Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
 - Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
 - Difficulty of assessing changes in knowledge and behaviour: training questionnaire has been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh,

Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

4 Results

4.1 MFS II supported capacity development interventions

The information available about the MFS II supported capacity development interventions comes partly from the support to capacity development sheet filled in by Hivos in September 2012 and other progress reports received. Unfortunately the person within Hivos who was well familiar with RGVN no longer works for Hivos India and therefore could not provide additional inside information on the capacity development of RGVN. Tasks and responsibilities were transferred to the Hivos head office in the Netherlands upon closure of the Bangalore office in December 2013 and in anticipation of the establishment of a new office in Mumbai in August 2014.

Under the project "Graduating NGOs in MF Institutions in the state of Odisha", that was supported by Hivos until 2012, several capacity development interventions took place in which also RGVN executives participated. These are: training of trainers (TOT) on strategic business plans; workshop on development of result oriented framework and monitoring indicators; follow-up workshop on result orientation and monitoring indicators and a loan portfolio audit. However, these interventions are not mentioned by Hivos as capacity strengthening interventions for RGVN and no budget is known.

During the endline evaluation HRM/Admin staff, programme staff and management of RGVN indicated in their self-assessment sheets that the following trainings were supported by Hivos:

- Training on Leadership, financial management and group dynamics in Jamunali supported by Hivos in July 2013
- Exposure visit to Badamba, Raipur, Parbatipuram and Agriculture university farm, Hyderabad
- Training on Organic farming process at Rambhadrapuram in October 2013
- Training on enterprise promotion and business development in 2013 and August 2014 in Bhubaneswar
- Workshop on Producer Entrepreneurship Catalyst and Incubation Facility (ProCIF) organised by Vrutti Livelihoods sponsored by Hivos 22-23 May 2014 at Bangalore to help the staff graduate poor producer organisations into self-reliant enterprises. This resulted in the staff to improve capacity in training the partners on enterprise management skill and techniques of enterprise promotion activity to supplement the objective of scale up, profitability and market linkages. They could better plan for community level enterprise promotion and prepared a road map for the registration of the cluster with suitable legal identity

The Financial Audited Statement for the financial year April 2013 to March 2014 shows that the following expenditures were made under the category Capacity Building.

By Capacity Building

a) Training. on Vegetable Farming	INR 670.000,-
b) Training. on NTFP	INR 140.000,-
c) Training. on Bell Metal	INR 102.500,-
d) Training & Workshop (Central)	INR 106.100,-
e) Exposure Visit Expenses	INR 60.000,-

These interventions were carried out to strengthen the internal capacity of the community based organizations like Self Help Groups, partners NGOs as well as RGVN itself.

In addition, the 2014 Annual Review Report indicates that the following capacity building activities have been planned for RGVN staff between April 2014 and March 2015.

(D) Central Budget

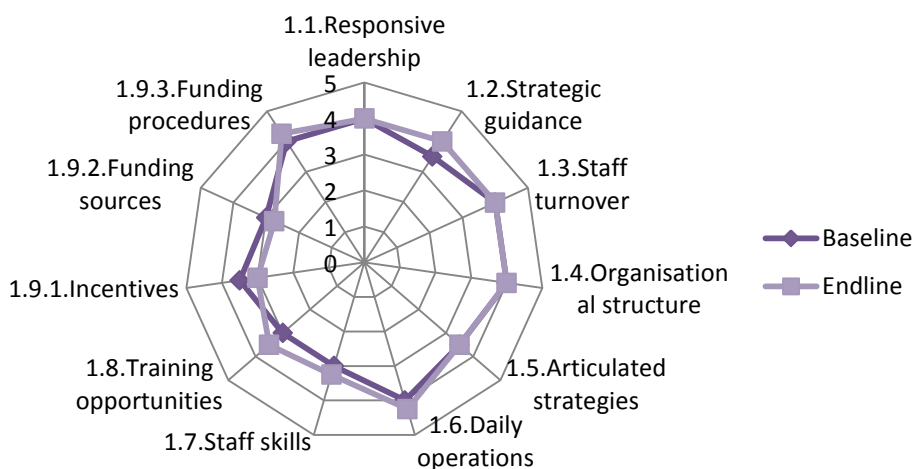

(1) Capacity Building	Nos	April'14-March'15	Total
TOT on Value chain Analysis	1	40,000.00	40,000.00
Training on Enterprise Promotion	1	20,000.00	20,000.00
Development of Posters, Banners and Booklets on the and study materials on Products		30,000.00	30,000.00
Training on Business Development	3	75,000.00	75,000.00
Training on Governance	2	40,000.00	40,000.00
Training On Financial Management	2	40,000.00	40,000.00
Training on Branding and marketing	2	60,000.00	60,000.00
Bye Law Preparation (Activity Specific)	8	80,000.00	80,000.00

4.2 Changes in capacity and reasons for change - evaluation question 1 and 4

Below you can find a description of the changes in each of the five core capabilities. This information is based on the analysis of the information per each of the indicators. This detailed information for each of the indicators describes the current situation, and how and why it has changed since the baseline workshop in August 2012 and the interview with the Director at the head office in Guwahati in June 2013 and what are the reasons for change. Unless explicitly stated that a change happened since the interview with the director in June 2013, the changes took place since the baseline workshop in August 2012. See also annex 3.

4.2.1 Changes in the five core capabilities

Capability to act and commit

The leadership at the head office continues to be open to ideas and suggestions and has a decentralised approach with each implementing regional unit. The Regional unit in Bhubaneswar is

autonomous and responsible for its fundraising, but contracts have to be approved and signed by the RGVN executive director. The executive director feels that despite repeated suggestions the leader at the Bhubaneswar office has not submitted any funding proposals to the head office. The leadership at RGVN Bhubaneswar is however, very committed, competent, experienced, responsive and proactive in taking decisions. The leadership in Bhubaneswar continues to give strategic guidance. While the 2011-2012 strategic plans could not be implemented mainly due to the micro-finance crisis, and a flood and cyclone followed, the management made the strategic decision to shift from micro-finance to sustainable livelihood enhancement. Also external resource mobilisation began to play an important role as the head office decided to no longer allow external borrowings from banks. RGVN's new Project Finance Committee plays an important role in monitoring progress and responding to proposals for funding. Leadership is now staying more abreast with the latest developments and encourages innovative ideas in strategy making. Staff turnover continues to be low at the regional unit Bhubaneswar and staff has become experienced in their work. There has been no new recruitment at the Bhubaneswar office during the last two years, as the organisation has not been able to procure any new projects. The Sustainable Livelihood Enhancement and Enterprise Promotion (SLEEP) project till 2015, funded by Hivos does not have enough funds to attract extra manpower. The organisational structure at the headquarters in Guwahati and the regional office in Bhubaneswar continued to be the same, but new board members have replaced the earlier ones. RGVN continues to work in 14 states of India. The executive director heads the organisation and is based in Guwahati while the four regional offices at Guwahati, Patna, Bhubaneswar and Raipur are headed by Regional Coordinators. Hivos continues to support RGVN for its work in Odisha, for which the team works from Bhubaneswar. RGVN's strategies continue to be well defined and based on good situation analysis and its experience in working in its operational areas. The overall strategy from RGVN has moved from microfinance to sustainable livelihood enhancement. In the related project SLEEP, RGVN articulates its strategies based on their longstanding experience of mobilising and strengthening women producers, artisans, and forest dwellers. With the change in the strategic plan and changing environment the day-to-day operational plans have been revised. Fortnightly review meetings are now conducted to monitor day-to-day operation; this has streamlined the operationalization of the strategic plan of the organization. Over the period RGVN staff has gained skills and knowledge on certain areas that were recommended during the baseline and more due to trainings supported by Hivos and other donors like the Small Industrial Development Bank of India and through staff's considerable field experience. However, due to limited staff strength in the regional office of Bhubaneswar the staff has to multi-task and takes up additional responsibilities. Over the MFS II period the staff participated in ample training programmes and exposure visits supported both by Hivos (MFS II) and others. Staff now seems to have more access to trainings on new trends and strategies as the above trainings fit well with RGVN's new strategy to focus on sustainable livelihood enhancement. Freedom at work, freedom of experimentation with ideas and skill building through various trainings and exposure visits continue to motivate staff at work. However, performance linked incentives have stopped after the baseline in August 2012 because of the executive board's decision to no longer borrow commercial funds and the end of MFS II funding. During the baseline, RGVN had 11 different funders and was receiving funding in the form of grants and loans, while RGVN is approaching new donors related to livelihoods and with its CSR eligibility certificate, currently they are receiving funding from a smaller set of funders than during the baseline. RGVN continues to have clear cut funding procedures RGVN has a national level copy of procedures for exploring new funding opportunities which includes a separate section applicable to RGVN Bhubaneswar. RGVN head office Guwahati has given autonomy to the regional branches to mobilise funds at its own and to choose the projects they work on.

Score baseline: 3.6

Score endline: 3.7 (no change)

Capability to adapt and self-renew

The shift in the focus from microfinance to sustainable livelihood and demand from the donor for focused and structured reporting led the organisation to fine-tune and modify monitoring formats and indicators to collect focussed data from the field. Computerized accounting by using the latest technology was initiated, which further strengthened the M&E system. However, there continues to be a need for RGVN to link outputs to higher level outcomes. RGVN still does not have a dedicated person that works on M&E. At the Bhubaneswar office, most staff has worked there for a long time and has over the years been trained in using log frames and results based analysis. RGVN has indicated that they will hire an M&E expert as soon as they have the funds available for this. RGVN continues to get both qualitative and quantitative information from its M&E system; staff still shares their field visit experience in monthly and half yearly meetings and now also during fortnightly meetings. It is evident from the annual plan 2014-15 that after proper monitoring and review the organisation has proposed some changes in strategy for programme management, financial management and decision making process. Management has also become more responsive and the fortnightly review meetings have streamlined the critical reflection process and resulted in better identification of gaps and appropriate actions taken to address it. The assistant director gives considerable autonomy to the staff to come up with ideas. Though there is hierarchy in the organisation the staff is allowed to take their own decisions and contribute in the strategy in coherence with the overall mandate of the organisation. RGVN continues to work with its implementing NGO partners which helps to have a better understanding of the contextual issues at the field level. RGVN is still part of a large network. As RGVN has shifted its focus from microfinance to sustainable livelihoods, they now also track developments in agriculture. While, staff RGVN stays informed about their operating environment, there still seems to be no formal mechanism to track the environment. The organisation continues to be open to take inputs from different stakeholders, especially their partner organisations, and uses their inputs in developing its M&E indicators and formats in the SLEEP project. Periodic review of financial and operational system is done and shared with all stakeholders.

Score baseline: 3.4

Score endline: 3.4 (no change)

Capability to deliver on development objectives

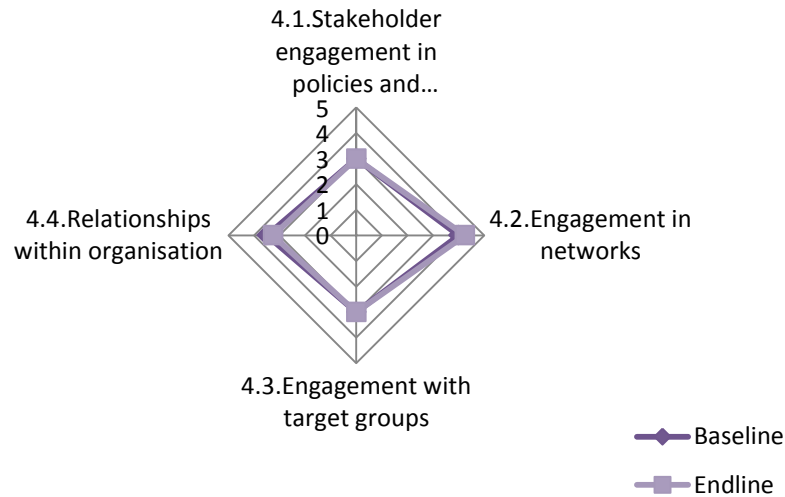

RGVN continues to have day-to-day operational plans and budget for each projects which the staff fully understands and which are in line with the new strategic plan on sustainable livelihood enhancement programme. The restriction of the executive board in borrowing external funds, the ending of the microfinance project and the phasing out of MFS II funding, further made RGVN cost conscious in its resource use. Geographical overlap in RGVN's two main projects saves costs when visiting the target groups. With the microfinance crisis and RGVN board's decision to stop taking loans from the bank, the project of 2011-12 'Graduating NGOs in to MF Institutions in the state of Odisha' could not be delivered as planned. However, the operational plan of the new Hivos funded program 'SLEEP' has been carried out successfully so far. The new initiative of fortnightly review further contributed in effective delivery of the planned outputs. RGVN continues to verify whether services meet beneficiary needs through its monitoring system There is still no formal mechanism to calculate input and output ratio. More detailed report writing, fortnightly meetings, and more interaction at field during training programs and frequent feedback from partners streamlined the monitoring efficiency system. The small team of experienced staff at the Bhubaneswar office continues to ensure team work and good results. Better planning, use of technology in the accounting system, fortnightly review meetings, and the formation of the Project Finance Committee improved the quality and efficiency of work.

Score baseline: 3.7

Score endline: 3.7 (no change)

Capability to relate

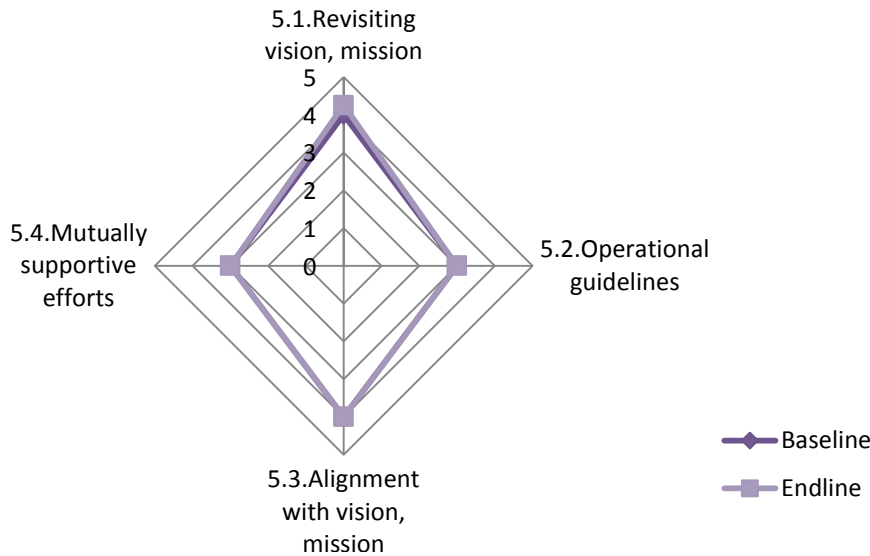

RGVN continues to engage its stakeholders for the benefit of its operations, plans and outcomes. The organization has strengthened its relationship with the government; however, the relationship is only to link up government schemes to the target groups and not at the level of involving them in policy or strategy making. RGVN continues to work with NGO partners to implement its programmes. The new Company Social Responsibility (CSR) Act facilitated the organisation to establish corporate partnerships. A few other new networks have been established since the baseline workshop in August 2012. And RGVN established better linkages with government departments through linking their target group to government schemes and because of built up trust by implementing the rehabilitation program for the Phailin and flood victims. The organisation continues to engage actively with the target groups.

RGVN organizes various periodic workshops, exposure visits, krusak melas (farmer festivals) which facilitates engagement with the target groups. The assistant director at the Bhubaneswar office being democratic in her approach gives considerable autonomy to her staff in terms taking decisions for their respective projects. The evaluation team observed that the relationship between RGVN Bhubaneswar and RGVN head office Guwahati is getting unpleasant as they compete with each other for the same projects.

Score baseline: 3.4

Score endline: 3.4 (no change)

Capability to achieve coherence

The organisation continues to revisit vision and mission of the organisation every 5 years. Due to the microfinance crisis, a change in the donor's priority, the floods and Phailin cyclone, the organisation has made a strategic shift from microfinance to community based micro-enterprise development leading to sustainable livelihood enhancement. The strategic shift is still in alignment with the unchanged vision and mission of the organization. The organisation continues to have operational guidelines like a HR policy which is part of the Administrative Manual of which a hard copy exists. RGVN's projects, strategies and operations continue to be in line with their vision and mission. The new SLEEP project's strategies are very much in line with RGVN's vision to improve the quality of life of the rural and urban underprivileged poor through social action. RGVN's projects continue to be mutually supportive. The SLEEP project and Jivika project both aim at promoting sustainable livelihood promotion among the women, work in the same geographical areas and focus on the same core livelihood sub sectors.

Score endline: 3.6 (no change)

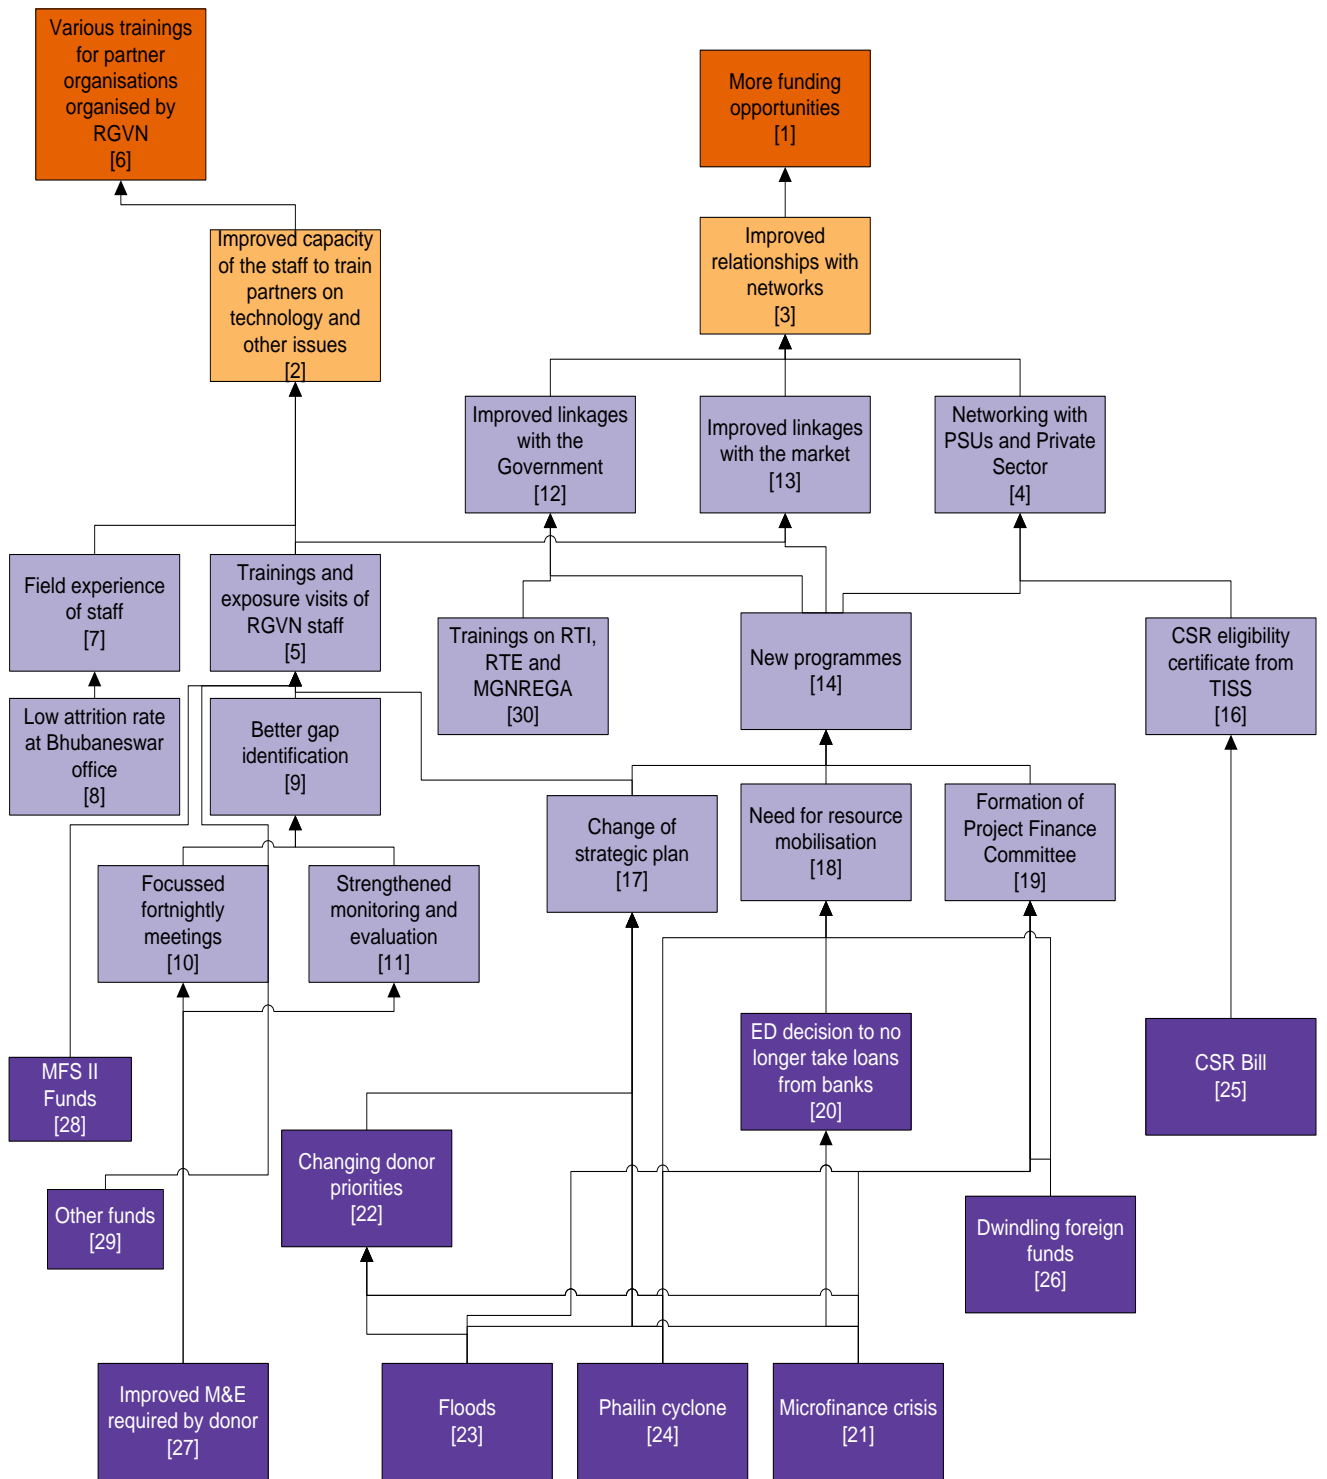

4.2.2 General changes in the organisational capacity of the SPO

The evaluation team carried out an endline assessment at RGVN from 19 to 20 August 2014. During the endline workshop at the SPO, a discussion was held around what were the main changes in organisational capacity since the baseline and why these changes have taken place. The discussion was visualised in a general causal map as can be seen below. The narrative for the general causal map is also described below. It gives a more general picture of what was seen as important changes in the organisation since the baseline, and how these changes have come about, and that tells the more general story about the organisational changes in the SPO. The evaluators considered it important to also note down the SPO's story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provide by the evaluation team. The detailed narrative can be found in Annex 4.

During this workshop, the team made a recap of key features of the organisation since the baseline workshop in August 2012 and the interview with the Director at the head office in the North-East in June 2013 (such as vision, mission, strategies, clients, partnerships). This was the basis for discussing changes that had happened to the organisation since the baseline. The two main changes that happened in the organisation since the baseline, as identified by the staff during self -assessments, interviews and during the workshop were:

- Improved capacity of the staff to train partners on technology and other issues [2]
- Improved relationships with networks [3]

The two main organisational capacity changes are described in the light orange boxes and some of their key consequences are noted above these cards in dark orange. Unless explicitly stated that a change happened since the interview with the Director in June 2013, the changes took place since the baseline workshop in August 2012. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the organisation are listed at the bottom in dark purple. The narrative describes per organisational capacity change, the contributing factors as described from the top down. The numbers in the visual correspond with the numbers in the narrative.

Improved capacity of the staff to train partners on technology and other issues [2]

RGVN is committed to the sustainable livelihood enhancement of rural poor in accordance with its vision and mission. The main source of income of the target population is agriculture and allied activities. Lack of technical knowledge on agriculture, marketing, value addition, lack of irrigation facilities, and exploitation by middlemen, periodic natural disasters and lack of financial inclusion affected the target groups' livelihood security. Since the baseline, the organization has undertaken steps to improve the basic skill sets and marketing linkages of the target groups by improving the capacity of the RGVN staff in these directions. The improved capacity of RGVN staff to train partners on technology and other issues has had a trickledown effect on the capacity of RGVN's partners. This has consequently had enabled the target groups' ability to cope with adverse situations. As a result of RGVN's improved capacity to organize and give trainings to partners, several capacity building trainings on value addition, market linkages, organic farming, vermicomposting production were organized by RGVN staff [6] as per the contract with Hivos for the new project 'Sustainable Livelihood Enhancement and Entrepreneur Promotion' (SLEEP). This project replaced the previous one on microfinance after the microfinance crisis.

Staff's capacity to train partners [2] improved because of the field experience that staff got [7] and because of RGVN staff attending various trainings and exposure visits [5]. Both are further explained below.

Field experience of staff [7]

Capacity of the staff to train partners on technology and other issues also improved because some RGVN staff has been there for a long time working in a small compact unit, doing a variety of activities they also have learnt from field experience. This was because of a low attrition rate at the Bhubaneswar office [8]. This is where the team works that is supported by Hivos to work on the SLEEP project.

Trainings and exposure visits of RGVN staff [5]

Increased capacity of the RGVN staff [2] was furthermore due to various capacity building trainings and exposure visits [5] supported by Hivos and other donors. These trainings include:

- Two-day training was organized by Vrutti Livelihoods, Bangalore on 22-23 May 2014 sponsored by Hivos (MFS II) on producer entrepreneurship catalyst and incubation facility. The focus of the training was to help the staff to assist unviable producer organisations into self-reliant enterprises. Funded by MFS II [28]. The training was attended by assistant director of RGVN, Bhubaneswar Region.
- Two- day training was organised with the support of Hivos (MFS II) on 18-19 August 2014 at Bhubaneswar on enterprise promotion and business development. The programme coordinators of RGVN participated in this. Funded by MFS II [28]. The programme coordinators of RGVN participated in the training programme.
- Training programme on vermicomposting pit by Sir Dorabji Tata Trust, (SDTT) Mumbai in 2013. Funded by SDTT [29]. The training was attended by 3 project staff and programme coordinator of RGVN, Bhubaneswar.
- Leadership training was organized by Small Industrial Development Bank of India (SIDBI) in 2014. Funded by SIDBI [2]. The Programme Coordinator of RGVN, Bhubaneswar attended the training.

The organization also arranged a number of exposure visits for the staff during the last two years to help them learn about vermicomposting, bio-pesticides, governance, value chain analysis and organic farming.

Staff was sent to trainings and exposure visits [5] since they realised there is a gap in terms of knowledge and skills [9] and also because of the change in the strategic plan [17], as working topics like strengthening livelihoods in the SLEEP project required further training to gain knowledge and skills on this. The identification of gaps in knowledge and skills [9] was done during fortnightly meetings [10] where a strategy for diversification of resource mobilisation was being discussed. It was also the result of having strengthened monitoring and evaluation [11]. These are further explained below.

- *Focused fortnightly meetings [10]*

The fortnightly meeting was a new initiative taken by the management in order to streamline the reporting and monitoring structure. Here day-to-day planned operations were monitored and reviewed, gaps in knowledge and skills were better identified which streamlined the strategic plan

of the organization for smooth functioning of projects and planning of trainings and exposure visits.

- *Strengthened monitoring and evaluation [11]*

There was change in the strategic plan to shift to sustainable livelihood enhancement, demand from the donor to have detailed and focused data collection, commitment of the organization to fulfil the needs of the target group and increasing focus of donors on evidence based grant making and value for money analysis pushed the organisation to strengthen their monitoring and evaluation. As a result they refined the monitoring and evaluation formats and indicators. Now the data collection is both qualitative and quantitative, whereas during the baseline it was only quantitative.

Focused fortnightly meetings [10] were taken up by the management and monitoring and evaluation was strengthened [11] to streamline the monitoring and evaluation structures and processes because of the donors requirements [27].

Improved relationships with networks [3]

There have been a couple of issues that have greatly affected RGVN and the need to look for additional funding by strengthening their networks. After the microfinance crisis in 2009 [21] the organization went through a rough patch as floods in 2011 and 2014 [23] and the cyclone Phailin in 2013 [24] in the organisation's partner areas further worsened the situation. The partners' ability to recover loans meted out and pay back to RGVN was questionable in the face of such large scale disaster. The organization was not able to recuperate fully from the Microfinance crisis in 2009 and the floods in 2011 till the baseline workshop conducted in August 2012. During this time the focus had already shifted from microfinance to sustainable livelihood enhancement of the target group. However, the strategy was still in an embryonic stage. In the post baseline period, the executive board of RGVN decided to restrict external borrowings from banks and other financial institutions anticipating the inability of the partner organisations to repay RGVN. This initiated the RGVN management to think in the direction of external resource mobilization, develop linkages with government programs and schemes, linkages with market and improve capacity of the staff to implement sustainable livelihood programmes to the target group.

The precarious funding situation, compelled the management to think of converging and linking with government programmes, the market, Public Sector Units (PSUs) and the private sector to enhance the livelihood security of the target groups [3]. Improved relationships with networks [3] is expected to lead to more funding opportunities for RGVN [1]. Improved relationships with networks with different kind of partners [3] was due to improved linkages with the government [12], improved linkages with the market [13] and networking with PSUs and the private sector [4]. Each of these linkages are further explained below.

Linkages with the government [12]

During the baseline workshop (August 2012) there was a need identified for RGVN to develop a relationship with government institutions and maintain a strategic relationship, so that they could better translate their commitments to the target groups. The organization's initiative to rehabilitate the Flood (August 2014) and Phailin (October 2013) affected people and the capacity to implement sustainable livelihood programs, facilitated the organization to develop a trust relationship with the government in the last one and half years (2013-14). Since 2013, RGVN staff has better linkages with government line departments at local level, state level officials and other semi-governmental organisations and corporations which run delivery programmes for the poor. This is evident from the fact that the organization could linkup government schemes and programs to the target groups (farmers in Odisha). With the support of RGVN the target groups could access the inputs provided by the government in the form of a vermicomposting pit. Nearly 25 vermicomposting pits have been constructed by the State Agriculture Department of Odisha in one of the vegetable growing clusters in the Anugul district. In another vegetable growing cluster area in Dhenkanal the farmers have been helped in getting support from the State Agriculture Department of Odisha for Shade Net Nursery. Also NTFP collectors and traders have been able to receive 5 tamarind cake making machines with support from the Tribal Development Corporation. All these have been facilitated by RGVN and its partners. Some of the plans are in the pipeline. For example, RGVN has approached the state and national horticulture board, state agricultural technology institutes, the forest department, the state handicraft development board and the state Khadi and Village Industry board to link with them through different schemes. Banks and financial institutions (FIs) have been approached for providing working capital support for product enhancement at a low interest rate. Given that some of the board members are heads of FIs, it should not be an uphill task, yet while RGVN Guwahati gets its share,

RGVN Bhubaneswar is left out. RGVN strengthening its linkages with the government is thus; because of the new programmes [14] they have been and will be involved in with government agencies (one on new programmes later on) and trainings [30] on Right to Information (RTI), Right to Education (RTE), Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA).

Linkages with the market [13]

Due to lack of knowledge and skills on value addition, marketing, variable market condition, exploitative middlemen, and other factors the target groups often find it difficult to get out of the poverty trap. RGVN is committed to align its work with its vision and mission to enhance the livelihood of the target groups. In order to do so they provide them with handholding support in areas like value addition and creating direct linkages with the market. To be able to provide this support RGVN has trained itself after the baseline workshop in August 2012 on these topics [5]. For example, in terms of value addition: Value addition is a process in which the farmers are given handholding support to give due care during processing, preservation and sorting and grading in NTFP and vegetable product which have a positive impact on the pricing and marketing of the products. During last two years (August 2012-2014) RGVN staff provided trainings and handholding support to the target groups on value addition, marketing, etc. They also facilitated access to fair & remunerative markets including linking producer groups to marketing opportunities by market aggregators. An example of value addition activities was tamarind collection and marketing. With the technical support provided by RGVN now the farmers have better capacity in processing, sorting, packaging and grading for proper pricing of the product and to maintain quality aspect with the buyers [Source: ARR + Work Plan 2013-14-15, Endline Evaluation Workshop].

During the last two years (August 2012- August 2014) RGVN initiated and funded "Bazaar on Wheels", a new project to strengthen producer organizations and their access to market. The project focuses especially on access to market for the women producer groups. They are provided with capacity building trainings and provision of a van for marketing their products. This is a pilot project carried out by RGVN through Jagruti Mahila Mahasangha at Govindpur of Dhenkanal district. At present the Mahila Mahasangha (Federation) has a membership of 1200 women and diversified its production to non-farm activities. This has enabled wider markets and enhanced profits. Improved linkages with the market [13] for RGVN has thus been a result of the new programmes [14] they have been involved in and the trainings and exposure visits staff went to [5].

Networking with different Public Sector Units (PSUs) and private sector [4]

RGVN Bhubaneswar has started having better working relations with Public Sector Units and to some extent the private sector agencies. The microfinance crisis and the executive board's decision to restrict borrowing commercial funds created financial crunch in the organization. Also, as the implementation focus has been concentrated on production enhancement, marketing linkages, working capital linkages, value addition etc. to move the clusters into the next phase of sustainability of the activities compelled the organization to make strategic change for resource mobilization. Some of the new networked partners are ACC Limited (formerly The Associated Cement Companies Limited), Larsen & Toubro (L&T), Jamsedji Tata Trust and the 8 new partners in the SLEEP project.

Networking with PSUs and Private sectors [4] improved because of new programmes [14] and CSR eligible certificate from Tata Institute of Social Science (TISS) [16].

- New programmes [4]

The following are some of the new programmes that were undertaken by RGVN during the last two years (August 2012- August 2014):

- **Placement linked target program** is part of the Phailin rehabilitation program that started after October 2013, which was initiated by RGVN in association with ACC and L&T.
- **SLEEP** project facilitated the organization to approach new programs such as, NTFP processing, value addition & marketing, Organic vegetable farming, DWCRA⁵ / bell metal work from production to marketing. This project runs from July 1st, 2012 till June 30th 2015.
- **The JIVIKA programme** started in June 2012 and was outlined based on the experiences gained during the survey and relief distribution program conducted by RGVN with support from Jamsedji Tata Trust, Mumbai (JTT).

⁵ The Development of women and children in Rural Areas or DWCRA is a government sponsored anti-poverty programme of the Ministry of Rural Development.

- **Working capital support to rickshaw pullers:** Graduating rickshaw pullers to become owner of the rickshaws they use to make a living.

RGVN initiated new programmes [14] due to a change in their strategic plan [17], a need for resource mobilization [18] and the formation of a Project Finance Committee (PFC)[19]. These are further explained below.

- Change of strategic plan [17]

There was change of strategic plan to shift from microfinance to Sustainable Livelihood Enhancement and Enterprise Promotion due to the microfinance crisis [21] and consequently the failure of the microfinance project's implementation. The Microfinance crisis, the floods and the Phailin cyclone also caused donors to focus more on sustainable livelihoods [22] and mid-course corrective actions in order to keep the target group support afloat. Apart from changing their funding priorities, donors have also been revising their grant making policies [22]. More and more donors are funding agriculture based programs with a focus on improved livelihoods for the poor. Furthermore, The RGVN board too became cautious about recovery of loans and restricted the RGVN Bhubaneswar office from commercial borrowing [20]. The floods in 2011 and 2014 [23] and the cyclone Phailin in 2013 [24] worsened the situation in the organisation's partner areas even further, which also triggered the involvement of RGVN in programmes that were more focused on sustainable livelihood enhancement. All these factors compelled the organization to change its strategy to sustainable livelihood enhancement by focusing on the core livelihood sub sectors like NTFP, agriculture and allied agriculture through the System of Rice Intensification (SRI) model, dairy, organic paddy cultivation, organic vegetable farming, handicraft, etc.

- Need for resource mobilization [18]

With the microfinance crisis the organization was already undergoing a rough patch which further worsened during 2011-12 period. The board's decision to restrict external commercial borrowing of funds [20], the effect of Phailin [24] and dwindling foreign funding [26] worsened the financial situation of RGVN. All these factors compelled the organization to think of diversifying their strategy for resource mobilization.

- Formation of Project Finance Committee (PFC) [19]

RGVN used to work with the LAC (Local Area Committee), which has now been disbanded. To recover from the rough patch it was undergoing (including the floods [23], cyclone [24], microfinance crisis [21] and dwindling foreign funds [26]), internally RGVN has set up a Project Finance Committee comprising the Executive Director, Assistant Director, and programme staff. This is a body created to expedite the decision making process, monitor progress, and respond to proposals for funding.

- *CSR⁶ eligibility certificate from TISS [16]*

RGVN became a team member of the National CSR Hub Empanelment team of TISS. This certification made them eligible for receiving CSR funds for developmental activities. The empanelment process aims to provide CPSEs (Central Public Sector Enterprises) with a list of reliable and credible organisations as partners for CSR activities. The empanelment process is designed to serve the requirements of CPSEs. The National Corporate Social Responsibility (NCSR) Hub shall empanel those organisations that are people-centric, have experience and expertise in a specific field and have a planned approach to developmental activities with a specific focus on the welfare and rights of the vulnerable groups in society. This means all the Public Sector Companies (state/government owned companies) of India may consider RGVN for implementation of big CSR project. RGVN getting this certification [16] was triggered by the new CSR Bill [25], which got approved by the Parliament and is effective from April 2014. It has a very strong CSR Clause, which mandates companies with an average profit of INR 50 million in the last three years, to proactively design and undertake welfare and other developmental activities. This is seen as a great opportunity for RGVN as the corporate sector would be required to spend 2 % of their net profit for social development actions.

⁶ The new Companies Act 2014, with a very strong CSR Clause, mandates companies with an average profit of INR 50 million in last three years, to proactively design and undertake welfare and other developmental activities.

5 Discussion and conclusion

5.1 Methodological issues

In order to get detailed information on the capacity development of the staff, self-assessment forms were filled out by the management (Assistant Director), programme staff (two Programme Coordinators) and HR/Admin staff (Programme Coordinator Finance). RGVN doesn't have a separate M&E unit. The staff performs multiple tasks including M&E. Their financial condition does not allow it to have a separate team for M&E and programme coordination and therefore no M&E person was interviewed. The agreed questionnaire was aimed at teasing out information from various levels of staff without putting them in any awkward situation. The modified and nuanced repetition of questions when translated to an audience not properly exposed to the English language, created a sense of repetitiveness. Evaluators tried to resolve this, by clarifying the responses by a follow-up interview after studying the responses.

RGVN's focus is to strengthen the partners. It largely works through its partners and at times implements projects on its own. As a result field staff was not invited for the workshop. Due to shift in their programme (from microfinance to Sustainable Livelihood Enhancement and Enterprise Promotion (SLEEP)), RGVN stopped working with the partners they worked with during the baseline. RGVN started working with new partners in the post baseline period. Therefore, evaluators decided not to interview new partners as they were not part of the baseline assessment. RGVN rarely uses Organisation Development Consultants since the staff is well versed and experienced in the area of interventions. The projects under review for funding by Hivos did not have one Organisation Development Consultant. Initially Hivos handheld RGVN and helped it shape the contours of the programme.

The baseline of RGVN was conducted in August 2012 at the Bhubaneswar office and the executive director was interviewed in June 2013 in Guwahati. The endline was conducted in August, 2014, followed by an interview with their Executive Director in September, 2014. Therefore, there was difficulty in observing the changes within the organisation due to different time frame. Our focus of evaluation was the RGVN Bhubaneswar office. Since RGVN has this unique division of ownership/ leadership, we also wanted to get the view of the head office regarding the performance and quality of the regional office, in this case Bhubaneswar office. RGVN Bhubaneswar is autonomous to the extent of raising resources and designing the operations of its projects, but their salary comes from RGVN head office in Guwahati. The regional office does not submit any reports to the head office. It directly submits reports annually to the board of trustees. As a result, the Executive Director did not have much information about the functioning of its Bhubaneswar office and his views contradicted the views given by the RGVN staff in Bhubaneswar.

The information on the capacity development interventions was "reconstructed" based on the baseline report, progress reports, with the help of the CFA, Netherlands (the person responsible for managing the India portfolio in the transition of offices), as the person within Hivos (the CFA) who was well familiar with RGVN no longer works for Hivos India.

5.2 Changes in organisational capacity

This section aims to provide an answer to the first and fourth evaluation questions:

1. *What are the changes in partner organisations' capacity during the 2012-2014 period?*
4. *What factors explain the findings drawn from the questions above?*

Changes took place in all of the five core capabilities. Below the changes in each of the capabilities are further explained, by referring to the specific indicators that changed.

Over the last two years many changes took place in the indicators under the capability to act and commit. RGVN's leader made the strategic decision to start external resource mobilisation and no longer take loans from banks. In this regard RGVN started to link with government schemes. This showed the staff that the management is now more abreast with changes and developments in their operating environment. Daily operations improved slightly because of the formation of a Project Finance Committee that speeded up the decision making process also concerning funding proposals. Also the introduction of fortnightly meetings that daily operations were in line with strategic plans. RGVN staff improved their skills in a variety of topics, including business development, due to trainings and exposure visits funded by Hivos and other funders like SIDBI and SDTT. Overall staff had more access to trainings on new trends and strategies. There was a slight deterioration in the staff's incentives as performance linked incentives stopped because resources reduced as a result of the director's decision to stop taking loans from banks. RGVN's funding situation deteriorated very slightly as they now have less donors (8) compared to the baseline (11). RGVN improved its proposal writing capacity and improved its relations with government, PSUs and private sector through the CSR hub they became involved in, which is helping in its efforts to raise funds.

In the capability to adapt and self-renew RGVN improved very slightly in two indicators. RGVN very slightly improved their M&E because of having fortnightly meetings to discuss progress, fine-tuned MIS formats and indicators which led to more focussed data collection. Management became more responsive to staff which allowed for more critical reflection during the fortnightly meetings.

In terms of the capability to deliver on development objectives, there has been a very slight improvement in balancing quality and efficiency. RGVN improved the quality of its implementation because of an improved MIS format, better planning, use of technology in accounting system and fortnightly meetings. Efficiency improved because of the Project Finance Committee which helped speed up the decision making process.

In the capability to relate, RGVN improved very slightly its relations with government departments as they worked together more with government programmes. They also improved their relations with the private sector through being involved in the national CSR hub.

Finally, RGVN revisited their strategies from a focus on microfinance to sustainable livelihood enhancement. These new strategies were still in line with their vision and mission.

During the endline workshop some key organisational capacity changes were brought up by RGVN's staff: improved staff capacity to train partners on technology and other issues; and improved relationships with networks. The evaluators considered it important to also note down the SPO's story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provide by the evaluation team.

RGVN said that their capacity improved in training their partners because of their field experience (because of low attrition rates at the Bhubaneswar office); and trainings and exposure visits they went on that were funded by Hivos, SIDBI and SDTT. RGVN staff got more access to trainings and visits because of gap identification and a change in the strategic plan which required staff to develop new skills. The gaps were identified as a result of fortnightly meetings and strengthened M&E because of donor (Hivos) requirements. RGVN improved its relationships with the government, market, PSUs and private sector. The relations with the government improved because of the new programmes RGVN is involved in and because of some trainings of government department that they attended. The linkages with the market improved because of new programmes and trainings by Hivos, SDTT and SIDBI. The relations with PSUs and the private sector improved because of new programmes and RGVN obtaining a CSR eligibility certificate and become part of a national CSR Hub of TISS, after the CSR bill got approved. The new programmes were a consequence of a change in RGVN's strategic plan, need for resource mobilisation and the formation of the Project Finance Committee. The change in strategic focus of RGVN was triggered by floods, the Phailin cyclone, the microfinance crisis and the changes in donor's priorities (from microfinance to agriculture/livelihoods). The need for resource mobilisation came from dwindling foreign funding and the decision of the director to no longer take loans from banks. According to RGVN, and in terms of the key organisational capacity changes since the baseline according to their perspective, MFS II funded capacity development interventions played a role , particularly in terms of improving their staff capacity to train partners on technology and other issues and improved linkages with the market.

Appendix 1 Methodological approach & reflection

1. Introduction

This appendix describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around four key evaluation questions:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

Note: the methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report. At the end of this appendix a brief methodological reflection is provided.

2. Changes in partner organisation's capacity – evaluation question 1

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?**

This question was mainly addressed by reviewing changes in 5c indicators, but additionally a 'general causal map' based on the SPO perspective on key organisational capacity changes since the baseline

has been developed. Each of these is further explained below. The development of the general causal map is integrated in the steps for the endline workshop, as mentioned below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012.⁷ Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 4) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 5) **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

⁷ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Key steps to assess changes in indicators are described

16. Provide the description of indicators in the relevant formats – CDI team
17. Review the descriptions per indicator – in-country team & CDI team
18. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
19. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
20. Organise the field visit to the SPO – in-country team
21. Interview the CFA – CDI team
22. Run the endline workshop with the SPO – in-country team
23. Interview SPO staff – in-country team
24. Fill-in observation sheets – in-country team
25. Interview externals – in-country team
26. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
27. Provide to the overview of information per 5c indicator to in-country team – CDI team
28. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
29. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
30. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Below each of these steps is further explained.

*Step 1. Provide the **description of indicators** in the relevant formats – CDI team*

- These formats were to be used when collecting data from SPO staff, CFA, partners, and consultants. For each of these respondents different formats have been developed, based on the list of 5C indicators, similar to the procedure that was used during the baseline assessment. The CDI team needed to add the 2012 baseline description of each indicator. The idea was that each respondent would be requested to review each description per indicator, and indicate whether the current situation is different from the baseline situation, how this situation has changed, and what the reasons for the changes in indicators are. At the end of each format, a more general question is added that addresses how the organisation has changed its capacity since the baseline, and what possible reasons for change exist. Please see below the questions asked for each indicator as well as the more general questions at the end of the list of indicators.

General questions about key changes in the capacity of the SPO

What do you consider to be the key changes in terms of how the organisation/ SPO has developed its capacity since the baseline (2012)?

What do you consider to be the main explanatory reasons (interventions, actors or factors) for these changes?

List of questions to be asked for each of the 5C indicators (The entry point is the the description of each indicator as in the 2012 baseline report):

1. *How has the situation of this indicator changed compared to the situation during the baseline in 2012? Please tick one of the following scores:*
 - -2 = Considerable deterioration
 - -1 = A slight deterioration
 - 0 = No change occurred, the situation is the same as in 2012
 - +1 = Slight improvement
 - +2 = Considerable improvement
2. *Please describe what exactly has changed since the baseline in 2012*
3. *What interventions, actors and other factors explain this change compared to the baseline situation in 2012? Please tick and describe what interventions, actors or factors influenced this indicator, and how. You can tick and describe more than one choice.*
 - Intervention, actor or factor at the level of or by **SPO**:
 - Intervention, actor or factor at the level of or by the **Dutch CFA (MFS II funding)**:
 - Intervention, actor or factor at the level of or by the **other funders**:
 - **Other** interventions, actors or factors:
 - Don't know.

Step 2. Review the descriptions per indicator – in-country team & CDI team

Before the in-country team and the CDI team started collecting data in the field, it was important that they reviewed the description for each indicator as described in the baseline reports, and also added to the endline formats for review by respondents. These descriptions are based on document review, observation, interviews with SPO staff, CFA staff and external respondents during the baseline. It was important to explain this to respondents before they filled in the formats.

Step 3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)

The CDI team was responsible for collecting data from the CFA:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet – CFA perspective.

The in-country team was responsible for collecting data from the SPO and from external respondents (except CFA). The following formats were sent before the fieldwork started:

- 5C Endline support to capacity sheet – SPO perspective.
- 5C Endline interview guides for externals: partners; OD consultants.

Step 4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team

The CDI team, in collaboration with the in-country team, collected the following documents from SPOs and CFAs:

- Project documents: project proposal, budget, contract (Note that for some SPOs there is a contract for the full MFS II period 2011-2015; for others there is a yearly or 2-yearly contract. All new contracts since the baseline in 2012 will need to be collected);
- Technical and financial progress reports since the baseline in 2012;.

- Mid-term evaluation reports;
- End of project-evaluation reports (by the SPO itself or by external evaluators);
- Contract intake forms (assessments of the SPO by the CFA) or organisational assessment scans made by the CFA that cover the 2011-2014 period;
- Consultant reports on specific inputs provided to the SPO in terms of organisational capacity development;
- Training reports (for the SPO; for alliance partners, including the SPO);
- Organisational scans/ assessments, carried out by the CFA or by the Alliance Assessments;
- Monitoring protocol reports, especially for the 5C study carried out by the MFS II Alliances;
- Annual progress reports of the CFA and of the Alliance in relation to capacity development of the SPOs in the particular country;
- Specific reports that are related to capacity development of SPOs in a particular country.

The following documents (since the baseline in 2012) were requested from SPO:

- Annual progress reports;
- Annual financial reports and audit reports;
- Organisational structure vision and mission since the baseline in 2012;
- Strategic plans;
- Business plans;
- Project/ programme planning documents;
- Annual work plan and budgets;
- Operational manuals;
- Organisational and policy documents: finance, human resource development, etc.;
- Monitoring and evaluation strategy and implementation plans;
- Evaluation reports;
- Staff training reports;
- Organisational capacity reports from development consultants.

The CDI team will coded these documents in NVivo (qualitative data analysis software program) against the 5C indicators.

Step 5. Prepare and organise the field visit to the SPO – in-country team

Meanwhile the in-country team prepared and organised the logistics for the field visit to the SPO:

- **General endline workshop** consisted about one day for the self-assessments (about ½ to ¾ of the day) and brainstorm (about 1 to 2 hours) on key organisational capacity changes since the baseline and underlying interventions, factors and actors ('general causal map'), see also explanation below. This was done with the five categories of key staff: managers; project/ programme staff; monitoring and evaluation staff; admin & HRM staff; field staff. Note: for SPOs involved in process tracing an additional 1 to 1½ day workshop (managers; program/project staff; monitoring and evaluation staff) was necessary. See also step 7;
- **Interviews with SPO staff** (roughly one day);
- **Interviews with external respondents** such as partners and organisational development consultants depending on their proximity to the SPO. These interviews could be scheduled after the endline workshop and interviews with SPO staff.

General causal map

During the 5C endline process, a 'general causal map' has been developed, based on key organisational capacity changes and underlying causes for these changes, as perceived by the SPO. The general causal map describes cause-effect relationships, and is described both as a visual as well as a narrative.

As much as possible the same people that were involved in the baseline were also involved in the endline workshop and interviews.

Step 6. Interview the CFA – CDI team

The CDI team was responsible for sending the sheets/ formats to the CFA and for doing a follow-up interview on the basis of the information provided so as to clarify or deepen the information provided. This relates to:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet - CFA perspective.

Step 7. Run the endline workshop with the SPO – in-country team

This included running the endline workshop, including facilitation of the development of the general causal map, self-assessments, interviews and observations. Particularly for those SPOs that were selected for process tracing all the relevant information needed to be analysed prior to the field visit, so as to develop an initial causal map. Please see Step 6 and also the next section on process tracing (evaluation question two).

An endline workshop with the SPO was intended to:

- Explain the purpose of the fieldwork;
- Carry out in the self-assessments by SPO staff subgroups (unless these have already been filled prior to the field visits) - this may take some 3 hours.
- Facilitate a brainstorm on key organisational capacity changes since the baseline in 2012 and underlying interventions, factors and actors.

Purpose of the fieldwork: to collect data that help to provide information on what changes took place in terms of organisational capacity development of the SPO as well as reasons for these changes. The baseline that was carried out in 2012 was to be used as a point of reference.

Brainstorm on key organisational capacity changes and influencing factors: a brainstorm was facilitated on key organisational capacity changes since the baseline in 2012. In order to kick start the discussion, staff were reminded of the key findings related to the historical time line carried out in the baseline (vision, mission, strategies, funding, staff). This was then used to generate a discussion on key changes that happened in the organisation since the baseline (on cards). Then cards were selected that were related to organisational capacity changes, and organised. Then a 'general causal map' was developed, based on these key organisational capacity changes and underlying reasons for change as experienced by the SPO staff. This was documented as a visual and narrative. This general causal map was to get the story of the SPO on what they perceived as key organisational capacity changes in the organisation since the baseline, in addition to the specific details provided per indicator.

Self-assessments: respondents worked in the respective staff function groups: management; programme/ project staff; monitoring and evaluation staff; admin and HRM staff; field staff. Staff were assisted where necessary so that they could really understand what it was they were being asked to do as well as what the descriptions under each indicator meant.

Note: for those SPOs selected for process tracing an additional endline workshop was held to facilitate the development of detailed causal maps for each of the identified organisational change/ outcome areas that fall under the capability to act and commit, and under the capability to adapt and self-renew, and that are likely related to capacity development interventions by the CFA. See also the next section on process tracing (evaluation question two). It was up to the in-country team whether this workshop was held straight after the initial endline workshop or after the workshop and the follow-up interviews. It could also be held as a separate workshop at another time.

Step 8. Interview SPO staff – in-country team

After the endline workshop (developing the general causal map and carrying out self-assessments in subgroups), interviews were held with SPO staff (subgroups) to follow up on the information that was provided in the self-assessment sheets, and to interview staff that had not yet provided any information.

Step 9. Fill-in observation sheets_ – in-country team

During the visit at the SPO, the in-country team had to fill in two sheets based on their observation:

- 5C Endline observation sheet;
- 5C Endline observable indicators.

Step 10. Interview externals – in-country team & CDI team

The in-country team also needed to interview the partners of the SPO as well as organisational capacity development consultants that have provided support to the SPO. The CDI team interviewed the CFA.

Step 11. Upload and auto-code all the formats collected by in-country team and CDI team – CDI team

The CDI team was responsible for uploading and auto-coding (in Nvivo) of the documents that were collected by the in-country team and by the CDI team.

Step 12. Provide the overview of information per 5C indicator to in-country team – CDI team

After the analysis in NVivo, the CDI team provided a copy of all the information generated per indicator to the in-country team for initial analysis.

Step 13. Analyse the data and develop a draft description_of the findings per indicator and for the general questions – in-country team

The in-country team provided a draft description of the findings per indicator, based on the information generated per indicator. The information generated under the general questions were linked to the general causal map or detailed process tracing related causal map.

Step 14. Analyse the data and finalize the description of the findings per indicator, per capability and general – CDI team

The CDI team was responsible for checking the analysis by the in-country team with the Nvivo generated data and to make suggestions for improvement and ask questions for clarification to which the in-country team responded. The CDI team then finalised the analysis and provided final descriptions and scores per indicator and also summarize these per capability and calculated the summary capability scores based on the average of all indicators by capability.

Step 15. Analyse the information in the general causal map –in-country team & CDI team

The general causal map based on key organisational capacity changes as perceived by the SPO staff present at the workshop, was further detailed by in-country team and CDI team, and based on the notes made during the workshop and where necessary additional follow up with the SPO. The visual and narrative was finalized after feedback by the SPO. During analysis of the general causal map relationships with MFS II support for capacity development and other factors and actors were identified. All the information has been reviewed by the SPO and CFA.

3. Attributing changes in partner organisation's capacity – evaluation question 2

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?***

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process. The box below provides some background information on process tracing.

Background information on process tracing

The essence of process tracing research is that scholars want to go beyond merely identifying correlations between independent variables (Xs) and outcomes (Ys). Process tracing in social science is commonly defined by its addition to trace causal mechanisms (Bennett, 2008a, 2008b; Checkle, 2008; George & Bennett, 2005). A causal mechanism can be defined as "a complex system which produces an outcome by the interaction of a number of parts" (Glennan, 1996, p. 52). Process tracing involves "attempts to identify the intervening causal process – the causal chain and causal mechanism – between an independent variable (or variables) and the outcome of the dependent variable" (George & Bennett, 2005, pp. 206-207).

Process tracing can be differentiated into three variants within social science: theory testing, theory building, and explaining outcome process tracing (Beach & Pedersen, 2013).

Theory testing process tracing uses a theory from the existing literature and then tests whether evidence shows that each part of hypothesised causal mechanism is present in a given case, enabling within case inferences about whether the mechanism functioned as expected in the case and whether the mechanism as a whole was present. No claims can be made however, about whether the mechanism was the only cause of the outcome.

Theory building process tracing seeks to build generalizable theoretical explanations from empirical evidence, inferring that a more general causal mechanism exists from the fact of a particular case.

Finally, explaining outcome process tracing attempts to craft a minimally sufficient explanation of a puzzling outcome in a specific historical case. Here the aim is not to build or test more general theories but to craft a (minimally) sufficient explanation of the outcome of the case where the ambitions are more case centric than theory oriented.

Explaining outcome process tracing is the most suitable type of process tracing for analysing the causal mechanisms for selected key organisational capacity changes of the SPOs. This type of process tracing can be thought of as a single outcome study defined as seeking the causes of the specific outcome in a single case (Gerring, 2006; in: Beach & Pedersen, 2013). Here the ambition is to craft a minimally sufficient explanation of a particular outcome, with sufficiency defined as an explanation that accounts for all of the important aspects of an outcome with no redundant parts being present (Mackie, 1965).

Explaining outcome process tracing is an iterative research strategy that aims to trace the complex conglomerate of systematic and case specific causal mechanisms that produced the outcome in question. The explanation cannot be detached from the particular case. Explaining outcome process tracing refers to case studies whose primary ambition is to explain particular historical outcomes, although the findings of the case can also speak to other potential cases of the phenomenon. Explaining outcome process tracing is an iterative research process in which 'theories' are tested to see whether they can provide a minimally sufficient explanation of the outcome. Minimal sufficiency is defined as an explanation that accounts for an outcome, with no redundant parts. In most explaining outcome studies, existing theorisation cannot provide a sufficient explanation, resulting in a second stage in which existing theories are re-conceptualised in light of the evidence gathered in the preceding empirical analysis. The conceptualisation phase in explaining outcome process tracing is therefore an iterative research process, with initial mechanisms re-conceptualised and tested until the result is a theorised mechanism that provides a minimally sufficient explanation of the particular outcome.

Below a description is provided of how SPOs are selected for process tracing, and a description is provided on how this process tracing is to be carried out. Note that this description of process tracing provides not only information on the extent to which the changes in organisational development can be attributed to MFS II (evaluation question 2), but also provides information on other contributing factors and actors (evaluation question 4). Furthermore, it must be noted that the evaluation team has developed an adapted form of 'explaining outcome process tracing', since the data collection and analysis was an iterative process of research so as to establish the most realistic explanation for a particular outcome/ organisational capacity change. Below selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

ETHIOPIA

For Ethiopia the capabilities that are mostly targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 1

The extent to which the Dutch NGO explicitly targets the following capabilities – Ethiopia

Capability to:	AMREF	CARE	ECFA	FSCE	HOA- REC	HUND EE	NVEA	OSRA	TTCA
Act and commit	5	4	5	5	5	3	4	4	3
Deliver on development objectives	2	1	1	1	2	1	1	2	1
Adapt and self-renew	4	2	3	4	2	5	3	3	3
Relate	3	1	2	2	3	2	1	3	1
Achieve coherence	2	2	1	1	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Ethiopia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: AMREF,

ECFA, FSCE, HUNDEE. In fact, six SPOs would be suitable for process tracing. We just selected the first one per CFA following the criteria of not including more than one SPO per CFA for process tracing

Table 2
SPOs selected for process tracing – Ethiopia

Ethiopia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
AMREF	Dec 2015	Yes	Yes	Yes	Yes	AMREF NL	Yes
CARE	Dec 31, 2015	Partly	Yes	Yes	Yes – slightly	CARE Netherlands	No - not fully matching
ECFA	Jan 2015	Yes	Yes	Yes	Yes	Child Helpline International	Yes
FSCE	Dec 2015	Yes	Yes	Yes	Yes	Stichting Kinderpostzegels Netherlands (SKN); Note: no info from Defence for Children – ECPAT Netherlands	Yes
HOA-REC	Sustainable Energy project (ICCO Alliance): 2014 Innovative WASH (WASH Alliance): Dec 2015	Yes	Yes	Yes	Yes - slightly	ICCO	No - not fully matching
HUNDEE	Dec 2014	Yes	Yes	Yes	Yes	ICCO & IICD	Yes
NVEA	Dec 2015 (both)	Yes	Yes	Yes	Yes	Edukans Foundation (under two consortia); Stichting Kinderpostzegels Netherlands (SKN)	Suitable but SKN already involved for process tracing - FSCE
OSRA	C4C Alliance project (farmers marketing): December 2014 ICCO Alliance project (zero grazing): 2014 (2 nd phase)	Yes	Yes	Yes	Yes	ICCO & IICD	Suitable but ICCO & IICD already involved for process tracing - HUNDEE
TTCA	June 2015	Partly	Yes	No	Yes	Edukans Foundation	No - not fully matching

INDIA

For India the capability that is mostly targeted by CFAs is the capability to act and commit. The next one in line is the capability to adapt and self-renew. See also the table below in which a higher score means that the specific capability is more intensively targeted.

Table 3

The extent to which the Dutch NGO explicitly targets the following capabilities – India⁸

Capability to:	BVHA	COUNT	DRISTI	FFID	Jana Vikas	Samar thak Samiti	SMILE	SDS	VTRC
Act and commit	5	3	4	4	4	4	4	3	5
Deliver on development objectives	1	5	1	1	1	1	1	2	1
Adapt and self-renew	2	2	1	3	1	1	4	1	4
Relate	3	1	1	1	1	1	2	1	2
Achieve coherence	1	1	1	4	1	1	1	1	2

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, India.

Below you can see a table describing when the contract with the SPO is to be ended and whether SPO and the CFA both expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BVHA, COUNT, FFID, SMILE and VTRC. Except for SMILE (capability to act and commit only), for the other SPOs the focus for process tracing can be on the capability to act and commit and on the capability to adapt and self-renew.

Table 4

SPOs selected for process tracing – India

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BVHA	2014	Yes	Yes	Yes	Yes	Simavi	Yes; both capabilities
COUNT	2015	Yes	Yes	Yes	Yes	Woorden Daad	Yes; both capabilities
DRISTI	31-03-2012	Yes	Yes	No	no	Hivos	No - closed in 2012
FFID	30-09-2014	Yes	Yes	Yes	Yes	ICCO	Yes

⁸ RGVN, NEDSF and Women's Rights Forum (WRF) could not be reached timely during the baseline due to security reasons. WRF could not be reached at all. Therefore these SPOs are not included in Table 1.

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew –by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Jana Vikas	2013	Yes	Yes	Yes	No	Cordaid	No - contract is and the by now; not fully matching focus
NEDSF							No – delayed baseline
RGVN							No - delayed baseline
Samarthak Samiti (SDS)	2013 possibly longer	Yes	Yes	Yes	No	Hivos	No - not certain of end date and not fully matching focus
Shivi Development Society (SDS)	Dec 2013 intention 2014	Yes	Yes	Yes	No	Cordaid	No - not fully matching focus
Smile	2015	Yes	Yes	Yes	Yes	Wilde Ganzen	Yes; first capability only
VTRC	2015	Yes	Yes	Yes	Yes	Stichting Red een Kind	Yes; both capabilities

INDONESIA

For Indonesia the capabilities that are most frequently targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 5

The extent to which the Dutch NGO explicitly targets the following capabilities – Indonesia

Capability to:	ASB	Daya ikologi	ECPAT	GSS	Lem bage Kita	Pt. PPMA	Rifka Annisa	WIIP	Yad upa	Yayasan Kelola	YPI	YRBI
Act and commit	4	4	4	5	4	4	5	3	3	2	5	4
Deliver on development objectives	1	1	1	2	2	1	2	1	1	1	1	1
Adapt and self-renew	3	1	2	4	2	3	4	4	1	1	4	3
Relate	1	1	2	3	3	2	1	2	2	2	3	2
Achieve coherence	1	1	1	2	1	1	2	2	1	1	2	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Indonesia.

The table below describes when the contract with the SPO is to be ended and whether both SPO and the CFA expect to focus on these two selected capabilities (MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: ASB, ECPAT, Pt.PPMA, YPI, YRBI.

Table 6

SPOs selected for process tracing – Indonesia

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
ASB	February 2012; extension Feb,1, 2013 – June,30, 2016	Yes	Yes	Yes	Yes	Hivos	Yes
Dayakologi	2013; no extension	Yes	Yes	Yes	No	Cordaid	No: contract ended early and not matching enough
ECPAT	August 2013; Extension Dec 2014	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	Yes
GSS	31 December 2012; no extension	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	No: contract ended early
Lembaga Kita	31 December 2012; no extension	Yes	Yes	No	Yes	Free Press Unlimited - Mensen met een Missie	No - contract ended early
Pt.PPMA	May 2015	Yes	Yes	No	Yes	IUCN	Yes, capability to act and commit only
Rifka Annisa	Dec, 31 2015	No	Yes	No	Yes	Rutgers WPF	No - no match between expectations CFA and SPO
WIIP	Dec 2015	Yes	Not MFS II	Yes	Not MFS II	Red Cross	No - Capacity development interventions are not MFS II financed. Only some overhead is MFS II

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Yayasan Kelola	Dec 30, 2013; extension of contract being processed for two years (2014-2015)	Yes	Not really	Yes	Not really	Hivos	No - no specific capacity development interventions planned by Hivos
YPI	Dec 31, 2015	Yes	Yes	Yes	Yes	Rutgers WPF	Yes
YRBI	Oct, 30, 2013; YRBI end of contract from 31st Oct 2013 to 31st Dec 2013. Contract extension proposal is being proposed to MFS II, no decision yet.	Yes	Yes	Yes	Yes	ICCO	Yes
Yadupa	Under negotiation during baseline; new contract 2013 until now	Yes	Nothing committed	Yes	Nothing committed	IUCN	No, since nothing was committed by CFA

LIBERIA

For Liberia the situation is arbitrary which capabilities are targeted most CFA's. Whilst the capability to act and commit is targeted more often than the other capabilities, this is only so for two of the SPOs. The capability to adapt and self-renew and the capability to relate are almost equally targeted for the five SPOs, be it not intensively. Since the capability to act and commit and the capability to adapt and self-renew are the most targeted capabilities in Ethiopia, India and Indonesia, we choose to focus on these two capabilities for Liberia as well. This would help the synthesis team in the further analysis of these capabilities related to process tracing. See also the table below.

Table 7

The extent to which the Dutch NGO explicitly targets the following capabilities – Liberia

Capability to:	BSC	DEN-L	NAWOCOL	REFOUND	RHRAP
Act and commit	5	1	1	1	3
Deliver on development objectives	3	1	1	1	1
Adapt and self-renew	2	2	2	2	2
Relate	1	2	2	2	2
Achieve coherence	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Liberia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Also, for two of the five SPOs capability to act and commit is targeted more intensively compared to the other capabilities. Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BSC and RHRAP.

Table 8

SPOs selected for process tracing – Liberia

Liberia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BSC	Dec 31, 2015	Yes	Yes	Yes	Yes	SPARK	Yes
DEN-L	2014	No	No	Unknown	A little	ICCO	No – not matching enough
NAWOCOL	2014	Yes	No	No	A little	ICCO	No – not matching enough
REFOUND	At least until 2013 (2015?)	Yes	No	Yes	A little	ICCO	No – not matching enough
RHRAP	At least until 2013 (2014?)	Yes	Yes	Yes	Yes	ICCO	Yes

Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ' general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in

time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

Some definitions of the terminology used for this MFS II 5c evaluation

Based upon the different interpretations and connotations the use of the term causal mechanism we use the following terminology for the remainder of this paper:

A **detailed causal map** (or **model of change**) = the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change.

A **causal mechanism** = is the combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome (Beach and Pedersen, 2013, p. 176).

Part or **cause** = one actor with its attributes carrying out activities/ producing outputs that lead to change in other parts. The final part or cause is the change/ outcome.

Attributes of the actor = specificities of the actor that increase his chance to introduce change or not such as its position in its institutional environment.

*Step 1. Identify the **planned MFS II supported capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

Chapter 4.1 and 4.2 in the baseline report were reviewed. Capacity development interventions as planned by the CFA for the capability to act and commit and for the capability to adapt and self-renew were described and details inserted in the summary format. This provided an overview of the capacity development activities that were originally planned by the CFA for these two capabilities and assisted in focusing on relevant outcomes that are possibly related to the planned interventions.

*Step 2. Identify the **implemented capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

The input from the CFA was reviewed in terms of what capacity development interventions have taken place in the MFS II period. This information was found in the 'Support to capacity development sheet - endline - CFA perspective' for the SPO, based on details provided by the CFA and further discussed during an interview by the CDI team.

The CFA was asked to describe all the MFS II supported capacity development interventions of the SPO that took place during the period 2011 up to now. The CDI team reviewed this information, not only the interventions but also the observed changes as well as the expected long-term changes, and then linked these interventions to relevant outcomes in one of the capabilities (capability to act and commit; and capability to adapt and self-renew).

*Step 3. Identify **initial changes/ outcome areas** in these two capabilities – by CDI team & in-country team*

The CDI team was responsible for coding documents received from SPO and CFA in NVivo on the following:

- 5C Indicators: this was to identify the changes that took place between baseline and endline. This information was coded in Nvivo.
- Information related to the capacity development interventions implemented by the CFA (with MFS II funding) (see also Step 2) to strengthen the capacity of the SPO. For example, the training on financial management of the SPO staff could be related to any information on financial management of the SPO. This information was coded in Nvivo.

In addition, the response by the CFA to the changes in 5C indicators format, was auto-coded.

The in-country team was responsible for timely collection of information from the SPO (before the fieldwork starts). This set of information dealt with:

- MFS II supported capacity development interventions during the MFS II period (2011 until now).
- Overview of all trainings provided in relation to a particular outcome areas/organisational capacity change since the baseline.
- For each of the identified MFS II supported trainings, training questionnaires have been developed to assess these trainings in terms of the participants, interests, knowledge and skills gained, behaviour change and changes in the organisation (based on Kirkpatrick's model), one format for training participants and one for their managers. These training questionnaires were sent prior to the field visit.
- Changes expected by SPO on a long-term basis ('Support to capacity development sheet - endline - SPO perspective').

For the selection of change/ outcome areas the following criteria were important:

- The change/ outcome area is in one of the two capabilities selected for process tracing: capability to act and commit or the capability to adapt and self-renew. This was the first criteria to select upon.
- There was a likely link between the key organisational capacity change/ outcome area and the MFS II supported capacity development interventions. This also was an important criteria. This would need to be demonstrated through one or more of the following situations:
 - In the 2012 theory of change on organisational capacity development of the SPO a link was indicated between the outcome area and MFS II support;
 - During the baseline the CFA indicated a link between the planned MFS II support to organisational development and the expected short-term or long-term results in one of the selected capabilities;
 - During the endline the CFA indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities;
 - During the endline the SPO indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities.

Reviewing the information obtained as described in Step 1, 2, and 3 provided the basis for selecting key organisational capacity change/ outcome areas to focus on for process tracing. These areas were to be formulated as broader outcome areas, such as 'improved financial management', 'improved monitoring and evaluation' or 'improved staff competencies'.

Note: the outcome areas were to be formulated as intermediates changes. For example: an improved monitoring and evaluation system, or enhanced knowledge and skills to educate the target group on climate change. Key outcome areas were also verified - based on document review as well as discussions with the SPO during the endline.

*Step 4. Construct the **detailed, initial causal map** (theoretical model of change) – CDI & in-country team*

A detailed initial causal map was developed by the CDI team, in collaboration with the in-country team. This was based on document review, including information provided by the CFA and SPO on MFS II supported capacity development interventions and their immediate and long-term objectives as well as observed changes. Also, the training questionnaires were reviewed before developing the initial causal map. This detailed initial causal map was to be provided by the CDI team with a visual and related narrative with related references. This initial causal map served as a reference point for further reflection with the SPO during the process tracing endline workshop, where relationships needed to be verified or new relationships established so that the second (workshop-based), detailed causal map could be developed, after which further verification was needed to come up with the final, concluding detailed causal map.

It's important to note that organisational change area/ outcome areas could be both positive and negative.

For each of the selected outcomes the team needed to make explicit the theoretical model of change. This meant finding out about the range of different actors, factors, actions, and events etc. that have contributed to a particular outcome in terms of organisational capacity of the SPO.

A model of change of good quality includes:

- The causal pathways that relate the intervention to the realised change/ outcome;
- Rival explanations for the same change/ outcome;
- Assumptions that clarify relations between different components or parts;
- Case specific and/or context specific factors or risks that might influence the causal pathway, such as for instance the socio-cultural-economic context, or a natural disaster;
- Specific attributes of the actors e.g. CFA and other funders.

A model of change (within the 5C study called a 'detailed causal map') is a complex system which produces intermediate and long-term outcomes by the interaction of other parts. It consists of parts or causes that often consist of one actor with its attributes that is implementing activities leading to change in other parts (Beach & Pedersen, 2013). A helpful way of constructing the model of change is to think in terms of actors carrying out activities that lead to other actors changing their behaviour. The model of change can be explained as a range of activities carried out by different *actors* (including the CFA and SPO under evaluation) that will ultimately lead to an outcome. Besides this, there are also '*structural*' elements, which are to be interpreted as external factors (such as economic conjuncture); and *attributes* of the actor (does the actor have the legitimacy to ask for change or not, what is its position in the sector) that should be looked at (Beach & Pedersen, 2013). In fact Beach and Pedersen, make a fine point about the subjectivity of the actor in a dynamic context. This means, in qualitative methodologies, capturing the changes in the actor, acted upon area or person/organisation, in a non sequential and non temporal format. Things which were done recently could have corrected behavioural outcomes of an organisation and at the same ime there could be processes which incrementally pushed for the same change over a period of time. Beach and Pedersen espouse this methodology because it captures change in a dynamic fashion as against the methodology of logical framework. For the MFS II evaluation it was important to make a distinction between those paths in the model of change that are the result of MFS II and rival pathways.

The construction of the model of change started with the identified key organisational capacity change/ outcome, followed by an inventory of all possible subcomponents that possibly have caused the change/ outcome in the MFS II period (2011-up to now, or since the baseline). The figure below presents an imaginary example of a model of change. The different colours indicate the different types of support to capacity development of the SPO by different actors, thereby indicating different

pathways of change, leading to the key changes/ outcomes in terms of capacity development (which in this case indicates the ability to adapt and self-renew).

