are evaluated for the same reason. Over the last years, they have, however, started to implement projects directly and work with beneficiaries like rickshaw pullers, agriculture workers and children that have dropped out of school. In these last projects, NEDSSS goes to find out first from the target group the reasons behind their inability to access certain resources, in this way removing misconceptions about the group. For the rickshaw pullers, it was found out that it was not the lack of knowledge but there was a lack of advocacy and lobbying for them and thus a need to get attention from the government. Efforts were then made to bridge the gap, directly responding to meeting beneficiary needs.

Score baseline: 4.0

Score endline: 4.25 (very slight improvement)

Level of work efficiency

3.5.Monitoring efficiency: 'The organisation monitors its efficiency by linking outputs and related inputs (input-output ratio's)'

This is about how the SPO knows they are efficient or not in their work.

There is still no tool developed to measure input-output ratios . Staff feels that their work is related to human behaviour and social transformation and thus concerns a qualitative change which is hard to measure in terms of input-output ratios. Also, since NEDSSS's work still involves more of coordination and less of implementation, it becomes difficult to judge efficiency based on the progress of project related work. A lot is dependent on the Dioceses. High staff turnover at Dioceses level creates problems as trainings have to be repeated and a lot of time and financial resources get wasted in the process.

Score baseline: 2.0

Score endline: 2.0 (no change)

3.6. Balancing quality-efficiency: 'The organisation aims at balancing efficiency requirements with the quality of its work'

This is about how the SPO ensures quality work with the resources available

The organisation still constantly motivates its staff to multitask to ensure efficient utilisation of the staff's capabilities and of resources. The organisation continues to provide training opportunities to its staff to ensure improvement in the quality of outputs they produce. The partners also have to report regularly as per the formats provided to them. During the baseline in May 2013 budget linked activity reporting was absent. Since then, NEDSSS has worked towards increasing their quality and efficiency by streamlining their work, putting in place the legal documentation as per the FCRA and Indian Tax Laws. Financial auditing is also being done by an expert in the field. Following the requirements of the donor, expenditures are done as per the allocated funds. Now the capacities of the partners are increased through trainings in financial and legal documentation and monitoring of their programmes in the field which enables them to link budget to the reported activities. The accounting department tallies the report with the expenditure reports and unit cost and frequency are checked by the finance department. Financial procedures are communicated to the partners.

Score baseline: 3.0

Score endline: 3.25 (very slight improvement)

Summary of capability to deliver on development objectives

There continue to be clear operational plans for carrying out projects. Regular monthly meetings of the staff are held to discuss the project progress. In the projects where NEDSSS works through its partners the planning process is done in consultation with them. In two projects where NEDSSS is the implementing organisation the planning process is done independently. NEDSSS continues to make cost-effective use of its resources. Utilisation of funds are in line with the contract with the donor and expenses are kept low by multi-tasking and keeping travel costs low. A large percentage (around 80%) of planned outputs are still delivered as planned. There are several factors that prevent timely delivery of outputs, including natural disasters, protests and staff turnover. For instance, in September 2013 there were spurts of violence in the Bodo dominated districts and there was a flood in Assam in July 2014. NEDSSS still works mostly through its 15 partner organisations, who in turn work with the beneficiaries. For its partners, NEDSSS conducts meetings to make sure that the services NEDSSS offers its partners meet their needs. Over the last years, the organisation started implementing projects and working directly with beneficiaries. NEDSSS bases these projects on a needs assessment among the target group. Monitoring efficiency through relating inputs to outputs is not done, but NEDSSS balances quality with efficiency by efficient utilisation of the staff's capabilities and of resources through multi-tasking and at the same time enhancing staff's quality of work through trainings. Since the baseline, NEDSSS has worked towards increasing their quality and efficiency by streamlining their work, putting in place the legal documentation as per the FCRA and Indian Tax Laws.

Score baseline: 3.4

Score endline: 3.5 (no change)

Capability to relate

Level of involving external parties in internal policy/strategy development

4.1. Stakeholder engagement in policies and strategies: 'The organisation maintains relations/ collaboration/alliances with its stakeholders for the benefit of the organisation'

This is about whether the SPO engages external groups in developing their policies and strategies, and how.

The organisation continues to have systematic engagement with its stakeholders. Their partner organisations actively participate to express their views, suggesting the required changes, highlighting their issues, reviews and feedback with regard to the projects in the General Body

Meetings. When policies are framed and strategies undertaken a common understanding is created avoiding conflict and disagreements. Through workshops, seminars, consultation and one-to-one meetings with NGOs and government departments, NEDSSS gets input from stakeholders for its policies and strategies. While during the baseline, engagement with other non-church stakeholders was lacking, now there is interaction with not only religious heads, but also leaders of civil society and NGOs, officials of different government departments and CBOs.

Score baseline: 4.0

Score endline: 4.25 (very slight improvement)

Level of engagement of organisation in networks, alliances and collaborative efforts

4.2.Engagement in networks: 'Extent to which the organization has relationships with existing networks/alliances/partnerships'

This is about what networks/alliances/partnerships the SPO engages with and why; with they are local or international; and what they do together, and how do they do it.

NEDSSS implements most of its projects by working with its 15 network partners. Apart from their immediate partners, they engage with various Faith Based Organisations and CBOs (SHGs, Farmers groups and Cooperatives) working in North East. In the peace project they also work with ethnic and religious groups, government departments, law enforcing agencies, youth clubs, students bodies, media and academic institutions. In order to increase its visibility, NEDSSS is also working with networks such as the North East Social Research Centre (NESRC), Tata Institute of Social Sciences (TISS) and other regional networks. NEDSSS interacted with North East women network for its gender programme and with SarvaShikshaAbhiyan for the programme on Human Rights Education. As far as funding is concerned networking with funding agencies has also increased. For instance, NEDSSS is working with World Bank, Missio Aachen, Missio Munchen, Kindermission, Raskob foundation and St. Peter Claver. NEDSSS takes up combined trainings, workshops, seminars, campaigns, joint publications and peace missions with its network. They also share their available resources (e.g. their publications) with partners and likeminded organisations. As advocacy and lobbying plays a greater role in various projects there is a slight improvement in NEDSSS's approach and relationship with the government. Consultations, trainings and meetings have been held with various government departments like the State Institute of Rural Development (SIRD), Government Medical College (GMC), NABARD, the Social Welfare Department, Krishi Vigyan Kendra (KVK, the Farm Science Centre which is a district level organisation of the Indian Council of Agricultural Research (ICAR)), National Institute of Rural Development (NIRD) and the Indian Institute of Entrepreneurship (IIE). For example on 24 October 2013, NEDSSS staff participated in a training on Entrepreneurship conducted by IIE.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

Extent to which organisation is actively engaging with target groups

4.3.Engagement with target groups: 'The organisation performs frequent visits to their target groups/beneficiaries in their living environment'

This is about how and when the SPO meets with target groups.

NEDSSS has two kinds of target groups. In the projects in which they work through their 15 partner organisations, their partners are their target group. NEDSSS staff visits them to monitor and discuss their work on a regular basis. NEDSSS also engages its partner organisations by letting them actively participate to express their views, suggesting the required changes, highlighting their issues, reviews and feedback with regard to the projects in the General Body Meetings. Besides this, the partners also undergo several trainings at the NEDSSS office. The Development Dynamic Course programme has been started by NEDSSS in 2014, to train partner organisations to become effective facilitators in development initiatives. Under the Peace Initiatives in North East India (June 2012-May 2014), partners are trained on issues of peace building, conflict resolution skills, human rights, child psychology, peer mediation, documentation, personal and leadership development; workshops and

seminars on peace and related issues; street plays, consultation and lobbying; media outreach and research. NEDSSS has also initiated direct implementation of projects. Therefore, their second target group are the direct beneficiaries of these project. As these projects are still in the beginning phase, staff have visited their target groups to do a situational analysis so that appropriate strategies could be formulated to solve their issues.

Score baseline: 3.0

Score endline: 3.0 (no change)

Level of effective relationships within the organisation

4.4.Relationships within organisation: 'Organisational structure and culture facilitates open internal contacts, communication, and decision-making'

How do staff at the SPO communicate internally? Are people free to talk to whomever they need to talk to? When and at what forum? What are the internal mechanisms for sharing information and building relationships?

NEDSSS continues to have a culture that facilitates open interaction amongst its staff members. The office space is divided into cubicles for all its staff members. There are different cabins, for the Director, the Assistant Director and the accounts staff but they are all on the same floor which facilitates interaction. There are regular staff meetings each month where people communicate and express their ideas. The minutes of meetings of the General and the Governing Bodies are maintained in separate registers. The General and Governing body members are better informed on the changing trend in the field of development sector and the change of the government policies. Minutes of staff meetings were circulated after some of these meetings.

Score baseline: 3.5

Score endline: 3.5 (no change)

Summary of capability to relate

The organisation continues to have systematic engagement with its stakeholders. Their partner organisations actively participate to express their views and suggest required changes. NEDSSS gets input from other stakeholders like religious heads, leaders of civil society and NGOs, officials of different government departments and CBOs through consultation, workshops and one-to-one meetings. Apart from their immediate partners, they engage with various Faith Based Organisations and CBOs (SHGs, Farmers groups and Cooperatives) working in North East. They have started working with networks such as the North East Social Research Centre (NESRC), Tata Institute of Social Sciences (TISS) and other regional networks. As advocacy and lobbying plays a greater role in various projects, NEDSSS improved its relation with the government and has had meetings with various government departments like Government Medical College (GMC), NABARD and the Social Welfare Department. NEDSSS has two kinds of target groups: 1) their partner organisations which they visit regularly for monitoring and trainings, and 2) direct beneficiaries in recently started projects in which NEDSSS is the implementing organisations, here they have visited their target groups to do a situational analysis to develop appropriate strategies. NEDSSS continues to have a culture and office space that facilitates open interaction amongst its staff members. There are regular staff meetings each month where people communicate and express their ideas. Minutes of the meetings were circulated after some of these meetings.

Score baseline: 3.5

Score endline: 3.7 (very slight improvement)

Capability to achieve coherence

Existence of mechanisms for coherence

5.1.Revisiting vision, mission: 'Vision, mission and strategies regularly discussed in the organisation'

This is about whether there is a vision, mission and strategies; how often staff discuss/revise vision, mission and strategies; and who is involved in this.

This indicator has not changed since the baseline evaluation. The organisation still has a clear vision and mission statement and staff members are made aware of them during induction programmes. However, vision and mission have remained the same over the years. Strategic plans are revisited every five years. Strategies are discussed amongst (some) diocesan directors, bishops and peace partners. The discussions with staff tend to be limited to projects, not overall strategies and trends.

Score baseline: 2.0

Score endline: 2.0 (no change)

5.2.Operational guidelines: 'Operational guidelines (technical, admin, HRM) are in place and used and supported by the management'

This is about whether there are operational guidelines, which operational guidelines exist; and how they are used.

NEDSSS has introduced the HIV/AIDS Workplace policy, which was developed on 12 July 2013 and approved by the Governing Body on 9th September 2013. This policy had the aim to promote and respect the dignity of individuals irrespective of his/her status of HIV/AIDS and non-acceptance of any kinds of discrimination against PLHIV and those affected by HIV and AIDS. The Policy outlines the procedures for interacting with employees who have medically been diagnosed with HIV or who are suspected of being HIV positive or having developed AIDS and guidelines were provided to the staff on HIV/AIDS workplace policy.

While there has been a gender policy in place since the baseline in May 2013 and achieving gender equity through women empowerment remains a mandate in their programmes, NEDSSS has failed to adopt a similar policy with regard to their internal governance. Leadership positions (President, Vice-President, Director and Secretary, Treasurers) are held by Fathers with overarching authority in comparison to the Sisters.

Score baseline: 2.5

Score endline: 2.75 (very slight improvement)

Level of coherence of various efforts of organisation

5.3.Alignment with vision, mission: 'Projects, strategies and associated operations are in line with the vision and mission of the organisation'

This is about whether the operations and strategies are line with the vision/mission of the SPO.

All projects and strategies remain to be in line with the vision and mission of NEDSSS and the church. It is aimed at strengthening the capacity of church (related) institutions to better address the needs of the population, to improve services for the poor. It also works towards peace and peaceful relations within the community.

Score baseline: 4.0

Score endline: 4.0 (no change)

5.4.Mutually supportive efforts: 'The portfolio of project (activities) provides opportunities for mutually supportive efforts'

This is about whether the efforts in one project complement/support efforts in other projects.

This indicator has not changed since the baseline. NEDSSS projects are still complimentary, and efforts in one project support another project. Not only the activities within a project but the projects that have been taken on by NEDSSS mutually support and complement each other as the broader aim of all the projects and interventions is to strengthen the ability to analyse, plan, strategize, implement

services for communities and for peace of church institutions and linked organisations throughout the region and in different states. Also, the projects and interventions foster engagement and learning between the various stakeholders, though this can be further increased. Based in a conflict region of North East India, NEDSSS work has been planned in a manner whereby impact of one project would be able to influence another. For instance, the peace project requires a long term commitment and a close monitoring of the changes within the community with regard to the mind-set and approach of the community members. To that end, human rights education has been given a focus which would enable children to develop as responsible individuals who despise violence.

Score baseline: 4.0

Score endline: 4.0 (no change)

Summary of capability to achieve coherence

The organisation still has a clear vision and mission statement that has not changed over the years and staff members are made aware of them during induction programmes. NEDSSS has introduced a HIV/AIDS Workplace policy which was approved by the governing board in September 2013. While achieving gender equity through women empowerment remains a mandate in their programmes, NEDSSS has failed to adopt a similar policy with regard to their internal governance. All projects and strategies remain to be in line with the vision and mission of NEDSSS and the church, as they are all aimed at strengthening the capacity of church (related) institutions to better address the needs of the population and to improve services for the poor. Appendix 4 Results - key changes in organisational capacity - general causal map

Below you will find a description of the general causal map that has been developed for the SPO during the endline workshop. Key changes in organisational capacity since the baseline as identified by the SPO during this endline workshop are described as well as the expected effects and underlying causal factors, actors and events. This is described in both a visual as well as a narrative.

The evaluation team carried out an endline assessment at NEDSSS from 23 to 24 September 2014. During this workshop, the team made a recap of key features of the organisation in the baseline in May 2013 (such as vision, mission, strategies, clients, partnerships). The gap between the baseline and endline was short (one year and four months). Therefore some of the changes that are discussed here started before the baseline and were further strengthened in the post baseline period. This was the basis for discussing changes that had happened to the organisation since the baseline. The three main changes that happened in the organisation since the baseline, as identified by the staff during self-assessments, interviews and during the endline workshop were:

- Improved systems in place [1]
- Increased visibility [2]
- Diversification of funding [4]

The three main organisational capacity changes are described in the light orange boxes and some of their key consequences are noted above these cards in dark orange. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the organisation are listed at the bottom in dark purple. The narrative describes per organisational capacity change, the contributing factors as described from the top down. The numbers in the visual correspond with the numbers in the narrative. Below each of these key changes and how these have come about are described.

Improved Systems in place [1]

The Director wanted to streamline the processes in the organisation. For this he wanted to ensure that the systems were in place [14]. He was able to convince the Governing body to change the way of working of NEDSSS from being a charity based organisation to a more professionally governed organisation [Source: Interview with the OD consultant]. The grant agreement between Cordaid and NEDSSS for the project "Peace Initiative in North East India" demands submission of narrative and financial report and every 6 months NEDSSS is expected to submit a report with details of expenditure and to verify legal compliances of its 15 partners [Source: Contract 2012.pdf]. Improved systems in place is expected to lead to improved credibility of NEDSSS with its existing donors [24], including MISSIO München, the Professionalising actors of Church Ministry, MISSIO Aachen and the Raskob Foundation. This in turn is expected to lead to improved financial sustainability [25].

NEDSSS improved its systems because they now have a legal way of documentation [5], a proactive and responsive governing board and general body [6], and a HIV/AIDS work policy, revised gender and financial policy [7]. Each of these changes are further discussed below.

Legal way of documentation [5]

There was a continuous improvement in the legal documentation of NEDSSS. This was due to the *increased knowledge of not only the Director of NEDSSS but also that of the members of the governing body* [12] and because of the *systematic approach of the director* [14]. This is further explained below.

- **Knowledge of the director and governing body [12]** increased because of *trainings on financial management, FCRA, and government regulations* [13]. The following trainings [13] were financed through other funds [16] such as Missio München:
 - **Accounting and Tally Management Training Workshop was organised for 3 days on 29th to 31st August, 2013.** There were 21 participants from NEDSSS who were trained in proper method of accounting and documentation. They were also equipped with basic accounting information on Tally [Source: Munchan REPORT-Final.docx]. This training was funded by MISSIO München [16].
 - **Legal Administration and Governance of Organizations/Trusts (FCRA/Income Tax)** seminar was organised and conducted by Chartered Accountant from Lancy D'Souza and Company and Director of Mask Organization from 5th to 7th February, 2014. This seminar highlighted the legal implication of FCRA and Income Tax laws on Religious Institutions. There were 76 participants from NEDSSS [Source: Munchan REPORT-Final.docx]. This training was funded by MISSIO München [16].
 - **Leadership and Communication Training** was held from 7th to 14th January, 2014 with 26 participants. The objective of the seminar was to train the participants on improving their leadership qualities and communication [Source: Munchan REPORT-Final.docx]. This training was funded by MISSIO München [16].

These trainings [13] were triggered by the changes in government rules and regulations [18].

- **Systematic approach of the director [14]** to streamline processes led to a legal way of documentation [5] and was triggered by changes in the donor environment [17], with the donors demanding more transparency and accountability from the NGOs and the government rules and regulations with regard to the FCRA [18] [Source: Interview with the OD consultant].

A Proactive and responsive governing board and general body [6]

The minutes of meetings of the General and the Governing Bodies are maintained in separate registers. The General and Governing body members are better informed on the changing trends in the development sector and the changes in government policies [Source: 5c endline self-assessment sheet_programmestaff_India_NEDSSS 1.docx]. The governing board and general body became more proactive and responsive because of a *training on Society Registration and Documentation for the Governing Board and General Body* [19]. On 18-19 October, 2012, NEDSSS conducted a two-day workshop for the director of DSSSSs on Society Registration and Documentation by the Director of MASK Organisation, Nagpur. The training was on maintenance of registers of General Body Members, Governing Body Members, assets, minutes of annual general body meetings and governing body

meetings. Emphasis was given to keeping systematic records of the Minutes of the General Body and Governing Body meetings and the Amendments of Memorandum of the Organization. In these workshop clarifications of Foreign Contribution Regulation Act 2010 were also made [Source: Annual report 2013.pdf]. This workshop was also triggered by changes in government regulations [18] with regard to the FCRA and was co-funded by MFS II (Cordaid) [15] and non-MFS II (MISEREOR) funds [16].

Introduction of HIV/AIDS work policy, revision of gender and financial policy [7]

In 2013, NEDSSS introduced the HIV/AIDS Workplace policy with an aim to promote and respect the dignity of individuals irrespective of his/her status of HIV/AIDS and non-acceptance of any kinds of discrimination against PLHIV¹⁰ and those affected by HIV and AIDS. The Policy outlines the procedures for interacting with employees who have medically been diagnosed with HIV or who are suspected of being HIV positive or having developed AIDS [Source: NEDSSS HIV AIDS Workplace policy]. This policy was developed to internally mainstream acceptance of HIV/AIDS in the organization. NEDSSS has revised and modified Gender and Finance policies [Source: 5c endline self-assessment sheet_programmestaff_India_NEDSSS 1.docx].

Increased visibility [2]

During the endline workshop the staff of NEDSSS stated that they wanted to strengthen their vision of becoming a resource for their partner organisations [26]. This means for them that they would like their partners to be able to turn to them for any information or training they need on a particular topic or even turn to them for implementation of projects or resource mobilisation. NEDSSS wants to be looked upon as a role model and also implement innovative pilot projects so that their partners can replicate them in their respective areas. Thus in order to follow through with this vision, it was important to showcase their work and be well connected. This was possible if they increased their visibility [2]. This increased visibility is expected to lead to increased credibility with existing donors [24] like Missio München, Missio Aachen, Raksob Foundation and Professionalising Actors of Church Ministry and has led to NEDSSS receiving the World Bank India Development Market Grand Award 2014. This increased credibility is in turn expected to lead to improved financial sustainability of the organisation [25].

In moving closer to that, NEDSSS has already started working towards increasing their number of publications [20]. NEDSSS, furthermore increased its visibility through their HRE modules [11], and through improved networking [9].

- *HRE Modules [11].*
For instance, NEDSSS introduced Human Rights Education (HRE) in 200 schools and trained 199 teachers on the values of human rights. NEDSSS also published HRE Modules—I and II for class IV and VII and Module III for class VIII, which were published in June 2013 [Source: Project Proposal - extension contract in 2013.docx]. These modules were developed under the MFS II, Cordaid funded project [15]: Human Rights Education in North Eastern States from 1st January 2013 to 31st December 2013. The development of these modules were also triggered by NEDSSS's strengthened vision to become a resource for its partners [26].
- *Increased number of publications [20].*
Staff of NEDSSS has been actively involved in the publication since the baseline in May 2013: Human Rights Education Book III, released on 16th May 2013; Portraits of Change, published in January 2014 edited and compiled by the M&E officer of NEDSSS; Herbal Medicine Family Health Kit-2013, published in February 2014 written by a member of the MASK organisation and team; Human Rights Manual (an understanding and guide to teachers), released on 22nd November 2014 by the Chief Coordinator NEDSSS; The Silver Milestones (History of NEDSSS), released on 22nd November 2014, compiled by the Project Manager Capacity Building at NEDSSS; The March of Seven Sisters of North East (Jubilee Brochure edited by Sr. Prema .SCS on Nov.22nd, 2014). The increased number of publication was triggered by NEDSSS's strengthened vision to become a resource for its partners [26].

¹⁰ PLHIV stands for "People Living with HIV". This abbreviation is used throughout the text.

- *Improved Networking*[9].

Apart from publications, NEDSSS has formed networks with a wide range of organisations such as: as NABARD, IIE (Indian Institute of Entrepreneurship), KVK (KrishiVigyan Kendra), NIRD (National Institute of Rural Development), and SIRD (State Institute of Rural Development). These networks were formed before May 2013 and in the last year (2014) these networks have improved because they are working more closely together. On 24 October 2013, NEDSSS staff and staff of Tezpur, AIDA had participated the training on Entrepreneurship conducted by IIE. NEDSSS has also held consultations, meetings and trainings with and by government departments, like NABARD and the Social Welfare department [Source: 5c endline self-assessment sheet_programme_staff_India_NEDSSS 1.docx]. In order to increase its visibility, NEDSSS is also working with networks such as North East Social Research Centre (NESRC), Tata Institute of Social Sciences (TISS) and other regional networks. NEDSSS interacted with North East women network for its gender programme and with SarvaShikshaAbhiyan for Human Rights Education [Source: 5c endline self-assessment sheet_management_India_NEDSSS 25.doc]. The improved networking was triggered by NEDSSS's strengthened vision to become a resource for its partners [26].

***Diversification of funding* [4]**

Over the last two years NEDSSS is trying to be self-reliant and diversify its funding sources given the changing donor environment in the country [17] and the change in government rules and regulations [18] concerning foreign funding. These two developments led to the need to explore new funding sources [22]. There have been efforts taken to widen the horizon of interventions in order to access government resources and CSR funding. The management feels that the staff capacities have also been increased for drawing funding opportunities such as the World Bank Grant Fund Award for the institution in India Market Development Place for replicating NEDSSS's health interventions [Source: <http://blogs.worldbank.org/dmblog/2014-india-dm-finalist-story-NEDSSS-helping-people-become-agents-change>].

Currently NEDSSS receives funding for different projects from the following diversified set of funders [4]:

- Caritas India is funding a project that supports 5 of NEDSSS's partner organisation to tap government resources.
- Shelter Project for Rickshaw Pullers is funded by IGSSS;
- Professionalising Actors of Church Ministry is funded by Missio München;
- Facilitating Regional Exercise towards an Effective Church in North East India is funded by Missio Aachen;
- The Income Generation Programme on financial empowerment of 80 families below poverty line is funded by Raskob Foundation;
- Community Health in Assam and Rural Meghalaya (CHARM) programme is funded by the World Bank;
- KINDERMISSIONWERK funds NEDSSS's work on education;
- Nursery Teacher Training for pre-primary and primary school teachers is funded by Advance Information in Early Childhood Care & Education, New Delhi;
- St. Peter Claver Foundation, MISEREOR, UNICEF, Dreikönigsaktion, Manos Unidas Spain are also funding NEDSSS's work.
- World Bank: NEDSSS is the Awardee of "World Bank India Development Market Grand Award 2014"
- Caritas Denmark funds " Capacity building, coordination and advocacy for Civil Society Organizations in NE India".

In total NEDSSS is now funded by 15 funders compared to 8 during the baseline.

NEDSSS has diversified its funding [4] because they are approaching new donors [8], diversifying their of areas of intervention [10] and because staff have improved their capacity to attract funds [21]. These changes are further explained below

- *Approaching new donors* [8]

NEDSSS has been supported by Caritas India for a period of time and many of the projects are funded by CORDAID and MISEREOR till date. With their active support the organization has grown and improved in their implementation of the development programmes. Within the last years NEDSSS has approached new donors to fund new projects such as the World Bank (CHARM

Project Health, June 2014-May 2016), MISSIO Aachen, MISSIO Munchen (June 2013-May 2014) and Kindermission Germany (since 2012) and Raskob Foundation USA (since 2013) [Source: 5c endline self-assessment sheet_programmestaff_India_NEDSSS 1.docx; endline workshop minutes]. Since May 2013, NEDSSS is also working with organisations such as NACO (National AIDS Control Organisation); IIE (Indian Institute of Entrepreneurship; Indian Council for Agricultural Research (ICAR); Department of Social Welfare, Guwahati to identify opportunities for collaboration and support. NEDSSS continues to work with KVK (Krishi Vigyan Kendra) and NIRD (National Institute of Rural Development) [Source: Workshop details]. NEDSSS started to approach new donors because of the need to explore funding sources [22]. This need was triggered by the changing donor environment [17] and change in government regulations [18], but the decision of NEDSSS management to focus towards improving the financial sustainability of the organisation was also triggered by an organisational assessment of NEDSSS and its partners. This assessment was done during the partners workshop 'A Way Forward' on 20th and 21st January 2014. The objective of the assessment was to have an in-depth knowledge of organisations. This assessment was done by NEDSSS with support and funding from CARITAS India [16] [Source: Consolidated Report of the Organizational Assessment.pptx].

- *Diversification of areas of intervention [10]*

In order to increase its visibility [2], scaling up its work and diversify its funding, NEDSSS is intervening in new areas. To this end, NEDSSS is taking up projects in which they are the implementing organisation. They have projects with rickshaw pullers, agriculture and children that have dropped out of school. As a resource centre, NEDSSS is not confined to training but has worked towards innovative interventions. These innovative ways are used for reaching out to the communities, which will be further replicated by the partners. For instance, the shelter project where rickshaw pullers were organised so that they could demand their rights from the government through increased ability to bargain. NEDSSS's approach was innovative with regard to adopting an innovative path in removing the misconceptions about communities or groups by going and finding out first from the target group the reasons behind their inability to access certain resources. In this project of NEDSSS, it was found out that it was not lack of knowledge of the available resources rather there was lack of advocacy or lobbying for them. There was a need to get attention from the government. There was lack of legal stand which was found out through the Public Interest Litigation. Through expanding into new projects in which NEDSSS is the implementer they have been able to attract funding from the World Bank and IGSSS. These are new and ongoing projects. NEDSSS started to diversify its areas of intervention [10] because of a need to explore new funding sources [22].

- *Improved staff capacity to attract funds [21]*

NEDSSS has trained its staff in proposal writing, showcasing their work, preparing legal and financial documents that are required for proposals and also prepare documentation in line with the CSR rules. As NEDSSS continues to work with and through its partner organisations, they have also started to strengthen their capacity in mobilising funds from government departments, semi-government departments and the corporate sector (through CSR). In support of this, NEDSSS does the dissemination of Caritas India's policy on Local Fund Mobilisation to its partners to implement the institutional Local Resource Mobilisation policy for all partner organisations. All efforts are taken to tap into more domestic sources (CSR and government) while also keeping an eye out for international donors. Improving the staff's capacity to attract funds [21] was triggered by the need to explore new funding sources [22], which in turn was because of changes in the donor environment [17] and in government regulations. With increased surveillance by the government over foreign funding, tapping domestic funding sources has become necessary.

Report CDI-15-020

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Acknowledgements

We are grateful to all the people that have contributed to this report. We particularly would like to thank the Southern Partner Organisation Shivi Development Society (SDS) and the Co-Financing Agency Cordaid for their endless patience and support during this challenging task of collecting the endline data. We hope that this endline report will provide useful insights to Shivi Development Society, Cordaid, the synthesis team, IOB and NWO/Wotro.

The India 5C evaluation team

List of abbreviations and acronyms

5 C	Capacity development model which focuses on 5 core capabilities
AIDMAM	All India Dalit Mahila AdhikarManch
BBO	Bridging People and Politics
CASH	Committee Against Sexual Harassment
Causal map	Map with cause-effect relationships. See also 'detailed causal map'.
Causal mechanisms	The combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome
CDI	Centre for Development Innovation, Wageningen UR
CFA	Co-Financing Agency
CSO	Civil Society Organisation
CSR	Corporate Social Responsibility
Detailed causal map	Also 'model of change'. the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change. In the 5C evaluation identified key organisational capacity changes and underlying reasons for change (causal mechanisms) are traced through process tracing (for attribution question).
FCRA	Foreign Contribution Regulation Act
FK	Fredskorpset
General causal map	Causal map with key organisational capacity changes and underlying reasons for change (causal mechanisms), based on SPO perception.

1 Introduction & summary

1.1 Purpose and outline of the report

The Netherlands has a long tradition of public support for civil bi-lateral development cooperation, going back to the 1960s. The Co-Financing System (*Medefinancieringsstelsel*, or 'MFS') is its most recent expression. MFS II is the 2011-2015 grant framework for Co-Financing Agencies (CFAs), which is directed at achieving a sustainable reduction in poverty. A total of 20 consortia of Dutch CFAs have been awarded €1.9 billion in MFS II grants by the Dutch Ministry of Foreign Affairs (MoFA).

The overall aim of MFS II is to help strengthen civil society in the South as a building block for structural poverty reduction. CFAs receiving MFS II funding work through strategic partnerships with Southern Partner Organisations.

The MFS II framework stipulates that each consortium is required to carry out independent external evaluations to be able to make valid, evaluative statements about the effective use of the available funding. On behalf of Dutch consortia receiving MFS II funding, NWO-WOTRO has issued three calls for proposals. Call deals with joint MFS II evaluations of development interventions at country level. Evaluations must comprise a baseline assessment in 2012 and a follow-up assessment in 2014 and should be arranged according to three categories of priority result areas as defined by MoFA:

- Achievement of Millennium Development Goals (MDGs) & themes;
- Capacity development of Southern partner organisations (SPO) (5 c study);
- Efforts to strengthen civil society.

This report focuses on the assessment of capacity development of southern partner organisations. This evaluation of the organisational capacity development of the SPOs is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

The purpose of this report is to provide endline information on one of the SPOs involved in the evaluation: FFID in India. The baseline report is described in a separate document.

Chapter 2 describes general information about the Southern Partner Organisation (SPO). Here you can find general information about the SPO, the context in which the SPO operates, contracting details and background to the SPO. In chapter 3 a brief overview of the methodological approach is described. You can find a more detailed description of the methodological approach in appendix 1. Chapter 4 describes the results of the 5c endline study. It provides an overview of capacity development interventions of the SPO that have been supported by MFS II. It also describes what changes in organisational capacity have taken place since the baseline and why (evaluation question is 1 and 4). This is described as a summary of the indicators per capability as well as a general causal map that provides an overview of the key organisational capacity changes since the baseline, as experienced by the SPO. The complete overview of descriptions per indicator, and how these have changed since the baseline is described in appendix 3. The complete visual and narrative for the key organisational capacity changes that have taken place since the baseline according to the SPO staff present at the endline workshop is presented in appendix 4.

For those SPOs involved in process tracing a summary description of the causal maps for the identified organisational capacity changes in the two selected capabilities (capability to act and commit; capability to adapt and self-renew) is provided (evaluation questions 2 and 4). These causal maps describe the identified key organisational capacity changes that are possibly related to MFS II

interventions in these two capabilities, and how these changes have come about. More detailed information can be found in appendix 5.

Chapter 5 presents a discussion on the findings and methodology and a conclusion on the different evaluation questions.

The overall methodology for the endline study of capacity of southern partner organisations is coordinated between the 8 countries: Bangladesh (Centre for Development Studies, University of Bath; INTRAC); DRC (Disaster Studies, Wageningen UR); Ethiopia (CDI, Wageningen UR); India (CDI, Wageningen UR; Indonesia (CDI, Wageningen UR); Liberia (CDI, Wageningen UR); Pakistan (IDS; MetaMeta); (Uganda (ETC). Specific methodological variations to the approach carried out per country where CDI is involved are also described in this document.

This report is sent to the Co-Financing Agency (CFA) and the Southern Partner Organisation (SPO) for correcting factual errors and for final validation of the report.

1.2 Brief summary of analysis and findings

Over the last two years, SDS has very slightly improved in its capability to act and commit. Important improvements have been less staff turnover at the Delhi office, a well-defined organogram in place, situational analysis is now used to articulate strategies, improved staff skills, improved funding procedures. The funding situation deteriorated slightly because SDS now only has one funder (MISEREOR). In the capability to adapt and self-renew SDS also improved very slightly. This was mainly due to taking a more community centric approach, improved communication between the head and regional offices, more critical reflection, more freedom for ideas and more responsiveness to stakeholders. SDS showed a very slight improvement in the capability to deliver on development objectives, as SDS works more cost-effectively and is now monitoring its inputs and outputs through activity related financial reporting. While the organisation overall showed no change in the capability to relate, SDS is now working with more partners in networks at different levels. Finally there was a slight improvement in the capability to achieve coherence because they now have a formulated mission, revised their vision, have better aligned projects and improved in their operational guidelines on procurement and sexual harassment.

The evaluators considered it important to also note down the SPO's perspectives on the most important organisational capacity changes since the baseline. During the endline workshop the key organisational capacity changes that were brought up by SDS' staff were: improved research capacity, improved documentation related to FCRA and improved focus on community outreach programme and action research. SDS said it improved its research capacity because of hiring skilled new staff, training existing staff (both mentioned above) and experience they gained by doing more research. The underlying reasons for these changes were the new vision and mission of SDS and the separation of IPAC, so that SDS could focus on research. SDS improving its documentation related to FCRA was triggered by a documentation training and a changing donor environment in which the government regulations for foreign-funded NGOs became stricter and the CSR Act was implemented. SDS improved its focus on community outreach programme and action research because of their new vision and mission. The vision and mission were changed because of the changing donor environment and IPAC becoming a separate entity. MFS II funded capacity development interventions were not mentioned as having played an important role in the organisational capacity changes that SDS identified as being key, during the endline workshop.

2 General Information about the SPO – Shivi Development Society

2.1 General information about the Southern Partner Organisation (SPO)

Country	India
Consortium	Communities of Change
Responsible Dutch NGO	Cordaid
Project (if applicable)	Women in Governance Assam (until 31 March 2013) National support to coalition on environment & national resources (until 31 May 2014)
Southern partner organisation	Shivi Development Society (SDS)

The project/partner is part of the sample for the following evaluation component(s):

Achievement of MDGs and themes	
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

2.2 The socio-economic, cultural and political context in which the partner operates

Shivi Development Society (SDS) is a civil society organisation works on the issues of human rights, good governance, and promotion of people's participation with gender as a cross cutting theme undertaking development initiatives to positively influence the lives and improve the quality of living of poor and marginalized sections of the society. Therefore, SDS also strives to support the policy work through lobby and advocacy strategies of the grassroots voluntary organizations by engaging them in capacity building in lobbying, undertakes direct community outreach programmes and analysing grassroots actions.

SDS from 2006 started receiving funds from foreign donors such as ICCO, Cordaid and Entrée. In 2008, SDS through Cordaid funding organised capacity building programme for Guwahati based partners of Cordaid: Women in Governance¹ and those working with Dalit women. In 2010, it also started working with Fredskorpset, Norway and Western Union Foundation on various capacity building programmes, safe migration etc. In 2012, with the termination of ICCO funding, MISEREOR became the major funder for Chhattisgarh programme on Women Human Rights Defenders. In these years, SDS's area of intervention has been in the conflict zones of the country: states of North East and Chhattisgarh.

Since 2010, NGOs working in conflict areas started coming under the radar of Intelligence Bureau of India. NGO activities especially in the North East were seen as processes aimed at derailing the developmental objectives of the government of India². Despite putting all the legal and financial compliances in place and training its staff to fulfil the requirements of FCRA (Foreign Contribution

¹ Women in Governance is not a network of SDS at present and receives funds through Chindu, a Hyderabad based organisation.

² <http://timesofindia.indiatimes.com/india/Dutch-funded-NGO-trying-to-stall-oil-drilling-in-northeast-IB-report/articleshow/36513963.cms>

Regulation Act, 2010, implemented for regulating foreign funding) the external environment of government suspicion continued with regard to lobbying activities. North Eastern region sharing its international borders with China, Bangladesh and Myanmar continued to remain a major law and order issue for the state³. An on-going separatist struggle has continued in the region since the late 1940s, making it the longest running separatist struggle in South Asia. In order to ensure law and order situation there has been imposition of Armed Forces (Special Powers) Act, 1958 with special powers granted to the armed forces resulting in human rights violation. AFSPA has been criticized from different sections and commissions such as the Jeevan Reddy Commission of 2005 and the Verma Commission of 2012, demanded repeal of this Act from the region for ensuring peace. While AFSPA is not in place in Chhattisgarh, there is often escalation of conflict in the Baster region of Chhattisgarh between Maoist groups and Central Reserve Police Force leading to similar violation of rights.

SDS changed its focus on increasing its research capabilities over lobbying due to legal and political changes in the external environment. In working directly with the community, SDS focused on issues of women with the rise in cases of crime against them across the country. According to National Crime Records Bureau of India Statistics, there has been an increase in crime against women in the last two years; its rate of crime in 2013 is 5.69 against 4.26 in 2012⁴; and incidence of immoral trafficking of 2579 female in 2013 as against 2563 in 2012.

Women in conflict regions are more vulnerable to human rights violation, being placed between the militant outfits on the one hand and the army or police personnel on the other hand.

In addition to this, the socio-economic situations of women in tribal areas have often led to their vulnerable condition. For instance, in North East there is community control over resources and presence of customary laws among different tribes. Economic participation of women includes clearing jungles, collection of food and firewood from the forest. However, economic participation of women could not increase their status due to the presence of customary practices being followed in these areas, such as differential allocation of resources in land and their control by the community as a whole.⁵ Continuance of customary laws over resources has found an explicit support in the Sixth Schedule of the Constitution. Sixth Schedule of the Constitution of India allows the District Councils and Regional Councils of the areas mentioned under the Schedule to make laws in certain specific areas such as: use of water and land resources, cultivation, inheritance of property, marriage and divorce, social customs etc. In recent times, oil extraction has started in the North Eastern regions adversely impacting the situation of women who hardly have been able to impact the decision-making processes in the region, such as articulating their needs, negotiating compensation through participation in decision making bodies at the community as well as, the state level. Taking into account the complexity of the situation research based intervention by SDS helped them to get an overall understanding of the situation.

2.3 Contracting details

When did cooperation with this partner start: 2007 (discussions), 2008 (projects).

What is the MFS II contracting period:

- Women in Governance Assam, under MFS II: 1 January 2011 until 31 March 2013 (Chindu became the legal holder of Women in Governance Assam);
- National support to coalition on environment & national resources: 1 September 2013 – 31 June 2014.

Did cooperation with this partner end? Yes.

What is the reason for ending the cooperation with this partner: General phasing out of programme in India. Only some of the counterparts will be supported further during some months in 2015, in case

⁵ <http://ncw.nic.in/pdfreports/Customary%20Law.pdf>

they contribute in a very direct way for the planned achievements of Cordaid's Unit "Women's Leadership for Peace and Security." This is not the case for SDS.

Is there any expected future collaboration with this partner? No future collaboration is expected with SDS.

2.4 Background to the Southern Partner Organisation

History

Shivi Development Society (SDS) started in 1995 as a small, volunteer based initiative to work towards the empowerment of disadvantaged sections of the society. The organization was initiated with the objective of enabling the vulnerable and socially excluded by building up their capabilities for a decent, dignified and independent life.

Until 2002, SDS's work was sustained through contributions made by members and the activities were operated on a small scale with a very limited budget (in 2002, budget of maximum 2,500 Euros). From 2002 onwards, SDS members decided that activities needed to be more organized and systematic. The Board was reconstituted and new members were taken in. Funds were organized by way of donations mainly from individual donors. Executive committee meetings were made regular and accounts were audited.

SDS got its FCRA registration in 2006 (the Foreign Contribution Regulation Act is a pre requisite to receive funding from foreign donors) and began in that year after to have contacts with foreign funders: ICCO, CORDAID and Entrée. ICCO funded a one year project as an experiment which enabled the organisation to better organise itself and to find people within the sector to work with. Also in 2007, a lobby and advocacy support centre began: the Indraprastha Public Affairs Centre (IPAC). The mission of IPAC is to provide and organize professional lobby support to client organisations in not-for-profit sector, to influence decision makers in the selected areas of policy regime. Entrée contacted SDS for lobbying. The same year, discussions with CORDAID were successful and SDS/IPAC was made the Indian counterpart for capacity building for all CORDAID partners. Therefore, in 2008, SDS organized capacity building program in Guwahati for all CORDAID partners and in the process, some programs came to the forefront, such as- Women in Governance and issues of Dalit women.

In 2009, SDS started its activities in Assam and the North East region through network of women titled: Women in Governance (WinG). After 2009, SDS has obtained many more funders and it has been able to diversify its operations and their geographical spread.

In 2010, SDS got new projects sponsored by different funders. In 2010, SDS also begun a program on Staff Exchange, funded by Fredskorpset, Norway where SDS is part of group of 4 organisations focusing on issues of Human Rights. This has been an extremely useful exercise in terms of skill development, exposure and capacity building for employees of SDS. Also, this is a logical culmination of an organisation working on capacity Development and advocacy to openly choose Rights based Approach and a network approach to make its voice heard in policy circles.

In 2011 the focus had centred on developing SDS as a centre for excellence in research. A step towards this was started with a pilot project to explore the extent of malnutrition and nutritional deficiencies among the age-group of 0-6 yrs. of children in Northern Delhi area and also review/analyse the causative factors of its existence. This was funded by Child Rights and You (CRY) and expanded to cover the whole state in 2012.

Safe migration program began in 2011 through funding given by Western Union Foundation, expanding geographical spread of SDS to Bihar and Rajasthan. As there has been a rise in funders and projects, the total budget of the organization has grown and SDS has also been able to hire qualified and skilled staff- bringing the total number of employees to 17 including the staff of WinG. In 2014 the SDS staff consists of 8.

In 2012, ICCO funding ended for the project Women Human Rights Defender in Chhattisgarh and on July 2012 MISEREOR began to fund for to continue the project. The total funding of SDS was about 140,000 Euros in 2012.

Over time, SDS has organized many training workshops and sends its employees to other organisations as resource persons. The present situation indicates that SDS is moving towards its aim to become a resource organisation for capacity development for other organisations and help them in skill development and advocacy work.

To that end, SDS has been working towards improving its documentation process. In August 2013, SDS has sent one of its staffs to Bangkok to receive training in documentation skills. There have also been programmes with INSEC Nepal to develop staff capacity for putting all legal compliances in place.

Till 31st March 2013, SDS received funds from ICCO Netherlands on Action for Empowerment of Marginalized Communities Supported by ICCO; Women in Governance India 2012 supported by Cordaid; Personality Development Training Support by Netherlands, FK Partnership Agreement Supported by INSEC, Nepal; Promotion of Women Human Rights Defenders in Chhattisgarh supported by MISEREOR, Germany; BBO Training Supported by BBO Netherlands; A Study on Malnutrition Among Children in Delhi supported by CRY; India lobby Support Supported by Cordaid, Netherlands.

In 2013, SDS received fund from CORDAID for the project Manipur Coalition Support 2013, later named *National support to coalition on environment & national resources* for the project period September 2013 to May 2014. It got an extension of one month for this project. As per the contract, Cordaid contribution was EUR 19.200,00.

Among other changes, WinG which was earlier a part of SDS, started working with its new legal holder, a Hyderabad based organisation Chindu. WinG received a project extension fund from Cordaid from 1st September, 2013 to 31st March, 2014. Now MISEREOR is the only funder for the SDS who will support still 2016 for the Chhattisgarh project.

Vision

SDS vision is to foster a growth oriented, just and equitable society based on the respect for the rights of the individuals and non-discrimination among the caste, communities and gender by enabling the under-privileged and uninitiated secure their rights.

Mission

Using rights based approach to development, SDS works towards capability building of its partner communities, with a focus on marginalised women, children and youth, so that they are able to achieve their lasting well-being.

Strategies

SDS works on the issues of child development, human rights, good governance and promotion of people's participation with gender as a cross cutting theme. SDS undertakes the following strategies to achieve its objectives:

- **Community Engagement and Outreach Intervention:** SDS undertakes engagement with communities either directly or through its partner organizations to understand the existing realities within the communities and identify the gaps. Targeted interventions and Community Outreach are then undertaken to support the development of the communities in an inclusive and holistic manner.
- **Capacity Building:** SDS undertakes capacity building initiatives within communities to enhance the community's ability to access their rights and efficiently organize themselves in order to empower and support community based development.
- **Promoting Self-Help Initiatives:** SDS also promotes either directly or through its partners to enable the creation and development of self-help groups to empower and create opportunities for access to sustainable means of livelihoods.
- **Advocacy and Education:** SDS undertakes academic and policy oriented research on important issues related to its thematic focus to better inform its own actions as well as to make a case for policy work and engagement with public sector. In addition, advocacy initiatives are also be routed through SDS partner/sister organization and Indraprastha Public Affairs Centre (IPAC). It further promotes education within the communities on the relevant issues in order to equip the communities to participate in the decision making process.