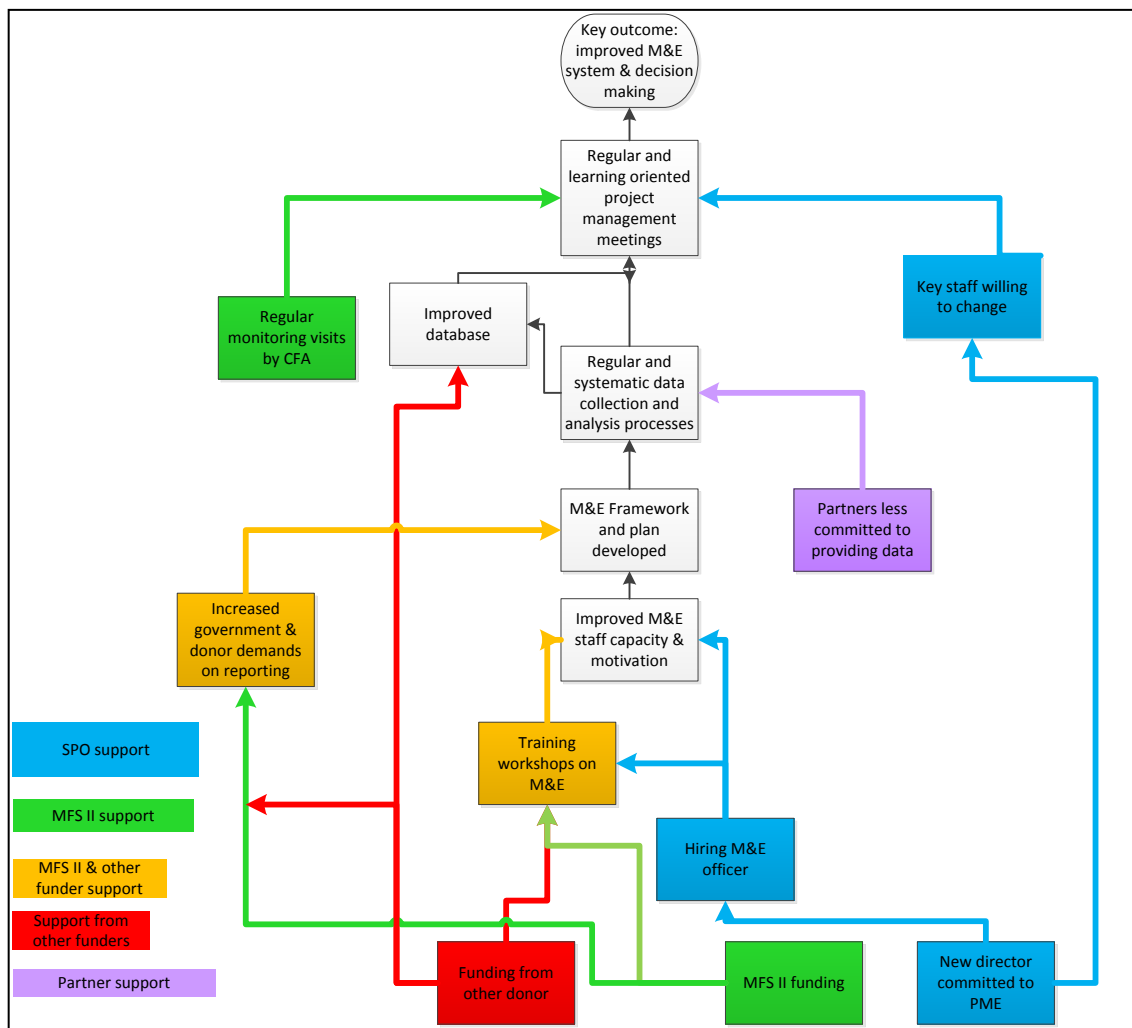

Figure 1 An imaginary example of a model of change

Step 5. Identify **types of evidence** needed to verify or discard different causal relationships in the model of change – in-country teams with support from CDI team

Once the causal mechanism at theoretical level were defined, empirical evidence was collected so as to verify or discard the different parts of this theoretical model of change, confirm or reject whether subcomponents have taken place, and to find evidence that confirm or reject the causal relations between the subcomponents.

A key question that we needed to ask ourselves was, "What information do we need in order to confirm or reject that one subcomponent leads to another, that X causes Y?". The evaluation team needed to agree on what information was needed that provides empirical manifestations for each part of the model of change.

There are four distinguishable types of evidence that are relevant in process tracing analysis: *pattern*, *sequence*, *trace*, and *account*. Please see the box below for descriptions of these types of evidence.

The evaluation team needed to agree on the types of evidence that was needed to verify or discard the manifestation of a particular part of the causal mechanism. Each one or a combination of these different types of evidence could be used to confirm or reject the different parts of the model of change. This is what is meant by robustness of evidence gathering. Since causality as a concept can bend in many ways, our methodology, provides a near scientific model for accepting and rejecting a particular type of evidence, ignoring its face value.

Types of evidence to be used in process tracing

Pattern evidence relates to predictions of statistical patterns in the evidence. For example, in testing a mechanism of racial discrimination in a case dealing with employment, statistical patterns of employment would be relevant for testing this part of the mechanism.

Sequence evidence deals with the temporal and spatial chronology of events predicted by a hypothesised causal mechanism. For example, a test of the hypothesis could involve expectations of the timing of events where we might predict that if the hypothesis is valid, we should see that the event B took place after event A took place. However, if we found that event B took place before event A took place, the test would suggest that our confidence in the validity of this part of the mechanism should be reduced (disconfirmation/ falsification).

Trace evidence is evidence whose mere existence provides proof that a part of a hypothesised mechanism exists. For example, the existence of the minutes of a meeting, if authentic ones, provide strong proof that the meeting took place.

Account evidence deals with the content of empirical material, such as meeting minutes that detail what was discussed or an oral account of what took place in the meeting.

Source: Beach and Pedersen, 2013

Below you can find a table that provides guidelines on what to look for when identifying types of evidence that can confirm or reject causal relationships between different parts/ subcomponents of the model of change. It also provides one example of a part of a causal pathway and what type of information to look for.

Table 9

Format for identifying types of evidence for different causal relationships in the model of change (example included)

Part of the model of change	Key questions	Type of evidence needed	Source of information
Describe relationship between the subcomponents of the model of change	Describe questions you would like to answer so as to find out whether the components in the relationship took place, when they took place, who was involved, and whether they are related	Describe the information that we need in order to answer these questions. Which type of evidence can we use in order to reject or confirm that subcomponent X causes subcomponent Y? Can we find this information by means of : Pattern evidence; Sequence evidence; Trace evidence; Account evidence?	Describe where you can find this information
Example: Training workshops on M&E provided by MFS II funding and other sources of funding	Example: What type of training workshops on M&E took place? Who was trained? When did the training take place? Who funded the training? Was the funding of training provided before the training took place? How much money was available for the training?	Example: Trace evidence: on types of training delivered, who was trained, when the training took place, budget for the training Sequence evidence on timing of funding and timing of training Content evidence: what the training was about	Example: Training report SPO Progress reports interviews with the CFA and SPO staff Financial reports SPO and CFA

Please note that for practical reasons, the 5C evaluation team decided that it was easier to integrate the specific questions in the narrative of the initial causal map. These questions would need to be addressed by the in country team during the process tracing workshop so as to discover, verify or discard particular causal mechanisms in the detailed, initial causal map. Different types of evidence was asked for in these questions.

*Step 6. **Collect data** to verify or discard causal mechanisms and develop workshop-based, detailed causal map – in-country team*

Once it was decided by the in-country and CDI evaluation teams what information was to be collected during the interaction with the SPO, data collection took place. The initial causal maps served as a basis for discussions during the endline workshop with a particular focus on process tracing for the identified organisational capacity changes. But it was considered to be very important to understand from the perspective of the SPO how they understood the identified key organisational capacity change/outcome area has come about. A new detailed, workshop-based causal map was developed that included the information provided by SPO staff as well as based on initial document review as described in the initial detailed causal map. This information was further analysed and verified with other relevant information so as to develop a final causal map, which is described in the next step.

*Step 7. **Assess the quality** of data and **analyse data**, and develop the **final detailed causal map** (model of change) – in-country team and CDI team*

Quality assurance of the data collected and the evidence it provides for rejecting or confirming parts of causal explanations are a major concern for many authors specialised in contribution analysis and process-tracing. Stern et al. (2012), Beach and Pedersen (2013), Lemire, Nielsen and Dybdal (2012), Mayne (2012) and Delahais and Toulemonde (2012) all emphasise the need to make attribution/contribution claims that are based on pieces of evidence that are rigorous, traceable, and credible. These pieces of evidence should be as explicit as possible in proving that *subcomponent X causes subcomponent Y* and ruling out other explanations. Several tools are proposed to check the nature and the quality of data needed. One option is, Delahais and Toulemonde's Evidence Analysis Database, which we have adapted for our purpose.

Delahais and Toulemonde (2012) propose an Evidence Analysis Database that takes into consideration three criteria:

Confirming/ rejecting a causal relation (yes/no);

Type of causal mechanism: intended contribution/ other contribution/ condition leading to intended contribution/ intended condition to other contribution/ feedback loop;

Strength of evidence: strong/ rather strong/ rather weak/ weak.

We have adapted their criteria to our purpose. The in-country team, in collaboration with the CDI team, used the criteria in assessing whether causal relationships in the causal map, were strong enough. This has been more of an iterative process trying to find additional evidence for the established relationships through additional document review or contacting the CFA and SPO as well as getting their feedback on the final detailed causal map that was established. Whilst the form below has not been used exactly in the manner depicted, it has been used indirectly when trying to validate the information in the detailed causal map. After that, the final detailed causal map is established both as a visual as well as a narrative, with related references for the established causal relations.

<i>Example format for the adapted evidence analysis database (example included)</i> Description of causal relation	Confirming/ rejecting a causal relation (yes/no)	Type of information providing the background to the confirmation or rejection of the causal relation	Strength of evidence: strong/ rather strong/ rather weak/ weak	Explanation for why the evidence is (rather) strong or (rather) weak, and therefore the causal relation is confirmed/ rejected
e.g. Training staff in M&E leads to enhanced M&E knowledge, skills and practice	e.g. Confirmed	e.g. Training reports confirmed that staff are trained in M&E and that knowledge and skills increased as a result of the training		

Step 8. **Analyse and conclude** on findings– in-country team and CDI team

The final detailed causal map was described as a visual and narrative and this was then analysed in terms of the evaluation question two and evaluation question four: "To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?" and "What factors explain the findings drawn from the questions above?" It was analysed to what extent the identified key organisational capacity change can be attributed to MFS II supported capacity development interventions as well as to other related factors, interventions and actors.

4. Explaining factors – evaluation question 4

This paragraph describes the data collection and analysis methodology for answering the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This has been explained in the first section of this appendix. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information was procured for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the process of process tracing as described in the section above.

5. Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team.

Use of the 5 core capabilities framework and qualitative approach: this has proven to a be very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in

the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
- Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
- Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a

result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

Appendix 2 Background information on the five core capabilities framework

The 5 capabilities (5C) framework was to be used as a framework for the evaluation of capacity development of Southern Partner Organisations (SPOs) of the MFS II consortia. The 5C framework is based on a five-year research program on 'Capacity, change and performance' that was carried out by the European Centre for Development Policy Management (ECDPM). The research included an extensive review of the literature and sixteen case studies. The 5C framework has also been applied in an IOB evaluation using 26 case studies in 14 countries, and in the baseline carried out per organisation by the MFS II organisations for the purpose of the monitoring protocol.

The 5C framework is structured to understand and analyse (changes in) the capacity of an organization to deliver (social) value to its constituents. This introduction briefly describes the 5C framework, mainly based on the most recent document on the 5C framework (Keijzer et al., 2011).

The 5C framework sees capacity as an **outcome** of an **open system**. An organisation or collaborative association (for instance a network) is seen as a system interacting with wider society. The most critical practical issue is to ensure that relevant stakeholders share a common way of thinking about capacity and its core constituents or capabilities. Decisive for an organisation's capacity is the context in which the organisation operates. This means that **understanding context issues** is crucial. The use of the 5C framework requires a multi-stakeholder approach because shared values and results orientation are important to facilitate the capacity development process. The 5C framework therefore needs to **accommodate the different visions** of stakeholders and conceive different strategies for raising capacity and improving performance in a given situation.

The 5C framework defines capacity as '**producing social value**' and identifies five core capabilities that together result in that overall capacity. Capacity, capabilities and competences are seen as follows:

Capacity is referred to as the overall ability of an organisation or system to create value for others;

Capabilities are the collective ability of a group or a system to do something either inside or outside the system. The collective ability involved may be technical, logistical, managerial or generative (i.e. the ability to earn legitimacy, to adapt, to create meaning, etc.);

Competencies are the energies, skills and abilities of individuals.

Fundamental to developing capacity are inputs such as human, material and financial resources, technology, and information. To the degree that they are developed and successfully integrated, capabilities contribute to the overall capacity or ability of an organisation or system to create value for others. A single capability is not sufficient to create capacity. All are needed and are strongly interrelated and overlapping. Thus, to achieve its development goals, the 5C framework says that every organisation or system must have **five basic capabilities**:

- The capability to act and commit;
- The capability to deliver on development objectives;
- The capability to adapt and self-renew;
- The capability to relate (to external stakeholders);
- The capability to achieve coherence.

In order to have a common framework for evaluation, the five capabilities have been reformulated in outcome domains and for each outcome domain performance indicators have been developed.

There is some overlap between the five core capabilities but together the five capabilities result in a certain level of capacity. Influencing one capability may have an effect on one or more of the other capabilities. In each situation, the level of any of the five capabilities will vary. Each capability can become stronger or weaker over time.

Appendix 3 Changes in organisational capacity of the SPO - 5C indicators

Below you will find a description for each of the indicators under each of the capabilities, what the situation is as assessed during the endline, how this has changed since the baseline workshop in August 2012 and the interview with the Director at the head office in Guwahati in June 2013 and what are the reasons for change. Unless explicitly stated that a change happened since the interview with the director in June 2013, the changes took place since the baseline workshop in August 2012.

Capability to act and commit

Level of effective leadership

1.1. Responsive leadership: 'Leadership is responsive, inspiring, and sensitive'

This is about leadership within the organisation (operational, strategic). If there is a larger body then you may also want to refer to leadership at a higher level but not located at the local organisation.

The leadership at the head office continues to be open to ideas and suggestions and has a decentralised approach with each implementing regional unit. This creates a platform for the regional units to grow, strengthen themselves and work towards being self-sustainable. The Regional unit is autonomous to the extent of raising resources and completely designing the operations of its projects but all project contracts have to be approved and signed by the RGVN Director, head office and the funds are also channelled through them. The leadership at RGVN Bhubaneswar is however, very committed, competent, experienced, responsive and proactive in taking decisions. This is evident from the initiatives taken by the leader after the micro-finance crisis in 2009 and floods in 2011 and cyclone Phailin in 2013. The leader responded by shifting the focus from micro-finance to sustainable livelihood enhancement of the target group. Further, in response to the executive board of RGVN deciding to restrict external borrowings from banks and other financial institutions, the leader along with the management decided to initiate external resource mobilization, develop linkages with government programs and schemes, linkages with market, network with NGOs and public sector units and improve capacity of the staff to provide sustainable livelihood security to the target group. Though there is hierarchy in the organization the leader at the Bhubaneswar office gives considerable autonomy to the staff to contribute in the organizational strategy, decision making, operation, capacity development etc., which further enhanced the capacity of the staff for self-sustainability.

Score baseline: 4.0

Score endline: 4.0 (no change)

1.2. Strategic guidance: 'Leaders provide appropriate strategic guidance (strategic leader and operational leader)'

This is about the extent to which the leader(s) provide strategic directions

The leadership in Bhubaneswar continues to give strategic guidance. The strategic plan of 2011-2012 on strengthening micro-finance institutions could not be implemented because of the micro-finance crisis in 2009, flood and cyclone Phailin in 2011 and 2013. The management initiated to shift from micro-finance to sustainable livelihood enhancement of the target group. This decision was taken during the baseline but the strategy was still in an inception stage. In the post baseline period the executive board of RGVN decided to restrict external borrowings from Banks and other financial institutions anticipating the inability of the partner organisation to repay their loans. Thus, the

management made a strategic change to initiate external resource mobilization and develop linkages with government programs and schemes, linkages with market, network with NGOs and public sector units and improve capacity of the staff for better sustainability of the programme. During the baseline there was a call for leadership to stay abreast with the latest developments and encourage innovative ideas in strategy making. This is now taking place as management has made the strategic change based on developments in their operating environment.

After the baseline workshop in August 2012, RGVN has set up a Project Finance Committee comprising the executive director, assistant director, and programme staff. This has contributed to improved strategic guidance. This is a body created to expedite the decision making process, monitor progress, and respond to proposals for funding. The executive board continues to review the operations of each regional office separately in its periodic meetings and extends strategic direction as and when required. Thus, though the regional units are given autonomy to implement the project, mobilise funds, write proposals, approach donors etc., this autonomy is restricted as the final approval comes from the executive director.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

1.3. Staff turnover: 'Staff turnover is relatively low'

This is about staff turnover.

Over the last two years there has been no change in this indicator. Staff turnover continues to be low at the regional unit Bhubaneswar. The organisation provides an environment in which the staff members are trusted and delegated authority and responsibilities commensurate to their abilities. There has been no new recruitment during the last two years, as the organisation has not grown. They have not been able to procure any new projects and the Hivos fund for the Sustainable Livelihood Enhancement and Enterprise Promotion (SLEEP) project till 2015 is not enough to hire new project staff. The low staff turnover has the positive effect that staff has learnt a lot through experience and is applying this in their daily work.

Score baseline: 4.0

Score endline: 4.0 (no change)

Level of realistic strategic planning

1.4. Organisational structure: 'Existence of clear organisational structure reflecting the objectives of the organisation'

Observable indicator: Staff have copy of org structure and understand this

The organisational structure at the headquarters in Guwahati and the regional office in Bhubaneswar continue to be the same, but new board members have replaced the earlier ones. RGVN has set up the Project Finance Committee which is comprised of the executive director, assistant director, and programme staff. This is a body created to expedite the decision making process, monitor progress, and respond to proposals for funding. With the change in the strategy RGVN stopped working with old NGO partners on micro-finance and aligned with eight new partners to work on enhancing sustainable livelihoods. Out of these eight, four partners are in Orissa and the other four are in Andhra Pradesh. RGVN has an established effective structure at the regional and head office which ensures a sound decision making process and a transparent financial and programme management system. In the SLEEP project they are making some changes in the decision making process, staff structure and financial and programme management system at the Partner NGO level for better realization of the overall objectives of the project. While the livelihood coordinator now heads the project and takes all the operational decisions, the chief functionary of each partner organisation would do lead head the project and make operational decisions. Furthermore, the decision making process has to be participatory with involvement of the beneficiaries, the facilitating staff members and the chief functionary of each facilitating NGOs.

RGVN continues to work in 14 states of India. The executive director heads the organisation and is based in Guwahati while the four regional offices at Guwahati, Patna, Bhubaneswar and Raipur are headed by Regional Coordinators. The organisation has a well-developed staff structure with separate departments for accounts, personnel and operations. RGVN has a team of 313 (259 on contract basis) staff drawn from the fields of management, social sciences, social work, agriculture, veterinary science and engineers. Hivos supports RGVN for its work in Odisha State. The Odisha team that works from the Bhubaneswar office is comprised of 5 key personnel of whom 2 are women and they manage the day to day operations.

Score baseline: 4.0

Score endline: 4.0 (no change)

1.5. Articulated strategies: 'Strategies are articulated and based on good situation analysis and adequate M&E'

Observable indicator: strategies are well articulated. Situation analysis and monitoring and evaluation are used to inform strategies.

Over the period RGVN has devised certain strategies for the sustainability of the organisation moving from microfinance into sustainable livelihood enhancement. The strategies continue to be well defined and based on a proper contextual analysis and monitoring which staff now understand better. Sustainable livelihood enhancement is done by focusing on the core livelihood sub sectors like Non Timber Forest Produce (NTFP), agriculture and allied agriculture on System of Rice Intensification (SRI) technology, dairy, organic paddy cultivation, organic vegetable farming, handicraft, etc. For better achievement of the outcomes RGVN mobilized and strengthened women producers, artisans, and forest dwellers in its operational areas. The strategies that RGVN is following in the SLEEP project are:

- A three phase model of graduating women in producers groups to producer federations to producer cooperatives through using the entrepreneurship development concept.
- Use of locally adopted, resource saving, knowledge-centric, farmer-led and environment-friendly technologies.
- Coordinated action by communities and community based institutions such as the women self-help groups, cooperatives, farmer groups and local NGOs.
- Inculcating community mobilization skills among women in agriculture, NTFP and bell metal thereby demonstrating and articulating the benefits of the sustainable livelihood methods to them.
- Enhancing the skill base of the women in these livelihood activities to enable them to pursue their livelihoods on a sustainable basis.
- Partnering with local resource agencies for effective deliverance and desired output.

All these strategies are articulated in a participatory manner, making use of good situation analysis, bottom-up planning and RGVN's longstanding experience of mobilising and strengthening women produces, artisans, and forest dwellers in its operational areas.

Score baseline: 3.5

Score endline: 3.5 (no change)

Level of translation of strategy into operations

1.6. Daily operations: 'Day-to-day operations are in line with strategic plans'

This is about the extent to which day-to-day operations are aligned with strategic plans.

With the change in the strategic plan and changing environment the day-to-day operational plans have been revised. The organisation continues to maintain a bottom up approach in strategic planning. Plans are normally followed except sometimes due to unavoidable circumstances. The Project Finance Committee was established to speed up the decision making process. Fortnightly review meetings are conducted to monitor day-to-day operation and gather informal feedback for smooth execution of the plan. This has streamlined the operationalization of the strategic plan of the organization. Focused half yearly, quarterly, monthly and fortnightly monitoring and review meetings continue to be in place to discuss the progress in the programmes.

Score baseline: 4.0

Score endline: 4.25 (very slight improvement)

Level of staff capacity and motivation

1.7. Staff skills: 'Staff have necessary skills to do their work'

This is about whether staff have the skills necessary to do their work and what skills they might they need.

Over the period RGVN staff has gained skills and knowledge on certain areas that were recommended during the baseline, such as, sectorial understanding in agriculture, communication and their reports now read well. Furthermore, skills and knowledge of staff have been increased on business development, producer entrepreneurship, organic farming, market linkages, value chain and organisational development, vermin compost production, conducting training of trainers, training their partner organisations, to initiate dialogue with government line department for support and convergence. Increased skills and knowledge have been primarily due to capacity building trainings supported by Hivos and other donors like the Small Industrial Development Bank of India. The low attrition rate has also helped staff to acquire considerable field experience while working in a compact unit working on a plethora of activities. Skills on fundraising, M&E, MIS and financial management have not yet been addressed through trainings. Due to limited staff strength in the regional office of Bhubaneswar the staff has to multi-task and takes up additional responsibilities. The executive director feels that despite repeated suggestions the staff at the Bhubaneswar office has not been unable to put a proposal together for submission to a donor.

Score baseline: 3.0

Score endline: 3.25 (very slight improvement)

1.8. Training opportunities: 'Appropriate training opportunities are offered to staff'

This is about whether staff at the SPO are offered appropriate training opportunities

Over the period the staff participated in ample training programmes and exposure visits supported both by Hivos (MFS II) and others. The following training and exposure visits were offered to staff in the last years:

- Exposure visit to SAMBANDH supported by Sir Dorabji Tata Trust in 2013.
- Exposure visit to Badamba, Raipur, Parbatipuram and Agriculture university farm, Hyderabad supported by Hivos in 2013.
- Training on Portfolio Audit 2012.
- Vermicomposting pit development training by Sri Damodar Tata Trust, Mumbai in 2013.
- Training on Leadership, financial management and group dynamics in July 2013, Jamunali supported by Hivos.
- Training on Organic farming process in October 2013 at Rambhadrapuram supported by Hivos.
- Training on enterprise promotion and business development in 2013 and August 2014 in Bhubaneswar supported by Hivos.
- Exposure visit to Construction Skills Training Institute, Kolkatta in the year 2014.
- Leadership training by Grameen India Foundation, funded by SIDBI in 2014.
- Workshop on Producer Entrepreneurship Catalyst and Incubation Facility (ProCIF) organised by Vrutti Livelihoods sponsored by Hivos 22-23 May 2014 at Bangalore to help the staff graduate poor producer organisations into self-reliant enterprises. This resulted in the staff to improve capacity in training the partners on enterprise management skill and techniques of enterprise promotion activity to supplement the objective of scale up, profitability and market linkages. They could better plan for community level enterprise promotion and prepared a road map for the registration of the cluster with suitable legal identity.

Staff now seems to have more access to trainings on new trends and strategies as the above trainings fit well with RGVN's new strategy to focus on sustainable livelihood enhancement. This has improved since the baseline.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

1.9.1. Incentives: 'Appropriate incentives are in place to sustain staff motivation'

This is about what makes people want to work here. Incentives could be financial, freedom at work, training opportunities, etc.

Freedom at work, freedom of experimentation with ideas and skill building through various trainings and exposure visits continue to motivate staff at work. Pay and benefits are almost at par in the sector. Benefits like provident fund, leave travel allowance, telephone bills reimbursements and accommodation are made available to staff. The organisation continues to support internal learning and reflection processes as part of its culture of creating informed knowledge base and sharing. The mutual learnings and cross sharing of ideas provide opportunities for staff members to be recognised and given enhanced responsibilities. However, performance linked incentives for staff have been stopped since the baseline workshop in August 2012 because of the executive board's decision to no longer borrow commercial funds and the end of MFS II funding.

Score baseline: 3.5

Score endline: 3.0 (slight deterioration)

Level of financial resource security

1.9.2. Funding sources: 'Funding from multiple sources covering different time periods'

This is about how diversified the SPOs funding sources are over time, and how the level of funding is changing over time.

During the baseline in August 2012, RGVN had 11 different funders and was receiving funding in the form of grants and loans. Now the executive board has made the decision to no longer take loans from banks, anticipating the inability of the partner organisation to repay their loans. The formation of Project Finance Committee and Company Social Responsibility (CSR) eligibility certificate from Tata Institute of Social Studies further strengthened the organisation to explore funding opportunities for financial sustainability. In 2013, RGVN received funding from the following foreign donors: Hivos, Indian Network on Ethics and Workshop on Climate Change (funded by EU), Assam Foundation of North America (United States), Concern Universal (CU), Bangladesh – project funded by EU and Oxfam India (received from UK). With the change in strategy from microfinance (after the microfinance crisis) to sustainable livelihood enhancement, RGVN has been able to continue to receive support from Hivos, and in addition has received funding for this topic from Jamsedji Tata Trust, ACC Ltd (formerly The Associated Cement Companies Limited) and Larsen & Toubro. For the SLEEP project, Hivos is the main funder, but RGVN has also contacted several government institutions and other donors like Malviya foundation, OXFAM, National livelihood mission, National Horticulture mission for possible support. There are proposals in the pipeline to get funding from: Invest India Micro Pension Services Private Limited, Vattikuti Foundation, India Foundation for Humanistic Development (IFHD), Bharat Rural Livelihoods Foundation (BRLF) and the Invest India Micro Pension (IIMP). While RGVN is approaching new donors and this looks promising, currently they are receiving funding from around 8 donors which is a smaller set of funders than during the baseline.

Score baseline: 3.0

Score endline: 2.75 (very slight deterioration)

1.9.3. Funding procedures: 'Clear procedures for exploring new funding opportunities'

This is about whether there are clear procedures for getting new funding and staff are aware of these procedures.

RGVN continues to have clear cut funding procedures. RGVN has a national level copy of procedures for exploring new funding opportunities which includes a separate section applicable to RGVN Bhubaneswar. For the sustainability of the programmes the staff has developed new proposals to approach different donors. The organisation has started having better working relations with government agencies, Public Sector Units (PSUs) and to some extent the private sector agencies for mobilizing funds. The new Company Social Responsibility Act opened an opportunity for RGVN to mobilise funds. RGVN became a member of National Company Social Responsibility (CSR) Hub Empanelment team of Tata Institute of Social Science. This is a network working to provide CPSEs (Central Public Sector Enterprises) with a list of reliable and credible organisations as partners for CSR activities.⁹ This Company Social Responsibility (CSR) eligibility certificate from Tata Institute of Social Studies further strengthened the organisation to explore funding opportunities for financial sustainability.

RGVN has set up a Project Finance Committee comprising the executive director, assistant director, and programme staff. This is a body created to expedite the decision making process, monitor progress, and respond to proposals for funding. Since the baseline interview with the director in 2013, RGVN head office Guwahati has given autonomy to the regional branches to mobilise funds at its own and to choose the projects they work on. However, all the application must go through the executive director. The head office gives strategic support to the regional branches to mobilise funds. Bhubaneswar regional unit started working among rickshaw pullers on financial inclusion. The idea came from the executive director and was to create better livelihood opportunities for the rickshaw pullers and enhance the visibility of RGVN to attract new funders.

The change in strategy from microfinance to sustainable livelihood enhancement has widened their scope to approach new donors. For example, they are receiving support from ACC (formerly The Associated Cement Companies Limited) and Larsen & Toubro (L&T) to work the youth skill development and placement programme which is part of the Phailin cyclone rehabilitation programme. This programme was initiated by RGVN. RGVN identifies and motivates semi-skilled youths/workers to receive training facilitated by L&T. This resulted in better networking and visibility of the organisation to leverage more funds. There are proposals in the pipeline to get funding from: Invest India Micro Pension Services Private Limited, Vattikuti Foundation, India Foundation for Humanistic Development (IFHD), Bharat Rural Livelihoods Foundation (BRLF) and the Indian Institute of Planning and Management (IIMP).

Score baseline: 4.0

Score endline: 4.25 (very slight improvement)

Summary of capability to act and commit

The leadership at the head office continues to be open to ideas and suggestions and has a decentralised approach with each implementing regional unit. The Regional unit in Bhubaneswar is autonomous and responsible for its fundraising, but contracts have to be approved and signed by the RGVN executive director. The executive director feels that despite repeated suggestions the leader at the Bhubaneswar office has not submitted any funding proposals to the head office. The leadership at RGVN Bhubaneswar is however, very committed, competent, experienced, responsive and proactive in taking decisions. The leadership in Bhubaneswar continues to give strategic guidance. While the 2011-2012 strategic plans could not be implemented mainly due to the micro-finance crisis, and a flood and cyclone followed, the management made the strategic decision to shift from micro-finance to sustainable livelihood enhancement. Also external resource mobilisation began to play an important role as the head office decided to no longer allow external borrowings from banks. RGVN's new Project Finance Committee plays an important role in monitoring progress and responding to proposals for funding. Leadership is now staying more abreast with the latest developments and encourages

⁹ The new CSR Bill which got approved by the Parliament (and effective from April 2014), with a very strong CSR Clause, mandates companies with an average profit of INR 50 million in the last three years, to proactively design and undertake welfare and other developmental activities. The corporate sector would be required to spend 2 % of their net profit for social development actions.

innovative ideas in strategy making. Staff turnover continues to be low at the regional unit Bhubaneswar and staff has become experienced in their work. There has been no new recruitment at the Bhubaneswar office during the last two years, as the organisation has not been able to procure any new projects. The Sustainable Livelihood Enhancement and Enterprise Promotion (SLEEP) project till 2015, funded by Hivos does not have enough funds to attract extra manpower. The organisational structure at the headquarters in Guwahati and the regional office in Bhubaneswar continued to be the same, but new board members have replaced the earlier ones. RGVN continues to work in 14 states of India. The executive director heads the organisation and is based in Guwahati while the four regional offices at Guwahati, Patna, Bhubaneswar and Raipur are headed by Regional Coordinators. Hivos continues to support RGVN for its work in Odisha, for which the team works from Bhubaneswar. RGVN's strategies continue to be well defined and based on good situation analysis and its experience in working in its operational areas. The overall strategy from RGVN has moved from microfinance to sustainable livelihood enhancement. In the related project SLEEP, RGVN articulates its strategies based on their longstanding experience of mobilising and strengthening women producers, artisans, and forest dwellers. With the change in the strategic plan and changing environment the day-to-day operational plans have been revised. Fortnightly review meetings are now conducted to monitor day-to-day operation; this has streamlined the operationalization of the strategic plan of the organization. Over the period RGVN staff has gained skills and knowledge on certain areas that were recommended during the baseline and more due to trainings supported by Hivos and other donors like the Small Industrial Development Bank of India and through staff's considerable field experience. However, due to limited staff strength in the regional office of Bhubaneswar the staff has to multi-task and takes up additional responsibilities. Over the MFS II period the staff participated in ample training programmes and exposure visits supported both by Hivos (MFS II) and others. Staff now seems to have more access to trainings on new trends and strategies as the above trainings fit well with RGVN's new strategy to focus on sustainable livelihood enhancement. Freedom at work, freedom of experimentation with ideas and skill building through various trainings and exposure visits continue to motivate staff at work. However, performance linked incentives have stopped in after the baseline in August 2012 because of the executive board's decision to no longer borrow commercial funds and the end of MFS II funding. During the baseline, RGVN had 11 different funders and was receiving funding in the form of grants and loans, while RGVN is approaching new donors related to livelihoods and with its CSR eligibility certificate, currently they are receiving funding from a smaller set of funders than during the baseline. RGVN continues to have clear cut funding procedures RGVN has a national level copy of procedures for exploring new funding opportunities which includes a separate section applicable to RGVN Bhubaneswar. RGVN head office Guwahati has given autonomy to the regional branches to mobilise funds at its own and to choose the projects they work on.

Score baseline: 3.6

Score endline: 3.7 (no change)

Capability to adapt and self-renew

Level of effective application of M&E

2.1.M&E application: 'M&E is effectively applied to assess activities, outputs and outcomes'

This is about what the monitoring and evaluation of the SPO looks at, what type of information they get at and at what level (individual, project, organisational).

The shift in the focus from microfinance to sustainable livelihood and demand from the donor for focused and structured reporting led the organisation to fine-tune and modify monitoring formats and indicators to collect focussed data from the field. RGVN continues to get both qualitative and quantitative information from its M&E system. During monthly and half yearly meetings staff continues to share their field visit experiences. A new initiative is the fortnightly meetings. The management has initiated fortnightly (informal) review meetings to review and analyse the day to day operation and the data. It is indicated in the annual plan for the SLEEP project for 2014-15 that the objectives, indicators, achievements, output and target are well defined to have better evaluation and monitoring of the programmes. Fine-tuned MIS formats and modified MIS indicators made data collection from

the field more focused. RGVN followed the reporting guidelines of Hivos which resulted not only in better reporting but also triggered RGVN to have a close look at the achievements. As per the contract a bi-lingual process manual was developed for Orissa and Andhra Pradesh to review the progress of all the clusters on a quarterly basis for better programme management. Computerized accounting by using the latest technology was initiated. This has further strengthened the M&E system, but an overall comprehensive M&E system for the organisation is missing. However, there continues to be a need for RGVN to link outputs to higher level outcomes.

Score baseline: 4.0

Score endline: 4.25 (very slight improvement)

2.2.M&E competencies: 'Individual competencies for performing M&E functions are in place'

This is about whether the SPO has a trained M&E person; whether other staff have basic understanding of M&E; and whether they know what information to collect, how to process the information, how to make use of the information so as to improve activities etc.

There has been no change in this indicator. RGVN still does not have a dedicated person that works on M&E. Staff members have a good understanding of M&E. At the Bhubaneswar office, most staff has worked there for a long time and has over the years been trained in using log frames and results based analysis. Continuous feedback from Hivos also has helped them improve their knowledge on monitoring the progress of the SLEEP programme. As a result there is focused data collection and structured reporting. However, there continues to be a need to setup a proper monitoring system by establishing a separate monitoring department and hiring a dedicated person for M&E. RGVN has indicated that they will hire an M&E expert as soon as they have the funds available for this.

Score baseline: 2.5

Score endline: 2.5

Level of strategic use of M&E

2.3.M&E for future strategies: 'M&E is effectively applied to assess the effects of delivered products and services (outcomes) for future strategies'

This is about what type of information is used by the SPO to make decisions; whether the information comes from the monitoring and evaluation; and whether M&E info influences strategic planning.

In the fortnightly meetings, day to day planned operations are monitored and reviewed, and gaps better identified. Inputs from these frequent meetings are used in the half yearly meetings in which the strategic plan of the organization is discussed. RGVN continue to receive feedback from the donor which further helps in planning. It is evident from the annual plan 2014-15 that after proper monitoring and review the organisation has proposed some changes in strategy for programme management, financial management and decision making process. However, information on the link between outputs and higher level outcomes are still missing, so these are not guiding the strategic decisions for the future.

Score baseline: 3.0

Score endline: 3.0 (no change)

Level of openness to strategic learning

2.4.Critical reflection: 'Management stimulates frequent critical reflection meetings that also deal with learning from mistakes'

This is about whether staff talk formally about what is happening in their programs; and, if so, how regular these meetings are; and whether staff are comfortable raising issues that are problematic.

There has been a slight improvement in this indicator. During the endline evaluation workshop it was shared to the evaluation team that while monthly, quarterly and annual meetings continued to take

place, now fortnightly review meetings were introduced by management. These fortnightly meetings form a new platform/initiative for the staff to reflect upon the progress of the project, discuss on the plan and other issues with the assistant director. Management has also become more responsive. This streamlined the critical reflection process and resulted in better identification of gaps and appropriate actions taken to address it. Because of a small compact unit of staff at the Bhubaneswar office the meetings are carried out in an informal way and without any prior notice.

Score baseline: 3.0

Score endline: 3.25 (very slight improvement)

2.5. Freedom for ideas: 'Staff feel free to come up with ideas for implementation of objectives

This is about whether staff feel that ideas they bring for implementation of the program are welcomed and used.

There has been no change in this indicator. The organisation continues to follow a bottom up approach and practices flexibility in strategic planning. The assistant director gives considerable autonomy to the staff to come up with ideas. There has been no new recruitment at the Bhubaneswar office and most of the staff has been in the organisation for a fairly long period. Though there is hierarchy in the organisation the staff is allowed to take their own decisions and contribute in the strategy in coherence with the overall mandate of the organisation.

Score baseline: 4.0

Score endline: 4.0 (no change)

Level of context awareness

2.6. System for tracking environment: 'The organisation has a system for being in touch with general trends and developments in its operating environment'

This is about whether the SPO knows what is happening in its environment and whether it will affect the organization.

There has been no change in this indicator. The organisation continues to follow the existing system for tracking the issues that may affect the functioning of the organisation. For instance, it continues to work with its implementing NGO partners which helps to have better understanding of the contextual issues at the field level. The head quarter at Guwahati also shares information with the regional offices during board meetings and Project Finance Committee meetings. The board members are widely experienced and guide the staff in adverse situations. Internet, newspapers, government policies, media and other stakeholders are also used as a source for information on the external environment. RGVN is still part of a large network. Since the baseline they became a member of the National Corporate Social Responsibility Hub Empanelment team (NCSRHET) of Tata Institute of Social Science. This is a network working to provide CPSEs (Central Public Sector Enterprises) with a list of reliable and credible organisations as partners for CSR activities. This ensures that the organisation keeps a track on the latest developments in its operating environment in terms of opportunities related to the CSR Bill. As RGVN has shifted its focus from microfinance to sustainable livelihoods, they now also track developments in agriculture. In light of large scale government promotional activities for organic cultivation RGVN has planned for 2014-15 to create conducive environment for the farming community to shift from non-organic cultivation process to organic based cultivation. This further ensures that it keeps a track on the latest developments. While, staff RGVN stays informed about their operating environment, there still seems to be no formal mechanism to track the environment.

Score baseline: 3.0

Score endline: 3.0 (no change)

2.7. Stakeholder responsiveness: 'The organisation is open and responsive to their stakeholders and the general public'

This is about what mechanisms the SPO has to get input from its stakeholders, and what they do with that input.

There has been no change in this indicator. The organisation continues to be open to take inputs from different stakeholders and is sensitive to their needs. For example, RGVN has developed its M&E indicators and formats in the SLEEP project in consultation with the facilitating NGO partners for effective implementation and reporting of the project activities. RGVN also continues to involve its partner organisations during the planning phase. At the regional level the draft planning is prepared and this is sent to the head office for review and approval by the Governing Board. Regular visits to and communication with the partners maintain an open level of interaction. RGVN maintains transparency in operation and financial matters. There is a periodic sharing of accounts and operational information to all stakeholders and general public. Periodic review of financial and operational system is done and shared with all stakeholders.

Score baseline: 4.0

Score endline: 4.0 (no change)

Summary of capability to adapt and self-renew

The shift in the focus from microfinance to sustainable livelihood and demand from the donor for focused and structured reporting led the organisation to fine-tune and modify monitoring formats and indicators to collect focussed data from the field. Computerized accounting by using the latest technology was initiated, which further strengthened the M&E system. However, there continues to be a need for RGVN to link outputs to higher level outcomes. RGVN still does not have a dedicated person that works on M&E. At the Bhubaneswar office, most staff has worked there for a long time and has over the years been trained in using log frames and results based analysis. RGVN has indicated that they will hire an M&E expert as soon as they have the funds available for this. RGVN continues to get both qualitative and quantitative information from its M&E system; staff still shares their field visit experience in monthly and half yearly meetings and now also during fortnightly meetings. It is evident from the annual plan 2014-15 that after proper monitoring and review the organisation has proposed some changes in strategy for programme management, financial management and decision making process. Management has also become more responsive and the fortnightly review meetings have streamlined the critical reflection process and resulted in better identification of gaps and appropriate actions taken to address it. The assistant director gives considerable autonomy to the staff to come up with ideas. Though there is hierarchy in the organisation the staff is allowed to take their own decisions and contribute in the strategy in coherence with the overall mandate of the organisation. RGVN continues to work with its implementing NGO partners which helps to have a better understanding of the contextual issues at the field level. RGVN is still part of a large network. As RGVN has shifted its focus from microfinance to sustainable livelihoods, they now also track developments in agriculture. While, staff RGVN stays informed about their operating environment, there still seems to be no formal mechanism to track the environment. The organisation continues to be open to take inputs from different stakeholders, especially their partner organisations, and uses their inputs in developing its M&E indicators and formats in the SLEEP project. Periodic review of financial and operational system is done and shared with all stakeholders.

Score baseline: 3.4

Score endline: 3.4 (no change)

Capability to deliver on development objectives

Extent to which organisation delivers on planned products and services

3.1. Clear operational plans: 'Organisation has clear operational plans for carrying out projects which all staff fully understand'

This is about whether each project has an operational work plan and budget, and whether staff use it in their day-to-day operations.

There has been no change in this indicator. RGVN continues to have day-to-day operational plans and budget for each project which the staff fully understands and which are in line with the strategic plan. Since the baseline workshop in August 2012, with the shift in the strategy from microfinance to the sustainable livelihood enhancement programme there is a modification in the strategic and operational plans. Annual strategic and operational plans are prepared with clear indication of activities, output and results. Bi-monthly operational work plan also prepared which is in line with the annual plan. Attention has been given for quality enhancement and strict adherence to budget in daily operations.

Score baseline: 4.0

Score endline: 4.0 (no change)

3.2. Cost-effective resource use: 'Operations are based on cost-effective use of its resources'

This is about whether the SPO has the resources to do the work, and whether resources are used cost-effectively.

There has been no change in this indicator. The restriction of the executive board in borrowing external funds, the ending of the microfinance project and the phasing out of MFS II funding, further made RGVN cost conscious in its resource use. RGVN continues to be cost-effective in resource use by planning the day-to-day operations in line with the annual budget and giving attention to strict adherence to the budget. As RGVN's two main projects work in the same geographical areas this facilitates and saves costs when giving capacity building trainings, organising review meetings and going on monitoring visits.

Score baseline: 4.0

Score endline: 4.0 (no change)

3.3. Delivering planned outputs: 'Extent to which planned outputs are delivered'

This is about whether the SPO is able to carry out the operational plans.

With the microfinance crisis and RGVN board's decision to stop taking loans from the bank, the project of 2011-12 'Graduating NGOs in to MF Institutions in the state of Odisha' could not be delivered as planned. However, the operational plan of the new Hivos funded program 'SLEEP' has been carried out successfully so far. It is evident from the 2012-13 and 2013-14 annual reports and the donor assessment of the annual report that the outputs are being delivered as planned. For example the 2013-14 annual report indicates 100% achievement in mobilizing women farmers/Forest dwellers/DWCRA¹⁰ artisans to form producer groups: there is an improvement from 1700 in 2012-13 to 3650 in 2013-14 against the targeted 3650. The new initiative of fortnightly review meetings along with the existing half yearly and annual review meetings further contributed in effective delivery of the planned outputs.

Score baseline: 4.0

Score endline: 4.0 (no change)

¹⁰ The Development of women and children in Rural Areas or DWCRA is a government sponsored anti-poverty programme of the Ministry of Rural Development.

Extent to which delivered products and services are relevant for target population in terms of the effect they have

3.4.Mechanisms for beneficiary needs: 'The organisation has mechanisms in place to verify that services meet beneficiary needs'

This is about how the SPO knows that their services are meeting beneficiary needs

This indicator has not changed since the baseline. RGVN continues to verify whether services meet beneficiary needs through its monitoring system. Over the period the report format for quarterly review has been fine-tuned. RGVN staff is now included in the cluster level quarterly review meetings which were earlier done by only the NGO partners. This further facilitated to know whether services meet beneficiary needs. The workshops organised by RGVN for SHG leaders and krusak melas (farmer festivals) also facilitated informal discussion with the target groups to know the outcome of the projects. The process to know whether service meet beneficiaries needs improved as the MIS indicators and format was fine-tuned to get proper data from the field. Also fortnightly meetings streamlined the process.

Score baseline: 4.0

Score endline: 4.0 (no change)

Level of work efficiency

3.5.Monitoring efficiency: 'The organisation monitors its efficiency by linking outputs and related inputs (input-output ratio's)'

This is about how the SPO knows they are efficient or not in their work.

There is no formal mechanism to calculate input and output ratio. However, through the fortnightly, monthly and quarterly review of the projects the efficiency is measured which is linked to the deliverables. The donor feedback on the annual reports of RGVN and the assessment of planned targets and its achievements also contribute in monitoring efficiency of the organisation. There is an internal audit and the external audit by RGVN head office to ensure transparency and accountability in utilisation of funds. More detailed report writing, more interaction at field during training programs and frequent feedback from partners streamlined the monitoring efficiency system.

Score baseline: 3.0

Score endline: 3.0 (no change)

3.6.Balancing quality-efficiency: 'The organisation aims at balancing efficiency requirements with the quality of its work'

This is about how the SPO ensures quality work with the resources available

The small team of experienced staff at the Bhubaneswar office continues to ensure team work and good results. The staff could better implement the project as there is an operational plan and improved MIS format to monitor the project's quality and efficiency. The staff has been there for a long time and is well-experienced, which contributes in balancing efficiency with the quality of work. Better planning, use of technology in the accounting system, fortnightly review meetings, and the formation of the Project Finance Committee improved the quality and efficiency of work. Appropriate trainings are given to the partners and beneficiaries to deliver quality work.

Score baseline: 3.0

Score endline: 3.25 (very slight improvement)

Summary of capability to deliver on development objectives

RGVN continues to have day-to-day operational plans and budget for each projects which the staff fully understands and which are in line with the new strategic plan on sustainable livelihood enhancement programme. The restriction of the executive board in borrowing external funds, the ending of the microfinance project and the phasing out of MFS II funding, further made RGVN cost conscious in its resource use. Geographical overlap in RGVN's two main projects saves costs when visiting the target groups. With the microfinance crisis and RGVN board's decision to stop taking loans from the bank, the project of 2011-12 'Graduating NGOs in to MF Institutions in the state of Odisha' could not be delivered as planned. However, the operational plan of the new Hivos funded program 'SLEEP' has been carried out successfully so far. The new initiative of fortnightly review further contributed in effective delivery of the planned outputs. RGVN continues to verify whether services meet beneficiary needs through its monitoring system. There is still no formal mechanism to calculate input and output ratio. More detailed report writing, fortnightly meetings, and more interaction at field during training programs and frequent feedback from partners streamlined the monitoring efficiency system. The small team of experienced staff at the Bhubaneswar office continues to ensure team work and good results. Better planning, use of technology in the accounting system, fortnightly review meetings, and the formation of the Project Finance Committee improved the quality and efficiency of work.

Score baseline: 3.7

Score endline: 3.7 (no change)

Capability to relate

Level of involving external parties in internal policy/strategy development

4.1. Stakeholder engagement in policies and strategies: 'The organisation maintains relations/ collaboration/alliances with its stakeholders for the benefit of the organisation'

This is about whether the SPO engages external groups in developing their policies and strategies, and how.

There has been no change in this indicator. RGVN continues to engage its stakeholders for the benefit of its operations, plans and outcomes. They are proactive in analysing trends jointly with other stakeholders. RGVN Governing board takes all policy and governance related decisions on a quarterly and annual basis. The organization has strengthened its relationship with the government which was weak during baseline. However, the relationship is only to the point of linking up government schemes and programmes to the target groups but not at the level of involving them in policy or strategy making.

Score baseline: 3.0

Score endline: 3.0 (no change)

Level of engagement of organisation in networks, alliances and collaborative efforts

4.2. Engagement in networks: 'Extent to which the organization has relationships with existing networks/alliances/partnerships'

This is about what networks/alliances/partnerships the SPO engages with and why; with they are local or international; and what they do together, and how do they do it.

In RGVN's new programmes they continue to work with NGO partners to implement its programmes. Over the period with the shift in the strategic plan the organisation has established relationships with eight new NGO partners, out of whom four are in Orissa and the other four are in Andhra Pradesh. The new Company Social Responsibility (CSR) Act facilitated the organisation to establish corporate partnership with ACC Limited (formerly The Associated Cement Companies Limited) and Larsen & Toubro (L&T) for training and employment of semi-skilled workers from the under privileged segment.

RGVN became a member of National CSR Hub Empanelment team of Tata Institute of Social Science. This is a network working to provide CPSEs (Central Public Sector Enterprises) with a list of reliable and credible organisations as partners for CSR activities. A few new networks have been established since the baseline workshop in August 2012: Invest India Micro Pension, VattiKutti Foundation, Jindal Association. In the last months RGVN established better linkages with government departments through linking and converging with government programs and schemes. Also there was trust built with the government by implementing the rehabilitation program for the Phailin and flood victims.

Score baseline: 4.0

Score endline: 4.25 (very slight improvement)

Extent to which organisation is actively engaging with target groups

4.3.Engagement with target groups: 'The organisation performs frequent visits to their target groups/beneficiaries in their living environment'

This is about how and when the SPO meets with target groups.

There has been no change in this indicator. The organisation continues to engage actively with the target groups. The downward communication generally happens through developing and strengthening other partner organisations to reach out effectively to the primary stakeholders. RGVN organizes various periodic workshops, exposure visits, krusak melas (farmer festivals) which facilitates engagement with the target groups.

Score baseline: 3.0

Score endline: 3.0 (no change)

Level of effective relationships within the organisation

4.4.Relationships within organisation: 'Organisational structure and culture facilitates open internal contacts, communication, and decision-making'

How do staff at the SPO communicate internally? Are people free to talk to whomever they need to talk to? When and at what forum? What are the internal mechanisms for sharing information and building relationships?

The assistant director at the Bhubaneswar office being democratic in her approach gives considerable autonomy to her staff in terms taking decisions for their respective projects. The small team in Bhubaneswar has been working together for a long period. This has facilitated better communication both at the professional and personal front. In general there continues to be open communication in the organisation. RGVN teams have internal team meetings, and the senior management team meets every three months. Formal meetings are mostly through monthly meetings, quarterly review, training and workshops, strategic planning exercises, retreats etc. The evaluation team observed that the relationship between RGVN Bhubaneswar and RGVN head office Guwahati is getting unpleasant as they compete with each other for the same projects.

Score baseline: 3.5

Score endline: 3.25 (very slight deterioration)

Summary of capability to relate

RGVN continues to engage its stakeholders for the benefit of its operations, plans and outcomes. The organization has strengthened its relationship with the government; however, the relationship is only to link up government schemes to the target groups and not at the level of involving them in policy or strategy making. RGVN continues to work with NGO partners to implement its programmes. The new Company Social Responsibility (CSR) Act facilitated the organisation to establish corporate partnerships. A few other new networks have been established since the baseline workshop in August 2012. And RGVN established better linkages with government departments through linking their target group to government schemes and because of built up trust by implementing the rehabilitation

program for the Phailin and flood victims. The organisation continues to engage actively with the target groups.

RGVN organizes various periodic workshops, exposure visits, krusak melas (farmer festivals) which facilitates engagement with the target groups. The assistant director at the Bhubaneswar office being democratic in her approach gives considerable autonomy to her staff in terms taking decisions for their respective projects. Score baseline: 3.4

Score endline: 3.4 (no change)

Capability to achieve coherence

Existence of mechanisms for coherence

5.1.Revisiting vision, mission: 'Vision, mission and strategies regularly discussed in the organisation'

This is about whether there is a vision, mission and strategies; how often staff discuss/revise vision, mission and strategies; and who is involved in this.

The organisation continues to revisit vision and mission of the organisation every 5 years. Due to the microfinance crisis, a change in the donor's priority, the floods and Phailin cyclone, the organisation has made a strategic shift from microfinance to community based micro-enterprise development leading to sustainable livelihood enhancement. The strategic shift is in alignment with the vision (a world where the poor and underprivileged can live with dignity and prosperity) and mission (to improve the quality of life of the urban and rural poor and underprivileged through microfinance and social action) of the organization.

Score baseline: 4.0

Score endline: 4.25 (very slight improvement)

5.2.Operational guidelines: 'Operational guidelines (technical, admin, HRM) are in place and used and supported by the management'

This is about whether there are operational guidelines, which operational guidelines exist; and how they are used.

There is no change in this indicator. The organisation continues to have operational guidelines like a HR policy which is part of the Administrative Manual of which a hard copy exists. The performance appraisal system is still part of the HR policy. There are also operational manuals. Separate books of account and ledger are maintained and a separate audit reports are prepared as per the funder's requirement.

Score baseline: 3.0

Score endline: 3.0 (no change)

Level of coherence of various efforts of organisation

5.3.Alignment with vision, mission: 'Projects, strategies and associated operations are in line with the vision and mission of the organisation'

This is about whether the operations and strategies are line with the vision/mission of the SPO.

RGVN's projects, strategies and operations continue to be in line with their vision and mission. The new Sustainable Livelihood Enhancement and Enterprise Promotion project aims at empowerment of women in agriculture, NTFP and handicraft by making systematic interventions to enhance their participation and productivity. The aim is gradually graduate individuals (women) from SHGs to producer federations to producer companies through entrepreneurship development for sustainable

livelihoods. It works in the four Tribal dominated pockets of Southern Odisha, Central Odisha, where predominantly tribal, unprivileged, poor people live. This is very much in line with RGVN's vision to improve the quality of life of the rural and urban underprivileged poor through social action.

Score baseline: 4.0

Score endline: 4.0 (no change)

5.4. Mutually supportive efforts: 'The portfolio of project (activities) provides opportunities for mutually supportive efforts'

This is about whether the efforts in one project complement/support efforts in other projects.

There has been no change in this indicator. RGVN's projects continue to be mutually supportive. The Jivika rehabilitation of flood victims in Puri & Nayagarh districts of Odisha project was outlined based on the experiences gained during RGVN's survey and relief distribution programme in 2011 with support from Jamsedji Tata Trust, Mumbai (JTT). The project promotes sustainable rural livelihoods in sub sectors like goatery, bamboo work, vermicomposting, organic farming and cycle rickshaw/trolley at the house hold level. This project aims at empowering women among the marginalized poor people of this area. The SLEEP project and Jivika project both aim at promoting sustainable livelihood promotion among the women, work in the same geographical areas and focus on the same core livelihood sub sectors. This facilitates mutually supportive efforts in organizing capacity building trainings, review meetings and monitoring visits.

Score baseline: 3.0

Score endline: 3.0 (no change)

Summary of capability to achieve coherence

Appendix 4 Results - key changes in organisational capacity - general causal map

Below you will find a description of the general causal map that has been developed for the SPO during the endline workshop. Key changes in organisational capacity since the baseline as identified by the SPO during this endline workshop, are described as well as the expected effects and underlying causal factors, actors and events.

The evaluation team carried out an endline assessment at RGVN from 19 to 20 August 2014. During this workshop, the team made a recap of key features of the organisation since the baseline workshop in August 2012 and the interview with the Director at the head office in the North-East in June 2013 (such as vision, mission, strategies, clients, partnerships). This was the basis for discussing changes that had happened to the organisation since the baseline. The two main changes that happened in the organisation since the baseline, as identified by the staff during self -assessments, interviews and during the workshop were:

- Improved capacity of the staff to train partners on technology and other issues [2]
- Improved relationships with networks [3]

The two main organisational capacity changes are described in the light orange boxes and some of their key consequences are noted above these cards in dark orange. Unless explicitly stated that a change happened since the interview with the Director in June 2013, the changes took place since the baseline workshop in August 2012. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the organisation are listed at the bottom in dark purple. The narrative describes per organisational capacity change, the contributing factors as described from the top down. The numbers in the visual correspond with the numbers in the narrative.

Improved capacity of the staff to train partners on technology and other issues [2]

After the Micro Finance crisis in 2009 the organization went through a rough patch and the 2011 flood and cyclone Phailin [Source: Flood & Phailin details] in the organisation's partner areas further worsened the condition. The partners' ability to recover loans meted out and pay back RGVN was questionable in the face of such large scale disaster. The organization was not able to recuperate fully till the baseline conducted in 2012. During this time the focus had already shifted from micro finance to sustainable livelihood enhancement of the target group. The main source of income of the target population is agriculture and allied activities. However, the strategy was still in an embryonic stage.

RGVN is committed to the sustainable livelihood enhancement of rural poor in accordance with its vision and mission. Lack of technical knowledge on agriculture, marketing, value addition, lack of irrigation facilities, and exploitation by middlemen, periodic natural disasters and lack of financial inclusion affected the target groups' livelihood security. Since the baseline, the organization has undertaken steps to improve the basic skill sets and marketing linkages of the target groups by improving the capacity of the RGVN staff in these directions. [Source: ARR+WP 12-13-14]. The improved capacity of RGVN staff to train partners on technology and other issues, which has had a trickle-down effect on the capacity of RGVN's partners and the target group in coping mechanisms. As a result of RGVN's improved capacity to organize and give trainings to partners, several capacity building trainings on value addition, market linkages, organic farming, vermicomposting production were organized by RGVN staff [6] as per the contract with Hivos for the new project 'Sustainable Livelihood Enhancement and Entrepreneur Promotion' (SLEEP) [Source: Signed contract-hard copy]. This project replaced the previous one on microfinance after the microfinance crisis. These trainings include:

- *Two days training on 'Group Dynamics, Conflict Resolution, Leadership and Financial Management'* was organized by RGVN at Jamunali on 19-20 July 2013 for the SHG leaders. They were trained on allied agricultural development, group dynamics, market linkages, and basics of financial viability of an association [Source: Sample Field trg. Minutes].
 - *Two days training on 'Vermicomposting production'* was organized by RGVN at Pratappur on 9-10 August 2013 funded by Hivos. The objective of the training was to develop the skill and knowledge of the farmers on Vermicomposting production, its impact on land, its marketability and household level labour saving aspect [Source: Sample Vermi Trg.Minutes].
 - *One day Krusak Mela (farmers' get-together)* was organized by RGVN at Kanasa in March 2013. The objective was to orient the farmers on organic farming, market linkages, preparing indigenous cold storage and show casing best practices and practitioners [Source: Krusak Mela].
 - *One day training program on "Enterprise Promotion and Business Development Plan"* was organized by RGVN on 14-15 May 2014 at Vizagapatam, AP. This enhanced the knowledge of the partners in business development, market linkages, value chain, banking practices, financial inclusion etc. Resource person Mr. I.B Raju, Assistant Professor, GIM, GITAM University, Visakhapatnam was invited to facilitate the training [Source: Sample Central Training Minutes].
- Staff's capacity to train partners [2] improved because of the field experience that staff got [7] and because of RGVN staff attending various trainings and exposure visits [5]. Both are further explained below.

Field experience of staff [7]

Capacity of the staff to train partners on technology and other issues also improved because some RGVN staff has been there for a long time working in a small compact unit, doing a variety of activities they also have learnt from field experience [Source: ARR+WP 12-13-14, ARR+Work Plan 2013-14-15, 5c endline self-assessment sheet_ management _India_ RGVN]. This was because of a low attrition rate at the Bhubaneswar office [8]. This is where the team works that is supported by Hivos to work on the SLEEP project.

Trainings and exposure visits of RGVN staff [5]

Increased capacity of the RGVN staff [2] was furthermore due to various capacity building trainings and exposure visits [5] supported by Hivos and other donors. These trainings include:

- Two-day training was organized by Vrutti Livelihoods, Bangalore on 22-23 May 2014 sponsored by Hivos on producer entrepreneurship catalyst and incubation facility. The focus of the training was to help the staff to assist unviable producer organisations into self-reliant enterprises [Source: 5c endline self-assessment sheet_management_India_RGVN, Workshop on Producer

-
- Entrepreneurship Catalyst and Incubation Facility May 2014]. Funded by MFS II [28]. The training was attended by assistant director of RGVN, Bhubaneswar Region.
 - Two- day training was organised with the support of Hivos (MFS II) on 18-19 August 2014 at Bhubaneswar on enterprise promotion and business development. The programme coordinators of RGVN participated in this [Source: 5c endline self-assessment sheet_programme staff_India_RGVN]. Funded by MFS II [28]. The programme coordinators of RGVN participated in the training programme.
 - Training programme on vermicomposting pit by Sir Dorabji Tata Trust (SDTT), Mumbai in 2013 [Source: 5c endline self-assessment sheet_programme staff_India_RGVN]. Funded by SDTT [29]. The training was attended by 3 project staff and programme coordinator of RGVN, Bhubaneswar.
 - Leadership training was organized by Small Industrial Development Bank of India (SIDBI) in 2014 [Source: 5c endline self-assessment sheet_programme staff_India_RGVN]. Funded by SIDBI [29]. The Programme Coordinator of RGVN, Bhubaneswar attended the training.

The organization also arranged a number of exposure visits for the staff during the last two years to help them learn about vermicomposting, bio-pesticides, governance, value chain analysis and organic farming [Source: 5c endline self-assessment sheet_management_India_RGVN]:

- Exposure visit to Badamba, Raipur, Parbatipuram and Agriculture university farm, Hyderabad, supported by Hivos enabled the staff to have practical knowledge and skills which was passed on to the partner organisations later. These visits also enabled the staff to network with likeminded organisations [Source: 5c endline self-assessment sheet_management_India_RGVN]. Funded by MFS II [28].
- Visit to SAMBANDH supported by Sir Dorabji Tata Trust. Sambandh is a Microfinance institution, which also trains organisations to graduate to producer companies [Source: 5c endline self-assessment sheet_management_India_RGVN]. Funded by SDTT [29].

Staff was sent to trainings and exposure visits [5] since they realised there is a gap in terms of knowledge and skills [9] and also because of the change in the strategic plan [17], as working topics like strengthening livelihoods in the SLEEP project required further training to gain knowledge and skills on this. The identification of gaps in knowledge and skills [9] was done during fortnightly meetings [10] where a strategy for diversification of resource mobilisation was being discussed. It was also the result of having strengthened monitoring and evaluation [11] [Source: 5c endline self-assessment sheet_management_India_RGVN]. These are further explained below.

- *Focused fortnightly meetings [10]*

The fortnightly meeting was a new initiative taken by the management in order to streamline the reporting and monitoring structure. Here day-to-day planned operations were monitored and reviewed, gaps in knowledge and skills were better identified which streamlined the strategic plan of the organization for smooth functioning of projects and planning of trainings and exposure visits [Source: ARR + Work Plan 2013-14-15, 5c endline self-assessment sheet_management_India_RGVN].

- *Strengthened monitoring and evaluation [11]*

There was change in the strategic plan to shift to sustainable livelihood enhancement, demand from the donor to have detailed and focused data collection, commitment of the organization to fulfil the needs of the target group and increasing focus of donors on evidence based grant making and value for money analysis pushed the organisation to strengthen their monitoring and evaluation. As a result they refined the monitoring and evaluation formats and indicators. Now the data collection is both qualitative and quantitative, whereas during the baseline it was only quantitative [Source: Endline evaluation workshop, 5c endline self-assessment sheet_management_India_RGVN, 1004806_RGVN_Assessment of 2014 Annual Review Report]

Focused fortnightly meetings [10] were taken up by the management and monitoring and evaluation was strengthened [11] to streamline the monitoring and evaluation structures and processes because of the donors requirements [27].

Improved relationships with networks [3]

There have been a couple of issues that have greatly affected RGVN and the need to look for additional funding by strengthening their networks. After the microfinance crisis in 2009 [21] the organization went through a rough patch as floods in 2011 and 2014 [23] and the cyclone Phailin in 2013 [24] in the organisation's partner areas further worsened the situation [Source: Flood & Phailin details]. The partners' ability to recover loans meted out and pay back to RGVN was questionable in the face of such large scale disaster. The organization was not able to recuperate fully from the

Microfinance crisis in 2009 and the floods in 2011 till the baseline workshop conducted in August 2012. During this time the focus had already shifted from microfinance to sustainable livelihood enhancement of the target group. However, the strategy was still in an embryonic stage [Source: RGVN Baseline report]. In the post baseline period, the executive board of RGVN decided to restrict external borrowings from banks and other financial institutions anticipating the inability of the partner organisations to repay RGVN. This initiated the RGVN management to think in the direction of external resource mobilization, develop linkages with government programs and schemes, linkages with market and improve capacity of the staff to implement sustainable livelihood programmes to the target group [Source: 5c endline self-assessment sheet_management_India_RGVN, ARR+WP 12-13-14, RGVN-Annual-Report-2012-13-Final-Draft].

The precarious funding situation, compelled the management to think of converging and linking with government programmes, the market, Public Sector Units (PSUs) and the private sector to enhance the livelihood security of the target groups [3][Source: Endline evaluation workshop, 5c endline self-assessment sheet_management_India_RGVN, Flood & Phailin details]. Improved relationships with networks [3] is expected to lead to more funding opportunities for RGVN [1]. Improved relationships with networks [3] was because of improved linkages with the government [12], improved linkages with the market [13] and networking with PSUs and the private sector [4]. Each of these linkages are further explained below.

Linkages with the government [12]

During the baseline workshop (August 2012) there was a need for RGVN to develop a relationship with government institutions and maintain a strategic relationship, so that they could better translate their commitments to the target groups. The organization's initiative to rehabilitate the Flood (August 2014) and Phailin (October 2013) affected people and the capacity to implement sustainable livelihood programs, facilitated the organization to develop a trust relationship with the government in the last one and half years (2013-14). Since 2013, RGVN staff has better linkages with government line departments at local level, state level officials and other semi-governmental organisations and corporations which run delivery programmes for the poor [Source: 5c endline self-assessment sheet_management_India_RGVN, Flood & Phailin details, <http://www.slideshare.net/RanjanPraharaj/phailin-response-by-uaa-in-ganjam-district-of-odisha>]. This is evident from the fact that the organization could linkup government schemes and programs to the target groups (farmers in Odisha). With the support of RGVN the target groups could access the inputs provided by the government in the form of a vermicomposting pit. Nearly 25 vermicomposting pits have been constructed by the State Agriculture Department of Odisha in one of the vegetable growing clusters in the Anugul district. In another vegetable growing cluster area in Dhenkanal the farmers have been helped in getting support from the State Agriculture Department of Odisha for Shade Net Nursery. Also NTFP collectors and traders have been able to receive 5 tamarind cake making machines with support from the Tribal Development Corporation. All these have been facilitated by RGVN and its partners [Source: ARR + Work Plan 2013-14-15]. Some of the plans are in the pipeline. For example, RGVN has approached the state and national horticulture board, state agricultural technology institutes, the forest department, the state handicraft development board and the state Khadi and Village Industry board to link with them through different schemes. Banks and financial institutions (FIs) have been approached for providing working capital support for product enhancement at a low interest rate [Source: ARR + Work Plan 2013-14-15]. Given that some of the board members are heads of FIs, it should not be an uphill task, yet while RGVN Guwahati gets its share, RGVN Bhubaneswar is left out. RGVN strengthening its linkages with the government is thus; because of the new programmes [14] they have been and will be involved in with government agencies, (more on new programmes later on) and trainings [30] on Right to Information (RTI), Right to Education (RTE), Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA) [Source: Endline evaluation workshop, 5c endline self-assessment sheet_management_India_RGVN, Flood & Phailin details].

Linkages with the market [13]

Due to lack of knowledge and skills on value addition, marketing, variable market condition, exploitative middlemen, and other factors the target groups often find it difficult to get out of the poverty trap. RGVN is committed to align its work with its vision and mission to enhance the livelihood of the target groups. In order to do so they provide them with handholding support in areas like value addition and creating direct linkages with the market. To be able to provide this support RGVN has trained itself after the baseline workshop in August 2012 on these topics [5]. For example, in terms of value addition: Value addition is a process in which the farmers are given handholding support to give due care during processing, preservation and sorting and grading in NTFP and vegetable product which have a positive impact on the pricing and marketing of the products. During last two years (August 2012-2014) RGVN staff provided trainings and handholding support to the target groups on

value addition, marketing, etc. They also facilitated access to fair & remunerative markets including linking producer groups to marketing opportunities by market aggregators [Source: Endline evaluation workshop, ARR+WP 12-13-14]. An example of value addition activities was tamarind collection and marketing. With the technical support provided by RGVN now the farmers have better capacity in processing, sorting, packaging and grading for proper pricing of the product and to maintain quality aspect with the buyers [Source: ARR + Work Plan 2013-14-15, Endline Evaluation Workshop]. During the last two years (August 2012- August 2014) RGVN initiated and funded "Bazaar on Wheels", a new project to strengthen producer organizations and their access to market. The project focuses especially on access to market for the women producer groups. They are provided with capacity building trainings and provision of a van for marketing their products. This is a pilot project carried out by RGVN through Jagruti Mahila Mahasangha at Govindpur of Dhenkanal district. At present the Mahila Mahasangha (Federation) has a membership of 1200 women and diversified its production to non-farm activities. This has enabled wider markets and enhanced profits [Source: RGVN-Annual-Report-2012-13-Final-Draft, 5c endline self-assessment sheet_programme staff_India_RGVN]. Improved linkages with the market [13] for RGVN has thus been a result of the new programmes [14] they have been involved in and the trainings and exposure visits staff went to [5].

Networking with different Public Sector Units (PSUs) and private sector [4]

RGVN Bhubaneswar has started having better working relations with Public Sector Units and to some extent the private sector agencies. The microfinance crisis and the executive board's decision to restrict borrowing commercial funds created financial crunch in the organization. Also, as the implementation focus has been concentrated on production enhancement, marketing linkages, working capital linkages, value addition etc. to move the clusters into the next phase of sustainability of the activities compelled the organization to make strategic change for resource mobilization [Source: Endline evaluation workshop, ARR + Work Plan 2013-14-15, Strategy_Minutes]. Some of the new networked partners are:

- In the post Phailin (October 2013) period RGVN in association with ACC Limited (formerly The Associated Cement Companies Limited) supports and rehabilitates the Phailin and flood affected people of Odisha. Also in collaboration with Larsen & Toubro (L&T), RGVN has taken up the project in the post Phailin period to provide placement to the semi-skilled Phailin and Flood effected people [Source: Endline evaluation workshop, 5c endline self-assessment sheet_management_India_RGVN].
- Jamsedji Tata Trust: Since 2012 RGVN has developed a network with Jamsedji Tata Trust to promote sustainable livelihood of the poor flood and Phailin effected people [Source: Narrative_Annual_report_of_Project-_JIVIKA_June_1, 2012-May_31, 2013, Flood & Phailin details, Endline evaluation workshop].
- With the inception of the new project Sustainable Livelihood Enhancement and Enterprise Promotion (SLEEP) there are eight new partner NGOs with RGVN. This project runs from July 1st, 2012 till June 30th 2015. Out of these eight, four partners are in Orissa: SHAKTI, Raygada; Viswa Yuva Kendra, Baninali, Angul; Gania Sisu Raija, Gania, Nayagargh Integrated Rural Harijana Adibasi Development Centre, Dhenkanal. The other four partners are in Andhra Pradesh: Chaitanya Bharathi – Vizianagaram, SAMIDA, Yelamanchili, NATURE Araku, and CMS Hyderabad. While this project had started when the baseline workshop was conducted, it was still in its initial stage. In the post baseline workshop period (after August 2012) the project gradually strengthened and implemented [Source: Endline evaluation workshop, ARR + Work Plan 2013-14-15, 5c endline self-assessment sheet_management_India_RGVN, RGVN-Annual-Report-2012-13-Final-Draft, Strategy_Minutes].

Networking with PSUs and Private sectors [4] improved because of new programmes [14] and CSR eligible certificate from Tata Institute of Social Science (TISS) [16].

New programmes [4]

The following are some of the new programmes that were undertaken by RGVN during the last two years (August 2012- August 2014):

- **Placement linked target program** is part of the Phailin rehabilitation program that started after October 2013, which was initiated by RGVN in association with ACC and L&T. RGVN identifies and motivates semi-skilled youths/workers to receive training facilitated by L&T. As of now 81 candidates are sponsored by RGVN. L&T has initiated the Construction Skilled Training Institutes in a joint venture with vocational training institutes across the country to train rural youth. The 8th Construction Skills Training Institute (CSTI) at Gopalpur, Cuttack in the state of Odisha was established in June 2012. The training institute is a joint initiative between the Government of Odisha and L&T. The building and land infrastructure is provided by the State and L&T is the knowledge

provider and training partner. Subsequent to the training, L&T also facilitates placement of trainees through subcontractors at project sites for the willing candidates [Source: Endline Evaluation Workshop, 5c endline self-assessment sheet_management_India_RGVN, <http://www.Intecc.com/homepage/csti/jointventures.htm>].

- **SLEEP** project facilitated the organization to approach new programs such as, NTFP processing, value addition & marketing, Organic vegetable farming, DWCRA¹¹ / bell metal work from production to marketing. This project runs from July 1st, 2012 till June 30th 2015 [Source: ARR + Work Plan 2013-14-15, Micro Plan- Ramanaguda NTFP cluster].
- **The JIVIKA programme** started in June 2012 and was outlined based on the experiences gained during the survey and relief distribution program conducted by RGVN with support from Jamsedji Tata Trust, Mumbai (JTT). The project promotes sustainable rural livelihoods in sub sectors like- Goatery, Bamboo work, vermicomposting, organic farming (vegetable & paddy farming through System of Rice Intensification SRI technology) and cycle rickshaw/trolley at the house hold level. This also includes recognizing and strengthening potential SHGs who would be the vectors for such activities as beneficiaries, verification, and final distribution on the need based report. While this programme started before the baseline workshop in August 2012, it was implemented and strengthened after the baseline workshop [Source: Narrative_Annual_report_of_Project-_JIVIKA_June_1, 2012-May_31, 2013, Flood & Phailin details].
- **Working capital support to rickshaw pullers:** Graduating rickshaw pullers to become owner of the rickshaws they use to make a living. RGVN had identified 35 flood victims to become involved in this project. However, with the approved budget for the activity (capital cost) they could manage to extend the number up to 40 cycle rickshaw/trolley to 40 beneficiaries and 5 bi-cycles to 5 women beneficiaries to expedite their mobility in the business of stone carving items, toy business & fast food business. The synthesis of the total attempt was to create adequate livelihood opportunity at the house hold level and ensure food security. The model has been so effective that it has been adopted by Syndicate Bank and Allahabad Bank, two of the leading banking partners with credible presence in the project area. This is evidence of spill over effect of piloting and demonstrating in order to network with PSUs [Source: Endline Evaluation Workshop, RGVN-Annual-Report-2012-13-Final-Draft, Narrative_Annual_report_of_Project-_JIVIKA_June_1, 2012-May_31, 2013, Workshop on Rickshaw puller interface, Flood & Phailin details].

There are some proposals which are in the pipeline with VattiKutti Foundation, India Foundation for Humanistic Development (IFHD) Vishakhapatnam Steel Plant, Bharat Rural Livelihoods Foundation (BRLF) and Invest India Micro Pension Services Private Limited (IIMP) [Source: 5c endline self-assessment sheet_management_India_RGVN, 5c endline self-assessment sheet_programme staff_India_RGVN].

RGVN initiated new programmes [14] due to a change in their strategic plan [17], a need for resource mobilization [18] and the formation of a Project Finance Committee (PFC)[19] [Source: Endline evaluation workshop, 5c endline self-assessment sheet_management_India_RGVN, Endline Evaluation Workshop]. These are further explained below.