-
- Coalition Building and Networking: SDS engages extensively with coalitions and other likeminded CSO's in order to create a network of supporters to facilitate policy dialogues and policy change. Networking with Parliamentarians to initiate effective policy change is also a core strategy at SDS.

3 Methodological approach and reflection

3.1 Overall methodological approach and reflection

This chapter describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

Note: this methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report A detailed overview of the approach is described in appendix 1.

The first (changes in organisational capacity) and the fourth evaluation question are addressed together through:

- **Changes in the 5C indicators since the baseline:** standard indicators have been agreed upon for each of the five capabilities of the five capabilities framework (see appendix 2) and changes between the baseline, and the endline situation have been described. For data collection a mix of data collection methods has been used, including self-assessments by SPO staff; interviews with SPO staff and externals; document review; observation. For data analysis, the Nvivo software program for qualitative data analysis has been used. Final descriptions per indicator and per capability with corresponding scores have been provided.
- **Key organisational capacity changes – 'general causal map':** during the endline workshop a brainstorm has been facilitated to generate the key organisational capacity changes as perceived by the SPO since the baseline, with related underlying causes. For this purpose, a visual as well as a narrative causal map have been described.

In terms of the attribution question (2 and 4), '**process tracing**' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to

focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

At the end of this appendix a brief methodological reflection is provided.

3.2 Assessing changes in organisational capacity and reasons for change - evaluation question 1 and 4

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?** And the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This is explained below. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

The evaluators considered it important to also note down a consolidated SPO story and this would also provide more information about what the SPO considered to be important in terms of organisational capacity changes since the baseline and how they perceived these key changes to have come about. Whilst this information has not been validated with sources other than SPO staff, it was considered important to understand how the SPOs has perceived changes in the organisation since the baseline.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information is provided for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the next session on the evaluation question on attribution, as described below and in the appendix 1.

How information was collected and analysed for addressing evaluation question 1 and 4, in terms of description of changes in indicators per capability as well as in terms of the general causal map, based on key organisational capacity changes as perceived by the SPO staff, is further described below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012⁶.

⁶ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

1. **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
2. **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
3. **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
4. **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
5. **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Please see appendix 1 for a description of the detailed process and steps.

3.3 Attributing changes in organisational capacity - evaluation question 2 and 4

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*** and the fourth evaluation question: ***“What factors explain the findings drawn from the questions above?”***

In terms of the attribution question (2), ‘process tracing’ is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Below, the selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

3.3.1 Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

For the detailed results of this selection, in the four countries that CDI is involved in, please see appendix 1. The following SPOs were selected for process tracing:

- Ethiopia: AMREF, ECFA, FSCE, HUNDEE (4/9)
- India: BVHA, COUNT, FFID, SMILE, VTRC (5/10)
- Indonesia: ASB, ECPAT, PtPPMA, YPI, YRBI (5/12)
- Liberia: BSC, RHRAP (2/5).

3.3.2 Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change.

Those SPOs selected for process tracing had a separate endline workshop, in addition to the ' general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained. More information can be found in Appendix 1.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

3.3.3 Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team. These can also be found in appendix 1.

Use of the 5 core capabilities framework and qualitative approach: this has proven to be a very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II

supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
 - Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
 - Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the

Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

4 Results

4.1 MFS II supported capacity development interventions

Below an overview of the different MFS II supported capacity development interventions of Shivi Development Society that have taken place since 2011 are described. The information is based on the information provided by Cordaid.

Table 1

Information about MFS II supported capacity development interventions since baseline

Title of the MFS II supported capacity development intervention	Objectives	Activities	Timing and duration	Budget
Capacity building support for SDS Assam staff and stakeholders on engagement with UN		In region training course is organized in Guwahati on international humanitarian and human rights law, UN mechanisms and engagement with UN bodies by an expert from Geneva for Human Rights, in which 7 members from SDS Assam office and main stakeholders participated	December 2011, 4 days	About 6,600 EUR
		The SDS director, SDS regional coordinator Assam and selected WinG Assam member participated in an exposure visit to Geneva to learn about the UPR (Universal Periodic Review) is a new and unique mechanism of the Human Rights Council (HRC) aiming at improving the human rights situation on the ground) process for India at the UN HRC. It was more a political exposure and to see in practice how lobby is going on and how the following steps are designed.	May 2012	About 3,600 EUR

Source: Baseline report

Between the baseline and the 31st of March 2013 when the WinG Assam project changed its legal holder from SDS to Chindu, there have not been any capacity development interventions supported by Cordaid for SDS. In the new project that ran until June 2014 is a small project, in which SDS functions as a consultancy/ support organization. It is not a project aimed at capacity building, but more like a consultancy assignment.

4.2 Changes in capacity and reasons for change - evaluation question 1 and 4

Below you can find a description of the changes in each of the five core capabilities. This information is based on the analysis of the information per each of the indicators. This detailed information for each of the indicators describes the current situation, and how and why it has changed since the baseline. See also annex 3.

4.2.1 Changes in the five core capabilities

Capability to act and commit

The director of SDS continues to be responsive and sensitive. However, there is still no second line leadership, and everything depends on the chief functionary, and a fall back option is needed for when he is not there. SDS leadership continues to provide strategic directions, and there is still clarity as to how different initiatives, interventions lead to one goal. In the last two years SDS leadership has identified women empowerment and gender justice to be its core thematic area. SDS's chief functionary has focused on research capacity of the organisation to better inform its own actions, and this is done by hiring staff who have good research knowledge and skills. An important change in the organisational structure of SDS is that its advocacy initiative IPAC was registered as an independent organisation in April 2008, however, the independent operations on a significant level could start only in July 2014 when it got its FCRA registration. The director is part of both SDS and IPAC and is now expanding the area of operation for both organizations (IPAC is now separated from SDS). They are in the process of selecting a chief functionary for IPAC who will then take-over this task. In the last two years there has been a change in the organisational structure as SDS no longer hosts the WinG Assam office. The leadership has not changed, but staff turnover remains high in the Delhi office because staff are often hired on a project-basis and new graduates leave SDS after a short period to move on to other jobs or post-graduate studies. New staff have a good understanding of policy related work and are hindered less by travelling alone and having no social security, compared to the baseline situation. SDS now has a well-defined organogram so that it is clear to all staff who is responsible for what. SDS has revised its strategies, and over the last two years they worked on improving their research capacity, improving their documentation related to FCRA and they have increased their focus on community outreach programme and action research. Strategies are based on research and needs assessment, but there are no mechanisms to use M&E findings systematically in the strategic planning process. SDS's daily operations are still in line with their strategic plans. Staff at SDS pointed out that in the last two years, their staff have a better understanding of annual action plans and leadership now provides guidance on a daily basis. SDS has sufficient capacity, knowledge base, technical skills, as well as capacity to co-ordinate, train and empower persons at community level in order to foster community mobilization within local communities. In the last two years staff has improved their skills in: accounting, financial management and monitoring in adherence to all accounting standards, documentation and computer related skills. As SDS envisages to become an excellent research centre,

staff that has been longer with the organisation still have to develop more research skills. External resource persons were invited by SDS to train their staff members in research skills. Appropriate training is being given to the staff, and also communication among the internal staff is also very helpful. Staff has also attended trainings in Thailand and Nepal, on legal compliances and women human rights. SDS remains a small organization with a dedicated team that enjoys the freedom and flexibility at workplace and trainings. There are now more financial incentives in place which are linked to a regular performance appraisal system, but the director takes the final decision on increment. In the last two years SDS has had challenges in terms of exploring and mobilizing new donors as the two consistent resource agencies that have been supporting SDS in its development pursuits are facing severe resource constraints. Several projects that received funding are coming to an end and at the moment SDS is not receiving adequate funds, since several projects of Cordaid, MISEREOR and BBO end in 2014. The donor environment has changed over the last two years. The donor base is shrinking and foreign NGOs, including Cordaid, are under the radar of the Indian government as they are suspected of activism that stalls India's development projects for example in the extractive industry. SDS now has a systematized approach to access and look for funding opportunities: they are member of "Fund for NGOs" and "Global Giving" websites, are responding to UN requests for interests, have undertaken an extensive scanning of corporate funding under CSR, a new staff member was hired for writing proposals for funding, a yearly report of is made of which proposals are sent and staff meet monthly to discuss this. Unfortunately, this hasn't led to any concrete results at the moment.

Score baseline: 2.8

Score endline: 3.0 (very slight improvement)

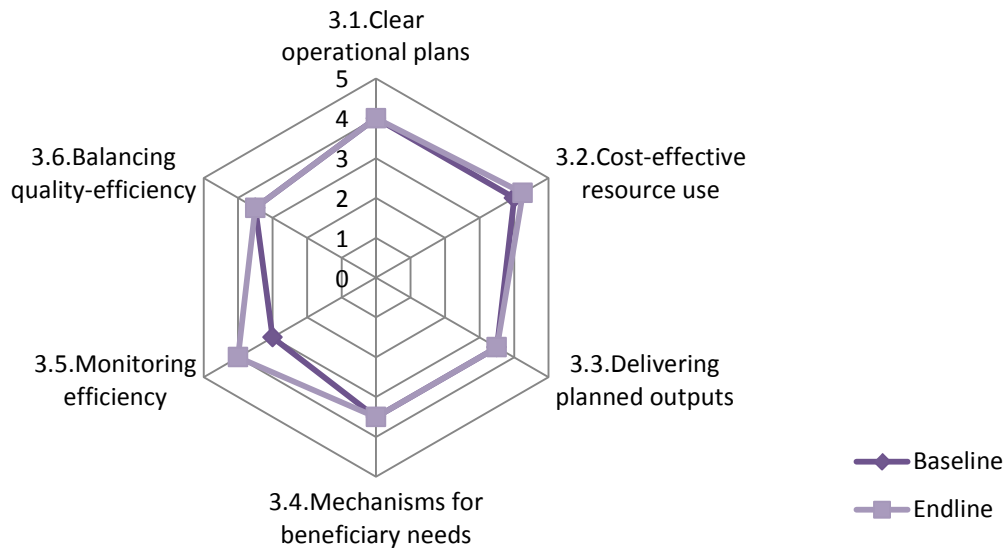

Capability to adapt and self-renew

SDS still gathers information at the output level. Depending on the donors' requirements they use log-frame or results-based management to report on objectives, activities and expected results of projects. The information is compiled at project level. Long term monitoring of projects is still underway. There is still no dedicated person for taking on M&E for all projects. Most field and programme staff has a sufficient knowledge of M&E in relation to their specific projects and consult their senior staff and management when in doubt. SDS uses the findings from their needs assessments to develop their programme strategies in order to ensure that the work they do for the community is aligned with their needs. There is still a need to set up a mechanism to systematically gather longer term results of their interventions and to use this information in strategic planning. Every year SDS continues to conduct Annual Retreats with all staff members to review the existing programmes, job responsibilities of staff and future possibilities and strategies. Staff is given the opportunity to voice their opinions and contribute to the organizational thinking. In the last two years weekly staff meetings were introduced for more frequent reflection. Staff continue to feel free to share their ideas. Staff are taking more ownership and responsibility to implement new ideas. SDS continues to keep track of the changing external environment through newspaper articles, parliamentary proceedings, information through network partners, policy briefings and legislations. As SDS is focussing more on research, they first do research in their operating environment before starting project implementation. SDS continues to be responsive to its stakeholders through various events of different civil society networks. Meetings with stakeholders are regular. There is now some engagement with government functionaries in the state of Chhattisgarh where the WHRD (Women Human Rights Defenders) project is ongoing.

Score baseline: 3.2

Score endline: 3.4 (very slight improvement)

Capability to deliver on development objectives

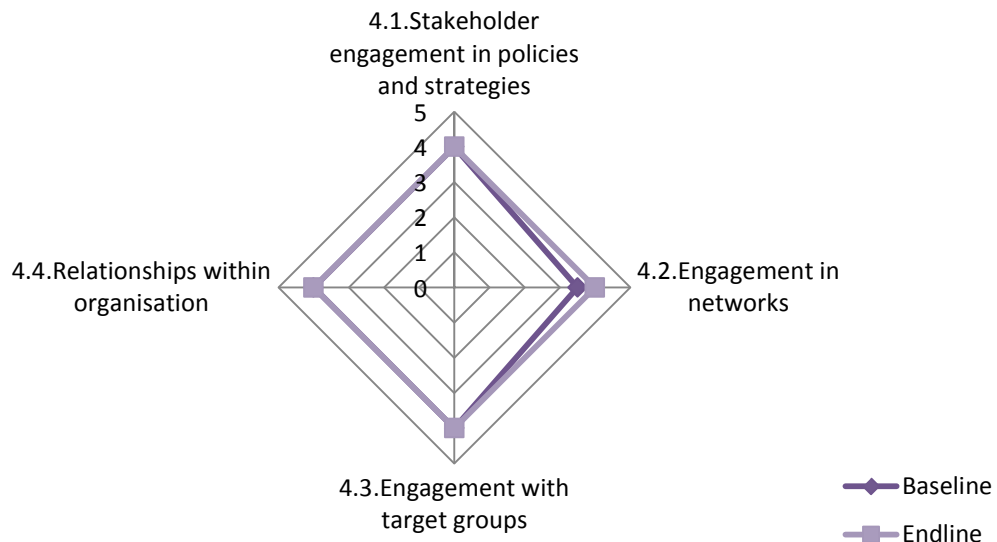

SDS continues to prepare its proposals and plans in consultation with all staff, and staff members follow annual plans and even daily activities plans. During monthly meetings the finished work and occasional deviations from the planned activities are discussed. Cost effectiveness is still a highly valued operational principle at SDS. If there is deviation of budget vis – a – vis activities, it is well documented and conveyed to the donors. Every year, SDS submits the reports to the Ministry of Home Affairs as required under FCRA and income tax returns as required under the Income Tax Act. SDS now follows a procurement policy for purchase of goods and services. This is done to ensure cost-effective utilisation of resource use. SDS continues to deliver most of its outputs as planned, except for when there are delays due to external factors like natural disasters and unrest in the North East, delays in transfer of funds or delays in implementation by other stakeholders. SDS continues to base its services on needs assessments, which is part of its project design process. The needs assessments are discussed with the beneficiaries of its services. SDS still does not have a formal mechanism to ascertain whether beneficiaries are happy with the benefits and services they receive (after receiving them) or to what extent the different target groups benefit. They have now started working directly with their target groups which will help them to get an idea of whether their services meet beneficiary needs. Efficiency in finance is kept under check by not increasing the expenses beyond the allotted budget. All staff members are given targets to be achieved. SDS has put in place a system monitoring of inputs related to outputs through activity related financial reporting. SDS continues to aim at balancing efficiency requirements with the quality of their work, they ensure this by doing proper research and background work. Sometimes due to limited availability of resources, quality work is hindered and work is often hurried up.

Score baseline: 3.6

Score endline: 3.8 (very slight improvement)

Capability to relate

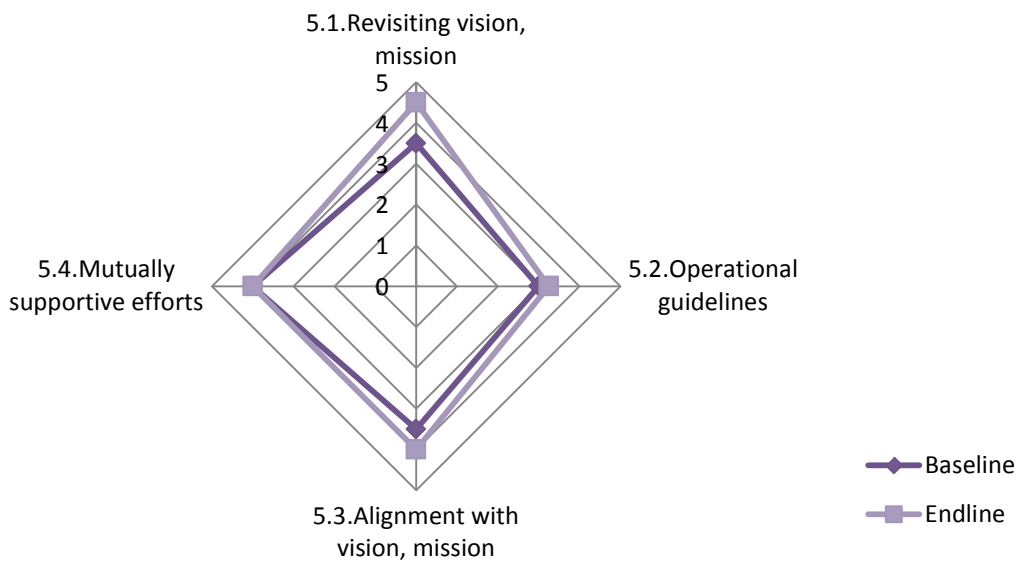

The organisation continues to actively engage with its stakeholders in policy and strategy development through meetings, workshops and consultations. An example is that they have organised a get together with friends of SDS in December 2013. Through consultations like these SDS informs its strategies and policies for the benefit of the organisation. In the past two years SDS has significantly increased the number of partners, including NGOs, CSOs, government agencies, international networks, UN agencies and parliamentarians. SDS has engaged with local NGOs, CSOs, lobby groups and local administration, which increased its knowledge of the ground situation. SDS staff continue to meet beneficiaries frequently: during needs assessment, research, implementation and follow up. SDS continues to be a small organization providing ample space for staff to interact and communicate freely. A dedicated team has been working for SDS, which is spread over three offices and one field centre. SDS has also put in place an office management, communication, monitoring and reporting system; communication between state office and central office is improving because of this.

Score baseline: 3.9

Score endline: 4.0 (no change)

Capability to achieve coherence

The organisation continues to organise annual retreats for leadership and staff to reflect on vision, mission and strategies. Since the baseline SDS has revised its vision and has formulated its mission. SDS works on research and project implementation with a specific focus on women empowerment and gender justice and is using a rights-based approach. The organisation continues to have a financial (from 2009), HR (from 2011) and gender policy (from 2007) in place. To implement the gender policy, the Committee Against Sexual Harassment (CASH) was formed during the Annual Retreat in 2013. SDS also adheres to the FCRA, Income Tax Act and now has a procurement policy in place. As IPAC is now a separate entity working on lobby and advocacy, SDS's research and project implementation are all aligned with its revisited and now consolidated vision of working on the wellbeing of marginalised women and children through women empowerment, gender justice and a rights based approach. SDS continues to take up different programmes which mutually support each other, and now documents the experiences, which informs future planning in the same regions or elsewhere. The areas in which SDS continues to work are: community outreach and research. Its research work informs their activities in the community.

Score baseline: 3.5

Score endline: 3.9 (slight improvement)

4.2.2 General changes in the organisational capacity of the SPO

During the endline workshop at the SPO, a discussion was held around what were the main changes in organisational capacity since the baseline and why these changes have taken place. The discussion was visualised in a general causal map as can be seen below. The narrative for the general causal map is also described below. It gives a more general picture of what was seen as important changes in the organisation since the baseline, and how these changes have come about, and that tells the more general story about the organisational changes in the SPO. The evaluators considered it important to also note down the SPO's story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provide by the evaluation team. The detailed narrative can be found in Annex 4.

The evaluation team carried out an endline assessment at SDS from 16 to 17 August 2014. During this workshop, the team made a recap of key features of the organisation in the baseline in 2012 (such as vision, mission, strategies, clients, partnerships). This was the basis for discussing changes that had happened to the organisation since the baseline.

According to the staff present at the endline workshop, the three key changes in SDS over the last two years since the baseline in 2012 have been:

- Improved research capacity [2];
- Improved documentation related to FCRA [3];
- Increased focus on community outreach programme and action research [4].

The three main organisational capacity changes are described in the light orange boxes. These are expected to lead to improved organisational capacity [1], visualised in dark orange. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the organisation are listed at the bottom in dark purple. The narrative describes per organisational capacity change, the contributing factors as described from the top down. The numbers in the visual correspond with the numbers in the narrative.

1. Improved Research Capacity [2]

SDS in the course of the last two years (2012-2014) has been working towards establishing its research capabilities and working directly with the community. SDS initiated research work to better inform its own actions as well as to make a case for policy work and engagement with public sector. Improved research capacity of SDS has been due to:

- Hiring of staff trained in research and data collection methods [3] SDS hired staff trained in research and data collection methods.

- Training of existing staff in research [5]: External resource persons were invited by SDS to train their staff members in research. SDS thus claims that their staff with the presence of trained colleagues and trainings have increased their capacity in the field of research.
- Experience acquired while working in projects [4] In order to expand its research based work, SDS conducted a research for CRY on the Study on Malnutrition among Children in the State of Delhi of children between the age-group of 0-3 years in Delhi and study on quality of education among government schools in Delhi. Under this project, 500 persons were interviewed of which 220 were from resettled colonies, 220 from JJ colonies and 60 were homeless.

Each of these changes has been informed by a change in the vision and mission of the organisation. During the last two years, SDS began envisaging itself as a centre for excellence in research with a specific focus on women [11]. The mission of the organisation which was not very clear during the baseline became focused on women related issues and women empowerment. The organisation is now directing its efforts towards working with the community through women centric community based programmes instead of lobbying and advocacy. When IPAC became independent organisation [8], this helped the organisation to refocus its orientation which was an important change happening in the organisation. Thus the focus of SDS became research and programme implementation while that of IPAC became lobbying and advocacy.

2. Improved Documentation related to FCRA [5]

NGOs working in conflict areas in the North East are in general under the radar of Intelligence Bureau of India. The report of the Intelligence Bureau under the Ministry of Home Affairs "Concerted efforts by select foreign funded NGOs to 'take down' Indian development projects" stated explicitly the work of NGOs especially the foreign funded donors like CORDAID, whom they fear anti-development activities in the country with reference to the extractive project in North East:

"Furthering its efforts on the North-East, Netherlands-based, Dutch Government funded, donor, CORDAID, has recently added 'Extractive Industries in the North East' as the fourth focal point for its interventions in India. It organized another 'Side-Event on Extractive Industries Operations on the Enjoyment of Human Rights (September 14, 2012/Geneva) with Swami Agnivesh as the prominent speaker.....To assess the potential for civil rights activism, Senior Policy Officer, CORDAID, Eelco De Groot (earlier associated with the Dutch Ministry of Economic Affairs), has planned a visit to Manipur from March 5-12, 2013, which was denied. He has planned the visit under the cover of an organization called Extractive Industries Transparency Initiative..."

In a latest report in a national daily in India the negative impacts that foreign funded NGOs working in India, including Cordaid, are stalling oil drilling in the North East. With foreign funded NGOs being brought under the radar of the government [10], NGOs have to put in place an improved process of documentation both financially and programme related. To that end, SDS worked on improving their legal compliances of aligning with the FCRA (Foreign Contribution Regulation Act) [10] and drawing the focus of companies engaged in CSR (Corporate Social Responsibility) initiative [9]. In August 2013, SDS sent one of the staff members to Bangkok to receive training in 'Documentation Skills'. There was also an exchange programme with INSEC⁷, Nepal. These trainings were based on putting all legal compliances in place. So SDS improved its documentation related to FCRA [5] because of the changing donor environment [6], which was influenced by government regulations for foreign funded NGOs [10] and the CSR Act in 2014 [9] helps to improve the documentation related to FCRA.