- Change of strategic plan [17]

There was change of strategic plan to shift from microfinance to Sustainable Livelihood Enhancement and Enterprise Promotion due to the microfinance crisis [21] and consequently the failure of the microfinance project's implementation. The Microfinance crisis, the floods and the Phailin cyclone also caused donors to focus more on sustainable livelihoods [22] and mid-course corrective actions in order to keep the target group support afloat. Apart from changing their funding priorities, donors have also been revising their grant making policies [22]. More and more donors are funding agriculture based programs with a focus on improved livelihoods for the poor. Furthermore, The RGVN board too became cautious about recovery of loans and restricted the RGVN Bhubaneswar office from commercial borrowing [20]. The floods in 2011 and 2014 [23]and the cyclone Phailin in 2013 [24] worsened the situation in the organisation's

¹¹ The Development of women and children in Rural Areas or DWCRA is a government sponsored anti-poverty programme of the Ministry of Rural Development.

partner areas even further, which also triggered the involvement of RGVN in programmes that were more focused on sustainable livelihood enhancement [Source: Flood & Phailin details]. All these factors compelled the organization to change its strategy to sustainable livelihood enhancement by focusing on the core livelihood sub sectors like NTFP, agriculture and allied agriculture through the System of Rice Intensification (SRI) model, dairy, organic paddy cultivation, organic vegetable farming, handicraft, etc. [Source: Startegy_Minutes, Organic Agriculture, 5c endline self-assessment sheet_management_India_RGVN, 5c endline self-assessment sheet_programme staff_India_RGVN].

- Need for resource mobilization [18]

With the microfinance crisis the organization was already undergoing a rough patch which further worsened during 2011-12 period. The board's decision to restrict external commercial borrowing of funds [20], the effect of Phailin [24] and dwindling foreign funding [26] worsened the financial situation of RGVN. All these factors compelled the organization to think of diversifying their strategy for resource mobilization [Source: Endline Evaluation Workshop, 5c endline self-assessment sheet_management_India_RGVN].

- Formation of Project Finance Committee (PFC) [19]

RGVN used to work with the LAC (Local Area Committee), which has now been disbanded. To recover from the rough patch it was undergoing (including the floods [23], cyclone [24], microfinance crisis [21] and dwindling foreign funds [26]), internally RGVN has set up a Project Finance Committee comprising the Executive Director, Assistant Director, and programme staff. This is a body created to expedite the decision making process, monitor progress, and respond to proposals for funding [Source: RGVN-Annual-Report-2012-13-Final-Draft, PFC Minute, 5c endline self-assessment sheet_management_India_RGVN].

- CSR¹² eligibility certificate from TISS [16]

RGVN became a team member of the National CSR Hub Empanelment team of TISS. This certification made them eligible for receiving CSR funds for developmental activities. The empanelment process aims to provide CPSEs (Central Public Sector Enterprises) with a list of reliable and credible organisations as partners for CSR activities. The empanelment process is designed to serve the requirements of CPSEs. The National Corporate Social Responsibility (NCSR) Hub shall empanel those organisations that are people-centric, have experience and expertise in a specific field and have a planned approach to developmental activities with a specific focus on the welfare and rights of the vulnerable groups in society. This means all the Public Sector Companies of India may consider RGVN for implementation of big CSR projects [Source: Endline Evaluation Workshop, 5c endline self-assessment sheet_programme staff_India_RGVN, FINAL_EMPANELMENT TISS]. RGVN getting this certification [16] was triggered by the new CSR Bill [25], which got approved by the Parliament and is effective from April 2014. It has a very strong CSR Clause, which mandates companies with an average profit of INR 50 million in the last three years, to proactively design and undertake welfare and other developmental activities. This is seen as a great opportunity for RGVN as the corporate sector would be required to spend 2 % of their net profit for social development actions.

¹² The new Companies Act 2014, with a very strong CSR Clause, mandates companies with an average profit of INR 50 million in last three years, to proactively design and undertake welfare and other developmental activities.

Report CDI-15-021

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Achievement of MDGs and themes	X
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

Abstract

This report contains the evaluation of Samarthak Samiti's project "Mobilisation of Community to Strengthen MFP based Livelihoods of Tribal Women in South Rajasthan". It provides information on the measured impact of the project as well as details on its "efficiency". The findings are based on data collected in 2012 and in 2014. The main finding is that the project has some impact but this impact decreased over time. The project seems to be cost effective..

Introduction

This report examines the impact and the cost-effectiveness of a program that tries to empower the communities depending on minor forest produce (MFP) based products by focusing on capacity building and better service delivery through effective marketing of the forest produce collected by the communities. The project is conducted by Samarthak Samiti, a southern partner organization (SPO) of HIVOS. This program evaluation examines whether the project accomplished the main aims in terms of outputs and outcomes. The evaluation also contains a cost-effectiveness analysis.

The impact evaluation mainly focuses on the impact of the program on the livelihood of the minor forest producers (MFPs). The evaluation suggests that self-help groups (SHGs) have a positive influence on the livelihood of the MFPs. However, this effect seems too dissipate over the evaluation period. The impact of the program on the village level has been positive but decreases during the evaluation period till a level where no improvement can be seen anymore. Measuring the cost-effectiveness of the program is not obvious. However, taking into accounts the outputs delivered, costs seem reasonable.

The remainder of this report is as follows: the next section will give some background about Samarthak Samiti, MFP collectors and the local context. Section three gives details about the project, its budget, duration, objectives, outcomes as well as the theory of change. Section four gives a description of the sampling process together with some descriptive statistics. Section five describes the methodology together with its motivation and the outcome of the impact evaluation plus a cost-effectiveness analysis. A discussion is provided in section six. Section seven concludes.

Context

In Rajasthan (India) both forest areas and tribal population are concentrated in the southern and south-eastern parts of the state. The tribal communities constitute 12.56 per cent of the state population. These communities depend on minor forest produce. Studies have shown that 63-65 per cent of the total income of the tribal households comes from the forest.

The tribal live in extreme poverty with limited access to land, poor quality of cultivable land, and poor access to health service provisions, resulting in high incidence of communicable and non-communicable diseases. The reasons for persistent poverty are: too many intermediaries, lack of access to markets, value addition due to lack of processing facilities ,marketing, lack of information about grading, sorting, drying, lack of credit for taking up entrepreneurial activities, absence of collective arrangement for procurement. Furthermore, unscientific and unsustainable extractions of resources cause long term damage to the eco-system.

The fifth Schedule of the Constitution of India envisages notification of tribal-dominated areas as Scheduled Areas and the formation of a Tribal Advisory Council (TAC) at the State level. It provides for making regulations by the State Government for the Scheduled Areas having the force of law. It also allows the Union Government to give directions to a State regarding the administration of Scheduled Areas. These Schedules have had little impact on the ground.

In 1992, the 73rd amendment Act to the Constitution mandated that resources, responsibility and decision making be passed on from central government to the lowest unit of the governance, the Gram Sabha or the Village Assembly. Since the laws do not automatically cover the scheduled areas,

the Panchayat Extension to Scheduled Areas (PESA) Act was enacted on 24 December 1996 to enable Tribal Self Rule in these areas. The rationale behind the Act is to preserve the tribal population from exploitation with an active involvement of the Gram Sabha. It authorized the Gram Sabha and Panchayats, specifically on matters of enforcing prohibition of sale and consumption of intoxicant; ownership of minor forest produce; power to prevent alienation of land and restoration of unlawfully alienated land, management of village markets, control over money lending, etc. A limitation of the PESA law is that it is applicable only to those areas which are legally regarded as Scheduled Areas. A significant number of tribal living outside the scheduled areas are not covered by this legislation.

Moreover, Gram Sabhas need to implement PESA effectively, by giving control to the tribal to take care of their affairs almost autonomously. However, in reality other state legislatures and extraneous forces, such as forest department, subordinate them defeating the very purpose of PESA. The State governments have discovered a clever way to bypass PESA provisions to exploit the natural resources of the tribal areas: The parliament passed the PESA Act for rural areas, but a similar legislation for urban scheduled areas was never mooted. State governments are taking advantage of Parliament's lapse to give speedy clearances to mining and industries in tribal areas. Their modus operandi is simple: they upgrade rural panchayats in scheduled areas to urban panchayats to bypass PESA.

The MFPs collected by the tribal include many different stakeholders: tribal communities, the Rajasthan Tribal Area Development Co-operative Federation Ltd. (Rajas Sangh), the intermediary organizations created to facilitate the Rajas Sanghs-- Large Area Multipurpose Societies (LAMPS), the State Forest Department, the traders, the cooperatives comprising SHGs and other NGOs.

There are two different ministries in the Union Government, namely, the Ministry of Panchayati Raj and the Ministry of Tribal Affairs that have overlapping influence on implementation of PESA – and they virtually function in isolation. In the Tribal sub plan area, the Rajas Sangh was formed in 1976 and was given the monopoly rights for the collection and trading of the MFPs. The aim was to reduce the exploitation of the MFP collectors at the hands of the private traders through a price fixing mechanism. There is a significant price differential between the price of MFPs fixed by the Rajas Sangh and that from the open market i.e. traders. The Rajas Sangh has authorized agents called LAMPS. However the collection centres are not available in remote villages where the chances of getting MFPs are very high as they are closer to the forest. The traders here take the advantage; they can also react to the price fluctuations in the market to attract the MFPs collectors which cannot be done by the LAMPS. It was also reported by the MFP collector during our field visit that the LAMPS do not collect MFPs and collude with traders or not account the produce and sell it directly in the open market. It is usually found that the market rate is higher than the Rajas Sangh rate. Though Rajas Sangh provides incentives to LAMPS for collecting the MFPs (8 percent commission is given) but the profit margin are still higher claimed by the Samarthak Samiti to be higher in selling the produce in the open market. Samarthak Samiti, a registered federation of six cooperative society's claims to positively influence the price of Minor Forest Produce. It collects the MFPs from the groups (SHGs) and put pressure on the traders to increase the prices by offering higher price to the group collectors.

The current issues that the Minor Forest Producers are facing are the following:

High exploitation and poor regeneration-Due to unrestricted collection, overuse of Products, unscientific collection, and also rapid deforestation for non-forest use, the natural availability of MFP producing trees are less in number, and their regeneration in many forest areas has gone down.

Inadequate MFP baseline data and mapping, unclear demand supply scenario-For national level planning and management a reliable data base on MFP is required to determine the quantity available, collected, self- consumed, value added and traded, mature trees available and their production potential, per hector number of trees, etc. Since MFP collections are seasonal and may vary from year to year it is difficult to provide demand and supply data until a dedicated system prevails.

Poor attention to MFP conservation- In situ and ex situ conservation, identification of genotype and gene bank, application of biotechnology and genetic engineering need attention.

Absence of sustainable harvesting protocols- Sustainable harvesting protocols has not been developed for most MFPs and whatever protocols are available remain unpracticed in many cases.

Unorganized sector- Traditionally the entire MFP sector, particularly its collection, trade and local value addition are managed in an unsystematic and unorganized manner. Gram sabhas and Panchayats are still not in a position to handle the overall management of MFP.

Inadequate infrastructure, and post-harvesting facilities/skills- In most places in India neither the Forest Department, nor the procurement agencies, the Gram sabha/Panchayat and the institutions of primary collectors have proper storage facilities. Most MFPs are seasonal products. Moreover products that are perishable require immediate disposal in absence of appropriate storage facility. This means that the primary collector is compelled to sell at a low price.

Volatile market- MFP market is highly diverse, and fluctuates quite frequently. This discourages private entrepreneurship in the sector so far commercial farming is concerned. Primary collectors and producers get the least share from their hard earned product, so there is a need of Minimum Support Price (MSP) from the government side.

Adapting to Climate change- Change in temperature and rainfall pattern affects the MFP production- both qualitatively and quantitatively (for example, lac). This will affect the dependent economy of the local people.

Incompatible tax structure - The present tax structure for many MFP (tendu patta, lac, gum, mahua, medicinal plants, sal seeds, etc,) is not structured and each state follows separate tax structures.

Inadequate capacity and knowledge in MFP management-

Conventional forest management systems are unable to meet the requirement of complex challenges of the present era like biodiversity conservation and climate adaptation.

Poor progress in research & development: Some commercially important MFPs like mahua and tendu leaf have only one market use, which is why they are very much vulnerable to fluctuations in demand. There are many high volume MFPs that either remain unsold or sold at a meager price due to absence of wider marketable options.

Absence of complimentary mechanism for MFP crop failures: Periodic crop failure is a natural phenomenon for many MFPs, but climate change has increased the frequency. MFP crop failure or bad crop severely affects primitive tribal groups and hunter gatherers, but there is no policy or mechanism to provide some support in such cases to the critically dependents.

Underperformance of public sector procurement & trade agencies: TRIFED and state-level procurement & trade agencies have often underperformed in meeting their objectives partly because their structure is not much professionally and/or commercially viable, partly because they suffer from policy level setbacks, and partly because they have to face unwanted and informal political and other interventions.

Primary collectors losing interest in MFP collection: Uncertain market and reduced production followed by availability of more secured options like MGNREGS has reduced the interest of primary collectors (particularly males) in MFP collection in many areas.

Better opportunities in marketing through Minimum Support Price (MSP) ; mechanism for market intelligence and information system; efficient Certification system for improved trade; revolving fund for primary collectors and their institutions; value chain development by aggregation; primary processing, grading, branding and certification; eco- services of MFP such as Herbal ecotourism and local enterprise development; and encouraging corporate sector involvement- contract farming, infrastructure development, resource augmentation. Total budgeted amount: Rs.3000 crores.

Project Description

The Minor Forest Produce (MFP) collected by the tribal people includes many different stakeholders which are involved in the marketing of the MFP in some way or the other. These stakeholders are – tribal community themselves, the Rajasthan Tribal Area Development Co-operative Federation Ltd. (Rajas Sangh), the Rajas Sangh agents i.e Large Area Multipurpose Societies (LAMPS), the State Forest Department, the traders, the cooperatives (including Self Help Group i.e. SHGs) and other NGOs.

In the Tribal sub plan (refer to ‘type of area’) area, the Rajas Sangh was formed in 1976 and was given the monopoly rights for the collection and trade of the non- nationalized MFP. The aim was to reduce the exploitation of the MFP collectors at the hands of the private traders through a price fixing mechanism. There is a significant price differential between the price of MFP fixed by the Rajas Sangh and that from the open market i.e. traders. The Rajas Sangh has authorized agents called LAMPS. However the collection centres are not available in remote villages where the chances of getting MFP are very high as they are closer to the forest. The traders here take the advantage; they can also react to the price fluctuations in the market to attract the MFP collectors which cannot be done by the LAMPS. It was also reported by the MFP collector during our field visit that the LAMPS do not collect MFP and collude with traders or not account the produce and sell it directly in the open market. It is usually found that market rate is higher than the Rajas Sangh rate. Though Rajas Sangh provides incentives to LAMPS for collecting the MFP (8 percent commission is given) but the profit margin are still higher claimed by the Samarthak Samiti to be higher in selling the produce in the open market. Samarthak Samiti, a registered federation of six cooperative society’s claims to positively influence the price of Minor Forest Produce. It collects the MFP from the groups (SHGs) and put pressure on the traders to increase the prices by offering higher price to the group collectors.

The purpose of this project is to enhance access and control over livelihood resources of forest dependent communities in 5 districts and 10 blocks of Southern Rajasthan by 2013. The activities would primarily seek to strengthen the existing cooperatives at the state level, build their capacities for collecting, processing and marketing of 5 forest products. And lobby their interest with the government. The basic idea is to break the monopoly of forest contractors. This will improve the prices of the forest produce, and thus their income increase. The project started in 01-04-2009, as a follow-up of a project that was financed under MFS I that started in 20-11-2006. The project originally ran till 31-03-2013 however, a budget-neutral extension was agreed, making the project run one year longer, till 31-3-2014. The total budget of the project was 441,108 Euro, from which HIVOS finances 150,850 Euro where 87,929 Euro falls under MFS I (2009 and 2010) and 62,921 Euro falls under MFS II (2011 and 2012).

In order to achieve the above mentioned goal the project 6 staff members¹, of which two are women, are financed and a financial management training from HIVOS is organized. Moreover, Minor Forest Producer Groups were formed and activities organized, which include: training, exposure visits, production of IEC materials, linkages with traders and forest department, propagation of saplings, providing business development services, networking and organizing pressure groups. A stylized result chain, which shows the manner in which Samarthak Samiti expected to accomplish its objectives, is provided below.

Stylized results chain:

Input:

Financial and technical support of HIVOS

Activities:

Minor Forest Producer Groups are formed and activities organized, which include: training, exposure visits, production of IEC materials, linkages with traders and forest department, propagation of saplings, providing business development services, networking and organizing pressure groups

Outputs:

- 70 Minor Forest Producer Groups (20 new) with 1600 members will have been established and federated at the state level by 2013
- establishing and strengthening 9 cooperatives (1 new).
- A centralized processing centre would have been set up catering to the 9 cooperatives (and can support the members of the groups).
- A minor forest produce development fund (MDF) (which has already been created) to support small financial needs of the groups to carry out the activity of the MFPs collection and marketing

Outcomes:

¹ The "Call" document suggests that there are 8 full time staff members.

- Outcome 1: Enhanced control over livelihoods of Forest Dependent Communities in 10 blocks in 5 districts of Southern Rajasthan by 2013.
- Outcome 2: Community organized for gaining rights and control over MFP.
- Outcome 3: Biodiversity maintained and sustained (Note this has not been evaluated by us since there was no baseline (some self-evaluation questions are asked)).
- Outcome 4: Knowledge and skill of forest dependent community & organisations built for community controlled processing and marketing.
- Outcome 5: Favorable policy environment created in support of Forest Dependent Communities.

Indicators:

This evaluation will mainly focus on Outcome 1. The major outcome indicators for this outcome are:

Major outcome indicators:

Food security: until what month is food available

Monthly per capita income

Yield/hectare of selected crops

Specific indicators:

Prices of honey, ratanjot, punwar, sitaphal, mahua, and tendupatta.

Quantities of honey, ratanjot, punwar, sitaphal, mahua, and tendupatta.

Some indicators on the demand side (traders) are obtained but the sample size is below 20.

Data and Sampling

The data that is used for this evaluation is collected from annual review reports and several types of surveys. We have conducted surveys in the Tribal Sub Plan (TSP) areas where all households have access and rights for collecting the Minor Forest Produce from the forest. Within this area we have conducted surveys on 3 stakeholders: Self Help Group members, Traders, and Village heads or Village representatives.

We have identified the Kotra block from where we have taken our sample. The block was chosen based on its forest cover. It contributes to the community livelihoods to a considerable extent. The block was also selected since it has the maximum variety of Minor Forest Produce. We had identified the most common Minor Forest Produce i.e. Honey, Ratanjot, Punwar, Sitaphal, Mahua, Tendupatta & others. We sampled from villages that are close to the main road. Within these villages the selection was random.

We have identified tree types of groups to identify the impact of the SHGs. First we selected a group that contains members of the Samarthak Samiti (SS) SHGs (T1: proposed sample 150, actual sample 145). The second group is our first control group and exists of households who are not members of

Samarthak Samiti but live in the same village as where Samarthak Samiti operates (C1: proposed sample 150, actual sample 157). This control group helps us in identifying possible spillover effects of the program. The third group also contains households who are not members of Samarthak Samiti, but these households live in villages where Samarthak Samiti does not operate (C2: proposed sample 125, actual sample 250). This group allows us to identify the effect of all operations of Samarthak Samiti.

We assumed that all members of a SHG would be active in collecting MFP. However, it turned out that some members of SHGs did not collect MFP when the agricultural produce was good. It also happened that the MFP collected is small, e.g. because of lack of rain, or due to personal consumption. In these cases no prices were reported. Sometimes MFP happened to be reported as home-grown, and thus not as MFP.

Secondly traders of Minor Forest Produce are surveyed. The objective of the trader's survey was to see whether there is MFP price variation across the value chain of the traders and why. It may also give extra information about whether Samarthak Samiti has been able to influence the MFP prices. This is because Samarthak Samiti formed the SHGs groups and these SHG groups collect the produce from the collectors and aim at giving better price returns as compared to the prevailing Rajas Sangh rate.

Finally, a survey is held among village heads. The MFP commercialization provides an effective answer to the problem of improving local livelihoods. At the same time, achieving species and ecosystem conservation is also important. The growing body of scientific research suggests that MFPs can help communities meet their needs without jeopardizing forest ecosystems. To capture the impact of MFP collection on the economic, social and ecological value, we have conducted the village head survey regarding the Natural Resource Management.

Two rounds of surveying have taken place. The first round of the survey took place in the end of 2012. The follow up was done in the second half of 2014. It should be noticed that the baseline survey is not a real baseline for the survey did not take place before the interventions started. The fact that a pre-intervention survey is lacking complicates the impact analysis considerably, as will be further explained below. We were able to survey the same people in the baseline and the follow up survey. Thus, our analysis does not suffer from attrition problems. Yet, it appeared that many members of SHGs organized by Samarthak Samiti left these SHGs. As will be explained below, we were able to use this information to improve the impact analysis.

Some descriptive statistics on key variables are given in Table 1. Table A1 in the appendix gives an overview of control variables that are used.

Table 1: Descriptive statistics of outcomes

Analysis and Results

This section analyzes the impact of the program of Smarthak Samiti. Firstly some outcomes that can be observed directly are compared with the planned outcomes. Secondly, the methodology that is applied in order to evaluate the impact is discussed, together with the tradeoffs and reasons why this particular setup has been chosen. Subsequently the results of this examination are analyzed. Finally this section discusses the “cost-effectiveness” of the project.

Outputs and Outcomes

The program has many outcomes and outcome indicators, and most of the goals for these indicators are met. Therefore this section only focusses on the outcomes that directly involve the beneficiaries and/or their livelihood, which are listed in Table 2. A complete overview of all the indicators is given in Table A2 in the appendix. From Table 2 it is clear that the number of members is higher than the set goal. However, there is a decrease in the number of members over time. This is not necessarily critical as members may leave the program if all aims have been reached. Moreover, the decrease in the number of members in the entire project is less severe than the number of members who have left the project in our sample. The percentage of female members has not met its target. However, in

all fairness this may be explained by the larger member base of Samarthak Samiti. The number of women in leadership positions is difficult to examine precisely since information about all leadership positions was not available to us. A figure of about 22% is given (see Table A2), but this number could not be verified. However, on the overall cooperative level 45 percent of the leading positions are occupied by women. Yet, there are quite some differences between the number of women in the council between these cooperatives. There are cooperatives that do not have female members in their council at all.

An extensive analysis of the impact of the project on price changes and income is given in the impact section below.

Table 2: Output and outcome goals and achievements

Output/Outcome	Goal	Achieved
Number of members	2000	3856-3492 ¹⁾
Percentage female members	70 %	2012: 2390/3856 2013: 2207/3492 So, about 65 % are females
Women on leadership positions	30%	22% up to about 45% ²⁾
Increased price realization in case of at least 5 MFP products through value addition and quality improvement.	5	For 2 to 3 products a significant increase in price has been found ³⁾
An increase in income from 3 MFP products by increasing holding capacity by 2013.	At least 10%	⁴⁾ An in-depth analysis is given below
Sources: Country specific information – India, Mobilization of Community to strengthen MFP based Livelihood of Tribal (2012-2013) and (2013-2014), and COOP details and EC list. Own calculations. <ol style="list-style-type: none"> 1) 3856 in December 2012 (before the project ended) and 3492 at December 2013 after the project ended. 2) The exact details on the number of female leaders could not be found. Yet, the number of females in the cooperative council is about 45 %. So, 22 percent may be correct. However, there is quite a large difference between the several cooperatives, the percentage runs from 0 to 100. 3) Our result is based on the prices that households have received and differs from the result given in Table A2, which reports the findings of Samarthak Samiti. It is not clear how they have calculated their result. An in-depth analysis is given below. 4) An in-depth analysis is given below. 		

Methodology

The main challenge of every impact evaluation is to determine to what extent certain changes can be attributed to the intervention. An impact evaluation tries to disentangle impacts of the project from impacts due to other causes, which is not an easy task. Impact evaluations also suffer from self-selection and program placement biases. The preferred approach to measure impact is to conduct a randomized controlled trial as this automatically generates comparable control and treatment groups. However, RCTs are often not possible in practice, as is the case for this project.

The initial plan to measure impact for this program was to conduct a so-called double difference (DD) methodology. The DD approach does not measure the average impact of the project as such for a pre-intervention baseline is lacking. However, since we have observed that people have selected themselves out of the program we had the opportunity to identify the effect of the program by applying a fixed effects estimator.

Our approach works as follows. We estimate the following equation with fixed effects.

$$Y_{ijt} = \alpha_i + \beta_1 Post_t + \beta_2 Post_t D_j^T + \beta_3 D_j^T + \gamma X_{ijt} + \varepsilon_{ijt} \quad (1)$$

Where Y_{ijt} denotes an outcome variable for respondent i in group j at time t , α_i is the fixed effect, $Post_t$ is a binary variable that takes the value one if the observation corresponds to the second time period, D_j^T is a binary variable equal to one if the respondent belonged to the treatment group. X is a vector of controls. ε_{ijt} denotes the error term. β_2 in (1) is the estimate of the impact of one extra time period in the intervention on outcome Y .² β_3 measures the impact of the program.

In order to improve matching between controls and treatments, before applying the fixed effects estimation, we use PSM to match treatments and controls during the baseline. More specifically, we run a logit regression using baseline data, and determine probabilities of “being in the treatment or the control group”. Based on this analysis we are able to determine a so-called common space, which defines an area within which controls and treatments do not differ too much. We subsequently deleted all observations outside the common space, and applied the fixed effects analysis only on observations within the common space.

Since the program has also aspects that work on the village level we have compared the treated villages with the control villages. If we assume that the villages in which the program operates are not correlated with some unobservable characteristics, we can estimate a Mundlack model, which is a kind of hybrid fixed and random effects model. The assumption of not correlated effects with unobservable characteristics may be quite unrealistic at the individual level, yet, on the village level this may not be implausible. Under the Mundlack specification we can identify the effect of the program on the village level. More specifically we have estimated Equation (1) again but now α_i is the random effect, $Post_t$ is a binary variable that takes the value one if the observation corresponds to the second time period, D_j^T is a variable equal to one if the respondent belonged to a treatment village.³ X is a vector of controls. ε_{ijt} denotes the error term. β_2 in (1) is the estimate of the impact of one extra time period in the intervention village on outcome Y .⁴ β_3 measures the impact of the program on the village level. Also for this case we have improved the matching as discussed above.

Impact

One of the main drivers of impact of the program is a change in price of the minor forest produce. Table 3 gives an overview of the prices in the treatment and in the control villages for the first round, the second round, and the combination of both rounds. These prices are based on the reported value and quantities of the last year per product by the surveyed households. Since not all respondents collected a certain product or could recall the prices and or quantities, the number of observations runs from as low as 2 up to 193 per group. Some members of a SHG do not collect MFP because the agriculture produce was good. Or MFP was so small, e.g. because of lack of rain, such that all produce was used for personal consumption and thus no prices were reported. Another issue is that sometimes MFP is reported as home-grown and thus not reported as MFP. This of course has its

² This time period is measured by the time between the baseline and follow-up survey.

³ The subtle difference here is the difference of belonging to the treatment group or the treatment village.

⁴ This time period is measured by the time between the baseline and follow-up survey.

influence on the power. From Table 3 it is clear that for all products but tendupatta in the second round the price of the MFP is higher in the treatment village than in the control village. However, most price increases are not statistically significant. Only for Ratanjot there is a clear and significant price increase. For sitaphal only in the first round a significant increase is found. For punwar a significant price increase at the ten percent level is found only if both rounds are combined. Note that the sample may be too small to be able to detect small impacts of the project. In other words, the analysis may suffer from too low a power. For completeness we have checked if the effects on prices were driven by quantity effects. It appeared that there are no significant changes in the quantities (see Table A3 in the appendix). This implies that there is some indication that the project has led to a better price of the MFP for the collectors. From our survey among the 20 traders we have identified that almost all traders have heard about Samarthak Samiti. When asked if Samarthak Samiti has been able to influence the price, most traders refuse to answer. From the eight traders who do answer half of them indicate that Samarthak Samiti indeed affects the prices.

For determining the impact of the program on livelihood we firstly have examined the impact of the SHGs on total consumption. Some households indicated that they were no longer a member of a SHG in the second period. Therefore, the treatment variable is no longer completely time unvarying which helps us to identify the effect of the treatment under fixed effects. The results of this analysis are given in Table 4. Panel A in Table 4 shows the results based on the entire sample. As the entire sample also includes a group of families that live in the same village as the families who are members of SHGs, the analysis may be troubled by spillovers. Therefore, in Panel B of Table 4 the spillover group is excluded. From Panel A we can observe that being a member has a positive effect on consumption. Yet, this effect is only significant at the ten percent level. The effect is consistent in all the specification though. Interestingly, it appears that over the entire sample people consumed less in the second period compared to the first period. This effect may be even somewhat stronger for the treated members. However, this effect is not statistically significant. If all the different effects are added with each other, it looks like that the families in the treatment group and stayed in the treatment group are at about the same level of consumption as they initially where, while the families in the control group saw their consumption decrease lower. People who have selected themselves out of the program have benefitted most. With the possible spillover group excluded from the sample as is done in Panel B, we can observe that being a member of a SHG has a strongly significant positive effect on consumption. However, this effect has significantly decreased in the period between our two surveys. These results indeed suggest the existence of spillover effects.

The effect of the Samarthak Samiti's program on the village level is explored more deeply. If we assume that the villages in which the program operates are not correlated with some unobservable characteristics, we can estimate a Mundlack model, which is a kind of hybrid fixed and random effects model. The assumption of not correlated effects with unobservable characteristics may be quite unrealistic at the individual level, yet, on the village level this may not be implausible. Under the Mundlack specification we can identify the effect of the program on the village level. The results of this analysis are given in Tabel 5. From Table 5 we can observe that the program initially had a positive effect on total consumption where significance runs from one to five percent. However, over the time period the project stopped having an impact as the Treated Village interacted with time cancels out the initial treated village effect. The reason for the deteriorating impact of the program over time is not clear. Moreover, it seems as if the total consumption for the entire sample became significantly lower over the period.

Table 3: Prices of MFP from producers

Panel A: First round		Treatment	Control	p	N	N_T	N_C
Total	Village	Village					
Price of Honey	196.6667	227.1429	90	0.30	9	7	2

Price of Mahua	16.35043	17.10185	7.333333	0.18	39	36	3
Price of Tendupatta	30.2836	33.18095	29.26952	0.41	27	7	20

In addition, we examined the impact of the project on food security. Despite the decrease in total consumption, all families (but one or two) indicated that food security was not an issue. This holds for the treatment as well as for the control group. The results are given in Table A4 in the appendix.

As the project also deals with biodiversity we have examined if this aspect of the project would have any negative (or possible positive) effects on the yield and profits from agriculture. We have not found any of such effect (The results are in Tables A5 and A6 in the appendix).

With respect to the environment we have asked several village heads about regulation regarding the use of the forest. This regulation has increased from five out of nine to seven out of nine in the period of the evaluation. They also indicate that the regulation is followed. They are also asked about the biodiversity in their village. The results are given in Table A7. But no significant changes over time are found.

Cost-effectiveness

In order to determine the cost-effectiveness of a project one needs a benchmark project that is cost-effective and uses about the same inputs as the project under evaluation. One can compare the outputs of both projects in order to determine whether the assessed project is cost-effective. Since such a benchmark is lacking the determination of cost-effectiveness is problematic. Therefore the focus will be on the price per output calculated from the amount of inputs delivered for the given budget of the project and these are compared with prices per input of similar projects found in the literature on forest produce.

Table 6: Cost of organize and strengthen MFP groups

	2012-2013	2013-2014	2012-2014
Organize/Strengthen MFP collectors (Women and Men) into groups	307300 INR 19646.49 Int\$	417310 INR 25715.55 Int\$	724610 INR 45362.04 Int\$
Cost per Group	165.10 Int\$	216.10 Int\$	381.19 Int\$
Business sustainability support	1329620 INR 85006.07 Int\$	730996 INR 45045.57 Int\$	2060616 INR 130051.64 Int\$
Cost per Group	714.34 Int\$	378.53 Int\$	1092.87 Int\$
Overall cost per group	879.43 Int\$	594.63 Int\$	1474.07 Int\$

Sources: FR – Hivos 2013-14.pdf and Mobilization of Community to Strengthen MFP based Livelihoods of Tribal Women in Southern Rajasthan.
The split between Organize and Strengthen and business sustainability is a bit ad hoc and not entirely consistent between the 2012-2013 and 2013-2014 reports.
Conversion is based on rates of 2012 and 2013 respectively based on the methodology outlined in in AIID (2014).

Table 6 gives the cost per group. If this is compared with the 1,670.00 Int\$ of Isern (2007 via AIID 2014) the project can run for about eight years if these costs are met. However, the project also includes business sustainability support, which also includes cost for the processing units, and forestry based orchards, which deals more with the biodiversity outcome of the program, the costs increase to 1474.07 Int\$ for two years. This is still less than the number given by Isern (2007) but it is only for two years. Given these two extremes we can conclude that the project is reasonably efficient from a cost per group perspective.

Discussion

A remarkable indication from the analysis is that the overall livelihood in the area seems to decrease for the regressions show a negative time trend. Fortunately, SHG's seem to improve on this outcome. Yet, also for members of SHGs livelihoods decreased during the evaluation period. Given the probable change in the environment where Samarthak Samiti operates, the weakening of the effect of the program may be caused by the lack of Samarthak Samiti to change its overall capability to act and commit, one of the findings in the capacity development part of the evaluation of Samarthak Samiti (see the capacity development evaluation report of Samarthak Samiti for further details). However, one should note that none of the respondents in the treatment group and only a few in the control groups have indicated that food security was an issue.

A positive effect of the program is that it probably has positive spillover effects on non-members. While these spillovers are positive the program faces a decline in the total number of members, about ten percent in the last year given information provided by Samathak Samiti and around half in our sample. In all fairness we have to say that the number of members is much higher than planned.

This impact evaluation has not focused much on the bio diversity aspect of the program since we lack baseline information on bio diversity. However, in the village heads survey we did not find any evidence for a deterioration of bio diversity. Yet, it remains unclear to what extent this can be attributed to the project.

As far as we could examine the program achieved most of its objectives and we even find that the program has broken (part of) the monopoly power of the traders. Breaking the monopoly power of the traders may be of great importance as Das (1996) writes: "Monopolistic trade policies are the surest way to kill initiative and the market, and deny justice to the [minor forest] producers". Yet, as already mentioned, dynamics seem to be quite important as effects have changed over the period of two years a lot. Because of these dynamics, this evaluation cannot address questions like should the project be continued or if similar projects should be started? In order to answer these questions clearly more than two points in time are necessary. Therefore, if this project is continued, we urge for the inclusion of extra survey rounds as well.

Conclusion

Given the above findings of the impact evaluation the following scores are given to the program:

Table 7: Scoring the program

Statement:	Score:
On a scale of 1 to 10, with 1 being “not at all” and 10 being “completely”	
The project was well designed	8
The project was implemented as designed	10
The project reached all its objectives	6
The observed results are attributable to the project interventions	6
The observed results are relevant to the project beneficiaries	8
The project was implemented efficiently	6

Scores are on a scale of 1 to 10, with 1 being “not at all” and 10 being “completely”

Note that the score on “The observed results are attributable to the project interventions” reflects how well we could evaluate the program. Therefore, it is not a score of the program. The objectives used to score on this aspect are given in the country summary.

Table A2: Outcomes

Objectives as in Contract till 2013	Outcome - Indicator as on December 2012	Outcome - Indicator as on December 2013
Enhancing control over livelihoods of Forest Dependent communities in 10 blocks in five districts of southern Rajasthan by 2013		
An apex body to secure the rights of forest Dependent Communities will have been created by 2013	An apex body to secure the rights of forest Dependent Communities have been created as a Samarthak Producers Company Ltd. Udaipur	An apex body to secure the rights of forest Dependent Communities have been created as a Samarthak Producers Company Ltd. Udaipur
At least 70% of the projected 2000 members will be women and at least 30% women will be at leadership positions	By the March 2012 the network has a total of 3856 members with 2390-as women members	By the March 2012 the network has a total of 3492 members with 2207as women members
Out of the cooperatives at least 1 will have developed its business plan and 1 cooperative will have established a MFP processing centre in the region	Kotra Cooperative have developed capacities to prepare annual Business Plan and Kotra cooperative have established a MFP processing centre in the region	Kotra Cooperative have developed capacities to prepare annual Business Plan and Kotra cooperative have established a MFP processing centre in the region
At least 2 policy changes favoring the MFP collecting community will have been made by end of 2013	New forest rights act centre sub rules will have positive effect for MFPs collectors of the area Making of the PESA sub rules in Rajasthan statae SS was a part of this during drafting and formation by Astha and its TRRU, and submitted to state for adopt this.	New forest rights act centre sub rules will have positive effect for MFPs collectors of the area Making of the PESA sub rules in Rajasthan state SS was a part of this during drafting and formation by Astha and its TRRU, and submitted to state for adopt this.
At least in 6 blocks the forest department will have propagated MFP saplings in the forest area.	Forest Department started to propagation of economic MFPs in the area as they are making nurseries and providing saplings of the most economic plants	Forest Department started to propagation of economic MFPs in the area as they are making nurseries and providing saplings of the most economic plants
Out of the nine at least 2 cooperatives will have started generating its own local resources towards sustainability	Kotra and Aburoad coopeartives are using there own resources and are in process of sustainability	Kotra and Aburoad coopeartives are using there own resources and are in process of sustainability
Increased price realization in case of at least 5 MFP products through	Honey, Jamun, Amla, Sitafal, Ratanjote are the product wich are	Honey, Jamun, Amla, Sitafal, Ratanjote and Wax are the product

value addition and quality improvement	getting increased price by value addition and quality is improved	wich are getting increased price by value addition and quality is improved
At least 10% increase in income from 3 MFP products by increasing holding capacity by 2013.	By holding the produce at local level price is increased of Punwad by 30%, Amla by 40%, and Mahuwa flower by 50 %. Moong and Urad are also increased rate by 10 -15 % after holding	By holding the produce at local level price is increased of Punwad by 30%, Amla by 40%, and Mahuwa flower by 50 %. Moong and Urad are also increased rate by 10 -15 % after holding
Community organized for gaining rights and control over MFP		
70 groups (20 New) and 9 cooperatives (1 new) with 1600 members (1000 women) will have been established and federated at the state level by 2013	119 Womens groups are formed and 9 coopearives (2) un-regeisterd are formed with 3856 memebers including 2390 womens	119 Womens groups are formed and 9 coopearives (2) un-regeisterd are formed with 3492 memebers including 2207 womens
At least 30% of the women members will have developed skills for leadership positions	Total 2390 womens out of the total 3856 memebers are 61 %..of the totalmembership. 520 womens members are comes in as leadership position of the grouas and cooperatives are 22%	Total 2207 womens out of the total 3492 memebers are 61 %..of the totalmembership. 520 womens members are comes in as leadership position of the grouas and cooperatives are 22%
Biodiversity maintained and sustained		
Situation papers and an action plan evolved for the conservation of biodiversity	Situation papers and an action plan evolved for the conservation of biodiversity	Situation papers and an action plan evolved for the conservation of biodiversity
At least 5 villages in each block will have MFP saplings planned on private and common lands	In Dhariyawad, Kotra, and Goguda .blocks MFPs saplings are planted in 10 villages.	In Dhariyawad, Kotra, and Goguda blocks MFPs saplings are planted in 20 villages.
At least 80 (50) new families will have started farming compost and organic farming	3 varmi compost bed are made during the year as a extension of the unit resulting total of the 90 varmi composed bed in area.	5 groups have started to make Bio pesticide using local resource and started to use it at farne level. Total 90 varmi compost bed were made during the project with extension of the beds.
Stakeholders including forest department sensitized on the need to conserve bio-diversity	Forest department is in link with samarthak samiti and are involve us in there programe and activity in refrance to the Bio-divercity as	Forest department is in link with samarthak samiti and are involve us in there programe and activity in refrance to the Bio-divercity as

	they invite us in every programe of the conservation organised by them.	they invite us in every programe of the conservation organised by them.
Knowledge and skill of forest department community & organization built for community controlled processing and marketing		
At least one cooperative out of nine will have an established and functioning, processing centre.	One cooperative Kotra have a small level processing center at Devla for processing of Honey	One cooperative Kotra have a small level processing center at Devla for processing of Honey
A revolving fund use strategy will have been developed for better management of MDF fund	Revolving fund management poloicy has been developed and is using for the management at the fedreation level	Revolving fund management poloicy has been developed and is using for the management at the fedreation level
2 MFP products will have been certified by concerned authorities and marketed by the cooperatives	Food Licence has been issued in name of the producers company for producing Honey and Ark in area	Food Licence has been issued in name of the Samarthak Producers Company for producing Honey and Ark and Saharbat in area.
Community Capacitated to improve MFP collection and storage methods	Community started to value addistion and storage of the MFPs like Ratnjote, Punwad, Palash, MFPs–Honey , jamun and Sitafal collection work is improve as Safe Harvest	Community started to value addistion and storage of the MFPs like Ratnjote, Punwad, Palash, Mahuwa, MFPs–Honey , jamun and Sitafal collection work is improve using Safe Harvest Practice.
Linkages established with traders and financial institutions	For MFPs like last forest company at Tamilnadu and UTMT at Mumbai. Tendupatta market link with trader at Hedrabad	For MFPs like last forest company at Tamilnadu and UTMT at Mumbai. And few small out lets at varios citi in Mharastar and Gujrat. The Tendupatta market link with trader at Hedrabad is regular .
Favourable policy environment created in support of forest Dependent communities		
Forest dependent communities and local panchayats members sensitized and aware of forest act, PESA, TSR, transit permit, reservation on tendering and rate fixing etc.	Forest dependent communities and local panchayats members sensitized and aware of forest act, PESA, TSR, transit permit, reservation on tendering and rate fixing etc.	Forest dependent communities and local panchayats members sensitized and aware of forest act, PESA, TSR, transit permit, reservation on tendering and rate fixing etc.
Strong organization for forest dependent communities emerges as pressure groups for lobbying government, forest department	As the most of the lobbying work is done by SS is done in colobration with Astha and in south Rajasthan most of the issue releted to tribes are deal by the TRRU (Tribal Rights	As the most of the lobbying work is done by SS is done in colobration with Astha and in south Rajasthan most of the issue releted to tribes are deal by the TRRU (Tribal Rights

A strong network of organization in place to lobby for policy changes.	Resource Unit) and Jungal Jameen Jan andolan is the leading organisation workin for the tribal rights. SS is the involve in this since a long time .	Resource Unit) and Jungal Jameen Jan andolan is the leading organisation workin for the tribal rights. SS is the involve in this since a long time .
Improved management efficiency at Samarthak Samiti		
Result Based Monitoring system put in place	Overall monitoring system is developed and monitoring on RBM process is planned under various projects	Overall monitoring system is developed and monitoring on RBM process is planned under various projects
In house gender expertise developed	SS Members would be provided with gender sensitization processes	SS Members would be provided with gender sensitization processes
HRD policy put in place	HRD aspects are started to be followed	HRD aspects are started to be followed
Sustainability Plan developed	Planning exercise with member cooperatives	Planning exercise with member cooperatives members

Kusters, C., Mohapatra, B.P., Sethi, S., Buizer, N.N., Das, A., Bhatra, R. W., Sen, P., 2015. *Endline report – India, Samarthak Samiti. MFS II country evaluations; Capacity of Southern Partner Organisations (5C) component*. Centre for Development Innovation, Wageningen University & Research centre. Report CDI-15-014. Wageningen.

This report presents the findings of the endline of the evaluation of the organisational capacity component of the MFS II country evaluations. The focus of this report is India, Samarthak Samiti. The format is based on the requirements by the synthesis team and NWO/WOTRO. The endline was carried out in 2014. The baseline was carried out in 2012.

Key words: 5C (five core capabilities); attribution; baseline; causal map; change; CFA (Co-financing Organisation) endline; organisational capacity development; SPO (Southern Partner Organisation).

Acknowledgements

We are grateful to all the people that have contributed to this report. We particularly would like to thank the Southern Partner Organisation Samarthak Samiti (SS) and the Co-Financing Agency Hivos for their endless patience and support during this challenging task of collecting the endline data. We hope that this endline report will provide useful insights to Samarthak Samiti, Hivos, the synthesis team, IOB and NWO/Wotro.

The India 5C evaluation team

List of abbreviations and acronyms

Causal map	Map with cause-effect relationships. See also 'detailed causal map'.
Causal mechanisms	The combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome
CBO	Community Based Organisation
CCD	Covenant Centre for Development
CDI	Centre for Development Innovation, Wageningen University & Research centre
CEE-UNDP	Centre for Environment Education of the United Nations Development Programme
CFA	Co-Financing Agency
CPR	Common Property Resource
CSR	Corporate Social Responsibility
Detailed causal map	Also 'model of change'. the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change. In the 5C evaluation identified key organisational capacity changes and underlying reasons for change (causal mechanisms) are traced through process tracing (for attribution question).
FCRA	Foreign Contribution Regulation Act
FRA	Forest Rights Act Forest Rights Act
General causal map	Causal map with key organisational capacity changes and underlying reasons for change (causal mechanisms), based on SPO perception.
HR	Human Resources
IDF	India Development Foundation
LAMPS	Large Area Multipurpose Societies
M&E	Monitoring and Evaluation
MDF	MFP development Fund
MFP	Minor Forest Produce
MFS	Dutch co-financing system
MGNREGA	Mahatma Gandhi National Rural Employment Guarantee Act
MIS	Management Information System
MSP	Minimum Support Price
NABARD	National Bank for Agriculture and Rural Development
NGO	Non-Governmental Organisation
NPMI	Non-Pesticide Members Initiative
NRLM	National Rural Livelihood Mission
NSTFDC	National Scheduled Tribal Finance and Development Corporation
NTFP	Non-Timber Forest Produce
OD	Organisational Development
PESA	Panchayat Extension to Scheduled Areas
PME	Planning, Monitoring and Evaluation
Process tracing	Theory-based approach to trace causal mechanisms
ProCIF	Producer Entrepreneurship Catalyst & Incubation Facility
SBI	State Bank of India
SDTT	Sir Dorabji Tata Trust
SFAC	Small Farmers' Agribusiness Consortium
SHG	Self-Help Group
SIDBI	Small Industries Development Bank of India

SPO	Southern Partner Organisation
SPWD	Society for Promotion of Wasteland Development
SRTT	Sir Ratan Tata Trust
SS	Samarthak Samiti
ST	Scheduled Tribes
ToC	Theory of Change
TRIFED	Tribal Cooperative Marketing Development Federation of India
TSP	Tribal Sub Plan
TSR	Tribal Self-Rule
Wageningen UR	Wageningen University & Research centre
WFI	Wells for India
5 C	Capacity development model which focuses on 5 core capabilities

1 Introduction & summary

1.1 Purpose and outline of the report

The Netherlands has a long tradition of public support for civil bi-lateral development cooperation, going back to the 1960s. The Co-Financing System (*Medefinancieringsstelsel*, or 'MFS') is its most recent expression. MFS II is the 2011-2015 grant framework for Co-Financing Agencies (CFAs), which is directed at achieving a sustainable reduction in poverty. A total of 20 consortia of Dutch CFAs have been awarded €1.9 billion in MFS II grants by the Dutch Ministry of Foreign Affairs (MoFA).

The overall aim of MFS II is to help strengthen civil society in the South as a building block for structural poverty reduction. CFAs receiving MFS II funding work through strategic partnerships with Southern Partner Organisations.

The MFS II framework stipulates that each consortium is required to carry out independent external evaluations to be able to make valid, evaluative statements about the effective use of the available funding. On behalf of Dutch consortia receiving MFS II funding, NWO-WOTRO has issued three calls for proposals. Call deals with joint MFS II evaluations of development interventions at country level. Evaluations must comprise a baseline assessment in 2012 and a follow-up assessment in 2014 and should be arranged according to three categories of priority result areas as defined by MoFA:

Achievement of Millennium Development Goals (MDGs) & themes;

Capacity development of Southern partner organisations (SPO) (5 c study);

Efforts to strengthen civil society.

This report focuses on the assessment of capacity development of southern partner organisations. This evaluation of the organisational capacity development of the SPOs is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

The purpose of this report is to provide endline information on one of the SPOs involved in the evaluation: Samarthak Samiti in India. The baseline report is described in a separate document.

Chapter 2 describes general information about the Southern Partner Organisation (SPO). Here you can find general information about the SPO, the context in which the SPO operates, contracting details and background to the SPO. In chapter 3 a brief overview of the methodological approach is described. You can find a more detailed description of the methodological approach in appendix 1. Chapter 4 describes the results of the 5c endline study. It provides an overview of capacity development interventions of the SPO that have been supported by MFS II. It also describes what changes in organisational capacity have taken place since the baseline and why (evaluation question is 1 and 4). This is described as a summary of the indicators per capability as well as a general causal map that provides an overview of the key organisational capacity changes since the baseline, as experienced by the SPO. The complete overview of descriptions per indicator, and how these have changed since the baseline is described in appendix 3. The complete visual and narrative for the key organisational capacity changes that have taken place since the baseline according to the SPO staff present at the endline workshop is presented in appendix 4.

Chapter 5 presents a discussion on the findings and methodology and a conclusion on the different evaluation questions.

The overall methodology for the endline study of capacity of southern partner organisations is coordinated between the 8 countries: Bangladesh (Centre for Development Studies, University of Bath; INTRAC); DRC (Disaster Studies, Wageningen UR); Ethiopia (CDI, Wageningen UR); India (CDI, Wageningen UR); Indonesia (CDI, Wageningen UR); Liberia (CDI, Wageningen UR); Pakistan (IDS; MetaMeta); (Uganda (ETC). Specific methodological variations to the approach carried out per country where CDI is involved are also described in this document.

This report is sent to the Co-Financing Agency (CFA) and the Southern Partner Organisation (SPO) for correcting factual errors and for final validation of the report.

1.2 Brief summary of analysis and findings

Over the last two years SS has seen no change in its overall capability to act and commit. While the leader became more self-reliant, there were more trainings and capacity to writing proposals for funding but due to a deteriorated funding situation key staff had to leave the organisation. In the capability to adapt and self-renew SS also improved very slightly. This was mainly due to fine-tuning, but their M&E templates, internal capacity building on M&E, slightly more strategic use of M&E by SS and slight improvement in tracking its operating environment. SS showed a very slight deterioration in the capability to deliver on development objectives. While SS is working more cost-effectively, due to staff having to leave because of reduced funding, balancing quality and efficiency was negatively affected. The organisation had a very slight improvement in the capability to relate because SS now receives feedback on its strategies from a more diverse set of stakeholders and has improved its networks at the national level. Finally there was a very slight deterioration in the capability to achieve coherence because SS is applying new strategies that are not yet aligned with their current vision and mission.

The evaluators considered it important to also note down the SPO's perspectives on the most important organisational capacity changes since the baseline. During the endline workshop the key organisational capacity changes that were brought up by SS' staff were: improved staff capacity to write reports, improved staff capacity to train target groups and improved capacity for financial sustainability. An MFS II supported capacity development intervention (financial management training) together with trainings by other funders like SDTT and Astha Sansthan have played a role in improving data collection and compilation skills which contributed to staff capacity to write reports. SS staff being better able to train target groups can be attributed to trainings and exposure visits funded by MFS II and other funders (SDTT, IRMA). These trainings focused on business plan development, marketing etc. furthermore staff have also taken on more responsibilities due to reduced funding as a result of shifting donor priorities. Finally, SS improved their capacity for financial sustainability because of new funding strategies, that were triggered by reduced funding, and improved interaction and networks with like-minded NGOs and government agencies. According to SS, MFS II funded capacity development interventions thus played a role mainly in terms of improving their data collection and compilation competencies and in improving their understanding of the technical aspect of their role in supporting and training their target groups, in particular in advising beneficiaries on sustainable farming etc. A general shift of the donor priorities and reduced funding have been important triggers for these changes.

2 General Information about the SPO – Samarthak Samiti

2.1 General information about the Southern Partner Organisation (SPO)

Country	India
Consortium	People Unlimited 4.1
Responsible Dutch NGO	Hivos
Project (if applicable)	Mobilisation of Community to strengthen MFP based livelihoods of tribal Women in South Rajasthan
Southern partner organisation	Samarthak Samiti

The project/partner is part of the sample for the following evaluation component(s):

Achievement of MDGs and themes	X
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

2.2 The socio-economic, cultural and political context in which the partner operates

Samarthak Samiti (The Rajasthan Forest Produce Processing Group Support Society) is registered as a society working among tribal and other marginalised communities since 1995 in six districts of Rajasthan to provide guidance and motivation to smaller organizations, cooperative societies and such other societies, which are engaged with minor forest produce collection and devoted to the cause of biodiversity conservation.

Rajasthan has a tribal population of 8.42 percent against the Scheduled Tribe population of India of 10.4 percent. There are 1152 villages with 100 percent tribal population as per 2011 Census in Rajasthan.¹ The Tribal economy is mainly dependent on subsistence agriculture with forest forming an essential part of their livelihood.² As per the Government Estimates, a total of 100 million forest dwellers are dependent on Minor Forest Produce (MFP) for food, shelter, medicines, cash income etc. Market for MFP products not being developed the products were sold through a channel which included chain of traders comprising petty traders, small traders, big traders and wholesalers, all of them retaining a part of their profits. With producers on the other hand left with meagre income from sale of MFPs. Lack of transparency and absence of market led to rise of large numbers of middle men linking the forest producers to the market.

In Rajasthan, Rajasthan Tribal Area Development Co-operative Federation Ltd (Rajas Sangh) was established in 1976 under the Tribal sub plan area, and was given the monopoly rights for the collection and trading of the MFPs. The aim was to reduce the exploitation of the MFP collectors at the

1 <http://tribal.nic.in/WriteReadData/CMS/Documents/201410170519295222004StatisticalProfileofSTs2013.pdf>
2 <http://tribal.nic.in/WriteReadData/CMS/Documents/201410170519295222004StatisticalProfileofSTs2013.pdf>

hands of the private traders through a price fixing mechanism. However, there was a significant price differential between the price of MFPs fixed by the Rajas Sangh and that from the open market i.e. traders. The Rajas Sangh had authorised agents called Large Area Multipurpose Societies (LAMPS) for the collection of MFPs. These centres were not available in remote villages where the chances of getting MFPs were high being close to the forest. It was also reported by the MFP collector that the LAMPS did not collect MFPs and collude with traders or not account the produce and sell it directly in the open market. The market rate remained higher than the Rajas Sangh rate. Though Rajas Sangh provided incentives to LAMPS for collecting the MFPs (8 percent commission is given) but the profit margin continued to remain higher in selling the produce in the open market. Samarthak Samiti, through its work influenced the price of Minor Forest Produce. It collected the MFPs from the groups (SHGs) and put pressure on the traders to increase the prices by offering higher price to the group collectors.

The provisions of PESA (Panchayat Extension to Scheduled Areas) in 1996 and FRA (Forest Rights Act) in 2006 the ownership rights of MFP were given to the Gram Sabhas³ in the villages. The Scheduled Tribes and Other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006 gave tribal communities right to ownership as well as, access to collect, use and dispose of minor forest produce which are traditionally collected within and outside the village boundaries.

It was also envisaged in the 2010 report of the Government, "Report of the Committee on Ownership, Price Fixation, Value Addition and Marketing of Minor Forest Produce"⁴ that there is a need for strengthening of SHGs, co-operatives and producer companies for removal of exploitative traders in its place. In this report emphasis was already placed on Minimum Support Price⁵ for 14 main MFP's: tamarind, mahuwa flower, mahuwa seed, tendu leaf, bamboo, sal seed, myrobalan, chironji, lac, gum, karaya, honey and seeds of karanja, neem and puwad. However, it was only in 2013-2014, that the Government of India decided to come up with a Minimum Support Price⁶ (MSP) for the Minor Forest Products (MFP). This MSP will also create a social net for the producers ensuring protection of Scheduled Tribe groups living in these areas from abject poverty. The MSP for MFP has been implemented in areas under the Schedule V⁷ of the Constitution for certain specified items like Tendu, Mahuwa seed etc. Under the scheme "Mechanism for marketing of Minor Forest Produce (MFP) through Minimum Support Price (MSP) and development of Value Chain for MFP" launched in 2014 to be continued for the next Five Years Plan (2012-2017) an incentive in the form of procurement of 2% of the base procurement value of MFP will be given by the government to all the states for a period of five years. Government programmes towards marketing of MFP will be linked to capacity building of Gram Sabhas and Panchayati Raj Institutions. For instance, the 'Mahila Sashaktikaran Pariyojana' under the NRLM⁸ (National Rural Livelihood Mission) will capacitate MFP gatherers. Emphasis has also been given to market information system for MFP, as well as, implementation of speedy dissemination of market information through MFPNET.

National Scheduled Tribal Finance and Development Corporation (NSTFDC) signed refinance agreement with the State Bank of India (SBI) in the Financial Year 2012-2013 to help ST (Scheduled Tribes) SHGs to access NSTFDC's concessional assistance and market their products by Tribal Cooperative Development Federation of India Limited (TRIFED) through its retail outlets "TRIBES INDIA"⁹. TRIFED and the state agencies are envisaged to keep a close watch on the market prices during the procurement season¹⁰. Intervention of Samarthak Samiti in these areas towards empowering the MFP collectors group into larger groups at the sub-district and regional level, worked for long term production sustenance of MFPs for continued and improved livelihood, building

³ Gram Sabha means a body consisting of persons registered in the electoral rolls relating to a village comprised within the area of Panchayat at the village level.

⁴ http://www.panchayat.gov.in/documents/401/84079/Report_of_the_Committee_on_MinorForestProduce.pdf

⁵ Minimum Support price: The MSP is a scheme of the Government of India (GOI) to safeguard the interest of the farmers. Under this scheme the GOI declares the minimum support pieces of various agricultural produces and assures the farmer that their agricultural produce will be purchased at the MSP, thereby preventing distress sell.

⁷ Schedule V: Fifth Schedule of the Constitution determined the scheduled areas by an order of the President.

⁸ NRLM: National Rural Livelihood Mission a project under the Ministry of Rural Development of India for poverty alleviation.

⁹ <http://tribal.nic.in/WriteReadData/CMS/Documents/201407280104442396450AnnualReport2013-14.pdf>

¹⁰ <http://tribal.nic.in/WriteReadData/CMS/Documents/201403250507260927826operationalguidelines2.pdf>

knowledge and skill of the tribal communities on collection and marketing of MFP, inculcate policy and environmental regulations for protecting community rights. This led to MFP collectors (Tendu Collectors) get a minimum support price fixed by the Forest Department of Rajasthan. Earlier the traders did not pay this support price to the producers organized a campaign raised awareness and in turn traders also had to pay minimum price, this has helped 10000 tendupatta collector tribals families.

The market for Tendupatta in 2013 in this area is affected by the policy of the government to ban smoking. But as tendupatta cooperatives have paid the minimum price of Rs. 70 per 100 bundles and organized a campaign raised awareness and in turn traders also had to pay minimum price, this has helped 10000 tendu leaves collector tribals families.

As Tribals are well connected with Samarthak Samiti, they could discuss with them on the kind of produce to be produced in the gap period. This helped the leaders to make a strategic choice to diversifying its program and move towards agriculture and animal husbandry and from production to marketing. Samarthak Samiti has moved a step up from production to marketing through strengthening its producer company.

2.3 Contracting details

When did cooperation with this partner start:

Hivos has been aware of Samarthak Samiti's (SS) work through its relationship with Astha Sansthan that has promoted Samarthak Samiti. Hivos has also support Samarthak Samiti in 2003 for organising a meeting on behalf of South Asian Alliance for Poverty Eradication (SAAPE) through the Micro Fund Budget line. Subsequently Samarthak Samiti approached Hivos for support to build up its institution to strengthen the cooperatives of Minor Forest Produce (MFP) gatherers in Southern Rajasthan region. The first phase of support to SS for the project 'Mobilisation of Community to Strengthen MFP based Livelihoods of Tribal Women in South Rajasthan' was for the period 1 October 2006 to 31 March 2009.

What is the MFS II contracting period:

The project "Mobilisation of Community to strengthen MFP based livelihoods of tribal Women in South Rajasthan" runs from 1st of April 2009 until 31st of March 2014 and is funded under MFS II from 1st of January 2011 until 31st of March 2014.

Did cooperation with this partner end? Yes.

If yes, when did it finish? 31 March 2014

What is the reason for ending the cooperation with this partner: This contract has come to an end following the changes in the Co-Financing Programme supported by the Dutch Ministry of Foreign Affairs. Hivos may collaborate with this partner again in the future if the work of this organization can be integrated into a new project or programme.

2.4 Background to the Southern Partner Organisation

History

Samarthak Samiti developed as an offshoot of Astha Sansthan in 1990 in Southern Rajasthan to undertake the struggle/movement to increase the wages of Tendupatta collectors which Astha Sansthan had initiated in early nineties. It aims at strengthen community based organisations (CBOs) (self-help groups (SHGs) and Cooperatives) which are engaged with minor forest produce (MFP) collection and devoted to the cause of biodiversity conservation in order to provide sustainable livelihood to the marginalised tribal communities. Also lobby for natural resource management rules, laws and policies to create a favourable condition for the marginal communities.

In the early nineties despite some drawbacks the tendupatta movement resulted in increase in the price per bundle of tendupatta and cooperatives received loan with a negotiated interest rate from the department of Cooperatives. However, in 1993-95 cooperatives suffered losses due to change in management level and local politics. As a result, the need rose to form an organization to support tendupatta cooperatives after dealing with (Rajas Sangh) and then all the cooperative members meet together and decide to form an organization known as Samarthak Samiti.

During this period Samarthak Samiti was registered as a society in 1995 under the Societies Registration Act 1956 in order to manage the five existing cooperatives and streamline their activities, while carrying out the advocacy with the government. It was also registered under FCRA in 2002. The vision of Samarthak Samiti was then defined as "Strengthening livelihood of tribal communities and other marginalized sections of the society in Rajasthan through natural resource management.", and continues with the same vision. It was decided that the work would focus on tendupatta collection and sale and cooperatives would help sustain the activities of the society. Therefore, no funds were to be asked for.

From 1997 because the construction of Samarthak Samiti was not financially sustainable, Sir Ratan Tata Trust (SRTT) was asked for funds. SRTT gave Rs 2.76 lakhs for about 3 years. Working capital was requested from NABARD and other banks but loans were refused due to lack of sufficient assets. Though Astha gave a guarantee but this guarantee was refused, asking for change in by laws of Astha. However, in 1997 SIDBI granted 20 lakhs as loan in at 11% interest.

In the year 1998-2000 there was severe drought conditions in the region which resulted poor leaf yield. This made Samarthak Samiti aware of the risk of working with single commodity based intervention and undertook studies on availability of various minor forest produce in the area. As per the outcome of the study and in order to improve the demand conditions for other MFP products such as honey, ratanjot, custard apple, etc., started organising exhibition and presentation so as to increase demand condition in the region. As a result not only the demand condition increased in the market but also the district administration provided retail space to some of the cooperatives to display and sell their products.

By the year 2003, Samarthak Samiti was managing six cooperatives: Pratapgrah, Ghatol, Kotra, Aburoad Jhalawar, Jhadol, and Bichhiwada. And in 2004, two more were added: Gogunda and Salumber. The year 2003-04 was crucial as there were no funds for the organisation and Astha had to be asked for payment of salaries.

2004 was a turning year for Samarthak Samiti as they were granted a UNDP country project for the period 2004 – 2007 (about 70,000 EUR). This project 'Strengthening Minor Forest Produce- Based Livelihoods for Tribal Women in Udaipur' helped create a unique identity for Samarthak Samiti. It started working beyond tendupatta and other MFPs collection and marketing. 6 new employees were recruited and 22 SHG groups were formed and Samarthak Samiti also expanded geographically.

As it gained better visibility and experience in the livelihood promotion of the marginal tribal communities, contributed in mobilising international funds. Towards the end of UNDP project in 2006 it received MFS funds from Hivos. Hivos funded the 'Mobilization of Community to Strengthen MFP based Livelihoods of Tribal Women in Southern Rajasthan' project since October 2006. In this project, during 2006-2008 it received for about 70,605 EUR from Hivos and it increased to 150,850 Euro in 2009-2013 of which 62,921 Euro in years 2011-2013. The unspent balance with Hivos for 2009-13 was INR

1,913,495 which gave SS an extension of one year for 2013-2014. The Hivos funding over the years has helped Samarthak Samiti strengthen its capacity, improve the visibility and establish better networks.

Samarthak Samiti had 10 staff during baseline (September 2012) and during endline (July 2014) it had 9 staff. In 2009, Samarthak Samiti has started dealing with organic agricultural produce under SPWD (Society for Promotion of Wasteland Development) funds (about 20,000 EUR for the period of 2007-2010) but shortage of rains has not let the program to be successful and the funding ended in 2010.

In 2009-2013 Samarthak Samite received funding from various funders: Christian Aid started funding since 2010 till March 2013 for about 55000 GBP was received from Christian Aid for period of 2010-2013 and Sri Dorabji Tata Trust started funding since 2011 till 2014 for about 65000 Euro / INR 5,500,000. TRIFED started funding since 2009 till 2013 for about 14000 Euro. TRIFED along with support mostly engaged in capacitating the staff in honey harvesting techniques. During this period Centre for Environment Education (CEE) project focuses on biodiversity and funded for seed. Also, at present, Samarthak Samiti has good Khadi and zila parishad linkages along with good links with forest department. Other organisations also seek advice from Samarthak Samiti for matters concerning forest produce.

The number of SHGs and cooperatives has grown over time; the number of active registered cooperatives was 7 during baseline (September 2012) and in 2014 it is increased to 9. Obtaining funds is a big problem, if all cooperatives were to work then about projected requirement would be of 3-4 crores (INR 30-40 million; between 420,000 and 520,000EUR). Some cooperatives like the one in Abu road and Kotra are self-sustaining while the remaining 7 active registered cooperatives required resources to carry out their work.

A centralized processing centre is already planned with the support of HIVOS and other partner agencies. In 2012-13 laid the foundation of the processing centre for proper set-up of processing, storage and training. This is a grass roots level training cum processing demonstration centre at Kotra cooperative office premise is set including activities like Honey filter and processing, Jamun Sirka preparation, grinding unit, processing of Chikori powder. This centre also helps young girls to learn income generation avenues in alternate opportunities. The project developed centre so that it provides additional employment by creating grading and the value addition facilities for products like Satawar, Asgandh, Musali, Ratanjyot, Kanji and Dolma.

Samarthak Producer Company Limited which was registered during 2011 formally got registered in the Agriculture Produce Marketing Committee (APMC) and also got register its trade mark "desert Greens" for producing, processing and marketing Honey and Ark and Saharbat in area.

MFP Development Fund (MFD) which supports the small financial needs of the groups to carry out the activity of the MFPs collection and marketing to made payments to the collectors for their urgent needs. In this fund all the Cooperatives and forest community groups contributes. Since 2009 MFD has been managed by members on rotation. Presently this fund is managed by the Vanopaj Samuh Sangh. It is further planned to train the members on financial management to manage and utilize the fund and pass on this knowledge and skill to community leaders in the area, so that by the end of the project period a sustainable fund management system is at place.

The significance of MFPs is high for poor tribal communities in the area as they constitute important part of their livelihoods and potentials are large. In this whole trade of MFPs over-exploitation and even local extirpation in response to intensive harvest is the major threat to forest ecosystem and community economics. The result is that the natural resource base is becoming degraded in certain areas, and an increasing number of species are becoming extinct. In such circumstances, maintaining MFP harvest and trade within sustainable levels presents a major challenge today and the foreseeable future. With government's anti-smoking policy and changing donor priority has added further challenges. Thus the organisation has further made strategic change to move toward agriculture and animal husbandry production and marketing for creating better sustainable livelihood for the target groups.

Vision

Strengthening livelihood of tribal communities and other marginalized sections of the society in Rajasthan through natural resource management.

Mission

Samarthak Samiti endeavours to strengthen people's organizations by facilitating appropriate interventions in collection, processing and marketing of forest produces in Rajasthan.

Strategies

The strategies followed by Samarthak Samiti are the following:

- Support forest dwellers for getting their rights in the forest area and to collect the forest products.
- Promote the natural agriculture and Non pesticides used agriculture products in area;
- Social mobilization of the women's especially tribal women's to get there rights over natural resource. Information exchange within the community in changes of rules and regulations regarding the forest;
- Provide support for the creation of new groups and Cooperatives for collective marketing of their products;
- Provide financial, marketing and legal support to organizations like groups and cooperatives for selling there MFPS and other products;
- Research, survey and documentation of information related with different varieties of forest produce;
- Enhance the organizational and financial capacities of smaller groups.

3 Methodological approach and reflection

3.1 Overall methodological approach and reflection

This chapter describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

Note: this methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report A detailed overview of the approach is described in appendix 1.

The first (changes in organisational capacity) and the fourth evaluation question are addressed together through:

- **Changes in the 5C indicators since the baseline:** standard indicators have been agreed upon for each of the five capabilities of the five capabilities framework (see appendix 2) and changes between the baseline, and the endline situation have been described. For data collection a mix of data collection methods has been used, including self-assessments by SPO staff; interviews with SPO staff and externals; document review; observation. For data analysis, the Nvivo software program for qualitative data analysis has been used. Final descriptions per indicator and per capability with corresponding scores have been provided.
- **Key organisational capacity changes – 'general causal map':** during the endline workshop a brainstorm has been facilitated to generate the key organisational capacity changes as perceived by the SPO since the baseline, with related underlying causes. For this purpose, a visual as well as a narrative causal map have been described.

In terms of the attribution question (2 and 4), '**process tracing**' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

At the end of this appendix a brief methodological reflection is provided.

3.2 Assessing changes in organisational capacity and reasons for change - evaluation question 1 and 4

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?** And the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This is explained below. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

The evaluators considered it important to also note down a consolidated SPO story and this would also provide more information about what the SPO considered to be important in terms of organisational capacity changes since the baseline and how they perceived these key changes to have come about. Whilst this information has not been validated with sources other than SPO staff, it was considered important to understand how the SPOs has perceived changes in the organisation since the baseline.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information is provided for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the next session on the evaluation question on attribution, as described below and in the appendix 1.

How information was collected and analysed for addressing evaluation question 1 and 4, in terms of description of changes in indicators per capability as well as in terms of the general causal map, based on key organisational capacity changes as perceived by the SPO staff, is further described below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012¹¹.

Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See

¹¹ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 4) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 5) **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Please see appendix 1 for a description of the detailed process and steps.

3.3 Attributing changes in organisational capacity - evaluation question 2 and 4

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*** and the fourth evaluation question: ***“What factors explain the findings drawn from the questions above?”***

In terms of the attribution question (2), ‘process tracing’ is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Below, the selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

3.3.1 Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

For the detailed results of this selection, in the four countries that CDI is involved in, please see appendix 1. The following SPOs were selected for process tracing:

Ethiopia: AMREF, ECFA, FSCE, HUNDEE (4/9)

India: BVHA, COUNT, FFID, SMILE, VTRC (5/10)

Indonesia: ASB, ECPAT, PtPPMA, YPI, YRBI (5/12)

Liberia: BSC, RHRAP (2/5).

3.3.2 Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ‘ general endline workshop. This workshop was carried out after the initial endline workshop and the interviews

during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained. More information can be found in Appendix 1.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

3.3.3 Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team. These can also be found in appendix 1.

Use of the 5 core capabilities framework and qualitative approach: this has proven to be a very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be a perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in

the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
 - Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
 - Difficulty of assessing changes in knowledge and behaviour: training questionnaire has been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh,

Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

4 Results

4.1 MFS II supported capacity development interventions

Below an overview of the different MFS II supported capacity development interventions of Samarthak Samiti that have taken place since 2011 are described. The information is based on the information provided by Hivos and Samarthak Samiti.

The information available about the MFS II supported capacity development interventions comes partly from the support to capacity development sheet filled in by Hivos in September 2012, other progress reports received and the support to capacity development sheet filled in by SS in March 2014. Unfortunately the person within Hivos who was well familiar with SS no longer works for Hivos India and therefore could not provide additional inside information on the capacity development of SS. Tasks and responsibilities were transferred to the Hivos head office in the Netherlands upon closure of the Bangalore office in December 2013 and in anticipation of the establishment of a new office in Mumbai in August 2014.

In the progress report for the period 1 April 2013 – 31 March 2014 on the project "Mobilisation of Community to strengthen MFP based livelihoods of tribal Women in South Rajasthan" funded by Hivos, the following capacity building activities are mentioned:

- During this year SS organised a training for its staff on producer company management , exposure to the other producer company and the marketing exposure in the big events.
- Staff training: Team members were sent to a training programme where the opportunity came towards two persons, who were sent to a producer company training organised by ALC, Hyderabad at Udaipur.

The table below is based on the interventions that Samarthak Samiti has mentioned as funded by Hivos in the support to capacity development sheet.

Table 1

Information about MFS II supported capacity development interventions since baseline

Title of the MFS II supported capacity development intervention	Objectives	Activities	Timing and duration	Budget
Finance Management and Accounting Workshop by Hivos in Bangalore	To improve the financial management systems in the organization	2 staff members (Secretary/programme and accounts) participated in this in-house workshop for Hivos its partners for new FCRA and progress	6-9 September 2011	€ 235
Training on Project Management and Result Based Monitoring in Udaipur	Staff have a better understanding of project management	Training by Mr. Subodh Tonadan for all staff	21-22 October 2011	€ 471
RBM and Project Management training in Udaipur	Understanding for better project management	Training by Mr. Deepak Sharma for all staff	9 November 2011	€ 118
Training on Management of the producers organisation in Udaipur	Understanding about the producer organisation	Training by ALC , Hyderabad A cluster facilitator and the accounts person of SS participated in this.	14-16 November 2013	€ 94
Training on Management of the Social enterprise in Anand	Understanding about Social enterprise management	Training by IRMA. A cluster facilitator participated in this.	18-22 March 2014	€ 353

4.2 Changes in capacity and reasons for change - evaluation question 1 and 4

Below you can find a description of the changes in each of the five core capabilities. This information is based on the analysis of the information per each of the indicators. This detailed information for each of the indicators describes the current situation, and how and why it has changed since the baseline. See also annex 3.