3. Increased focus on Community outreach programme and Action Research [7]

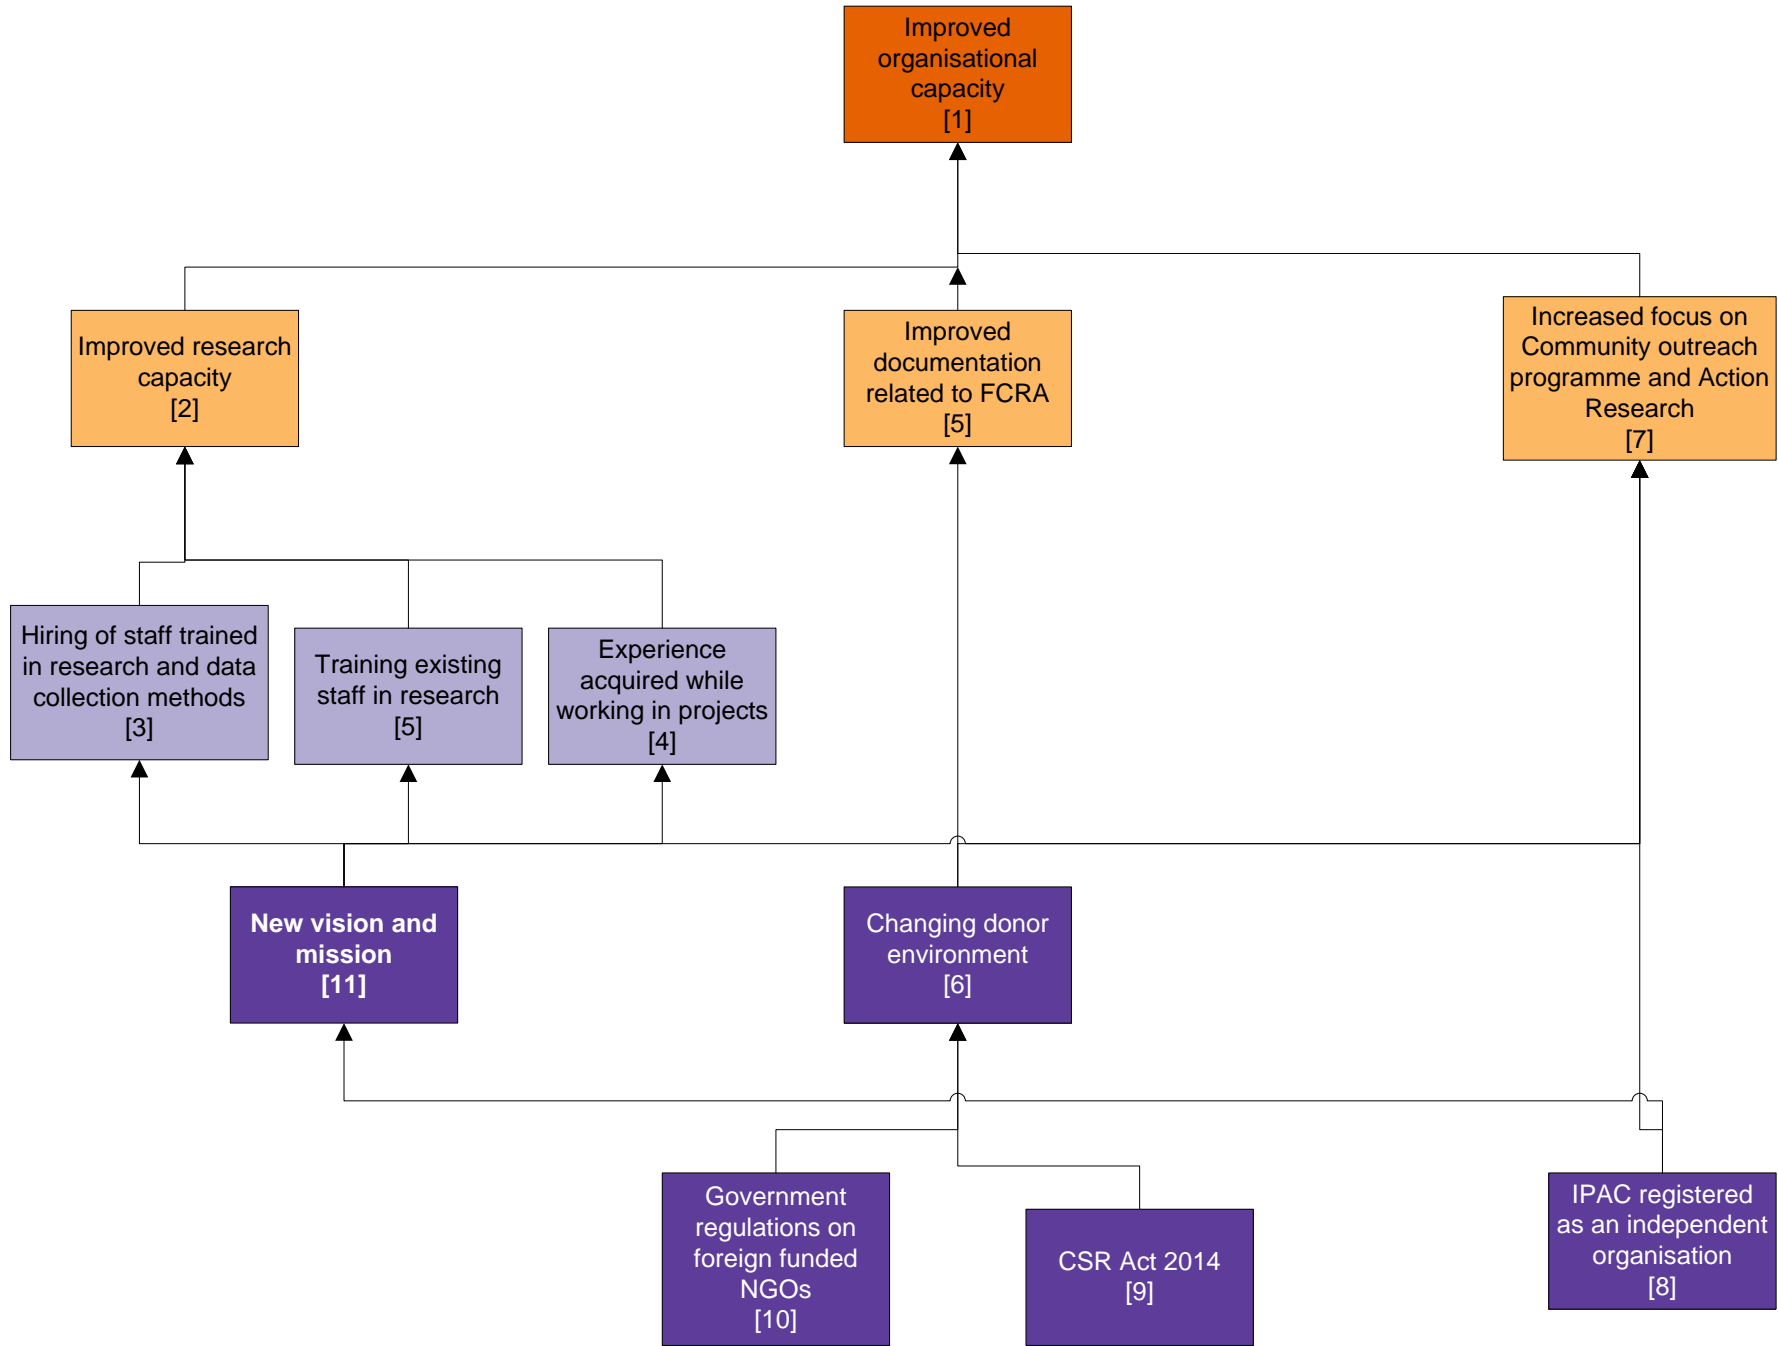

Some examples of SDS' work on community outreach and action research are mentioned below:

- SDS also published "Experiences of Women Human Rights Defenders (WHRD) in the South Asian Context" in November 2013, a documented report on issues of human rights violation of women across South Asia.

⁷ Informal Sector Service Centre

-
- Mining Extraction Project since 1st September 2013 to 31st May, 2014 in Manipur is supported through the Cordaid funding and is based on SDS's research on the impact of mining on women working in the field.
 - Shivi Development Society has improved its focus on community outreach programmes and action research [7], as a result of their revised vision and new mission [11]. This change was also made because of:
 - Change in the donor environment [6]: With the Corporate Social Responsibility(CSR⁸) Act coming into force in 2014 [9], SDS realized that in order to approach the corporate sector they had to focus on community related interventions as the corporate sector did not fund lobbying and advocacy initiatives.
 - IPAC became registered as an independent organization [8]: Another important change that occurred was that the advocacy initiative within SDS i.e. IPAC, became registered as an independent organisation. Thus the focus of SDS became research and programme implementation while that of IPAC became lobbying and advocacy.

⁸ The new Companies Act 2014, with a very strong CSR Clause, mandates companies with an average profit of INR 50 million in last three years, to proactively design and undertake welfare and other developmental activities.

5 Discussion and conclusion

5.1 Methodological issues

During the SDS baseline, WinG (Women in Governance) was still their network partner. During the endline this was no longer the case. It was decided by the evaluation team to document an interview with WinG separately and not to follow the questions in the self-assessment form, since the secretary of WinG did not want to be interviewed, as their partnership with SDS was over. Evaluators conducted a telephonic interview with WinG which is based in the North Eastern part of India and at the time of baseline it was not possible to travel to that part due to security reasons, as explained in the baseline report. Currently, WinG is not working with SDS and has no knowledge of organisational level changes in SDS. They are being hosted by a different organisation and have severed their funding links with SDS. However, since SDS was the unit of analysis, the evaluation team proceeded with focusing on SDS as a unit of analysis for the endline process, even though the links with WinG were not established any more. It must be noted that Cordaid still collaborates with SDS but then on different issues.

There was some difference in the baseline and endline situation of Shivi Development Society. The baseline evaluation, while taking SDS as the unit of analysis, focussed mostly on their Assam Office from which the Women in Governance programme was hosted. This programme was funded by Cordaid. The baseline took place in June 2012 and in March 2013 the legal holder of WinG changed from SDS to Chindu, a Hyderabad based organisation. Cordaid continued to fund this programme but no longer through SDS. Cordaid was funding a smaller project of SDS until June 2014, but because of complications in getting visa for Cordaid staff to travel to India a proper verification of the organisational capacity development interventions could not be carried out. Further, this smaller project did not involve any capacity development support to SDS. Cordaid could provide very little information about SDS and its organisational changes during the evaluation period. For the endline, SDS remained the unit of analysis, but the focus was no longer on WinG.

In order to get detailed information on the capacity development of the staff, self-assessment forms were filled up by the management (Chief functionary, Special invitee to EC, Program Coordinator), programme staff (Daily operations help, Program Associate), HR/Administration (Administration, HR and Finance). Except for the Program Coordinator, Daily operations help, Program Associate, all staff also participated in the baseline process. The financial situation did not allow SDS to form a separate M&E unit and staff. There are no field staff, as SDS works with its networking partners. The agreed questionnaire was aimed at teasing out information from various levels of staff without putting them in any awkward situation. The modified and nuanced repetition of questions when translated to an audience not properly exposed to the English language, created a sense of repetitiveness. Evaluators tried to resolve this, by clarifying the responses by a follow-up interview after studying the responses.

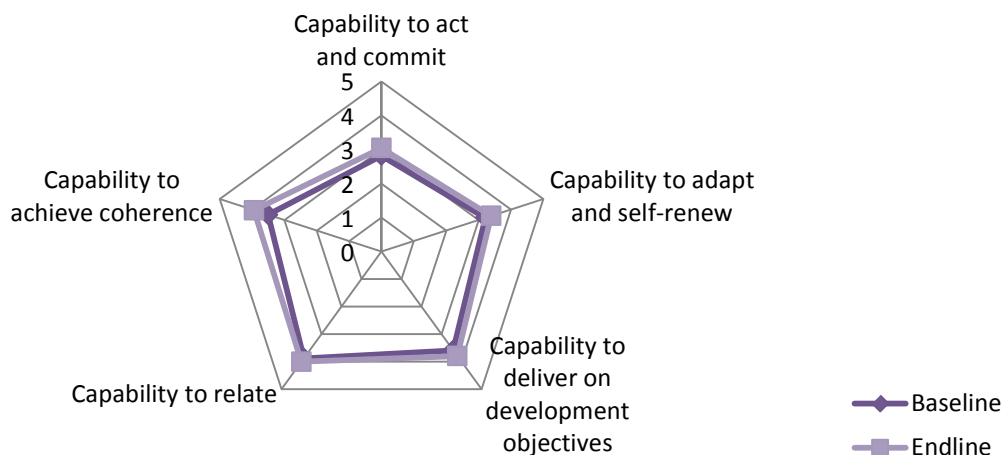

The Organisation Development Consultant of the organisation, who was interviewed during the baseline, is now a special invitee to the Executive Council of SDS. He was part of the endline assessment and filled in the self-assessment forms with the management. So it was decided not to interview him separately.

SDS did not fill in the support to capacity development sheet because they did not receive any MFS II support intervention training programme in the post baseline period. Cordaid also did not fill this in. However, since this organisation was not involved in process tracing the consequences of this was minimal for the analysis.

5.2 Changes in organisational capacity

This section aims to provide an answer to the first and fourth evaluation questions:

1. *What are the changes in partner organisations' capacity during the 2012-2014 period?*
4. *What factors explain the findings drawn from the questions above?*

Whilst changes took place in all of the five core capabilities. Below the changes in each of the capabilities are further explained, by referring to the specific indicators that changed.

Over the last two years most improvements took place in the indicators under the capability to act and commit. There was a very slight improvement in the indicator on staff turnover, as there was less staff turnover at the Delhi office. The reason for this was that all staff now have a good understanding of policy related work and know what kind of work to expect. There is now a well-defined organogram that clearly explains who is responsible for what, which was lacking during the baseline. A slight improvement in the indicator on articulation of strategies was noted because of SDS' improved focus on research and programme implementation and the fact that they use situational analysis; research and M&E for their strategies. Staff now has a better understanding of annual action plans. New staff that was hired is skilled in research and the accounting staff has improved their skills. The financial incentives for staff have improved since the baseline. There has, however, been a slight deterioration in the funding situation of SDS as they now only have one funder, MISEREOR. To improve their funding situation SDS has slightly improved their funding procedures as they now have a more systematised approach to look for funding opportunities.

In the capability to adapt and self-renew SDS also improved slightly in various indicators. SDS improved their M&E because of taking a more community centric approach and improving the communication between the head office and regional office through an office management, communication, monitoring and reporting system. There is more time for critical reflection through weekly staff meetings and more freedom for ideas because of more flexible leadership and staff taking more ownership. SDS has also increased its engagement with stakeholders, especially with government functionaries in the state Chhatisgarh.

In terms of the capability to deliver on development objectives, there has been a very slight improvement in cost-effectiveness as SDS now has a procurement policy to ensure the cost-effective utilisation of resources. There has also been improvement in the monitoring of inputs and outputs as SDS put in place a system for activity related financial reporting.

In the capability to relate SDS improved in its networking capacity. During the baseline there was a need to increase the number of partners. There are now more partners that SDS works with, including local NGOs, CSOs, lobby groups, government agencies and international networks.

Finally, SDS has slightly improved in its capability to achieve coherence as they have now formulated their mission (which was absent during the baseline), have revised their vision and were able to align their projects better with their mission and vision because of IPAC becoming a separate entity. SDS

now focusses on research and project implementation. SDS has also adopted a procurement policy and has formed a Committee against Sexual Harassment.

During the endline workshop some key organisational capacity changes were brought up by SDS' staff: improved research capacity, improved documentation related to FCRA and improved focus on community outreach programme and action research. SDS said it improved its research capacity because of hiring skilled new staff, training existing staff (both mentioned above) and experience they gained by doing more research. The underlying reasons for these changes were the new vision and mission of SDS and the separation of IPAC, so that SDS could focus on research. SDS improving its documentation related to FCRA was triggered by a changing donor environment in which the government regulations for foreign-funded NGOs became stricter and the CSR Act was implemented. SDS improved its focus on community outreach programme and action research because of their new vision and mission. The vision and mission were changed because of the changing donor environment and IPAC becoming a separate entity. MFS II funded capacity development interventions have played no role in the organisational capacity changes that SDS identified as being key, during the endline workshop.

Appendix 1 Methodological approach & reflection

Introduction

This appendix describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around four key evaluation questions:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

Note: the methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report. At the end of this appendix a brief methodological reflection is provided.

Changes in partner organisation's capacity – evaluation question 1

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?**

This question was mainly addressed by reviewing changes in 5c indicators, but additionally a 'general causal map' based on the SPO perspective on key organisational capacity changes since the baseline has been developed. Each of these is further explained below. The development of the general causal map is integrated in the steps for the endline workshop, as mentioned below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012.⁹ Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

1. **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
2. **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
3. **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
4. **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
5. **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

⁹ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Below each of these steps is further explained.

*Step 1. Provide the **description of indicators** in the relevant formats – CDI team*

- These formats were to be used when collecting data from SPO staff, CFA, partners, and consultants. For each of these respondents different formats have been developed, based on the list of 5C indicators, similar to the procedure that was used during the baseline assessment. The CDI team needed to add the 2012 baseline description of each indicator. The idea was that each respondent would be requested to review each description per indicator, and indicate whether the current situation is different from the baseline situation, how this situation has changed, and what the reasons for the changes in indicators are. At the end of each format, a more general question is added that addresses how the organisation has changed its capacity since the baseline, and what possible reasons for change exist. Please see below the questions asked for each indicator as well as the more general questions at the end of the list of indicators.

General questions about key changes in the capacity of the SPO

What do you consider to be the key changes in terms of how the organisation/ SPO has developed its capacity since the baseline (2012)?

What do you consider to be the main explanatory reasons (interventions, actors or factors) for these changes?

List of questions to be asked for each of the 5C indicators (The entry point is the the description of each indicator as in the 2012 baseline report):

1. *How has the situation of this indicator changed compared to the situation during the baseline in 2012? Please tick one of the following scores:*
 - -2 = Considerable deterioration
 - -1 = A slight deterioration
 - 0 = No change occurred, the situation is the same as in 2012
 - +1 = Slight improvement
 - +2 = Considerable improvement
2. *Please describe what exactly has changed since the baseline in 2012*

3. *What interventions, actors and other factors explain this change compared to the baseline situation in 2012? Please tick and describe what interventions, actors or factors influenced this indicator, and how. You can tick and describe more than one choice.*
- Intervention, actor or factor at the level of or by **SPO**:
 - Intervention, actor or factor at the level of or by the **Dutch CFA (MFS II funding)**:
 - Intervention, actor or factor at the level of or by the **other funders**:
 - **Other** interventions, actors or factors:
 - Don't know.

Step 2. Review the descriptions per indicator – in-country team & CDI team

Before the in-country team and the CDI team started collecting data in the field, it was important that they reviewed the description for each indicator as described in the baseline reports, and also added to the endline formats for review by respondents. These descriptions are based on document review, observation, interviews with SPO staff, CFA staff and external respondents during the baseline. It was important to explain this to respondents before they filled in the formats.

Step 3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)

The CDI team was responsible for collecting data from the CFA:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet – CFA perspective.

The in-country team was responsible for collecting data from the SPO and from external respondents (except CFA). The following formats were sent before the fieldwork started:

- 5C Endline support to capacity sheet – SPO perspective.
- 5C Endline interview guides for externals: partners; OD consultants.

Step 4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team

The CDI team, in collaboration with the in-country team, collected the following documents from SPOs and CFAs:

- Project documents: project proposal, budget, contract (Note that for some SPOs there is a contract for the full MFS II period 2011-2015; for others there is a yearly or 2-yearly contract. All new contracts since the baseline in 2012 will need to be collected);
- Technical and financial progress reports since the baseline in 2012; .
- Mid-term evaluation reports;
- End of project-evaluation reports (by the SPO itself or by external evaluators);
- Contract intake forms (assessments of the SPO by the CFA) or organisational assessment scans made by the CFA that cover the 2011-2014 period;
- Consultant reports on specific inputs provided to the SPO in terms of organisational capacity development;
- Training reports (for the SPO; for alliance partners, including the SPO);
- Organisational scans/ assessments, carried out by the CFA or by the Alliance Assessments;
- Monitoring protocol reports, especially for the 5C study carried out by the MFS II Alliances;
- Annual progress reports of the CFA and of the Alliance in relation to capacity development of the SPOs in the particular country;
- Specific reports that are related to capacity development of SPOs in a particular country.

The following documents (since the baseline in 2012) were requested from SPO:

- Annual progress reports;
- Annual financial reports and audit reports;
- Organisational structure vision and mission since the baseline in 2012;
- Strategic plans;

- Business plans;
- Project/ programme planning documents;
- Annual work plan and budgets;
- Operational manuals;
- Organisational and policy documents: finance, human resource development, etc.;
- Monitoring and evaluation strategy and implementation plans;
- Evaluation reports;
- Staff training reports;
- Organisational capacity reports from development consultants.

The CDI team will code these documents in NVivo (qualitative data analysis software program) against the 5C indicators.

Step 5. Prepare and organise the field visit to the SPO – in-country team

Meanwhile the in-country team prepared and organised the logistics for the field visit to the SPO:

- **General endline workshop** consisted about one day for the self-assessments (about ½ to ¾ of the day) and brainstorm (about 1 to 2 hours) on key organisational capacity changes since the baseline and underlying interventions, factors and actors ('general causal map'), see also explanation below. This was done with the five categories of key staff: managers; project/ programme staff; monitoring and evaluation staff; admin & HRM staff; field staff. Note: for SPOs involved in process tracing an additional 1 to 1½ day workshop (managers; program/project staff; monitoring and evaluation staff) was necessary. See also step 7;
- **Interviews with SPO staff** (roughly one day);
- **Interviews with external respondents** such as partners and organisational development consultants depending on their proximity to the SPO. These interviews could be scheduled after the endline workshop and interviews with SPO staff.

General causal map

During the 5C endline process, a 'general causal map' has been developed, based on key organisational capacity changes and underlying causes for these changes, as perceived by the SPO. The general causal map describes cause-effect relationships, and is described both as a visual as well as a narrative.

As much as possible the same people that were involved in the baseline were also involved in the endline workshop and interviews.

Step 6. Interview the CFA – CDI team

The CDI team was responsible for sending the sheets/ formats to the CFA and for doing a follow-up interview on the basis of the information provided so as to clarify or deepen the information provided. This relates to:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet - CFA perspective.

Step 7. Run the endline workshop with the SPO – in-country team

This included running the endline workshop, including facilitation of the development of the general causal map, self-assessments, interviews and observations. Particularly for those SPOs that were selected for process tracing all the relevant information needed to be analysed prior to the field visit, so as to develop an initial causal map. Please see Step 6 and also the next section on process tracing (evaluation question two).

An endline workshop with the SPO was intended to:

- Explain the purpose of the fieldwork;
- Carry out in the self-assessments by SPO staff subgroups (unless these have already been filled prior to the field visits) - this may take some 3 hours.
- Facilitate a brainstorm on key organisational capacity changes since the baseline in 2012 and underlying interventions, factors and actors.

Purpose of the fieldwork: to collect data that help to provide information on what changes took place in terms of organisational capacity development of the SPO as well as reasons for these changes. The baseline that was carried out in 2012 was to be used as a point of reference.