4.2.1 Changes in the five core capabilities

Capability to act and commit

The most serious change that affected the organisation has been the reduction in funding. Most of Samarthak Samiti's contracts with donors have ended in 2014, including the one with Hivos, meaning a significant decrease in its funding base. Whilst there are still no formal funding procedures, SS has improved staff's capacity to write proposals and they have approached five potential funders to cope with this poor funding situation. Other coping strategies include: widening its strategic focus to appeal to a wider set of donors; strengthening its producer company in the hope that they can support the organisation's strategies and pay the salaries of the staff of Samarthak Samiti; the MFP development fund which helps in the self-sustainability of the producer's groups that Samarthak Samiti supports; being hired as resource agency by SFAC¹² and by TRIFED to organise short term NTFPs based training. They were able to get funding from Centre for Environment Education of the United Nations Development Programme (CEE-UNDP) and Wells for India (WFI) to continue the "Mobilization of Community to Strengthen MFP based Livelihoods of Tribal Women in Southern Rajasthan" programme until December 2015 and pay half of the field staff's salaries. The chief functionary has taken it upon himself to develop proposals and new relationships with potential donors. The leader of Samarthak Samiti is still responsive and focussed in his work. Reduced funding and need to sustain the organisation has compelled the leader to be self-reliant. He has become more independent from external consultants and Astha (the mother organisation of SS) as he increased his capacity to write reports, proposals and approach donors. The leader has improved his capacity to network and has approached new donors for the sustainability of the organisation: in 2013 he approached the Centre for Environment Education Ahmedabad and Wells for India. The leader is focusing on the capacity building of his field staff by offering them training opportunities and exposure visits so that they can independently train the target groups. The strategic directions provided by the leader are still in line

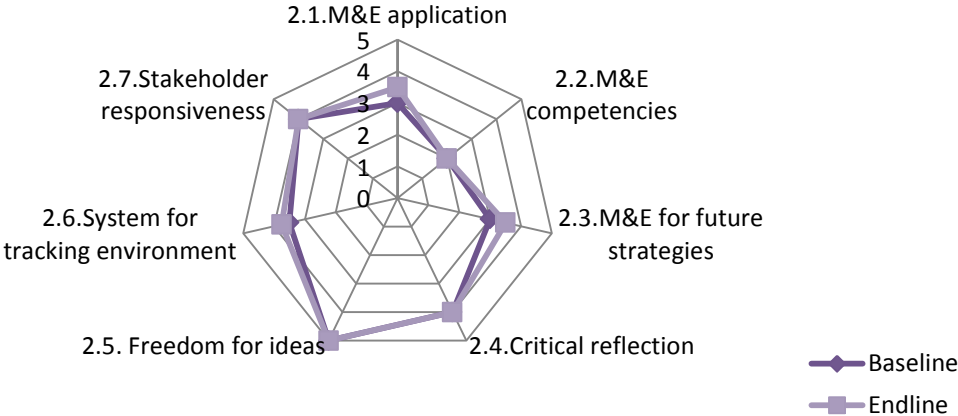

¹² SFAC is a consortium that supports new ventures in Agro-based industries. The target groups are individuals, farmers, producer groups, SHGs etc. and the consortium helps them get venture capital by linking them with banks

with the vision of the organization. The leader is now taking a more business-like approach by focussing on non-timber forest produce (NTFP) collection, livelihoods and marketing and focusses more on generating own income instead of depending on grants. Samarthak Samiti has well-articulated strategies both at the programme as well as the organizational level that are based on good situational analysis and on achieving sustainability. Through its field staff Samarthak Samiti is always aware of the situation on the ground. The organisation's daily operations are still in line with strategic plans. Monthly plans are made based upon quarterly targets and staff makes daily plan based on the monthly plans. In the last two years as the funding from the donors has gradually reduced, staff salaries have also been reduced by 50%. Two project level staff had to leave the organization because of lack of funds to keep them, which has increased the workload on the remaining staff. Staff turnover at the field level continues to be low. Field staff is from the community and are motivated to help their own community. SS remains to be a not very hierarchical organisation and there are no changes in the organisational structure. There is a plan to reshuffle the board members and form an advisory committee to make the decision making process faster. While staff has improved their skills in areas that were lacking during the baseline (MIS, nursery raising, technical support on agriculture, developing producer organisation), there continues to be a need to improve basic English skills gaps. While SS continued to provide a customised training and exposure visit programme to staff and had reached a good level of trained staff, with 2-3 trained staff leaving the situation changed dramatically. The programme staff that was trained on results-based monitoring could not be retained as the organisation did not have sufficient funds.

Score baseline: 3.1

Score endline: 3.0 (no change)

Capability to adapt and self-renew

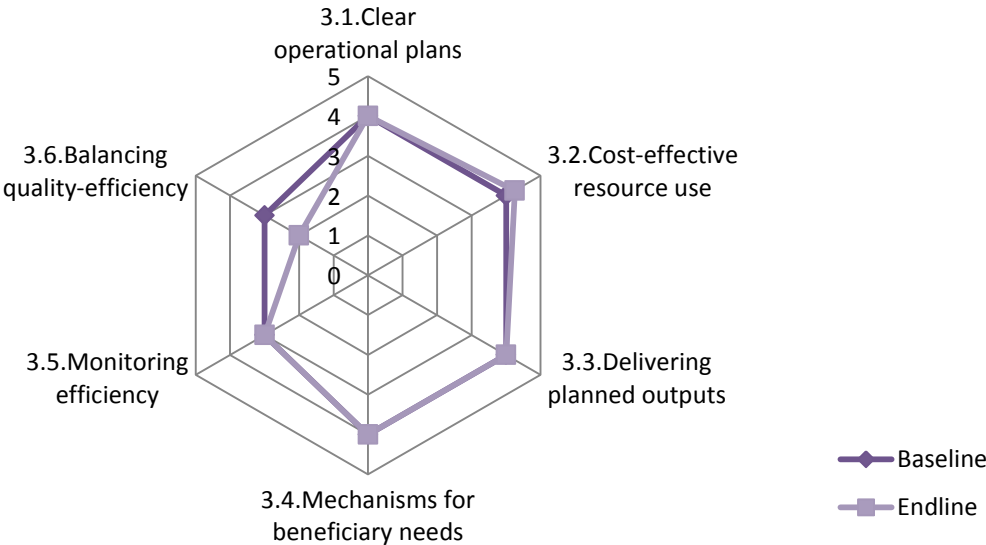

Samarthak Samiti continues to have regular meetings to report on and discuss project related issues but still does not have a comprehensive and formalised M&E system in place. Monitoring is still done for inputs and outputs through record keeping. Since the baseline Samarthak Samiti has fine-tuned its templates and MIS formats for data collection and monitoring both at the field and head quarter level. In its reports, indicators at activity and outcome level are reported on. The reports are submitted monthly by the field staff. These are then compiled, analysed and translated to English by the leader. While field staff has become better at monitoring and collecting data and the leader is becoming less dependent on external consultants for drafting reports, programme staff that was trained in results-based monitoring have left the organisation due to lack of funding. The informal analysis of data and the overall M&E process improved over the last two years as donors have continuously pointed at the gaps. This has helped Samarthak Samiti to learn from previous experiences and use this in developing new strategic plans. Staff continue to meet regularly to discuss issues at project level. They also feel comfortable to come to the leader to ask for advice as he is very approachable and likes to sit in the same room as staff. With reduction in funds, issues are discussed more often. Decision making is participatory and decentralised and this supports people in talking freely. There are frequent discussions and their ideas are welcomed and used. Samarthak Samiti continues to work with the

cooperatives which helps them in tracking any changes regarding the situation on the ground. As Samarthak Samiti continues to work on products of which many are regulated by the government, they stay up to date with the relevant acts and policies; and make use of the relevant state and national government provisions. With government’s anti-smoking policy and changing donor priority the organisation made strategic change to move toward agriculture and animal husbandry production and marketing. SS is now also tracking trends in agriculture through its network in the non- pesticide management initiative. The information now seems to be coming from both the local and national level. The organisation continues to be open to take inputs from different beneficiaries and sensitive to their needs.

Score baseline: 3.5

Score endline: 3.7 (very slight improvement)

Capability to deliver on development objectives

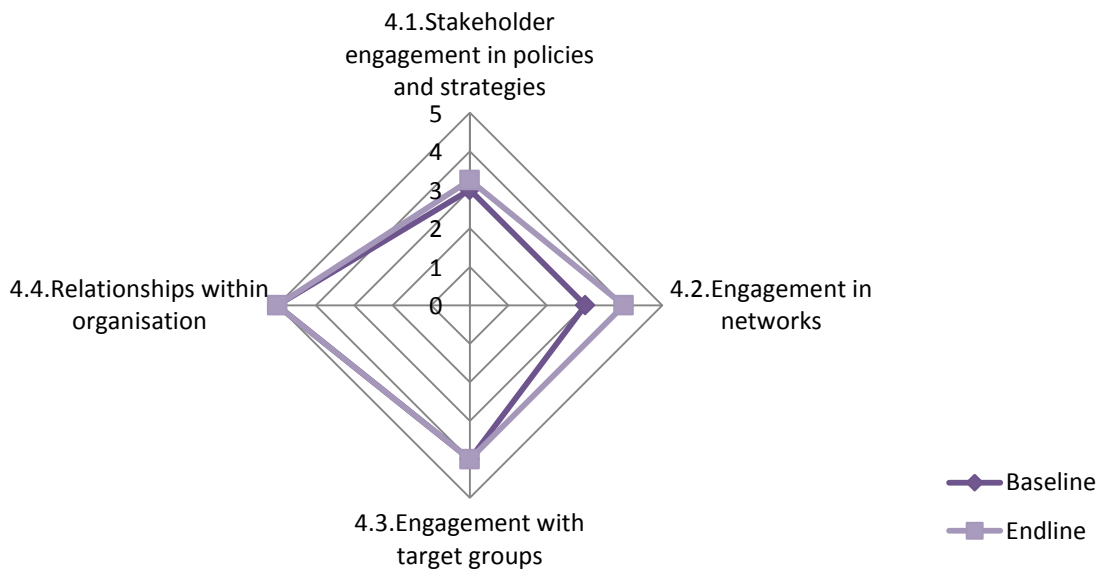

Samarthak Samiti continues to have a work plan and budget for each project. Quarterly, monthly and daily plans are made in alignment with the annual strategic plan. In some of the clusters the staff meets daily to discuss their plans and activities. Staff still have access to vehicles and computers that enable them to carry out their work. With a reduction in funds, using resources in a cost-effective manner has become more important. The leader and field staff are now less dependent on the external consultant and only hire him when in dire need. Most of the planned outputs are carried out and delivered. There are external factors, like climatic conditions and auction prices that sometimes prevent the execution of plans and submission of deliverables. Samarthak Samiti continues to work in a participatory and decentralized way. They are a membership organisation having representation from various cooperatives; the programmes are developed based on the needs and alternatives suggested by the members. Input-output ratios are still not developed as per the definition of the term and no formal mechanisms for staff appraisal are in place. Monitoring efficiency could have improved as two project staff were trained on results-based monitoring. However, they left the organisation as they could not be retained due to financial constraints. Due to lack of staff there is no proper monitoring and sufficient field visits of the programme and as a result the quality and efficiency of the work has deteriorated. Furthermore, the current staff is overburdened with double workloads against half the salary.

Score baseline: 3.7

Score endline: 3.5 (very slight deterioration)

Capability to relate

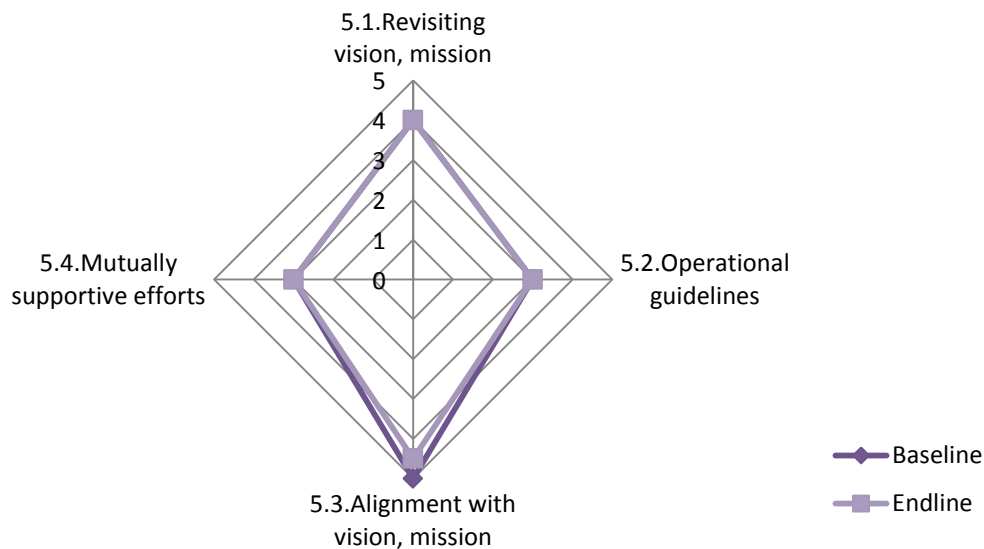

Samarthak Samiti continues to maintain relationships with local likeminded NGOs and cooperatives and takes inputs from them while preparing strategic plans. A new network they are part of is the Non-Pesticide Management Initiative (NPMI) which helps them in developing strategies on agriculture. During the last two years Samarthak Samiti has continued its relationship with cooperatives, government and like-minded NGOs, but is now linking up with other organisations and relevant networks also at the national level. These include: SFAC for promoting producer organisations in Rajasthan, MFP Drafting committee of the government, NPMI, Tribal Self-Rule Network and the Herbal Network India. This has strengthened the capacity of the organization in lobbying for policy change and betterment of the tribal community. Samarthak Samiti continues to maintain close relationships with the cooperatives and in the last two years field level staff gained confidence to independently conduct meetings with the community groups which strengthened their interaction with them. However, due to reduced funding and the leader being overburdened with work his interaction with the target groups has reduced. Staff continues to have good interpersonal relationships and feel free to discuss issues among themselves and with their leader.

Score baseline: 3.8

Score endline: 4.1 (very slight improvement)

Capability to achieve coherence

For now, Samarthak Samiti's projects, strategies and associated operations are still aligned with its vision and mission. Samarthak Samiti is however, rethinking its strategic focus to move it from NTFP collection and marketing to agriculture and forest based strategies due to the government's anti-smoking policy affecting the demand for tendu patta and the change in funders' priorities. This is not in line with the current vision and mission which both focus on natural resource management and collection, processing and marketing of forest produces (not agriculture). Operational plans, HR guidelines and gender policy still exist in the organisation but are not strictly followed as there are few staff members and reduced funding. There is still a need to follow the gender policy more systematically. Due to having less people in the organization, the staff is multi-tasking which further ensures that there is no duplication of work and the project activities are mutually supportive. A negative result of this is that staff over overburdened.

Score baseline: 3.8

Score endline: 3.6 (very slight deterioration)

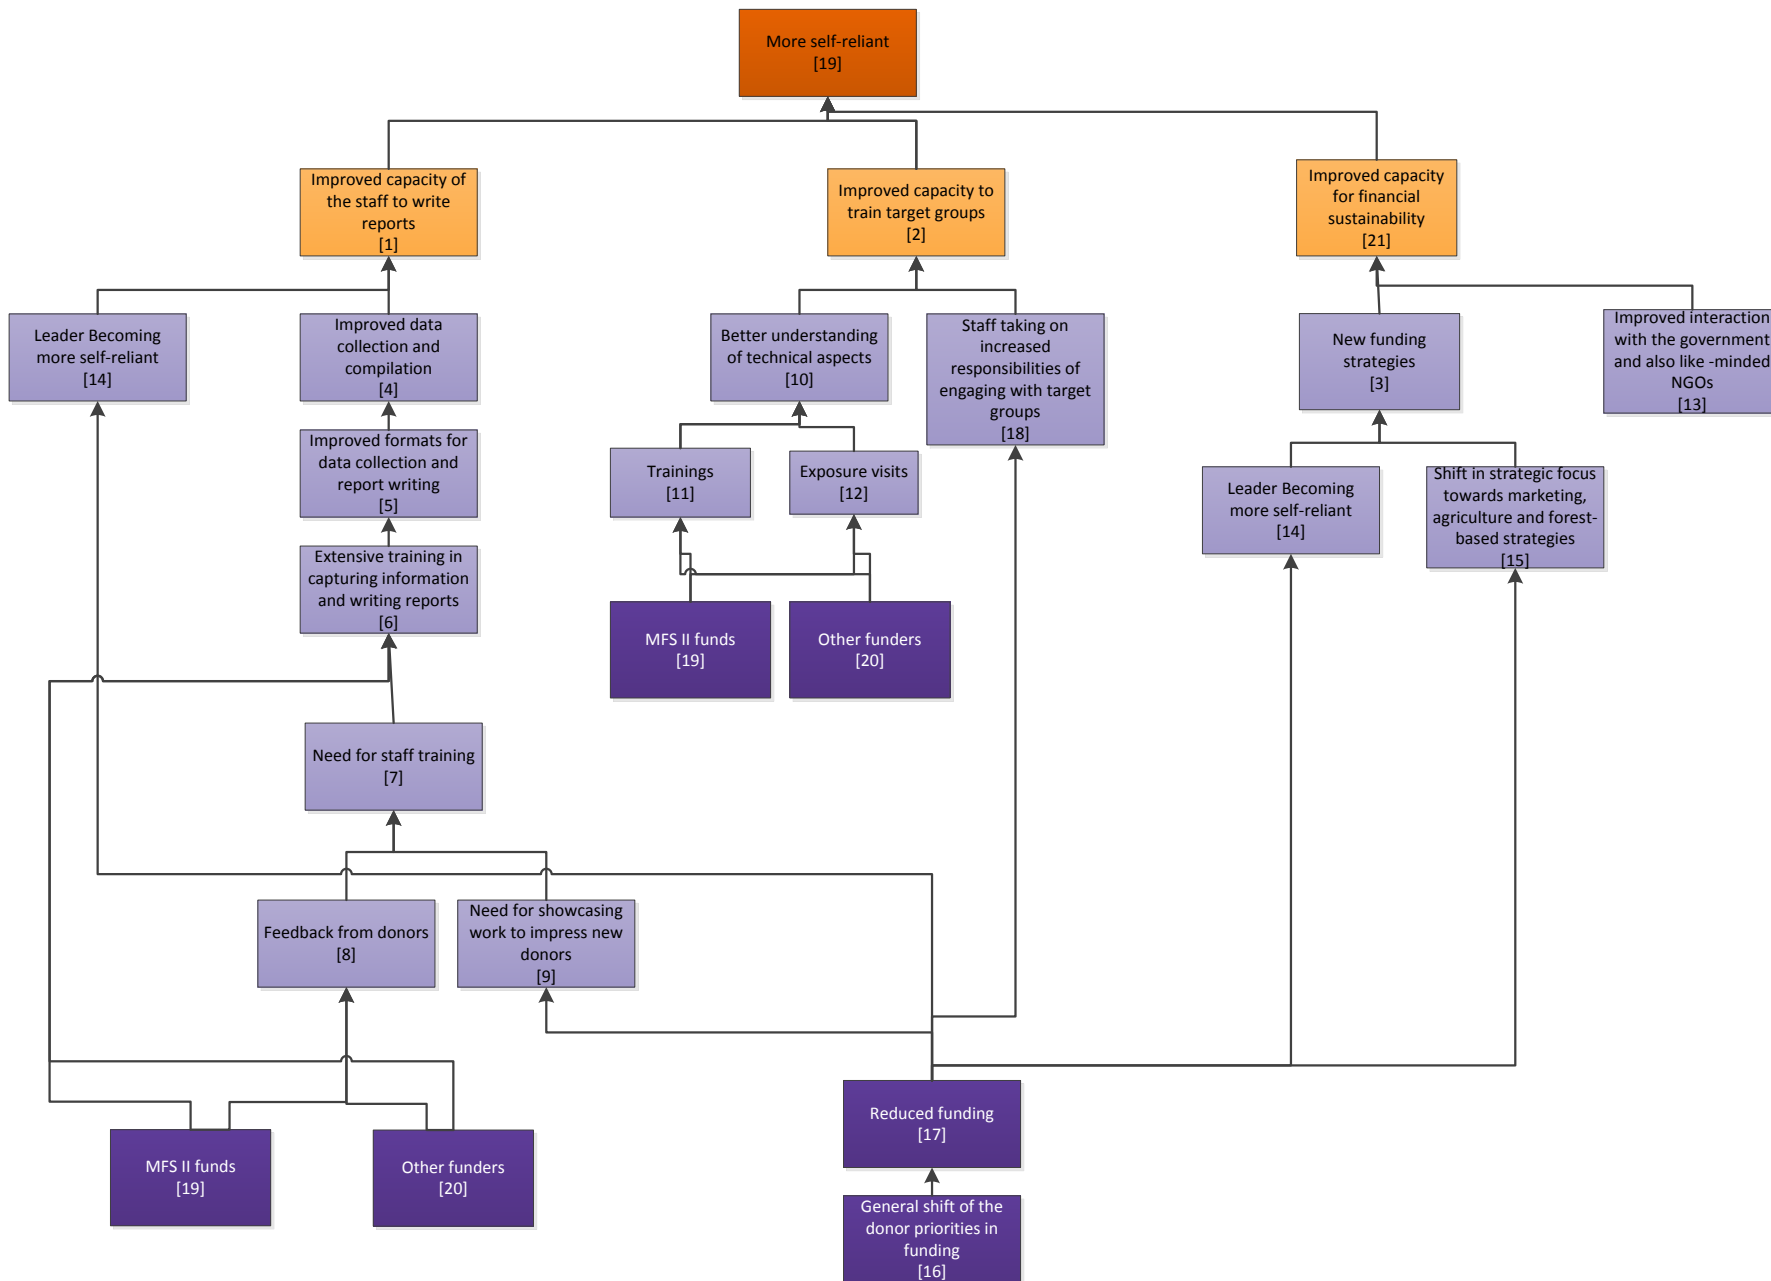

4.2.2 General changes in the organisational capacity of the SPO

The evaluation team carried out an endline assessment at Samarthak Samiti from 1 to 3 July 2014. During the endline workshop at the SPO, a discussion was held around what were the main changes in organisational capacity since the baseline and why these changes have taken place. The discussion was visualised in a general causal map as can be seen below. The narrative for the general causal map is also described below. It gives a more general picture of what was seen as important changes in the organisation since the baseline, and how these changes have come about, and that tells the more general story about the organisational changes in the SPO. The evaluators considered it important to also note down the SPO's story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provide by the evaluation team. The detailed narrative can be found in Annex 4.

During this workshop, the team made a recap of key features of the organisation in the baseline in 2012 (such as vision, mission, strategies, clients, partnerships). This was the basis for discussing changes that had happened to the organisation since the baseline. According to staff present at the endline workshop. Samarthak Samiti has become more self-reliant in the last two years since the baseline. This has been due to the following key organizational capacity changes:

1. Improved capacity of the staff to write reports [1]
2. Improved capacity of the staff to train target groups [2]
3. Improved capacity for financial sustainability [21]

During the endline workshop it was discussed what were the reasons for each of these organisational capacity changes. The three main organisational capacity changes are described in the light orange boxes and some of their key consequences are noted above these cards in dark orange. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the organisation are listed at the bottom in dark purple. The narrative describes per organisational capacity change, the contributing factors as described from the top down. The numbers in the visual correspond with the numbers in the narrative.

1. Improved capacities of the staff to write reports [1]

During the endline workshop, SS staff indicated that their capacity to write reports has improved [1] and that this is related to:

- *The leader becoming more self-reliant [14].* The leader is less dependent on external consultants and Samarthak Samiti's mother organisation Astha Sansthan. This is evident from the fact that the consultant was initially invited for 4-5 times in a month but now his help is sought only 4-5 times in a quarter. The leader has been independently trying to put together proposals, compiling information from the field and translating it into English, which he is now better versed in.
- *Improved data collection and compilation [4].* The improved capacity of the staff for data collection, report writing and monitoring improved the quality of monthly reports. This is evident from the approval letter of 2014 Annual Review Report of Samarthak Samiti.

2. Improved capacities of the field staff to train target groups [2]

Samarthak Samiti has improved its capacity to train the target groups on technologies, entrepreneurship development, business potential and sustainability [2], which is noted in the additional partner contract with Hivos for extension of the budget. The staff is more confident in conducting meetings with the target groups, officials of the forest departments and the police. Improved capacities of the field staff to train target groups [2] is due to:

- *Staff expresses better understanding of the technical aspects of their roles [10]:* this is demonstrated by for example advising beneficiaries on sustainable farming, processing of NTFP, documentation related to dispatch of NTFP and helping beneficiaries negotiate with local traders
- *Staff to take on increased responsibility of engaging with the target groups [18]:* The other reason for improved capacity of SS staff to train the target group was that staff now take on the responsibility of engaging with the target groups. Earlier the staff was more dependent on the leader or a resource person to train the target groups and solve problems.

3. Improved capacity for financial sustainability [21]

SS improved its capacity for financial sustainability [21] because the organization started using new funding strategies [3] and because they improved their interaction with the government and like-minded NGOs [13]:

- *New funding strategies [3]* During the last two years the staff has improved their skills significantly to collect focused data from the field, to write better reports in order to showcase its work to new donors. While during the baseline Samarthak Samiti depended on an organisational development specialist for finalising their proposals, they are now trying to independently to put together proposals, and they are making better use of data and field experiences. The chief functionary has taken it upon himself to develop proposals and new relationships with potential donors. SS currently is in contact with the following potential donors:
 - Cement company to make it part of their CSR
 - NABARD (National Bank for Agriculture and Rural Development) Jaipur for the tree-based Wadi support for tribal groups in the area
 - Christian Aid, hopefully to support SS in a consortium of the BEE-Keeping for agriculture production project in 2014-2016
 - As a Hivos partner SS also has applied to the Producer Entrepreneurship Catalyst & Incubation Facility (PROCIF) for capacity building and will also apply for the working capital and other support.
- *During the endline workshop, SS staff also indicated that they have improved their interaction with the government and also other like-minded NGOs [13].* One of the networks that Samarthak Samiti has strengthened is that they are now empanelled as resource agency by SFAC¹³.

13 SFAC is a consortium that supports new ventures in Agro-based industries. The target groups are individuals, farmers, producer groups, SHGs etc. and the consortium helps them get venture capital by linking them with banks

Underlying factors:

- *Other funders [20]*: have funded trainings and exposure visits that (indirectly) led to improved data collection and compilation [4] and staff expressing a better understanding of the technical aspects of their roles [10].
- *MFS II funds [19]*: also were used for trainings and exposure visits that (indirectly) led to improved data collection and compilation [4] and staff expressing a better understanding of the technical aspects of their roles [10].
- *Reduced funding [17]* and need to sustain the organisation has compelled the leader to be self-reliant [14] because of a shift in donor priorities [16]. Reduction in funding [17] has also led to staff taking on increased responsibility of engaging with the target groups [18] and the organisation starting to use new funding strategies [3].

5 Discussion and conclusion

5.1 Methodological issues

In order to get detailed information on the capacity development of the staff, self-assessment forms were filled in by the management (Secretary cum chief functionary), HR/Administration staff (HR/Administration, Finance officer), and field staff (three community worker and cluster facilitator). Two of SS' programme staff left the organization during the period of evaluation, due to inadequate funds to support these staff. As a result, the evaluators did not have filled in self-assessment forms for those programme staff. Though the questions in the self-assessments were aimed at looking closely into the detailed changes, these questions became very repetitive. Evaluators tried to resolve this, by clarifying the responses by follow-up interviews after studying the responses.

The evaluators interviewed one partner of SS and the organisation's Organisation Development Consultant, which gave insight into the organisation's capacity, strategic planning and funding situation. Dependence of Samarthak Samiti on the Organisation Development Consultant has gradually reduced due to funding crunch and lack of new projects.

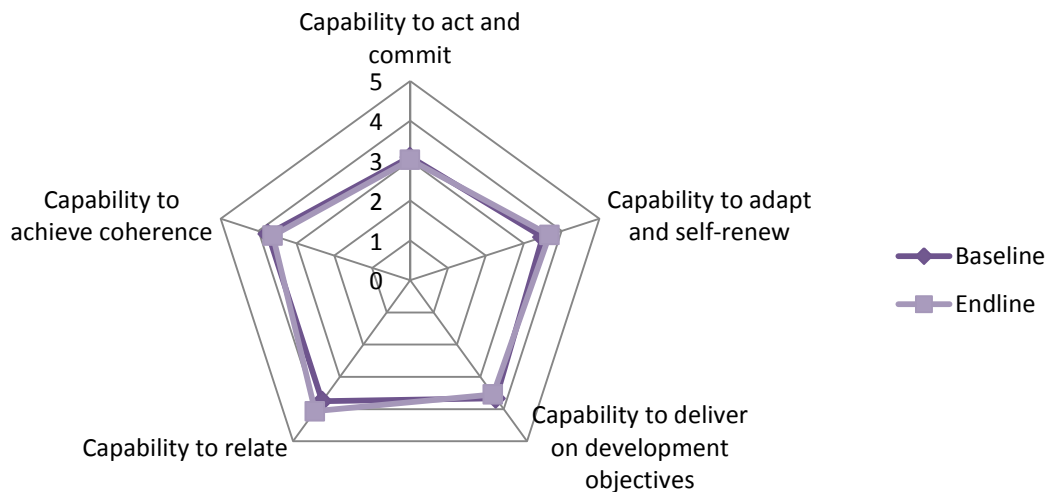

Unfortunately the person within Hivos (the CFA) who was well familiar with SS no longer works for Hivos India and could therefore not provide additional inside information on the capacity development and the changes in the organisational capacity indicators of SS. Tasks and responsibilities of the Hivos office in India were transferred to the Hivos head office in the Netherlands upon closure of the Bangalore office in December 2013 and in anticipation of the establishment of a new office in Mumbai in August 2014. The information on the capacity development interventions was "reconstructed" based on the baseline report, and the progress reports. The support to capacity development sheet was filled in by SS in March 2014, with the help of the CFA (the person responsible for managing the India portfolio in the transition of offices).

The five funders they had during the baseline have almost all terminated their contracts in 2014 (including Hivos). The effect of this might not be shown completely in the general causal map, since these changes are recent, whilst most likely the implications and consequences for SS are big.

5.2 Changes in organisational capacity

This section aims to provide an answer to the first and fourth evaluation questions:

1. *What are the changes in partner organisations' capacity during the 2012-2014 period?*
4. *What factors explain the findings drawn from the questions above?*

Changes took place in all of the five core capabilities. Below the changes in each of the capabilities are further explained, by referring to the specific indicators that changed.

Over the last two years many changes took place in the indicators under the capability to act and commit. Because of reduced funding the leader became more self-reliant and less dependent on the external consultant. The leader focussed more on capacity building for staff and at the same time second line leadership was strengthening. The leader also started taking a more business-like approach and through strategic planning exercises SS came to a more holistic strategy for its work. The leader also improved his networking capacity. There was a slight deterioration in the indicator on staff turnover, as 2-3 key staff left the organisation in the last two years, taking with them valuable skills. This was because of reduced funding, which led to having to let two staff members go and halving the salaries while increasing the workload of the staff that remained. There has, however, been improvement in the amount of trainings that were offered to staff. Hivos and other donors identified gaps and there were more need-based trainings in the last two years. As most of the contracts ended in 2014 there was a deterioration in the funding situation of SS. This in turn led SS to improve its capacity to showcase its work and write proposals for new funding opportunities slightly.

In the capability to adapt and self-renew SS improved slightly in various indicators. SS fine-tuned their M&E templates and MIS formats and made them available in Hindi for field staff to understand. There has also been internal capacity building for staff which has helped them in improving the M&E process. The improvement in the M&E process allowed SS to learn from their previous experiences which they take along in their strategic plans. In this sense, SS' strategic use of M&E has improved slightly. There has also been a very slight improvement in SS' tracking of its operating environment. They are now part of more (also national) networks, like the non-pesticide management initiative which allows them to track trends in agriculture, which is a new area they are working in.

In terms of the capability to deliver on development objectives, there has been a very slight improvement in cost-effectiveness, as reduced funding pushed SS to become more cost-effective. They are now e.g. making less use of hiring an external OD-consultant to assist in proposal writing. Because of the same reduced funding the ability of SS to balance quality and efficiency, however, deteriorated. They were unable to retain talented staff which negatively affected both the quality and the efficiency of their work.

In the capability to relate, SS is now receiving feedback on its strategies and policies from a more diverse set of stakeholders, including government agencies with whom they have better relationships. They have improved their networks, because there is now more interaction with different partners and they are more open to other organisations and networks, not only at local but also at national level.

Finally, SS slightly deteriorated in its capability to achieve coherence as they are applying new strategies, more related to agriculture, but these are not yet aligned with their current vision and mission which is only about natural resource management.

During the endline workshop some key organisational capacity changes were brought up by SS's staff, these have been captured in the general causal map in 4.2.2: improved staff capacity to write reports, improved staff capacity to train target groups and improved capacity for financial sustainability. The

evaluators considered it important to also note down the SPO's story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provide by the evaluation team.

SS said it improved its staff capacity in writing reports because their leader became more self-reliant and staff improved their capacity to collect and compile data. Becoming more self-reliant was triggered by reduced funding (including the ending of the MFS II contract in March 2014). Improved data collection and compilation skills can be attributed to trainings by MFS II funds (e.g. financial management training in 2012) and other funders like SDTT and Astha Sansthan. SS was better able to train their target groups because of a better understanding of the technical aspect of their roles and staff taking on increased responsibility of engaging with the target groups. The better understanding of the technical aspect can be attributed to trainings funded by MFS II and other funders (SDTT, IRMA), and these trainings focused on business plan development, marketing etc. Staff took up increased responsibility/workload because of reduced funding (including the ending of the MFS II contract in March 2014). Finally, SS to have had improved their capacity for financial sustainability because of new funding strategies, that were triggered by reduced funding, and improved interaction and networks with like-minded NGOs and government agencies. The new funding strategies were also due to the leader becoming more self-reliant and the shift in strategic focus from NTFP collection and marketing to agriculture and forest based strategies. According to SS, MFS II funded capacity development interventions thus played a role in improving their data collection and compilation and in improving their understanding of the technical aspect of their role in supporting their partners, in particular in advising beneficiaries on sustainable farming, processing of NTFP, documentation related to dispatch of NTFP and helping beneficiaries negotiate with local traders.

Appendix 1 Methodological approach & reflection

1. Introduction

This appendix describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around four key evaluation questions:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

Note: the methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report. At the end of this appendix a brief methodological reflection is provided.

2. Changes in partner organisation's capacity – evaluation question 1

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?**

This question was mainly addressed by reviewing changes in 5c indicators, but additionally a 'general causal map' based on the SPO perspective on key organisational capacity changes since the baseline

has been developed. Each of these is further explained below. The development of the general causal map is integrated in the steps for the endline workshop, as mentioned below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012.¹⁴ Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 4) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 5) **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

¹⁴ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Key steps to assess changes in indicators are described

16. Provide the description of indicators in the relevant formats – CDI team
17. Review the descriptions per indicator – in-country team & CDI team
18. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
19. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
20. Organise the field visit to the SPO – in-country team
21. Interview the CFA – CDI team
22. Run the endline workshop with the SPO – in-country team
23. Interview SPO staff – in-country team
24. Fill-in observation sheets – in-country team
25. Interview externals – in-country team
26. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
27. Provide to the overview of information per 5c indicator to in-country team – CDI team
28. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
29. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
30. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Below each of these steps is further explained.

*Step 1. Provide the **description of indicators** in the relevant formats – CDI team*

- These formats were to be used when collecting data from SPO staff, CFA, partners, and consultants. For each of these respondents different formats have been developed, based on the list of 5C indicators, similar to the procedure that was used during the baseline assessment. The CDI team needed to add the 2012 baseline description of each indicator. The idea was that each respondent would be requested to review each description per indicator, and indicate whether the current situation is different from the baseline situation, how this situation has changed, and what the reasons for the changes in indicators are. At the end of each format, a more general question is added that addresses how the organisation has changed its capacity since the baseline, and what possible reasons for change exist. Please see below the questions asked for each indicator as well as the more general questions at the end of the list of indicators.

General questions about key changes in the capacity of the SPO

What do you consider to be the key changes in terms of how the organisation/ SPO has developed its capacity since the baseline (2012)?

What do you consider to be the main explanatory reasons (interventions, actors or factors) for these changes?

List of questions to be asked for each of the 5C indicators (The entry point is the the description of each indicator as in the 2012 baseline report):

1. *How has the situation of this indicator changed compared to the situation during the baseline in 2012? Please tick one of the following scores:*
 - -2 = Considerable deterioration
 - -1 = A slight deterioration
 - 0 = No change occurred, the situation is the same as in 2012
 - +1 = Slight improvement
 - +2 = Considerable improvement
2. *Please describe what exactly has changed since the baseline in 2012*
3. *What interventions, actors and other factors explain this change compared to the baseline situation in 2012? Please tick and describe what interventions, actors or factors influenced this indicator, and how. You can tick and describe more than one choice.*
 - Intervention, actor or factor at the level of or by **SPO**:
 - Intervention, actor or factor at the level of or by the **Dutch CFA (MFS II funding)**:
 - Intervention, actor or factor at the level of or by the **other funders**:
 - **Other** interventions, actors or factors:
 - Don't know.

Step 2. Review the descriptions per indicator – in-country team & CDI team

Before the in-country team and the CDI team started collecting data in the field, it was important that they reviewed the description for each indicator as described in the baseline reports, and also added to the endline formats for review by respondents. These descriptions are based on document review, observation, interviews with SPO staff, CFA staff and external respondents during the baseline. It was important to explain this to respondents before they filled in the formats.

Step 3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)

The CDI team was responsible for collecting data from the CFA:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet – CFA perspective.

The in-country team was responsible for collecting data from the SPO and from external respondents (except CFA). The following formats were sent before the fieldwork started:

- 5C Endline support to capacity sheet – SPO perspective.
- 5C Endline interview guides for externals: partners; OD consultants.

Step 4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team

The CDI team, in collaboration with the in-country team, collected the following documents from SPOs and CFAs:

- Project documents: project proposal, budget, contract (Note that for some SPOs there is a contract for the full MFS II period 2011-2015; for others there is a yearly or 2-yearly contract. All new contracts since the baseline in 2012 will need to be collected);
- Technical and financial progress reports since the baseline in 2012;.

- Mid-term evaluation reports;
- End of project-evaluation reports (by the SPO itself or by external evaluators);
- Contract intake forms (assessments of the SPO by the CFA) or organisational assessment scans made by the CFA that cover the 2011-2014 period;
- Consultant reports on specific inputs provided to the SPO in terms of organisational capacity development;
- Training reports (for the SPO; for alliance partners, including the SPO);
- Organisational scans/ assessments, carried out by the CFA or by the Alliance Assessments;
- Monitoring protocol reports, especially for the 5C study carried out by the MFS II Alliances;
- Annual progress reports of the CFA and of the Alliance in relation to capacity development of the SPOs in the particular country;
- Specific reports that are related to capacity development of SPOs in a particular country.

The following documents (since the baseline in 2012) were requested from SPO:

- Annual progress reports;
- Annual financial reports and audit reports;
- Organisational structure vision and mission since the baseline in 2012;
- Strategic plans;
- Business plans;
- Project/ programme planning documents;
- Annual work plan and budgets;
- Operational manuals;
- Organisational and policy documents: finance, human resource development, etc.;
- Monitoring and evaluation strategy and implementation plans;
- Evaluation reports;
- Staff training reports;
- Organisational capacity reports from development consultants.

The CDI team will coded these documents in NVivo (qualitative data analysis software program) against the 5C indicators.

Step 5. Prepare and organise the field visit to the SPO – in-country team

Meanwhile the in-country team prepared and organised the logistics for the field visit to the SPO:

- **General endline workshop** consisted about one day for the self-assessments (about ½ to ¾ of the day) and brainstorm (about 1 to 2 hours) on key organisational capacity changes since the baseline and underlying interventions, factors and actors ('general causal map'), see also explanation below. This was done with the five categories of key staff: managers; project/ programme staff; monitoring and evaluation staff; admin & HRM staff; field staff. Note: for SPOs involved in process tracing an additional 1 to 1½ day workshop (managers; program/project staff; monitoring and evaluation staff) was necessary. See also step 7;
- **Interviews with SPO staff** (roughly one day);
- **Interviews with external respondents** such as partners and organisational development consultants depending on their proximity to the SPO. These interviews could be scheduled after the endline workshop and interviews with SPO staff.

General causal map

During the 5C endline process, a 'general causal map' has been developed, based on key organisational capacity changes and underlying causes for these changes, as perceived by the SPO. The general causal map describes cause-effect relationships, and is described both as a visual as well as a narrative.

As much as possible the same people that were involved in the baseline were also involved in the endline workshop and interviews.

Step 6. Interview the CFA – CDI team

The CDI team was responsible for sending the sheets/ formats to the CFA and for doing a follow-up interview on the basis of the information provided so as to clarify or deepen the information provided. This relates to:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet - CFA perspective.

Step 7. Run the endline workshop with the SPO – in-country team

This included running the endline workshop, including facilitation of the development of the general causal map, self-assessments, interviews and observations. Particularly for those SPOs that were selected for process tracing all the relevant information needed to be analysed prior to the field visit, so as to develop an initial causal map. Please see Step 6 and also the next section on process tracing (evaluation question two).

An endline workshop with the SPO was intended to:

- Explain the purpose of the fieldwork;
- Carry out in the self-assessments by SPO staff subgroups (unless these have already been filled prior to the field visits) - this may take some 3 hours.
- Facilitate a brainstorm on key organisational capacity changes since the baseline in 2012 and underlying interventions, factors and actors.

Purpose of the fieldwork: to collect data that help to provide information on what changes took place in terms of organisational capacity development of the SPO as well as reasons for these changes. The baseline that was carried out in 2012 was to be used as a point of reference.

Brainstorm on key organisational capacity changes and influencing factors: a brainstorm was facilitated on key organisational capacity changes since the baseline in 2012. In order to kick start the discussion, staff were reminded of the key findings related to the historical time line carried out in the baseline (vision, mission, strategies, funding, staff). This was then used to generate a discussion on key changes that happened in the organisation since the baseline (on cards). Then cards were selected that were related to organisational capacity changes, and organised. Then a 'general causal map' was developed, based on these key organisational capacity changes and underlying reasons for change as experienced by the SPO staff. This was documented as a visual and narrative. This general causal map was to get the story of the SPO on what they perceived as key organisational capacity changes in the organisation since the baseline, in addition to the specific details provided per indicator.

Self-assessments: respondents worked in the respective staff function groups: management; programme/ project staff; monitoring and evaluation staff; admin and HRM staff; field staff. Staff were assisted where necessary so that they could really understand what it was they were being asked to do as well as what the descriptions under each indicator meant.

Note: for those SPOs selected for process tracing an additional endline workshop was held to facilitate the development of detailed causal maps for each of the identified organisational change/ outcome areas that fall under the capability to act and commit, and under the capability to adapt and self-renew, and that are likely related to capacity development interventions by the CFA. See also the next section on process tracing (evaluation question two). It was up to the in-country team whether this workshop was held straight after the initial endline workshop or after the workshop and the follow-up interviews. It could also be held as a separate workshop at another time.

Step 8. Interview SPO staff – in-country team

After the endline workshop (developing the general causal map and carrying out self-assessments in subgroups), interviews were held with SPO staff (subgroups) to follow up on the information that was provided in the self-assessment sheets, and to interview staff that had not yet provided any information.

Step 9. Fill-in observation sheets_ – in-country team

During the visit at the SPO, the in-country team had to fill in two sheets based on their observation:

- 5C Endline observation sheet;
- 5C Endline observable indicators.

Step 10. Interview externals – in-country team & CDI team

The in-country team also needed to interview the partners of the SPO as well as organisational capacity development consultants that have provided support to the SPO. The CDI team interviewed the CFA.

Step 11. Upload and auto-code all the formats collected by in-country team and CDI team – CDI team

The CDI team was responsible for uploading and auto-coding (in Nvivo) of the documents that were collected by the in-country team and by the CDI team.

Step 12. Provide the overview of information per 5C indicator to in-country team – CDI team

After the analysis in NVivo, the CDI team provided a copy of all the information generated per indicator to the in-country team for initial analysis.

Step 13. Analyse the data and develop a draft description_of the findings per indicator and for the general questions – in-country team

The in-country team provided a draft description of the findings per indicator, based on the information generated per indicator. The information generated under the general questions were linked to the general causal map or detailed process tracing related causal map.

Step 14. Analyse the data and finalize the description of the findings per indicator, per capability and general – CDI team

The CDI team was responsible for checking the analysis by the in-country team with the Nvivo generated data and to make suggestions for improvement and ask questions for clarification to which the in-country team responded. The CDI team then finalised the analysis and provided final descriptions and scores per indicator and also summarize these per capability and calculated the summary capability scores based on the average of all indicators by capability.

Step 15. Analyse the information in the general causal map –in-country team & CDI team

The general causal map based on key organisational capacity changes as perceived by the SPO staff present at the workshop, was further detailed by in-country team and CDI team, and based on the notes made during the workshop and where necessary additional follow up with the SPO. The visual and narrative was finalized after feedback by the SPO. During analysis of the general causal map relationships with MFS II support for capacity development and other factors and actors were identified. All the information has been reviewed by the SPO and CFA.

3. Attributing changes in partner organisation's capacity – evaluation question 2

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?***

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process. The box below provides some background information on process tracing.

Background information on process tracing

The essence of process tracing research is that scholars want to go beyond merely identifying correlations between independent variables (Xs) and outcomes (Ys). Process tracing in social science is commonly defined by its addition to trace causal mechanisms (Bennett, 2008a, 2008b; Checkle, 2008; George & Bennett, 2005). A causal mechanism can be defined as "a complex system which produces an outcome by the interaction of a number of parts" (Glennan, 1996, p. 52). Process tracing involves "attempts to identify the intervening causal process – the causal chain and causal mechanism – between an independent variable (or variables) and the outcome of the dependent variable" (George & Bennett, 2005, pp. 206-207).

Process tracing can be differentiated into three variants within social science: theory testing, theory building, and explaining outcome process tracing (Beach & Pedersen, 2013).

Theory testing process tracing uses a theory from the existing literature and then tests whether evidence shows that each part of hypothesised causal mechanism is present in a given case, enabling within case inferences about whether the mechanism functioned as expected in the case and whether the mechanism as a whole was present. No claims can be made however, about whether the mechanism was the only cause of the outcome.

Theory building process tracing seeks to build generalizable theoretical explanations from empirical evidence, inferring that a more general causal mechanism exists from the fact of a particular case.

Finally, explaining outcome process tracing attempts to craft a minimally sufficient explanation of a puzzling outcome in a specific historical case. Here the aim is not to build or test more general theories but to craft a (minimally) sufficient explanation of the outcome of the case where the ambitions are more case centric than theory oriented.

Explaining outcome process tracing is the most suitable type of process tracing for analysing the causal mechanisms for selected key organisational capacity changes of the SPOs. This type of process tracing can be thought of as a single outcome study defined as seeking the causes of the specific outcome in a single case (Gerring, 2006; in: Beach & Pedersen, 2013). Here the ambition is to craft a minimally sufficient explanation of a particular outcome, with sufficiency defined as an explanation that accounts for all of the important aspects of an outcome with no redundant parts being present (Mackie, 1965).

Explaining outcome process tracing is an iterative research strategy that aims to trace the complex conglomerate of systematic and case specific causal mechanisms that produced the outcome in question. The explanation cannot be detached from the particular case. Explaining outcome process tracing refers to case studies whose primary ambition is to explain particular historical outcomes, although the findings of the case can also speak to other potential cases of the phenomenon. Explaining outcome process tracing is an iterative research process in which 'theories' are tested to see whether they can provide a minimally sufficient explanation of the outcome. Minimal sufficiency is defined as an explanation that accounts for an outcome, with no redundant parts. In most explaining outcome studies, existing theorisation cannot provide a sufficient explanation, resulting in a second stage in which existing theories are re-conceptualised in light of the evidence gathered in the preceding empirical analysis. The conceptualisation phase in explaining outcome process tracing is therefore an iterative research process, with initial mechanisms re-conceptualised and tested until the result is a theorised mechanism that provides a minimally sufficient explanation of the particular outcome.

Below a description is provided of how SPOs are selected for process tracing, and a description is provided on how this process tracing is to be carried out. Note that this description of process tracing provides not only information on the extent to which the changes in organisational development can be attributed to MFS II (evaluation question 2), but also provides information on other contributing factors and actors (evaluation question 4). Furthermore, it must be noted that the evaluation team has developed an adapted form of 'explaining outcome process tracing', since the data collection and analysis was an iterative process of research so as to establish the most realistic explanation for a particular outcome/ organisational capacity change. Below selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

ETHIOPIA

For Ethiopia the capabilities that are mostly targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 1

The extent to which the Dutch NGO explicitly targets the following capabilities – Ethiopia

Capability to:	AMREF	CARE	ECFA	FSCE	HOA- REC	HUND EE	NVEA	OSRA	TTCA
Act and commit	5	4	5	5	5	3	4	4	3
Deliver on development objectives	2	1	1	1	2	1	1	2	1
Adapt and self-renew	4	2	3	4	2	5	3	3	3
Relate	3	1	2	2	3	2	1	3	1
Achieve coherence	2	2	1	1	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Ethiopia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: AMREF,

ECFA, FSCE, HUNDEE. In fact, six SPOs would be suitable for process tracing. We just selected the first one per CFA following the criteria of not including more than one SPO per CFA for process tracing

Table 2

SPOs selected for process tracing – Ethiopia

Ethiopia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
AMREF	Dec 2015	Yes	Yes	Yes	Yes	AMREF NL	Yes
CARE	Dec 31, 2015	Partly	Yes	Yes	Yes – slightly	CARE Netherlands	No - not fully matching
ECFA	Jan 2015	Yes	Yes	Yes	Yes	Child Helpline International	Yes
FSCE	Dec 2015	Yes	Yes	Yes	Yes	Stichting Kinderpostzegels Netherlands (SKN); Note: no info from Defence for Children – ECPAT Netherlands	Yes
HOA-REC	Sustainable Energy project (ICCO Alliance): 2014 Innovative WASH (WASH Alliance): Dec 2015	Yes	Yes	Yes	Yes - slightly	ICCO	No - not fully matching
HUNDEE	Dec 2014	Yes	Yes	Yes	Yes	ICCO & IICD	Yes
NVEA	Dec 2015 (both)	Yes	Yes	Yes	Yes	Edukans Foundation (under two consortia); Stichting Kinderpostzegels Netherlands (SKN)	Suitable but SKN already involved for process tracing FSCE
OSRA	C4C Alliance project (farmers marketing): December 2014 ICCO Alliance project (zero grazing): 2014 (2 nd phase)	Yes	Yes	Yes	Yes	ICCO & IICD	Suitable but ICCO & IICD already involved for process tracing - HUNDEE
TTCA	June 2015	Partly	Yes	No	Yes	Edukans Foundation	No - not fully matching

INDIA

For India the capability that is mostly targeted by CFAs is the capability to act and commit. The next one in line is the capability to adapt and self-renew. See also the table below in which a higher score means that the specific capability is more intensively targeted.

Table 3

The extent to which the Dutch NGO explicitly targets the following capabilities – India¹⁵

Capability to:	BVHA	COUNT	DRIST I	FFID	Jana Vikas	Samar thak Samiti	SMILE	SDS	VTRC
Act and commit	5	3	4	4	4	4	4	3	5
Deliver on development objectives	1	5	1	1	1	1	1	2	1
Adapt and self-renew	2	2	1	3	1	1	4	1	4
Relate	3	1	1	1	1	1	2	1	2
Achieve coherence	1	1	1	4	1	1	1	1	2

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, India.

Below you can see a table describing when the contract with the SPO is to be ended and whether SPO and the CFA both expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BVHA, COUNT, FFID, SMILE and VTRC. Except for SMILE (capability to act and commit only), for the other SPOs the focus for process tracing can be on the capability to act and commit and on the capability to adapt and self-renew.

Table 4

SPOs selected for process tracing – India

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BVHA	2014	Yes	Yes	Yes	Yes	Simavi	Yes; both capabilities
COUNT	2015	Yes	Yes	Yes	Yes	Woorden Daad	Yes; both capabilities
DRISTI	31-03-2012	Yes	Yes	No	no	Hivos	No - closed in 2012
FFID	30-09-2014	Yes	Yes	Yes	Yes	ICCO	Yes

¹⁵ RGVN, NEDSF and Women's Rights Forum (WRF) could not be reached timely during the baseline due to security reasons. WRF could not be reached at all. Therefore these SPOs are not included in Table 1.

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew –by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Jana Vikas	2013	Yes	Yes	Yes	No	Cordaid	No - contract is and the by now; not fully matching focus
NEDSF							No – delayed baseline
RGVN							No - delayed baseline
Samarthak Samiti (SDS)	2013 possibly longer	Yes	Yes	Yes	No	Hivos	No - not certain of end date and not fully matching focus
Shivi Development Society (SDS)	Dec 2013 intention 2014	Yes	Yes	Yes	No	Cordaid	No - not fully matching focus
Smile	2015	Yes	Yes	Yes	Yes	Wilde Ganzen	Yes; first capability only
VTRC	2015	Yes	Yes	Yes	Yes	Stichting Red een Kind	Yes; both capabilities

INDONESIA

For Indonesia the capabilities that are most frequently targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 5

The extent to which the Dutch NGO explicitly targets the following capabilities – Indonesia

Capability to:	ASB	Daya ikologi	ECPAT	GSS	Lem bage Kita	Pt. PPMA	Rifka Annisa	WIIP	Yad upa	Yayasan Kelola	YPI	YRBI
Act and commit	4	4	4	5	4	4	5	3	3	2	5	4
Deliver on development objectives	1	1	1	2	2	1	2	1	1	1	1	1
Adapt and self-renew	3	1	2	4	2	3	4	4	1	1	4	3
Relate	1	1	2	3	3	2	1	2	2	2	3	2
Achieve coherence	1	1	1	2	1	1	2	2	1	1	2	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Indonesia.

The table below describes when the contract with the SPO is to be ended and whether both SPO and the CFA expect to focus on these two selected capabilities (MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: ASB, ECPAT, Pt.PPMA, YPI, YRBI.

Table 6

SPOs selected for process tracing – Indonesia

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
ASB	February 2012; extension Feb,1, 2013 – June,30, 2016	Yes	Yes	Yes	Yes	Hivos	Yes
Dayakologi	2013; no extension	Yes	Yes	Yes	No	Cordaid	No: contract ended early and not matching enough
ECPAT	August 2013; Extension Dec 2014	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	Yes
GSS	31 December 2012; no extension	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	No: contract ended early
Lembaga Kita	31 December 2012; no extension	Yes	Yes	No	Yes	Free Press Unlimited - Mensen met een Missie	No - contract ended early
Pt.PPMA	May 2015	Yes	Yes	No	Yes	IUCN	Yes, capability to act and commit only
Rifka Annisa	Dec, 31 2015	No	Yes	No	Yes	Rutgers WPF	No - no match between expectations CFA and SPO
WIIP	Dec 2015	Yes	Not MFS II	Yes	Not MFS II	Red Cross	No - Capacity development interventions are not MFS II financed. Only some overhead is MFS II

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Yayasan Kelola	Dec 30, 2013; extension of contract being processed for two years (2014-2015)	Yes	Not really	Yes	Not really	Hivos	No - no specific capacity development interventions planned by Hivos
YPI	Dec 31, 2015	Yes	Yes	Yes	Yes	Rutgers WPF	Yes
YRBI	Oct, 30, 2013; YRBI end of contract from 31st Oct 2013 to 31st Dec 2013. Contract extension proposal is being proposed to MFS II, no decision yet.	Yes	Yes	Yes	Yes	ICCO	Yes
Yadupa	Under negotiation during baseline; new contract 2013 until now	Yes	Nothing committed	Yes	Nothing committed	IUCN	No, since nothing was committed by CFA

LIBERIA

For Liberia the situation is arbitrary which capabilities are targeted most CFA's. Whilst the capability to act and commit is targeted more often than the other capabilities, this is only so for two of the SPOs. The capability to adapt and self-renew and the capability to relate are almost equally targeted for the five SPOs, be it not intensively. Since the capability to act and commit and the capability to adapt and self-renew are the most targeted capabilities in Ethiopia, India and Indonesia, we choose to focus on these two capabilities for Liberia as well. This would help the synthesis team in the further analysis of these capabilities related to process tracing. See also the table below.

Table 7

The extent to which the Dutch NGO explicitly targets the following capabilities – Liberia

Capability to:	BSC	DEN-L	NAWOCOL	REFOUND	RHRAP
Act and commit	5	1	1	1	3
Deliver on development objectives	3	1	1	1	1
Adapt and self-renew	2	2	2	2	2
Relate	1	2	2	2	2
Achieve coherence	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Liberia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Also, for two of the five SPOs capability to act and commit is targeted more intensively compared to the other capabilities. Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BSC and RHRAP.

Table 8

SPOs selected for process tracing – Liberia

Liberia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BSC	Dec 31, 2015	Yes	Yes	Yes	Yes	SPARK	Yes
DEN-L	2014	No	No	Unknown	A little	ICCO	No – not matching enough
NAWOCOL	2014	Yes	No	No	A little	ICCO	No – not matching enough
REFOUND	At least until 2013 (2015?)	Yes	No	Yes	A little	ICCO	No – not matching enough
RHRAP	At least until 2013 (2014?)	Yes	Yes	Yes	Yes	ICCO	Yes

Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ' general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

Some definitions of the terminology used for this MFS II 5c evaluation

Based upon the different interpretations and connotations the use of the term causal mechanism we use the following terminology for the remainder of this paper:

A **detailed causal map** (or **model of change**) = the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change.

A **causal mechanism** = is the combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome (Beach and Pedersen, 2013, p. 176).

Part or **cause** = one actor with its attributes carrying out activities/ producing outputs that lead to change in other parts. The final part or cause is the change/ outcome.

Attributes of the actor = specificities of the actor that increase his chance to introduce change or not such as its position in its institutional environment.

*Step 1. Identify the **planned MFS II supported capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

Chapter 4.1 and 4.2 in the baseline report were reviewed. Capacity development interventions as planned by the CFA for the capability to act and commit and for the capability to adapt and self-renew were described and details inserted in the summary format. This provided an overview of the capacity development activities that were originally planned by the CFA for these two capabilities and assisted in focusing on relevant outcomes that are possibly related to the planned interventions.

*Step 2. Identify the **implemented capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

The input from the CFA was reviewed in terms of what capacity development interventions have taken place in the MFS II period. This information was found in the 'Support to capacity development sheet - endline - CFA perspective' for the SPO, based on details provided by the CFA and further discussed during an interview by the CDI team.

The CFA was asked to describe all the MFS II supported capacity development interventions of the SPO that took place during the period 2011 up to now. The CDI team reviewed this information, not only the interventions but also the observed changes as well as the expected long-term changes, and

then linked these interventions to relevant outcomes in one of the capabilities (capability to act and commit; and capability to adapt and self-renew).

*Step 3. Identify **initial changes/ outcome areas** in these two capabilities – by CDI team & in-country team*

The CDI team was responsible for coding documents received from SPO and CFA in NVivo on the following:

- 5C Indicators: this was to identify the changes that took place between baseline and endline. This information was coded in Nvivo.
- Information related to the capacity development interventions implemented by the CFA (with MFS II funding) (see also Step 2) to strengthen the capacity of the SPO. For example, the training on financial management of the SPO staff could be related to any information on financial management of the SPO. This information was coded in Nvivo.

In addition, the response by the CFA to the changes in 5C indicators format, was auto-coded.

The in-country team was responsible for timely collection of information from the SPO (before the fieldwork starts). This set of information dealt with:

- MFS II supported capacity development interventions during the MFS II period (2011 until now).
- Overview of all trainings provided in relation to a particular outcome areas/organisational capacity change since the baseline.
- For each of the identified MFS II supported trainings, training questionnaires have been developed to assess these trainings in terms of the participants, interests, knowledge and skills gained, behaviour change and changes in the organisation (based on Kirkpatrick's model), one format for training participants and one for their managers. These training questionnaires were sent prior to the field visit.
- Changes expected by SPO on a long-term basis ('Support to capacity development sheet - endline - SPO perspective').

For the selection of change/ outcome areas the following criteria were important:

- The change/ outcome area is in one of the two capabilities selected for process tracing: capability to act and commit or the capability to adapt and self-renew. This was the first criteria to select upon.
- There was a likely link between the key organisational capacity change/ outcome area and the MFS II supported capacity development interventions. This also was an important criteria. This would need to be demonstrated through one or more of the following situations:
 - In the 2012 theory of change on organisational capacity development of the SPO a link was indicated between the outcome area and MFS II support;
 - During the baseline the CFA indicated a link between the planned MFS II support to organisational development and the expected short-term or long-term results in one of the selected capabilities;
 - During the endline the CFA indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities;
 - During the endline the SPO indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities.

Reviewing the information obtained as described in Step 1, 2, and 3 provided the basis for selecting key organisational capacity change/ outcome areas to focus on for process tracing. These areas were to be formulated as broader outcome areas, such as 'improved financial management', 'improved monitoring and evaluation' or 'improved staff competencies'.

Note: the outcome areas were to be formulated as intermediates changes. For example: an improved monitoring and evaluation system, or enhanced knowledge and skills to educate the target group on climate change. Key outcome areas were also verified - based on document review as well as discussions with the SPO during the endline.

*Step 4. Construct the **detailed, initial causal map** (theoretical model of change) – CDI & in-country team*

A detailed initial causal map was developed by the CDI team, in collaboration with the in-country team. This was based on document review, including information provided by the CFA and SPO on MFS II supported capacity development interventions and their immediate and long-term objectives as well as observed changes. Also, the training questionnaires were reviewed before developing the initial causal map. This detailed initial causal map was to be provided by the CDI team with a visual and related narrative with related references. This initial causal map served as a reference point for further reflection with the SPO during the process tracing endline workshop, where relationships needed to be verified or new relationships established so that the second (workshop-based), detailed causal map could be developed, after which further verification was needed to come up with the final, concluding detailed causal map.

It's important to note that organisational change area/ outcome areas could be both positive and negative.

For each of the selected outcomes the team needed to make explicit the theoretical model of change. This meant finding out about the range of different actors, factors, actions, and events etc. that have contributed to a particular outcome in terms of organisational capacity of the SPO.

A model of change of good quality includes:

- The causal pathways that relate the intervention to the realised change/ outcome;
- Rival explanations for the same change/ outcome;
- Assumptions that clarify relations between different components or parts;
- Case specific and/or context specific factors or risks that might influence the causal pathway, such as for instance the socio-cultural-economic context, or a natural disaster;
- Specific attributes of the actors e.g. CFA and other funders.

A model of change (within the 5C study called a 'detailed causal map') is a complex system which produces intermediate and long-term outcomes by the interaction of other parts. It consists of parts or causes that often consist of one actor with its attributes that is implementing activities leading to change in other parts (Beach & Pedersen, 2013). A helpful way of constructing the model of change is to think in terms of actors carrying out activities that lead to other actors changing their behaviour. The model of change can be explained as a range of activities carried out by different *actors* (including the CFA and SPO under evaluation) that will ultimately lead to an outcome. Besides this, there are also '*structural*' elements, which are to be interpreted as external factors (such as economic conjuncture); and *attributes* of the actor (does the actor have the legitimacy to ask for change or not, what is its position in the sector) that should be looked at (Beach & Pedersen, 2013). In fact Beach and Pedersen, make a fine point about the subjectivity of the actor in a dynamic context. This means, in qualitative methodologies, capturing the changes in the actor, acted upon area or person/organisation, in a non sequential and non temporal format. Things which were done recently could have corrected behavioural outcomes of an organisation and at the same time there could be processes which incrementally pushed for the same change over a period of time. Beach and Pedersen espouse this methodology because it captures change in a dynamic fashion as against the methodology of logical framework. For the MFS II evaluation it was important to make a distinction between those paths in the model of change that are the result of MFS II and rival pathways.

The construction of the model of change started with the identified key organisational capacity change/ outcome, followed by an inventory of all possible subcomponents that possibly have caused the change/ outcome in the MFS II period (2011-up to now, or since the baseline). The figure below presents an imaginary example of a model of change. The different colours indicate the different types of support to capacity development of the SPO by different actors, thereby indicating different pathways of change, leading to the key changes/ outcomes in terms of capacity development (which in this case indicates the ability to adapt and self-renew).

Figure 1 An imaginary example of a model of change

Step 5. Identify **types of evidence** needed to verify or discard different causal relationships in the model of change – in-country teams with support from CDI team

Once the causal mechanism at theoretical level were defined, empirical evidence was collected so as to verify or discard the different parts of this theoretical model of change, confirm or reject whether subcomponents have taken place, and to find evidence that confirm or reject the causal relations between the subcomponents.

A key question that we needed to ask ourselves was, "What information do we need in order to confirm or reject that one subcomponent leads to another, that X causes Y?". The evaluation team needed to agree on what information was needed that provides empirical manifestations for each part of the model of change.

There are four distinguishable types of evidence that are relevant in process tracing analysis: *pattern*, *sequence*, *trace*, and *account*. Please see the box below for descriptions of these types of evidence.

The evaluation team needed to agree on the types of evidence that was needed to verify or discard the manifestation of a particular part of the causal mechanism. Each one or a combination of these different types of evidence could be used to confirm or reject the different parts of the model of change. This is what is meant by robustness of evidence gathering. Since causality as a concept can bend in many ways, our methodology, provides a near scientific model for accepting and rejecting a particular type of evidence, ignoring its face value.

Types of evidence to be used in process tracing

Pattern evidence relates to predictions of statistical patterns in the evidence. For example, in testing a mechanism of racial discrimination in a case dealing with employment, statistical patterns of employment would be relevant for testing this part of the mechanism.

Sequence evidence deals with the temporal and spatial chronology of events predicted by a hypothesised causal mechanism. For example, a test of the hypothesis could involve expectations of the timing of events where we might predict that if the hypothesis is valid, we should see that the event B took place after event A took place. However, if we found that event B took place before event A took place, the test would suggest that our confidence in the validity of this part of the mechanism should be reduced (disconfirmation/ falsification).

Trace evidence is evidence whose mere existence provides proof that a part of a hypothesised mechanism exists. For example, the existence of the minutes of a meeting, if authentic ones, provide strong proof that the meeting took place.

Account evidence deals with the content of empirical material, such as meeting minutes that detail what was discussed or an oral account of what took place in the meeting.

Source: Beach and Pedersen, 2013

Below you can find a table that provides guidelines on what to look for when identifying types of evidence that can confirm or reject causal relationships between different parts/ subcomponents of the model of change. It also provides one example of a part of a causal pathway and what type of information to look for.

Table 9

Format for identifying types of evidence for different causal relationships in the model of change (example included)

Part of the model of change	Key questions	Type of evidence needed	Source of information
Describe relationship between the subcomponents of the model of change	Describe questions you would like to answer so as to find out whether the components in the relationship took place, when they took place, who was involved, and whether they are related	Describe the information that we need in order to answer these questions. Which type of evidence can we use in order to reject or confirm that subcomponent X causes subcomponent Y? Can we find this information by means of : Pattern evidence; Sequence evidence; Trace evidence; Account evidence?	Describe where you can find this information
Example: Training workshops on M&E provided by MFS II funding and other sources of funding	Example: What type of training workshops on M&E took place? Who was trained? When did the training take place? Who funded the training? Was the funding of training provided before the training took place? How much money was available for the training?	Example: Trace evidence: on types of training delivered, who was trained, when the training took place, budget for the training Sequence evidence on timing of funding and timing of training Content evidence: what the training was about	Example: Training report SPO Progress reports interviews with the CFA and SPO staff Financial reports SPO and CFA

Please note that for practical reasons, the 5C evaluation team decided that it was easier to integrate the specific questions in the narrative of the initial causal map. These questions would need to be

addressed by the in country team during the process tracing workshop so as to discover, verify or discard particular causal mechanisms in the detailed, initial causal map. Different types of evidence was asked for in these questions.

*Step 6. **Collect data** to verify or discard causal mechanisms and develop workshop-based, detailed causal map – in-country team*

Once it was decided by the in-country and CDI evaluation teams what information was to be collected during the interaction with the SPO, data collection took place. The initial causal maps served as a basis for discussions during the endline workshop with a particular focus on process tracing for the identified organisational capacity changes. But it was considered to be very important to understand from the perspective of the SPO how they understood the identified key organisational capacity change/outcome area has come about. A new detailed, workshop-based causal map was developed that included the information provided by SPO staff as well as based on initial document review as described in the initial detailed causal map. This information was further analysed and verified with other relevant information so as to develop a final causal map, which is described in the next step.

*Step 7. **Assess the quality of data and analyse data**, and develop the **final detailed causal map (model of change)** – in-country team and CDI team*

Quality assurance of the data collected and the evidence it provides for rejecting or confirming parts of causal explanations are a major concern for many authors specialised in contribution analysis and process-tracing. Stern et al. (2012), Beach and Pedersen (2013), Lemire, Nielsen and Dybdal (2012), Mayne (2012) and Delahais and Toulemonde (2012) all emphasise the need to make attribution/contribution claims that are based on pieces of evidence that are rigorous, traceable, and credible. These pieces of evidence should be as explicit as possible in proving that *subcomponent X causes subcomponent Y* and ruling out other explanations. Several tools are proposed to check the nature and the quality of data needed. One option is, Delahais and Toulemonde's Evidence Analysis Database, which we have adapted for our purpose.

Delahais and Toulemonde (2012) propose an Evidence Analysis Database that takes into consideration three criteria:

Confirming/ rejecting a causal relation (yes/no);

Type of causal mechanism: intended contribution/ other contribution/ condition leading to intended contribution/ intended condition to other contribution/ feedback loop;

Strength of evidence: strong/ rather strong/ rather weak/ weak.

We have adapted their criteria to our purpose. The in-country team, in collaboration with the CDI team, used the criteria in assessing whether causal relationships in the causal map, were strong enough. This has been more of an iterative process trying to find additional evidence for the established relationships through additional document review or contacting the CFA and SPO as well as getting their feedback on the final detailed causal map that was established. Whilst the form below has not been used exactly in the manner depicted, it has been used indirectly when trying to validate the information in the detailed causal map. After that, the final detailed causal map is established both as a visual as well as a narrative, with related references for the established causal relations.

<i>Example format for the adapted evidence analysis database (example included)</i> Description of causal relation	Confirming/ rejecting a causal relation (yes/no)	Type of information providing the background to the confirmation or rejection of the causal relation	Strength of evidence: strong/ rather strong/ rather weak/ weak	Explanation for why the evidence is (rather) strong or (rather) weak, and therefore the causal relation is confirmed/ rejected
e.g. Training staff in M&E leads to enhanced M&E knowledge, skills and practice	e.g. Confirmed	e.g. Training reports confirmed that staff are trained in M&E and that knowledge and skills increased as a result of the training		

Step 8. **Analyse and conclude** on findings– in-country team and CDI team

The final detailed causal map was described as a visual and narrative and this was then analysed in terms of the evaluation question two and evaluation question four: "To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?" and "What factors explain the findings drawn from the questions above?" It was analysed to what extent the identified key organisational capacity change can be attributed to MFS II supported capacity development interventions as well as to other related factors, interventions and actors.

4. Explaining factors – evaluation question 4

This paragraph describes the data collection and analysis methodology for answering the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This has been explained in the first section of this appendix. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information was procured for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the process of process tracing as described in the section above.

5. Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team.

Use of the 5 core capabilities framework and qualitative approach: this has proven to a be very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in

the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
- Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
- Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a

result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

Appendix 2 Background information on the five core capabilities framework

The 5 capabilities (5C) framework was to be used as a framework for the evaluation of capacity development of Southern Partner Organisations (SPOs) of the MFS II consortia. The 5C framework is based on a five-year research program on 'Capacity, change and performance' that was carried out by the European Centre for Development Policy Management (ECDPM). The research included an extensive review of the literature and sixteen case studies. The 5C framework has also been applied in an IOB evaluation using 26 case studies in 14 countries, and in the baseline carried out per organisation by the MFS II organisations for the purpose of the monitoring protocol.

The 5C framework is structured to understand and analyse (changes in) the capacity of an organization to deliver (social) value to its constituents. This introduction briefly describes the 5C framework, mainly based on the most recent document on the 5C framework (Keijzer et al., 2011).

The 5C framework sees capacity as an **outcome** of an **open system**. An organisation or collaborative association (for instance a network) is seen as a system interacting with wider society. The most critical practical issue is to ensure that relevant stakeholders share a common way of thinking about capacity and its core constituents or capabilities. Decisive for an organisation's capacity is the context in which the organisation operates. This means that **understanding context issues** is crucial. The use of the 5C framework requires a multi-stakeholder approach because shared values and results orientation are important to facilitate the capacity development process. The 5C framework therefore needs to **accommodate the different visions** of stakeholders and conceive different strategies for raising capacity and improving performance in a given situation.

The 5C framework defines capacity as '**producing social value**' and identifies five core capabilities that together result in that overall capacity. Capacity, capabilities and competences are seen as follows:

Capacity is referred to as the overall ability of an organisation or system to create value for others;

Capabilities are the collective ability of a group or a system to do something either inside or outside the system. The collective ability involved may be technical, logistical, managerial or generative (i.e. the ability to earn legitimacy, to adapt, to create meaning, etc.);

Competencies are the energies, skills and abilities of individuals.

Fundamental to developing capacity are inputs such as human, material and financial resources, technology, and information. To the degree that they are developed and successfully integrated, capabilities contribute to the overall capacity or ability of an organisation or system to create value for others. A single capability is not sufficient to create capacity. All are needed and are strongly interrelated and overlapping. Thus, to achieve its development goals, the 5C framework says that every organisation or system must have **five basic capabilities**:

- The capability to act and commit;
- The capability to deliver on development objectives;
- The capability to adapt and self-renew;
- The capability to relate (to external stakeholders);
- The capability to achieve coherence.

In order to have a common framework for evaluation, the five capabilities have been reformulated in outcome domains and for each outcome domain performance indicators have been developed.

There is some overlap between the five core capabilities but together the five capabilities result in a certain level of capacity. Influencing one capability may have an effect on one or more of the other

capabilities. In each situation, the level of any of the five capabilities will vary. Each capability can become stronger or weaker over time.

Appendix 3 Changes in organisational capacity of the SPO - 5C indicators

Below you will find a description for each of the indicators under each of the capabilities, what the situation is as assessed during the endline, how this has changed since the baseline and what are the reasons for change.

Capability to act and commit

Level of Effective Leadership

1.1. Responsive leadership: 'Leadership is responsive, inspiring, and sensitive'

This is about leadership within the organisation (operational, strategic). If there is a larger body then you may also want to refer to leadership at a higher level but not located at the local organisation.

The leader continues to be responsive and focused in his work. Since the baseline there is a slight improvement in the capacity of the leader in being more self-reliant and taking more responsibility in developing proposals, taking the lead in writing donor reports and strategic planning. He is less dependent on external consultants and Samarthak Samiti's mother organisation Astha Sansthan. This is evident from the fact that the consultant was initially invited for 4-5 times in a month but now his help is sought only 4-5 times in a quarter. He has been independently trying to put together proposals, compiling information from the field and translating it into English, which he is now better versed in. The leader is focusing on the capacity building of his field staff by offering them training opportunities and exposure visits so that they can independently train the target groups and address their issues. Reduced funding and need to sustain the organisation has compelled the leader to be self-reliant. The leader is still mentored by the general body which consists of 24 cooperative members and 2 invitees and meets twice a year. The executive council consists of 13 members (3 women) who meet regularly every quarter and act upon decisions taken at the general body meetings and also share information on the progress of the cooperatives. Also second line of leadership is strengthening as the accountant is taking on more responsibilities.

Score baseline: 4.0

Score endline: 4.25 (very slight improvement)

1.2. Strategic guidance: 'Leaders provide appropriate strategic guidance (strategic leader and operational leader)'

This is about the extent to which the leader(s) provide strategic directions

The strategic directions provided by the leader are still in line with the vision of the organization. Though he gives strategic guidance he also allows the flexibility to modify the guidelines in case the conditions on the field require doing so. The leader is now taking a more business-like approach by focussing on non-timber forest produce (NTFP) collection and marketing. This change in approach has come about through strategic planning exercises with the team. Samarthak Samiti is now more looking at holistic agriculture based on the livelihoods approach with a focus on generating own income instead of depending on grants. The leader has also improved his capacity to network with the government and like-minded NGOs and looks at other sustainable strategies for the organisation. He has taken initiatives in approaching new donors for the sustainability of the organisation. As a result he approached two new donors in 2013: the Centre for Environment Education Ahmedabad and Wells for India. The functioning of SS is still transparent and the decision making both internal and external

is democratic in nature. SS being an umbrella organisation for several minor forest produce groups and cooperatives still has a strong representation of cooperative members from the community.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

1.3. Staff turnover: 'Staff turnover is relatively low'

This is about staff turnover.

Staff turnover continues to be low at the field level. The staff is committed to the organisation and the leader. However, the 2-3 key programme staff has left during the last two years as the organisation did not have funds to support them. The SS team now has six members. The staff that has left held responsible positions and Samarthak Samiti's success depended on their capabilities. This is thus a serious concern as it reflects the poor funding status of the organisation, its inability to retain its staff and at the same time involves losing skills acquired by the staff during training programmes.

Score baseline: 3.0

Score endline: 2.0 (deterioration)

Level of realistic strategic planning

1.4. Organisational structure: 'Existence of clear organisational structure reflecting the objectives of the organisation'

Observable indicator: Staff have copy of org structure and understand this

Since baseline there has been no change in the organisational structure. There is still no very strong hierarchical structure. Everyone works and sits together in one room; also the leader prefers working with staff in the same room. An organogram is available in the Operational Policy. Strategic and operational decisions are taken by the project team headed by the secretary, and these are then presented in the executive body meeting for approval. During the endline workshop a plan that is in the pipeline was shared with the evaluation team to reshuffle the board members and form an advisory committee, so that the decision making process can be faster.

Score baseline: 3.0

Score endline: 3.0 (no change)

1.5. Articulated strategies: 'Strategies are articulated and based on good situation analysis and adequate M&E'

Observable indicator: strategies are well articulated. Situation analysis and monitoring and evaluation are used to inform strategies.

Samarthak Samiti has well-articulated strategies both at the programme as well as the organizational level. While the former is based on a good situational analysis of the target population the latter is based on achieving sustainability. Since the field staff of Samarthak Samiti works closely with the target population they are always aware of the situation on the ground. The organisation has formed different Minor Forest Produce (MFP) collection groups and capacitated them to become entrepreneurs. Regular interaction with these groups through meetings and trainings helps Samarthak Samiti get feedback on their programme strategies. In order to be self-sustainable, the organisation is in the process of strengthening their producer company for marketing their products. Samarthak Samiti has initiated a centralized processing and storage centre at the cooperative level for their products. The producer company which was registered in 2011 now has the "Desert Green" trademark on its products. The leader is trying to strengthen producer companies with the hope that the salaries of the staff of Samarthak Samiti will be paid by the members of the cooperatives for the services they offer. However, until now only one out of nine cooperatives got registered and further effort is needed to strengthen the cooperatives.

Score baseline: 3.0

Score endline: 3.0 (no change)

Level of translation of strategy into operations

1.6. Daily operations: 'Day-to-day operations are in line with strategic plans'

This is about the extent to which day-to-day operations are aligned with strategic plans.

Day to day operational plans continue to be in line with the strategic plans. The annual strategic plan clearly defines activities, objectives, output, outcomes and quarterly targets and based on this the staff make monthly plans. The monthly plans are presented in the first week of the month and on the basis of these monthly plans, daily plans are made. Before setting out to work, the field staff at the cluster level meets to review the work plan for the day.

Score baseline: 3.0

Score endline: 3.0 (no change)

Level of Staff Capacity and Motivation

1.7. Staff skills: 'Staff have necessary skills to do their work'

This is about whether staff have the skills necessary to do their work and what skills they might they need.

In comparison with the baseline situation staff express a better understanding of the technical aspects of their roles. They have improved their skills in advising beneficiaries on sustainable farming, processing of Non-Timber Forest Produce (NTFP), documentation related to dispatch of NTFP and helping beneficiaries negotiate with local traders. Field staff have also developed their skills in documentation procedures, invoices and preparing receipt for dispatch of goods. Customised/ needs-based training and exposure visit programmes supported by Hivos and other donors have capacitated the staff on different skills and knowledge, such as: use of bio-pesticide, nursery raising, managing and developing a producer company, report writing, case study writing and MIS. Most of the gaps in staff skills that were flagged in the baseline are now filled. Field staff's capacity has increased in marketing the product as they learned from the experience in the festivals Vikas mela and Shrashti mela. This has resulted in increased capacity of the staff to train their target groups. The leader has made a conscious effort to improve his English by writing reports and proposals with minimal help from the OD consultant. There is still a need for the staff to improve their Basic English and a mechanism for the organization to retain its skilled staff or knowledge because 2-3 trained staff left the organisation as Samarthak Samiti. This has been a major setback for Samarthak Samiti. While SS had reached a good level of trained staff, with 2-3 trained staff leaving the situation changed dramatically. The programme staff that was trained on results-based monitoring could not be retained as the organisation did not have sufficient funds. In effect, while there is trained field staff in the organisation, trained programme staff has left Samarthak Samiti.

Score baseline: 3.0

Score endline: 3.0 (no change)

1.8. Training opportunities: 'Appropriate training opportunities are offered to staff'

This is about whether staff at the SPO are offered appropriate training opportunities

During the last two years Samarthak Samiti has made significant effort in providing need based training opportunities to its staff with an aim to be self-sustaining. Hivos and other donors continuously identified gaps in the skills of the staff and trained them on focused data collection, report and proposal writing. Some of the trainings that were offered to the staff were on: FCRA act

and financial management supported by Hivos (2012, in Bangalore); writing reports and case studies facilitated by a consultant and Astha Sansthan (2014, in Udaipur); Waadi cultivation training; leadership (2013, at Astha Sansthan, Udaipur); bio-pesticides making training (2013, in Dhariyawad, Rajasthan); business planning training supported by Hivos (at Mungana Rajasthan); results-based monitoring and project engagement (in Udaipur); nursery raising and use of bio-pesticide training supported by Dorabji Trust (in Udaipur in 2012); project and financial management orientation (in Dahood); participatory marketing system development training supported by Christian Aid (in Madurai in 2013); management of the social enterprise training at (in Anand); management of producer company (in Hyderabad). There have also been exposure visits in 2014: visit to the Indian Institute of Management, Ahmedabad in 2014 to learn about how to market produce, supported by Hivos and Dorabji Trust; visit to Sultanpur, Madhya Pradesh to see the income generation activities of other cooperatives, supported by Dorabji Trust and Hivos; visit to Krishi Vigyan Kendra, supported by Hivos and Krishi Vigyan Kendra. In 2013 the following exposure visits were made: visit to Pratapgarh Krishi Vigyan Kendra for prevention of pest attacks, funded by Dorabji Trust, visit to Shrashti mela, a three day fair where NGOs showcase their products, supported Dorabji Trust and Hivos; visit to Coimbatore on methods of honey collection.

Score baseline: 3.0

Score endline: 4.0 (no change)

1.9.1. Incentives: 'Appropriate incentives are in place to sustain staff motivation'

This is about what makes people want to work here. Incentives could be financial, freedom at work, training opportunities, etc.

The leader continues to be the role model for the staff. Also, since the field staff is from the community, they are motivated to help their own community. It is thus the internal drive that keeps them loyal and committed towards the organisation. In the last two years as the funding from the donors has gradually reduced, staff salaries have also been reduced by 50%. Two project level staff had to leave the organization due to lack of funds to support them. This has increased the workload on the remaining staff.

Score baseline: 4.0

Score endline: 3.0 (deterioration)

Level of Financial Resource Security

1.9.2. Funding sources: 'Funding from multiple sources covering different time periods'

This is about how diversified the SPOs funding sources are over time, and how the level of funding is changing over time.

During the baseline evaluation, Samarthak Samiti received funds from five different donors. Most of the contracts terminated in 2014, for example the contract with Hivos ended on the 31st of March 2014. Over the last two years, funding has therefore decreased. As a consequence to the phasing out of donor funding, government's anti-smoking policy (which had an impact on the sale of tendu patta) and the general shift in the donor priorities, Samarthak Samiti made strategic plans and efforts towards sustainability.

In December 2013 SS managed to get funds from the Centre for Environment Education of the United Nations Development Programme (CEE-UNDP) and Wells for India (WFI) for two years up to October 2015 for the programme "Mobilization of Community to Strengthen MFP based Livelihoods of Tribal Women in Southern Rajasthan." This grant is released at six monthly intervals and is subject to their performance in the project. With this grant SS is supporting its field staff at half their earlier salaries. Further, Samarthak Samiti is hired as a resource agency by the Small Farmers' Agribusiness

Consortium (SFAC)¹⁶ for promoting producer organisation in Rajasthan. It is also hired by TRIFED for organising short term NTFPs based training support for the staff and target group.

Score baseline: 3.0

Score endline: 2.0 (deterioration)

1.9.3. Funding procedures: 'Clear procedures for exploring new funding opportunities'

This is about whether there are clear procedures for getting new funding and staff are aware of these procedures.

There are still no formal procedures to explore new funding possibilities. However, during the last two years the staff has improved their skills significantly to collect focused data from the field, to write better reports in order to showcase its work to new donors. While during the baseline Samarthak Samiti depended on an organisational development specialist for finalising their proposals, they are now trying to independently to put together proposals, and they are making better use of data and field experiences. The chief functionary has taken it upon himself to develop proposals and new relationships with potential donors. SS currently is in contact with the following potential donors:

- Cement company to make it part of their CSR;
- NABARD (National Bank for Agriculture and Rural Development) Jaipur for the tree-based Wadi support for tribal groups in the area;
- Christian Aid, hopefully to support SS in a consortium of the BEE-Keeping for agriculture production project in 2014-2016;
- As a Hivos partner SS also has applied to the Producer Entrepreneurship Catalyst & Incubation Facility (PROCIF) for capacity building and will also apply for the working capital and other support.

The leader understands that all these funding sources are in a nascent stage which needs further effort to strengthen to be completely self-sustained. Some other initiatives that Samarthak Samiti is taking to enhance their funding base are:

- Its producer company which was registered in 2011 got its trademark, "Desert Green", registered in 2013 for smooth and easy sale of its products. Samarthak Samiti is trying to strengthen its producer company with the hope that the salaries of the staff of Samarthak Samiti will be paid by the members of the cooperatives for the services they offer. With this producer company they are also focusing on new product innovations and marketing such as Beeswax lip balm, Maize Papdi, lentil, aloe vera juice, amla juice and jamun.
- Moving its strategic focus from NTFP collection to marketing, agriculture and forest based strategies to be able to approach a wider range of donors;
- The organisation is focusing on developing cooperatives as small processing and storage centres. All the NTFP and agricultural products can be processed and stored for marketing there so that they withhold the product in the store for a longer period and sell it when the market prices are good.
- Its producer company which was registered in 2011 got its trademark, "Desert Green", registered in 2013 for smooth and easy sale of its products. Samarthak Samiti is trying to strengthen its producer company with the hope that the salaries of the staff of Samarthak Samiti will be paid by the members of the cooperatives for the services they offer. With this producer company they are also focusing on new product innovations and marketing such as Beeswax lip balm, Maize Papdi, lentil, aloe vera juice, amla juice and jamun.
- The MFP development Fund (MDF) had been created 5 years ago for easy and timely credit to the group members involved in purchase of MFP from the villagers, for processing and value addition. Revolving fund management policy has been developed for better management of this fund. It was a unique step towards attaining self-sustainability in the business of MFP collection and trading by producers' groups. During the last two years most of the amount was used for making advance payments to the honey, Jamun and agriculture collection groups. Since the baseline the MDF fund

¹⁶ SFAC is a consortium that supports new ventures in Agro-based industries. The target groups are individuals, farmers, producer groups, SHGs etc. and the consortium helps them get venture capital by linking them with banks

has increased from Rs. 6,00,000 to Rs. 9,54,000 a growth of 59.98 percent. This fund helps make Samarthak Samiti's programmes and their effects more sustainable. Further, Samarthak Samiti is hired as a resource agency by SFAC for promoting producer organisation in Rajasthan. It is also hired by TRIFED for organising short term NTFPs based training support for the staff and target group.

The leader of Samarthak Samiti has improved his capacity to write proposals independently for different donors and is trying its best to come up with new innovative proposals, but funders have not been showing long-term interest

Score baseline: 2.0

Score endline: 2.5 (slight improvement)

Summary of capability to act and commit

The most serious change that affected the organisation has been the reduction in funding. Most of Samarthak Samiti's contracts with donor have ended in 2014, including the one with Hivos, meaning a significant decrease in its funding base. Whilst there are still no formal funding procedures, SS has improved staff's capacity to write proposal and they have approached five potential funders to cope with this poor funding situation. Other coping strategies include: widening its strategic focus to appeal to a wider set of donors; strengthening its producer company in the hope that they can support the organisation's strategies and pay the salaries of the staff of Samarthak Samiti; the MFP development fund which helps in the self-sustainability of the producer's groups that Samarthak Samiti supports; being hired as resource agency by SFAC¹⁷ and by TRIFED to organise short term NTFPs based training. They were able to get funding from Centre for Environment Education of the United Nations Development Programme (CEE-UNDP) and Wells for India (WFI) to continue the "Mobilization of Community to Strengthen MFP based Livelihoods of Tribal Women in Southern Rajasthan" programme until December 2015 and pay half of the field staff's salaries. The chief functionary has taken it upon himself to develop proposals and new relationships with potential donors. The leader of Samarthak Samiti is still responsive and focussed in his work. Reduced funding and need to sustain the organisation has compelled the leader to be self-reliant. He has become more independent from external consultants and Astha (the mother organisation of SS) as he increased his capacity to write reports, proposals and approach donors. The leader has improved his capacity to network and has approached new donors for the sustainability of the organisation: in 2013 he approached the Centre for Environment Education Ahmedabad and Wells for India. The leader is focusing on the capacity building of his field staff by offering them training opportunities and exposure visits so that they can independently train the target groups. The strategic directions provided by the leader are still in line with the vision of the organization. The leader is now taking a more business-like approach by focussing on non-timber forest produce (NTFP) collection, livelihoods and marketing and focusses more on generating own income instead of depending on grants. Samarthak Samiti has well-articulated strategies both at the programme as well as the organizational level that are based on good situational analysis and on achieving sustainability. Through its field staff Samarthak Samiti is always aware of the situation on the ground. The organisation's daily operations are still in line with strategic plans. Monthly plans are made based upon quarterly targets and staff makes daily plan based on the monthly plans. In the last two years as the funding from the donors has gradually reduced, staff salaries have also been reduced by 50%. Two project level staff had to leave the organization because of lack of funds to keep them, which has increased the workload on the remaining staff. Staff turnover at the field level continues to be low. Field staff is from the community and are motivated to help their own community. SS remains to be a not very hierarchical organisation and there are no changes in the organisational structure. There is a plan to reshuffle the board members and form an advisory committee to make the decision making process faster. While staff has

¹⁷ SFAC is a consortium that supports new ventures in Agro-based industries. The target groups are individuals, farmers, producer groups, SHGs etc. and the consortium helps them get venture capital by linking them with banks

improved their skills in areas that were lacking during the baseline (MIS, nursery raising, technical support on agriculture, developing producer organisation), there continues to be a need to improve basic English skills gaps. While SS continued to provide a customised training and exposure visit programme to staff and had reached a good level of trained staff, with 2-3 trained staff leaving the situation changed dramatically. The programme staff that was trained on results-based monitoring could not be retained as the organisation did not have sufficient funds.

Score baseline: 3.1

Score endline: 3.0 (no change)

Capability to adapt and self-renew

Level of effective application of M&E

2.1.M&E application: 'M&E is effectively applied to assess activities, outputs and outcomes'

This is about what the monitoring and evaluation of the SPO looks at, what type of information they get at and at what level (individual, project, organisational).

Whilst Samarthak Samiti continues to hold regular meetings to report on and discuss project related issues, there is still a need to have a comprehensive and more formalized M&E system. Monitoring of the project is still carried out at three levels based on participatory approach: 1) field level monitoring of the project is an ongoing process; 2) monthly joint review meetings where completion of project activities are reported and discussed at project level; and 3) quarterly meetings are organized at proposed cluster level with minor forest produce group meetings.

For project input monitoring (finance, equipment and human resource) the following records are still maintained: Monthly Progress Report, Trial balance and Budget-Expenditure statements; Logbooks to give utilization of equipment and instruments; performance of human resources is monitored through monthly schedule and achievement reports on task assignments. Towards output monitoring, projects still keep group based records on various minor forest produce, value addition, sale and income by different group members for various products. Records are maintained within the groups of problems and issues they have come across and actions taken to keep to planning. There is still a General body meeting twice a year and the Executive body meets every quarter. The entire project related and day to day operational decisions are taken by project team headed by secretary, which are later presented in executive body meeting for their approval.

Since the baseline Samarthak Samiti has fine-tuned its templates and MIS formats for data collection and monitoring both at the field and headquarter level. It now has separate formats for data collection for each forest produce unit collected by the cooperatives. These formats are in Hindi, to enable field staff to fill them easily. To ensure consistency and improving quality of data collection and compilation, capacity building workshops are organised for the staff. This process has helped staff to collect focused data regularly and track their progress on their activities, outputs and outcomes in a more systematic manner. Indicators are formulated, monitored and reported on at the activity and outcome level. The reports are submitted monthly by the field staff. These are then, compiled, analysed and translated to English by the leader.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

2.2.M&E competencies: 'Individual competencies for performing M&E functions are in place'

This is about whether the SPO has a trained M&E person; whether other staff have basic understanding of M&E; and whether they know what information to collect, how to process the information, how to make use of the information so as to improve activities etc.

Gradually there is less dependency of Samarthak Samiti on external consultants for preparing draft reports for the donor. The field staff's competency in monitoring, collecting and compiling the data has improved. Further capacity building trainings are conducted for the staff on MIS. As a result there is

better flow of information from the field to the head office which is further analysed and compiled by the leader. Earlier the leader had to call up the field staff frequently to fill in the missing links in the data. This has reduced considerably after the staff has been trained on data collection. Project staff were trained on results-based monitoring for better project management and decision making process at project level. However, the organisation could not retain these staff which, being a small organisation, resulted in loss of M&E competences of the organisation.

Score baseline: 2.0

Score endline: 2.0 (no change)

Level of strategic use of M&E

2.3.M&E for future strategies: 'M&E is effectively applied to assess the effects of delivered products and services (outcomes) for future strategies'

This is about what type of information is used by the SPO to make decisions; whether the information comes from the monitoring and evaluation; and whether M&E info influences strategic planning.

During the last two years donors have continuously pointed out gaps in data collection and reporting. Their aim was to strengthen data collection methods and procedures. There is improvement in the M&E process and the informal analysis of the data. This has helped Samarthak Samiti to learn from its previous experience on technical issues which has helped in developing new strategic plans. Reports submitted by field staff, cluster facilitators and community workers in the meetings are still valuable, according to which amendments are made in plans and accounts. The accounts person continues to do a monthly or bimonthly analysis to see if funds are being utilized as per budget. This helps in planning for the future.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

Level of openness to strategic learning

2.4.Critical reflection: 'Management stimulates frequent critical reflection meetings that also deal with learning from mistakes'

This is about whether staff talk formally about what is happening in their programs; and, if so, how regular these meetings are; and whether staff are comfortable raising issues that are problematic.

The staff continues to have regular monthly review meetings to discuss issues at project level. Cluster level meetings are still organized with minor forest produce groups every quarter. Reports are also reviewed to pick up on issues that need to be taken up. Samarthak Samiti is a small organisation, with an easy to approach leader who has a separate room but likes to sit in the same room as staff. Decision making is participatory and decentralised and this supports people in talking freely. There are frequent discussions and their ideas are welcomed and used. Apart from this, the leader continues to be always available to discuss other problems, in case of a problem, staff can easily ask for advice. With the reduction in funds, issues are discussed even more often.

Score baseline: 4.0

Score endline: 4.0 (no change)

2.5. Freedom for ideas: 'Staff feel free to come up with ideas for implementation of objectives

This is about whether staff feel that ideas they bring for implementation of the program are welcomed and used.

There has been no change in this indicator. Samarthak Samiti is a small organisation, with an easy to approach leader who has a separate room but likes to sit in the same room as staff. Decision making

is participatory and decentralised and this supports people in talking freely. There are frequent discussions and their ideas are welcomed and used.

Score baseline: 5.0

Score endline: 5.0 (no change)

Level of context awareness

2.6. System for tracking environment: 'The organisation has a system for being in touch with general trends and developments in its operating environment'

This is about whether the SPO knows what is happening in its environment and whether it will affect the organization.

Samarthak Samiti continues to work with the cooperatives. This ensures not only continuous and regular interaction but also enables them to track any changes regarding the situation on the ground. Astha Sansthan continues to pass on information that it finds relevant for Samarthak Samiti. The organisation has developed new networks with like-minded NGOs, state and national level organisations for sharing, learning and discussing several issues. This helped the leader in tracking different developments and changes. Awareness on the key issues related to the minor forest producers including their rights and responsibilities has helped Samarthak Samiti take suitable action. As Samarthak Samiti continues to work on products of which many are regulated by the government, they stay up to date with the relevant acts, like the Panchayats Extension to Scheduled Areas (PESA) Act, which enables Gram Sabhas to self-govern natural resources and make use of the relevant state and national government provisions like the Green India project, which allocates land under village pasture and MGNREGA¹⁸ work to promote MFP based plantations. With government's anti-smoking policy and changing donor priorities the organisation made a strategic change to move toward agriculture and animal husbandry production and marketing. After this strategic change, SS is now also tracking trends in agriculture. SS membership of a network of four organisations who are part of the non-pesticide management initiative, helps in this. The organisation is also keeping track of its competitors in the MFP sector through being part of a Drafting Committee set up by the government to develop a Draft MFP Policy. The information seems to be locally based but now also a bit more information is tracked at the national level.

Score baseline: 3.5

Score endline: 3.75 (very slight improvement)

2.7. Stakeholder responsiveness: 'The organisation is open and responsive to their stakeholders and the general public'

This is about what mechanisms the SPO has to get input from its stakeholders, and what they do with that input.

In the last two years there has been no change in this indicator. The organisation continued to be open to take inputs from different beneficiaries and sensitive to their needs. Community members continue to be the main stakeholders and are represented by their leaders. The leaders of the self-help groups are always in touch with the field staff of Samarthak Samiti. They also meet with other organizations working on minor forest produce. These meetings may not be regular as they are based on emerging issues and are area specific. Details of meetings with cooperative members are kept in a register at Samarthak Samiti. The forest department officials also inform Samarthak Samiti about policy changes if any. This input helps in planning for activities.

Score baseline: 4.0

¹⁸ The Mahatma Gandhi National Rural Employment Guarantee Act aims at enhancing the livelihood security of people in rural areas by guaranteeing hundred days of wage employment to a household whose adult members volunteer to do unskilled manual work.

Score endline: 4.0

Summary of capability to adapt and self-renew

Samarthak Samiti continues to have regular meetings to report on and discuss project related issues but still does not have a comprehensive and formalised M&E system in place. Monitoring is still done for inputs and outputs through record keeping. Since the baseline Samarthak Samiti has fine-tuned its templates and MIS formats for data collection and monitoring both at the field and headquarter level. In its reports, indicators at activity and outcome level are reported on. The reports are submitted monthly by the field staff. These are then compiled, analysed and translated to English by the leader. While field staff has become better at monitoring and collecting data and the leader is becoming less dependent on external consultants for drafting reports, programme staff that was trained in results-based monitoring have left the organisation due to lack of funding. The informal analysis of data and the overall M&E process improved over the last two years as donors have continuously pointed at the gaps. This has helped Samarthak Samiti to learn from previous experiences and use this in developing new strategic plans. Staff continue to meet regularly to discuss issues at project level. They also feel comfortable to come to the leader to ask for advice as he is very approachable and likes to sit in the same room as staff. With reduction in funds, issues are discussed more often. Decision making is participatory and decentralised and this supports people in talking freely. There are frequent discussions and their ideas are welcomed and used. Samarthak Samiti continues to work with the cooperatives which helps them in tracking any changes regarding the situation on the ground. As Samarthak Samiti continues to work on products of which many are regulated by the government, they stay up to date with the relevant acts and policies; and make use of the relevant state and national government provisions. With government's anti-smoking policy and changing donor priority the organisation made strategic change to move toward agriculture and animal husbandry production and marketing. SS is now also tracking trends in agriculture its network in the non- pesticide management initiative. The information now seems to be coming from both the local and national level. The organisation continues to be open to take inputs from different beneficiaries and sensitive to their needs.

Score baseline: 3.5

Score endline: 3.7 (very slight improvement)

Capability to deliver on development objectives

Extent to which organisation delivers on planned products and services

3.1. Clear operational plans: 'Organisation has clear operational plans for carrying out projects which all staff fully understand'

This is about whether each project has an operational work plan and budget, and whether staff use it in their day-to-day operations.

Since the baseline evaluation there has been no major change in the operational plans of the organisation. SS continues to have a work plan and budget for each project. Staff together prepares the monthly and quarterly activities which are planned in alignment with the annual strategic plan. Further on the basis of these plans daily activities plans are made. In some of the clusters the staff meets daily to discuss their plans and activities.

Score baseline: 4.0

Score endline: 4.0 (no change)

3.2. Cost-effective resource use: 'Operations are based on cost-effective use of its resources'

This is about whether the SPO has the resources to do the work, and whether resources are used cost-effectively.

There has not been any change in this indicator since the baseline. The staff members still have access to vehicles that enable them to carry out their work. Some staff members, like administrative staff, have knowledge of operating computers and have access to them for maintaining accounts. The present resources are used in a cost-effective manner. Because of a reduction in funding Samarthak Samiti had to become less dependent on hiring the support of the external consultant. The leader became self-reliant and only invited the consultant 4-5 times a quarter, instead of 4-5 times a month. Field staff now also works independently on programme related issues to cut down consultancy costs, which SS was paying from its project funding. The present funding scenario and lack of long-term support has pushed Samarthak to take a more cost effective approach to manage their operations.

Score baseline: 4.0

Score endline: 4.25 (very slight improvement)

3.3. Delivering planned outputs: 'Extent to which planned outputs are delivered'

This is about whether the SPO is able to carry out the operational plans.

In the last two years there has been no change in this indicator. The funds are released by the donors only after a report is sent. This ensures that Samarthak Samiti carries out its plans. Most of the planned outputs are carried out. For example all the planned activities for the "Mobilisation of Community to strengthen MFP based livelihoods of tribal Women in South Rajasthan" programme were delivered in the period April – December 2014. There are external factors, like climatic conditions (e.g. heavy rains) and auction prices that sometimes prevent the execution of plans and submission of deliverables. The progress of the programme is reviewed in every monthly meeting and cluster level meetings, and quarterly progress reports are submitted to the donor.

Score baseline: 4.0

Score endline: 4.0 (no change)

Extent to which delivered products and services are relevant for target population in terms of the effect they have

3.4. Mechanisms for beneficiary needs: 'The organisation has mechanisms in place to verify that services meet beneficiary needs'

This is about how the SPO knows that their services are meeting beneficiary needs

Since baseline there has been no change in this indicator. Samarthak Samiti continued to work in a participatory and decentralized way. They are a membership organisation having representation from various cooperatives; the programmes are developed based on the needs and alternatives suggested by the members. Trainings on honey harvesting, to avoid the loss of honey and forest ecology disruption, seem to be meeting the beneficiary needs. In a previous phase, trainings were organized for 750 honey harvesters and they are now doing the job of harvesting honey well.

Score baseline: 4.0

Score endline: 4.0 (no change)

Level of work efficiency

3.5. Monitoring efficiency: 'The organisation monitors its efficiency by linking outputs and related inputs (input-output ratio's)'

This is about how the SPO knows they are efficient or not in their work.

There has been no major change in this indicator since the baseline. Input-output ratios are still not developed as per the definition of the term and no formal mechanisms for staff appraisal are in place. The leader has been working with his core staff since the beginning and knows their strengths and weaknesses. Samarthak Samiti has fine-tuned its templates and MIS formats for data collection and monitoring and field staff have gotten better at both. The present funding scenario and lack of long-term support has pushed Samarthak to take more cost effective approach to manage their operations. They still analyse funds allocated, funds used and funds that can be saved. For project input (finance, equipment and HR) SS still keeps records on: monthly progress, trial balance and budget-expenditure statements and utilization of equipment and instruments. Monitoring efficiency could have improved as two project staff were trained on results-based monitoring. However, they left the organisation as they could not be retained to financial constraints. The situation therefore remains the same as in the baseline.

Score baseline: 3.0

Score endline: 3.0 (no change)

3.6. Balancing quality-efficiency: 'The organisation aims at balancing efficiency requirements with the quality of its work'

This is about how the SPO ensures quality work with the resources available

During the last two years there is slight deterioration in this indicator. The organisation could not retain their trained project staffs due to reduced funding, which has greatly affected its efficiency and quality of work. Due to lack of staff there is no proper monitoring of the programme and as a result the quality of the work has deteriorated. Furthermore, the current staff is overburdened with double workloads against half the salary. This has also affected quality of work. Earlier the field visits to monitor the staff were made by the programme coordinator but now these have to be done by the leader and given the fund shortage the number of such visits has reduced.

Score baseline: 3.0

Score endline: 2.0 (deterioration)

Summary of capability to deliver on development objectives

Samarthak Samiti continues to have a work plan and budget for each project. Quarterly, monthly and daily plans are made in alignment with the annual strategic plan. In some of the clusters the staff meets daily to discuss their plans and activities. Staff still have access to vehicles and computers that enable them to carry out their work. With a reduction in funds, using resources in a cost-effective manner has become more important. The leader and field staff are now less dependent on the external consultant and only hire him when in dire need. Most of the planned outputs are carried out and delivered. There are external factors, like climatic conditions and auction prices that sometimes prevent the execution of plans and submission of deliverables. Samarthak Samiti continues to work in a participatory and decentralized way. They are a membership organisation having representation from various cooperatives; the programmes are developed based on the needs and alternatives suggested by the members. Input-output ratios are still not developed as per the definition of the term and no formal mechanisms for staff appraisal are in place. Monitoring efficiency could have improved as two project staff were trained on results-based monitoring. However, they left the organisation as they could not be retained to financial constraints. Due to lack of staff there is no proper monitoring and sufficient field visits of the programme and as a result the quality and efficiency

of the work has deteriorated. Furthermore, the current staff is overburdened with double workloads against half the salary.

Score baseline: 3.7

Score endline: 3.5 (very slight deterioration)

Capability to relate

Level of involving external parties in internal policy/strategy development

4.1. Stakeholder engagement in policies and strategies: 'The organisation maintains relations/ collaboration/alliances with its stakeholders for the benefit of the organisation'

This is about whether the SPO engages external groups in developing their policies and strategies, and how.

There has been a very slight improvement in this indicator since the baseline. Samarthak Samiti continues to maintain relationships with local like-minded NGOs like Astha Sansthan, Prayas, Jan Chetna and cooperatives and takes inputs from them while preparing strategic plans. In the last two years the organisation received feedback from different donors, developed better relationships with the government, and formed alliances with other national NGOs. A new network they are part of is the Non-Pesticide Members Initiative (NPMI) which helps them in developing strategies on agriculture.

Score baseline: 3.0

Score endline: 3.25 (very slight improvements)

4.2. Engagement in networks: 'Extent to which the organization has relationships with existing networks/alliances/partnerships'

This is about what networks/alliances/partnerships the SPO engages with and why; with they are local or international; and what they do together, and how do they do it.

During the last two years Samarthak Samiti has continued its relationship with cooperatives, and strengthened its networks with government and like-minded NGOs. Some new developments since the baseline:

- SS is hired as a resource agency by SFAC for promoting producer organisations in Rajasthan.
- Samarthak Samiti has constantly been engaged in promotion of the MFPs along with the forest departments and also propagation of MFPs in Common Property Resources (CPR) by forest dweller community groups. It became member of MFP Policy Drafting committee of the Government. As a result Samarthak Samiti was able to advocate for the target groups in price fixation, regularising grades of MFPs.
- In 2013, Samarthak Samiti became a member of Non Pesticide Members Initiative (NPMI). This is a national network working on the promotion of non-pesticides farming and developing marketing linkages of the products made by the network partners. This was useful as SS decided to broaden its strategic focus to include agriculture. In the Access Livelihood conference the alliance members could learn and share their ideas.
- SS became a partner of Tribal Self-Rule (TSR) Network, Rajasthan. This network is mainly working on the PESA act (Panchayat Extension to Scheduled Area). Their main work has been to strengthen the village level council (Gaon Sabha) in the Tribal Sub Plan (TSP) area and identifying legal discrepancies within purview of PESA-TSR.
- It also became a partner of Herbal network India. This network is working to promote herbal initiative in North India by CCD (The Covenant Centre for Development).
- It has strengthened its relationship with the government which resulted in helping the forest dwellers in accessing government entitlements.
- The staff's participation in different mela's (festivals) and fairs has improved the relationship with many like-minded organisations.

All in all, Samarthak Samiti has started interacting more with more other partners compared to the baseline situation, when they mostly interacted with Astha Sansthan, Prayas and Jan Cethna. Their engagement in networks has also gone beyond just the local level to the national level. Samarthak is now more open to linking up with other organisations and relevant networks. Networking with different partners and sharing experiences strengthened the capacity of the organization in lobbying for policy change and betterment of the tribal community.

Score baseline: 3.0

Score endline: 4.0 (improvement)

Extent to which organisation is actively engaging with target groups

4.3.Engagement with target groups: 'The organisation performs frequent visits to their target groups/beneficiaries in their living environment'

This is about how and when the SPO meets with target groups.

Samarthak Samiti continues to maintain close relationships with the cooperatives and interacts with them in the cluster level meetings. The interaction of the field staff with the target group has increased ever since the producer company has started (2011). The target groups consults SS on prices of their produce and field staff tries to share the knowledge they attain during training programmes to the target groups. In the last two years as the field level staff gained confidence to independently conduct meetings with the community groups, their interaction and bonding have strengthened with the target communities. However, due to reduced funding and the leader being overburdened with work load his interaction with the target groups has reduced.

Score baseline: 4.0

Score endline: 4.0 (no change)

Level of effective relationships within the organisation

4.4.Relationships within organisation: 'Organisational structure and culture facilitates open internal contacts, communication, and decision-making'

How do staff at the SPO communicate internally? Are people free to talk to whomever they need to talk to? When and at what forum? What are the internal mechanisms for sharing information and building relationships?

In the last two years there has been no change in this indicator. As the organisation has very few staff who see each other in every meeting, they can interact freely and share ideas with each other and the leader. The staff together formulate ideas and take decision.

Score baseline: 5.0

Score endline: 5.0 (no change)

Summary of capability to relate

Samarthak Samiti continues to maintain relationships with local likeminded NGOs and cooperatives and takes inputs from them while preparing strategic plans. A new network they are part of is the Non-Pesticide Members Initiative (NPMI) which helps them in developing strategies on agriculture. During the last two years Samarthak Samiti has continued its relationship with cooperatives, government and like-minded NGOs, but is now linking up with other organisations and relevant networks also at the national level. These include: SFAC for promoting producer organisations in Rajasthan, MFP Drafting committee of the government, NPMI, Tribal Self-Rule Network and the Herbal Network India. This has strengthened the capacity of the organization in lobbying for policy change

and betterment of the tribal community. Samarthak Samiti continues to maintain close relationships with the cooperatives and in the last two years field level staff gained confidence to independently conduct meetings with the community groups which strengthened their interaction with them. However, due to reduced funding and the leader being overburdened with work his interaction with the target groups has reduced. Staff continues to have good interpersonal relationships and feel free to discuss issues among themselves and with their leader.

Score baseline: 3.8

Score endline: 4.1 (very slight improvement)

Capability to achieve coherence

Existence of mechanisms for coherence

5.1.Revisiting vision, mission: 'Vision, mission and strategies regularly discussed in the organisation'

This is about whether there is a vision, mission and strategies; how often staff discuss/revise vision, mission and strategies; and who is involved in this.

For now the vision and mission of the organisation remain the same. Samarthak Samiti is however, rethinking its strategic focus to move it from NTFP collection and marketing to agriculture and forest based strategies due to the government's anti-smoking policy affecting the demand for tendu patta and the change in funder's priorities. Samarthak Samiti is also now focussing more on marketing than on production. The Samarthak Samiti Producer Company which was registered in 2011, got its trademark "Desert Green" registered in 2013. This helps in better marketing and hence smooth sale of its products. These changes in strategies are not yet reflected in the vision and mission of SS which continue to be: "Strengthening livelihood of tribal communities and other marginalized sections of the society in Rajasthan through natural resource management" and "[...]to strengthen people's organizations by facilitating appropriate interventions in collection, processing and marketing of forest produces in Rajasthan."

Score baseline: 4.0

Score endline: 4.0 (no change)

5.2.Operational guidelines: 'Operational guidelines (technical, admin, HRM) are in place and used and supported by the management'

This is about whether there are operational guidelines, which operational guidelines exist; and how they are used.

There is no change in this indicator since baseline. Operational plans, HR guideline and gender policy exist in the organisation but are not strictly followed as there are few staff members and reduced funding. However, as the organisation is planning to be self-sustaining and is approaching new donors there is a need to improve and follow operational processes. Also as its mission is to strengthen tribal women, the gender policy needs to be followed more systematically.

Score baseline: 3.0

Score endline: 3.0 (no change)

Level of coherence of various efforts of organisation

5.3.Alignment with vision, mission: 'Projects, strategies and associated operations are in line with the vision and mission of the organisation'

This is about whether the operations and strategies are line with the vision/mission of the SPO.

For now, Samarthak Samiti's projects, strategies and associated operations are still aligned with its vision and mission. In the last two years however, SS started rethinking their strategy to move from collection and marketing of NTFPs to production and marketing of agriculture. This is not in line with

the current vision and mission which both focus on natural resource management and collection, processing and marketing of forest produces (not agriculture).

Score baseline: 5.0

Score endline: 4.5 (slight deterioration)

5.4. Mutually supportive efforts: 'The portfolio of project (activities) provides opportunities for mutually supportive efforts'

This is about whether the efforts in one project complement/support efforts in other projects.

There is no change in this indicator since the baseline. Due to less people in the organization, the staff is multi-tasking which further ensures that there is no duplication of work and the project activities are mutually supportive. A negative result of this is that staff over overburdened.

Score baseline: 3.0

Score endline: 3.0 (no change)

Summary of capability to achieve coherence

Appendix 4 Results – key changes in organisational capacity – general causal map

Below you will find a description of the general causal map that has been developed for the SPO during the endline workshop. Key changes in organisational capacity since the baseline as identified by the SPO during this endline workshop, are described as well as the expected effects and underlying causal factors, actors and events.

The evaluation team carried out an endline assessment at Samarthak Samiti from 1 to 3 July 2014. During this workshop, the team made a recap of key features of the organisation in the baseline in 2012 (such as vision, mission, strategies, clients, partnerships). This was the basis for discussing changes that had happened to the organisation since the baseline. According to staff present at the endline workshop, Samarthak Samiti has become more self-reliant in the last two years since the baseline. This has been due to the following key organizational capacity changes:

1. Improved capacity of the staff to write reports [1]
2. Improved capacity of the staff to train target groups [2]
3. Improved capacity for financial sustainability [21]

During the endline workshop it was discussed what were the reasons for each of these organisational capacity changes. The three main organisational capacity changes are described in the light orange boxes and some of their key consequences are noted above these cards in dark orange. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the organisation are listed at the bottom in dark purple. The narrative describes per organisational capacity change, the contributing factors as described from the top down. The numbers in the visual correspond with the numbers in the narrative.

Improved capacities of the staff to write reports [1]

During the endline workshop, SS staff indicated that their capacity to write reports has improved [1] and that this is related to the leader becoming more self-reliant [14] and to improved data collection and compilation [4]. The leader is less dependent on external consultants and Samarthak Samiti's mother organisation Astha Sansthan. This is evident from the fact that the consultant was initially invited for 4-5 times in a month but now his help is sought only 4-5 times in a quarter. He has been independently trying to put together proposals, compiling information from the field and translating it into English, which he is now better versed in. Reduced funding and need to sustain the organisation has compelled the leader to be self-reliant [17] [Source: 5c endline interview guide_OD consultants_selected indicators_Samarthak Samiti, 5c endline self-assessment sheet_field staff_India_Samarthak, 5c endline self-assessment sheet_admin HRM staff_India_Samarthak]. During the baseline evaluation, Samarthak Samiti received funds from five different donors. Most of the contracts terminated in 2014, for example the contract with Hivos ended on the 31st of March 2014. Over the last two years, funding has therefore decreased [Source: 5c endline self-assessment sheet_admin HRM staff_India_Samarthak, Audited – stat(income & exp) – FC 2012-130001].

The improved capacity of the staff for data collection, report writing and monitoring improved the quality of monthly reports. This is evident from the approval letter of 2014 Annual Review Report of Samarthak Samiti [Source: 140314 - SS - Approval letter of 2014 Annual Review Report].

According to SS staff, they improved the way they collect and compile data [4] due to having improved formats for data collection and report writing [5]. Samarthak Samiti fine-tuned templates and formats for data collection and monitoring at both the field level as well as at the Headquarter level [Source: 5c endline interview guide_OD consultants_selected indicators_Samarthak]. It now has separate formats for data collection for honey, tendu patta and other forest produce collected by the cooperatives. These formats are in Hindi, so the field staff does not have problems with filling them in. These are submitted every month in the office. The information is then compiled and translated to English by the leader [Source: interaction with the leader during the workshop].

Having improved formats for data collection and report writing was the result of extensive training (see below) in capturing information and writing reports [6]. Each donor provides a specific format for data collection and report writing. But, since the field staff was not formally trained, there was no standardized way in which information was collected. However, with training, the staff understood how data was to be collected and how reports were to be written. The consequence was that they even helped the leader in fine tuning the formats according to ground realities [Source: Discussed during endline workshop 2014].

The details of some of the trainings are given below:

- Orientation training on financial management in Bangalore organized and funded by Hivos under MFS II [19] in 2012. The objective of the training was to train the staff on what information needs to be collected, report writing, preparing of utilization certificates, better formats preparation. This concerns the procedure adopted for release of funds by the state government and others to an organisation under various programmes. This procedure stipulates that the organization should furnish Utilisation Certificates to the effect that the funds have been utilized for the purpose for which these were sanctioned and no diversion has been made [Source: self-assessment field, Review Report 2012-13- 11Feb].
- Training on report writing funded by Sir Dorabji Tata Trust, 2012 [Source: 5c endline self-assessment sheet_field staff_India_Samarthak Samiti].
- Training on report writing and case studies facilitated and funded by Aastha Sansthan, 2014 [Source: 5c endline self-assessment sheet_field staff_India_Samarthak Samiti].
- In-house training of the staff on the use of new templates and formats. As a result of this training the staff could improve their capacity to collect data which further improved consistency in data collection and compilation and hence improved reporting [Source: 5c endline interview guide_OD consultants_selected indicators_Samarthak Samiti].

Extensive training [6] was given to staff because of a need for trainings on these topics [7] because of a lack of staff skills. The need for trainings on report writing and data collection was triggered by:

- *Feedback from donors [8]* The need to train field staff [7] arose from the fact that the donors requested better reports [8]. There was regular feedback on the reports submitted by Samarthak Samiti from Hivos (under MFS II [19]) and other donors [20] regarding the need for more detailed information in the reports submitted by Samarthak Samiti [Source: Clarification for Hivos on report 2013, self-assessments]. When gaps in the reports were pointed out, both the leader and the staff understood the need to have more focused data collection and proper reporting [Source: 5c endline interview guide_OD consultants_selected indicators_Samarthak Samiti]. This was followed by the necessity to strengthen the field staff to collect detailed information for writing reports.
- *Need for showcasing work to impress new donors [9]*. The need to train field staff [7] also arose from the fact that Samarthak Samiti needed better reports to showcase its work to impress new donors [9], because of reduced funding [17]. There has been a reduction of funds since the last two years due to a general shift of the donor priorities in funding [16]. For e.g. foreign donors have been revising their grant making policies and funding priorities. More and more donors are funding agriculture based programs. Also, stringent policies by successive governments to restrict foreign funding to the NGOs in India which, it perceives are engaged in stalling developmental activities in the country has further added to the problem. This has triggered the need for Samarthak Samiti to look out for new donors. This in turn means that Samarthak Samiti should be able to showcase its work through good quality reports to impress the donor [9] [Source: Discussion during endline workshop 2014].

Improved capacities of the field staff to train target groups [2]

Samarthak Samiti has improved its capacity to train the target groups on technologies, entrepreneurship development, business potential and sustainability [2], which is noted in the additional partner contract with Hivos for extension of the budget [Source: Contract extension September 2013]. The staff is more confident in conducting meetings with the target groups, officials of the forest departments and the police [Source: 5. Review Report 2013-14, interview with OD]. Improved capacities of the field staff to train target groups [2] is due to: better understanding of the technical aspects of their roles [10] and staff to take on the responsibility of visiting target groups [18]. These are further explained below.

- *Staff expresses better understanding of the technical aspects of their roles [10]*: this is demonstrated by for example advising beneficiaries on sustainable farming, processing of NTFP, documentation related to dispatch of NTFP and helping beneficiaries negotiate with local traders [Source: 5c endline interview guide_OD consultants_selected indicators_Samarthak Samiti]. For more information please see below. Better understanding of the technical aspects of their roles is due to: trainings [11] and exposure visits [12]. For details about these trainings and how they assisted staff in the technical aspects of their work please see the information described below.
 - Trainings [11]
 - Training on business plan development and marketing. Training was organized for the SS staff by Hivos at Mungana in 2014 on Business plan development and marketing [Source: 5cendline self-assessment sheet_field staff_India_Samarthak Samiti]. This training helped the staff to train the target group on business planning and marketing on MFP and marketing linkages [Source: Review Report 2013-14]. A number of cooperatives are trained on business plan development and marketing. This training was funded by MFS II [19].
 - Training on Participatory Marketing System Development in Madurai by Sir Dorabji Tata Trust and Hivos in June 2013 [Source: 5. Review Report 2013-14, Self-assessment management]. The focus of the training was to understanding the market and market players including the value chain, participatory system in marketing. Now they could market honey in the brand name 'Desert Green'. This training was funded by MFS II [19].
 - Training on Producers' Company by Access Livelihoods Company, Hyderabad in Udaipur in November 2013 [Source 5. Review Report 2013-14, Self-assessment management]. As a result of the training a centralized processing centre was established which would serve as a processing and storage centre for honey filter, Jamun sirka making and grinding and processing Amla powder. After this training, Samarthak Samiti also started to make powder of Heena. During this training, the staff developed a plan to focus on "Integrated

Livelihood System” which not only includes development of MFP component of livelihood of these families but also a component on agriculture and animal husbandry [Source: 5. Review Report 2013-14]. This training was funded by MFS II [19].

- Leadership training and making bio pesticide. Training on making bio pesticides in Dhariyawad. This was funded by Sir Dorabji Tata Trust in 2013 [20]. This training trained the leaders to train the target groups to make and use bio pesticides. It is evident from the review report of 2013-14 that 5 forest dweller groups have started making and using bio pesticides who were trained by Samarthak Samiti staff [Source: 5. Review Report 2013-14].
- Training on management of social enterprise in 2014. A training on Management of the Social enterprise in March 2014 was organized by IRMA, in Anand. The workshop dealt with management of social enterprises and leadership. The training capacitated the staff to plan for a market base in and around the city. The leadership realized the role of the organization as an entrepreneur. This also enabled the management of Samarthak Samiti to develop a proposal and send to Global Environment Facility administered by the Centre for Environment Education (CEE) and Wells For India (WFI) [Source: 5. Review Report 2013-14].
- Exposure visits [12]. Samarthak Samiti organised various exposure visits for its staff to see income generation activities by other groups for marketing produce [Source: 5c endline self-assessment sheet_field staff_India_Samarthak Samiti]. These included:
 - Visit to Sultanpur, Madhya Pradesh to see the income generation activities of other cooperatives like making ayurvedic medicines growing tea. This was supported by Sir Dorabji Tata Trust [20] and Hivos [19], 2014.
 - Visit to Krishi Vigyan Kendra, in Rajasthan and the staff was given information on Waadi cultivation, bio pesticides, on making amla murabba and candy. This was supported by Hivos [19]and Krishi Vigyan Kendra [20] in 2014.
 - Exposure visit to Indian Institute of Management, Ahmedabad where the staff of SS and women in the cooperatives learnt how to market their produce. This was supported by Hivos [19] and Sir Dorabji Tata Trust [20] in 2014.
 - Visit to Shrashti mela, a three day fair in Ahmedabad where NGOs showcase their products. SS marketed honey and amla made by their cooperatives. This visit was supported Sir Dorabji Tata Trust [20] and Hivos [19] in 2013.
 - Exposure visit to Pratapgarh Krishi Vigyan Kendra for prevention of pest attacks. This was funded by Sir Dorabji Tata Trust [20] in 2013.
- Exposure visit to Coimbatore on methods of honey collection in 2013.
- *Staff to take on increased responsibility of engaging with the target groups [18].*

The other reason for improved capacity of SS staff to train the target group was that staff now take on the responsibility of engaging with the_target groups. Earlier the staff was more dependent on the leader or a resource person to train the target groups and solve problems. There were sufficient funds for the leader to travel so he would visit them frequently but with the reduction in the funds [17] the leader reduced his number of visits. The staff responded to this situation by taking on the responsibilities of visiting and engaging with the target groups. Now they engage independently in programme issues [Source: 5c endline self-assessment sheet_field staff_India_Samarthak Samiti; 5c endline self-assessment sheet_management_India_Samarthak Samiti].

Improved capacity for financial sustainability [21]

SS improved its capacity for financial sustainability [21] because the organization started using new funding strategies [3] and because they improved their interaction with the government and like-minded NGOs [13]:

- *New funding strategies [3]*

During the last two years the staff has improved their skills significantly to collect focused data from the field, to write better reports in order to showcase its work to new donors. While during the baseline Samarthak Samiti depended on an organisational development specialist for finalising their proposals, they are now trying to independently to put together proposals, and they are making better use of data and field experiences. The chief functionary has taken it upon himself to

develop proposals and new relationships with potential donors. SS currently is in contact with the following potential donors:

- Cement company to make it part of their CSR
- NABARD (National Bank for Agriculture and Rural Development) Jaipur for the tree-based Wadi support for tribal groups in the area
- Christian Aid, hopefully to support SS in a consortium of the BEE-Keeping for agriculture production project in 2014-2016
- As a Hivos partner SS also has applied to the Producer Entrepreneurship Catalyst & Incubation Facility (PROCIF) for capacity building and will also apply for the working capital and other support.

Samarthak Samiti started applying new funding strategies [3] because the leader became more self-reliant [14] and because of a shift in the organisation's strategic focus [15]:

- *Leader becoming self-reliant [14]:* The leader became self-reliant and depended less on the consultant. This is evident from the fact that the consultant was initially invited for 4-5 times in a month to take suggestions and support on writing reports and developing proposals, but now his help is sought only 4-5 times in a quarter [Source: self-assessment field staff]. Since there were not enough funds to pay the consultant [17], Samarthak Samiti was forced to rely on itself and take advice from the consultant only in case of dire need. This prompted the leader to take up more responsibilities on developing project proposals, preparing draft reports for the donor and taking initiatives in strategic development [Source: interview OD]. SS has now been trying to independently put together proposals, and making better use of data and making use of field experiences and has approached and get funding from two new funders – Wells for Life, CEE (Centre for Environment Education) (UNDP Small Grant) & TRIFED in 2013 [Source: Review Report 2013-14] came on board.
- *Shift in strategic focus [15] :* There was a shift in strategic focus from NTFP collection and marketing to agriculture and forest based strategies. Because of the seasonality of the forest produce and reduced sales of Tendu Patta due to government's anti-smoking policy, there was a lack of sustainable income for the producers. Also there was a reduction of funding [17] due to shifting of donor priorities on funding [16]. All these reasons compelled SS to think of diversifying its program [Source: Self-assessment field and management, endline evaluation workshop 2014]. As Tribals are well connected with Samarthak Samiti, they could discuss with them on the kind of produce to be produced in the gap period. This helped the leaders to make a strategic choice to diversifying its program and move towards agriculture and animal husbandry and from production to marketing. Note: this has not yet been integrated in the vision and mission of the organisation.

Samarthak Samiti has moved a step up from production to marketing. The Samarthak Samiti Producer Company was registered in 2011. It also registered its trademark "Desert Green" [Source: Annual Review Report 12-13]. SS is also focusing on new product innovations such as beeswax lip balm, Maize Papdi, lentils etc. followed by sale of products both new and old such as aloe vera juice, amla juice, jamun ark at various fairs in the country. For example, Maize Papdi was first sold at the 'Shrashti Mela', a fair held in Ahmedabad, Gujarat. Samarthak Samiti is trying to strengthen Producer Company with the hope that the salaries of the staff of Samarthak Samiti will be paid by the members of the cooperatives for the services they offer.

- *During the endline workshop, SS staff also indicated that they have improved their interaction with the government and also other like-minded NGOs [13].* Samarthak Samiti has strengthened the following networks:
 - Samarthak Samiti is empanelled as resource agency by SFAC¹⁹ (Society Promoted by department of agriculture and cooperation, Ministry of Agriculture, Government of India) for promoting producer organisations in Rajasthan [Source: 5. Review Report 2013-14].
 - Non Pesticide Members Initiative (NPMI). In 2013, Samarthak Samiti became a member of NPMI. This is a national network working on the promotion of non-pesticides farming in

¹⁹ SFAC is a consortium that supports new ventures in Agro-based industries. The target groups are individuals, farmers, producer groups, SHGs etc. and the consortium helps them get venture capital by linking them with banks

-
- the area and developing marketing linkages for the products made by the network partners [Source: 5. Review Report 2013-14, self-assessment management].
- MFP Policy Drafting committee [Source: self-assessment management]. Samarthak Samiti is part of this committee because they have constantly been engaged in promotion of the MFPs along with the forest departments and also propagation of MFPs in Common Property Resources (CPR) by Forest dweller Groups [Source: 3. Review Report 2012-13-11Feb].
 - It has strengthened its relationship with the government which resulted in helping the forest dwellers in accessing government entitlements [Source: SS-Work Plan_2013-14 26th May , Extension].
 - Tribal Self-Rule (TSR) Network, Rajasthan. This network is mainly working on the PESA act (Panchayat Extension to Scheduled Area). Their main work is to strengthen the village level council (Gaon Sabha) in the Tribal Sub Plan (TSP) area [Source: 5. Review Report 2013-14; discussion during workshop].
 - Herbal network India. This network is working to promote herbal initiative in North India by the Covenant Centre for Development [Source: 5. Review Report 2013-14].
 - NTFP- EP, South Asia Non Timber Forest Produce Exchange Programme, working on the issue of the NTFPs value addition, promote cultivation and marketing linkage for getting better price.
 - The staff's participation in different melas (festivals) and fairs has improved the relationship with many like-minded organisations [Source: 5. Review Report 2013-14]

Centre for Development Innovation
Wageningen UR
P.O. Box 88
6700 AB Wageningen
The Netherlands
T +31 (0)317 48 68 00
www.wageningenUR.nl/cdi

Report CDI-15-014

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Endline Report MFS II Joint Evaluations

Country	India
Consortium	Together4change
Responsible Dutch NGO	Wilde Ganzen
Project (if applicable)	Action for Children
Southern partner organisation	Smile foundation

The project/partner is part of the sample for the following evaluation component(s):

	X
Achievement of MDGs and themes	Good governance
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

1. Introduction

Economic growth has taken millions of people out of poverty in India while the middle class has grown considerably in the last two decades (Ravallion, 2010). However, 40 per cent of its population still lives on less than two dollars a day (Sheth, 2010). With a growing number of middle-income households and a vast amount of people living in extremely poor conditions, there is an increasing base for raising in-country funds towards developmental goals in India. In order for charitable organizations to raise funds efficiently from it, further knowledge on what drives these households to donate to charity is necessary.

Fundraising is a crucial activity for any charitable organization and carrying it out efficiently is not an easy task. In India, the Smile Foundation tries to raise funds from Indian firms and middle class to finance developmental projects. The Smile Foundation is financially supported by the Dutch NGO Wilde Ganzen, which is part of the Together4change consortium. Wilde Ganzen started in 2012 the Action for Children (AfC) project, which aims to support fund raising in Brazil, India, Kenya and South Africa via southern partner organizations. The Smile Foundation is the Indian Southern partner organization of Wilde Ganzen that implements the AfC program.

The AfC program works according to the following principle. It focuses on two groups. First, poor people or organizations that focus on poor people, who would like to start up a certain project, and need to raise money for this project from the local population. If the project is supported by AfC, only 50% of the needed funds need to be raised, the remainder will be donated by AfC. Second, the middleclass, including firms that are willing to donate money to Smile, such that Smile can double the funds available for the local projects.

Wilde Ganzen supports Smile in its attempt to conduct the AfC program. The project's aim is to establish and enhance a fully self-supporting mechanism for Civic Action to benefit poor children in India. Its main goal is for local non-governmental, non-poor, and non-foreign actors to increase their active participation in the process of poverty reduction by enabling a more resilient fundraising strategy from middle-income households and the corporate sector. The long-term aim is to achieve a fully India-financed AfC programme for Smile by 2020, independent from foreign aid.

The project targets 350 local civic groups throughout India where child poverty alleviation actions are being executed. These are co-funded, in line with the \$1:\$1 matching investment mechanism used by the AfC program. The specific aim of Wilde Ganzen is to give support to the development of a stronger fundraising strategy that focuses on these in-country donations by imparting training for the personnel of Smile. Basically, Wilde Ganzen aims to strengthen the capacity of Smile to increase local fundraising and, through Smile, the capacity of local organizations (mainly CBOs) to do the same. Details about the capacity to conduct local fundraising activities, and whether and how these changes are related to the intervention by Wilde Ganzen are provided in the Endline report-India, Smile Foundation MFS II country evaluations: Capacity of Southern Partner Organizations (5C) component (Kusters et al., January 2015). The specific goal consist in achieving an 85 per cent financing by in-country donations for all co-financed budgeted projects by 2016. Moreover, these

operations' administrative costs should at least be half covered by the same source of funds by project finalization date.

This report aims to evaluate the Action for Children project conducted by Smile and supported by Wilde Ganzen. We will assess whether the project achieved the main aims, in terms of improving the percentage of donations that are financed by in-country donations, and in terms of covering an increasing percentage of administrative costs. As the main contribution of Wilde Ganzen to SMILE relates to capacity building, which is analyzed by the C5 report (Kusters et al., 2015) we decided to conduct an experiment to test the underlying hypothesis of the AfC program. More specifically, we set up an experiment to test whether the \$1:\$1 matching investment mechanism encourages donations to Smile, for the matching strategy requires local groups to also contribute to the projects, which should enhance ownership and incentivize local groups to efficiently conduct the projects. The experiment also aims to improve knowledge about how SMILE could increase personal donations by the Indian middle class, one of the aims of the AfC project.

Although the intervention by Wilde Ganzen primarily aims to improve both the fundraising *capacity* of Smile, and, through Smile, of local CBOs, this report focusses on the first element (the capacity of Smile) and should therefore be read together with the C5 report by Kusters et al. (2015). The project does not primarily focus on poverty reduction of end users as such. Therefore, we refrain from conducting a household survey, and only consider whether the main outputs have been achieved.

The outline of the report is as follows: the next section presents India's charitable giving context as well as a review of the literature addressing the issues that are most associated with the current project. Section 3 describes the project in more detail, section 4 presents data on the fundraising activities, and in section 5 an analysis of the results is presented. Section 6 concludes the report.

2. Context

The middle class in India is estimated to be 50 million people and will reach 600 million by 2030. This represents a large and potential support base for raising funds for the charity. The increasing middle class population and individual motivations for giving can contribute to social change. A 2003 report by Participatory Research in Asia (PRIA) estimated that there are nearly 1.3 million NGOs operating in India. With so many organizations in the sector, it is difficult to choose and support many of these NGOs. The branding, accountability and transparency are a big challenge. The general myth is that the people do not donate in India. But on the contrary, religious donations are quite common in India. To tap the market HDFC Bank, the second largest private bank in the country, signed an agreement with Arulmigu Arunachaleswarar Temple in Thiruvannamalai, Tamil Nadu for offering online donation (press release by HDFC April 11, 2011). However, donations for socio economic causes are quite low. The anecdotal evidence suggests that it is due to lack of trust.

There is hope for the future with a wave of younger people engaging in different fundraising techniques for social causes. One of the finest examples in recent times is that of the group called India Against Corruption (IAC). The objective of this NGO was to introduce Jan Lokpal

Bill. Lokpal at centre and Lokayukta at state level will be independent bodies. This bill gives powers to initiate investigations and prosecution against any officer or politician without needing anyone's permission by the institution. The IAC received huge amount of funding from the people and the Lokpal Bill was passed in Parliament.

Contributions to charities from Indians have increased more than 50 per cent since 2006. The total amount of donations represents a 0.6 per cent of India's GDP and places it above countries such as Brazil and China, where contributions are of 0.3 and 0.1 per cent of their GDP, respectively.

According to Sheth and Singhal (2011), India's billionaires donate between 1.5 and 3 per cent of their annual household income as opposed to their U.S. counterparts who donate 9 per cent of theirs. The major reasons that hold back donations from wealthy individuals in India are threefold: accountability issues, lack of transparency, and donors' unawareness of a charitable organization that matches their interest. Moreover, with an impressive 700 per day NGO creation rate for the period 2006-2009, India now has over 3.3 million operating NGOs. Choosing among this overwhelming amount of charitable organizations represents another major problem for donors. Although this project focuses on fundraising from the middle class rather than millionaires, acknowledging some of the issues that hold back the latter in their donations is a valid insight to assess the constraints that the middle class faces at the time of contributing for charity. If those issues are binding for very wealthy individuals then, they must be even more restricting for middle-income households.

India is a vast country with the second largest population in the world. It contains thousands of different ethnicities, dialects, cultural backgrounds, and many different religious groups. Very diverse societies may have a larger reluctance to charitable giving. A recent study suggests that increases of 10 per cent in ethnic or religious diversity reduce charitable giving by 14 and 10 per cent, respectively (Andreoni et. al., 2011). Intuitively, people prefer to donate for others of their same ethnicity or religion. In more diverse societies, charitable organizations do not necessarily focus on one particular group of people. There is a larger probability for donations to be destined to help people from other ethnic origin or religious background than that of the donor, hence they are more reluctant to donate.

There are also studies that try to assess to what extent solving the transparency and accountability issues affect the amount of funds raised. Karlan and List (2012) demonstrate a simple theory which formally describes how charities can resolve the information asymmetry problems faced by small donors by working with large donors to generate quality signals. Vesterlund (2003) assumes that donors possess imperfect information about charity quality, and shows that if some donors can acquire sufficient information to reveal quality, then announcements about prior donor giving levels can induce additional giving through information revelation. Karlan and List (2012) provide evidence to suggest that, when a large donor is bundled with a charitable organization the asymmetry of information problem that arises when giving to charity is reduced. According to the authors, the large donor acts as a signaling device that reflects the seriousness and efficiency of the charitable organization. The former have more and better resources to monitor the work of many of these organizations. Therefore, having a large donor as a regular one provides the right

signal to smaller or individual donors, who do not have the means necessary to monitor the transparency and accountability of the organization that receives the funds.

Another constraint for fundraising is related to the overhead and fundraising spending in itself. Many studies show that donations are negatively correlated with the percentage of the total funds raised that are destined to administrative costs and fundraising activities by the charitable organization. According to experts and innovative entrepreneurs in the field, this overhead determination dooms the organization's possibilities for growth, and the hopes that it reaches more people and solves more problems more efficiently (Pallota, 2008). Donors want to see their funds destined to the cause they have selected, but a large overhead explicitly deducts part of the real impact their money can produce. Moreover, in a non-transparent environment, with accountability issues and a large pool of NGOs to choose from, high overheads would increase the binding constraint for charitable giving.

A very interesting approach that a recent study takes on the overhead issue, and related to the big donor benefits, is that taken in Gneezy et. al. (2014). In this research, the authors show in a lab setting that people will donate more, and more frequently, despite large overheads if they are told that the charitable organization's administrative costs are all being covered by some large donor's funds. Results seem to suggest that the real constraint to donations is the trust placed in the charitable organization. Having a large donor covering all the administrative costs provides the appropriate quality signal while assures donors that their full contribution will be directed to those who are targeted by the project. This mechanism has shown to increase donations even in a \$1:\$1 matching investment, or in a seed money for investment project.

In this context, the AfC project aims to establish and enhance a fully self-supporting mechanism for Civic Action to benefit poor children. It targets to obtain a proportion of 85 per cent of in-country funding donations for all co-financed projects by the end of 2015. Understanding the donating drivers among the Indians is important to develop a strong self-sufficient in-country fundraising base. How to raise funds from this increasing number of middle-income families is fundamental to this task and the aspects of charitable fundraising addressed above should be taken into account when asking for donations.

3. Project description

WG supports, through its partners, people who make an effort to achieve a better future for their community all over the world. An important part of the support is in the form of trainings and financial contributions to branding and marketing of SMILE. The support is directed through small-scale specific projects by, of and for people in developing countries. The AfC project in India focuses on alleviating poverty among children. Particularly, associated with the Smile Foundation in India, WG's focus was put on 350 civil groups throughout India with whom projects for and with children in the education sphere were conducted since January 2011, in addition to the 126 under MFS-1 (2007-2010).

The outcomes and objectives of the AfC project are to directly alleviate poverty through the implementation of 350 small-scale projects, as well as through strengthening the civil society. The latter relates to the possibility of a larger fraction of middle-income families and businesses contributing to funding these projects in the future. It also relates to strengthening the capacity of local CBOs and small NGOs to raise funds at local level and thus increase their legitimacy, their independence, their ability to set their own priorities (instead of that of a donor) and their financial sustainability. The mechanism through which WG works is by matching the investment of the donor. The contributor is invited to invest her preferred amount while the NGO commits to invest an equal amount with funds of its own. The target is to achieve an 85 per cent of in-country funding for co-funded projects by the finalization of the project at the end of 2015.

In order to achieve these goals the project envisaged a series of activities that focused on both, the direct co-financing of small-scale educational projects and strengthening fundraising capabilities of the local civic groups, to achieve a more locally and self-dependent fundraising strategy. The project doubles the local funding raised for these projects at the time it imparts training on fundraising for local civic groups and campaigns for fundraising from the middle class and the corporate sector. The outcomes of the project are straightforward: the number of co-financed educational projects implemented, the amount of money raised to fund the projects, and the degree of self-sufficiency (the proportion of those funds raised in-country). More specifically, the project outputs that SMILE and Wilde Ganzen aim to achieve in 2015 (as specified in the MFS II Evaluation: Country specific information India report; WOTRO, nd) are: (1) by the end of 2015, 350 projects of local groups have received € 705.086 from AfC to double their fundraising; (2) By the end of 2015, 350 local groups have been trained and advised; (3) By the end of 2015, the in-country donations cover 85 per cent of the co-financing budgets for projects; (4) By the end of 2015 this covers 50 per cent of the AfC organization costs.

It should be noted though, that the aimed project outcomes are slightly different from the contract requirement that SMILE wrote with Wilde Ganzen.¹ The contents of the agreement signed between Wilde Ganzen & Smile are:

1) by the end of 2015, Smile will conduct 350 local actions to support 250 projects of local groups. They will have received € 705.086 from AfC to double their fundraising;

(2) By the end of 2015, 250 local groups will be trained and advised;

(3) By the end of 2015, the in-country donations (Euro 436084) cover 62 per cent of the co-financing budgets for projects;

a. ¹ The reason for the differences are twofold: (a) WOTRO has only looked at 2015, whereas the contract between Smile and WG covers the whole period 2011-2015; (b) for points 3 and 4 (the co-financing of budgets), WOTRO has included the local actions, whereas the contract of WG with Smile uses figures excluding those local actions.

(4) By the end of 2015, Smile will raise (Euro 333187) this covers 27 per cent of the AfC organization costs.

4. Methodology and Data Requirements

The purpose of this project is for WG to build fundraising capacity into the Smiles Foundation. After training, advising, and practical support on fundraising events and campaigns provided by the NGO, the former aims to be able to finance 85 per cent of the budget for co-financed projects with in-country donations. Moreover, the aim is to cover as much as 50 per cent of all organizational costs of the Action for Children project by enhanced in-country fundraising capacity in 2015. All these outcomes should be achieved by project finalization in December 2015.

Project impact evaluation should answer the question of to what extent did the WG intervention actually enhance Smiles fundraising capacity. The indicators detailed above are figures that lead us to determine whether the project had reached, or is on the way of reaching, said goals. However, there is an underlying question that interferes with the project results which is, what would have been Smile's fundraising capacity had WG not intervened? This basic problem in project impact evaluation cannot be solved for this particular case. There is no possible way of analyzing the fundraising on a single project with and without WG intervention, hence we were not able to define a control group. We also lack information on fundraising performance of Smile for projects supported by the WG intervention against projects for which WG has no involvement whatsoever. We therefore decided to validate the project simply by considering the development of relevant indicators from the beginning of the project until the end of the project. This is somewhat in line with a before-after analysis, but not with real before-intervention data. The main drawback of this approach is that we are not able to rigorously analyse attribution. That is, if we find changes, we are not able to rigorously attribute these to the interventions by Wilde Ganzen.

The data requirements for our impact analysis are minor. We only need quarterly reports from the Smile Foundation for this project's main aim is to enhance fundraising capacity of SMILE. The main aim is to enhance capacity of SMILE and capacity of local CBOs and small NGOs supported by SMILE. The project does not primarily aim to enhance welfare of end-users, i.e. organizations that start projects with support of SMILE. Thus a household survey is not needed for this project.

Experiment

In addition to the impact analysis as such, using data from SMILE, we conducted an experiment testing the \$1:\$1 matching investment mechanism used by the AfC program. The experiment was also conducted to determine the drivers for middle class Indians' charitable contribution. Individual donors were separated into regular and occasional, according to their previous involvement with the foundation, and had letters sent with the purpose of getting them to contribute. Three different letter formats were randomly

assigned to each one: (1) A base letter, explaining what SMILE does. This letter contained a success story about the contribution's impact with a picture of the story's young protagonist; (2) the same as in 1, but in addition information about the funding methodology and (3) the same as for 1, but with additional information on SMILE foundation credibility. The idea of the experiment was as follows: if the \$1:\$1 matching investment mechanism used by the AfC program would be an attractive feature for potential donors, the second letter should raise more funds than the other two letters.

To further test this proposition, after we sent out the letters, we sent reminders by email. The email reminders started in May 2014. One email per month was sent. In total we sent three reminders.

Power

We don't have power issues regarding the main analysis for we only consider development of some key indicators. Yet, for our experiment, sample size, in terms of response rates, is important. It turned out that out of the sample of 150000 individuals to whom we sent the letters, only 25 responded. This comes down to a response rate that is lower than 0.02 percent. There were some differences between the three groups, with a response rate of letter 1 too be highest, around 0.025 percent and a response rate of letter 2 around 0.01 percent. However, it is clear that take up rates are far too low to use this experiment as a test of the relevance of the \$1:\$1 matching investment mechanism. Regarding the reminders, the response rate was also very low: Hence, our experiment turned out to be highly underpowered for measuring relevance and impact of the funding methodology. Yet, the experiment gives us important information about possibilities to raise funds among the middle class in India , the ultimate goal of SMILE. The experiment clearly shows how difficult it is to raise funds from Indian middle-class, towards child poverty and child rights, one of the main outcomes of this project.

Availability of financial data

The total project budget is € 2,642,711. The percentage funded by MFS II is 45%.

Reports on the budget assigned to each activity financed by WG were sent quarterly by Smile. These data help us determine whether or not the 50 per cent of organization costs being financed by in-country donations has been achieved, or if the foundation is heading that way.

5. Analysis of the results and financial analysis

Table 1a compares Targets and Actual results for 2011, 2012 and 2013. Table 1b gives the total funds (and for 2015 projected funds) raised by SMILE over the entire MFS II period,

2011-2015. Table 1a shows that targets for each year, set in accordance between WG and Smile, had not been met for most outcomes.² However, in the last two years reported, Smile has reached and outperformed the targets set regarding to what both, corporate and individual donors contribute. Moreover, funds raised in 2013 from major corporate donors increased threefold with respect to 2012, while those raised from individual occasional donors did as well by 50 per cent.

In 2013, more than 800 occasional individual donors made more than 50 thousand euros in contributions while 22 regular donors gave around 800 euros in donations. In per capita terms, the donations coming from occasional individuals were much larger than those coming from regular ones. The formers' contributions outperformed the latters' by twofold. Nothing can be said about these results without controlling for individual characteristics, which may bias them. However, from the comparison with results from the previous year, it can be concluded that the regular contributors, although duplicate in number, reduced by half the per capita contribution. Basically, in 2012, the same amount of money was raised from half the amount of regular donors. In addition, the number of regular individual contributors remains very low. With respect to occasional donors, the per capita contribution remained fairly the same from 2012 to 2013.

Table 1a In-Country Fundraising Activities	2011		2012			2013		
	Target	Actual	Target	Actual	Amount EUR	Target	Actual	Amount EUR
Fundraising actions planned	100	68	120	84	NA	200	100	NA
Fundraising actions carried out	60	44	70	44	58,266	120	52	NA
Major corporates approached	300	210	320	252	NA	400	295	NA
Major corporates' contributions received	30	34	34	34	36,184	50	49	102,851
Individual contributions – occasional	300	136	500	541	34,366	800	818	50,346
Individual contributions – regular	50	6	50	11	710	50	22	801
Total Funds Raised by Smile					129,526			154,098

Table 1B: Total funds raised by SMILE during MFS II period

²It may be argued that the number of fundraising actions implemented is not so important, as it all comes down to the total amount raised by Smile to cover its own contribution, as compared to the planned own contribution. The number of actions carried out is an indicator, though, for the diversification of sources of income and for Smile's ability to spread risks.

2011	2012	2013	2014	2015
103,221	129,526	153,998	163,406	247,116

Note: the figure for 2014 refers to the first three quarters of 2014 for figures of Q4 are not yet known. The figures for 2015 refer to projections, and need to be taken with caution as e.g. they still need correction for over- or underspending in previous years. The totals for 2013 presented in tables 1A and 1B slightly differ (100 Euro), probably due to ex-post corrections.

Table 1B shows that the overall amount raised by SMILE grew from 103,221 Euro in 2011 to 153,998 Euro in 2013. The yearly amount of funds raised increased even further in 2014, and is expected to substantially increase in 2015.

At the end of this section we come back to the required outputs to be achieved in 2015. Recall, that according to the contract between Wild Ganzen and SMILE, by the end of 2015 SMILE should have achieved the following outputs:

- 1) by the end of 2015, Smile will conduct 350 local actions to support 250 projects of local groups. They will have received € 705.086 from AfC to double their fundraising;
- 2) By the end of 2015, 250 local groups will be trained and advised;
- 3) By the end of 2015, the in-country donations (Euro 436084) cover 62 per cent of the co-financing budgets for projects;
- 4) By the end of 2015 , Smile will raise (Euro 333187) this covers 27 per cent of the AfC organization costs.

The project period is not yet finished. Yet, based on predictions of the Chief Operating Officer of Smile, mr Vikram Singh Verma, it is to be expected that by the end of 2015 Smile will be able to achieve the following:

- (1) by the end of 2015, 301 projects of local groups have received € 705.086 from AfC to double their fundraising;
- (2) By the end of 2015, 301 local groups have been trained and advised;
- (3) By the end of 2015, the in-country donations cover 67 per cent of the co-financing budgets for projects;
- (4) By the end of 2015 this covers 32 per cent of the AfC organization costs.

The projections of mr Vikram Singh Verma are supported by Table 2, which compares all funds raised in India under AfC, versus the subsidy spent, over the 2011-2014 period (minus Q3 of 2014) and the projection for 2015. The table shows that: 1) the local action results of CBOs have remained stable in the first three years, have grown in 2014 and are projected to grow further in 2015; 2) the funds raised by Smile have grown progressively (provided Q4 of 2014 has given the expected results) and are assumed to grow further in 2015; 3) From 2012 onwards, the overall amount of money raised in country (local actions of CBOs and funds raised by Smile combined) was at the least equal to the amount provided from the Dutch subsidy; 4) it is expected that in 2015 the own contribution of Smile (the funds it raised itself, so excluding the funds raised by local CBOs), is expected to be (far) higher than the planned Dutch subsidy and 5) it is expected that in 2015 the overall in country contributions will more than double the amount provided from the subsidy.

Table 2: Funds raised in India versus the AfC subsidy

	2011	2012	2013	2014	2015	Entire period
Local Action by CBOs	121,587	115,555	126,104	179,238	175,000	717,483
Funds raised by SMILE	103,221	129,526	153,998	193,366	247,116	827,227
Actual AfC subsidy	289,842	244,456	238,709	266,882	160,416	1,200,305
ratio Funds raised by Smile/AfC subsidy	36%	53%	65%	72%	154%	69%
ratio Sum Funds raised by SMILE and Local Actions/AfC subsidy	78%	100%	117%	140%	263%	129%

Hence, it is to be expected that SMILE will be able to fulfill all contract requirements at the end of the project period.