Brainstorm on key organisational capacity changes and influencing factors: a brainstorm was facilitated on key organisational capacity changes since the baseline in 2012. In order to kick start the discussion, staff were reminded of the key findings related to the historical time line carried out in the baseline (vision, mission, strategies, funding, staff). This was then used to generate a discussion on key changes that happened in the organisation since the baseline (on cards). Then cards were selected that were related to organisational capacity changes, and organised. Then a 'general causal map' was developed, based on these key organisational capacity changes and underlying reasons for change as experienced by the SPO staff. This was documented as a visual and narrative. This general causal map was to get the story of the SPO on what they perceived as key organisational capacity changes in the organisation since the baseline, in addition to the specific details provided per indicator.

Self-assessments: respondents worked in the respective staff function groups: management; programme/ project staff; monitoring and evaluation staff; admin and HRM staff; field staff. Staff were assisted where necessary so that they could really understand what it was they were being asked to do as well as what the descriptions under each indicator meant.

Note: for those SPOs selected for process tracing an additional endline workshop was held to facilitate the development of detailed causal maps for each of the identified organisational change/ outcome areas that fall under the capability to act and commit, and under the capability to adapt and self-renew, and that are likely related to capacity development interventions by the CFA. See also the next section on process tracing (evaluation question two). It was up to the in-country team whether this workshop was held straight after the initial endline workshop or after the workshop and the follow-up interviews. It could also be held as a separate workshop at another time.

Step 8. Interview SPO staff – in-country team

After the endline workshop (developing the general causal map and carrying out self-assessments in subgroups), interviews were held with SPO staff (subgroups) to follow up on the information that was provided in the self-assessment sheets, and to interview staff that had not yet provided any information.

Step 9. Fill-in observation sheets – in-country team

During the visit at the SPO, the in-country team had to fill in two sheets based on their observation:

- 5C Endline observation sheet;
- 5C Endline observable indicators.

Step 10. Interview externals – in-country team & CDI team

The in-country team also needed to interview the partners of the SPO as well as organisational capacity development consultants that have provided support to the SPO. The CDI team interviewed the CFA.

Step 11. Upload and auto-code all the formats collected by in-country team and CDI team – CDI team

The CDI team was responsible for uploading and auto-coding (in Nvivo) of the documents that were collected by the in-country team and by the CDI team.

Step 12. Provide the overview of information per 5C indicator to in-country team – CDI team

After the analysis in NVivo, the CDI team provided a copy of all the information generated per indicator to the in-country team for initial analysis.

Step 13. Analyse the data and develop a draft description_of the findings per indicator and for the general questions – in-country team

The in-country team provided a draft description of the findings per indicator, based on the information generated per indicator. The information generated under the general questions were linked to the general causal map or detailed process tracing related causal map.

Step 14. Analyse the data and finalize the description of the findings per indicator, per capability and general – CDI team

The CDI team was responsible for checking the analysis by the in-country team with the Nvivo generated data and to make suggestions for improvement and ask questions for clarification to which the in-country team responded. The CDI team then finalised the analysis and provided final descriptions and scores per indicator and also summarize these per capability and calculated the summary capability scores based on the average of all indicators by capability.

Step 15. Analyse the information in the general causal map –in-country team & CDI team

The general causal map based on key organisational capacity changes as perceived by the SPO staff present at the workshop, was further detailed by in-country team and CDI team, and based on the notes made during the workshop and where necessary additional follow up with the SPO. The visual and narrative was finalized after feedback by the SPO. During analysis of the general causal map relationships with MFS II support for capacity development and other factors and actors were identified. All the information has been reviewed by the SPO and CFA.

Attributing changes in partner organisation's capacity – evaluation question 2

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?***

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process. The box below provides some background information on process tracing.

Background information on process tracing

The essence of process tracing research is that scholars want to go beyond merely identifying correlations between independent variables (Xs) and outcomes (Ys). Process tracing in social science is commonly defined by its addition to trace causal mechanisms (Bennett, 2008a, 2008b; Checkle, 2008; George & Bennett, 2005). A causal mechanism can be defined as “a complex system which produces an outcome by the interaction of a number of parts” (Glennan, 1996, p. 52). Process tracing involves “attempts to identify the intervening causal process – the causal chain and causal mechanism – between an independent variable (or variables) and the outcome of the dependent variable” (George & Bennett, 2005, pp. 206-207).

Process tracing can be differentiated into three variants within social science: theory testing, theory building, and explaining outcome process tracing (Beach & Pedersen, 2013).

Theory testing process tracing uses a theory from the existing literature and then tests whether evidence shows that each part of hypothesised causal mechanism is present in a given case, enabling within case inferences about whether the mechanism functioned as expected in the case and whether the mechanism as a whole was present. No claims can be made however, about whether the mechanism was the only cause of the outcome.

Theory building process tracing seeks to build generalizable theoretical explanations from empirical evidence, inferring that a more general causal mechanism exists from the fact of a particular case.

Finally, explaining outcome process tracing attempts to craft a minimally sufficient explanation of a puzzling outcome in a specific historical case. Here the aim is not to build or test more general theories but to craft a (minimally) sufficient explanation of the outcome of the case where the ambitions are more case centric than theory oriented.

Explaining outcome process tracing is the most suitable type of process tracing for analysing the causal mechanisms for selected key organisational capacity changes of the SPOs. This type of process tracing can be thought of as a single outcome study defined as seeking the causes of the specific outcome in a single case (Gerring, 2006; in: Beach & Pedersen, 2013). Here the ambition is to craft a minimally sufficient explanation of a particular outcome, with sufficiency defined as an explanation that accounts for all of the important aspects of an outcome with no redundant parts being present (Mackie, 1965).

Explaining outcome process tracing is an iterative research strategy that aims to trace the complex conglomerate of systematic and case specific causal mechanisms that produced the outcome in question. The explanation cannot be detached from the particular case. Explaining outcome process tracing refers to case studies whose primary ambition is to explain particular historical outcomes, although the findings of the case can also speak to other potential cases of the phenomenon. Explaining outcome process tracing is an iterative research process in which ‘theories’ are tested to see whether they can provide a minimally sufficient explanation of the outcome. Minimal sufficiency is defined as an explanation that accounts for an outcome, with no redundant parts. In most explaining outcome studies, existing theorisation cannot provide a sufficient explanation, resulting in a second stage in which existing theories are re-conceptualised in light of the evidence gathered in the preceding empirical analysis. The conceptualisation phase in explaining outcome process tracing is therefore an iterative research process, with initial mechanisms re-conceptualised and tested until the result is a theorised mechanism that provides a minimally sufficient explanation of the particular outcome.

Below a description is provided of how SPOs are selected for process tracing, and a description is provided on how this process tracing is to be carried out. Note that this description of process tracing provides not only information on the extent to which the changes in organisational development can be attributed to MFS II (evaluation question 2), but also provides information on other contributing factors and actors (evaluation question 4). Furthermore, it must be noted that the evaluation team has developed an adapted form of ‘explaining outcome process tracing’, since the data collection and analysis was an iterative process of research so as to establish the most realistic explanation for a particular outcome/ organisational capacity change. Below selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

ETHIOPIA

For Ethiopia the capabilities that are mostly targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 1

The extent to which the Dutch NGO explicitly targets the following capabilities – Ethiopia

Capability to:	AMREF	CARE	ECFA	FSCE	HOA- REC	HUND EE	NVEA	OSRA	TTCA
Act and commit	5	4	5	5	5	3	4	4	3
Deliver on development objectives	2	1	1	1	2	1	1	2	1
Adapt and self-renew	4	2	3	4	2	5	3	3	3
Relate	3	1	2	2	3	2	1	3	1
Achieve coherence	2	2	1	1	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Ethiopia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: AMREF, ECFA, FSCE, HUNDEE. In fact, six SPOs would be suitable for process tracing. We just selected the first one per CFA following the criteria of not including more than one SPO per CFA for process tracing

Table 2

SPOs selected for process tracing – Ethiopia

Ethiopia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
AMREF	Dec 2015	Yes	Yes	Yes	Yes	AMREF NL	Yes
CARE	Dec 31, 2015	Partly	Yes	Yes	Yes – slightly	CARE Netherlands	No - not fully matching
ECFA	Jan 2015	Yes	Yes	Yes	Yes	Child Helpline International	Yes
FSCE	Dec 2015	Yes	Yes	Yes	Yes	Stichting Kinderpostzegels Netherlands (SKN); Note: no info from Defence for Children – ECPAT Netherlands	Yes
HOA-REC	Sustainable Energy project (ICCO Alliance): 2014 Innovative WASH (WASH Alliance): Dec 2015	Yes	Yes	Yes	Yes - slightly	ICCO	No - not fully matching
HUNDEE	Dec 2014	Yes	Yes	Yes	Yes	ICCO & IICD	Yes
NVEA	Dec 2015 (both)	Yes	Yes	Yes	Yes	Edukans Foundation (under two consortia); Stichting Kinderpostzegels Netherlands (SKN)	Suitable but SKN already involved for process tracing FSCE
OSRA	C4C Alliance project (farmers marketing): December 2014 ICCO Alliance project (zero grazing): 2014 (2 nd phase)	Yes	Yes	Yes	Yes	ICCO & IICD	Suitable but ICCO & IICD already involved for process tracing - HUNDEE
TTCA	June 2015	Partly	Yes	No	Yes	Edukans Foundation	No - not fully matching

INDIA

For India the capability that is mostly targeted by CFAs is the capability to act and commit. The next one in line is the capability to adapt and self-renew. See also the table below in which a higher score means that the specific capability is more intensively targeted.

Table 3

The extent to which the Dutch NGO explicitly targets the following capabilities – India¹⁰

Capability to:	BVHA	COUNT	DRISTI	FFID	Jana Vikas	Samar thak Samiti	SMILE	SDS	VTRC
Act and commit	5	3	4	4	4	4	4	3	5
Deliver on development objectives	1	5	1	1	1	1	1	2	1
Adapt and self-renew	2	2	1	3	1	1	4	1	4
Relate	3	1	1	1	1	1	2	1	2
Achieve coherence	1	1	1	4	1	1	1	1	2

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, India.

Below you can see a table describing when the contract with the SPO is to be ended and whether SPO and the CFA both expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BVHA, COUNT, FFID, SMILE and VTRC. Except for SMILE (capability to act and commit only), for the other SPOs the focus for process tracing can be on the capability to act and commit and on the capability to adapt and self-renew.

Table 4

SPOs selected for process tracing – India

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BVHA	2014	Yes	Yes	Yes	Yes	Simavi	Yes; both capabilities
COUNT	2015	Yes	Yes	Yes	Yes	Woorden Daad	Yes; both capabilities
DRISTI	31-03-2012	Yes	Yes	No	no	Hivos	No - closed in 2012
FFID	30-09-2014	Yes	Yes	Yes	Yes	ICCO	Yes

¹⁰ RGVN, NEDSF and Women's Rights Forum (WRF) could not be reached timely during the baseline due to security reasons. WRF could not be reached at all. Therefore these SPOs are not included in Table 1.

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew –by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Jana Vikas	2013	Yes	Yes	Yes	No	Cordaid	No - contract is and the by now; not fully matching focus
NEDSF							No – delayed baseline
RGVN							No - delayed baseline
Samarthak Samiti (SDS)	2013 possibly longer	Yes	Yes	Yes	No	Hivos	No - not certain of end date and not fully matching focus
Shivi Development Society (SDS)	Dec 2013 intention 2014	Yes	Yes	Yes	No	Cordaid	No - not fully matching focus
Smile	2015	Yes	Yes	Yes	Yes	Wilde Ganzen	Yes; first capability only
VTRC	2015	Yes	Yes	Yes	Yes	Stichting Red een Kind	Yes; both capabilities

INDONESIA

For Indonesia the capabilities that are most frequently targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 5

The extent to which the Dutch NGO explicitly targets the following capabilities – Indonesia

Capability to:	ASB	Daya kologi	ECPAT	GSS	Lem bage Kita	Pt. PPM/A	Rifka Annisa	WIIP	Yad upa	Yayasan Kelola	YPI	YRBI
Act and commit	4	4	4	5	4	4	5	3	3	2	5	4
Deliver on development objectives	1	1	1	2	2	1	2	1	1	1	1	1
Adapt and self-renew	3	1	2	4	2	3	4	4	1	1	4	3
Relate	1	1	2	3	3	2	1	2	2	2	3	2
Achieve coherence	1	1	1	2	1	1	2	2	1	1	2	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Indonesia.

The table below describes when the contract with the SPO is to be ended and whether both SPO and the CFA expect to focus on these two selected capabilities (MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: ASB, ECPAT, Pt.PPMA, YPI, YRBI.

Table 6

SPOs selected for process tracing – Indonesia

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
ASB	February 2012; extension Feb,1, 2013 – June,30, 2016	Yes	Yes	Yes	Yes	Hivos	Yes
Dayakologi	2013; no extension	Yes	Yes	Yes	No	Cordaid	No: contract ended early and not matching enough
ECPAT	August 2013; Extension Dec 2014	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	Yes
GSS	31 December 2012; no extension	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	No: contract ended early
Lembaga Kita	31 December 2012; no extension	Yes	Yes	No	Yes	Free Press Unlimited - Mensen met een Missie	No - contract ended early
Pt.PPMA	May 2015	Yes	Yes	No	Yes	IUCN	Yes, capability to act and commit only
Rifka Annisa	Dec, 31 2015	No	Yes	No	Yes	Rutgers WPF	No - no match between expectations CFA and SPO
WIIP	Dec 2015	Yes	Not MFS II	Yes	Not MFS II	Red Cross	No - Capacity development interventions are not MFS II financed. Only some overhead is MFS II

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Yayasan Kelola	Dec 30, 2013; extension of contract being processed for two years (2014-2015)	Yes	Not really	Yes	Not really	Hivos	No - no specific capacity development interventions planned by Hivos
YPI	Dec 31, 2015	Yes	Yes	Yes	Yes	Rutgers WPF	Yes
YRBI	Oct, 30, 2013; YRBI end of contract from 31st Oct 2013 to 31st Dec 2013. Contract extension proposal is being proposed to MFS II, no decision yet.	Yes	Yes	Yes	Yes	ICCO	Yes
Yadupa	Under negotiation during baseline; new contract 2013 until now	Yes	Nothing committed	Yes	Nothing committed	IUCN	No, since nothing was committed by CFA

LIBERIA

For Liberia the situation is arbitrary which capabilities are targeted most CFA's. Whilst the capability to act and commit is targeted more often than the other capabilities, this is only so for two of the SPOs. The capability to adapt and self-renew and the capability to relate are almost equally targeted for the five SPOs, be it not intensively. Since the capability to act and commit and the capability to adapt and self-renew are the most targeted capabilities in Ethiopia, India and Indonesia, we choose to focus on these two capabilities for Liberia as well. This would help the synthesis team in the further analysis of these capabilities related to process tracing. See also the table below.

Table 7

The extent to which the Dutch NGO explicitly targets the following capabilities – Liberia

Capability to:	BSC	DEN-L	NAWOCOL	REFOUND	RHRAP
Act and commit	5	1	1	1	3
Deliver on development objectives	3	1	1	1	1
Adapt and self-renew	2	2	2	2	2
Relate	1	2	2	2	2
Achieve coherence	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Liberia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Also, for two of the five SPOs capability to act and commit is targeted more intensively compared to the other capabilities. Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BSC and RHRAP.

Table 8

SPOs selected for process tracing – Liberia

Liberia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BSC	Dec 31, 2015	Yes	Yes	Yes	Yes	SPARK	Yes
DEN-L	2014	No	No	Unknown	A little	ICCO	No – not matching enough
NAWOCOL	2014	Yes	No	No	A little	ICCO	No – not matching enough
REFOUND	At least until 2013 (2015?)	Yes	No	Yes	A little	ICCO	No – not matching enough
RHRAP	At least until 2013 (2014?)	Yes	Yes	Yes	Yes	ICCO	Yes

Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ‘ general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

Some definitions of the terminology used for this MFS II 5c evaluation

Based upon the different interpretations and connotations the use of the term causal mechanism we use the following terminology for the remainder of this paper:

A detailed causal map (or model of change) = the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change.

A causal mechanism = is the combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome (Beach and Pedersen, 2013, p. 176).

Part or cause = one actor with its attributes carrying out activities/ producing outputs that lead to change in other parts. The final part or cause is the change/ outcome.

Attributes of the actor = specificities of the actor that increase his chance to introduce change or not such as its position in its institutional environment.

*Step 1. Identify the **planned MFS II supported capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

Chapter 4.1 and 4.2 in the baseline report were reviewed. Capacity development interventions as planned by the CFA for the capability to act and commit and for the capability to adapt and self-renew were described and details inserted in the summary format. This provided an overview of the capacity development activities that were originally planned by the CFA for these two capabilities and assisted in focusing on relevant outcomes that are possibly related to the planned interventions.

*Step 2. Identify the **implemented capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

The input from the CFA was reviewed in terms of what capacity development interventions have taken place in the MFS II period. This information was found in the 'Support to capacity development sheet - endline - CFA perspective' for the SPO, based on details provided by the CFA and further discussed during an interview by the CDI team.

The CFA was asked to describe all the MFS II supported capacity development interventions of the SPO that took place during the period 2011 up to now. The CDI team reviewed this information, not only the interventions but also the observed changes as well as the expected long-term changes, and

then linked these interventions to relevant outcomes in one of the capabilities (capability to act and commit; and capability to adapt and self-renew).

*Step 3. Identify **initial changes/ outcome areas** in these two capabilities – by CDI team & in-country team*

The CDI team was responsible for coding documents received from SPO and CFA in NVivo on the following:

- 5C Indicators: this was to identify the changes that took place between baseline and endline. This information was coded in Nvivo.
- Information related to the capacity development interventions implemented by the CFA (with MFS II funding) (see also Step 2) to strengthen the capacity of the SPO. For example, the training on financial management of the SPO staff could be related to any information on financial management of the SPO. This information was coded in Nvivo.

In addition, the response by the CFA to the changes in 5C indicators format, was auto-coded.

The in-country team was responsible for timely collection of information from the SPO (before the fieldwork starts). This set of information dealt with:

- MFS II supported capacity development interventions during the MFS II period (2011 until now).
- Overview of all trainings provided in relation to a particular outcome areas/organisational capacity change since the baseline.
- For each of the identified MFS II supported trainings, training questionnaires have been developed to assess these trainings in terms of the participants, interests, knowledge and skills gained, behaviour change and changes in the organisation (based on Kirkpatrick's model), one format for training participants and one for their managers. These training questionnaires were sent prior to the field visit.
- Changes expected by SPO on a long-term basis ('Support to capacity development sheet - endline - SPO perspective').

For the selection of change/ outcome areas the following criteria were important:

- The change/ outcome area is in one of the two capabilities selected for process tracing: capability to act and commit or the capability to adapt and self-renew. This was the first criteria to select upon.
- There was a likely link between the key organisational capacity change/ outcome area and the MFS II supported capacity development interventions. This also was an important criteria. This would need to be demonstrated through one or more of the following situations:
 - In the 2012 theory of change on organisational capacity development of the SPO a link was indicated between the outcome area and MFS II support;
 - During the baseline the CFA indicated a link between the planned MFS II support to organisational development and the expected short-term or long-term results in one of the selected capabilities;
 - During the endline the CFA indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities;
 - During the endline the SPO indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities.

Reviewing the information obtained as described in Step 1, 2, and 3 provided the basis for selecting key organisational capacity change/ outcome areas to focus on for process tracing. These areas were to be formulated as broader outcome areas, such as 'improved financial management', 'improved monitoring and evaluation' or 'improved staff competencies'.

Note: the outcome areas were to be formulated as intermediates changes. For example: an improved monitoring and evaluation system, or enhanced knowledge and skills to educate the target group on

climate change. Key outcome areas were also verified - based on document review as well as discussions with the SPO during the endline.

*Step 4. Construct the **detailed, initial causal map** (theoretical model of change) – CDI & in-country team*

A detailed initial causal map was developed by the CDI team, in collaboration with the in-country team. This was based on document review, including information provided by the CFA and SPO on MFS II supported capacity development interventions and their immediate and long-term objectives as well as observed changes. Also, the training questionnaires were reviewed before developing the initial causal map. This detailed initial causal map was to be provided by the CDI team with a visual and related narrative with related references. This initial causal map served as a reference point for further reflection with the SPO during the process tracing endline workshop, where relationships needed to be verified or new relationships established so that the second (workshop-based), detailed causal map could be developed, after which further verification was needed to come up with the final, concluding detailed causal map.

It's important to note that organisational change area/ outcome areas could be both positive and negative.

For each of the selected outcomes the team needed to make explicit the theoretical model of change. This meant finding out about the range of different actors, factors, actions, and events etc. that have contributed to a particular outcome in terms of organisational capacity of the SPO.

A model of change of good quality includes:

- The causal pathways that relate the intervention to the realised change/ outcome;
- Rival explanations for the same change/ outcome;
- Assumptions that clarify relations between different components or parts;
- Case specific and/or context specific factors or risks that might influence the causal pathway, such as for instance the socio-cultural-economic context, or a natural disaster;
- Specific attributes of the actors e.g. CFA and other funders.

A model of change (within the 5C study called a 'detailed causal map') is a complex system which produces intermediate and long-term outcomes by the interaction of other parts. It consists of parts or causes that often consist of one actor with its attributes that is implementing activities leading to change in other parts (Beach & Pedersen, 2013). A helpful way of constructing the model of change is to think in terms of actors carrying out activities that lead to other actors changing their behaviour. The model of change can be explained as a range of activities carried out by different *actors* (including the CFA and SPO under evaluation) that will ultimately lead to an outcome. Besides this, there are also '*structural*' elements, which are to be interpreted as external factors (such as economic conjuncture); and *attributes* of the actor (does the actor have the legitimacy to ask for change or not, what is its position in the sector) that should be looked at (Beach & Pedersen, 2013). In fact Beach and Pedersen, make a fine point about the subjectivity of the actor in a dynamic context. This means, in qualitative methodologies, capturing the changes in the actor, acted upon area or person/organisation, in a non sequential and non temporal format. Things which were done recently could have corrected behavioural outcomes of an organisation and at the same time there could be processes which incrementally pushed for the same change over a period of time. Beach and Pedersen espouse this methodology because it captures change in a dynamic fashion as against the methodology of logical framework. For the MFS II evaluation it was important to make a distinction between those paths in the model of change that are the result of MFS II and rival pathways.

The construction of the model of change started with the identified key organisational capacity change/ outcome, followed by an inventory of all possible subcomponents that possibly have caused the change/ outcome in the MFS II period (2011-up to now, or since the baseline). The figure below presents an imaginary example of a model of change. The different colours indicate the different types of support to capacity development of the SPO by different actors, thereby indicating different pathways of change, leading to the key changes/ outcomes in terms of capacity development (which in this case indicates the ability to adapt and self-renew).