5.1 Results of the experiment and possibilities for future research

Table 3 presents figures on the fundraising and experimental activity carried out on middle income regular and occasional Indian donors.

Table 3	Number of donors reached	Number of donors who responded	Amounts contributed* (€)	Contribution per capita (€)
Letter format 1	50,000	12	375	31.3
Letter format 2	50,000	5	107	21.4
Letter format 3	50,000	8	256	32.0
Total	150,000	25	738	29.5

* Originally reported in Indian Rupees, same exchange rate as in fourth quarter's financial report from Smiles.

The table clearly shows that response rates were extremely low. Fundraising by means of sending letters to potential donors in India does not seem to be a cost-effective experiment for the amount raised is far below the cost of the experiment.

After we sent out the letter, and response rates turned out to be so low, we decided to send reminders by email. The email reminders started in May 2014. One email per month was sent. In total three reminders were sent. Again response rates were very low. In total 8 more donations came in due to the reminders. The total amount of funds raised via the reminders was 17000 Indian rupees (around \$275).

The response rates to our experiment were much too low to test the relevance of SMILE's funding methodology, which was the prime aim of the experiment. Although the experiment was not primarily designed to suggest better funding possibilities for SMILE, it clearly shows that in order to raise donations among the Indian middleclass sending letters and/ or emails to a randomly chosen group of relatively rich individuals is not cost-effective. What other possibilities are available to SMILE to raise funding among Indian middleclass?

Overheads are important to donors, since the larger the proportion of their money goes to pay for administrative costs, the lower the sense of an impact they get from their contribution. Therefore it is crucial that new ways to reach out are worked out so that new contributors take this aspect as fundamental.³ Sending letters by post not only had a large stamp cost, there were two additional problems. First, one could not guarantee that the letters reached the intended target and second, even when they reached they were opened.

These days almost everyone with an Internet connection has an electronic way to be reached: be it through social networks, email accounts, or any other type of online presence. Although still one of the worst ranked countries with respect to information technology spread among its citizens, because of its massive population Indians are among the most

³ One way to do this could be to ask the Trustees or some large companies to cover the administrative costs, so Smile can guarantee individual donors that 100% of their gift goes to projects. Of course, the more successful fundraising among individuals becomes, the more difficult it is to maintain such a strategy. Under MFS1 Wilde Ganzen promoted the use of this strategy, but the partner organizations, including SMILE, found it inappropriate given their situation.

connected in the world (ITU, 2013). Middle class Indians are probably largely reachable through online interaction, which is marginally cost-free. Hence, instead of letters, emails should be sent.

Even better, through Facebook, particular groups can be targeted. Online social networks might provide a marginally cost-free, easily accessible and highly reliable means to contact potential donors. However, this is but only half the issue, the other half consists on what the content of the communication actually says. The content is what ultimately will be analyzed and that will influence, or determine, whether Indian middle-income individual donors donate.

So far the question of which is the best donation driver among regular or occasional contributors has been addressed without much success. The problem is not only answering which one is more effective, but if any actually is. As suggested above, reaching a vast amount of people is possible through online means. Therefore effectiveness will be sorted out if anything else, by the probability increase of a sufficient number of contributors responding. However, more than an experiment this should also be a fundraising action and, hence, funds need to be raised. Applying the strategy suggested in Gneezy et. al. (2014) may be of use.

6. Discussion and Conclusion

This project mainly aims to improve the fund raising capacity of SMILE and, through it, the same capacity of CBOs and small NGOs. The main aim of this project, i.e. raising the amount of in-country donations to help reduce child poverty and improve child rights is extremely important, e.g. since Western countries become more and more reluctant to donate funds. India has a growing middle class, which may be willing to contribute to the lack of funds available for aid projects, and should in principle provide a huge reservoir for increasing in-country donations. The Smile Foundation is the Indian Southern partner organization of Wilde Ganzen that implements the AfC program, which tries to improve within country donations via the so-called 1:1 funding matching strategy. Wilde Ganzen advocates this funding strategy as it would lead to improved ownership at the local level, being very important for it improves the ownership of the projects, at the local level, which would seduce members of the middle class to also contribute to such projects, and hence should attract more donations. Our experiment does not provide any evidence for the second element of this strategy, i.e. that the 1:1 funding matching strategy would increase donations by the middle class. A possible reason for this result is that the funding matching strategy is very important for the local level (CBOs and NGOs), but not for individual givers who donate to a project via a national partner organization, like SMILE.⁴ It should be

⁴ According to information from Wilde Ganzen, also in the Netherlands, Private Initiatives at the local level who receive from WG a premium on the funds they raise themselves, frequently say that the premium, plus the fact that the name of Wilde Ganzen is involved, is an important stimulant for mobilizing local donations, whereas individual donors to Wilde Ganzen often do not even know that Wilde Ganzen uses a particular funding methodology.

noticed, though, that our experiment does not test the first part of the strategy, i.e. the improved ownership at the grassroots level.

Our experiment indicates how difficult it is to raise funds from the Indian middle class. The experiment shows that simply approaching potential donors from the middle class in India by sending them letters or reminders per email does not work. In general, our experiment indicates how difficult it is to raise funds from individual persons from the Indian middle class. SMILE raises a lot of funds via Indian corporations, but in order to ensure a continuing increase in India-based donations and diversification of its funding SMILE aims to increase donations from Indian middleclass individuals. Our experiment clearly shows that this is not an easy task.

Our experiment to induce the Indian middle class to donate was not very successful. This could be because this was a new approach and like all new approaches, the overhead costs are too great and, hence, a one-off attempts becomes cost ineffective. Given that one is interested in reducing overheads, it was counter-productive that setting up the platform to reach individuals became too costly.

Luckily, platforms like Facebook and other social media already exist, there are many individuals connected to these media and the cost of disseminating through them is very small. Indeed, one of the experiments to raise donations from the Indian middle class that could be tried by SMILE in the future is crowd-sourcing of funds. Indians donate a lot to religious organizations and to friends and family. What is not common is giving to unknown individuals or organizations. What queers the pitch is that there are too many organizations and not all of them are credible and so the bad ones drive out the good ones from people's minds.

One important lacuna was that Wilde Ganzen is not a known organization in India. On the other hand, most people believe that European organizations, even if unknown, are more credible. So, instead of SMILE claiming that they are being funded by Wilde Ganzen, it could have been better if Wilde Ganzen claimed that they are working with SMILE. The main point being made is that those who know SMILE do not need any certificate from anyone about them; those who do not know will not be impressed by any claims made by SMILE. Wilde Ganzen making a claim has more bite in this case.

Coming back to the project in itself. In our view, the project has been well-designed. We had several conversations and meetings with SMILE. From these meetings we learned that SMILE is a highly professional and strong organization. This conclusion is also confirmed by the C5 report (Kusters et al., 2015) which clearly shows that SMILE was already a very strong organization during the baseline, scoring high on the five core capabilities. During the project period this even increased somewhat further.

In terms of outputs, the project has picked up steam in the last years, at least with some donors in India. It is to be expected that SMILE will be able to fulfil all project requirements at the end of the project period, although some outputs may be slightly below the aimed

outputs as described in the WOTRO country report. Unfortunately, we are not able to rigorously attribute these changes to the support by Wilde Ganzen for the evaluation methodology is based on a simple before-after analysis without taking into account a comparison group. Moreover, as is also explained in Kusters et al (2015) other donors also financially supported SMILE during the project period, so that it is almost impossible to single out the impact of Wilde Ganzen as such. Yet, overall we are very positive about this project, and about SMILE as a professional and strong organization. We do have some concerns about possibilities to raise India-based personal donations in the future, but trust that SMILE will be able to develop appropriate strategies.

We end this report by valuing the programme in terms of the main evaluation questions of the MFS II evaluation. As we were not able to define a control group, we are not sure whether observed results can be attributed to the project. Hence, we grade this question low, with a 5. It should be noticed though, that this is a grade for the “rigour” of the impact analysis, not for the project, SMILE or Wilde Ganzen. The efficiency question is also impossible to answer since we lack a credible benchmark that can be used to make a comparison with the fundraising costs of SMILE. Yet, we know from Table 2 that from 2012 onwards the overall amount of money raised in country was at the least equal to the amount provided from the Dutch subsidy. Hence, from 2012 a kind of a break-even point has been reached. We also know from Table 2 that it is to be expected that in 2015 the own contribution of Smile will be much higher than the planned Dutch subsidy. These figures suggest that the subsidy of Wilde Ganzen seduces a more than 1: 1 increase in in-country donations, and hence from this point of view the project seems cost-effective. Therefore, we grade the efficiency question with a 8, although a “real” efficiency analysis cannot be conducted given the data available. It should also be noticed that we did not test the impact of the obtained funds on end-users for this project’s main aim is to improve fundraising. Therefore, the question whether the observed results are relevant to the project beneficiaries cannot be answered.

Table 4: Valuing the programme

Statement	Score
(How much do you agree with the following statements?)	1 = not at all 10 = completely
The project was well designed	8/9
The project was implemented as intended	8/9
The project reached all its objectives	8/9
The observed results are attributable to the project interventions	5

The observed results are relevant to the project beneficiaries	NA
The project was implemented efficiently	8

Acknowledgements

We are grateful to all the people that have contributed to this report. We particularly would like to thank the Southern Partner Organisation Smile Foundation (Smile) and the Co-Financing Agency Wilde Ganzen for their endless patience and support during this challenging task of collecting the endline data. We hope that this endline report will provide useful insights to Smile, Wilde Ganzen, the Together4Change Alliance, the synthesis team, IOB and NWO/Wotro.

1. Introduction & summary

1.1 Purpose and outline of the report

The Netherlands has a long tradition of public support for civil bi-lateral development cooperation, going back to the 1960s. The Co-Financing System (*Medefinancieringsstelsel*, or 'MFS') is its most recent expression. MFS II is the 2011-2015 grant framework for Co-Financing Agencies (CFAs), which is directed at achieving a sustainable reduction in poverty. A total of 20 consortia of Dutch CFAs have been awarded €1.9 billion in MFS II grants by the Dutch Ministry of Foreign Affairs (MoFA).

The overall aim of MFS II is to help strengthen civil society in the South as a building block for structural poverty reduction. CFAs receiving MFS II funding work through strategic partnerships with Southern Partner Organisations.

The MFS II framework stipulates that each consortium is required to carry out independent external evaluations to be able to make valid, evaluative statements about the effective use of the available funding. On behalf of Dutch consortia receiving MFS II funding, NWO-WOTRO has issued three calls for proposals. Call deals with joint MFS II evaluations of development interventions at country level. Evaluations must comprise a baseline assessment in 2012 and a follow-up assessment in 2014 and should be arranged according to three categories of priority result areas as defined by MoFA:

Achievement of Millennium Development Goals (MDGs) & themes;

Capacity development of Southern partner organisations (SPO) (5 c study);

Efforts to strengthen civil society.

This report focuses on the assessment of capacity development of southern partner organisations. This evaluation of the organisational capacity development of the SPOs is organised around four key evaluation questions:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

The purpose of this report is to provide endline information on one of the SPOs involved in the evaluation: Smile Foundation in India. The baseline report is described in a separate document.

Chapter 2 describes general information about the Southern Partner Organisation (SPO). Here you can find general information about the SPO, the context in which the SPO operates, contracting details and background to the SPO. In chapter 3 a brief overview of the methodological approach is described. You can find a more detailed description of the methodological approach in appendix 1. Chapter 4 describes the results of the 5c endline study. It provides an overview of capacity development interventions of the SPO that have been supported by MFS II. It also describes what changes in organisational capacity have taken place since the baseline and why (evaluation question is 1 and 4). This is described as a summary of the indicators per capability as well as a general causal map that provides an overview of the key organisational capacity changes since the baseline, as experienced by the SPO. The complete overview of descriptions per indicator, and how these have changed since the baseline is described in appendix 3. The complete visual and narrative for the key organisational capacity changes that have taken place since the baseline according to the SPO staff present at the endline workshop is presented in appendix 4.

For those SPOs involved in process tracing a summary description of the causal maps for the identified organisational capacity changes in the two selected capabilities (capability to act and commit; capability to adapt and self-renew) is provided (evaluation questions 2 and 4). These causal maps describe the identified key organisational capacity changes that are possibly related to MFS II interventions in these two capabilities, and how these changes have come about. More detailed information can be found in appendix 5.

Chapter 5 presents a discussion on the findings and methodology and a conclusion on the different evaluation questions.

The overall methodology for the endline study of capacity of southern partner organisations is coordinated between the 8 countries: Bangladesh (Centre for Development Studies, University of Bath; INTRAC); DRC (Disaster Studies, Wageningen UR); Ethiopia (CDI, Wageningen UR); India (CDI, Wageningen UR; Indonesia (CDI, Wageningen UR); Liberia (CDI, Wageningen UR); Pakistan (IDS; MetaMeta); (Uganda (ETC). Specific methodological variations to the approach carried out per country where CDI is involved are also described in this document.

This report is sent to the Co-Financing Agency (CFA) and the Southern Partner Organisation (SPO) for correcting factual errors and for final validation of the report.

1.2 Brief summary of analysis and findings

Over the last two years Smile has slightly improved in its capability to act and commit. Important improvements were the strengthened second line leadership, more decentralised structure and improved fundraising capacity. In the capability to adapt and self-renew Smile also improved slightly. This was mainly due to improved internal cooperation and communication which led to better internal and external reporting, more participatory planning, better tracking of its operating environment and being more responsive to their stakeholders. Smile improved very slightly in the capability to deliver on development objectives. Smile is reaching its planned outputs better and has become more cost-effective in its resource use. The organisation improved slightly in its capability to relate. There is a strong feedback mechanism in place, they have improved their networks and relations within the organisation have also improved. Finally there was a very slight improvement in the capability to achieve coherence because the staff and director now share the same vision for the organisation.

The evaluators considered it important to also note down the SPO's perspective on the most important changes in in the organisation since the baseline. During the endline workshop the key organisational capacity changes that were brought up by Smile's staff were improved fundraising capacity and improved capacity to organise trainings for CBOs. These changes happened to overlap with the key organisational capacity changes that were selected for process tracing as they were linked to MFS II funded capacity development interventions. MFS II supported capacity development interventions have played an important role in improving the fundraising capacity of Smile, particularly its improved knowledge and skills on branding and fundraising and its brand development and positioning can be to a large extent attributed to MFS II funding. However, internal factors like hiring new fundraising staff and improved interdepartmental communication also have played an important role. MFS II supported capacity development interventions have also played an important role in improving the capacity of Smile to organize trainings for CBO, particularly in terms of enhancing the competencies of a now well-trained CBO team. The other change to which the dedicated and well-trained CBO team can be attributed is the "redesign and restructuring of the organization", which cannot be attributed to MFS II supported capacity development interventions and overall played a less important role.

2. General Information about the SPO – Smile

2.1 Context and general information about the Southern Partner Organisation (SPO)

Country	India
Consortium	Together4Change
Responsible Dutch NGO	Wilde Ganzen
Project (if applicable)	Action for Children
Southern partner organisation	Smile Foundation (Smile)

The project/partner is part of the sample for the following evaluation component(s):

Achievement of MDGs and themes	
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

2.2 The socio-economic, cultural and political context in which the partner operates

Nearly one third of the states and union territories in India have seen an increase in the dropout rate in primary education despite an overall increase in enrolment two years after the Right to Education Act (RTE) was implemented. This comes at a time when fund allocation has been doubled. These include progressive states like Tamil Nadu and Gujarat that have seen an increase in drop out ratio from 0.1% to 1.2% and 3.9% to 4.3% respectively between 2009-2010 and 2010-2011. This dropout rate is higher amongst underprivileged children and especially, girls. Further, learning assessments show that the children who do remain in school have poor learning outcomes. Poor education outcome is directly related to lack of infrastructure, lack of trained teachers, basic amenities like drinking water, toilets and text books in schools, ill health, malnutrition, unemployment, poverty which further leads to an intergenerational poverty trap. A comprehensive approach that maintains a continuum from education of children to gainful employment by strengthening vocational training skills for income generation; and continuing education with a special focus on empowerment of girls who in turn will ensure the literacy of their children can go a long way in strengthening communities. In this context, the efforts of NGOs and Community based organizations that focus on health and education of children can enhance and engender bridging the gaps created by poor Governance. Smile Foundation tries to do so by empowering underprivileged children and youth through relevant education, innovative healthcare and market-focused livelihood programs.

The NGOs and CBOs need funding support to carry out their work but the current donor environment is not very favourable to sustain their programs. The dwindling of foreign resources brings in the need to compete more aggressively with other similar NGOs working on issues of children, as the competition becomes tougher with smaller pots of money. There has been a notable decrease in the funders base mainly with foreign funds, owing to a very volatile donor environment across the world and more so in India. Most foreign donors have been revising their grant making policies and funding

priorities, and the current trend in India shows a decline in foreign funds and conclusion of operations by certain bilateral and multilateral organizations. International posturing of successive Indian governments has been that of a developing to developed nation, building on its economic growth, and young educated middle class. However, things on the ground tell a different story. The situation speaks of new forms of poverty, deprivation, inequalities and suffering.

But every closed door opens several new windows. The new Companies Act 2014, with a very strong CSR Clause, mandates companies with an average profit of INR 50 million in the last three years, to proactively design and undertake welfare and other developmental activities. This is seen as a great opportunity for Smile as the corporate sector would be required to spend 2 % of their net profit for social development actions. Smile is devising innovative and effective strategies to tap into this potential windfall. Though the Companies Act 2014 is being seen as a great opportunity and Smile is devising innovative and effective strategies to target the same, in all their interactions with Corporate houses in the recent months they have experienced that due to the Companies Act the nature of corporate funding for CSR has changed. Companies are now more inclined towards restricted funding for projects to be implemented. In the context of AfC, Smile's challenge is to raise unrestricted funds to meet premium and own costs. In addition, the middle class in India, estimated to be 50 million people and projected to reach 600 million by 2030 represents a large and potential support base for raising funds for developmental work. The increasing middle class population and individual motivations for giving, will contribute to social change.

The myth that people do not donate in India can be understood in the context of donation to religious institutions and trusts. However, the donations for the developmental causes are quite low. Anecdotal evidence suggests that, it is due to lack of trust. Vesterlund (2003) assumes that if donors possess information about charity quality, they may be motivated to donate. This brings in the need for branding, accountability and transparency for improving credibility of the organisation.

2.3 Contracting details

When did cooperation with this partner start: 20 December 2007

What is the MFS II contracting period: 1st of January 2011-31st December 2015

Did cooperation with this partner end? No

Is there an expected collaboration after the 31st of December 2015? Yes, Wilde Ganzen will continue to collaborate with Smile. This will be done in at least two ways:

By continuing to fund part of the premium for local projects, as under the Action for Children (AfC) model. The aim is to jointly fund between 70 and 88 new projects every year during the years 2016-2020. As under AfC, the local contribution is 50 %; the percentage of the contribution from funds raised at the national level increases and the percentage of the foreign (i.e. Wilde Ganzen) contribution decreases every year. Thus, the whole AfC cycle of steadily increasing local and national fundraising for local projects will be implemented until for this aspect Smile becomes completely independent from foreign funding.

By involving Smile in the Change the Game (CtG) programme that will provide training on local fundraising and on 'mobilising support (other than financial support)' (lobby & advocacy) to CBOs and NGOs. Smile is involved in:

- a. the development of the training courses
- b. training for Smile staff to become better trainers themselves (which will probably lead to the establishment of a specialized trainers unit within the organisation)
- c. providing actual 'classroom' trainings to groups
- d. providing coaching and advice to trainees who follow one of the digital courses provided by CtG.

The speed with which activities will be developed and implemented depends on available funding. Wilde Ganzen has approximately € 450,000 per year from its own funds. CtG is prosed by the ICCO-CNV International and Wilde Ganzen consortium for the Strategic Partnership with the Dutch Ministry of Foreign Affairs. If accepted, this should allow for a quicker development of the courses at different

levels, for training more CBOs and NGOs in India, for expansion to other countries and for developing specialized courses for specific themes.

2.4 Background to the Southern Partner Organisation

History

Smile was conceived in 2002, registered as a Trust. The focus during the early years was on children and their primary health care and education. The organisation then evolved to thinking about the youth and adolescents and focused on livelihood development.

The organisation followed a SVP (Social Venture Philanthropy) model where they identified community based organisations working with children and developing their capacities.

From 2002 to 2005, they ventured into education by starting their mission education (ME) program. This program was spread across 21 states by 2010-2011. In 2005-2007, Swabhiman, the women empowerment programme, STEP (Smile Twin E-learning Programme) and Smile ON WHEELS (mobile health clinic) were launched. Thus Smile started diversifying in terms of areas of intervention and themes. Their focus however continued to be on children.

STEP programme (2007) was designed for the youth in the age group of 18-30 years as a short term skill development programme. It was meant to generate income for the youth as well as their family. The programme included a vocational training programme as well as developing soft skills. All programmes of Smile Foundation are spread across 25 states.

From 2007 onwards Smile Foundation started focusing on fund raising and sustaining its staff and offices. The corporate partnership programme came up in 2007, as did the Child for Child program. There was a team formed for retail fundraising. Smile Foundation started building institutional alliances (both national and international). The Child for Child program was a sensitisation program for the "privileged" children in schools to be aware of their counterparts in the slums.

Smile Foundation also started forming alliances with corporates around this time. Communication and brand building became important and there were specific departments (units) set up across the country for this purpose. In 2010, the movie "I am Kalam" came out, funded by Smile Foundation, and this was a milestone in their branding achievements. It was an important stage of growth in their communication strategy. Trainings to their own employees gained momentum and their ability to respond to market forces strengthened.

Smile Foundation started with two employees and a turnover of about INR 300,000¹(€3,868). The turnover was INR 103,300,000 (€1,332,043) in 2010-11 and to about INR 150,000,000 (€1,934,236) in financial year 2011-12 , INR 159,338,591(€ 2,054,656) in 2012-2013; INR 146,393,868 (€1,887,735) in 2013-2014.

As far as funding of Smile Foundation goes, it was mainly through funds arranged by trustees that provided the funding in 2002. From 2002 to 2005-06 it was financed by the surplus fund arranged by the trustees. In 2006-07, the main funders were Population Foundation of India (PFI), German Embassy, Times Foundation, and HDFC. In 2012, they started their fund raising strategy and had about 140 corporates financing them, among which some regular funders are PFI, SAIL, Samsung, Tech Mahindra, Jindal Steel, etc. In 2014, while the funding from the regular funders is continuing, there are some new funders on board such as Herbalife, Barclays, MTS, Harley Davidson, ANZ bank etc. In addition to the corporate partnerships, Smile over the last two years has been trying to focus on individuals as well as PSUs (public sector undertakings) for funding support.

MFS II supports about 53 projects of Smile Foundation. MFS II helps in their programmes of mission education, fundraising and brand building activities, and communication. It has also helped in capacity building and training of internal staff. It also provided technical support in the form of a booklet by

¹ Exchange rate: 1 Euro=77.55 Indian Rupee as on October 13,2014.

Wilde Ganzen called "Money Maker" that helps build capacity by providing trainings to the staff. The technical support helps in online fundraising channels (restructuring online presence) and communication workshops.

Vision

(source: <http://www.smilefoundationindia.org/aboutus.htm#2> 08-10-2014)

As a catalyst to bring changes in the lives of millions of children, youth and women, who are not privileged, by addressing the real need at the grassroots level and also enabling the civil society across the world to engage proactively in the change process following the philosophy of Civic Driven Change and adopting the highest standard of governance and thereby emerging as a leading knowledge and technology driven, innovative and scalable international development organisation from India.

Mission

(source: <http://www.smilefoundationindia.org/aboutus.htm#3> 08-10-2014)

Smile Foundation is to empower underprivileged children, youth and women through relevant education, innovative healthcare and market-focused livelihood programmes. Smile Foundation is to deploy best possible methodology and technology for achieving ideal SROI (social return on investment), to practice and promote good governance. To link business competitiveness of the corporate with social development initiatives; also to sensitize privileged children, youth and citizens in general to promote Civic Driven Change.

Strategies

(source: <http://www.smilefoundationindia.org/aboutus.htm#6> and #7 08-10-2014)

Smile adopts a lifecycle approach by involving children, their families and the community. Smile Foundation believes that education is both the means as well as the end to a better life: the means because it empowers an individual to earn his/her livelihood and the end because it increases one's awareness on a range of issues – from healthcare to appropriate social behaviour to understanding one's rights – and in the process help him/her evolve as a better citizen. Education is the most effective tool which helps children build a strong foundation; enabling them to free themselves from the vicious cycle of ignorance, poverty and disease.

Smile Foundation realised that Education for Children cannot be achieved without the family, particularly, unless the mother is assured of health care and empowered. Moreover, when an elder sibling is educated and relevantly skilled to be employable and begins earning, the journey of empowerment continues beyond the present generation.

Smile Foundation extended its thematic areas of intervention by supporting family health, livelihood, and women empowerment. Children, their families and the community become the target group for Smile Foundation's activities as child education cannot be done in isolation and nothing else but education for children can bring long lasting change in the society.

Smile Foundation has evolved two working models namely, Social Venture Philanthropy (SVP) and Outreach. Depending on the necessity and circumstances, either of the models is deployed.

1. Social Venture Philanthropy (SVP) is an innovative model based on the business concept of venture capital. Under SVP, Smile Foundation not only identifies & implements its development projects through credible Community Based Organisations (CBOs) but also, handholds and builds capacities of these organisations, focusing on achieving scalability and sustainability, creating a culture of leadership and excellence and inculcating a deep sense of accountability among them.
2. Outreach - While working in the remote rural areas, Smile Foundation realized that many a times capacities of community based organisations (CBOs) were not adequate to meet the high expectations of large corporate social investors. Under the Outreach model, Smile Foundation implements the development interventions directly as it requires intensive and professional engagement for a wider and sustained outcome. Smile Foundation gets a first-hand experience in the nuances of development at the grassroots through its Outreach model and then implements the learning in its SVP Projects through its SVP Partners.

During the endline workshop, the current strategy was defined as being focused on livelihood and environment, health, networking and alliances at national and international levels.

Smile Foundation's website via the description of a work statement gives a broader scope to the organisation strategies:

1. To pursue the most critical development indices like child education, innovative healthcare, livelihood, and women empowerment to achieve large scale penetration and highest Social Return on Investment (SROI);
2. To engage SVP (Social Venture Philanthropy) model by working hand in hand with grassroots organisations, building their capacities, giving strategic directions, sharing resources and knowledge, upgrading technology with the aim to achieve scalability, accountability, sustainability and leadership;
3. To promote and practice good governance in every sphere of its activities and inculcate the same among the grassroots partners; to build trust and credibility with all stakeholders;
4. To source and implement suitable technology of relevance across its operations for optimisation of management and operation bandwidth;
5. To form alliances with the government, national and international institutions, bilateral and multilateral organisations to share resources and knowledge, and to complement and supplement the efforts of these institutions;
6. To engage the corporate sector in the welfare initiatives by linking their business competitiveness and social contributions, wherever befitting, to make the engagement sustainable;
7. To link business necessity with critical development indices in alignment with Smile Foundation agenda and expand programme coverage in the rural outreach to achieve integrated social development;
8. To sensitize the privileged citizens including opinion makers, mass media and to encourage them to participate in the civic driven change through various forms of engagement;
9. To promote and imbibe social sensibility among youth and privileged children to help them emerge as responsible citizens and also participate in Civic Driven Change;
10. To develop a management bandwidth which can not only support the broad vision of the organisation but also will strive for excellence, innovation and institution building.

3. Methodological approach and reflection

3.1 Overall methodological approach and reflection

This chapter describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

Note: this methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report A detailed overview of the approach is described in appendix 1.

The first (changes in organisational capacity) and the fourth evaluation question are addressed together through:

- **Changes in the 5C indicators since the baseline:** standard indicators have been agreed upon for each of the five capabilities of the five capabilities framework (see appendix 2) and changes between the baseline, and the endline situation have been described. For data collection a mix of data collection methods has been used, including self-assessments by SPO staff; interviews with SPO staff and externals; document review; observation. For data analysis, the Nvivo software program for qualitative data analysis has been used. Final descriptions per indicator and per capability with corresponding scores have been provided.
- **Key organisational capacity changes – 'general causal map':** during the endline workshop a brainstorm has been facilitated to generate the key organisational capacity changes as perceived by the SPO since the baseline, with related underlying causes. For this purpose, a visual as well as a narrative causal map have been described.

In terms of the attribution question (2 and 4), '**process tracing**' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to

focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

At the end of this appendix a brief methodological reflection is provided.

3.2 Assessing changes in organisational capacity and reasons for change - evaluation question 1 and 4

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?** And the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This is explained below. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

The evaluators considered it important to also note down a consolidated SPO story and this would also provide more information about what the SPO considered to be important in terms of organisational capacity changes since the baseline and how they perceived these key changes to have come about. Whilst this information has not been validated with sources other than SPO staff, it was considered important to understand how the SPOs has perceived changes in the organisation since the baseline.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information is provided for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the next session on the evaluation question on attribution, as described below and in the appendix 1.

How information was collected and analysed for addressing evaluation question 1 and 4, in terms of description of changes in indicators per capability as well as in terms of the general causal map, based on key organisational capacity changes as perceived by the SPO staff, is further described below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012².

² The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 4) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 5) **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Please see appendix 1 for a description of the detailed process and steps.

3.3 Attributing changes in organisational capacity - evaluation question 2 and 4

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*** and the fourth evaluation question: ***“What factors explain the findings drawn from the questions above?”***

In terms of the attribution question (2), ‘process tracing’ is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Below, the selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

3.3.1 Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

For the detailed results of this selection, in the four countries that CDI is involved in, please see appendix 1. The following SPOs were selected for process tracing:

Ethiopia: AMREF, ECFA, FSCE, HUNDEE (4/9)

India: BVHA, COUNT, FFID, SMILE, VTRC (5/10)

Indonesia: ASB, ECPAT, PtPPMA, YPI, YRBI (5/12)

Liberia: BSC, RHRAP (2/5).

3.3.2 Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ‘general endline workshop. This workshop was carried out after the initial endline workshop and the interviews

during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained. More information can be found in Appendix 1.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

3.3.3 Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team. These can also be found in appendix 1.

Use of the 5 core capabilities framework and qualitative approach: this has proven to be a very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be a perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in

the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
 - Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
 - Difficulty of assessing changes in knowledge and behaviour: training questionnaire has been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh,

Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

4. Results

4.1 MFS II supported capacity development interventions

Below an overview of the different MFS II supported capacity development interventions of Smile that have taken place since 2011 are described. The information is based on the information provided by Wilde Ganzen.

Table 1

Information about MFS II supported capacity development interventions since baseline

Title of the MFS II supported capacity development intervention	Objectives	Activities	Timing and duration	Budget
Participation in international Director's Meeting, once every year (2011: in New Delhi, India; 2012: in Mombasa, Kenya; 2013: in Salvador de Bahia, Brazil).	These interventions flow from the Programme Proposal for Action for Children. It is a yearly meeting to discuss progress and issues that partners encounter to have a content related discussion between partners about fundraising, to learn together.	Market where all partners could show the materials they use for fundraising (including, flyers, informational / educational material); to recruit participants (CBOs) to learn from each other. Active participation in formulation of new programme Change the Game. Bilateral discussions of WG staff with Smile participants before and after the sessions. Recurrent discussion in Meeting on possibilities to integrate AfC in overall strategy of our partners. Improved facilitation by WG by employing a highly experienced trainer/facilitator.	13-16 September 2011 2-7 September 2012 26- 30 August 2013	For Smile alone: 2011: €3,994 2012: €13,840 2013: € 13,750
Monitoring visits by WG AfC program manager (only in 2011 and April 2014, as a consequence of pregnancy and maternity leave of the manager)	Part of the Programme Proposal for Action for Children. Monitoring in 2012 and 2013 done during workshops (in the evenings). In November 2012 the part-time coordinator visited the workshop in Kenya.	Repeatedly discussing whether and how the AfC is applicable to other programs of the organisation.	7 -10 September 2011 15-19 April 2014	2011 € 1,671 2014 € 5,000.
Yearly international exchange visit of Smile AfC staff to an AfC partner in another country. 2012 -Soul City, South Africa 2013- KCDF in Kenya	Flows from the Programme Proposal for Action for Children. The hosting/receiving organisation organises the visit. The visiting organisation writes the terms of reference (they formulate their request/ what they want to learn from the organisation the visit). This ToR goes to	Partner organisations exchange experiences and views without presence of the donor (WG)	May 2012 (3 days) 13-15 November 2013	2012: € 3,500 2013: € 3,305

	Wilde Ganzen, who then decide to fund it or not			
Year round frequent e-mail exchanges to put forward ideas and help solve problems	From the application straight forward: partners & WG have to communicate	Very frequent communications.	All year round (2011-2014)	Part of overall costs of coordination
Financial contributions to branding and marketing of Smile	This intervention was planned in the Programme Proposal for Action for Children: if you want to raise funds you have to first position yourself in your society: people have to get an idea/feeling about your organisation. The organisation has to be positioned.	Discussion stimulated by WG staff and with other partners on importance of diversification of sources of funding. Funding earmarked (but with great freedom on how to spend it within the given aim) for branding and marketing of the organisation.	Continuous	Total expenses for Brand development and fundraising for Organizational cost: 2011:€ 216,367 2012: € 218,323 2013: € 234,125 Smile's total own contribution through fundraising by corporates: 2011: € 97,763 2012: € 129,526 2013: € 153,998 Difference is funded by Wilde Ganzen (MFS II): 2011: € 118604 2012: € 88797= 40,67% 2013: € 80127 = 34 %
Funding of a 3-day capacity development workshop organised by Smile on organisational capacity and local fundraising for CBO's, in July 2013, with observation and recommendations report from WG hired Dutch consultant	Part of the linking & learning to make the lessons of the programme more widely available	Request from Wilde Ganzen to organize such a workshop (already done by Smile for CBOs participating in AfC program) for local partners of WG that do not participate in AfC. WG hiring Dutch consultant on local fundraising. WG suggested to contact Dasra. Smile organises the workshop, they did the opening, closing and a training on the 5C model translated to the CBO level. Later Wilde Ganzen based their Organisational Capacity Assessment (OCA) on this, which is used to assess on which level an organisation can get into the Change the Game programme and to identify gaps. The other trainings were given by, among others: a former director from Oxfam India who is a retired "guru" on local fundraising with his own communication advice bureau on the use of visuals; a specialist on good governance and several others. Smile hires these	July 2013	None MFS II: The total budget for this workshop was: € 9,133. The actual costs was € 8,212. Funded by extra contribution of Wilde Ganzen (outside of MFS II)

		consultants or they volunteer to give trainings		
		Dutch consultant Veronica Uhl was also present as observer and later to give feedback to Smile		
Funding of a capacity development workshop for 100 participants organised by Smile on local fundraising and 'mobilising support (other than financial support)' (lobby & advocacy); in Bangalore, India, with observation by WG hired Dutch consultants and 1 WG staff in local fundraising and mobilising support (other than financial support). Evenings: joint evaluation (Wilde Ganzen and Smile) Evenings also: jointly preparing the new Change the Game program on local fundraising and mobilising support (other than financial support)'(Wilde Ganzen and Smile)	Part of learning and linking	Observations by WG hired Dutch consultants and 1 WG staff in local fundraising and mobilising support (other than financial support). Evenings: joint evaluation and program development of Change the Game (Wilde Ganzen and Smile) Evenings also: jointly preparing the new Change the Game program on local fundraising and mobilising support (other than financial support). (Wilde Ganzen and Smile)	27-29 February 2014 29-30 February 2014	The contribution from T4C is € 50,000. The total budget is € 55,000 of which € 5,000 will be contributed by WG outside of MFS II.

4.2 Changes in capacity and reasons for change - evaluation question 1 and 4

Below you can find a description of the changes in each of the five core capabilities. This information is based on the analysis of the information per each of the indicators (Appendix 3). This detailed information for each of the indicators describes the current situation, and how and why it has changed since the baseline.

4.2.1 Changes in the five core capabilities

Capability to act and commit

change in terms of leadership was the strengthening of second line management through the appointment of a Chief Operational Officer (COO). Decisions are taken in a more participatory manner in consultation with departmental heads, the COO and the executive trustee. The induction process has been streamlined and leadership is built at all levels by exposure of staff to trainings and decentralisation. Staff turnover is lower in some departments than during baseline, this is because there is more clarity on responsibilities and objectives and there are HR retention and appreciation policies in place. Staff turnover is still higher at lower levels. Structural changes in the organogram of the organisation brought in a decentralized approach that gave autonomy to different departments which further led to interdepartmental integration. Departmental heads are in a better position to address the set of skills they need due to decentralisation and more autonomy in the departments. This is guiding middle and higher level staff recruitment and at junior level staff is trained by seniors. The gap in skills in narrative reporting and marketing that was present during baseline has been filled. Trainings have improved for middle and senior level staff, but no improvement has been observed at the junior level. Next to trainings, the freedom at work makes staff members driven and enthusiastic to work for Smile, even though financial incentives are still not at par with the market.

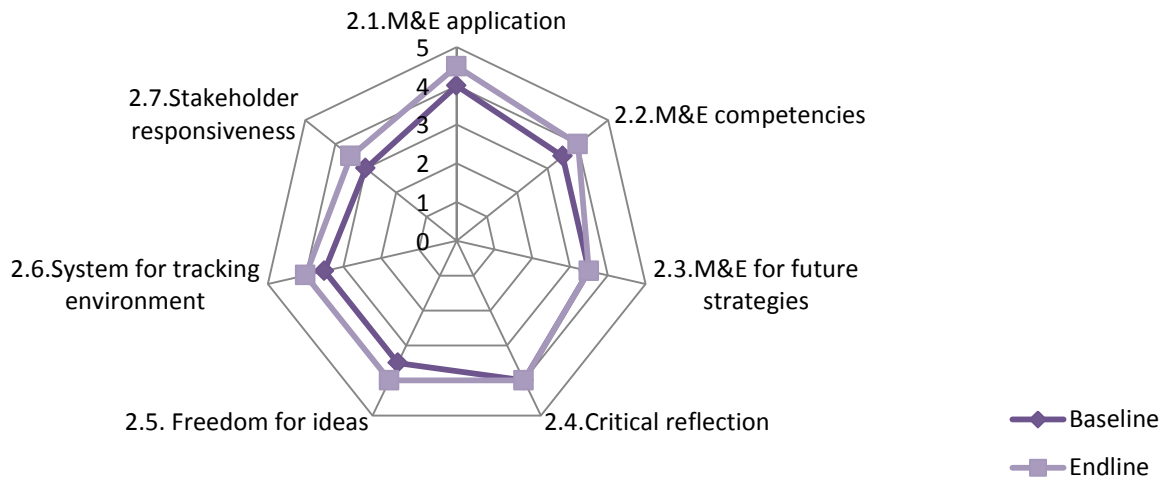

The development of programme strategies is still part of an annual planning exercise in consultation with stakeholders. For longer term programmes strategies are adjusted when needed. There are now inter-departmental weekly meetings and more specific targets in terms of focus, defined parameters, elaborate work plans, precise and specific outcomes, guide daily operations.

Smile continues to treat its donors as customers through its retention and nurturing programmes for both corporate and individual donors. New and innovative ways of fundraising have been introduced and the new alliance department for outreach project (which is donor driven and fully donor financed and targets Public Sector Units and institutional collaboration) and individual partnership department have strengthened Smile's strategy of fundraising among public sector units and individuals. Smile continues to effectively raise funds from the corporate sector. The organisation is now tapping into individual fundraising, by implementing a much needed, strong and credible brand strategy. Smile is closely following the developments of the CSR bill for new funding opportunities. While Smile is focussing a lot on fundraising the fruits of these efforts will be reaped in the coming years. The response from the donors is usually not an immediate one.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

Capability to adapt and self-renew

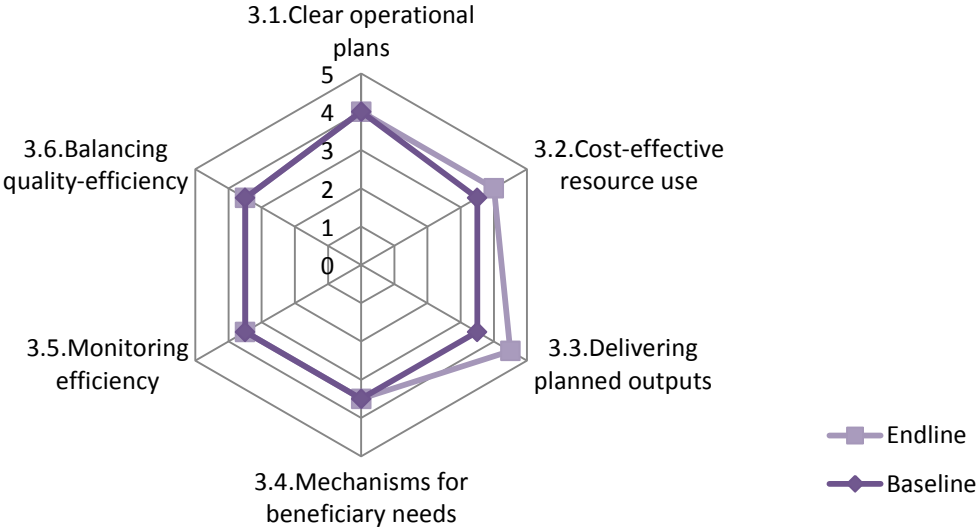

Over the last two years there have been some improvements in the way that M&E is applied. All MIS formats and systems are now compatible at the national level within departments and respective programmes by standardising the system and restructuring departments. The communication department works closely with all the divisions keeping track of their performance and achievement of targets and assessing programme outcomes and impact. The greater use of technology has enhanced this capacity further. The coordination between the regional officers and the head office in the M&E process has been streamlined and regional officers have received needed training on M&E. There has been an improvement of involving field staff in finalising future strategies looking at the M&E results. Smile receives input from its target group (mostly local NGOs) through their feedback on trainings they participated in and through regular feedback on planned interventions. This input is used to tailor the interventions to the stakeholders needs. Smile keeps in contact with its existing donors, both individual and corporate, through its donor nurturing and retention plan. The organisation is now better able to follow international trends through having a Special Consultative Status with The Economic and Social Council of United Nations. Smile staff has also received training to be in touch with general developments in its operation environment, closely following the Corporate Affairs Bill and its implications and setting up an Alliance and Institutional Partnership department. Management welcomes open ideas and takes considerable interest in the functioning of staff through engaging in weekly, monthly and annual meetings. An improvement in this regard has been that staff have more ownership over project implementation and planning has become a more participatory exercise.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

Capability to deliver on development objectives

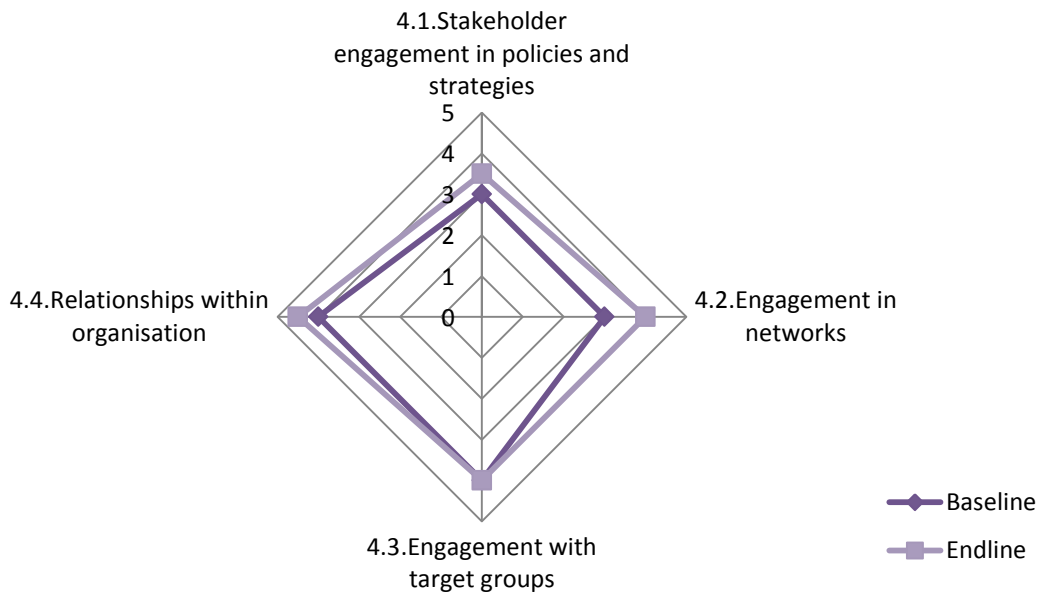

While operational plans are still in place for all projects, there is now more synergy between departments and protocols are smoothed for quick implementation. Cost-effectiveness has always been high on Smile’s agenda. Several measures are taken to ensure this, including use of technology to avoid travel costs, seeing audits as part of the general system and sensitising staff on the issue. The responsibility load of regional offices is now more in line with their capacity in terms of resources. Smile continues to achieve the targets set out in the Project Implementation Plan at planning level. Training of local civic groups, Smile’s partners, has been an important focus of the last period. This will also help Smile to deliver planned outputs through its partners. Better planning and presence of an operational support group has helped to improve the quality and efficiency of Smile’s work. For monitoring its efficiency Smile continues to use SROI and links targets to achievements and inflows of resources to outflows. Systems to identify if services meet beneficiaries’ needs are still in place. Smile now conducts baseline surveys to identify needs before starting a project and after its trainings participants are asked for feedback.

Score baseline: 3.5

Score endline: 3.8 (very slight improvement)

Capability to relate

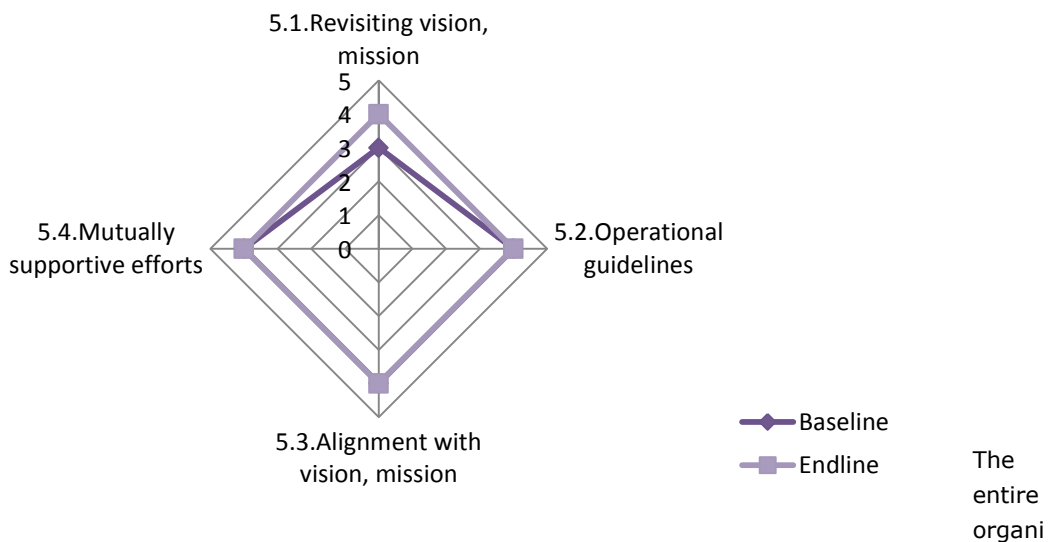

There has been some improvement in involving local groups (through workshops and trainings) and individual donors (through a regular contact and a volunteer cell) in policy and strategy development. However, this is only at the programme level. At the organisational level senior management and second line leadership make the decisions. Smile has increased its participation in relevant forums, workshops and platforms for networking and has become affiliated with a few major international bodies like the ECOSOC of the UN, UNICEF and the Indian Development Foundation of overseas Indians of the Ministry of Indian Overseas Affairs.

The quality of the monitoring visits to beneficiaries has improved. Online media, like Facebook and email, are now being used to stay connected to the beneficiaries. While Smile continues to have an open internal culture, staff do now dare to speak out more which is stimulated by both the CEO and new COO. The decentralisation of the organisational structure led to interdepartmental integration so that staff are enabled to share and learn more from other departments.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

Capability to achieve coherence

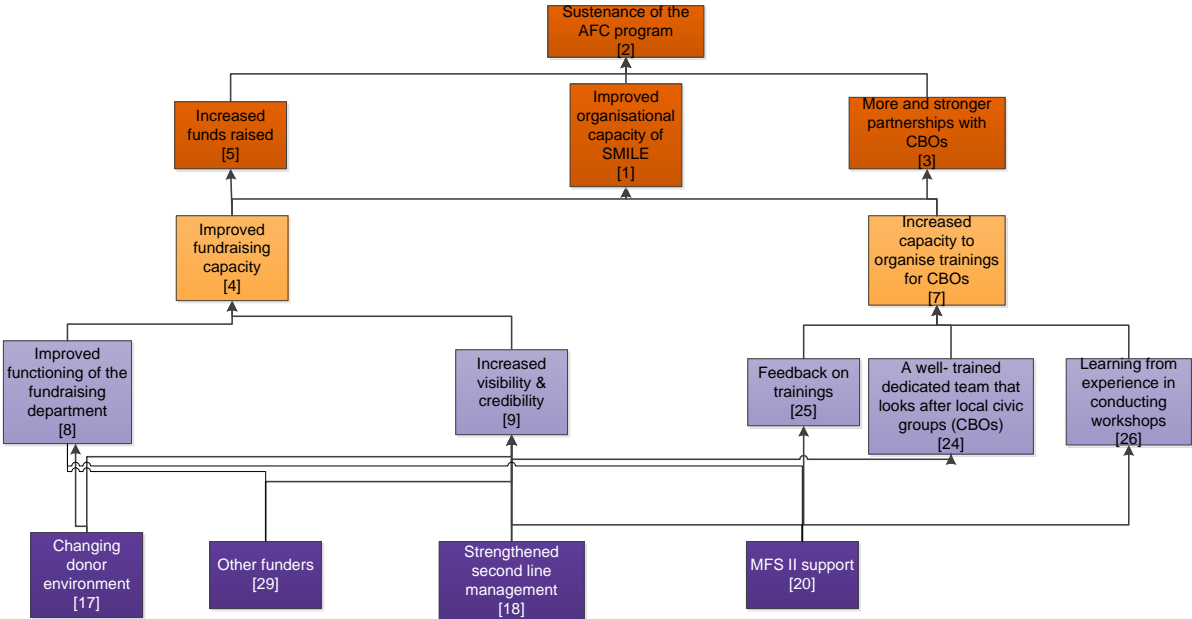

sation now works towards the same mission and vision. The visions of staff and the director grew closer together as both their visions, focus on fundraising and sensitising the community respectively, are now combined. Annual goal and work plan meetings help staff to align their work and ideas with the vision of the organisation which still is to improve the lives of under-privileged children, youth and women by adopting a Life Cycle Approach of development. All programmes are in line with this vision. All programmes of Smile are mutually supportive and cross-learning between projects is applied. Operational guidelines are in place and are updated from time to time. Standard Operational Procedures for donor retention and nurturing are strengthened.

Score baseline: 3.75

Score endline: 4.0 (very slight improvement)

4.2.2 General changes in the organisational capacity of the SPO

During the endline workshop at the SPO, a discussion was held around what were the main changes in organisational capacity development since the baseline and why these changes have taken place. The discussion was visualised in a general causal map as can be seen below. The narrative for the general causal map is also described below. It gives a more general picture of what was seen as important changes in the organisation since the baseline, and how these changes have come about, and that tells the more general story about the organisational changes in the SPO. The evaluators considered it important to also note down the SPO’s story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provide by the evaluation team. The detailed narrative can be found in Annex 4.

The evaluation team carried out an endline assessment at Smile from 14 to 16 May 2014. During this workshop, the team made a recap of key features of the organisation in the baseline in 2012 (such as vision, mission, strategies, clients, partnerships). This was the basis for discussing changes that had happened to the organisation since the baseline. The two main changes that happened in the organisation since the baseline, as identified by the staff during self-assessments, interviews and during the workshop were:

1. Improved fundraising capacity [4], and related to this improved visibility and credibility of Smile [9]
2. Improved capacity of Smile to organise trainings for CBOs [7]

These two changes happened to coincide with the outcome areas that were chosen for process tracing, so as to get detailed information on how these changes in organisational capacity came about. Therefore the general causal map overlaps strongly with the causal maps developed for each of these outcome areas/organisational capacity changes to be analysed during the process tracing. All the details about these changes in organisational capacity as well as the underlying factors that influenced these changes are described in the narrative and visual below.

The two main organisational capacity changes are described in the light orange boxes and some of their key consequences are noted above these cards in dark orange. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the organisation are listed at the bottom in dark purple. The narrative describes per organisational capacity change, the contributing factors as described from the top down. The numbers in the visual correspond with the numbers in the narrative.

Improved Fundraising Capacity [4]

As a consequence of Smile's improved fundraising capacity [4], more funds were raised [5] and the overall organisational capacity of Smile was strengthened [1].

The strengthened focus on raising more funds was one of the key areas that was identified by the management keeping in line with Smile's philosophy of civic driven change to increase the domestic donor base. Improved fundraising capacity [4] was a key organisational capacity change that was mentioned by many staff during the workshop and their self-assessments. Smile's capacity to raise funds has improved mainly because of:

- The improved functioning of its fundraising department [8]: Smile has a full-fledged improved fundraising team [8] consisting of 14 staff, responsible for raising its own cost and premium from high net worth individuals and corporates. In 2014, the Individual Partnership (IP) sub-division under the resource department was strengthened.
- Improved visibility and credibility [9]: Smile's improved visibility and credibility [9] is evident from awards and recognitions received by Smile. For example Smile Foundation was conferred with the "EDUCATION EXCELLENCE AWARDS – 2013" by the Associated Chambers of Commerce and Industries (ASSOCHAM) & The Education. The award is given to a university / institute and individuals performing their best in education sector.

Improved capacity of Smile to organise trainings for CBOs [7]

As a consequence of improvement in this capacity [7] more and stronger partnerships with CBOs [3] were formed and Smile's organisational capacity improved [1].

Smile has improved its capacity to organise trainings for CBOs over the last two years [7]. This has been keeping in line with the Social Venture Philanthropy (SVP) model of Smile as well as the requirements of the contract with Wilde Ganzen. As per the agreement between Smile and Wilde Ganzen training and advising local civic groups in fundraising and advocacy for civic actions for children is one of the mentioned outputs in the Terms of Reference. Smile's improved capacity in this area was confirmed in an interview with Wilde Ganzen and can be found in the Empowering Grassroots training report of July 2013. While Smile focused on streamlining its relations with its partners in the initial years of the contract, during the last two years Smile mainly focused on capacity development of partners. The improved capacity of Smile to organise trainings [7] is due to:

- A well -trained dedicated team that looks after local civic groups (CBOs) [24]: This team seeks applications from local civic groups through physical applications and also through online mode.
- Feedback on trainings from Wilde Ganzen and participants [25] Most of the trainings that Smile organised to strengthen the capacity of the CBOs were funded by Wilde Ganzen under MFS II [20]. Smile's capacity in developing trainings for CBOs mainly improved due to the feedback they have received on two trainings given to CBOs.
- Learning from experience in conducting workshops [26]. Smile organised 7 trainings on local fundraising, with 30 people from 15 different organisations per training since the baseline, these were funded by MFS II [20] and one on local fundraising and mobilising support (other than financial support). for 100 people, while 20 of these also followed an annexed pilot workshop on mobilising support (other than financial support) (also funded by MFS II [20]).

The main underlying causes for these three key organisational changes were:

- Changing donor environment [17]: this includes end of contract with Wilde Ganzen in 2015, dwindling foreign resources and new opportunities for (local) fundraising. This underlying factor has influenced:
- The improved functioning of its fundraising department [8], as the need for new funding strategies that arose from the changing donor environment led to applying certain measures (e.g. hiring new staff) to improve the functioning of the fundraising department.
- Increased visibility and credibility [9], as the need for new funding strategies triggered trainings on branding and fundraising.
- Other funders [29] have funded trainings to improve branding and fundraising, which in turn have led to improved functioning of the fundraising department [8] and improved visibility and credibility [9].
- MFS II support [20] has been going to trainings on branding and fundraising which led to improved function of the fundraising department [8] and improved visibility and credibility [9]. MFS II support also went to the trainings that Smile gave to CBOs [26] and to the feedback provided on these trainings [25].
- Strengthened second line management [18]: has introduced more structured planning and a new organisational structure which has affected the team looking after CBOs [24] and indirectly, increased visibility and credibility [9] and improved functioning of the fundraising department [8].

4.3 Attributing changes in organisational capacity - evaluation question 2 and 4

Note: for each country about 50% of the SPOs has been chosen to be involved in process tracing, which is the main approach chosen to address evaluation question 2. For more information please also see chapter 3 on methodological approach. For each of these SPOs the focus has been on the capability to act and commit and the capability to adapt and self-renew, since these were the most commonly addressed capabilities when planning MFS II supported capacity development interventions for the SPO.

For each of the MFS II supported capacity development interventions -under these two capabilities- an outcome area has been identified, describing a particular change in terms of organisational capacity of the SPO. Process tracing has been carried out for each outcome area. The following outcome areas have been identified under the capability to act and commit and the capability to adapt and self-renew. Also the MFS II capacity development interventions that could possibly be linked to these outcome areas are described in the table below.

Table 2

Information on selected capabilities, outcome areas and MFS II supported capacity development interventions since the baseline

Capability	Outcome area	MFS II supported capacity development intervention(2)
Capability to act and commit	Improved fundraising capacity	Participation in international Director's Meeting, once every year; Yearly international exchange visit of Smile AfC staff; Financial contributions to branding and marketing of Smile
Capability to act and commit	Improved capacity to organise trainings for CBOs	Funding of a 3-day capacity development workshop; Funding of a capacity development workshop on local fundraising and mobilising support (other than financial support) (lobby & advocacy); organised by Smile on organisational capacity and local fundraising for CBO's;

The next sections will describe the results of process tracing for each of the outcome areas, and will describe to what extent these outcome areas have taken place as a result of MFS II supported capacity development interventions and/or other related factors and actors.

Improved fundraising capacity

For the complete narrative with sources and the figure that has the numbers that are referred to in this narrative see Appendix 5.

As a consequence of Smile's improved fundraising capacity [4], more funds were raised [5] and the overall organisational capacity of Smile was strengthened [1]. Smile's improved capacity to raise funds [4] has led to increased funds raised [5]. This is evident from, for example the premiums³ raised among the middle class and the corporate sector in the year 2012 and 2013. In 2012, a total of € 86,179 was raised as a premium against the annual target of € 53,375. The increase in amount of funds raised together with the improved organisational capacity[1] and more and stronger partnerships with CBOs [3] (explained further on) in turn contributed to the sustainability of Smile's projects, especially the Action for Children (AfC) programme [2]. The strengthened focus on raising more funds was one of the key areas that was identified by the management keeping in line with Smile's philosophy of civic driven change to increase the domestic donor base. The fundraising department is using innovative ideas for fundraising. Improved fundraising capacity [4] was a key organisational capacity change that was mentioned by many staff during the workshop and their self-assessments. Smile's capacity to raise funds has improved mainly because of the improved functioning of its fundraising department [8] and its improved visibility and credibility [9].

³ Premiums are funds that can be used for specific projects.

Improved functioning of the fundraising department [8]

Smile has a full-fledged improved fundraising team consisting of 14 staff, responsible for raising its own cost and premium from high net worth individuals⁴ and corporates. Also each department has corporate, individual, institutional and child for child fundraising staff. The national fundraising team is based in Delhi, Mumbai and Bangalore. Every member of the Corporate Partnership department is well trained to generate resources from corporates. A restructuring of the resource department clearly highlights the intent on fundraising. In 2014, the Individual Partnership (IP) sub-division under the resource department was strengthened as is evident from the responsibility centre structure of 2014. The functioning of the fundraising department improved [8] because new fundraising staff was hired [11], knowledge and skills on fundraising and branding improved [12] and interdepartmental communication improved [13]:

- New fundraising staff was hired [11]: In order to fulfil its mandate to mobilise resources Smile recruited staff who had expertise in fundraising. As an example of new fundraising staff, a General Manager for fundraising was hired who, in his previous job, had worked on fundraising and brand promotion through event and corporate alliances.
- Improved interdepartmental communication [13] improved because of a redesign and restructuring of the organisation [23] by strengthened second line management [18]. This was an important step in a direction to further decentralize Smile's organizational structure and empower respective departmental leads to take proactive initiatives in the sustenance of the organisation. The communications department is now divided into internal and external communications divisions. While the internal department creates content (types of programs being implemented, their impact etc.) for circulation within and outside the organization the external division is responsible for public relations and media coverage, so that Smile foundation as a brand may be read out clearly in the society to further improve its visibility.
- Knowledge and skills on fundraising and branding improved [12] because of several trainings/workshops, exchange events organized by Wilde Ganzen and several in house training workshops on branding and fundraising[14]. Some of these trainings were funded by MFS II [20] some by other funders [29].

Need for new fundraising strategies [15]

Smile started hiring new fundraising staff [11] and focusing more on capacity building of staff on fundraising and branding [14] because of:

- New fundraising strategies [15] were needed because of changes in the donor environment [17]:
 - End of contract with Wilde Ganzen in 2015. As per the contract with Wilde Ganzen (WG), Smile foundation would get funds, if a yearly increasing part of the project finances were raised by Smile and other stakeholders of the project
 - Dwindling foreign resources bring in the need to compete more aggressively with other similar NGOs working on issues of children, as the competition becomes tougher with smaller pots of money. There has been a notable decrease in the funders base mainly with foreign funds, owing to a very volatile donor environment across the world and more so in India.
 - New opportunities for (local) fundraising: The new Companies Act 2014, with a very strong CSR Clause, mandates companies to proactively design and undertake welfare and other developmental activities. This is seen as a great opportunity for Smile as the corporate sector would be required to spend 2% of their net profit for social development actions. Smile is devising its own strategies to tap into this potential windfall
- Improvement of human resource development policies and practices [16] because of more structured and focused planning [17] that was introduced by a new Chief Operations Officer (COO) who was hired in January 2013. This was a strengthening of second line management [18].

⁴ High Net worth Individuals are those having investable assets (financial assets, excluding primary residence) of \$1 million or more.

Improved visibility and credibility of the organization [9]

Smile's improved visibility and credibility [9] is evident from awards and recognitions received by Smile [Source: Smile Foundation Website]. For example Smile Foundation was conferred with the "EDUCATION EXCELLENCE AWARDS – 2013" by the Associated Chambers of Commerce and Industries (ASSOCHAM) & The Education. The award is given to a university / institute and individuals performing their best in education sector. Smile increased its visibility and credibility [9] because of brand development and brand positioning [19] and because of improved internal and external reporting [21].

- Brand development and brand positioning [19] have been key parts of the agreement between Smile and Wilde Ganzen. This has been one of the key deliverables supported by MFS II funding.
 - During the period under review (2012-14), Wilde Ganzen has supported the branding and marketing of Smile with MFS II funds [20] making up to around 35 percent of Smile's total marketing budget [28] for the Action for Children programme.
 - Brand development and brand positioning has also improved because of improved knowledge and skills on branding and fundraising [12], which was a result of training on branding and fundraising [14], which were partly funded by MFS II [20].
- Smile's credibility [9] improved because of improved internal and external reporting [21], which are part of the overall improved M&E and governance of Smile.
 - Internal reporting includes better and more timely reports because of strengthened MIS and formats and templates in place [27]. Processes, procedures and systems for this were strengthened by new second line management [18].
 - The external reporting [21] improved mainly due to the improved functioning of the communications department [22] to communicate its work and to appeal for support. Smile has focused on accurate and relevant information which has helped it to earn respect and recognition. The communications department is working better [22] because trainings [14] have been conducted for field staff on photography and case study documentation as they are the first point at the field in the middle of the action. The trainings have helped generate good quality information which is further edited and brushed-up before being used in various communication and related actions. 2013-14 has been focus year for "Capturing our Impact" which for Smile has meant – "to tell our stories better". Thus the communications department improved because of trainings [14] and a redesign and restructuring of the organization [23] by the new second line management [18].

Improved capacity of staff to train CBOs

For the complete narrative with sources and the figure that has the numbers that are referred to in this narrative see Appendix 5.

As a consequence of improvement in this capacity [7] more and stronger partnerships with CBOs [3] were formed and the overall organisational capacity of Smile improved [1].

Smile has improved its capacity to organise trainings for CBOs over the last two years [7]. This has been keeping in line with the Social Venture Philanthropy (SVP) model of Smile as well as the requirements of the contract with Wilde Ganzen. As per the agreement between Smile and Wilde Ganzen training and advising local civic groups in fundraising and advocacy for civic actions for children is one of the mentioned outputs in the Terms of Reference. In delivering this output, Smile has improved its capacity to organise trainings for CBOs. This was confirmed in an interview with Wilde Ganzen and can be found in the Empowering Grassroots training report of July 2013.

The improved capacity of Smile to organise trainings is due to:

- A well -trained dedicated team that looks after local civic groups (CBOs) [24]. This team seeks applications from local civic groups through physical applications and also through online mode. The same application goes through the scrutiny process and the final application gets selected by the team. After due diligence and field appraisal the proposal gets approved and local actions are conducted. Later the premium is matched and disbursed to the local civic groups as per the contract and the project guidelines. It is the responsibility of the programme managers and officers to build the capacities of the partners through the Training of Trainers (ToT) mode and in the last two years, a lot of focus was given on training of partners. The programme officers travelled to the project

partners, local groups and communities, met with them and supported them for conducting local actions. Further, in 2013 two capacity building workshops titled "Empowering Grassroots" were organized for NGO Partners of North and West region. The dedicated team [24] has been empowered further as a result of:

- The restructuring of the organisation [23] by strengthened second line leadership [18]
- Several trainings and exposure visits [31] have contributed to the development of an experienced team who in turn contributed to the capacity building of the CBOs. These started before the MFS II funding period under MFS-I and continued under the Action for Children Programme under MFS II. As an example an exchange visit to CESE (Brazil) was made by the staff to understand the context of the partner and learn how they implement programmes and bring about civic driven change. In the last two years: AfC (Action for Children) Directors' Meets in 2012 and 2013, in Kenya and Brazil respectively and a three day capacity building workshop was organized for all the staff of Smile Foundation: This training helped them in improving their capacities to train the CBOs as the topics of the training were later on also used in the trainings for CBOs. These trainings and exposure visits were funded under MFS II [20].
- Feedback on trainings from Wilde Ganzen and participants [25]. Most of the trainings that Smile organised to strengthen the capacity of the CBOs [26] were funded by Wilde Ganzen under MFS II [20]. Smile's capacity in developing trainings for CBOs mainly improved due to the feedback they have received on two trainings given to CBOs. Wilde Ganzen hired the consultant Veronika Uhl from Himmelblau to observe the first of these two workshops given by Smile and share her observations in a report.
Smile received feedback from the partners that participated in the workshop. According to the training report of July 2013, participants thought that the workshop was very useful, had a good location, was very well organised, and said that income generation should also be included in the modules not just fundraising. The second workshop was observed by three Dutch consultants hired by Wilde Ganzen (including Veronika Uhl) and a staff member of Wilde Ganzen itself. In evening sessions, feedback was given.
- Learning from experience in conducting workshops [26]. Smile organised 7 trainings on local fundraising, 30 people from 15 different organisations per training since the baseline, these were funded by MFS II [20]. The Smile team has learnt from the resource persons on how to conduct training independently during the course of these workshops The topics that were covered in the trainings were effective leadership for development & strengthening, 5 c model of building organizational competencies and good governance, involving local support for sustainability, better fund utilization, meeting the expectations of donors, good fundraising practices, communicating with the stakeholders etc.

5. Discussion and conclusion

5.1 Methodological issues

As the COO was new to the organisation he felt it was necessary to have a better understanding of the 5C model framework to trace down the changes over the two years period. For this reason a pre-workshop briefing was given to the COO and staff.

The Organisation Development Consultant was interviewed which gave a good insight into Smile's new appraisal and training needs assessment system which are part of their improved HR policy and systems. The Consultant is only concerned with HR and Admin and not overall organisational development.

If one looks at the way Smile works, it would be clear that they co-fund (50% by Smile and the other half by the local organization), train, and carry out much of the ground level work with the locally based NGOs. These NGOs are not Smile's partners. Hence they were not interviewed.

In order to get detailed information on the capacity development of the staff, self-assessment forms were being filled up by the management (GM-Corporate Partnerships, Manager-HR, GM-Programmes, AGM-Communications, AGM-Finance & Accounts, National Manager-Corporate Partnerships them), Programme staff (Chief Manager - Programs, Manager - Corporate Partnership, Manager - Alliance, Chief Manager - Programs), HR/Administration staff (Communication, HR, Three Finance and Accounts manager) and field staff (Associate - Communication Placement Officer - Programme Officer - Programme Sr. Executive - Programme). Except for GM-Corporate Partnership, Associate - Communication Placement Officer - Programme Officer - Programme Sr. Executive - Programme, HR, 3 Finance and Accounts manager, Chief Manager - Programs, Manager - Corporate Partnership, Manager - Alliance, Chief Manager - Programs, the rest participated in the baseline workshop.

Self-assessment forms were filled in by two groups of management because of the nature of the programme and their designations and responsibilities they carried out. It was done to ensure that the answers are not influenced by each other's opinion. The communication department of Smile works on M&E, receiving HR/Admin consultancy support from the Organisation Development consultant. As the staff performs multiple tasks, the evaluators decided to include communication staff in the HR/Admin group.

Smile did not fill in the support to capacity development sheet but rather sent an overview of trainings, without budgets, and for some without dates and other details, even though the evaluation team requested the correct forms to be filled on a number of times.

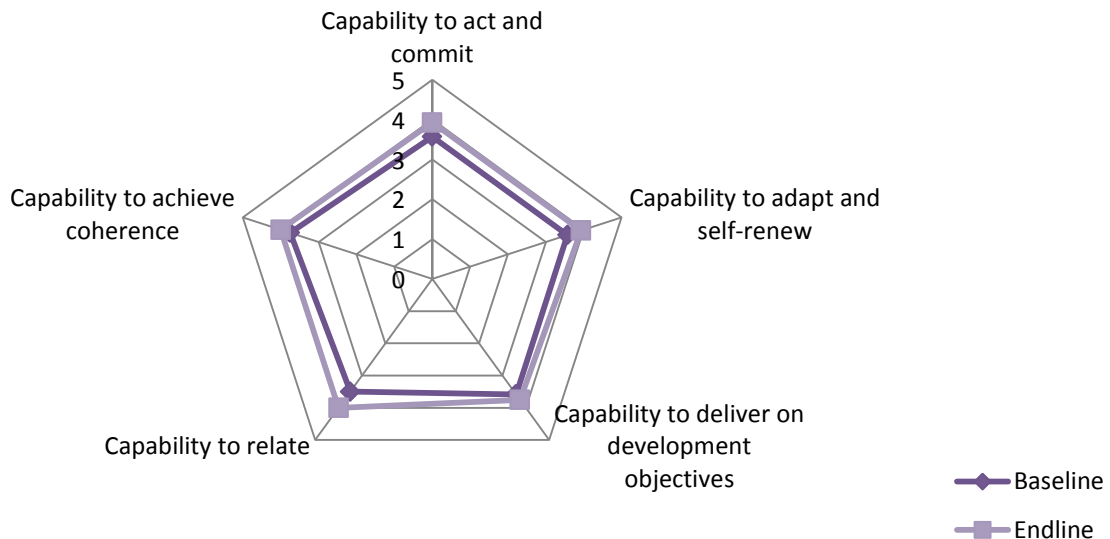

In relation to training questionnaires, Smile's staff was supposed to fill in four training (supported by MFS II) questionnaires. Despite evaluator's persistence only one questionnaire was filled by them. However, for the staff it was sometimes difficult to recall what they learnt during a specific training as they are exposed to various training programmes and exposure visits (both under MFS II programme and others). Therefore, the observed changes could be attributed to various factors beyond a specific training programme.

5.2 Changes in organisational capacity

This section aims to provide an answer to the first and fourth evaluation questions:

1. *What are the changes in partner organisations' capacity during the 2012-2014 period?*

4. What factors explain the findings drawn from the questions above?

During the baseline Smile was already one of the stronger organisations. Also in talking to the CFA it became clear that Wilde Ganzen greatly values Smile as an organisation that is taking initiative and is mostly itself responsible for the changes over the last two years.

Whilst changes took place in all of the five core capabilities, the improvements were only minor since SMILE’s organisational capacity was already quite well developed during the baseline in 2012. Below the changes in each of the capabilities are further explained, by referring to the specific indicators that changed.

Over the last two years most improvements took place in the indicators under the capability to act and commit. As the second line leadership was strengthened by appointment of the Chief Operations Officer, leadership became more responsive and Smile’s whole structure became more decentralised. Staff had clearer job responsibilities and a better HR system was implemented in which staff appraisal and training needs assessments started taking place. This had a positive effect on staff’s incentives to work for Smile and the staff turnover at the fundraising, communications and programme department decreased and new additional fundraising staff were hired. Smile has also worked hard to improve its funding situation. With many changes in the donor environment and being involved in the Action for Children programme, they have been triggered to look for new (local) funding sources, which includes CSR and Individual Partnerships. Over the years Smile’s staff has gained skills in many areas through the trainings and exposure visits provided by their donors and at their own initiative. The organisation considered it to be important that they improved their staff’s capacity. This improvement was mainly observed in their capacity to organise trainings for CBOs and their capacity to raise funds. They also improved their skills in narrative reporting and marketing. Through the decentralised structure staff is now also learning from other departments within the organisation. The decentralisation also led to less dependence among staff on the management for decision making and more participatory planning. In the operational plans the targets have become more specific.

In the capability to adapt and self-renew Smile also improved slightly in various indicators. Their MIS systems are now standardised for all departments and as different departments within Smile started working more together there is now a better connection between the programme and communications department. This has led to better internal and external reporting on Smile’s activities and results. Smile’s competences in M&E improved as regional officers were trained in M&E and experienced programme staff is responsible for M&E. As mentioned earlier, planning has become more participatory giving more freedom for ideas of staff. Smile has become better at tracking its operating environment as they now have a department for Alliances and Institutional Partnerships that track developments in Public Sector Units. Smile also obtained a Special Consultative Status with The Economic and Social Council of United Nations and is following the developments on the CSR bill closely. There is now also a department that keeps in touch with their individual donors to be more responsive to their stakeholders.

In terms of the capability to deliver on development objectives, there is very minor improvement and this improvement particularly is in the area of delivering planned outputs. Smile's partners, on which they rely for this, have been trained and have been better able to reach planned outputs. Also, Smile itself has reached all the planned outputs (and sometimes even more) in the AfC programme. They have also become more cost-effective in their resource use as the responsibilities of the regional officers now fit better with the funding they have available and Smile is making use of technology to drive down costs.

In the capability to relate Smile has also somewhat improved. They now have a stronger feedback mechanism to get input from the CBOs they train and guide, and from their corporate and individual donors. They have improved on their networks, as they are now part of a CSR hub, which is very important for funding opportunities, and have also started engaging in more international networks. Internally the relations within the organisation have improved as staff is taking more responsibilities and speaking out more. The establishment of the Operations Support Group, the decentralisation of decision making and the support of a HR consultant in the staff appraisal system have all contributed to stronger internal relations within Smile.

Finally, Smile has slightly improved in its capability to achieve coherence as staff and the director are now closer together in their vision for the organisation as they now both understand that a focus on fundraising and sensitising the community are both needed for the sustainability of Smile.

During the endline workshop some key organisational capacity changes were brought up by Smile's staff: improved fundraising capacity and improved capacity to organise trainings for CBOs. The evaluators considered it important to also note down the SPO's story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provided by the evaluation team. These changes happened to overlap with the key changes that were selected to process tracing. The changing donor environment was one of the most important underlying changes for the improved fundraising capacity. Dwindling foreign funding but also new opportunities like the CSR Bill have led to the need to diversify funding strategies, which has influenced Smile in organising its communication and fundraising departments but also in identifying the need for trainings. The MFS II funding of Wilde Ganzen (that combined a deliberate dwindling of foreign funding with investments in Smile's branding and marketing) also played an important role in both the key changes. This will further be explained below in 5.3.

5.3 Attributing changes in organisational capacity development to MFS II

This section aims to provide an answer to the second and fourth evaluation questions:

- 2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*
- 4. What factors explain the findings drawn from the questions above?*

To address the question of attribution it was agreed that for all the countries in the 5C study, the focus would be on the capability to act and commit and the capability to adapt and self-renew, with a focus on MFS II supported organisational capacity development interventions that were possibly related to these capabilities. 'Process tracing' was used to get more detailed information about the changes in these capabilities that were possibly related to the specific MFS II capacity development interventions.

During the baseline there were a few interventions planned under the capability to adapt and self-renew. These were: participation in director's meetings to exchange challenges and successes, monitoring visits by Wilde Ganzen and continuous email exchange between Smile and Wilde Ganzen to solve problems. There were however only minor changes observed in Smile's capability to adapt and self-renew and these changes were not linked to MFS II interventions based on document review and according to discussions with the SPO and CFA. As from the beginning there was no observable link between these MFS II and Smile's improved capability to adapt and self-renew, these interventions and changes were not further looked into during 'process tracing.'

The organisational capacity changes that were focused on were:

- improved fundraising capacity;
- improved capacity to organise trainings for CBOs.

Both of these organisational change areas fall in the capability to act and commit. The organisational capacity change areas that were chosen are based on document review as well as discussions with the SPO and CFA. Each of these organisational capacity changes is further discussed below.

The following issues are discussed for the MFS II funded activities that are related to the above mentioned organisational capacity changes:

- a. Design: the extent to which the MFS II supported capacity development intervention was well-designed. (Key criteria: relevance to the SPO; SMART objectives)
- b. Implementation: the extent to which the MFS II supported capacity development was implemented as designed (key criteria: design, according to plans during the baseline);
- c. Reaching objectives: the extent to which the MFS II capacity development intervention reached all its objectives (key criteria: immediate and long-term objectives, as formulated during the baseline);
- d. the extent to which the observed results are attributable to the identified MFS II supported capacity development intervention (reference made to detailed causal map, based on 'process tracing').

Please note that whilst (d) addresses the evaluation question related to attribution (evaluation question 2), the other three issues (a, b and c) have been added by the synthesis team as additional reporting requirements. This was done when fieldwork for the endline process had already started, and therefore inadequate information is available on this. Then again, this wasn't the purpose of this 5c evaluation.

Improved fundraising capacity.

The following MFS II capacity development interventions were mentioned by Wilde Ganzen and were linked to the key organisational capacity "improved fundraising capacity":

1. Participation in international Director's Meeting, once every year;
2. Yearly international exchange visit of Smile AfC staff;
3. Financial contributions to branding and marketing of Smile

Participation in international Director's Meeting, once every year

Design

The immediate effect of this intervention that was formulated during the baseline was the same as for the other MFS II funded capacity development interventions: "to exchange successes and challenges among the AfC partners and to contribute to efficient and effective involvement of AfC staff, especially through the international contacts." Wilde Ganzen specified that with "AfC partners" they mean CESE in Brazil, Smile in India, Soul City Institute in South Africa and KCDF in Kenya. With "AfC staff" they mean "those of the staff of each AfC partner actively involved with the implementation of the AfC programme in their country." With "international contacts" Wilde Ganzen means for Smile, contact with the three other AfC partners mentioned in previously. The long term effect that was formulated was: "fully India- financed AfC programme for Smile by 2020, independent from foreign aid." By "fully India financed" Wilde Ganzen meant that in 2020 the planned number of new local projects [to be found in the monitoring protocol of the application] would be funded completely by a combination of local funding (raised by the CBOs and other beneficiary organisations of Smile) and contribution from Smile itself. The number of projects was set, the amount of money involved was set, the percentage of independence (100 %) was set and the time was set (2020).

These effects were relevant for Smile, as during the baseline workshop discussions the organisation formulated the condition "established fund raising ability" in order to achieve their goal for the next five years: "improved capacity to achieve international presence and sustainability." Working on international contacts to in the end secure financing for the AfC programme of Smile, is in line with these objectives.

These expected effects were to some extent formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). The long term effect is specific (number of projects etc. was set), measurable (100 % independence and amount of money set), achievable (probably), relevant (as explained above) and time bound (by 2020). The immediate effect is not very specific: what is understood by efficient and effective involvement? It is also not measurable nor time-bound. Then again, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

Yearly Director's meetings were planned during the baseline and these have also been implemented. Each year multiple staff of Smile participated, as was anticipated. Detailed plans on the content of these meetings are lacking, but detailed minutes of the meetings are in place.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, and explain in a detailed causal map. The Director's Meetings came up in the map and narrative on the organisational capacity change 'improved fundraising capacity'. In this regard we can conclude that these meetings were useful as there were in-depth discussions around fundraising and that this was an excellent platform for sharing experiences which led to improved knowledge and skills on branding and fundraising.

With regard to the immediate and long-term objectives that were formulated during the baseline, though not the focus of this evaluation, we observe and the CFA confirms that the immediate objective of "to exchange successes and challenges among the AfC partners and to contribute to efficient and effective involvement of AfC staff, especially through the international contacts" has been achieved. Smile has had exchanges of successes and challenges with the other AfC partners: KCF, Soul City and CESE during the Director's Meetings, as can be seen in the minutes of these meetings. According to the CFA and the SPO, the staff of Smile who have been involved in AfC (mostly the CEO, COO, the AfC coordinator, the coordinator of programs, and the Head of Finance) were all very efficiently and effectively involved and the Directors Meetings have certainly helped in this. The CFA also states that it helped that Smile was very consistent in sending the same people every year, which was efficient (no loss of time because they couldn't grasp all the subjects under discussion) and effective (staff of Smile for instance always gave a quick and good follow up to actions agreed at the Directors Meeting, more so than any of the other partners or even Wilde Ganzen itself). The long term objective has not yet been reached, as it was set for 2020.

Yearly international exchange visit of Smile AfC staff

Design

The immediate objective of this intervention that was formulated during the baseline was the same as the other MFS II funded capacity development interventions: "to exchange successes and challenges among the AfC partners and to contribute to efficient and effective involvement of AfC staff, especially through the international contacts." The long term effect that was formulated was: "fully India-financed AfC programme for Smile by 2020, independent from foreign aid." For the full explanation of the objectives see "*Participation in international Director's Meeting*" above.

The immediate and long term effects of this intervention are the same as for the previous intervention, they are relevant for Smile but partly formulated in a SMART way. Then again, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

During the baseline it was unclear to which partner the exchange visits would be and when, this is because Smile itself takes the initiative and hands in a proposal for a visit to Wilde Ganzen, which they can then decide to fund.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, and for which a detailed causal map has been developed. The exchange visits came up in the map and narrative on the organisational capacity change 'improved fundraising capacity'. In this regard we can conclude that these exchange visits enhanced Smile's knowledge on brand communication strategies, fundraising ideas, donor retention strategies and high value institutional fundraising which led to improved knowledge and skills on branding and fundraising.

Though not the focus of this evaluation, we can provide an indication of the extent to which the objectives as formulated during the baseline and endline have been achieved. The immediate objective was "to exchange successes and challenges among the AfC partners and to contribute to efficient and effective involvement of AfC staff, especially through the international contacts." Both the CFA and the SPO feel that this immediate objective has been achieved, as the exchange visits helped to increase the motivation of AfC staff of Smile for the programme and for working with Smile. These visits, according to the CFA also led to improvements in the areas studied during each exchange visit, although such improvements can hardly ever be attributed to one exchange visit only. Exchange visits can either help trigger a new process or new ideas, or strengthen an ongoing process. Finally the exchange visits helped in finding practical solutions (those used by the other AfC partners) to concrete bottlenecks encountered during the implementation of AfC (e.g. what to do if a local beneficiary organisation does not raise their 50 % of the funding for the local project?). The long term objective has not yet been reached, as it was set for 2020.

Financial contributions to branding and marketing of Smile

Design

During the baseline the following intervention was mentioned "the AfC program includes (financial) means to develop further in-country fundraising capacity, in order to make the program gradually independent from foreign involvement." These financial means were in this case used as a branding and marketing budget that was 35 percent of Smile's total marketing budget, used at their own discretion. Together with the interventions mentioned above the immediate effect of this intervention would also be: "to exchange successes and challenges among the AfC partners and to contribute to efficient and effective involvement of AfC staff, especially through the international contacts." The long term effect that was formulated was: "fully India- financed AfC programme for Smile by 2020, independent from foreign aid." These objectives have been further explained under "*Participation in international Director's Meeting, once every year.*" During the endline Wilde Ganzen mentioned that an immediate objective of this intervention was to position Smile in society to be able to raise more funds. A longer term effect that the CFA identified was: a more diversified funding base, continued expansion of volume of aid raised domestically and provided by Smile to CBOs and NGOs, Smile part of top 10 or even top 5 of biggest development NGOs in India.

These effects, both those formulated during the baseline and endline were again very relevant for Smile. During the baseline workshop discussions the organisation formulated the condition "established fund raising ability" in order to achieve their goal for the next five years: "improved capacity to achieve international presence and sustainability." Working on branding and marketing to increase visibility to in the end secure financing for the AfC programme of Smile, is in line with these objectives.

The objectives or effects of this interventions as formulated during the baseline were to some extent formulated in a SMART way. The immediate objective formulated during the endline was not very specific and how do you measure whether your organisation has positioned itself? The longer term objectives are also not very specific, measurable (except for Smile in top 5 or 10 and 'continued expansion of volume of aid raised domestically and provided by Smile to CBOs and NGOs') and time-bound. Then again, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

Smile could use the funding for marketing and branding of their organisation as they seemed fit, and so they did. These funds are for example being used for Smile's TV show on a national channel in which children from the target group of Smile play a role: they explain their problems, sing and dance. This has helped in making Smile more known. It is not known for which specific other branding and marketing activities this budget has been used.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, and which are further explained in the detailed causal map. The financial contributions to branding and marketing of Smile came up in the map and narrative on the organisational capacity change 'improved fundraising capacity'. In this regard we can conclude that the financial contributions of Wilde Ganzen led to brand development and positioning of Smile.

Though not the focus of this evaluation, we can provide an indication of the extent to which the objectives as formulated during the baseline and endline, have been achieved. The immediate objective as formulated during the baseline "to exchange successes and challenges among the AfC partners [...]" does not seem to be achieved. The CFA confirms that this was not the immediate objective of this intervention. Rather it was, as formulated during the endline, "to position Smile in society to be able to raise more funds", has according to the CFA been reached as the number of people having heard of Smile has increased over the years and the number of corporates that donate has also grown. The overall income of Smile has gradually grown too.

Attribution of observed results to MFS II interventions

The improved fundraising capacity of Smile, which was one of the two key organisational changes over the last two years can to some extent be attributed to MFS II organisational capacity development support. Fundraising capacity improved because of an improved functioning of the fundraising department and increased visibility and credibility (see also section 4.3). The improved functioning of the fundraising department resulted from internal organisational factors like hiring new staff and improving interdepartmental communication, but was also due to improved knowledge on branding and fundraising acquired at several trainings and meetings on branding and fundraising. This is where MFS II support to organisational capacity development of Smile played a role, especially the director's meetings and yearly exchange visits. The Director's meetings made the need to diversify the donor base very clear and also the idea to work on fundraising from individual donors was discussed here, while Smile had been trying to work on that for a while. However, the improved knowledge on branding and fundraising was also due to at least three other trainings funded by other funders (Institute of Rural Management Anand (in 2011), Quantum Leap Performance Solutions Bangalore (in 2011) and South Asian Fundraising Group (1st Quarter of 2012)). In addition to the above-mentioned MFS II capacity development interventions that were planned for during the baseline, the improved knowledge on branding and fundraising was also due to two other important trainings that were not mentioned during the baseline by the CFA but that were funded by MFSII. One of these trainings was on fundraising from PSU's which played a role in improving knowledge and skills on fundraising from other sources. The other one was a three day workshop for all staff on on Fundraising, Leadership, Program Management & Governance, Brand Development and Media Advocacy, with a special session for the national fundraising team of Smile on new ways of fundraising for raising premium and organizational cost. This last training led to more efficiency in Smile's fundraising. The hiring of new fundraising staff and in improved interdepartmental integration cannot directly be attributed to MFS II capacity development interventions, but an underlying change in terms of dwindling donor funding, including from Wilde Ganzen (the contract end in 2015, while until September 2014 it was not known whether there would be a new contract) has played an important role in the organisation to strengthen their fundraising capacity.

The fundraising capacity of Smile also improved because of increased visibility and credibility of Smile. This was mainly due to developing and positioning its brand as well as to improved internal and external reporting. This brand development and positioning was partly a result of the contribution of Wilde Ganzen to Smile's marketing budget (around 35 %) and to the knowledge and skills on branding

they acquired through trainings funded by MFS II and other funders as mentioned above. The improved internal and external reporting cannot be attributed to MFS II capacity development interventions that took place after the baseline in 2012.

While Smile's fundraising capacity improved and also the funds raised for their projects increased, they still struggle to raise funds for their own administrative costs. This is something that all NGOs deal with, and the MFS II interventions to strengthen the fundraising capacity of Smile still have to come into effect in terms of raising adequate funds .

The drive to improve the fundraising capacity can also be attributed to a more underlying factor that the overall foreign funding is dwindling, including the fact that the contract with Wilde Ganzen is nearing its end and until September 2014 it was not yet known whether WG could continue funding Smile after 2015. This dwindling of foreign funding and the CSR Bill, led to a need for new funding strategies which had an effect on most of the initiatives Smile has taken to improve its fundraising capacity, including: hiring new staff and sending staff to trainings on branding and fundraising.

All in all, MFS II supported capacity development interventions have played an important role in improving the fundraising capacity of Smile, particularly its improved knowledge and skills on branding and fundraising can be greatly attributed to MFS II funding and its brand development and positioning.

Among the two underlying factors that have led to Smile's improved fundraising capacity, namely improved functioning of the fundraising department and, increased visibility and credibility, the first one has played a more important role. This change, improved functioning of the fundraising department, was due to new fundraising staff, improved interdepartmental communication and improved knowledge and skills on branding and fundraising. While MFS II has played a big role in improving the knowledge and skills, the internal changes of hiring new fundraising staff and improving the communication between the fundraising, programme and communication departments has played an even more important role.

Improved capacity to organise trainings for CBOs

The following MFS II funded capacity development interventions were mentioned by Wilde Ganzen and were linked to the key organisational capacity "Improved capacity to organise trainings for CBOs":

1. Funding of a 3-day capacity development workshop organised by Smile on organisational capacity and local fundraising for CBO's, in July 2013, with observation and recommendations report from a by WG hired Dutch consultant.
2. Funding of a capacity development workshop for 100 participants organised by Smile on local fundraising and mobilising support (other than financial support) (lobby & advocacy), in January 2014, with observations by WG hired Dutch consultants and 1 WG staff.

3-day capacity development workshop in July 2013 on organisational capacity and local fundraising for CBOs with observations and feedback from WG hired Dutch consultant

Design

This specific intervention was not planned during the baseline by the CFA. The training report mentions the following objectives: to identify strengths and points for improvement for the training and to share these with Smile Foundation, to discuss with Smile Foundation lessons learnt and how to use them for the development of the training programme in India, to share lessons learnt and possible use for the programmes in the other countries with Wild Geese. The long term effect the CFA mentions in the endline support to capacity development sheet is: "income generation by using training capacity and methodologies developed for offering training to partner organisations of other donors."

These objectives were relevant for Smile as improved sustainability of their organisation is their goal for the next years. Providing these trainings to CBOs can be a source of income, but the topics they train the CBOs in include local fundraising, so that in the end the CBOs become more capable in local fundraising which aids the sustainability of Smile as an organisation. The model behind the AfC programme and the rationale behind the Social Venture Philanthropy philosophy of Smile is that they provide funding for CBOs but that the organisations themselves also have to come up with part of the

funding through local fundraising. Improving the training programme is therefore a very relevant objective for Smile

The objectives of this training given by Smile with feedback from Wilde Ganzen hired consultants were not formulated in a SMART way. Then again, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

This intervention was not planned for during the baseline and details about the specific design cannot be provided, since this wasn't the focus of the evaluation. However, the training itself did take place in July 2013 and from the training report it can be concluded that the training was implemented as designed. It dealt with the following topics: local fundraising for sustainability, project management, communication and brand building for sustainability, effective leadership for organizational development & strengthening, good governance for organizational development & strengthening, and building organizational competences – 5 c model.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, as explained in the detailed causal map. The 3-day capacity development workshop in July 2013 of Smile came up in the map and narrative on the organisational capacity change: improved capacity to organise trainings for CBOs. In this regard we can conclude that the feedback that Smile received from Wilde Ganzen hired consultants helped to improve Smile's capacity to develop trainings for CBOs.

Though not the focus of this evaluation, we can provide an indication of the extent to which the objectives as formulated during the baseline and endline, have been achieved. The immediate objectives were "to identify strengths and points for improvement for the training and to share these with Smile Foundation, to discuss with Smile Foundation lessons learnt and how to use them for the development of the training programme in India, to share lessons learnt and possible use for the programmes in the other countries with Wild Geese." According to the CFA and the SPO the training methodology improved and Smile increased their network with the Indian capacity building organisation Dasra. Therefore this immediate objective has been achieved to some extent. However, the CFA also states that this workshop has to be seen as one in a series of workshops. The workshop in January 2014 was the next step. The long term objective of generating income by offering these types of trainings to partner organisations has not yet been reached. To achieve this long term objective MDF consultants are constructing Training of Trainers Courses. After the Train the Trainers Courses have been developed and given to Smile staff, and Smile has created a Trainers Pool or Unit, the organisation can start offering trainings and generate income. Though not a stated aim of the AfC programme, income generation from capacity building workshop can be a possible outcome of the new programme according to Smile.

Capacity development workshop for organised by Smile on local fundraising and mobilising support (other than financial support) (lobby & advocacy) for CBOs, in January 2014, with observations by WG hired Dutch consultants and 1 WG staff.

Design

This specific intervention was not planned for during the baseline by the CFA. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. Objectives of this interventions could not be found in the minutes of the evening sessions in which the feedback was given by the consultants and WG staff member. The long term effect the CFA expects, as mentioned in the endline support to capacity development sheet, is: ability to develop own programmes on mobilising support (other than financial support).

The long term expected effect is relevant for Smile as improved sustainability of their organisation is their goal for the next years and as Smile may become involved in the Change the Game programme of Wilde Ganzen that they are developing now and in this way secure some funding for the future. As mobilising support (other than financial support) is part of this new programme, Smile's ability to

develop their own programmes on mobilising support (other than financial support) will help Smile to not only participate in the Change the Game programme but also approach new donors for funding.

The expected effect was not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the observed immediate and expected long term effects of the interventions.

Implementation

This intervention was not planned during the baseline and details about the specific design cannot be provided, since this wasn't the focus of the evaluation. Therefore, no judgement can be made on whether this intervention was implemented as designed. However, the training itself did take place in January 2014. It dealt with the following topics: local fundraising, mobilising support (other than financial support) and lobby & advocacy for CBOs.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, as explained in the detailed causal map. The 3-day capacity development workshop in January 2014 of Smile came up in the map and narrative on the organisational capacity change: improved capacity to organise trainings for CBOs. In this regard we can conclude that the feedback that Smile received from Wilde Ganzen hired consultants helped to improve Smile's capacity to develop trainings for CBOs.

Though not the focus of this evaluation, we can provide an indication of the extent to which the objectives as formulated during the baseline and endline, have been achieved. The immediate effects of this workshop that the CFA observed were: a request to the AfC programme to facilitate the participation of Smile staff to follow a Train the Trainers course at MDF; decreased fear of working with (local) government, willingness to participate also in the "Mobilising Support" part of the new Change the Game programme. According to the CFA, Smile became convinced that mobilising support by CBOs versus local government was feasible, when Smile staff is properly trained in this to train the CBOs. The training of MDF will be given in the spring of 2015 to all relevant Smile staff as indicated by Smile (around 8 persons preferably). The long term objective of Smile developing their own programmes on mobilising support has not yet been reached, as the manner in which to take this forward is still under discussion and development.

Attribution of observed results to MFS II funded capacity development interventions

The increased capacity to organise trainings for CBOs, which was the second key organisational capacity change that happened over the last two years can to a large extent be attributed to MFS II organisational capacity development support by Wilde Ganzen. This capacity improved because of a well-trained dedicated team that looks after the CBOs, feedback on trainings that Smile organised and learning from experience in conducting workshops (see also section 4.3). The well-trained dedicated team working with CBOs resulted on the one hand from an internal organisational factor: the redesign and restructuring of the organisation, but on the other hand was also an effect of trainings and exposure visits for this team that were funded by MFS II, feedback on trainings from consultants hired by Wilde Ganzen and learning from experience in conducting workshops that were funded by MFS II.

Under the trainings and exposure visits supported by MFS II, the Director's Meetings that were mentioned under the previous capacity change also played a role. This meeting set the tone for innovations on empowering grassroots and brand building. Smile's CBO team after the 2013 meeting, started improving the quality of the capacity building programme to empower the grassroots. Another training that falls under this is the three day capacity building workshop that was organised for all Smile's staff, which was not planned for during the baseline but was funded by MFS II (Wilde Ganzen). This training helped the CBO team to train the CBOs as they could use the topics discussed during this workshop in the trainings they organised for CBOs. As far as the evaluation team could gather from information provided by Smile and Wilde Ganzen, there were no trainings on the same topics that were funded by other funders.

MFS II also played a role in the feedback provided on trainings which both directly and indirectly through the CBO team had an effect on Smile's increased capacity to organise trainings for CBOs. The

first training Smile received feedback on is the “Empowering Grassroots Capacity Building training” for CBOs in July 2013. This is the first MFS II capacity development intervention mentioned above under this capacity change. MFS II funding played a role in this feedback as Wilde Ganzen facilitated the feedback on the trainings from its own consultant and the participants. There was a second training in January 2014, which was a consequence of the July 2013 workshop to pilot a workshop on mobilising support (other than financial support). This is the second MFS II intervention mentioned under this capacity. Smile also received feedback from participants, the WG consultants and a WG staff member, and staff from the AfC partner organisation from Brazil on this trainings. This has helped Smile improve its capacity to organised trainings for CBOs and has also strengthened the CBO team. As far as the evaluation team could gather from information provided by Smile and Wilde Ganzen, there were no other funders that have provided this type of feedback to Smile.

Another factor to which a strengthened CBO team for Smile’s increased capacity to organise trainings for CBOs can partly be attributed, included simply the learning from experience in conducting and organising these workshops. The two workshops above were part of a series of 7 workshops that Smile has organised since the baseline, that were all funded by MFS II.

All in all, MFS II supported capacity development interventions have played an important role in improving the capacity of Smile to organize trainings for CBO, particularly in terms of enhancing the competencies of a now well-trained CBO team. This can largely be attributed to MFS II funded training, consultant feedback on their training and facilitation and the experience that Smile gained in organizing these trainings. The only other change that led to a dedicated and well-trained CBO team is the “redesign and restructuring of the organization”, which cannot be attributed to MFS II supported capacity development interventions. This change has played a less important role in the improvement in the CBO team, therefore more weight is given to the changes that can be attributed to MFS II supported capacity interventions, namely trainings, consultant feedback and the experience Smile got through giving trainings funded by MFS II.

CFA

Robert Wiggers, Deputy director; Manager of programs and strategic policy at Wilde Ganzen. Interviewed on 3 April 2014.

Others

Ira Das, OD Consultant, providing support in mentoring and staff appraisal. Interviewed on 20 May 2014.

Appendix 1 Methodological approach & reflection

1. Introduction

This appendix describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around four key evaluation questions:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

Note: the methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report. At the end of this appendix a brief methodological reflection is provided.

2. Changes in partner organisation's capacity – evaluation question 1

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?**

This question was mainly addressed by reviewing changes in 5c indicators, but additionally a 'general causal map' based on the SPO perspective on key organisational capacity changes since the baseline

has been developed. Each of these is further explained below. The development of the general causal map is integrated in the steps for the endline workshop, as mentioned below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012.⁵ Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 6) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 7) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 8) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 9) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 10) **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

16. Provide the description of indicators in the relevant formats – CDI team
17. Review the descriptions per indicator – in-country team & CDI team

⁵ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

18. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
19. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
20. Organise the field visit to the SPO – in-country team
21. Interview the CFA – CDI team
22. Run the endline workshop with the SPO – in-country team
23. Interview SPO staff – in-country team
24. Fill-in observation sheets – in-country team
25. Interview externals – in-country team
26. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
27. Provide to the overview of information per 5c indicator to in-country team – CDI team
28. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
29. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
30. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Below each of these steps is further explained.

*Step 1. Provide the **description of indicators** in the relevant formats – CDI team*

- These formats were to be used when collecting data from SPO staff, CFA, partners, and consultants. For each of these respondents different formats have been developed, based on the list of 5C indicators, similar to the procedure that was used during the baseline assessment. The CDI team needed to add the 2012 baseline description of each indicator. The idea was that each respondent would be requested to review each description per indicator, and indicate whether the current situation is different from the baseline situation, how this situation has changed, and what the reasons for the changes in indicators are. At the end of each format, a more general question is added that addresses how the organisation has changed its capacity since the baseline, and what possible reasons for change exist. Please see below the questions asked for each indicator as well as the more general questions at the end of the list of indicators.

General questions about key changes in the capacity of the SPO

What do you consider to be the key changes in terms of how the organisation/ SPO has developed its capacity since the baseline (2012)?

What do you consider to be the main explanatory reasons (interventions, actors or factors) for these changes?

List of questions to be asked for each of the 5C indicators (The entry point is the the description of each indicator as in the 2012 baseline report):

1. *How has the situation of this indicator changed compared to the situation during the baseline in 2012? Please tick one of the following scores:*
 - -2 = Considerable deterioration
 - -1 = A slight deterioration
 - 0 = No change occurred, the situation is the same as in 2012
 - +1 = Slight improvement
 - +2 = Considerable improvement
2. *Please describe what exactly has changed since the baseline in 2012*
3. *What interventions, actors and other factors explain this change compared to the baseline situation in 2012? Please tick and describe what interventions, actors or factors influenced this indicator, and how. You can tick and describe more than one choice.*
 - Intervention, actor or factor at the level of or by **SPO**:
 - Intervention, actor or factor at the level of or by the **Dutch CFA (MFS II funding)**:
 - Intervention, actor or factor at the level of or by the **other funders**:
 - **Other** interventions, actors or factors:

-
- Don't know.

Step 2. Review the descriptions per indicator – in-country team & CDI team

Before the in-country team and the CDI team started collecting data in the field, it was important that they reviewed the description for each indicator as described in the baseline reports, and also added to the endline formats for review by respondents. These descriptions are based on document review, observation, interviews with SPO staff, CFA staff and external respondents during the baseline. It was important to explain this to respondents before they filled in the formats.

Step 3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)

The CDI team was responsible for collecting data from the CFA:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet – CFA perspective.

The in-country team was responsible for collecting data from the SPO and from external respondents (except CFA). The following formats were sent before the fieldwork started:

- 5C Endline support to capacity sheet – SPO perspective.
- 5C Endline interview guides for externals: partners; OD consultants.

Step 4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team

The CDI team, in collaboration with the in-country team, collected the following documents from SPOs and CFAs:

- Project documents: project proposal, budget, contract (Note that for some SPOs there is a contract for the full MFS II period 2011-2015; for others there is a yearly or 2-yearly contract. All new contracts since the baseline in 2012 will need to be collected);
- Technical and financial progress reports since the baseline in 2012;.
- Mid-term evaluation reports;
- End of project-evaluation reports (by the SPO itself or by external evaluators);
- Contract intake forms (assessments of the SPO by the CFA) or organisational assessment scans made by the CFA that cover the 2011-2014 period;
- Consultant reports on specific inputs provided to the SPO in terms of organisational capacity development;
- Training reports (for the SPO; for alliance partners, including the SPO);
- Organisational scans/ assessments, carried out by the CFA or by the Alliance Assessments;
- Monitoring protocol reports, especially for the 5C study carried out by the MFS II Alliances;
- Annual progress reports of the CFA and of the Alliance in relation to capacity development of the SPOs in the particular country;
- Specific reports that are related to capacity development of SPOs in a particular country.

The following documents (since the baseline in 2012) were requested from SPO:

- Annual progress reports;
- Annual financial reports and audit reports;
- Organisational structure vision and mission since the baseline in 2012;
- Strategic plans;
- Business plans;
- Project/ programme planning documents;
- Annual work plan and budgets;
- Operational manuals;
- Organisational and policy documents: finance, human resource development, etc.;
- Monitoring and evaluation strategy and implementation plans;

- Evaluation reports;
- Staff training reports;
- Organisational capacity reports from development consultants.

The CDI team will code these documents in NVivo (qualitative data analysis software program) against the 5C indicators.

Step 5. Prepare and organise the field visit to the SPO – in-country team

Meanwhile the in-country team prepared and organised the logistics for the field visit to the SPO:

- **General endline workshop** consisted about one day for the self-assessments (about ½ to ¾ of the day) and brainstorm (about 1 to 2 hours) on key organisational capacity changes since the baseline and underlying interventions, factors and actors ('general causal map'), see also explanation below. This was done with the five categories of key staff: managers; project/ programme staff; monitoring and evaluation staff; admin & HRM staff; field staff. Note: for SPOs involved in process tracing an additional 1 to 1½ day workshop (managers; program/project staff; monitoring and evaluation staff) was necessary. See also step 7;
- **Interviews with SPO staff** (roughly one day);
- **Interviews with external respondents** such as partners and organisational development consultants depending on their proximity to the SPO. These interviews could be scheduled after the endline workshop and interviews with SPO staff.

General causal map

During the 5C endline process, a 'general causal map' has been developed, based on key organisational capacity changes and underlying causes for these changes, as perceived by the SPO. The general causal map describes cause-effect relationships, and is described both as a visual as well as a narrative.

As much as possible the same people that were involved in the baseline were also involved in the endline workshop and interviews.

Step 6. Interview the CFA – CDI team

The CDI team was responsible for sending the sheets/ formats to the CFA and for doing a follow-up interview on the basis of the information provided so as to clarify or deepen the information provided. This relates to:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet - CFA perspective.

Step 7. Run the endline workshop with the SPO – in-country team

This included running the endline workshop, including facilitation of the development of the general causal map, self-assessments, interviews and observations. Particularly for those SPOs that were selected for process tracing all the relevant information needed to be analysed prior to the field visit, so as to develop an initial causal map. Please see Step 6 and also the next section on process tracing (evaluation question two).

An endline workshop with the SPO was intended to:

- Explain the purpose of the fieldwork;
- Carry out in the self-assessments by SPO staff subgroups (unless these have already been filled prior to the field visits) - this may take some 3 hours.
- Facilitate a brainstorm on key organisational capacity changes since the baseline in 2012 and underlying interventions, factors and actors.

Purpose of the fieldwork: to collect data that help to provide information on what changes took place in terms of organisational capacity development of the SPO as well as reasons for these changes. The baseline that was carried out in 2012 was to be used as a point of reference.

Brainstorm on key organisational capacity changes and influencing factors: a brainstorm was facilitated on key organisational capacity changes since the baseline in 2012. In order to kick start the discussion, staff were reminded of the key findings related to the historical time line carried out in the baseline (vision, mission, strategies, funding, staff). This was then used to generate a discussion on key changes that happened in the organisation since the baseline (on cards). Then cards were selected that were related to organisational capacity changes, and organised. Then a 'general causal map' was developed, based on these key organisational capacity changes and underlying reasons for change as experienced by the SPO staff. This was documented as a visual and narrative. This general causal map was to get the story of the SPO on what they perceived as key organisational capacity changes in the organisation since the baseline, in addition to the specific details provided per indicator.

Self-assessments: respondents worked in the respective staff function groups: management; programme/ project staff; monitoring and evaluation staff; admin and HRM staff; field staff. Staff were assisted where necessary so that they could really understand what it was they were being asked to do as well as what the descriptions under each indicator meant.

Note: for those SPOs selected for process tracing an additional endline workshop was held to facilitate the development of detailed causal maps for each of the identified organisational change/ outcome areas that fall under the capability to act and commit, and under the capability to adapt and self-renew, and that are likely related to capacity development interventions by the CFA. See also the next section on process tracing (evaluation question two). It was up to the in-country team whether this workshop was held straight after the initial endline workshop or after the workshop and the follow-up interviews. It could also be held as a separate workshop at another time.

Step 8. Interview SPO staff – in-country team

After the endline workshop (developing the general causal map and carrying out self-assessments in subgroups), interviews were held with SPO staff (subgroups) to follow up on the information that was provided in the self-assessment sheets, and to interview staff that had not yet provided any information.

Step 9. Fill-in observation sheets – in-country team

During the visit at the SPO, the in-country team had to fill in two sheets based on their observation:

- 5C Endline observation sheet;
- 5C Endline observable indicators.

Step 10. Interview externals – in-country team & CDI team

The in-country team also needed to interview the partners of the SPO as well as organisational capacity development consultants that have provided support to the SPO. The CDI team interviewed the CFA.

Step 11. Upload and auto-code all the formats collected by in-country team and CDI team – CDI team

The CDI team was responsible for uploading and auto-coding (in Nvivo) of the documents that were collected by the in-country team and by the CDI team.

Step 12. Provide the overview of information per 5C indicator to in-country team – CDI team

After the analysis in NVivo, the CDI team provided a copy of all the information generated per indicator to the in-country team for initial analysis.

*Step 13. **Analyse the data and develop a draft description** of the findings per indicator and for the general questions – in-country team*

The in-country team provided a draft description of the findings per indicator, based on the information generated per indicator. The information generated under the general questions were linked to the general causal map or detailed process tracing related causal map.

*Step 14. **Analyse the data and finalize the description** of the findings per indicator, per capability and general – CDI team*

The CDI team was responsible for checking the analysis by the in-country team with the Nvivo generated data and to make suggestions for improvement and ask questions for clarification to which the in-country team responded. The CDI team then finalised the analysis and provided final descriptions and scores per indicator and also summarize these per capability and calculated the summary capability scores based on the average of all indicators by capability.

*Step 15. **Analyse the information** in the general causal map –in-country team & CDI team*

The general causal map based on key organisational capacity changes as perceived by the SPO staff present at the workshop, was further detailed by in-country team and CDI team, and based on the notes made during the workshop and where necessary additional follow up with the SPO. The visual and narrative was finalized after feedback by the SPO. During analysis of the general causal map relationships with MFS II support for capacity development and other factors and actors were identified. All the information has been reviewed by the SPO and CFA.

3. Attributing changes in partner organisation's capacity – evaluation question 2

This section describes the data collection and analysis methodology for answering the second evaluation question: **To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?**

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process. The box below provides some background information on process tracing.

Background information on process tracing

The essence of process tracing research is that scholars want to go beyond merely identifying correlations between independent variables (Xs) and outcomes (Ys). Process tracing in social science is commonly defined by its addition to trace causal mechanisms (Bennett, 2008a, 2008b; Checkle, 2008; George & Bennett, 2005). A causal mechanism can be defined as "a complex system which produces an outcome by the interaction of a number of parts" (Glennan, 1996, p. 52). Process tracing involves "attempts to identify the intervening causal process – the causal chain and causal mechanism – between an independent variable (or variables) and the outcome of the dependent variable" (George & Bennett, 2005, pp. 206-207).

Process tracing can be differentiated into three variants within social science: theory testing, theory building, and explaining outcome process tracing (Beach & Pedersen, 2013).

Theory testing process tracing uses a theory from the existing literature and then tests whether evidence shows that each part of hypothesised causal mechanism is present in a given case, enabling within case inferences about whether the mechanism functioned as expected in the case and whether the mechanism as a whole was present. No claims can be made however, about whether the mechanism was the only cause of the outcome.

Theory building process tracing seeks to build generalizable theoretical explanations from empirical evidence, inferring that a more general causal mechanism exists from the fact of a particular case.

Finally, explaining outcome process tracing attempts to craft a minimally sufficient explanation of a puzzling outcome in a specific historical case. Here the aim is not to build or test more general theories but to craft a (minimally) sufficient explanation of the outcome of the case where the ambitions are more case centric than theory oriented.

Explaining outcome process tracing is the most suitable type of process tracing for analysing the causal mechanisms for selected key organisational capacity changes of the SPOs. This type of process tracing can be thought of as a single outcome study defined as seeking the causes of the specific outcome in a single case (Gerring, 2006; in: Beach & Pedersen, 2013). Here the ambition is to craft a minimally sufficient explanation of a particular outcome, with sufficiency defined as an explanation that accounts for all of the important aspects of an outcome with no redundant parts being present (Mackie, 1965).

Explaining outcome process tracing is an iterative research strategy that aims to trace the complex conglomerate of systematic and case specific causal mechanisms that produced the outcome in question. The explanation cannot be detached from the particular case. Explaining outcome process tracing refers to case studies whose primary ambition is to explain particular historical outcomes, although the findings of the case can also speak to other potential cases of the phenomenon. Explaining outcome process tracing is an iterative research process in which 'theories' are tested to see whether they can provide a minimally sufficient explanation of the outcome. Minimal sufficiency is defined as an explanation that accounts for an outcome, with no redundant parts. In most explaining outcome studies, existing theorisation cannot provide a sufficient explanation, resulting in a second stage in which existing theories are re-conceptualised in light of the evidence gathered in the preceding empirical analysis. The conceptualisation phase in explaining outcome process tracing is therefore an iterative research process, with initial mechanisms re-conceptualised and tested until the result is a theorised mechanism that provides a minimally sufficient explanation of the particular outcome.

Below a description is provided of how SPOs are selected for process tracing, and a description is provided on how this process tracing is to be carried out. Note that this description of process tracing provides not only information on the extent to which the changes in organisational development can be attributed to MFS II (evaluation question 2), but also provides information on other contributing factors and actors (evaluation question 4). Furthermore, it must be noted that the evaluation team has developed an adapted form of 'explaining outcome process tracing', since the data collection and analysis was an iterative process of research so as to establish the most realistic explanation for a particular outcome/ organisational capacity change. Below selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for

different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

ETHIOPIA

For Ethiopia the capabilities that are mostly targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 1

The extent to which the Dutch NGO explicitly targets the following capabilities – Ethiopia

Capability to:	AMREF	CARE	ECFA	FSCE	HOA- REC	HUND EE	NVEA	OSRA	TTCA
Act and commit	5	4	5	5	5	3	4	4	3
Deliver on development objectives	2	1	1	1	2	1	1	2	1
Adapt and self-renew	4	2	3	4	2	5	3	3	3
Relate	3	1	2	2	3	2	1	3	1
Achieve coherence	2	2	1	1	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Ethiopia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: AMREF, ECFA, FSCE, HUNDEE. In fact, six SPOs would be suitable for process tracing. We just selected the first one per CFA following the criteria of not including more than one SPO per CFA for process tracing

Table 2

SPOs selected for process tracing – Ethiopia

Ethiopia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
AMREF	Dec 2015	Yes	Yes	Yes	Yes	AMREF NL	Yes
CARE	Dec 31, 2015	Partly	Yes	Yes	Yes – slightly	CARE Netherlands	No - not fully matching
ECFA	Jan 2015	Yes	Yes	Yes	Yes	Child Helpline International	Yes
FSCE	Dec 2015	Yes	Yes	Yes	Yes	Stichting Kinderpostzegels Netherlands (SKN); Note: no info from Defence for Children – ECPAT Netherlands	Yes
HOA-REC	Sustainable Energy project (ICCO Alliance): 2014 Innovative WASH (WASH Alliance): Dec 2015	Yes	Yes	Yes	Yes - slightly	ICCO	No - not fully matching
HUNDEE	Dec 2014	Yes	Yes	Yes	Yes	ICCO & IICD	Yes
NVEA	Dec 2015 (both)	Yes	Yes	Yes	Yes	Edukans Foundation (under two consortia); Stichting Kinderpostzegels Netherlands (SKN)	Suitable but SKN already involved for process tracing FSCE
OSRA	C4C Alliance project (farmers marketing): December 2014 ICCO Alliance project (zero grazing: 2014 (2 nd phase)	Yes	Yes	Yes	Yes	ICCO & IICD	Suitable but ICCO & IICD already involved for process tracing - HUNDEE
TTCA	June 2015	Partly	Yes	No	Yes	Edukans Foundation	No - not fully matching

INDIA

For India the capability that is mostly targeted by CFAs is the capability to act and commit. The next one in line is the capability to adapt and self-renew. See also the table below in which a higher score means that the specific capability is more intensively targeted.

Table 3

The extent to which the Dutch NGO explicitly targets the following capabilities – India⁶

Capability to:	BVHA	COUNT	DRISTI	FFID	Jana Vikas	Samar thak Samiti	SMILE	SDS	VTRC
Act and commit	5	3	4	4	4	4	4	3	5
Deliver on development objectives	1	5	1	1	1	1	1	2	1
Adapt and self-renew	2	2	1	3	1	1	4	1	4
Relate	3	1	1	1	1	1	2	1	2
Achieve coherence	1	1	1	4	1	1	1	1	2

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, India.

Below you can see a table describing when the contract with the SPO is to be ended and whether SPO and the CFA both expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BVHA, COUNT, FFID, SMILE and VTRC. Except for SMILE (capability to act and commit only), for the other SPOs the focus for process tracing can be on the capability to act and commit and on the capability to adapt and self-renew.

Table 4

SPOs selected for process tracing – India

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BVHA	2014	Yes	Yes	Yes	Yes	Simavi	Yes; both capabilities
COUNT	2015	Yes	Yes	Yes	Yes	Woorden Daad	Yes; both capabilities
DRISTI	31-03-2012	Yes	Yes	No	no	Hivos	No - closed in 2012
FFID	30-09-2014	Yes	Yes	Yes	Yes	ICCO	Yes

⁶ RGVN, NEDSF and Women's Rights Forum (WRF) could not be reached timely during the baseline due to security reasons. WRF could not be reached at all. Therefore these SPOs are not included in Table 1.

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew –by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Jana Vikas	2013	Yes	Yes	Yes	No	Cordaid	No - contract is and the by now; not fully matching focus
NEDSF							No – delayed baseline
RGVN							No - delayed baseline
Samarthak Samiti (SDS)	2013 possibly longer	Yes	Yes	Yes	No	Hivos	No - not certain of end date and not fully matching focus
Shivi Development Society (SDS)	Dec 2013 intention 2014	Yes	Yes	Yes	No	Cordaid	No - not fully matching focus
Smile	2015	Yes	Yes	Yes	Yes	Wilde Ganzen	Yes; first capability only
VTRC	2015	Yes	Yes	Yes	Yes	Stichting Red een Kind	Yes; both capabilities

INDONESIA

For Indonesia the capabilities that are most frequently targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 5

The extent to which the Dutch NGO explicitly targets the following capabilities – Indonesia

Capability to:	ASB	Daya ikologi	ECPAT	GSS	Lem bage Kita	Pt. PPMA	Rifka Annisa	WIIP	Yad upa	Yayasan Kelola	YPI	YRBI
Act and commit	4	4	4	5	4	4	5	3	3	2	5	4
Deliver on development objectives	1	1	1	2	2	1	2	1	1	1	1	1
Adapt and self-renew	3	1	2	4	2	3	4	4	1	1	4	3
Relate	1	1	2	3	3	2	1	2	2	2	3	2
Achieve coherence	1	1	1	2	1	1	2	2	1	1	2	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Indonesia.

The table below describes when the contract with the SPO is to be ended and whether both SPO and the CFA expect to focus on these two selected capabilities (MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: ASB, ECPAT, Pt.PPMA, YPI, YRBI.

Table 6

SPOs selected for process tracing – Indonesia

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
ASB	February 2012; extension Feb,1, 2013 – June,30, 2016	Yes	Yes	Yes	Yes	Hivos	Yes
Dayakologi	2013; no extension	Yes	Yes	Yes	No	Cordaid	No: contract ended early and not matching enough
ECPAT	August 2013; Extension Dec 2014	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	Yes
GSS	31 December 2012; no extension	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	No: contract ended early
Lembaga Kita	31 December 2012; no extension	Yes	Yes	No	Yes	Free Press Unlimited - Mensen met een Missie	No - contract ended early
Pt.PPMA	May 2015	Yes	Yes	No	Yes	IUCN	Yes, capability to act and commit only
Rifka Annisa	Dec, 31 2015	No	Yes	No	Yes	Rutgers WPF	No - no match between expectations CFA and SPO
WIIP	Dec 2015	Yes	Not MFS II	Yes	Not MFS II	Red Cross	No - Capacity development interventions are not MFS II financed. Only some overhead is MFS II

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Yayasan Kelola	Dec 30, 2013; extension of contract being processed for two years (2014-2015)	Yes	Not really	Yes	Not really	Hivos	No - no specific capacity development interventions planned by Hivos
YPI	Dec 31, 2015	Yes	Yes	Yes	Yes	Rutgers WPF	Yes
YRBI	Oct, 30, 2013; YRBI end of contract from 31st Oct 2013 to 31st Dec 2013. Contract extension proposal is being proposed to MFS II, no decision yet.	Yes	Yes	Yes	Yes	ICCO	Yes
Yadupa	Under negotiation during baseline; new contract 2013 until now	Yes	Nothing committed	Yes	Nothing committed	IUCN	No, since nothing was committed by CFA

LIBERIA

For Liberia the situation is arbitrary which capabilities are targeted most CFA's. Whilst the capability to act and commit is targeted more often than the other capabilities, this is only so for two of the SPOs. The capability to adapt and self-renew and the capability to relate are almost equally targeted for the five SPOs, be it not intensively. Since the capability to act and commit and the capability to adapt and self-renew are the most targeted capabilities in Ethiopia, India and Indonesia, we choose to focus on these two capabilities for Liberia as well. This would help the synthesis team in the further analysis of these capabilities related to process tracing. See also the table below.

Table 7

The extent to which the Dutch NGO explicitly targets the following capabilities – Liberia

Capability to:	BSC	DEN-L	NAWOCOL	REFOUND	RHRAP
Act and commit	5	1	1	1	3
Deliver on development objectives	3	1	1	1	1
Adapt and self-renew	2	2	2	2	2
Relate	1	2	2	2	2
Achieve coherence	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Liberia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Also, for two of the five SPOs capability to act and commit is targeted more intensively compared to the other capabilities. Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BSC and RHRAP.

Table 8

SPOs selected for process tracing – Liberia

Liberia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BSC	Dec 31, 2015	Yes	Yes	Yes	Yes	SPARK	Yes
DEN-L	2014	No	No	Unknown	A little	ICCO	No – not matching enough
NAWOCOL	2014	Yes	No	No	A little	ICCO	No – not matching enough
REFOUND	At least until 2013 (2015?)	Yes	No	Yes	A little	ICCO	No – not matching enough
RHRAP	At least until 2013 (2014?)	Yes	Yes	Yes	Yes	ICCO	Yes

Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ' general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

Some definitions of the terminology used for this MFS II 5c evaluation

Based upon the different interpretations and connotations the use of the term causal mechanism we use the following terminology for the remainder of this paper:

A detailed causal map (or model of change) = the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change.

A causal mechanism = is the combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome (Beach and Pedersen, 2013, p. 176).

Part or cause = one actor with its attributes carrying out activities/ producing outputs that lead to change in other parts. The final part or cause is the change/ outcome.

Attributes of the actor = specificities of the actor that increase his chance to introduce change or not such as its position in its institutional environment.

*Step 1. Identify the **planned MFS II supported capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

Chapter 4.1 and 4.2 in the baseline report were reviewed. Capacity development interventions as planned by the CFA for the capability to act and commit and for the capability to adapt and self-renew were described and details inserted in the summary format. This provided an overview of the capacity development activities that were originally planned by the CFA for these two capabilities and assisted in focusing on relevant outcomes that are possibly related to the planned interventions.

*Step 2. Identify the **implemented capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

The input from the CFA was reviewed in terms of what capacity development interventions have taken place in the MFS II period. This information was found in the 'Support to capacity development sheet - endline - CFA perspective' for the SPO, based on details provided by the CFA and further discussed during an interview by the CDI team.

The CFA was asked to describe all the MFS II supported capacity development interventions of the SPO that took place during the period 2011 up to now. The CDI team reviewed this information, not only the interventions but also the observed changes as well as the expected long-term changes, and

then linked these interventions to relevant outcomes in one of the capabilities (capability to act and commit; and capability to adapt and self-renew).

*Step 3. Identify **initial changes/ outcome areas** in these two capabilities – by CDI team & in-country team*

The CDI team was responsible for coding documents received from SPO and CFA in NVivo on the following:

- 5C Indicators: this was to identify the changes that took place between baseline and endline. This information was coded in Nvivo.
- Information related to the capacity development interventions implemented by the CFA (with MFS II funding) (see also Step 2) to strengthen the capacity of the SPO. For example, the training on financial management of the SPO staff could be related to any information on financial management of the SPO. This information was coded in Nvivo.

In addition, the response by the CFA to the changes in 5C indicators format, was auto-coded.

The in-country team was responsible for timely collection of information from the SPO (before the fieldwork starts). This set of information dealt with:

- MFS II supported capacity development interventions during the MFS II period (2011 until now).
- Overview of all trainings provided in relation to a particular outcome areas/organisational capacity change since the baseline.
- For each of the identified MFS II supported trainings, training questionnaires have been developed to assess these trainings in terms of the participants, interests, knowledge and skills gained, behaviour change and changes in the organisation (based on Kirkpatrick's model), one format for training participants and one for their managers. These training questionnaires were sent prior to the field visit.
- Changes expected by SPO on a long-term basis ('Support to capacity development sheet - endline - SPO perspective').

For the selection of change/ outcome areas the following criteria were important:

- The change/ outcome area is in one of the two capabilities selected for process tracing: capability to act and commit or the capability to adapt and self-renew. This was the first criteria to select upon.
- There was a likely link between the key organisational capacity change/ outcome area and the MFS II supported capacity development interventions. This also was an important criteria. This would need to be demonstrated through one or more of the following situations:
 - In the 2012 theory of change on organisational capacity development of the SPO a link was indicated between the outcome area and MFS II support;
 - During the baseline the CFA indicated a link between the planned MFS II support to organisational development and the expected short-term or long-term results in one of the selected capabilities;
 - During the endline the CFA indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities;
 - During the endline the SPO indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities.

Reviewing the information obtained as described in Step 1, 2, and 3 provided the basis for selecting key organisational capacity change/ outcome areas to focus on for process tracing. These areas were to be formulated as broader outcome areas, such as 'improved financial management', 'improved monitoring and evaluation' or 'improved staff competencies'.

Note: the outcome areas were to be formulated as intermediates changes. For example: an improved monitoring and evaluation system, or enhanced knowledge and skills to educate the target group on

climate change. Key outcome areas were also verified - based on document review as well as discussions with the SPO during the endline.

*Step 4. Construct the **detailed, initial causal map** (theoretical model of change) – CDI & in-country team*

A detailed initial causal map was developed by the CDI team, in collaboration with the in-country team. This was based on document review, including information provided by the CFA and SPO on MFS II supported capacity development interventions and their immediate and long-term objectives as well as observed changes. Also, the training questionnaires were reviewed before developing the initial causal map. This detailed initial causal map was to be provided by the CDI team with a visual and related narrative with related references. This initial causal map served as a reference point for further reflection with the SPO during the process tracing endline workshop, where relationships needed to be verified or new relationships established so that the second (workshop-based), detailed causal map could be developed, after which further verification was needed to come up with the final, concluding detailed causal map.

It's important to note that organisational change area/ outcome areas could be both positive and negative.

For each of the selected outcomes the team needed to make explicit the theoretical model of change. This meant finding out about the range of different actors, factors, actions, and events etc. that have contributed to a particular outcome in terms of organisational capacity of the SPO.

A model of change of good quality includes:

- The causal pathways that relate the intervention to the realised change/ outcome;
- Rival explanations for the same change/ outcome;
- Assumptions that clarify relations between different components or parts;
- Case specific and/or context specific factors or risks that might influence the causal pathway, such as for instance the socio-cultural-economic context, or a natural disaster;
- Specific attributes of the actors e.g. CFA and other funders.

A model of change (within the 5C study called a 'detailed causal map') is a complex system which produces intermediate and long-term outcomes by the interaction of other parts. It consists of parts or causes that often consist of one actor with its attributes that is implementing activities leading to change in other parts (Beach & Pedersen, 2013). A helpful way of constructing the model of change is to think in terms of actors carrying out activities that lead to other actors changing their behaviour. The model of change can be explained as a range of activities carried out by different *actors* (including the CFA and SPO under evaluation) that will ultimately lead to an outcome. Besides this, there are also '*structural*' elements, which are to be interpreted as external factors (such as economic conjuncture); and *attributes* of the actor (does the actor have the legitimacy to ask for change or not, what is its position in the sector) that should be looked at (Beach & Pedersen, 2013). In fact Beach and Pedersen, make a fine point about the subjectivity of the actor in a dynamic context. This means, in qualitative methodologies, capturing the changes in the actor, acted upon area or person/organisation, in a non sequential and non temporal format. Things which were done recently could have corrected behavioural outcomes of an organisation and at the same time there could be processes which incrementally pushed for the same change over a period of time. Beach and Pedersen espouse this methodology because it captures change in a dynamic fashion as against the methodology of logical framework. For the MFS II evaluation it was important to make a distinction between those paths in the model of change that are the result of MFS II and rival pathways.

The construction of the model of change started with the identified key organisational capacity change/ outcome, followed by an inventory of all possible subcomponents that possibly have caused the change/ outcome in the MFS II period (2011-up to now, or since the baseline). The figure below presents an imaginary example of a model of change. The different colours indicate the different types of support to capacity development of the SPO by different actors, thereby indicating different pathways of change, leading to the key changes/ outcomes in terms of capacity development (which in this case indicates the ability to adapt and self-renew).

Figure 1 An imaginary example of a model of change

Step 5. Identify **types of evidence** needed to verify or discard different causal relationships in the model of change – in-country teams with support from CDI team

Once the causal mechanism at theoretical level were defined, empirical evidence was collected so as to verify or discard the different parts of this theoretical model of change, confirm or reject whether subcomponents have taken place, and to find evidence that confirm or reject the causal relations between the subcomponents.

A key question that we needed to ask ourselves was, "What information do we need in order to confirm or reject that one subcomponent leads to another, that X causes Y?". The evaluation team needed to agree on what information was needed that provides empirical manifestations for each part of the model of change.

There are four distinguishable types of evidence that are relevant in process tracing analysis: *pattern*, *sequence*, *trace*, and *account*. Please see the box below for descriptions of these types of evidence.

The evaluation team needed to agree on the types of evidence that was needed to verify or discard the manifestation of a particular part of the causal mechanism. Each one or a combination of these different types of evidence could be used to confirm or reject the different parts of the model of change. This is what is meant by robustness of evidence gathering. Since causality as a concept can bend in many ways, our methodology, provides a near scientific model for accepting and rejecting a particular type of evidence, ignoring its face value.

Types of evidence to be used in process tracing

Pattern evidence relates to predictions of statistical patterns in the evidence. For example, in testing a mechanism of racial discrimination in a case dealing with employment, statistical patterns of employment would be relevant for testing this part of the mechanism.

Sequence evidence deals with the temporal and spatial chronology of events predicted by a hypothesised causal mechanism. For example, a test of the hypothesis could involve expectations of the timing of events where we might predict that if the hypothesis is valid, we should see that the event B took place after event A took place. However, if we found that event B took place before event A took place, the test would suggest that our confidence in the validity of this part of the mechanism should be reduced (disconfirmation/ falsification).

Trace evidence is evidence whose mere existence provides proof that a part of a hypothesised mechanism exists. For example, the existence of the minutes of a meeting, if authentic ones, provide strong proof that the meeting took place.

Account evidence deals with the content of empirical material, such as meeting minutes that detail what was discussed or an oral account of what took place in the meeting.

Source: Beach and Pedersen, 2013

Below you can find a table that provides guidelines on what to look for when identifying types of evidence that can confirm or reject causal relationships between different parts/ subcomponents of the model of change. It also provides one example of a part of a causal pathway and what type of information to look for.

Table 9

Format for identifying types of evidence for different causal relationships in the model of change (example included)

Part of the model of change	Key questions	Type of evidence needed	Source of information
Describe relationship between the subcomponents of the model of change	Describe questions you would like to answer a so as to find out whether the components in the relationship took place, when they took place, who was involved, and whether they are related	Describe the information that we need in order to answer these questions. Which type of evidence can we use in order to reject or confirm that subcomponent X causes subcomponent Y? Can we find this information by means of : Pattern evidence; Sequence evidence; Trace evidence; Account evidence?	Describe where you can find this information
Example: Training workshops on M&E provided by MFS II funding and other sources of funding	Example: What type of training workshops on M&E took place? Who was trained? When did the training take place? Who funded the training? Was the funding of training provided before the training took place? How much money was available for the training?	Example: Trace evidence: on types of training delivered, who was trained, when the training took place, budget for the training Sequence evidence on timing of funding and timing of training Content evidence: what the training was about	Example: Training report SPO Progress reports Interviews with the CFA and SPO staff Financial reports SPO and CFA

Please note that for practical reasons, the 5C evaluation team decided that it was easier to integrate the specific questions in the narrative of the initial causal map. These questions would need to be addressed by the in country team during the process tracing workshop so as to discover, verify or

discard particular causal mechanisms in the detailed, initial causal map. Different types of evidence was asked for in these questions.

*Step 6. **Collect data** to verify or discard causal mechanisms and develop workshop-based, detailed causal map – in-country team*

Once it was decided by the in-country and CDI evaluation teams what information was to be collected during the interaction with the SPO, data collection took place. The initial causal maps served as a basis for discussions during the endline workshop with a particular focus on process tracing for the identified organisational capacity changes. But it was considered to be very important to understand from the perspective of the SPO how they understood the identified key organisational capacity change/outcome area has come about. A new detailed, workshop-based causal map was developed that included the information provided by SPO staff as well as based on initial document review as described in the initial detailed causal map. This information was further analysed and verified with other relevant information so as to develop a final causal map, which is described in the next step.

*Step 7. **Assess the quality of data and analyse data**, and develop the **final detailed causal map (model of change)** – in-country team and CDI team*

Quality assurance of the data collected and the evidence it provides for rejecting or confirming parts of causal explanations are a major concern for many authors specialised in contribution analysis and process-tracing. Stern et al. (2012), Beach and Pedersen (2013), Lemire, Nielsen and Dybdal (2012), Mayne (2012) and Delahais and Toulemonde (2012) all emphasise the need to make attribution/contribution claims that are based on pieces of evidence that are rigorous, traceable, and credible. These pieces of evidence should be as explicit as possible in proving that *subcomponent X causes subcomponent Y* and ruling out other explanations. Several tools are proposed to check the nature and the quality of data needed. One option is, Delahais and Toulemonde's Evidence Analysis Database, which we have adapted for our purpose.

Delahais and Toulemonde (2012) propose an Evidence Analysis Database that takes into consideration three criteria:

Confirming/ rejecting a causal relation (yes/no);

Type of causal mechanism: intended contribution/ other contribution/ condition leading to intended contribution/ intended condition to other contribution/ feedback loop;

Strength of evidence: strong/ rather strong/ rather weak/ weak.

We have adapted their criteria to our purpose. The in-country team, in collaboration with the CDI team, used the criteria in assessing whether causal relationships in the causal map, were strong enough. This has been more of an iterative process trying to find additional evidence for the established relationships through additional document review or contacting the CFA and SPO as well as getting their feedback on the final detailed causal map that was established. Whilst the form below has not been used exactly in the manner depicted, it has been used indirectly when trying to validate the information in the detailed causal map. After that, the final detailed causal map is established both as a visual as well as a narrative, with related references for the established causal relations.

<i>Example format for the adapted evidence analysis database (example included)</i>	Confirming/ rejecting a causal relation (yes/no)	Type of information providing the background to the confirmation or rejection of the causal relation	Strength of evidence: strong/ rather strong/ rather weak/ weak	Explanation for why the evidence is (rather) strong or (rather) weak, and therefore the causal relation is confirmed/ rejected
Description of causal relation				
e.g. Training staff in M&E leads to enhanced M&E knowledge, skills and practice	e.g. Confirmed	e.g. Training reports confirmed that staff are trained in M&E and that knowledge and skills increased as a result of the training		

Step 8. Analyse and conclude on findings– in-country team and CDI team

The final detailed causal map was described as a visual and narrative and this was then analysed in terms of the evaluation question two and evaluation question four: "To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?" and "What factors explain the findings drawn from the questions above?" It was analysed to what extent the identified key organisational capacity change can be attributed to MFS II supported capacity development interventions as well as to other related factors, interventions and actors.

4. Explaining factors – evaluation question 4

This paragraph describes the data collection and analysis methodology for answering the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This has been explained in the first section of this appendix. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information was procured for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the process of process tracing as described in the section above.

5. Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team.

Use of the 5 core capabilities framework and qualitative approach: this has proven to a be very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation

and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
- Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
- Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people

change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

Appendix 2 Background information on the five core capabilities framework

The 5 capabilities (5C) framework was to be used as a framework for the evaluation of capacity development of Southern Partner Organisations (SPOs) of the MFS II consortia. The 5C framework is based on a five-year research program on 'Capacity, change and performance' that was carried out by the European Centre for Development Policy Management (ECDPM). The research included an extensive review of the literature and sixteen case studies. The 5C framework has also been applied in an IOB evaluation using 26 case studies in 14 countries, and in the baseline carried out per organisation by the MFS II organisations for the purpose of the monitoring protocol.

The 5C framework is structured to understand and analyse (changes in) the capacity of an organization to deliver (social) value to its constituents. This introduction briefly describes the 5C framework, mainly based on the most recent document on the 5C framework (Keijzer et al., 2011).

The 5C framework sees capacity as an **outcome** of an **open system**. An organisation or collaborative association (for instance a network) is seen as a system interacting with wider society. The most critical practical issue is to ensure that relevant stakeholders share a common way of thinking about capacity and its core constituents or capabilities. Decisive for an organisation's capacity is the context in which the organisation operates. This means that **understanding context issues** is crucial. The use of the 5C framework requires a multi-stakeholder approach because shared values and results orientation are important to facilitate the capacity development process. The 5C framework therefore needs to **accommodate the different visions** of stakeholders and conceive different strategies for raising capacity and improving performance in a given situation.

The 5C framework defines capacity as '**producing social value**' and identifies five core capabilities that together result in that overall capacity. Capacity, capabilities and competences are seen as follows:

Capacity is referred to as the overall ability of an organisation or system to create value for others;

Capabilities are the collective ability of a group or a system to do something either inside or outside the system. The collective ability involved may be technical, logistical, managerial or generative (i.e. the ability to earn legitimacy, to adapt, to create meaning, etc.);

Competencies are the energies, skills and abilities of individuals.

Fundamental to developing capacity are inputs such as human, material and financial resources, technology, and information. To the degree that they are developed and successfully integrated, capabilities contribute to the overall capacity or ability of an organisation or system to create value for others. A single capability is not sufficient to create capacity. All are needed and are strongly interrelated and overlapping. Thus, to achieve its development goals, the 5C framework says that every organisation or system must have **five basic capabilities**:

- The capability to act and commit;
- The capability to deliver on development objectives;
- The capability to adapt and self-renew;
- The capability to relate (to external stakeholders);
- The capability to achieve coherence.

In order to have a common framework for evaluation, the five capabilities have been reformulated in outcome domains and for each outcome domain performance indicators have been developed.

There is some overlap between the five core capabilities but together the five capabilities result in a certain level of capacity. Influencing one capability may have an effect on one or more of the other capabilities. In each situation, the level of any of the five capabilities will vary. Each capability can become stronger or weaker over time.

Appendix 3 Changes in organisational capacity of the SPO - 5C indicators

Below you will find a description for each of the indicators under each of the capabilities, what the situation is as assessed during the endline, how this has changed since the baseline and what are the reasons for change.

Below you will find a description for each of the indicators under each of the capabilities, what the situation is as assessed during the endline, how this has changed since the baseline and what are the reasons for change.

Capability to act and commit

Level of Effective Leadership

1.1. Responsive leadership: 'Leadership is responsive, inspiring, and sensitive'

This is about leadership within the organisation (operational, strategic). If there is a larger body then you may also want to refer to leadership at a higher level but not located at the local organisation.

The leadership of the organisation still remains visionary, charismatic, effective, cooperative and inspiring, participating in meetings on a regular basis and gives due importance to the viewpoint of individuals. The main improvement since the baseline has been the inclusion of a new position of the Chief Operating Officer (COO). The COO understands the complexities and issues pertaining to the day to day functioning of each department. He interacts positively with staff and departmental heads report to him, which gives the Executive Trustee time to focus on planning and strategizing while not having to worry about day-to-day operations. Before reaching at any conclusion or final decision, the management gives due respect to the viewpoints of concerned people by adopting a more inclusive and consultative approach. The Executive Trustee consults the COO and Departmental heads before making a decision. Programmatic level decisions are taken quickly and effectively. The following areas are the ones in which the organisation has improved since the baseline.

- Increase in participatory decision making approach;
- Developing second cadre of leadership;
- Decentralisation of responsibilities at various levels, e.g. departmental heads have more decision making power;
- The younger, middle management staff have grown in experience, self-confidence and trust;
- Synchronisation of all departments for achieving the common goal.

Smile has developed a strong review mechanism, with frequent discussions held with the management on organisational growth. Exposure to trainings and sessions at various levels has also been given specific priority. In addition to this, various HR related initiatives have been undertaken to increase productivity. The most important factor has been the flexibility in decision making that has been given at all levels.

Score baseline: 4

Score endline: 4.5 (slight improvement)

1.2. Strategic guidance: 'Leaders provide appropriate strategic guidance (strategic leader and operational leader)'

This is about the extent to which the leader(s) provide strategic directions

Leadership still provides good strategic directions, as leadership is visionary and in touch with trends in the sector, and leaders have a strong and common vision on the strategy of the organisation and

programmes. During the baseline there was a high degree of dependence of staff members on senior management for important decisions. In this regard, the appointment of the COO in January 2013 has been a welcome move. Departmental Heads have also proactively started taking ownership of their responsibilities.

Based on the nature of the work, decision making has now been delegated at various levels. The COO plays a proactive role. The Departmental Heads are also given independence to make their own decisions as long as they are in line with the Annual Goal & Work Plans which have been worked out in consultation with the Management. The Departmental Heads ensure to keep management informed about all the operational aspects.

Many operational decisions are taken as per the job responsibility of the employees. Also, lot of operational activities are already decided in monthly, quarterly and annual plans which helps to take decisions faster. In case there are any deviations in the works plan or any strategic decisions required to be taken, appropriate steps are taken in consultation with departmental heads, the COO and the executive trustee.

To illustrate the specific steps that have been undertaken since the baseline:

- Induction has been streamlined for all new staff which includes detailed interaction with all department and divisions, but also practical induction like field visits etc. The same has been strengthened through an effective induction docket.
- Building leaderships at all levels by exposure of all the staff members into regular cross exchange programmes. Sufficient independence is given to every single member in execution of their roles and responsibilities.
- Standard operating processes have been developed for all the departments at various levels and are a part of the induction process.
- Decision making has been decentralized to the second level of leadership.

Score baseline: 3.5

Score endline: 4.5 (improvement)

1.3. Staff turnover: 'Staff turnover is relatively low'

This is about staff turnover.

Since 2012 there has been a considerable improvement in the situation of staff turnover at all the levels. Generally, the fundraising department experiences huge attrition but since the last two years the fundraising unit had a negligible turnover. Other departments like programme or communication had a very low attrition rate except for people that left due to personal reasons like marriage etc.

One of the reasons of curbing this attrition is that in Smile each department has a clear objective and there seems to be no confusion unlike a few years back. All the departments have a clear thought process and working methodology with the right kind of expectations.

Also, Smile's positive environment has motivated people to stick to the organisation and undoubtedly people at the leadership positions have played an important role to nurture their subordinates.

Positive steps that have been taken which have resulted in reduction of staff turnover are:

- There has also been an improvement in the increments which had a positive impact on staff turnover.
- New initiatives by HR for retention and appreciation of employees, and stress management workshops for employees;
- HR initiatives like 'Spot the Hero' and 'Thank You' cards to build mutual appreciation among the employees, encouragement and appreciation of employees at all levels (at times, whole staff meetings are called to laud a particularly commendable employee);
- Trainings for professional enhancement of employees – a motivational factor.

However, staff turnover remains high at lower levels due to low salary structure.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

Level of realistic strategic planning

1.4.Organisational structure: 'Existence of clear organisational structure reflecting the objectives of the organisation'

Observable indicator: Staff have copy of org structure and understand this

A new Chief Operations Officer (COO) was hired in January 2013 with a view to give this position more independence to deal with the day to day running of Smile's operations, while the founder trustee could focus more on strategic and patronage issues to Smile. This was an important step in a direction to further decentralize Smile's organisational structure. The COO also started in this role with a profile which was significantly different than the previous incumbent in the same position. Among other immediate tasks undertaken by the new COO, was review of the roles and responsibilities of the staff, their capacities and their workloads. This was followed by a consultation and discussion with the board and department heads which resulted in the revamp and restructuring of the organogram and a revision of job profiles. The overstrained departmental heads are now supported by junior staff. This reduced the burden on the senior staff's time to allow them to work on improvements of the existing processes and identification of newer issues. This also enabled staff to share and learn from other departments within the organisation. The revamped structure brought in a decentralized and consultative approach that gave autonomy to different departments which further led to Interdepartmental integration.

Structural changes in the organogram have been undertaken with a focus on strengthening second line leadership and providing autonomy to departments, sub-departments and thematic teams. Assessment of all staff, their roles and responsibilities, their capacities, workloads; revision of job profiles has also been accomplished.

Score baseline: 4.0

Score endline:4.5 (slight improvement)

1.5.Articulated strategies: 'Strategies are articulated and based on good situation analysis and adequate M&E'

Observable indicator: strategies are well articulated. Situation analysis and monitoring and evaluation are used to inform strategies.

At Smile Foundation, the development of the programme strategy is still part of an annual planning exercise in consultation with stakeholders. The strategies are reviewed every year by the concerned programme team and then shared with senior leadership for a discussion. For some of the long term missions it was observed that strategies are followed for a block period of 2 to 3 years with necessary improvements each year. This is also illustrated by Smile's narrative report of 2012. It regards the annual plan of 2013 as still relevant, but indicates that sometimes due to some unforeseen reasons, there is always a possibility of shuffling the activities as defined in the plan. The Smile team believes that this does not affect the quantitative targets and ultimately Smile's past experience and meticulous planning helps achieve all its qualitative targets as well.

Score baseline: 4.0

Score endline: 4.0 (no change)

Level of translation of strategy into operations

1.6.Daily operations: 'Day-to-day operations are in line with strategic plans'

This is about the extent to which day-to-day operations are aligned with strategic plans.

Management has been taking keen interest in the planning and operations of each department. Strategic discussions are planned and for the last two years, the yearly goals, vision and work plans have been discussed in presence of all departments, to develop mutual understanding for better day to day operations.

Some of the notable changes since the baseline are:

- The planning exercise is being done in the beginning of the Fiscal Year in consultation with stakeholders. The viewpoints shared by them are thoroughly analysed;

- The inter-departmental weekly meetings and monthly review with the management help to be focused on planning day to day operations to achieve the Yearly Goals;
- While the processes have remained the same, the targets have become specific in terms of focus, defined parameters, elaborate work plans, precise and specific outcomes;
- The entire work approach has become quality oriented as Smile constantly tries to benchmark its work with the best in the sector.

Score baseline: 4.0

Score endline: 4.5 (slight improvement)

Level of Staff Capacity and Motivation

1.7. Staff skills: 'Staff have necessary skills to do their work'

This is about whether staff have the skills necessary to do their work and what skills they might they need.

Structural changes in the organogram have been undertaken with a focus on strengthening second line leadership and providing autonomy to departments, sub-departments and thematic teams. Assessment of all staff, their roles and responsibilities, their capacities, workloads; revision of job profiles has also been accomplished.

This reduced the burden on the senior staff's time to allow them to work on improvements of the existing processes and identification of newer issues. This also enabled staff to share and learn from other departments within the organisation. The revamped structure brought in a decentralized and consultative approach that gave autonomy to different departments which further led to Interdepartmental integration. Thus, departmental heads are in a better position to address the set of skills they would need to deliver on the key performance indicators set for their departments.

The staff recruitments at middle and higher level are done through a stringent recruitment process thus resulted into recruitments with required skill sets. At the junior level recruitments are focused majorly on new, young staff with limited skill sets. During their tenure with the organisation they are trained through continuous hand-holding by respective seniors. Such staff after acquiring required skill set move for better opportunities.

Further customized trainings and exposure programme make the staff have the necessary skills to deliver on their roles. Compared to the baseline the gap of staff's skills in narrative reporting and marketing has been filled.

Score baseline: 4.0

Score endline: 4.5 (slight improvement)

1.8. Training opportunities: 'Appropriate training opportunities are offered to staff'

This is about whether staff at the SPO are offered appropriate training opportunities

During the last two years Smile significantly focused on trainings and the level of training has been increased for middle and senior level staff. But no improvement has been observed at the junior level except inter-department handholding by respective reporting managers.

In order to develop the capacities of second level leadership, a series of workshops, training programmes and exposure visits have been organized focused on thematic areas, personality development, team work and coordination and specific skill sets, like fundraising. In-house trainings also contributed significantly towards development of the organisation.

Smile has a focussed approach to capacity building which includes recruiting people with appropriate skill sets, needs assessment of training by the OD consultant followed by training-in house, inviting resource persons and sending staff on exposure visits. The fundraising, programme, communication and governance team have all received specialised training in their area during the last 2 years. For field and lower level staff, in-house workshops are being conducted regularly primarily focusing on their monitoring, management and communication skill.

Some of the trainings and exposure programmes provided since the baseline include:

- Individual Fundraising Workshop

- Fundraising from Public Sector Units
- Specialized Training on MIS, reporting, monitoring and evaluation to Regional Officers/Project Managers. Also, a detailed discussion was organized as how to overcome challenges/concerns faced by managers and alternatives for addressing the same. Further, the roles and responsibilities of Project Managers/Regional Officers were discussed on community involvement including media, corporate houses, middle class etc. for civic driven change and fundraising.
- Capacity Building Workshop on Fundraising, Leadership, Program Management & Governance, Brand Development and Media Advocacy for all Smile Staff in National Conference
- Exchange Visit to Soul City Institute (South Africa)
- Face- to-Face fundraising workshop

Score baseline: 3.5

Score endline: 3.5 (no change)

1.9.1.Incentives: 'Appropriate incentives are in place to sustain staff motivation'

This is about what makes people want to work here. Incentives could be financial, freedom at work, training opportunities, etc.

The drive of staff members can be observed by their enthusiasm and the seriousness to complete all tasks even if this requires more time. Staff is proud of the quality of products and services delivered by them.

Though the financial incentives are not at par with the market, the organisation is trying to incentivise performers. The appraisal system plays an important role in identifying performers. Financial incentives are in place for only the fundraising teams, though other teams get recognized through various staff retention initiatives like thank you cards, "Spot the hero" and awards or certificates during organisational meets like the National Conference. There is immense freedom to work and grab opportunities. This is also felt as incentives by the staff.

Since there has been some considerable growth in resource raising, the organisation is taking care to the best of ability to fulfil the monetary requirements of the team members. Other than monetary benefits, incentives through skills enhancement is also an aspect that has been actively worked out and received well by the staff.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

Level of Financial Resource Security

1.9.2.Funding sources: 'Funding from multiple sources covering different time periods'

This is about how diversified the SPOs funding sources are over time, and how the level of funding is changing over time.