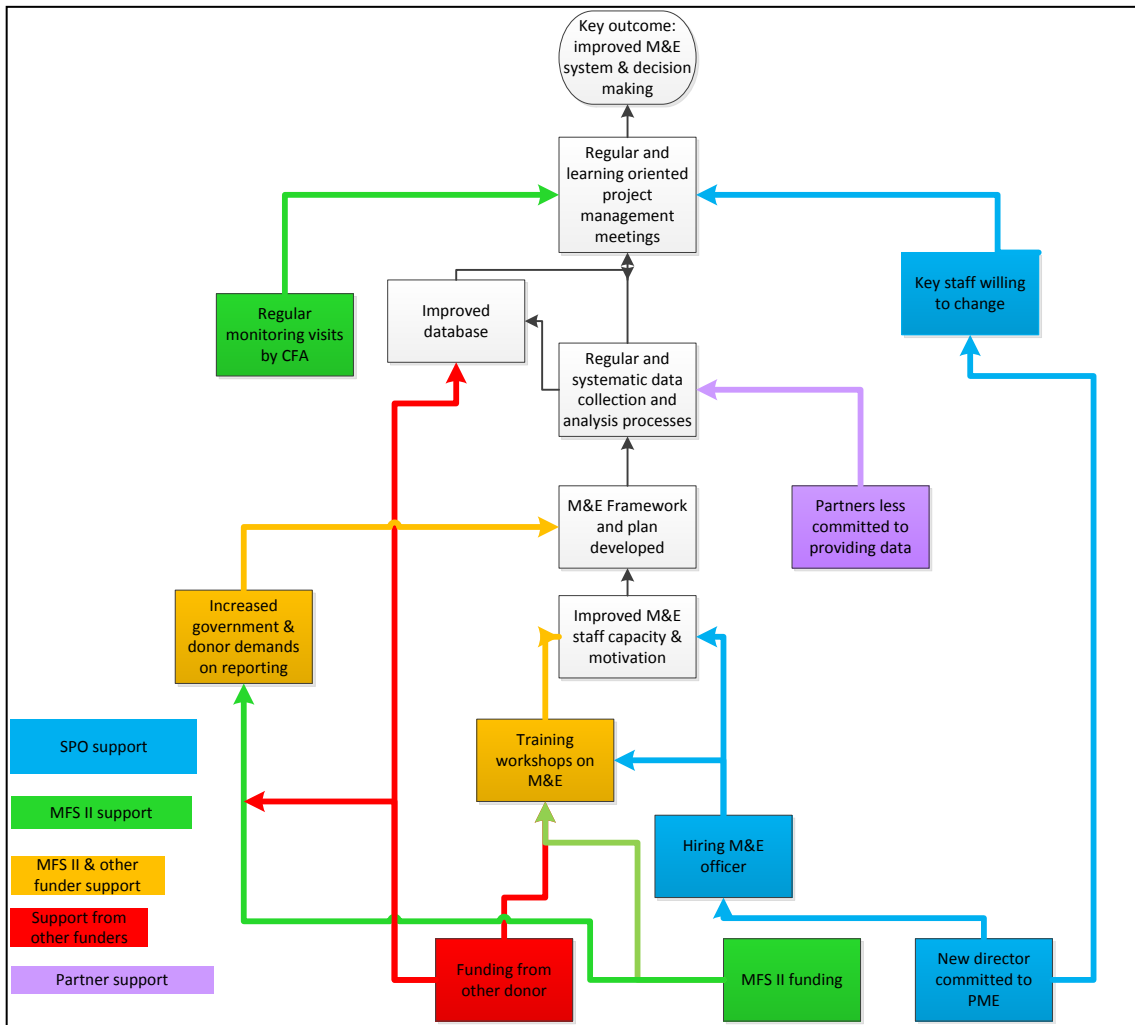

Figure 1 An imaginary example of a model of change

Step 5. Identify **types of evidence** needed to verify or discard different causal relationships in the model of change – in-country teams with support from CDI team

Once the causal mechanism at theoretical level were defined, empirical evidence was collected so as to verify or discard the different parts of this theoretical model of change, confirm or reject whether subcomponents have taken place, and to find evidence that confirm or reject the causal relations between the subcomponents.

A key question that we needed to ask ourselves was, “What information do we need in order to confirm or reject that one subcomponent leads to another, that X causes Y?”. The evaluation team needed to agree on what information was needed that provides empirical manifestations for each part of the model of change.

There are four distinguishable types of evidence that are relevant in process tracing analysis: *pattern*, *sequence*, *trace*, and *account*. Please see the box below for descriptions of these types of evidence.

The evaluation team needed to agree on the types of evidence that was needed to verify or discard the manifestation of a particular part of the causal mechanism. Each one or a combination of these different types of evidence could be used to confirm or reject the different parts of the model of change. This is what is meant by robustness of evidence gathering. Since causality as a concept can bend in many ways, our methodology, provides a near scientific model for accepting and rejecting a particular type of evidence, ignoring its face value.

Types of evidence to be used in process tracing

Pattern evidence relates to predictions of statistical patterns in the evidence. For example, in testing a mechanism of racial discrimination in a case dealing with employment, statistical patterns of employment would be relevant for testing this part of the mechanism.

Sequence evidence deals with the temporal and spatial chronology of events predicted by a hypothesised causal mechanism. For example, a test of the hypothesis could involve expectations of the timing of events where we might predict that if the hypothesis is valid, we should see that the event B took place after event A took place. However, if we found that event B took place before event A took place, the test would suggest that our confidence in the validity of this part of the mechanism should be reduced (disconfirmation/ falsification).

Trace evidence is evidence whose mere existence provides proof that a part of a hypothesised mechanism exists. For example, the existence of the minutes of a meeting, if authentic ones, provide strong proof that the meeting took place.

Account evidence deals with the content of empirical material, such as meeting minutes that detail what was discussed or an oral account of what took place in the meeting.

Source: Beach and Pedersen, 2013

Below you can find a table that provides guidelines on what to look for when identifying types of evidence that can confirm or reject causal relationships between different parts/ subcomponents of the model of change. It also provides one example of a part of a causal pathway and what type of information to look for.

Table 9

Format for identifying types of evidence for different causal relationships in the model of change (example included)

Part of the model of change	Key questions	Type of evidence needed	Source of information
Describe relationship between the subcomponents of the model of change	Describe questions you would like to answer so as to find out whether the components in the relationship took place, when they took place, who was involved, and whether they are related	Describe the information that we need in order to answer these questions. Which type of evidence can we use in order to reject or confirm that subcomponent X causes subcomponent Y? Can we find this information by means of : Pattern evidence; Sequence evidence; Trace evidence; Account evidence?	Describe where you can find this information
Example: Training workshops on M&E provided by MFS II funding and other sources of funding	Example: What type of training workshops on M&E took place? Who was trained? When did the training take place? Who funded the training? Was the funding of training provided before the training took place? How much money was available for the training?	Example: Trace evidence: on types of training delivered, who was trained, when the training took place, budget for the training Sequence evidence on timing of funding and timing of training Content evidence: what the training was about	Example: Training report SPO Progress reports Interviews with the CFA and SPO staff Financial reports SPO and CFA

Please note that for practical reasons, the 5C evaluation team decided that it was easier to integrate the specific questions in the narrative of the initial causal map. These questions would need to be addressed by the in country team during the process tracing workshop so as to discover, verify or discard particular causal mechanisms in the detailed, initial causal map. Different types of evidence was asked for in these questions.

*Step 6. **Collect data** to verify or discard causal mechanisms and develop workshop-based, detailed causal map – in-country team*

Once it was decided by the in-country and CDI evaluation teams what information was to be collected during the interaction with the SPO, data collection took place. The initial causal maps served as a basis for discussions during the endline workshop with a particular focus on process tracing for the identified organisational capacity changes. But it was considered to be very important to understand from the perspective of the SPO how they understood the identified key organisational capacity change/outcome area has come about. A new detailed, workshop-based causal map was developed that included the information provided by SPO staff as well as based on initial document review as described in the initial detailed causal map. This information was further analysed and verified with other relevant information so as to develop a final causal map, which is described in the next step.

*Step 7. **Assess the quality of data and analyse data**, and develop the **final detailed causal map (model of change)** – in-country team and CDI team*

Quality assurance of the data collected and the evidence it provides for rejecting or confirming parts of causal explanations are a major concern for many authors specialised in contribution analysis and process-tracing. Stern et al. (2012), Beach and Pedersen (2013), Lemire, Nielsen and Dybdal (2012), Mayne (2012) and Delahais and Toulemonde (2012) all emphasise the need to make attribution/contribution claims that are based on pieces of evidence that are rigorous, traceable, and credible. These pieces of evidence should be as explicit as possible in proving that *subcomponent X causes subcomponent Y* and ruling out other explanations. Several tools are proposed to check the nature and the quality of data needed. One option is, Delahais and Toulemonde's Evidence Analysis Database, which we have adapted for our purpose.

Delahais and Toulemonde (2012) propose an Evidence Analysis Database that takes into consideration three criteria:

Confirming/ rejecting a causal relation (yes/no);

Type of causal mechanism: intended contribution/ other contribution/ condition leading to intended contribution/ intended condition to other contribution/ feedback loop;

Strength of evidence: strong/ rather strong/ rather weak/ weak.

We have adapted their criteria to our purpose. The in-country team, in collaboration with the CDI team, used the criteria in assessing whether causal relationships in the causal map, were strong enough. This has been more of an iterative process trying to find additional evidence for the established relationships through additional document review or contacting the CFA and SPO as well as getting their feedback on the final detailed causal map that was established. Whilst the form below has not been used exactly in the manner depicted, it has been used indirectly when trying to validate the information in the detailed causal map. After that, the final detailed causal map is established both as a visual as well as a narrative, with related references for the established causal relations.

<i>Example format for the adapted evidence analysis database (example included)</i>	Confirming/ rejecting a causal relation (yes/no)	Type of information providing the background to the confirmation or rejection of the causal relation	Strength of evidence: strong/ rather strong/ rather weak/ weak	Explanation for why the evidence is (rather) strong or (rather) weak, and therefore the causal relation is confirmed/ rejected
Description of causal relation				
e.g. Training staff in M&E leads to enhanced M&E knowledge, skills and practice	e.g. Confirmed	e.g. Training reports confirmed that staff are trained in M&E and that knowledge and skills increased as a result of the training		

Step 8. **Analyse and conclude** on findings– in-country team and CDI team

The final detailed causal map was described as a visual and narrative and this was then analysed in terms of the evaluation question two and evaluation question four: *“To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?”* and *“What factors explain the findings drawn from the questions above?”* It was analysed to what extent the identified key organisational capacity change can be attributed to MFS II supported capacity development interventions as well as to other related factors, interventions and actors.

Explaining factors – evaluation question 4

This paragraph describes the data collection and analysis methodology for answering the fourth evaluation question: **“What factors explain the findings drawn from the questions above?”**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This has been explained in the first section of this appendix. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the ‘general causal map’ has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information was procured for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the process of process tracing as described in the section above.

Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team.

Use of the 5 core capabilities framework and qualitative approach: this has proven to a be very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation

and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
- Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
- Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors , rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people

change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

Appendix 2 Background information on the five core capabilities framework

The 5 capabilities (5C) framework was to be used as a framework for the evaluation of capacity development of Southern Partner Organisations (SPOs) of the MFS II consortia. The 5C framework is based on a five-year research program on 'Capacity, change and performance' that was carried out by the European Centre for Development Policy Management (ECDPM). The research included an extensive review of the literature and sixteen case studies. The 5C framework has also been applied in an IOB evaluation using 26 case studies in 14 countries, and in the baseline carried out per organisation by the MFS II organisations for the purpose of the monitoring protocol.

The 5C framework is structured to understand and analyse (changes in) the capacity of an organization to deliver (social) value to its constituents. This introduction briefly describes the 5C framework, mainly based on the most recent document on the 5C framework (Keijzer et al., 2011).

The 5C framework sees capacity as an **outcome** of an **open system**. An organisation or collaborative association (for instance a network) is seen as a system interacting with wider society. The most critical practical issue is to ensure that relevant stakeholders share a common way of thinking about capacity and its core constituents or capabilities. Decisive for an organisation's capacity is the context in which the organisation operates. This means that **understanding context issues** is crucial. The use of the 5C framework requires a multi-stakeholder approach because shared values and results orientation are important to facilitate the capacity development process. The 5C framework therefore needs to **accommodate the different visions** of stakeholders and conceive different strategies for raising capacity and improving performance in a given situation.

The 5C framework defines capacity as '**producing social value**' and identifies five core capabilities that together result in that overall capacity. Capacity, capabilities and competences are seen as follows:

- **Capacity** is referred to as the overall ability of an organisation or system to create value for others;
- **Capabilities** are the collective ability of a group or a system to do something either inside or outside the system. The collective ability involved may be technical, logistical, managerial or generative (i.e. the ability to earn legitimacy, to adapt, to create meaning, etc.);
- **Competencies** are the energies, skills and abilities of individuals.

Fundamental to developing capacity are inputs such as human, material and financial resources, technology, and information. To the degree that they are developed and successfully integrated, capabilities contribute to the overall capacity or ability of an organisation or system to create value for others. A single capability is not sufficient to create capacity. All are needed and are strongly interrelated and overlapping. Thus, to achieve its development goals, the 5C framework says that every organisation or system must have **five basic capabilities**:

- The capability to act and commit;
- The capability to deliver on development objectives;
- The capability to adapt and self-renew;
- The capability to relate (to external stakeholders);
- The capability to achieve coherence.

In order to have a common framework for evaluation, the five capabilities have been reformulated in outcome domains and for each outcome domain performance indicators have been developed.

There is some overlap between the five core capabilities but together the five capabilities result in a certain level of capacity. Influencing one capability may have an effect on one or more of the other

capabilities. In each situation, the level of any of the five capabilities will vary. Each capability can become stronger or weaker over time.

Appendix 3 Changes in organisational capacity of the SPO - 5C indicators

Below you will find a description for each of the indicators under each of the capabilities, what the situation is as assessed during the endline, how this has changed since the baseline and what are the reasons for change.

Capability to act and commit

Level of Effective Leadership

1.1. Responsive leadership: 'Leadership is responsive, inspiring, and sensitive'

This is about leadership within the organisation (operational, strategic). If there is a larger body then you may also want to refer to leadership at a higher level but not located at the local organisation.

The director of SDS continues to be responsive and sensitive. He has been a part of the organisation since its inception. Over the last two years he has focused on firming up the mission of the organisation which was in the evolving stage during baseline. The director remains flexible and leads on strategic issues concerning SDS's organizational objectives and development programme agenda. He is strong on leading policy issues. However, there is still no second line leadership, and since everything depends on the chief functionary, a fall back option is needed for when he is not there.

Score baseline: 3.0

Score endline: 3.0 (no change)

1.2. Strategic guidance: 'Leaders provide appropriate strategic guidance (strategic leader and operational leader)'

This is about the extent to which the leader(s) provide strategic directions

SDS leadership continues to provide strategic directions, and there is still clarity as to how different initiatives, interventions lead to one goal, one vision. In the last two years SDS leadership has identified women empowerment and gender justice to be its core thematic area. In this regard, the inclusion of Muslim women within their programmes in addition to Dalit and Adivasi women is a positive change since 2012. SDS's chief functionary has focused on research capabilities of the organisation and working directly with the community. SDS initiated research work to better inform its own actions as well as to make a case for policy work and engagement with public sector. The director is part of both SDS and IPAC. As part of the future plan, he wants to expand their working area at both SDS and IPAC and fundraising is very significant part to expand the area of operation. He is applying for projects on behalf of SDS and IPAC, but raised the issue that IPAC should have somebody to work on this independently. They are in the process of selecting a chief functionary for IPAC.

Score baseline: 3.0

Score endline: 3.0 (no change)

1.3. Staff turnover: 'Staff turnover is relatively low'

This is about staff turnover.

In the last two years there has been a change in the organisational structure as SDS Development Society no longer hosts the WinG Assam, and therefore has no office in Assam anymore. The leadership has not changed at SDS in the Delhi office. In 2014 new programme staff was hired in the Delhi office. The present staff at Delhi office have a good understanding of policy related work and are hindered less by the reasons for leaving that were described in the baseline report: preferring to work

in a larger team, travelling alone and no social security. This has led to less staff turnover at the Delhi office.

Score baseline: 2.5

Score endline: 2.75 (very slight improvement)

Level of realistic strategic planning

1.4.Organisational structure: 'Existence of clear organisational structure reflecting the objectives of the organisation'

Observable indicator: Staff have copy of org structure and understand this

There have been changes in the overall organizational structure of SDS. WinG-Assam is no longer a part of SDS, it is presently working with an organization in Hyderabad called Chindu, which is also its legal holder for receiving funds from donors. Another important change that occurred was that the advocacy initiative of SDS, IPAC was registered as an independent organisation. As a consequence SDS is now focussing on research and programme implementation while IPAC continues to work independently on lobbying and advocacy. SDS continues to be a small organisation and some staff members have been part of the organisation since its inception. There is therefore not a very strong hierarchal structure. The organisation now does have a well-defined organogram so that it is clear to all staff who is responsible for what. There is also a clear HR policy that defines the benefits to be received by the staff members.

Score baseline: 2.5

Score endline: 3.0 (some improvement)

1.5.Articulated strategies: 'Strategies are articulated and based on good situation analysis and adequate M&E'

Observable indicator: strategies are well articulated. Situation analysis and monitoring and evaluation are used to inform strategies.

SDS has well-articulated strategies for its programmes which are developed based on situational analysis through proper research and M&E to identify the issues. For example, SDS has revised its strategy by developing its capacity in research to undertake academic and policy oriented research on important issues such as human rights, women empowerment, gender, environment etc. It resulted in better informing its own actions as well as to make a case for advocacy in policy work and engagement with various public sector units. IPAC was registered as an independent organisation. SDS now focuses more on research and programme implementation while IPAC works on lobbying and advocacy.

Further, it is also directing its efforts towards working with the community through women centric community based programmes instead of lobbying and advocacy. In Chhattisgarh the organisation found out the issues of crime against women and challenges faced by leading women human rights defenders in working on human rights issues in the state. Thus, SDS along with IPAC planned a strategy to establish a network of WHRDs in the state and strengthen it. The following strategies were planned for this programme:

- To build the capacities of WHRDs to analyse the specificity of the risks they face and to develop their own security and protection strategies.
- To explore 'self' and 'us' from the perspective of strength and common grounds.
- To broaden the perspectives building a stronger coalitions to work efficiently.
- To take back ideas from each other for collaboration and work for human rights promotion and defence.
- To develop action plans for the next six months for lobby on specific common issues.

In another example, through the needs assessment research programme SDS identified that a segment of Muslim migrant labourers from Bangladesh who were displaced during 2010 Delhi Commonwealth Games are struggling with the issues acquiring documents to support their citizenship to avail government schemes. Thus, SDS developed a strategy to support for skill building of the

women of this community and looking forward to mobilise corporate social responsibility (CSR) fund towards this.

Score baseline: 2.5

Score endline: 3.0 (slight improvement)

Level of translation of strategy into operations

1.6. Daily operations: 'Day-to-day operations are in line with strategic plans'

This is about the extent to which day-to-day operations are aligned with strategic plans.

SDS's daily operations are still in line with their strategic plans. The operational plans continue to be developed out of strategic plans on a yearly basis and reviewed during the year. With the changes in the organisational structure, IPAC becoming an independent organisation and SDS no longer being the legal holder of WinG, an enhanced focus on research and community outreach has impacted SDS's operations. Staff at SDS pointed out that in the last two years; their staff has a better understanding of annual action plans, coordination with the field and policy approaches. Leadership now provides guidance on a daily basis.

Score baseline: 3.5

Score endline: 3.75 (very slight improvement)

Level of Staff Capacity and Motivation

1.7. Staff skills: 'Staff have necessary skills to do their work'

This is about whether staff have the skills necessary to do their work and what skills they might they need.

SDS is working towards developing as a research centre. At present, the research capacities are only confined to the new recruits of SDS, who are skilled in research and data collection methods. The older (in terms of years of association with SDS) staff still have to develop this capacity. SDS has been inviting external resource persons to train their staff members. SDS thus claims that their staff with the presence of trained colleagues and trainings has increased their capacity in the field of research. Skills of accounting staff have improved, including the staff's ability to prepare aggregate project budgets, overall project budgets, financial management and monitoring in adherence to all accounting standards, documentation and computer related skills. SDS has sufficient capacity, knowledge base, technical skills, as well as capacity to co-ordinate, train and empower persons at community level in order to foster community mobilization within local communities. Currently SDS has staff that has previously worked with the United Nations High Commission for Refugees (UNHCR), India and therefore has knowledge, experience and skills of working with UNHCR. Through the current staff, SDS has been able to develop a concept note and financial management document for applying for the project "Strengthened and Expanded Community Mobilization and Promotion of Peaceful Coexistence with Local Communities" in Delhi and NCR. It was submitted by SDS on 13th September, 2014.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

1.8. Training opportunities: 'Appropriate training opportunities are offered to staff'

This is about whether staff at the SPO are offered appropriate training opportunities

SDS hired staff trained in research and data collection methods. Further external resource persons were invited by SDS to train their staff members. SDS thus claims that their staff with the presence of trained colleagues and trainings has increased their capacity in the field of research. Appropriate training is being given to the staff, and also communication among the internal staff is also very helpful. During the last two years the following trainings were given:

- In August 2013, SDS sent one of the staff members to Bangkok to receive training in 'Documentation Skills'.
- There was an exchange programme from July 2012 – June 2013 with INSEC, Nepal on legal compliances. The programme coordinator of SDS participated in this programme.

-
- In Chhattisgarh there has been a workshop funded by MISEREOR, on Women Human Rights Defenders, organized by SDS from 6-9 August 2014.

Score baseline: 4.0

Score endline: 4.0 (no change)

1.9.1. Incentives: 'Appropriate incentives are in place to sustain staff motivation'

This is about what makes people want to work here. Incentives could be financial, freedom at work, training opportunities, etc.

SDS remains a small organization with a dedicated team. They include freedom and flexibility at the workplace, independent functioning, exposures and trainings. There is scope for personal growth. There are now more financial incentives in place. Leadership in consultation with the board members of SDS prepares a performance appraisal once in a year based on which the director takes the final decision on increment. There is a system of regular assessments and related benefits associated with it. The staff is also supported to undertake trainings on a regular basis including trainings that are organised outside India.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

Level of Financial Resource Security

1.9.2. Funding sources: 'Funding from multiple sources covering different time periods'

This is about how diversified the SPOs funding sources are over time, and how the level of funding is changing over time.

In the last two years SDS has had challenges in terms of exploring and mobilizing new donors as the two consistent resource agencies that have been supporting SDS in its development pursuits are facing severe resource constraints. Therefore, the organisation was required to be more pro-active in developing new programmes and seek funding, and to be more creative in resource generation through consultancy services. Cordaid continued to fund SDS till June 2014. Right now, the only funding that SDS has is from MISEREOR for the 'Women Human Rights Defenders' project, Chhattisgarh which will continue until February, 2016. One of the projects that is supported by Cordaid is "National support to coalition on environment & natural resources" for the period 1st September 2013 –31 st June 2014, but for the Women in Governance programme SDS is not the legal holder anymore because SDS is based in New Delhi and had limited knowledge on the socio-political and economic of the North Eastern states. Apart from this, there was logistical difficulty faced by WinG with regard to managing funds and preparation of budgets, so the decision was made by Cordaid to work with the Hyderabad based organisation called Chindu. SDS is continuously reviewing its programme priorities and has sharpened its focus to attract and be able to approach new donors. However, several projects that received funding are coming to an end. Thus, the organisation is not receiving adequate funds to carry out its mission and strategies.

Score baseline: 1.0

Score endline: 0.5 (slight deterioration)

1.9.3. Funding procedures: 'Clear procedures for exploring new funding opportunities'

This is about whether there are clear procedures for getting new funding and staff are aware of these procedures.

The donor environment has changed over the last two years. The donor base is shrinking and foreign NGOs, including Cordaid, are under the radar of the Indian government as they are suspected of activism that stalls India's development projects for example in the extractive industry. As a result NGOs have to put in place improved processes of financial and programme documentation. Thus, SDS has improved their legal compliances of aligning with the FCRA (Foreign Contribution Regulation Act). SDS also trained their incumbent staff members, and this helps them to bid for new donors. SDS now has a systematized approach to access and look for funding opportunities. SDS is a premium member of the "Fund for NGOs" and "Global Giving" websites from where they gain access to regular updates

on funding opportunities. Through these websites SDS gets information on funding sources to approach for funding by sending proposals. SDS responds to specific calls for interests from UN, its agencies and other regional organisations operating in India. Currently SDS has staff that was previously worked with the United Nations High Commission for Refugees (UNHCR), India and therefore has knowledge, experience and skills of working with UNHCR. As a result SDS has been able to develop a concept note and financial management document for applying for the project “Strengthened and Expanded Community Mobilization and Promotion of Peaceful Coexistence with Local Communities in Delhi and NCR”. It was submitted by SDS to UNHCR on 13th September, 2014, and is still in the pipeline. They have also undertaken an extensive scanning of corporate funding under CSR. However, several projects of MISEREOR, Cordaid and BBO (Bridging People and Politics) have come to an end in 2014. At present MISEREOR is the only funder and this funding will continue till February, 2016. Responsibility for exploring new funding opportunities lies with the director, but a new staff member is recruited for writing proposals for funding. Staff meet monthly to plan logistics and discuss internal issues regarding funding opportunities. Unfortunately, this hasn't led to any concrete results at the moment.

Score baseline: 2.5

Score endline: 3.0 (slight improvement)

Summary of capability to act and commit

The director of SDS continues to be responsive and sensitive. However, there is still no second line leadership, and everything depends on the chief functionary, and a fall back option is needed for when he is not there. SDS leadership continues to provide strategic directions, and there is still clarity as to how different initiatives, interventions lead to one goal. In the last two years SDS leadership has identified women empowerment and gender justice to be its core thematic area. SDS's chief functionary has focused on research capacity of the organisation to better inform its own actions, and this is done by hiring staff that have good research knowledge and skills. An important change in the organisational structure of SDS is that its advocacy initiative IPAC was registered as an independent organisation in April 2008, however, the independent operations on a significant level could start only in July 2014 when it got its FCRA registration. The director is part of both SDS and IPAC and is now expanding the area of operation for both organizations (IPAC is now separated from SDS). They are in the process of selecting a chief functionary for IPAC who will then take-over this task. In the last two years there has been a change in the organisational structure as SDS no longer hosts the WinG Assam office. The leadership has not changed, but staff turnover remains high in the Delhi office because staff are often hired on a project-basis and new graduates leave SDS after a short period to move on to other jobs or post-graduate studies. New staff have a good understanding of policy related work and are hindered less by travelling alone and having no social security, compared to the baseline situation. SDS now has a well-defined organogram so that it is clear to all staff who is responsible for what. SDS has revised its strategies, and over the last two years they worked on improving their research capacity, improving their documentation related to FCRA and they have increased their focus on community outreach programme and action research. Strategies are based on research and needs assessment, but there are no mechanisms to use M&E findings systematically in the strategic planning process. SDS's daily operations are still in line with their strategic plans. Staff at SDS pointed out that in the last two years, their staff have a better understanding of annual action plans and leadership now provides guidance on a daily basis. Staff has sufficient capacity, knowledge base, technical skills, as well as capacity to co-ordinate, train and empower persons at community level in order to foster community mobilization within local communities. In the last two years staff has improved their skills in: accounting, financial management and monitoring in adherence to all accounting standards, documentation and computer related skills. As SDS envisages becoming an excellent research centre, staff that has been longer with the organisation still have to develop more research skills. External resource persons were invited by SDS to train their staff members in research skills. Appropriate training is being given to the staff, and also communication among the internal staff is also very helpful. Staff has also attended trainings in Thailand and Nepal, on legal compliances and women human rights. SDS remains a small organization with a dedicated team that enjoys the freedom and flexibility at workplace and trainings. There are now more financial incentives in place which are linked to a regular performance appraisal system, but the director takes the final decision on increment. In the last two years SDS has had challenges in terms of exploring and mobilizing new donors as the two

consistent resource agencies that have been supporting SDS in its development pursuits are facing severe resource constraints. Several projects that received funding are coming to an end and at the moment SDS is not receiving adequate funds, since several projects of Cordaid, MISEREOR and BBO end in 2014. The donor environment has changed over the last two years. The donor base is shrinking and foreign NGOs, including Cordaid, are under the radar of the Indian government as they are suspected of activism that stalls India's development projects for example in the extractive industry. SDS now has a systematized approach to access and look for funding opportunities: they are member of "Fund for NGOs" and "Global Giving" websites, are responding to UN requests for interests, have undertaken an extensive scanning of corporate funding under CSR, a new staff member was hired for writing proposals for funding, a yearly report of is made of which proposals are sent and staff meet monthly to discuss this. Unfortunately, this hasn't led to any concrete results at the moment.

Score baseline: 2.8

Score endline: 3.0 (very slight improvement)

Capability to adapt and self-renew

Level of effective application of M&E

2.1.M&E application: 'M&E is effectively applied to assess activities, outputs and outcomes'

This is about what the monitoring and evaluation of the SPO looks at, what type of information they get at and at what level (individual, project, organisational).

There has been a very slight improvement in this indicator. SDS still gathers information at the output level. Depending on the donors requirements they use a log-frame or results-based management to report on objectives, activities and expected results of projects. The information is compiled at project level. Long term monitoring of projects is underway for long term projects of SDS like the Chhattisgarh project which is funded by MISEREOR. Staff submit monthly reports on their activities, but these are very short and do not convey the essence of the work done. This is an issue that was raised in the annual report for 2012 -2013. SDS has also put in place an office management, communication, monitoring and reporting system, which has been documented in a log sheet till 31st March, 2013. Through this process all the regional offices of SDS fill up in detail the output and outcomes of the project, staff activities, weekly planning and send it to the central office (SDS) on a monthly and weekly basis for further review and analysis of the report. This facilitates SDS to better monitor and evaluate the status and gaps in the programme to make appropriate strategies to address the issues through. Also it helped improve the communication between SDS and regional offices to better implement the programme. SDS's improved monitoring and evaluation of programmes is linked to their taking up of a community centric approach.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

2.2.M&E competencies: 'Individual competencies for performing M&E functions are in place'

This is about whether the SPO has a trained M&E person; whether other staff have basic understanding of M&E; and whether they know what information to collect, how to process the information, how to make use of the information so as to improve activities etc.

There is still no dedicated person for taking on M&E for all projects. The Executive Director is well versed with M&E, setting indicators and plans for monitoring programmes and projects. Most field and programme staff has a sufficient knowledge of M&E in relation to their specific projects and consult their senior staff and management when in doubt.

Score baseline: 3.0

Score endline: 3.0 (no change)

Level of strategic use of M&E

2.3.M&E for future strategies: 'M&E is effectively applied to assess the effects of delivered products and services (outcomes) for future strategies'

This is about what type of information is used by the SPO to make decisions; whether the information comes from the monitoring and evaluation; and whether M&E info influences strategic planning.

SDS uses their findings from their needs assessments to develop their programme strategies in order to ensure that the work they do for the community is aligned with their need. An example is the need assessment programme in Bawana Industrial region located in the North Western district of New Delhi. In addition to the assessment a follow up was done to locate the reasons behind the migrant community's problem. SDS's improved monitoring and evaluation of programmes is linked to their taking up of a community centric approach. There is still a need to set up a mechanism to systematically gather and document the medium and longer term results of their interventions and to discuss and use this information in strategic planning and review.

Score baseline: 2.5

Score endline: 2.5 (no change)

Level of openness to strategic learning

2.4.Critical reflection: 'Management stimulates frequent critical reflection meetings that also deal with learning from mistakes'

This is about whether staff talk formally about what is happening in their programs; and, if so, how regular these meetings are; and whether staff are comfortable raising issues that are problematic.

Every year SDS continues to conduct Annual Retreats with all staff members. The focus of these retreats is to review the existing programmes and job responsibilities of staff, details of ongoing activities, forthcoming programmes and future possibilities and strategies. It provides an opportunity for staff to meet each other, share about their work and reflect upon SDS's overall work and plans at the national level. This has given staff access and opportunity to voice their opinions and contribute to the organizational thinking. In the last two years weekly staff meetings were introduced for more frequent reflection.

Score baseline: 3.0

Score endline: 3.25 (very slight improvement)

2.5. Freedom for ideas: 'Staff feel free to come up with ideas for implementation of objectives'

This is about whether staff feel that ideas they bring for implementation of the program are welcomed and used.

Staff continue to feel free to share their ideas. In Delhi the team is small and ideas are always welcome. During Annual Retreats all staff are allowed to speak about their ideas and discuss issues. Leadership is now more flexible and staff are taking more ownership and responsibility to implement new ideas.

Score baseline: 3.5

Score endline: 3.75 (very slight improvement)

Level of context awareness

2.6.System for tracking environment: 'The organisation has a system for being in touch with general trends and developments in its operating environment'

This is about whether the SPO knows what is happening in its environment and whether it will affect the organization.

SDS continues to keep track of the changing external environment through newspaper articles, parliamentary proceedings, information through network partners and policy briefings. It also keeps track of important legislations. All staff are encouraged and almost mandated to record and keep track of changes in the external world. Furthermore, SDS gets a range of opportunities to engage at

international, national and regional level forums where policy issues and trends are discussed. However, the government in some cases still thinks of SDS's work and engagement as some kind of threat. In the last two years, SDS awareness about the general trends and developments led to their taking up issues on the rise in the cases of crime against women. The MFS II funding received by them is a case in point where the funding is used to finding out the situation of the rights of women in oil extracting industries in Manipur. The Delhi team is quite well aware of developments at national and international level, including the critical importance of information collection and information use. As SDS is focussing more on research, they first do research in their operating environment before starting project implementation.

Score baseline: 4.0

Score endline: 4.0 (no change)

2.7. Stakeholder responsiveness: 'The organisation is open and responsive to their stakeholders and the general public'

This is about what mechanisms the SPO has to get input from its stakeholders, and what they do with that input.

SDS continues to be responsive to its stakeholders. It actively takes part in various events of different civil society networks and responds to their requests for information or assistance. Meetings are regular and according to an overall plan through which SDS stays in touch with other partner organisations. There is also an increased engagement with the stakeholders, in particular, the government functionaries in the state of Chhattisgarh where the WHRD (Women Human Rights Defenders) project is ongoing.

Score baseline: 3.5

Score endline: 3.75 (very slight improvement)

Summary of capability to adapt and self-renew

SDS still gathers information at the output level. Depending on the donors' requirements they use log-frame or results-based management to report on objectives, activities and expected results of projects. The information is compiled at project level. Long term monitoring of projects is still underway. There is still no dedicated person for taking on M&E for all projects. Most field and programme staff has a sufficient knowledge of M&E in relation to their specific projects and consult their senior staff and management when in doubt. SDS uses the findings from their needs assessments to develop their programme strategies in order to ensure that the work they do for the community is aligned with their needs. There is still a need to set up a mechanism to systematically gather longer term results of their interventions and to use this information in strategic planning. Every year SDS continues to conduct Annual Retreats with all staff members to review the existing programmes, job responsibilities of staff and future possibilities and strategies. Staff is given the opportunity to voice their opinions and contribute to the organizational thinking. In the last two years weekly staff meetings were introduced for more frequent reflection. Staff continue to feel free to share their ideas. Staff are taking more ownership and responsibility to implement new ideas. SDS continues to keep track of the changing external environment through newspaper articles, parliamentary proceedings, and information through network partners, policy briefings and legislations. As SDS is focussing more on research, they first do research in their operating environment before starting project implementation. SDS continues to be responsive to its stakeholders through various events of different civil society networks. Meetings with stakeholders are regular. There is now some engagement with government functionaries in the state of Chhattisgarh where the WHRD (Women Human Rights Defenders) project is ongoing.

Score baseline: 3.2

Score endline: 3.4 (very slight improvement)

Capability to deliver on development objectives

Extent to which organisation delivers on planned products and services

3.1. Clear operational plans: 'Organisation has clear operational plans for carrying out projects which all staff fully understand'

This is about whether each project has an operational work plan and budget, and whether staff use it in their day-to-day operations.

There has been no change in this indicator. SDS continues to prepare its proposals and plans in consultation with all staff, and staff members follow annual plans and even daily activity plans. During monthly meetings they discuss the finished work in accordance with annual plans. Deviations from the operational plan, in terms of activities not so much in terms of the budget, happen as the successful implementation of activities very often depends on the other stakeholders.

Score baseline: 4.0

Score endline: 4.0 (no change)

3.2. Cost-effective resource use: 'Operations are based on cost-effective use of its resources'

This is about whether the SPO has the resources to do the work, and whether resources are used cost-effectively.

Cost effectiveness is still a highly valued operational principle at SDS. While during the baseline underutilisation of the budget was covered in the budget variance reporting and activity and results linked financial reporting were missing, now, if there is deviation of budget vis – a – vis activities, it is well documented and conveyed to the donors. Every year, SDS submits the reports to the Ministry of Home Affairs as required under FCRA and income tax returns as required under the Income Tax Act. In addition, it submits regular financial reports to its donors depending on their requirement and project agreement. SDS also shares its budget and financial statements with its constituency, NGO partners and other key stakeholders. The Executive Committee of the organisation keeps a regular track of the financial management of the organisation. The organisation has a written financial policy to guide its daily operations. SDS now follows a procurement policy for purchase of goods and services. Employees making purchases as part of the project activity have to follow the mechanisms of filling up a requisition form. The finance department follows it up and gets it signed by Chief Executive/Executive Director, thereafter a delivery slip will be procured from the finance department of the supplier once the purchase is done and finally all these to be done as per the auditing methods. All of this is done to ensure cost-effective utilisation of resource use.

Score baseline: 4.0

Score endline: 4.25 (very slight improvement)

3.3. Delivering planned outputs: 'Extent to which planned outputs are delivered'

This is about whether the SPO is able to carry out the operational plans.

There has been no change in this indicator. SDS continues to deliver most of its outputs as planned. There are times when the delivery of outputs is delayed due to external factors beyond SDS' control, like natural disasters and unrest in the North East. Delays in transfer of funds also delay project implementation. The successful implementation of activities very often depends on the other stakeholders.

Score baseline: 3.5

Score endline: 3.5 (no change)

Extent to which delivered products and services are relevant for target population in terms of the effect they have

3.4. Mechanisms for beneficiary needs: 'The organisation has mechanisms in place to verify that services meet beneficiary needs'

This is about how the SPO knows that their services are meeting beneficiary needs

SDS continues to base its services on needs assessments, which is part of its project design process. The needs assessments are discussed with the beneficiaries of its services. In Chhattisgarh the team is in close contact with beneficiaries and its main stakeholders in the WHRD network. Fact finding missions are conducted prior to taking action and actions are discussed with concerned beneficiaries. Beneficiaries are participating in different planning and training activities of SDS. SDS's needs assessment programme in the Bawana Industrial region located in the North Western district of New Delhi has been linked to their research based work. These communities are migrant workers who were relocated in the region after being displaced during the Delhi Commonwealth Games in 2010. One of their main problems is acquiring documents to support their citizenship. This was followed up by locating the reasons behind their problem. Along with research, there was implementation of skill building programme for the women in these areas. This support for skill building is provided by SDS from their existing funds and based on the needs assessment in this district. Exploring this area of work as implementers, SDS wants to make use of the corporate social responsibility bill in their favour. SDS still does not have a formal mechanism to ascertain whether beneficiaries are happy with the benefits and services they receive (after receiving them) or to what extent the different target groups benefit. This is precisely the reason behind SDS changing its mandate and initiating the process of directly working with the community through its community centric approach. Through this approach they will get a better idea of whether their services meet beneficiary needs.

Score baseline: 3.5

Score endline: 3.5 (no change)

Level of work efficiency

3.5. Monitoring efficiency: 'The organisation monitors its efficiency by linking outputs and related inputs (input-output ratio's)'

This is about how the SPO knows they are efficient or not in their work.

Efficiency in finance is kept under check by not increasing the expenses beyond the allotted budget. Yearly plans are made during their annual retreat. All staff members are given targets to be achieved. Regular monthly meetings to review their progress are held every fourth day of the month. SDS has put in place a system monitoring of inputs related to outputs through activity related financial reporting.

Score baseline: 3.0

Score endline: 4.0 (improvement)

3.6. Balancing quality-efficiency: 'The organisation aims at balancing efficiency requirements with the quality of its work'

This is about how the SPO ensures quality work with the resources available

There has been no change in this indicator. SDS continues to focus on quality. Generally SDS aims at balancing efficiency requirements with the quality of its work. This is ensured by doing proper research and background work; advance preparation of materials; proper organizing and planning; and by periodically reviewing the utilisation and requirement of resources. Sometimes due to limited availability of resources, quality work is hindered and work is often hurried up.

Score baseline: 3.5

Score endline: 3.5 (no change)

Summary of capability to deliver on development objectives

SDS continues to prepare its proposals and plans in consultation with all staff, and staff members follow annual plans and even daily activities plans. During monthly meetings the finished work and occasional deviations from the planned activities are discussed. Cost effectiveness is still a highly valued operational principle at SDS. If there is deviation of budget vis – a – vis activities, it is well documented and conveyed to the donors. Every year, SDS submits the reports to the Ministry of Home Affairs as required under FCRA and income tax returns as required under the Income Tax Act. SDS now follows a procurement policy for purchase of goods and services. This is done to ensure cost-

effective utilisation of resource use. SDS continues to deliver most of its outputs as planned, except for when there are delays due to external factors like natural disasters and unrest in the North East, delays in transfer of funds or delays in implementation by other stakeholders. SDS continues to base its services on needs assessments, which is part of its project design process. The needs assessments are discussed with the beneficiaries of its services. SDS still does not have a formal mechanism to ascertain whether beneficiaries are happy with the benefits and services they receive (after receiving them) or to what extent the different target groups benefit. They have now started working directly with their target groups which will help them to get an idea of whether their services meet beneficiary needs. Efficiency in finance is kept under check by not increasing the expenses beyond the allotted budget. All staff members are given targets to be achieved. SDS has put in place a system monitoring of inputs related to outputs through activity related financial reporting. SDS continues to aim at balancing efficiency requirements with the quality of their work; they ensure this by doing proper research and background work. Sometimes due to limited availability of resources, quality work is hindered and work is often hurried up.

Score baseline: 3.6

Score endline: 3.8 (very slight improvement)

Capability to relate

Level of involving external parties in internal policy/strategy development

4.1. Stakeholder engagement in policies and strategies: 'The organisation maintains relations/ collaboration/alliances with its stakeholders for the benefit of the organisation'

This is about whether the SPO engages external groups in developing their policies and strategies, and how.

There has been no change in this indicator. The organisation continues to actively engage with its stakeholders in policy and strategy development through meetings, workshops and consultations. An example is that they have organised a get together with friends of SDS in December 2013, where well-wishers, consultants, board members and staff of SDS and IPAC were invited to share objectives and operations of both the organizations (SDS and IPAC) with friends and gradually with the public at large. The founding member presented the history, vision, mission, formation, growth, struggles and achievements of SDS and IPAC. There was also a consultation on the rights of Muslim women. Women were invited from eight states of the country i.e. Bihar, Uttar Pradesh, Chhattisgarh, Madhya Pradesh, Maharashtra, Rajasthan, Haryana and Delhi to discuss pressures on Muslim women in their areas. They expressed a need for more opportunities for education for Muslim women and girls, skill development and employment. Through consultations like these SDS informs its strategies and policies for the benefit of the organisation.

Score baseline: 4.0

Score endline: 4.0 (no change)

Level of engagement of organisation in networks, alliances and collaborative efforts

4.2. Engagement in networks: 'Extent to which the organization has relationships with existing networks/alliances/partnerships'

This is about what networks/alliances/partnerships the SPO engages with and why; with they are local or international; and what they do together, and how do they do it.

SDS continues to be engaged with various regional, national and international networks. The organisation has been involved with UDGHOSH (a network on the right to development) since the baseline. While during the baseline there was a need to engage with more partners, in the past two years SDS has increased the number of partners they engage with. SDS has engaged with local NGOs, CSOs, lobby groups and local administration, which increased its knowledge of the ground situation. Through IPAC, SDS remains in contact with a network of professional lobbyists working in the not-for-profit sector. SDS has also partnered with Fredskorpset (FK); this is a network of partners funded by Norwegian government, working on enhancing the capacity of youth professionals through exchange

programmes. SDS has also partnered with All India Dalit Mahila Adhikar Manch (AIDMAM); North East Women's Network (NewNet), Lok Vikas Kendra, Bihar; Vaagdhara, Rajasthan, Prayatan, Rajasthan; Muslim Mahila Andolan, Mahila Swarozgar Samiti, Uttar Pradesh; Nange Paon Satyagraha, Chhattisgarh; INSEC, Nepal; and SHREE Bangladesh. SDS has been actively working with the network of Women Human Rights Defenders (WHRDs) in Chhattisgarh for the last three years. SDS has engaged with government agencies and parliamentarians as well as international networks like Civicus, Lobby Works and UN organs and agencies, specifically UN Human Rights Council. Concerned programme staff participate in the meetings and events organised by other partners when relevant.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

Extent to which organisation is actively engaging with target groups

4.3. Engagement with target groups: 'The organisation performs frequent visits to their target groups/beneficiaries in their living environment'

This is about how and when the SPO meets with target groups.

There has been no change in this indicator. SDS staff continue to meet beneficiaries frequently: during needs assessment, research, implementation and follow up. Both qualitative and quantitative data was collected to understand the needs of the target groups. During the implementation of a programme staff engage with the target group through awareness programmes, legal follow up and quarterly meetings. For direct intervention at the grass root level, SDS works with volunteers who work as outreach agents.

Score baseline: 4.0

Score endline: 4.0 (no change)

Level of effective relationships within the organisation

4.4. Relationships within organisation: 'Organisational structure and culture facilitates open internal contacts, communication, and decision-making'

How do staff at the SPO communicate internally? Are people free to talk to whomever they need to talk to? When and at what forum? What are the internal mechanisms for sharing information and building relationships?

There has been no change in this indicator. SDS continues to be a small organization providing ample space for staff to interact and communicate freely. Staff use different modes of communication. Daily interactions among staff members continue to take place. A dedicated team has been working for SDS, which is spread over three offices and one field centre. SDS has also put in place an office management, communication, monitoring and reporting system, which has been documented in a log sheet till 31st March, 2013. Monthly reporting consists of programme activity and staff activity along with an analysis; and weekly reporting includes staff mobilization, project or program outcomes of activity, reporting of the program and planning for the week ahead. Minutes are kept of staff meetings and annual retreats. Communication between state office and central office is improving due to a stronger network that is being built.

Score baseline: 4.0

Score endline: 4.0 (no change)

Summary of capability to relate

The organisation continues to actively engage with its stakeholders in policy and strategy development through meetings, workshops and consultations. An example is that they have organised a get together with friends of SDS in December 2013. Through consultations like these SDS informs its strategies and policies for the benefit of the organisation. In the past two years SDS has significantly increased the number of partners, including NGOs, CSOs, government agencies, international networks, UN agencies and parliamentarians. SDS has engaged with local NGOs, CSOs, lobby groups and local administration, which increased its knowledge of the ground situation. SDS staff continue to meet beneficiaries frequently: during needs assessment, research, implementation and follow up. SDS

continues to be a small organization providing ample space for staff to interact and communicate freely. A dedicated team has been working for SDS, which is spread over three offices and one field centre. SDS has also put in place an office management, communication, monitoring and reporting system; communication between state office and central office is improving because of this.

Score baseline: 3.9

Score endline: 4.0 (no change)

Capability to achieve coherence

Existence of mechanisms for coherence

5.1.Revisiting vision, mission: 'Vision, mission and strategies regularly discussed in the organisation'

This is about whether there is a vision, mission and strategies; how often staff discuss/revise vision, mission and strategies; and who is involved in this.

The organisation continues to organise annual retreats for leadership and staff to reflect on vision, mission and strategies. Since the baseline in 2012, SDS has revised its vision and has formulated its mission, which was not yet consolidated in 2012. With SDS no longer being the legal holder of the WinG and with IPAC, the lobby and advocacy initiative of SDS, now being an independent organisation, SDS is envisaging to become a centre for excellence in research with a specific focus on women. SDS initiated research work to better inform its own actions as well as to make a case for policy work and engagement with public sector. SDS also continues to work on project implementation. The organisation is now directing its efforts towards working with the community through women centric community based programmes working on achieving wellbeing for marginalised women and children through women empowerment, gender justice and a rights based approach.

Score baseline: 3.5

Score endline: 4.5 (improvement)

5.2.Operational guidelines: 'Operational guidelines (technical, admin, HRM) are in place and used and supported by the management'

This is about whether there are operational guidelines, which operational guidelines exist; and how they are used.

The organisation continues to have a financial (from 2009), HR (from 2011) and gender policy (from 2007) in place. These operational guidelines are followed. The HR manual provides guidelines to the staff consisting of office hours, compensation granted, insurance given, salary advances etc. SDS's gender manual supports the setting up of a Committee Against Sexual Harassment (CASH) for preventing cases of sexual harassment in the office. During the Annual retreat in 2013, this committee was formed, one for the Delhi and one for the Raipur office (in consultation with its local partners) to further stimulate the use of the gender policy. SDS reports to the Ministry of Home Affairs as required under the FCRA and sends income tax returns as required under the Income Tax Act. In addition, it submits regular financial reports to its donors depending on their requirement and project agreement. SDS also shares its budget and financial statements with its constituency, NGO partners and other key stakeholders. The Executive Committee of the organisation also keeps a regular track of the financial management of the organisation. SDS now also has a procurement policy in place. Policy making continues to be seen largely as a function of the management, so they continue to decide on processes and clauses within processes.

Score baseline: 3.0

Score endline: 3.25 (very slight improvement)

Level of coherence of various efforts of organisation

5.3. Alignment with vision, mission: 'Projects, strategies and associated operations are in line with the vision and mission of the organisation'

This is about whether the operations and strategies are in line with the vision/mission of the SPO.

Operations, projects, interventions, networking and stakeholder engagement are all in line with the revisited vision and now consolidated mission of SDS, which means that all their operations are related to achieving wellbeing of marginalised women and children through women empowerment, gender justice and a rights based approach. Since the baseline SDS wanted to develop IPAC into a separate entity, it has now succeeded at this: in July 2014 IPAC obtained its FCRA registration and so that it could operate independently. This makes it easier for SDS to focus on its research and project implementation work in line with their vision and mission, while IPAC continues to work on lobby and advocacy.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

5.4. Mutually supportive efforts: 'The portfolio of project (activities) provides opportunities for mutually supportive efforts'

This is about whether the efforts in one project complement/support efforts in other projects.

SDS continues to take up different programmes which strengthen each other, in terms of experiences, strategies, knowledge and networks. SDS now documents and reports on the experiences of its programmes and benefits from networks, which has consistently informed and educated future planning of projects and activities in the same regions or elsewhere. SDS no longer works on WinG and policy influencing; this last area is now done by the independent entity IPAC. The areas in which SDS continues to work are: community outreach on the issue of child rights, women for effective governance; and research and documentation around child and human rights, health and malnutrition, migration, voter's motivation levels in parliamentary elections, and Dalit land rights. These areas mutually support each other as SDS's research work informs their actions in the community outreach programme.

Score baseline: 4.0

Score endline: 4.0 (no change)

Summary of capability to achieve coherence

The organisation continues to organise annual retreats for leadership and staff to reflect on vision, mission and strategies. Since the baseline SDS has revised its vision and has formulated its mission. SDS works on research and project implementation with a specific focus on women empowerment and gender justice and is using a rights-based approach. The organisation continues to have a financial (from 2009), HR (from 2011) and gender policy (from 2007) in place. To implement the gender policy, the Committee Against Sexual Harassment (CASH) was formed during the Annual Retreat in 2013. SDS also adheres to the FCRA, Income Tax Act and now has a procurement policy in place. As IPAC is now a separate entity working on lobby and advocacy, SDS's research and project implementation are all aligned with its revisited and now consolidated vision of working on the wellbeing of marginalised women and children through women empowerment, gender justice and a rights based approach. SDS continues to take up different programmes which mutually support each other, and now documents the experiences, which informs future planning in the same regions or elsewhere. The areas in which SDS continues to work are: community outreach and research. Its research work informs their activities in the community.

Score baseline: 3.5

Score endline: 3.9 (slight improvement)

Appendix 4 Results - key changes in organisational capacity - general causal map

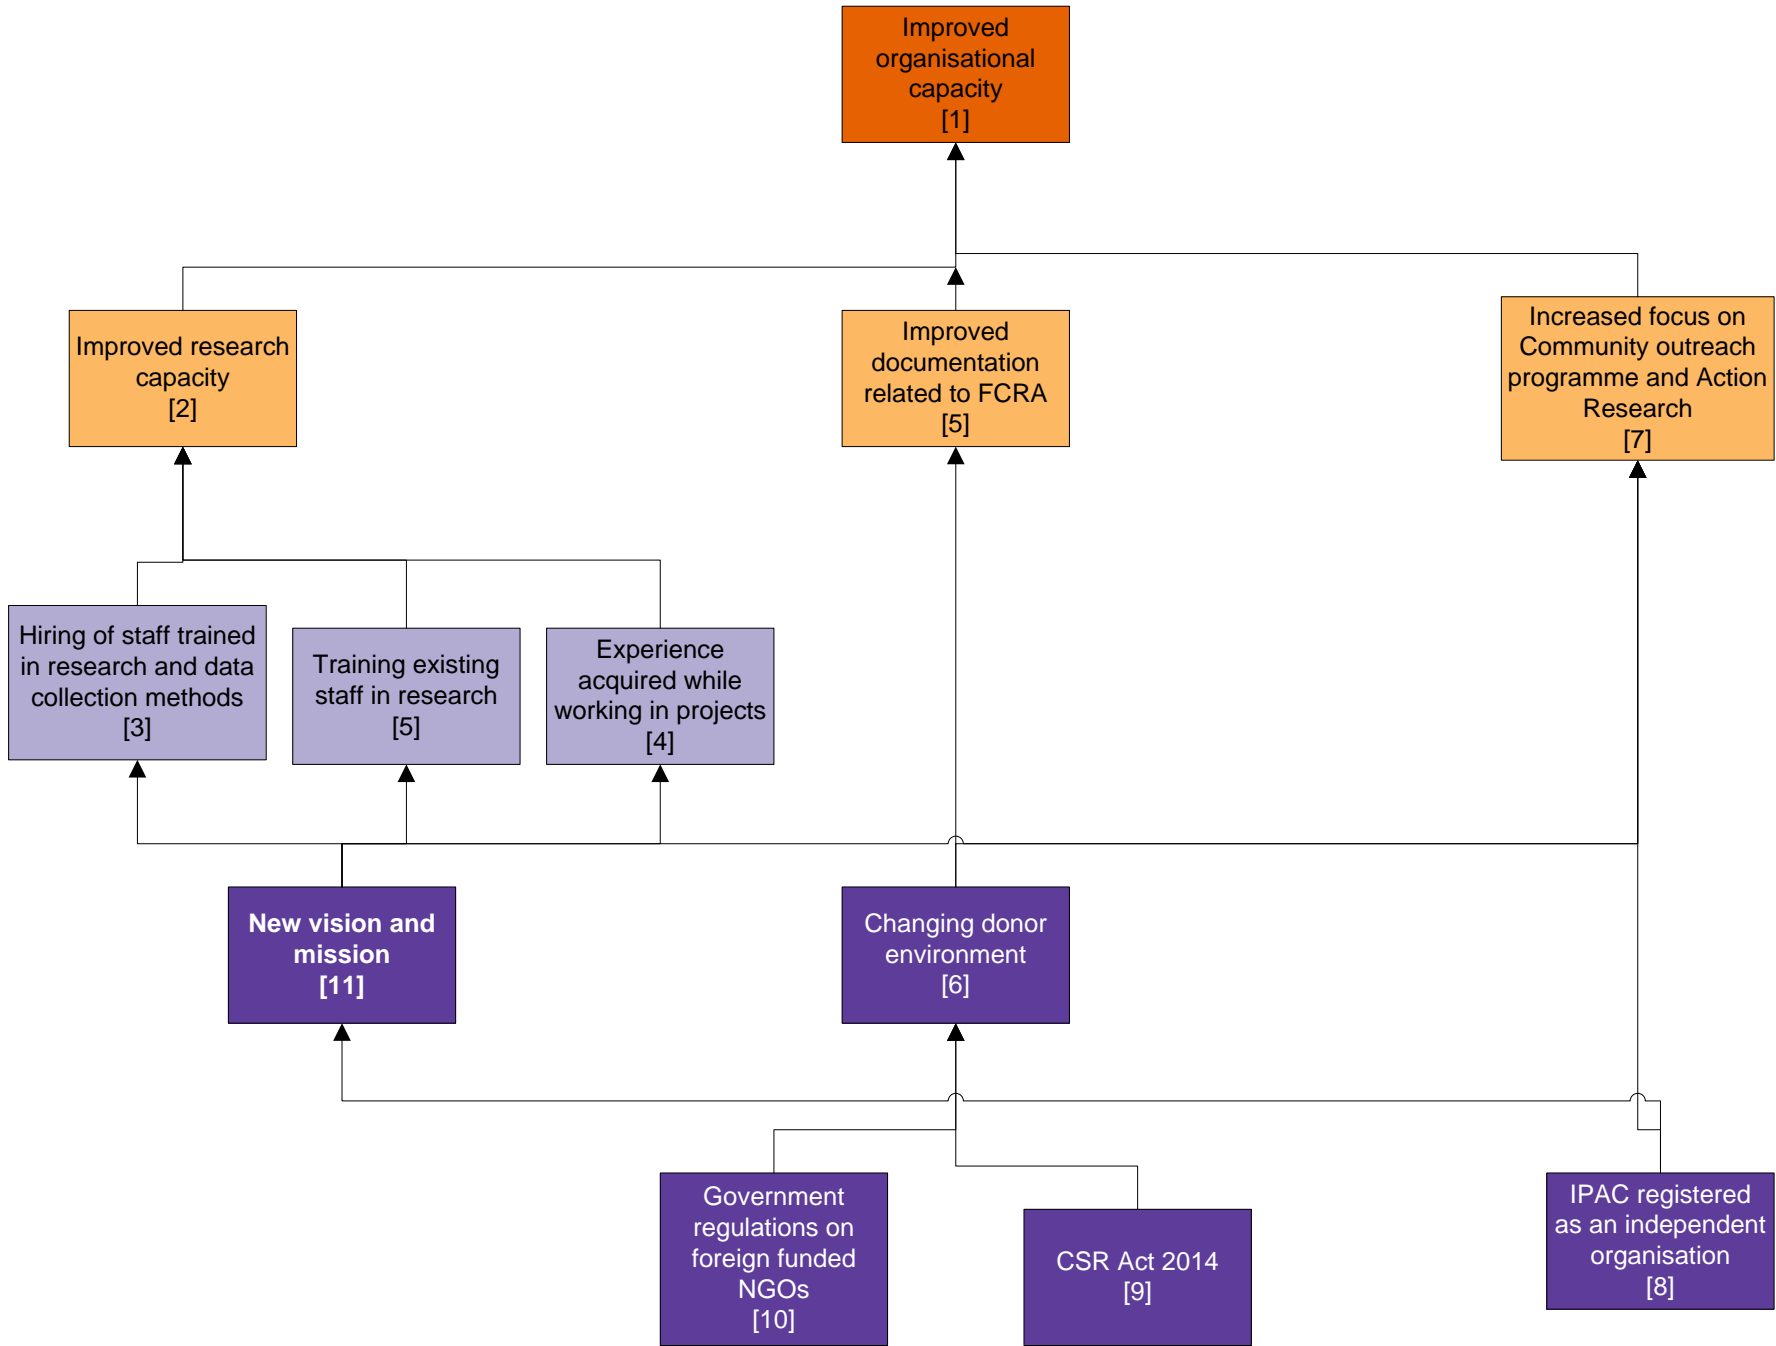

Below you will find a description of the general causal map that has been developed for the SPO during the endline workshop. Key changes in organisational capacity since the baseline as identified by the SPO during this endline workshop are described as well as the expected effects and underlying causal factors, actors and events. This is described in both a visual as well as a narrative.

The evaluation team carried out an endline assessment at SDS from 16 to 17 August 2014. During this workshop, the team made a recap of key features of the organisation in the baseline in 2012 (such as vision, mission, strategies, clients, partnerships). This was the basis for discussing changes that had happened to the organisation since the baseline.

According to the staff present at the endline workshop, the three key changes in SDS over the last two years since the baseline in 2012 have been:

- Improved research capacity [2]
- Improved documentation related to FCRA [3]
- Increased focus on community outreach programme and action research [4]

The three main organisational capacity changes are described in the light orange boxes. These are expected to lead to improved organisational capacity [1], visualised in dark orange. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the organisation are listed at the bottom in dark purple. The narrative describes per organisational capacity change, the contributing factors as described from the top down. The numbers in the visual correspond with the numbers in the narrative.

Improved Research Capacity [2]

SDS in the course of the last two years (2012-2014) has been working towards establishing its research capabilities and working directly with the community. SDS initiated research work to better inform its own actions as well as to make a case for policy work and engagement with public sector [Source: Workshop details 2014]. Improved research capacity of SDS has been due to hiring of staff trained in research and data collection methods [3], Training of existing staff in research [5] and experience acquired while working in projects [4].

- Hiring of staff trained in research and data collection methods [3] SDS hired staff trained in research and data collection methods [Source: Self-Assessment forms for Management, 2014].
- Training of existing staff in research [5]: External resource persons were invited by SDS to train their staff members in research. SDS thus claims that their staff with the presence of trained colleagues and trainings has increased their capacity in the field of research [Source: Self-Assessment forms for Management, 2014].
- Experience acquired while working in projects [4] In order to expand its research based work, SDS conducted a research for CRY on the Study on Malnutrition among Children in the State of Delhi of children between the age-group of 0-3 years in Delhi and study on quality of education among government schools in Delhi. Under this project, 500 persons were interviewed of which 220 were from resettled colonies, 220 from JJ colonies and 60 were homeless. A survey was done through “a social questionnaire to obtain quantitative data; for qualitative inputs focused group discussions were held with the help of interview schedules, and through observations with the service providers i.e. ICDS functionaries and doctors of health centres (private and governmental) [Source: SDS Annual Report 2012-2013.pdf].
- SDS’s needs assessment programme in Bawana Industrial region located in the North West district of New Delhi has been linked to their research based work. These communities are migrant workers who were relocated in the region after being displaced during the Delhi Commonwealth Games in 2010. Majority of them are Muslims from Bangladesh, whose struggle start with the problem of acquiring documents to support their citizenship. This cumbersome process of acquiring an identity for acquiring government schemes for the poor led to a situation, where the powerful (resourceful in terms of those who could bribe officials) get easy access to these documents. This was followed up by locating the reasons behind their problem. Along with research, there was implementation of a skill building programme for the women in these areas. This support for skill building is provided by SDS from their existing funds. Exploring this area of working as implementers, SDS wanted to divert the corporate social responsibility in their favour.

Each of these changes has been informed by a change in the vision and mission of the organisation. During the last two years, SDS began envisaging itself as a centre for excellence in research with a specific focus on women [11]. The mission of the organisation which was not very clear during the baseline became focused on women related issues and women empowerment. The organisation is now directing its efforts towards working with the community through women centric community based programmes instead of lobbying and advocacy. When IPAC became independent organisation [8], this helped the organisation to refocus its orientation which was an important change happening in the organisation. The other important change was the fact that the advocacy initiative within SDS i.e. IPAC, became registered as an independent organisation [8] [Source: 5c endline self-assessment of the SPO on organisational capacity – management_India_Shivi]. Thus the focus of SDS became research and programme implementation while that of IPAC became lobbying and advocacy [11].

Improved Documentation related to FCRA [5]

NGOs working in conflict areas in the North East are in general under the radar of Intelligence Bureau of India. The report of the Intelligence Bureau under the Ministry of Home Affairs “Concerted efforts by select foreign funded NGOs to ‘take down’ Indian development projects” stated explicitly the work of NGOs especially the foreign funded donors like CORDAID, whom they fear anti-development activities in the country with reference to the extractive project in North East:

- “Furthering its efforts on the North-East, Netherlands-based, Dutch Government funded, donor, CORDAID, has recently added ‘Extractive Industries in the North East’ as the fourth focal point for its interventions in India. It organized another ‘Side-Event on Extractive Industries Operations on the Enjoyment of Human Rights (September 14, 2012/Geneva) with Swami Agnivesh as the prominent speaker.....To assess the potential for civil rights activism, Senior Policy Officer, CORDAID, Eelco De Groot (earlier associated with the Dutch Ministry of Economic Affairs), has planned a visit to Manipur from March 5-12, 2013, which was denied. He has planned the visit under the cover of an organization called Extractive Industries Transparency Initiative...” [Source: IB-Report-NGO.pdf].
- In a latest report in a national daily in India the negative impacts that foreign funded NGOs working in India, including Cordaid, are stalling oil drilling in the North East [Source: <http://timesofindia.indiatimes.com/india/Dutch-funded-NGO-trying-to-stall-oil-drilling-in-northeast-IB-report/articleshow/36513963.cms>]. With foreign funded NGOs being brought under the radar of the government [10], NGOs have to put in place an improved process of documentation both financially and programme related. To that end, SDS worked on improving their legal compliances of aligning with the FCRA (Foreign Contribution Regulation Act) [10] and drawing the focus of companies engaged in CSR (Corporate Social Responsibility) initiative [9]. In August 2013, SDS sent one of the staff members to Bangkok to receive training in ‘Documentation Skills’. There was also an exchange programme with INSEC¹¹, Nepal. These trainings were based on putting all legal compliances in place [Source: Discussion during Endline Workshop 2014]. So SDS improved its documentation related to FCRA [5] because of the changing donor environment [6], which was influenced by government regulations for foreign funded NGOs [10] and the CSR Act in 2014 [9] helps to improve the documentation related to FCRA.

Increased focus on Community outreach programme and Action Research [7]

Some examples of SDS’ work on community outreach and action research are mentioned below:

- SDS is working with the community and had to take up issues on the rise in the cases of crime against women in the last two years; SDS working in the area of human rights violations could not have overlooked issues concerning violation of rights of women. The MFS II funding received by them is a case in point where the funding is taken on finding out the situation of rights of woman in oil extracting industries in Manipur. On the one hand, there is the changed mandate of working directly on issues of women and on the other hand, SDS is also working as direct implementers of the projects. Working directly with the community has led to scaling up their work.
- In Chattisgarh there has been a workshop funded by MISEREOR, on Women Human Rights Defenders, organized by SDS from 6-9 August, 2014. SDS work with this network of Human Rights Defenders is supported by SDS and IPAC [Source: State Level Workshop on Women Human Rights Defenders.docx]. The main objectives of the workshop were:
 - To build the capacities of WHRDs to analyse the specificity of the risks they face and to develop their own security and protection strategies.
 - To explore ‘self’ and ‘us’ from the perspective of strength and common grounds.
 - To broaden the perspectives building a stronger coalitions to work efficiently.
 - To take back ideas from each other for collaboration and work for human rights promotion and defence.
 - To develop action plans for the next six months for lobby on specific common issues. [Source: WHRD News.PDF].
- SDS also published “Experiences of Women Human Rights Defenders (WHRD) in the South Asian Context” in November 2013, a documented report on issues of human rights violation of women across South Asia. This document has been published from the funding received by SDS from Cordaid [Source: Experiences of Women Human Right Defenders in the South Asian Context]
- Mining Extraction Project since 1st September 2013 to 31st May, 2014 in Manipur is supported through the Cordaid funding and is based on SDS’s research on the impact of mining on women working in the field. This project is at its initial stage of formulating of the concept note for it. Change in its theme led to SDS looking into the impact of oil extracting companies from the

¹¹ Informal Sector Service Centre

perspective of its impact on gender. Dispelling the common perception of higher engagement of men in agriculture, this research looks into its impact upon the lives of women working in the agricultural fields.

- In 2013, SDS worked towards setting up a Migration Facilitation and Information Centre (MFIC) in Dudhaniya village in Jharkhand. The centres cater to migrant workers from the 18 villages in that region. It provides them with ID cards issued by Government of Bihar, providing basic services to the migrant workers. The programme focused on the awareness and effective implementation of “Pravasi Majdoor Durghatana¹² Bima Yojana”. SDS had set up health camps in Varanasi and Kota, Rajasthan to promote health awareness [Source: SDS Annual Report 2012-2013.pdf].

Shivi Development Society has improved its focus on community outreach programmes and action research [7], as a result of their revised vision and new mission [11]. This change was also made in response to a change in the donor environment [6] and because of IPAC, the lobby and advocacy initiative of SDS becoming an independent entity [8].

- Change in the donor environment [6]
- With the Corporate Social Responsibility(CSR¹³) Act coming into force in 2014 [9], SDS realized that in order to approach the corporate sector they had to focus on community related interventions as the corporate sector did not fund lobbying and advocacy initiatives.
- IPAC became registered as an independent organization [8]
- Another important change that occurred was that the advocacy initiative within SDS i.e. IPAC, became registered as an independent organisation [Source: 5c endline self-assessment of the SPO on organisational capacity – management_India_Shivi]. Thus the focus of SDS became research and programme implementation while that of IPAC became lobbying and advocacy.

¹² Accident insurance policy for migrant labourers

¹³ The new Companies Act 2014, with a very strong CSR Clause, mandates companies with an average profit of INR 50 million in last three years, to proactively design and undertake welfare and other developmental activities.

Centre for Development Innovation
Wageningen UR
P.O. Box88
6700 AB Wageningen
The Netherlands

www.wageningenUR.nl/cdi

ReportCDI-15-013

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.