Smile continues to effectively raise funds for premiums and for organisational costs, mainly from the corporate sector. Smile's corporate fundraising approach has emerged to be more structured and strategic as more qualified and experienced professional staff are at the helm of affairs. There is an increased number of big corporate donors and a better reporting system in place for donors. New donors like Union Bank, LIC, RECL, Hyatt, Harley Davidson have been roped in because of an effective communication strategy, specific and specialized communication material for acquisition, retention of corporate and individual donors, receiving timely trainings for all fundraising teams and having credible organizations as Smile's supporters has led to trust by other corporate and PSUs.

The fundraising staff of Smile consists of 14 people for the corporate team and Smile would like to increase the team for individual fundraising based in Delhi, Mumbai and Bangalore. Every department has corporate, individual, institutional and child for child fundraising staff.

During the baseline it was observed that Smile should strengthen its individual donor partnerships. Smile is currently preparing to set up a new programme for individual fundraising. From their research they found that one of the main challenges is the competition with INGOs who can invest vast amounts in building their social and fundraising programmes. With limited resources available, developing a strong and profitable individual giving programme poses a challenge to Smile. Therefore,

Smile plans to organize focus groups with donors regularly as a low-investment way of doing qualitative research to understand the needs and interests of donors to set up programmes to appeal the individuals for giving. The current network of corporate high-level individuals can be a powerful entry point to set up a medium and a major donor programme in the near future. Smile will try to create linkages between the individual giving with corporate giving programmes.

A well thought-out aggressive branding strategy is in place. Branding Smile aggressively results in attention from multiple sources of potential funding. A number of celebrity events, campaigns, interviews and interactions with distinguished personalities were held in 2013. These activities got covered in national and regional newspapers, radio and TV giving wide branding as well as advocacy for the cause that Smile Foundation is involved in. Due to brand penetration a lot of international organisations are showing interest in partnering with Smile. The communications department is now divided into internal and external communications divisions. While the internal department creates content (types of programs being implemented, their impact etc.) for circulation for both within and outside the organization the external division is responsible for public relations and media coverage. They realized that in order to tap resources from individuals it is important to focus on brand building as individuals before donating check the credibility and branding of organizations. Further, CSR being at a nascent stage, the Government and Corporate are yet to grasp the full implications of developmental work and thus, sometimes there is a clash with Smile's own organisational interests. However, Smile is trying its level best to contribute towards changing the prevailing situation.

Smile has been able to increase the diversity of its funders since the baseline. They are now receiving funds from 170 corporates, compared to 140 during the baseline. The corporates and Public Sector Units (PSUs) they receive funds from include: Barclays, British Council, Bank of America, Caterpillar, Capgemini, GAIL, GE, Ginni Filaments Ltd., HP, HDFC, HSBC, IBM - Daksh, IDBI Bank, Indian Institute of Foreign Trade, International Management Institute, Lotus Herbals, Microsoft, Sandwood Infratech, SAIL, Suzlon Energy, TARGET, Tata Chemicals Limited, TCS, The Grand Hotels, Times Foundation, UPS, Verint, Graphic Prints and Air France KLM etc. Smile also receives funds from individual partners, through charity sale amongst high end luxury brands like TODS and Ethos, etc.

Score baseline: 3.0

Score endline: 4.0 (improvement)

1.9.3. Funding procedures: 'Clear procedures for exploring new funding opportunities'

This is about whether there are clear procedures for getting new funding and staff are aware of these procedures.

The resource mobilization unit consists of four departments: corporate partnership, individual partnership, alliances and child for child. In the corporate department the funds raised are mostly programme level funds for either education, empowering women, healthcare or livelihoods. The new alliances department is for outreach projects, which is donor driven and fully donor financed and targets Public Sector Units and institutional collaboration. Donors are still treated as customers through donor retention and nurturing programmes for both corporate and individual donors. There was no attrition in the corporate partnership team and because of regular internal and external trainings, the momentum of fundraising from the team is good. Furthermore, the individual partnership department has started performing and some encouraging results are also seen. Trainings were given for fundraising staff on e.g. fundraising from public sector units and on face to face fundraising.

The following funding procedures are in place :

CSR Bill – The new CSR Bill which got approved by the Parliament (and will be effective from April 2014) is a great opportunity for Smile Foundation as corporate organisations would be required to spend 2 percent of their net profit for social development.

Ramp for Champs – Over the last few years Smile's celebrity fashion show for the cause has become a new property which is getting acceptance in major cities of India.

Brand Association – In the recent past Smile has experienced that because of being able to communicate well about the good work Smile is doing, many of the reputed brands are looking forward to get associated and for Smile definitely it's an opportunity.

Art Shows - The fundraising team in the recent past partnered with Hyatt to organize a multi city Art Exhibition-cum-sale. Smile did a lot of research and realized that India has a big Art market and Art could be one more interesting aspect to raise own cost or premium.

Luxury Brands - Another new area which Smile identified to raise own cost or premium is luxury brands. Smile has been successful in doing events like charity sale amongst high end luxury brands like TODS and Ethos and now they are trying to build a strategy to continuously engage luxury brands for such associations.

Celebrity Cultivation -There has been a slight improvement in celebrity's mind-set when it comes to charity. Now celebrities are (though few of them) at least trying to connect with a cause as they think it may positively impact their brand image in the society.

Mass Media Campaign - Also, mass media campaigns are gradually becoming popular amongst TV channels and it seems in coming times Smile will get an opportunity to scale up its Choone Do Aasman campaign and it may become one of the major sources of raising own cost and premium.

A challenge at the moment is the economic slowdown. Corporates have become more selective when it comes to investing for a cause. This in turn is restricting Smile to set up quality projects as even institutional funds are no longer readily available.

Score baseline: 4.0

Score endline: 4.0 (no change)

Summary of capability to act and commit

The main change in terms of leadership was the strengthening of second line management through the appointment of a Chief Operational Officer (COO). Decisions are taken in a more participatory manner in consultation with departmental heads, the COO and the executive trustee. The induction process has been streamlined and leadership is built at all levels by exposure of staff to trainings and decentralisation. Staff turnover is lower in some departments than during baseline, this is because there is more clarity on responsibilities and objectives and there are HR retention and appreciation policies in place. Staff turnover is still higher at lower levels. Structural changes in the organogram of the organisation brought in a decentralized approach that gave autonomy to different departments which further led to interdepartmental integration. Departmental heads are in a better position to address the set of skills they need due to decentralisation and more autonomy in the departments. This is guiding middle and higher level staff recruitment and at junior level staff is trained by seniors. The gap in skills in narrative reporting and marketing that was present during baseline has been filled. Trainings have improved for middle and senior level staff, but no improvement has been observed at the junior level. Next to trainings, the freedom at work makes staff members driven and enthusiastic to work for Smile, even though financial incentives are still not at par with the market.

The development of programme strategies is still part of an annual planning exercise in consultation with stakeholders. For longer term programmes strategies are adjusted when needed. There are now inter-departmental weekly meetings and more specific targets in terms of focus, defined parameters, elaborate work plans, precise and specific outcomes, guide daily operations.

Smile continues to treat its donors as customers through its retention and nurturing programmes. Donors are still treated as customers through donor retention and nurturing programmes for both corporate and individual donors. New and innovative ways of fundraising have been introduced and the new alliance department for outreach project (which is donor driven and fully donor financed and targets Public Sector Units and institutional collaboration) and individual partnership department have strengthened Smile's strategy of fundraising among public sector units and individuals. Smile continues to effectively raise funds from the corporate sector. The organisation is now tapping into individual fundraising, by implementing a much needed, strong and credible brand strategy. Smile is closely following the developments of the CSR bill for new funding opportunities. While Smile is focussing a lot on fundraising the fruits of these efforts will be reaped in the coming years. The response from the donors is usually not an immediate one.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

Capability to adapt and self-renew

Level of effective application of M&E

2.1.M&E application: 'M&E is effectively applied to assess activities, outputs and outcomes'

This is about what the monitoring and evaluation of the SPO looks at, what type of information they get at and at what level (individual, project, organisational).

As a principle, Smile has put M&E as part of its operations system. All MIS formats and systems have been made compatible at the national level within departments and respective programmes. To achieve and maintain this, regular capacity workshops have been organized covering grassroots partners of all the regions wherein need and the method of proper reporting has been stressed and it has led to improvement in this regard. The human resources within the organisation have been restructured thereby giving focused attention towards MIS requirements. Furthermore, experienced staff with M&E skills has been recruited and MIS systems have been standardized. The regional officers now send detailed monthly plans to the head office detailing actions of the tour plan and the purpose of visit. After thorough discussion with the Responsibility Centre Heads and Chief Manager Programmes, the monitoring visit plans are authorized. Monthly monitoring visit reports are shared with the head office regularly. The observations from head office are shared with the regional officer and partner on the ground. During the next visit the regional officers keep a check on feedback given to the partner. The Project Implementation Plan is in place to check the achievements against the targets on a regular basis. The communications department has been working more closely with all the programmes, as well as assessing programme outcomes and impact. It is their responsibility to communicate programme achievements and impact both within and outside the organisation.

The following systems have strengthened the existing system:

- Innovations like online web based appraisal system
- Number of site visits has increased to keep a thorough check on the monitoring aspects
- Analyses of the outcomes are done on a regular basis
- Started the feedback process to the partner and implementing staff
- Streamlined and timely MIS
- Focus on improvements in quality
- Quantifiable & results oriented system
- GPS in all Smile on Wheels

However, issues regarding the availability of technology in remote areas are still a constraint.

Score baseline: 4.0

Score endline: 4.5 (slight improvement)

2.2.M&E competencies: 'Individual competencies for performing M&E functions are in place'

This is about whether the SPO has a trained M&E person; whether other staff have basic understanding of M&E; and whether they know what information to collect, how to process the information, how to make use of the information so as to improve activities etc.

During the baseline a need for training staff to improve the quality of M&E was indicated, and workshops on M&E are a part of Smile's capacity building programme. In 2012 and 2014 regional officers were trained on maintenance of MIS, reporting, the purpose, processes and principles of M&E in the context of evaluating the impact of the projects/ programmes, and on different tools and techniques for quantitative data gathering and qualitative reporting. Furthermore, experienced management staff at the head office level continuously helps regional officers and guides them on proper M&E. There is no dedicated M&E person. Each programme has in built M&E and it is the responsibility of the programme head to take care of the M&E. However, the use of technology has made it easier to monitor and track programme activities.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

Level of strategic use of M&E

2.3.M&E for future strategies: 'M&E is effectively applied to assess the effects of delivered products and services (outcomes) for future strategies'

This is about what type of information is used by the SPO to make decisions; whether the information comes from the monitoring and evaluation; and whether M&E info influences strategic planning.

There is an improvement in the involvement of the field staff, especially regional officers and project coordinators during the planning of the future strategy. They contributed actively in terms of which indicators to include in the M&E framework. In the past, Smile has identified the shortfalls of regional and project coordinators, and other key field staff have been involved in strategy development and training on M&E. The plans for the each year are now developed through a participatory process involving all the staff members including field staff. Each division head is supposed to make a presentation on the previous year's achievements as well as plan for the coming year. This is usually done in presence of all the division heads and there is an open discussion for understanding the reasons for non-achievement of targets and planning for the future. A good example on how a better monitoring system leads to future strategies would be - Grading of STeP centres. In this case, performance grading was planned for Mission Education which formed the basis for arriving at decisions. Data is used to analyse trends and arrive at informed strategic decisions.

Score baseline: 3.5

Score endline: 3.5 (no change)

Level of openness to strategic learning

2.4.Critical reflection: 'Management stimulates frequent critical reflection meetings that also deal with learning from mistakes'

This is about whether staff talk formally about what is happening in their programmes; and, if so, how regular these meetings are; and whether staff are comfortable raising issues that are problematic.

The management still takes considerable interest in functioning of all departments, and monthly meetings are regularly held for reviews. A more participatory way of working is being encouraged by the management.

Some of the steps are:

- Annual Review – Hits & Misses
- Creation of an Operations Support Group (OSG) was constituted to further enhance the process of decision making in case of any exigency. The OSG is constituted by senior members of the program division, finance and resource mobilization department
- Monthly Review Meetings
- Setting up of Key Performance Indicators to be able to track their progress and identify reasons for poor achievement

Smile has continued to carry on it's the standard operating procedures.

Score baseline: 4.0

Score endline: 4.0 (no change)

2.5. Freedom for ideas: 'Staff feel free to come up with ideas for implementation of objectives'

This is about whether staff feel that ideas they bring for implementation of the programme are welcomed and used.

Freedom for ideas has been improved as the planning exercises have become more participatory in nature and even during implementation freedom is given in terms of operating the programme but the reporting manager is kept in the loop.

Management welcomes open ideas and considers them through weekly, monthly and annual meetings. Staff can go to the executive trustee whenever they wish. Monthly meetings of all departments are held with the executive trustee. The empowerment approach towards staff by the organisation plays an important role towards coming up with good, new ideas by lots of people. The improvement is entirely due to the managers and staff of Smile itself, and most probably can be attributed to a good

return on investment in human resource development. Younger staff have been trained, have grown more knowledgeable and experienced and thus can be (and are) entrusted with more space to improvise or do things in the way they know will produce the best results.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

Level of context awareness

2.6. System for tracking environment: 'The organisation has a system for being in touch with general trends and developments in its operating environment'

This is about whether the SPO knows what is happening in its environment and whether it will affect the organisation.

Smile continues to follow a regular process of market intelligence and research, learning from the external environment. Smile also motivates employees of various departments to participate at the relevant forums and platforms so as to understand the current trends in the market which helps the organisation to align with the changing environment. While during the baseline there was a lack of linking with the government, now a new department named "Alliances and Institutional Partnership" has been set up that focusses on high value projects from Public Sector Units (PSUs) and gets in touch with like-minded institutions for financial and/or technical support.

Apart from being a member of a government based NGO advisory platform (already at the time of the baseline survey) Smile now has obtained a Special Consultative Status with The Economic and Social Council of United Nations, allowing it to follow international trends more closely. Through exchange visits and meetings with partner organisations in the AfC programme and the Together for Change alliance, Smile keeps track of the developments in the changing donor environment.

At baseline the need for more external training of staff at every level to track the environment was flagged, according to Wilde Ganzen's information such training has been provided.

Since the baseline Smile has engaged in the following initiatives:

- Following the Corporate Affairs Bill and its implications with NGOs
- Benchmarking with best in the sector
- Departmental Heads with the support of management keep track of the changes.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

2.7. Stakeholder responsiveness: 'The organisation is open and responsive to their stakeholders and the general public'

This is about what mechanisms the SPO has to get input from its stakeholders, and what they do with that input.

At Smile different departments continue to take care of stakeholder ties. The programme department is in touch with the field staff and the target group. They organised a series of 7 trainings on local fundraising for local civic groups. These have brought together an average of 30 people of 15 stakeholder organisations at a time plus 100 people at the last training in Bangalore (January 2014). The trainings are participative and all trainings are evaluated. This allows for stakeholder feedback at the beneficiary level, in addition to the mechanisms that already existed. Smile has become more responsive to various critical stakeholders, like local NGOs. The inputs that are received during capacity building workshops, meetings or planned interventions at the operational level, are used to tailor the interventions to provide maximum satisfaction to critical stakeholders. Other stakeholders like parents, teachers, health workers and other community members are now involved more frequently, for example through parent teacher meetings and village education committees.

While during the baseline there was no organised structure for keeping in touch with individual donors, Smile now has a donor servicing department for individual donors. There is now regular correspondence with individual donors as Smile has an action plan for nurturing and retaining both corporate and individual donors. This is being made more robust. Corporate Partnership events like

Ramp for Champs, Charity Dinner etc. give a platform to interact with existing supporters. Also educating them about various initiatives and impact report by the end of the financial year has been implemented.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

Summary of capability to adapt and self-renew

Over the last two years there have been some improvements in the way that M&E is applied. All MIS formats and systems are now compatible at the national level within departments and respective programmes by standardising the system and restructuring departments. The communication department works closely with all the divisions keeping track of their performance and achievement of targets and assessing programme outcomes and impact. The greater use of technology has enhanced this capacity further. The coordination between the regional officers and the head office in the M&E process has been streamlined and regional officers have received needed training on M&E. There has been an improvement of involving field staff in finalising future strategies looking at the M&E results. Smile receives input from its target group (mostly local NGOs) through their feedback on trainings they participated in and through regular feedback on planned interventions. This input is used to tailor the interventions to the stakeholders needs. Smile keeps in contact with its existing donors, both individual and corporate, through its donor nurturing and retention plan. The organisation is now better able to follow international trends through its Special Consultative Status with The Economic and Social Council of United Nations. Smile staff has also received training to be in touch with general developments in its operation environment, closely following the Corporate Affairs Bill and its implications and setting up an Alliance and Institutional Partnership department. Management welcomes open ideas and takes considerable interest in the functioning of staff through engaging in weekly, monthly and annual meetings. An improvement in this regard has been that staff have more ownership over project implementation and planning has become a more participatory exercise.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

Capability to deliver on development objectives

Extent to which organisation delivers on planned products and services

3.1. Clear operational plans: 'Organisation has clear operational plans for carrying out projects which all staff fully understand'

This is about whether each project has an operational work plan and budget, and whether staff use it in their day-to-day operations.

Smile still has operational plans for each project and weekly team meetings help to understand progress and discuss weekly plans to conduct scheduled activities. As far as systems are concerned, they were already there, however, now more focus has been given on quality enhancement. Two important improvements since the baseline are that protocols have been smoothed to quicken the implementation and that there is more synergy between the departments which is useful since programmes involve considerable inputs from the different departments.

Score baseline: 4.0

Score endline: 4.0 (no change)

3.2. Cost-effective resource use: 'Operations are based on cost-effective use of its resources'

This is about whether the SPO has the resources to do the work, and whether resources are used cost-effectively.

With the establishment of second level of leadership, the role and responsibility of each and every officer has been clearly demarcated. This helps in better programme and financial planning. With various systems in place the coordination between head office and regional officers has increased. While during the baseline the regional officers had too much responsibilities given the amount of funds

available to them, the project responsibility has now shifted from regional officers to head office. According to Wilde Ganzen's information there has also been an improvement in the funding base of several regional offices.

All projects are operating in a direct implementation mode. Under each project, monthly review of available and utilized funds helps in cost-effectiveness and proper utilization of resources. For any fundraising activity that Smile organises, they look into possibilities to get sponsors in terms of funding or free materials, services and the like, in order to keep costs as low as possible. Given Smile's culture, with senior management having a corporate background, financial considerations including cost-effectiveness have always been high on Smile's agenda.

Strengths of the current system are:

- Maximum use of technology e.g. Video Conferencing, to avoid travel costs;
- Online MIS for data compilation to address the issue of overhead costs;
- Audits as part of the general system, rather than looking at audits as only donor requirements;
- Staff is regularly sensitised on the optimum utilization of resources.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

3.3. Delivering planned outputs: 'Extent to which planned outputs are delivered'

This is about whether the SPO is able to carry out the operational plans.

Over the last two years, Smile Foundation has continued to achieve all its targets pertaining to local actions, fundraising for premium and Smile's own administrative expenses in the AfC programme according to its annual reports of 2012 and 2013. In the area of healthcare, the organisation was conferred with the 'Healthcare Leadership Award 2012' instituted by the Knowledge Resource Development & Welfare Group.

Further, apart from meeting the targets for local actions and raising funds, a lot of emphasis has been given to training and advising Local Civic Groups (Smile's partners) in fundraising, advocacy and proper programme management for Civic Actions for children. With regards to training and advising the Local Civic Groups, Smile delivered upon all its planned outputs and gave even two more trainings than planned: in July 2013 and January 2014. By the end of 2012, the training programmes also started showing results as staff and partners started feeling more confident in carrying out developmental projects. During the baseline it was flagged that the extent to which Smile could deliver planned outputs depended for a great deal on Smile's partners. With training and increased confidence of the partners, this issue is worked on. Apart from this, a number of brand building activities (big & small) were also conducted in 2012-2013.

The Project Implementation Plan chalked out at planning level gives a clear indication of targets to be achieved as per the agreed timelines with the donor. It helps in the execution and also helps achieve focus on the deliverables that Smile committed to the donor. Any changes in the timeline pertaining to deliverables are being communicated to the donor in advance.

Score baseline: 3.5

Score endline: 4.5 (improvement)

Extent to which delivered products and services are relevant for target population in terms of the effect they have

3.4. Mechanisms for beneficiary needs: 'The organisation has mechanisms in place to verify that services meet beneficiary needs'

This is about how the SPO knows that their services are meeting beneficiary needs

Before initiating new projects baseline surveys are carried out to identify the needs of the community. These surveys are done through external agencies as well as by in-house staff. During the implementation period regular feedback is taken from the community both in verbal and written

format. At the end of a training given by Smile, participants are asked to provide feedback, both collectively and individually.

MIS has become an important tool for project management. There has been a better coordination between field staff, local civic group and the head office.

Theoretically, with the rapid growth of Smile into new geographical areas, it might become more difficult to verify to what extent beneficiary needs are met. However, the systems (like the beneficiary management system) are still in place.

Score baseline: 3.5

Score endline: 3.5 (no change)

Level of work efficiency

3.5 Monitoring efficiency: 'The organisation monitors its efficiency by linking outputs and related inputs (input-output ratio's)'

This is about how the SPO knows they are efficient or not in their work.

These systems were already there, but the organisation is trying to make it more efficient. Smile Foundation has a four-tier audit and evaluation mechanism to ensure impact of investment and complete transparency and accountability in utilisation of funds. This four-tier audit mechanism reviews programmes and projects, internal operations, compliance of statutory norms and conducts an external evaluation for the impact and outcome of various development programmes. Newer systems have been brought into place to match the market standards. The auditing, evaluation & monitoring systems have been strengthened with knowledge from various auditing agencies, consultants and trainings. Social Return on Investment (SROI) is still used as a tool for measuring results. Input-output ratios are not calculated as such but in the MIS achievements are compared to targets and inflow and related outflows of resources are also monitored.

Score baseline: 3.5

Score endline: 3.5 (no change)

3.6. Balancing quality-efficiency: 'The organisation aims at balancing efficiency requirements with the quality of its work'

This is about how the SPO ensures quality work with the resources available

Smile integrated all the departments to ensure team work and optimum results. Qualified staff are motivated to use resources in an optimal way and follow operational guidelines. Resolution of issues, exchange of ideas, better planning and presence of an operational support group has helped to improve the quality and enhancing the efficiency of work. Overall, the business-like approach of Smile and the many good guidelines and procedures in place guarantee that sufficient attention is paid to achieve the balance between quality and efficiency. With the opening of new regional offices, with sometimes less experienced staff, at some places the balancing may be less than at headquarters or in 'older' regional offices.

During the baseline efficiency was sometimes compromised because of dependence of Smile on partner organizations, and also resource constraints prevented Smile from taking steps to improve conditions at regional level of operations. However, partners have now received more training in programme management and the balance between responsibilities and resources at the regional level has improved.

Smile's efficiency is ensured through:

- Communication materials;
- Donor reporting;
- Bench marking against other organisations that do work similar to Smile. This comparison stimulates them to improve their performance.

Score baseline: 3.5

Score endline: 3.5 (no change)

Summary of capability to deliver on development objectives

While operational plans are still in place for all projects, there is now more synergy between departments and protocols are smoothened for quick implementation. Cost-effectiveness has always been high on Smile's agenda. Several measures are taken to ensure this, including use of technology to avoid travel costs, seeing audits as part of the general system and sensitising staff on the issue. The responsibility load of regional offices is now more in line with their capacity in terms of resources. Smile continues to achieve the targets set out in the Project Implementation Plan at planning level. Training of local civic groups, Smile's partners, has been an important focus of the last period. This will also help Smile to deliver planned outputs through its partners. Better planning and presence of an operational support group has helped to improve the quality and efficiency of Smile's work. For monitoring its efficiency Smile continues to use SROI and links targets to achievements and inflows of resources to outflows. Systems to identify if services meet beneficiaries' needs are still in place. Smile now conducts baseline surveys to identify needs before starting a project and after its trainings participants are asked for feedback.

Score baseline: 3.5

Score endline: 3.75 (very slight change)

Capability to relate

Level of involving external parties in internal policy/strategy development

4.1. Stakeholder engagement in policies and strategies: 'The organisation maintains relations/ collaboration/alliances with its stakeholders for the benefit of the organisation'

This is about whether the SPO engages external groups in developing their policies and strategies, and how.

There have been processes and systems in place, but in the last couple of years a strong feedback mechanism from the local civic groups, corporate donors and individuals was introduced which has helped the organisation in improving the quality of its strategic planning and policies. Inputs from the partners are taken into consideration in consultation with management. During the baseline a need to increase involvement of local groups and individuals and donors in policy and strategy development, was flagged, as much focus was on corporate donors. In this regard the following improvements took place:

- Regularly being in touch with individual supporters has been a prime agenda and is implemented;
- In-kind contributions of individuals are facilitated through a volunteering cell;
- Corporate and institutional supporters continue to be nurtured, but a strong nurturing process has to be brought in place;
- "Empowering Grassroots" workshops were held in Mumbai, Bangalore and Delhi for grassroots NGOs: the aims were to provide the participants with a common platform to share their learning, success, achievements, challenges and difficulties and to also plan together for strengthening the partnership in future;
- Feedback and inputs from the participants (local civic groups: grantees from Smile's AfC programme and other programmes) during the training in January 2014 on local fundraising and mobilising support (other than financial support) were used to improve the content and approach of future trainings.

For programme implementation strategies, the needs of stakeholders, including the corporate donors, NGO partners and the community are considered, but on the organisational level policies and strategies are decided on by the senior management and second level leadership.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

Level of engagement of organisation in networks, alliances and collaborative efforts

4.2.Engagement in networks: 'Extent to which the organisation has relationships with existing networks/alliances/partnerships'

This is about what networks/alliances/partnerships the SPO engages with and why; with they are local or international; and what they do together, and how do they do it.

Smile is conducting regular capacity building workshops for its local partners, invites donors and involves celebrities in many campaigns. There has been increased participation of the organisation in the relevant forums, workshops and platforms for networking. The alliances department has been dedicated the work of presenting the organisation in such forums. An advocacy cell will be established. The networking with the local grass-root partners has increased many folds due to periodic empowering and capacity building workshops. Many events have been organised to network, nurture and strengthen the partnership with the existing donors such as donor meet, sending regular updates on the organisation development, festive greetings etc. Smile is investing in its network because they believe that in order to grow as a reputed brand, they have to make their presence in the relevant forums and also nurture the existing partnerships for the sustainability of the organisation.

Smile continues to engage in meetings and exchange visits with other Action for Children partners. The Foundation is also part of, through the AfC programme, of the Together for Change alliance, which also organises exchange events.

Smile has started an informal cooperation with Dasra, a highly professional Social Change promoting organisation coming from the corporate sector. Dasra has shared all their extensive and highly professional training materials with Smile and Wilde Ganzen free of charge. Smile staff are invited to participate in Dasra trainings. Smile has also become a part of 'National CSR Hub' of Tata Institute of Social Sciences. This means all the Public Sector Companies of India may consider Smile for implementation of big CSR projects. Smile indicated that in general, there is little collaboration and skill-sharing with other Indian NGOs, because of the highly competitive fundraising environment.

Since the baseline, Smile has started to participate and affiliate itself to a few major international bodies. Smile has been awarded a special consultative status with the Economic and Social Council (ECOSOC) of the UN. Furthermore, Smile's Director-Development was invited by UNICEF in a forum to discuss changing trends in giving culture (the tendency to donate among individuals). In the last quarter of 2013, the organisation worked closely with UNDP during a natural calamity (flood) in the North of India. Based on that linkage Smile Foundation started working with an Indian nationalized bank towards implementing a health based rehabilitation model in the flood affected areas. Finally, Smile started collaboration with the Indian Development Foundation of overseas Indians of the Ministry of Indian Overseas Affairs, and international due diligence agencies such as Charities Aid Foundation, United Way Worldwide and Guidestar.

Score baseline: 3.0

Score endline: 4.0 (improvement)

Extent to which organisation is actively engaging with target groups

4.3.Engagement with target groups: 'The organisation performs frequent visits to their target groups/beneficiaries in their living environment'

This is about how and when the SPO meets with target groups.

A successful beneficiary management system is still operational within Smile Foundation, which helps tracking the progress and development of all the beneficiaries in its two major national level programmes. There has been improvement in the quality of monitoring visits. Smile staff handhold the local partners in terms of fundraising, brand development and project management. There are now quarterly tour planners in place to keep a complete note on each and every movement of the regional officers. With involvement of second cadre of leadership the programme operations have been smooth and a complete check is being kept in terms of programme deliverables and output. Beneficiaries are familiar with Smile's programme officers as well as in direct contact with them. Online media is now a transparent way to keep in touch with beneficiaries, e.g. through Facebook and email.

Score baseline: 4.0

Score endline: 4.0 (no change)

Level of effective relationships within the organisation

4.4. Relationships within organisation: 'Organisational structure and culture facilitates open internal contacts, communication, and decision-making'

How do staff at the SPO communicate internally? Are people free to talk to whomever they need to talk to? When and at what forum? What are the internal mechanisms for sharing information and building relationships?

Wilde Ganzen staff has experienced and heard from staff that Smile has an open internal culture that is quite uncommon in India. At the same time, while staff tended to look to their CEO for the final word before, they are now taking more responsibility of their own, daring to speak out more, also if the CEO is present. Wilde Ganzen observed that this is because both the CEO and new COO stimulate people to speak up, come with ideas and take responsibility. Within the organisation there is an openness for suggestions and necessary changes are brought about after coming to a consensus. During the national conference which is an annual event for all Smile staff they learn from other Smile staff working in other states by sharing their experiences. Apart from regular practice of internal contacts, communication and decision making, Smile gives more focus to a friendly environment to make learning more effective. Some of other steps taken in this regard are:

- An Operations Support Group was constituted by senior members of the programme division, finance and resource mobilisation departments to further enhance the process of decision making in case of any exigency;
- Decentralisation and consultative approach: gave autonomy to different departments, led to interdepartmental integration so that staff are enabled to share and learn from other departments;
- Staff's one to one interaction with external HR Consultant.

Score baseline: 4.0

Score endline: 4.5 (slight improvement)

Summary of capability to relate

There has been some improvement in involving local groups (through workshops and trainings) and individual donors (through a regular contact and a volunteer cell) in policy and strategy development. However, this is only at the programme level. At the organisational level senior management and second line leadership make the decisions. Smile has increased its participation in relevant forums, workshops and platforms for networking and has become affiliated with a few major international bodies like the ECOSOC of the UN, UNICEF and the Indian Development Foundation of overseas Indians of the Ministry of Indian Overseas Affairs.

The quality of the monitoring visits to beneficiaries has improved. Online media, like Facebook and email, are now being used to stay connected to the beneficiaries. While Smile continues to have an open internal culture, staff do now dare to speak out more which is stimulated by both the CEO and new COO. The decentralisation of the organisational structure led to interdepartmental integration so that staff are enabled to share and learn more from other departments.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

Capability to achieve coherence

Existence of mechanisms for coherence

5.1. Revisiting vision, mission: 'Vision, mission and strategies regularly discussed in the organisation'

This is about whether there is a vision, mission and strategies; how often staff discuss/revise vision, mission and strategies; and who is involved in this.

There have been many internal discussion platforms wherein management has shared their vision and mission with the employees. In such discussions many queries were resolved and at present the entire organisation works towards the same mission and vision. Staff and the director grew closer together as both their visions (fundraising and sensitising the community) are now combined. The director is now perfectly aware that the funding base needs to be broadened (whereas before he heavily leaned on companies alone and his personal network of owners of large companies to cover any deficits that might occur). Smile has definitely decided that they want to belong to the top 10 or top 5 fundraising organisations, but at the same time, sensitizing society will also remain a core element of Smile's approach.

To align the mission and vision of the organisation there is the annual goal and work plan meeting in which the focus is to address the life cycle approach i.e. children, their families and their communities. This workshop helps the employees in all the departments to align their work and ideas with the vision of organisation as Smile is and would remain a programme oriented organisation and improved fundraising would help execute these programmes. Thus, it is the cycle in which Smile implements its programme, sensitises the society and communicates with its stakeholders which helps in fundraising.

There have been multiple levels of interaction between the management and the staff. The emphasis has been to develop the organisation as a respected and trusted entity. Thus, every department works for the same mission. Since regular discussions and get-togethers have happened within the organisation at various levels and collectively for building coherence within the teams, the agenda of discussion usually comprises of vision of the organisation and ways to achieve it. While usually new team members take time to understand the long term vision, seniors also make it a point to spread the same philosophy across all levels.

Score baseline: 3.0

Score endline: 4.0 (improvement)

5.2.Operational guidelines: 'Operational guidelines (technical, admin, HRM) are in place and used and supported by the management'

This is about whether there are operational guidelines, which operational guidelines exist; and how they are used.

As the organisation is growing and new donors are partnering, there has been a need of better operational processes to enhance donor retention and nurturing. Standard Operational Procedures are now in place for this area. Although other processes and systems were already in place, the organisation has made a lot of quality improvement from time to time and has reviewed operational guidelines, and donor management system guidelines.

Score baseline: 4.0

Score endline: 4.0 (no change)

Level of coherence of various efforts of organisation

5.3.Alignment with vision, mission: 'Projects, strategies and associated operations are in line with the vision and mission of the organisation'

This is about whether the operations and strategies are line with the vision/mission of the SPO.

In order to bring an alignment to the vision and mission of Smile Foundation, an annual goal and work plan meeting is conducted every year. Goals and work plans ensure to keep the teams focussed. The exercise helps the employees of all the departments and divisions to align their work and ideas with the vision of organisation, which still is to improve the lives of under-privileged children, youth and women. The idea of the 'Life Cycle Approach' of development, i.e. children, their families and the community is established in such exercises. Social Venture Philanthropy is used as a key intervention to enhance the capacities of communities. This strategy is very similar to the model (local fundraising, brand enhancement, training of local civic groups and overall sustainability) used in Action for Children programme and continues to be used in Smile's other programmes as well. All their programmes are in line with the vision of the organisation.

Score baseline: 4.0

Score endline: 4.0 (no change)

5.4. Mutually supportive efforts: 'The portfolio of project (activities) provides opportunities for mutually supportive efforts'

This is about whether the efforts in one project complement/support efforts in other projects.

The avenues have been created for cross-learning between all the projects. The success and learnings of one programme is replicated in the other programmes. The training instruments and training workshops developed under the Action for Children programme continue to be used for training beneficiary organisations from other programmes of Smile as well. All the programmes are mutually supportive as all link to Smile's full life cycle approach to improving the lives of children, their families and their communities: education, health, livelihoods, girl-child and women empowerment.

Score baseline: 4.0

Score endline: 4.0 (no change)

Summary of capability to achieve coherence

The entire organisation now works towards the same mission and vision. The visions of staff and the director grew closer together as both their visions, focus on fundraising and sensitising the community respectively, are now combined. Annual goal and work plan meetings help staff to align their work and ideas with the vision of the organisation which still is to improve the lives of under-privileged children, youth and women by adopting a Life Cycle Approach of development. All programmes are in line with this vision. All programmes of Smile are mutually supportive and cross-learning between projects is applied. Operational guidelines are in place and are updated from time to time. Standard Operational Procedures for donor retention and nurturing are strengthened.

Score baseline: 3.75

Score endline: 4.0 (very slight change)

Appendix 4 Results - key changes in organisational capacity - general causal map

As the changes in organisational capacity in the general causal map and the detailed causal maps overlap completely, please refer to Appendix 5 for the detailed narrative and map.

Appendix 5 Results - attribution of changes in organisational capacity - detailed causal maps

The evaluation team carried out an endline assessment at Smile from 14 to 16 May 2014. During this workshop, the team made a recap of key features of the organisation in the baseline in 2012 (such as vision, mission, strategies, clients, partnerships). This was the basis for discussing changes that had happened to the organisation since the baseline. The two main changes that happened in the organisation since the baseline, as identified by the staff during self -assessments, interviews and during the workshop were:

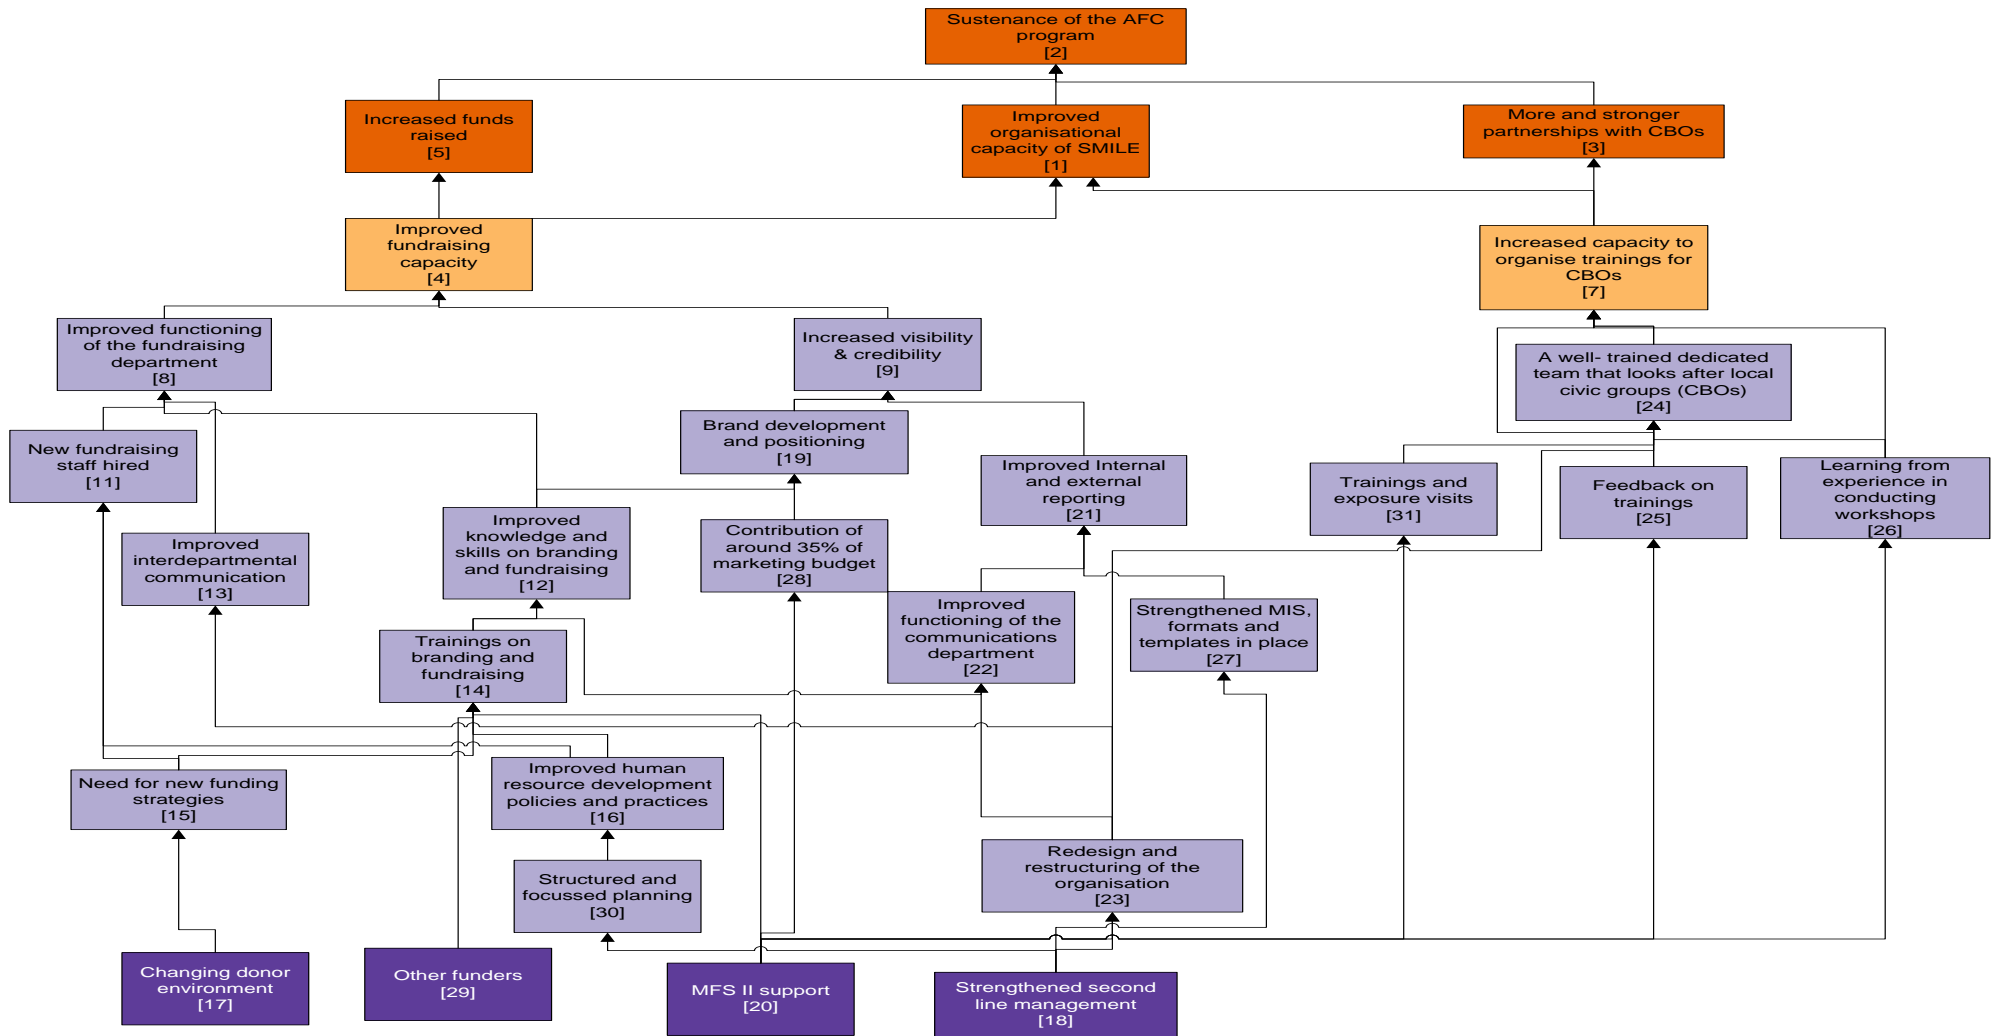

- Improved fundraising capacity, and related to this improved visibility and credibility of Smile;
- Improved capacity of Smile to organise trainings for CBOs.

These two changes happened to coincide with the outcome areas that were chosen for process tracing, so as to get detailed information on how these changes in organisational capacity came about. Therefore the general causal map overlaps strongly with the causal maps developed for each of these outcome areas/organisational capacity changes to be analysed during the process tracing. All the details about these changes in organisational capacity as well as the underlying factors that influenced these changes are described in the narrative and visual below.

During the course of the last two years, 2012 - 2014 (the period under focus for this evaluation), Smile Foundation (Smile) has undertaken several initiatives to improve its organizational capacity to bring about sustainability. This goal has mandated Smile to further improve its funding situation in order to continue its ongoing programmes, nurture community level partners as well as adopt a focused approach to capacity building. The focus has been more on the area of strengthening internal capacities for fundraising and setting forth an integrated approach to draw on expertise internally available and if lacking, fill in the gap with outsourced resource persons. There are two key underlying factors that have strongly influenced these changes in organisational capacity:

1. Strengthened senior management;
2. Changes in the donor environment.

The two main organisational capacity changes are described in the light orange boxes and some of their key consequences are noted above these cards in dark orange. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the organisation are listed at the bottom in dark purple. The narrative describes per organisational capacity change, the contributing factors as described from the top down. The numbers in the visual correspond with the numbers in the narrative.

Improved Fundraising Capacity

As a consequence of Smile's improved fundraising capacity [4], more funds were raised [5] and the overall organisational capacity of Smile was strengthened [1]. Smile's improved capacity to raise funds [4] has led to increased funds raised [5] [Source: Endline Assessment CFA]. This is evident from, for example the premiums raised among the middle class and the corporate sector in the year 2012 and 2013. In 2012, a total of € 86,179 was raised as a premium against the annual target of € 53,375. Towards this premium, a major contribution was made by Prestige Group, CGI, National Small Industries Corporation Ltd. and Zeetex and Concern India Foundation [Source: Smile Foundation-Narrative 2012]. In 2013, a total of € 82,804 was raised as a premium against the annual target of € 78,785. Major contributions were made by corporate like TODS, Ericson, Tuskar Harley Davidson, ZAFCO, Tata Motors, LIC, United Way of Mumbai and Philips [Source: AfC Narrative Reporting 2013 Smile delivered 20140210]. The increase in amount of funds raised together with the improved organisational capacity[1] and more and stronger partnerships with CBOs [3] (explained further on) in turn contributed to the sustainability of Smile's projects, especially the Action for Children (AfC) programme [2].

The strengthened focus on raising more funds was one of the key areas that was identified by the management keeping in line with Smile's philosophy of civic driven change to increase the domestic donor base [Source: Interview with COO]. The fundraising department is using innovative ideas for fundraising, some examples:

- 'Ramp for Champs' is one of the many innovative initiatives that Smile Foundation has undertaken to raise resources for the education of underprivileged girls by organizing fashion shows and raising resources through the corporate sector [Source: AfC Narrative Reporting 2013 Smile delivered 20140210].
- 'Serve with Smile Week' is an innovative concept initiated by Smile Foundation to raise funds for the nutrition of the underprivileged children. The aim of the campaign was "Nutrition for Better Literacy". The target audiences of this campaign were the restaurant owners and the regular restaurant goers, who could empathize with the underprivileged children, who did not even get a proper meal in a day. This campaign touched the lives and hearts of 35 lakh (3.5 million) people through various media initiatives, from print media to social media [Source: Smile Foundation-Narrative 2012].
- CSR Bill – The new CSR Bill which got approved by the Parliament (and will be effective from April 2014) is a great opportunity for Smile Foundation to raise funds as corporate organisations would be required to spend 2 percent of their net profit for social development [Source: Outline AfC Narrative Reporting 2014].
- Brand Association – In the recent past Smile has experienced that because of being able to communicate well about the good work Smile is doing, many of the reputed brands are looking forward to get associated and for Smile definitely it's an opportunity [Source: Outline AfC Narrative Reporting 2014].
- Art Shows - The fundraising team in the recent past partnered with Hyatt to organize a multi city Art Exhibition-cum-sale. Smile did a lot of research and realized that India has a big Art market and Art could be one more interesting aspect to raise own cost or premium [Source: Outline AfC Narrative Reporting 2014].
- Luxury Brands - Another new area which Smile identified to raise own cost or premium is luxury brands. Smile has been successful in doing events like charity sale amongst high end luxury brands like TODS and Ethos and now they are trying to build a strategy to continuously engage luxury brands for such associations [Source: Outline AfC Narrative Reporting 2014].
- Celebrity Cultivation -There has been a slight improvement in celebrity's mind-set when it comes to charity. Now celebrities are (though few of them) at least trying to connect with a cause as

they think it may positively impact their brand image in the society [Source: Outline AfC Narrative Reporting 2014].

- Mass Media Campaign - Also, mass media campaigns are gradually becoming popular amongst TV channels and it seems in coming times Smile will get an opportunity to scale up its Choone Do Aasman campaign and it may become one of the major sources of raising own cost and premium [Source: Outline AfC Narrative Reporting 2014].

Improved fundraising capacity [4] was a key organisational capacity change that was mentioned by many staff during the workshop and their self-assessments. Smile's capacity to raise funds has improved mainly because of the improved functioning of its fundraising department [8] [Source: AfC Narrative 2012, Outline AP AfC Prog 2013] and its improved visibility and credibility [9] [Source: Smile Foundation Website].

Improved functioning of the fundraising department [8]

Smile has a full-fledged improved fundraising team [8] consisting of 14 staff, responsible for raising its own cost and premium from high net worth individuals⁷ and corporates. Also each department has corporate, individual, institutional and child for child fundraising staff. They use various modes of fundraising namely, the pay roll giving program, corporate contribution to a project, fundraising from cause related marketing, fundraising from events, direct mailing and e-direct mailing activities, general donations etc. [Source: Outline Annual Plan AFC programme 2013, Monitoringvisit WildeGanzen at Smile April 2014]. The national fundraising team is based in Delhi, Mumbai and Bangalore. The organisation would like to increase the team strength to focus on individual fundraising based in Delhi, Mumbai and Bangalore. Every member of the Corporate Partnership department is well trained to generate resources from corporates. Similarly, the direct mailing and direct e-mailing activities are done from Delhi but it is being planned to extend this team to other cities so that more individuals can be approached [Source: Evaluation Workshop May 2014, IP-2014, COO Interview, Outline Annual Plan AFC programme 2014 (3) Final delivered 30092013, Monitoringvisit WildeGanzen at Smile April 2014]. A restructuring of the resource department clearly highlights the intent on fundraising. In 2014, the Individual Partnership (IP) sub-division under the resource department was strengthened as is evident from the responsibility centre structure of 2014 [Source: HR PPT Goals Work plan 2014] which shows innovative approaches to connect with existing and potential donors. These initiatives include direct mailing, online resources, IP donor servicing and nurturing new donors. These were brought in to further strengthen fundraising from individuals [Source: IP-2014, Corporate Partnerships, Presentation - Content & Creative]. Further, Smile is preparing to set up a new programme for individual fundraising. From their research they found that one of the main challenges is the competition with Indian NGOs who can invest vast amounts in building their social and fundraising programmes. With limited resources available, developing a strong and profitable individual giving programme poses a challenge to Smile. The current network of corporate high-level individuals can be a powerful entry point to set up a medium and a major donor programme in the near future. Smile will try to create linkages between the individual giving with corporate giving programmes [Source: Monitoringvisit WildeGanzen at Smile April 2014].

The functioning of the fundraising department improved [8] because new fundraising staff was hired [11], knowledge and skills on fundraising and branding improved [12] and interdepartmental communication improved [13].

- **New fundraising staff was hired [11]**

In order to fulfil its mandate to mobilise resources Smile recruited staff who had expertise in fundraising. As an example of new fundraising staff, a General Manager for fundraising was hired who, in his previous job, had worked on fundraising and brand promotion through event and corporate alliances [Source: Minutes of AfC meeting Mombasa 17-10-2012]. The responsibility of Manager of Alliances and Institutional Partnerships was given to someone who had worked on CSR

⁷ High Net worth Individuals are those having investable assets (financial assets, excluding primary residence) of \$1 million or more.

in her previous job. Finally, a Manager for Corporate Partnerships was recruited who had nine years of experience in the corporate sector and in resource mobilisation [Source: Discussions during workshops].

- **Improved interdepartmental communication [13]** improved because of a redesign and restructuring of the organisation [23] by strengthened second line management [18]. This was an important step in a direction to further decentralize Smile's organizational structure and empower respective departmental leads to take proactive initiatives in the sustenance of the organisation. The overstrained departmental heads are now supported by junior staff. This restructuring has reduced the burden on the senior staff and has given them sufficient time to work on improvements of the existing processes. The communications department is now divided into internal and external communications divisions. While the internal department creates content (types of programs being implemented, their impact etc.) for circulation within and outside the organization the external division is responsible for public relations and media coverage, so that Smile foundation as a brand may be read out clearly in the society to further improve its visibility. Senior staff from the fundraising department also had more time to identify newer contextual issues and sharing with and learning from other organisations helped them acquire new ideas to develop better proposals for resource mobilisation. The new Chief Operations Officer (COO) reviewed the roles and responsibilities of the staff, their capacities and their workloads and chalked out the path forward for each departmental head and created a mechanism for coordination and cross accountability for each head [Source: Evaluation workshop May 2014, COO Interview, Endline workshop]. This enabled staff to share and learn from other departments within the organisation which further improved the functioning of the fundraising department. The revamped structure brought in a decentralized and consultative approach that gave autonomy to different departments which further led to improved interdepartmental communication. An Operations Support Group (OSG) [Source: Evaluation Workshop, May 2014, COO interview] was constituted to further enhance the process of decision making in case of any exigency. The OSG is constituted by senior members of the program division, finance and resource mobilization department. In case of any exigency they call for a meeting of all the departments and try to solve the issue at hand together. Since all the departments are present, action can be taken immediately to resolve the issues. OSG also creates a platform where all the senior members of different departments meet to exchange ideas and take actions quickly. It has improved/streamlined the competence and compliance of the organisation for better operation of the programmes. No minutes of the meetings are kept by Smile as they consider it an informal forum to solve issues of the organization [Source: Evaluation Workshop, May 2014].
- **Knowledge and skills on fundraising and branding improved [12]** because of several trainings/workshops, exchange events organized by Wilde Ganzen and several in house training workshops on branding and fundraising[14]. Some of these trainings were funded by MFS II [20] some by other funders [29]. Details of the trainings/workshops and exchange visits that had an impact on fundraising and branding are as follows:
 - In 2011⁸:
 - Everybody Wins: Negotiating Skills for Managers:** This training lead to a better coordination with the program and fundraising team and was expected to help in donor retention and converting occasional donors to loyal donors [Source: 5C endline_support to capacity development sheet_SPO perspective_India_Smile]. This training was funded by the Institute of Rural Management Anand, Gujarat.
 - ABC Leadership - Building High Performance Teams:** This training improved the knowledge of the participants on fundraising [Source: 5C endline_support to capacity development sheet_SPO perspective_India_Smile]. This training was funded by Quantum Leap Performance Solutions Bangalore - A professional training and corporate coaching company.
 - In 2012, 2013:
 - Exchange Visit to Soul City Institute (South Africa):** A two member team went to Soul City Institute in South Africa for an exchange program in the month of May 2012. The National Director-CFC and the Assistant Manager, Communications stayed at Soul City Institute and enhanced their knowledge on Soul City's brand communication strategies and

⁸ Though the period of evaluation is between 2012-2014 , we cannot disregard the trainings that were given in the year 2011 as the impact of these trainings would have been visible only in the subsequent years.

activities and helped them make an effort to implement them suitably in communication for brand building of Smile Foundation in the future [Source: Smile Foundation-Narrative 2012; Smile exchange with Soul City]. This exchange visit was funded by MFS II.

Exchange visit to Kenya: In November, 2013, three staff members from the fundraising background visited KCDF (Kenyan partner under AfC programme) for an exchange visit of 3 days. The idea behind this exchange was to create a networking platform among the four international AfC partners to share each other's experience, build the capacity of fundraising staff towards better brand integration for fundraising and also to learn about donor retention strategy, unique fundraising ideas like Charity Golf etc. [Source: AfC Narrative Reporting 2013 Smile delivered 20140210, Report on Exchange Learning Visit with KCDF by Smile]. As per the report submitted by the participants from Smile this was a good learning experience that enhanced their understanding on the programme implemented by their partner in Kenya as well as their unique fundraising ideas, asset development methods, donor retention strategies, networking strategies, high value institutional fundraising etc. [Source Report on Exchange Learning Visit with KCDF by Smile]. This exchange visit was funded by MFS II.

AfC (Action for Children) Directors' Meet: Two different meetings were organised in 2012 & 2013, in Kenya and Brazil respectively. Important issues discussed were – challenges of fund-raising, continuation of support beyond 2015, and furthering cause related marketing. The meeting of 2013 set the tone for innovations on empowering the grassroots, and brand building. [Source: AFC Directors Meet 2013- Brazil, AfC Narrative Reporting 2013 Smile delivered 20140210, Minutes of AfC meeting Mombasa 17-10-2012, 5c endline _questionnaire _training_participant_perspective _India_Smile_namep_Smile_Kavita Tiwari (Resource Mobilization) participant]. The take home action points after the Kenya meeting was the need to diversify donor base as well as to focus on individual donors [Source: Minutes of AfC meeting Mombasa 17-10-2012,pg 24]. An evaluation of the Directors' Meeting 2013 by the partners including Smile revealed the meeting was very useful as there were in depth discussions around fundraising and that this was an excellent platform for sharing experiences [Source: AFC Directors Meet 2013- Brazil]. These Directors' Meets were funded by MFS II.

A three day capacity building workshop was organized for all the staff of Smile Foundation: There was a pan India participation of staff from all the regions. The workshop was focused on Fundraising, Leadership, Program Management & Governance, Brand Development and Media Advocacy. This helped in improving efficiency in fundraising [Source: 5C endline_support to capacity development sheet_SPO perspective_India_Smile]. The MFS II funds supported the expenses of the AfC program staff to attend this conference [Source: Discussions during workshop]. Further, a special session was organized for the National Fundraising Team of Smile Foundation. The team was exposed to new ways of fundraising for raising premium and organizational cost [Source: AfC Narrative Reporting 2013 Smile delivered 20140210].

Training on Fundraising from Public Sector Units: Earlier in the 3rd quarter of 2012 in-house regional training of Corporate Partnership team (fundraising team) was conducted in Mumbai funded by MFS II. The objective was to build the understanding of fundraising from Public Sector Units (PSU) in India, so that it enhances the capacities of fundraising team to raise significant amount for premium and organization cost. PSUs as per the direction of Government of India have to invest some percentage of their profits for social development [Source: Smile Foundation-Narrative 2012, 5C endline_support to capacity development sheet_SPO perspective_India_Smile.]

Face- to- Face fundraising workshop: In the 1st quarter of 2012, the Individual Partnership divisions along with other marketing professionals of Smile Foundation were participated to Face to Face Fundraising training session organized by South Asian Fundraising Group (SAFRG). The aim was to help the participants learn the important skill and tips which requires on field while approaching a new donor [Source: Smile Foundation-Narrative 2012, 5C endline_support to capacity development sheet_SPO perspective_India_Smile].

Smile started hiring new fundraising staff [11] and focusing more on capacity building of staff on fundraising and branding [14] because of: a need for new fundraising strategies [15] [Source: Outline

AfC Narrative Reporting 2013-1st Quarter] and improvement of human resource development policies and practices [16] [Source: interview with the COO, HR PPT Goals Work Plan 2014, Thank you and Spot the hero card, Evaluation Workshop, May 2014, 5 C Endline Assessment - Group - I - management - Smile - India]. New fundraising strategies [15] were needed because of changes in the donor environment [17]:

- **End of contract with Wilde Ganzen in 2015.** As per the contract with Wilde Ganzen (WG), Smile foundation would get funds, if an ever increasing part of the project finances were raised by Smile and other stakeholders of the project [Source: Contract for Together for Change Programme, 2011-15]. In 2011, out of a total project cost, 62% was borne by WG and the remaining 38% percent was raised by Smile, however towards the end of 2015 only 26% of the total project cost will be given by WG and the remaining 74% will have to be raised by Smile. Also, WG in a number of communications has hinted at the reduction or uncertainty of a next phase of funding after MFS II [Source: Minutes of AfC Directors Meet, Kenya, September 2012]. Clear indications have been given that Smile should look to diversify its donor base.
- **Dwindling foreign resources** bring in the need to compete more aggressively with other similar NGOs working on issues of children, as the competition becomes tougher with smaller pots of money. There has been a notable decrease in the funders base mainly with foreign funds, owing to a very volatile donor environment across the world and more so in India. [Source: http://cprindia.org/Spring_2014_IDCR_Report_the_State_of_Indian_Development_Cooperation.pdf]. Most foreign donors have been revising their grant making policies and funding priorities, and the current trend in India shows a decline in foreign funds and conclusion of operations by certain bilateral and multilateral organisations. International posturing of successive Indian governments has been that of a developing to developed nation, building on its economic growth, and a young, educated, and expanding middle class. Also the challenge at the moment is the economic slowdown. Corporates have become more selective when it comes to investing for a cause. This in turn is restricting Smile to set up quality projects as even institutional funds are no longer readily available [Source: Outline AfC Narrative Reporting 2014]. However, things on the ground tell a different story. The situation speaks of new forms of poverty, deprivation, inequalities and suffering. That said, aid has not been more than a trickle, with aid policies of the developing world reorganized with respect to India [Source: Smile Foundation-Narrative 2012].
- **New opportunities for (local) fundraising:** Every closed door opens several new windows. The new Companies Act 2014, with a very strong CSR Clause, mandates companies to proactively design and undertake welfare and other developmental activities. This is seen as a great opportunity for Smile as the corporate sector would be required to spend 2% of their net profit for social development actions. Smile is devising its own strategies to tap into this potential windfall [Source: AFC Narrative Reporting 2013 Smile, COO Interview, Hospitality Biz India __ CSR_ Practice What You Preach].

Smile is and has been operating in a highly competitive funding environment. This space has become increasingly competitive with new players both in the NGOs community in India, and the corporate sectors. As explained in more detail above, there has been a notable decrease in the funders base mainly with foreign funds, owing to a very volatile donor environment across the world and more so in India. Smile's mission is to increase its domestic donor base, which has therefore prompted the organization to look at its internal structure, the necessary skills sets and strategies to successfully diversify its funding base. In addition to increasing its fundraising capacity, Smile decided to focus on three key areas: Communication, Visibility and Branding [Source: Evaluation Workshop May 2014, AfC Narrative Reporting 2013 Smile delivered 20140210], see also below.

The improvement of human resource development policies and practices [16] consisted of:

- **An improved appraisal system:** An OD consultant, who has been more of an accompanying mentor in the past was involved in the appraisal process [Source: interview with the COO] and reported to the senior management the training needs of Smile's staff, their strengths and weaknesses, and ability to deliver in time. This in turn led to a better match between training needs and selection of participants. [Source: HR PPT Goals Work Plan 2014].

- **Better staff retention initiatives:** Besides training opportunities, a series of new initiatives such as 'Spot the Hero', 'Thank you cards', and open acknowledgement of the efforts of staff at national meetings, further added to the motivation of the staff and their retention [Source: Thank you and Spot the hero card, Evaluation Workshop, May 2014].
- **Hiring new skilled staff:** Several new positions were created and recruited against. At the same time Smile proactively looked at professional skill sets to hire new staff against vacant positions. [Source: Evaluation Workshop, May 2014]. The idea was two pronged: first, to have clear cut accountability demarcations of responsibilities; and second, to plug the identified gaps in skill sets so that dependence on outside resource is reduced.

Human resource development policies improved [16] because of more structured and focused planning [30] that was introduced by a new Chief Operations Officer (COO) who was hired in January 2013 [Source: Interview with Founder Trustee] with a view to give this position more independence to deal with day to day running of Smile's operations, while the founder trustee could focus more on strategic and patronage issues to Smile [Source: Outline Narrative Reporting, AfC Narrative Reporting, 2013-1st Quarter], as well as strategic visibility, credibility and fundraising issues pertaining to the organisation. This was a strengthening of second line management [Source: Interview with Founder Trustee] [18].

Improved visibility and credibility of the organization

Smile increased its visibility and credibility [9] because of brand development and brand positioning [19] and because of improved internal and external reporting [21]. Smile's improved visibility and credibility [9] is evident from awards and recognitions received by Smile [Source: Smile Foundation Website]. For example Smile Foundation was conferred with the "EDUCATION EXCELLENCE AWARDS – 2013" by the Associated Chambers of Commerce and Industries (ASSOCHAM) & The Education. The award is given to a university / institute and individuals performing their best in education sector. Smile Foundation was also awarded the Corporate Excellence Award for NGO Excellence by the Institute of Public Enterprise (IPE); a Hyderabad based non-profit educational society, endorsed by World CSR Day and Asian Confederation of Business. The IPE Corporate Excellence Awards recognize and honor companies as well as individuals who, through their corporate practices, have helped to raise India's corporate disclosure standards and corporate governance. The Awards seek to identify and celebrate those companies that have had a positive impact on our environment and society as well as their business. Smile Foundation has been awarded the GE Healthcare - Modern Medicare Excellence Awards for its phenomenal work in healthcare. The 'NGO of the Year' award was given to Smile Foundation from among five nominations, in recognition of its phenomenal work supporting medical causes and offering various services within the healthcare industry. This award is instituted by GE Healthcare, a division of the global giant General Electric, which is into manufacturing and marketing of specialized hospital and pharmaceutical equipment. The objective of this award is to recognize real heroes in healthcare areas, especially related to hospitals, individual doctors and other NGO organizations which have contributed to the society in a large way. All these awards prove that Smile Foundations has improved its visibility and credibility as an organization [9] [Source: Smile Foundation Website].

Brand development and brand positioning [19] have been key parts of the agreement between Smile and Wilde Ganzen [Source: Contract for Together for Change Programme, 2011-15]. This has been one of the key deliverables supported by MFS II funding [28] [20]. During the period under review (2012-14), Smile has improved its visibility through the following brand development and brand positioning activities:

- Live streaming of target children's interviews;
- Use of radio and television;
- New branding activities, like celebrity engagement and endorsements, new corporate engagements and collaborative events, media campaigns, motorbike rallies, participation in film festival on children's films, art shows, short film on impact of Smile's programme, online media work for public relations; The film 'I am Kalam' was mainly used for branding of Smile. It was

shown to many groups, which created visibility [Source: Minutes of AfC meeting Mombasa 17-10-2012].

- Brand development and fund raising from middle class and corporates;
- Branding in digital space including website improvement and social media like Facebook and YouTube.

[Source: techcomm_2014, Sandip. Comm. 21052014, External Communication 2014 – 2015, IP-2014]

Wilde Ganzen has supported the branding and marketing of Smile with MFS II funds [20] [Source: [Interview with COO, Contract for Together for Change Programme, 2011-15] making up to around 35 percent of Smile's total marketing budget [28] for the Action for Children programme. The funding was earmarked but with a high amount of freedom on how to spend it within the given aim. Brand development and brand positioning [19] has also improved because of improved knowledge and skills on branding and fundraising [12], which was a result of training on branding and fundraising [14], which were partly funded by MFS II [20] [Source: Interview with COO; Contract for Together for Change Programme, 2011-15], see also the explanation on this above.

Smile's credibility [9] improved because of improved internal and external reporting [21], which are part of the overall improved M&E and governance of Smile. Internal reporting includes better and more timely reports because of strengthened MIS and formats and templates in place [27]. Processes, procedures and systems for this were strengthened by new second line management [18]. The external reporting [21] improved mainly due to the improved functioning of the communications department [22].

The communications department has been redesigned with a clear brief of improving internal communications, linking and learning, external communication, communication on programme achievements and impact. Over the last two years the communications department has changed its ways of working to maximize the impact of communications on the organisation [22]. Internally the department has been working more closely with programmes, as well as engaging target groups with programmes and programme impact. Target groups are defined as journalists, policy makers, educationists and parents of young children. Communications is an area that is still evolving, especially for charities, and non-governmental organizations. With competition to have an edge over rivals and/or bidders for the same pot of money rising, Smile has started engaging with PR Agencies, creative agencies and events management firms to communicate its work and to appeal for support. Smile has focused on accurate and relevant information which has helped it to earn respect and recognition. At times Smile has used customized communication for a target audience and selected stakeholders by outsourcing new material with concept and control remaining with Smile [Source: AfC Narrative Reporting 2013 Smile delivered 20140210, External Communication 2014 – 2015, IP-2014].

As is evident in the self-assessment sheet for field staff that new donors like Union Bank, LIC, RECL, Hyatt, Harley Davidson etc., have roped in and testimony to all organizations engaged in fundraising, a vibrant communication strategy, specific and specialized communication material for acquisition, retention of corporate and individual donors, receiving timely trainings for all fundraising teams along with aggressive branding further enhance the chance of garnering more resources. In a fast changing world, Smile decided to look at the key functions of communications, visibility and branding in greater detail. All three functions are intermeshed together, with the focus on visibility and funds generation. During the endline workshop at Smile, this was explained in detail by the Smile team and the concerned departmental heads and their team members [Source: Evaluation Workshop May 2014, AfC Narrative Reporting 2013 Smile delivered 20140210, 5C Endline Assessment - India Smile - field staff].

The communications department is working better [22] because trainings have been conducted for field staff on photography and case study documentation as they are the first point at the field in the middle of the action [Source: learnings from IP sessions, Report workshop March 3-7, Evaluation Workshop May 2014]. The trainings have helped generate good quality information which is further edited and brushed-up before being used in various communication and related actions. 2013-14 has been focus year for "Capturing our Impact" which for Smile has meant – "to tell our stories better".

Thus the communications department improved because of trainings [14] and a redesign and restructuring of the organization [23] by the new second line management [18]. This restructuring included clarification of roles and responsibilities and a more decentralised and consultative approach.

This restructuring also led to a division of the communications department into internal and external divisions. While creative/content management and technology was brought under the internal communications division; media advocacy and a new sub-division called "Celebrities and Events integration" for brand development was brought under the external communications division. This is evident from a comparison between its current [Source: HR PPT Goals Work plan 2014] and 2012 organograms [Source: STeP_2012 (operational guidelines)].

Improved capacity of Smile to organise trainings for CBOs

Smile has improved its capacity to organise trainings for CBOs over the last two years [7]. This has been keeping in line with the Social Venture Philanthropy (SVP) model of Smile as well as the requirements of the contract with Wilde Ganzen. Smile Foundation is guided by the philosophy of Social Venture Philanthropy, in which they identify handholds and build capacities of genuine grassroots NGOs to achieve accountability, sustainability, scalability and leadership. Smile provides seed money for launch of new projects, expansion of old projects, and also emphasizes regular counseling, better productivity, efficiency enhancement, capacity building of grassroots NGO's, communication and a process of Good Governance.

As per the agreement between Smile and Wilde Ganzen training and advising local civic groups in fundraising and advocacy for civic actions for children is one of the mentioned outputs in the Terms of Reference [Source: Contract for Together for Change Programme, 2011-15]. In delivering this output, Smile has improved its capacity to organise trainings for CBOs. This was confirmed in an interview with Wilde Ganzen and can be found in the Empowering Grassroots training report of July 2013. While Smile focused on streamlining its relations with its partners in the initial years of the contract, during the last two years Smile mainly focused on capacity development of partners [Source: Evaluation Workshop May 2014, The new India express, Empowering Grassroots_jul2013_draft].

In partnership with Wilde Ganzen and taking learnings from India and similar economies in the world, such as Brazil, Kenya and South Africa, Smile Foundation has built capacities of 500 grassroots NGOs in last two years under 'Empowering Grassroots' programme [Source: Media Coverage Report - Empowering Grassroots].

Smile Foundation, held a three day workshop between 27th and 29th January 2014 in Bangalore through their initiative "Empowering Grassroots" – capacity building of community based organizations, which received a tremendous response from national and international grassroots NGOs. The aim of this initiative was to enable and equip community based organizations (CBOs) to achieve sustainability by aligning themselves with the CSR mandate under the Companies Acts 2013 and the growing middle class in India with high net worth individuals, in the wake of foreign institutional funding slowing down. The outcome of this workshop was that CBOs were instilled with the need to achieve sustainability through credible delivery, whilst at the same time they were exposed to various tools that they could use to scale up their management, operational and governance bandwidth to establish credibility transparency and accountability so as to facilitate resource mobilization and thus achieve sustainability.

As a consequence of improvement in this capacity [7] more and stronger partnerships with CBOs [3] were formed [Source: Outline AfC Narrative Reporting 2014, p.1]

The improved capacity of Smile to organise trainings is due to:

- **A well -trained dedicated team that looks after local civic groups (CBOs) [24]**

This team seeks applications from local civic groups through physical applications and also through online mode. The same application goes through the scrutiny process and the final application gets selected by the team. After due diligence and field appraisal the proposal gets approved and local actions are conducted. Later the premium is matched and disbursed to the local civic groups as per the contract and the project guidelines. The same team reviews the

projects from time to time [Source: Outline Annual Plan AFC programme 2013, PLAN FOR 14-15, 5c

endline_questionnaire_training_participant_perspective_India_Smile_namep_Smile_Programmes participant]. It is the responsibility of the programme managers and officers to build the capacities of the partners through the Training of Trainers (ToT) mode and in the last two years, a lot of focus was given on training of partners.

The programme officers travelled to the project partners, local groups and communities, met with them and supported them for conducting local actions. In addition to the visits, follow up and handholding during the local actions events, Smile helped them with advocacy tools (movies, clips, campaigns etc.) and also by conducting fundraising activities at local level. Further, in 2013 two capacity building workshop titled "Empowering Grassroots" were organized for NGO Partners of North and West region. The objective of these workshops was to enhance the knowledge & skills of grassroots organizations towards sustainability and to give insights as how the grassroots NGOs can develop credibility, strengthen their organizational capabilities & build their competencies. The workshop also aimed at providing the participants with a common platform to share their learning's, success, achievements, challenges and difficulties and to also plan together for strengthening the partnership in future [Source: Outline AfC Narrative Reporting 2014].

The dedicated team [24] has been empowered further as a result of the restructuring of the organisation [23] by strengthened second line leadership [Source: 5c endline self-assessment India Smile - Program staff, 5c endline interview guide_OD consultants_selected indicators_Smile].

Several trainings and exposure visits [30] funded by MFS II [20] have contributed to the development of an experienced team who in turn contributed to the capacity building of the CBOs. These started much earlier than the MFS II funding period as a part of the activity under the Action for Children Programme under MFS I and are bearing fruit now. As an example an exchange visit to CESE (Brazil) was made by the staff to understand the context of the partner and learn how they implement programmes and bring about civic driven change. The focus was also to understand the best practices around fundraising for empowering grassroots which could be replicated back home as one of the components of training of CBOs [Source: Smile's exchange with Cese].

Trainings in the last two years are as follows:

- **AfC (Action for Children) Directors' Meet:** Two different meetings were organised in 2012 and 2013, in Kenya and Brazil respectively. Important issues discussed were – challenges of fundraising, continuation of support beyond 2015, and furthering cause related marketing. The meeting of 2013 set the tone for innovations on empowering the grassroots, and brand building. After the Directors' Meet of 2013 innovative fundraising campaigns and events like Marathon, ART Show were carried out by the organisation. The program managers and officers of Smile's CBO team provided handholding support to the partner NGOs and CBOs in organizing fundraising events and helped with advocacy tools (movies, clips, campaigns etc.), for raising fund and brand building. Further, the director's meet also set the tone for the organisation to improve the quality of empowering grassroots on capacity building programme for partner NGOs and CBOs, innovative ideas in fund raising [Source: AFC Directors Meet 2013- Brazil, AfC Narrative Reporting 2013 Smile delivered 20140210, Minutes of AfC meeting Mombasa 17-10-2012, 5c endline _questionnaire _training_participant_perspective _India_Smile_namep_Smile_ (Resource Mobilization) participant]. The take home action points after the Kenya meeting was the need to diversify donor base as well as to focus on individual donors [Source: Minutes of AfC meeting Mombasa 17-10-2012,pg 24]. An evaluation of the Directors' Meeting 2013 by the partners including Smile revealed the meeting was very useful as there were in depth discussions around fundraising and that this was an excellent

platform for sharing experiences [Source: AFC Directors Meet 2013- Brazil]. These Directors' Meets were funded by MFS II.

- **A three day capacity building workshop was organized for all the staff of Smile Foundation:** There was a pan India participation of staff from all the regions. The workshop was focused on Fundraising, Leadership, Program Management & Governance, Brand Development and Media Advocacy. This training helped them in improving their capacities to train the CBOs as the topics of the training were later on also used in the trainings for CBOs [Source: 5C endline_support to capacity development sheet_SPO perspective_India_Smile, AfC Narrative Reporting 2013 Smile delivered 20140210].

The improved capacity of Smile to organise trainings is also due to:

- Feedback on trainings from Wilde Ganzen and participants [25]. Most of the trainings that Smile organised to strengthen the capacity of the CBOs [26] were funded by Wilde Ganzen under MFS II [20]. Smile's capacity in developing trainings for CBOs mainly improved due to the feedback they have received on two trainings given to CBOs. Wilde Ganzen hired the consultant Veronika Uhl from Himmelblau to observe the workshop given by Smile in July 2013 and share her observations in a report and the other consultant – Train the Trainers trainer Ewoud Plate of MDF - to conduct a pilot workshop on mobilising support (other than financial support) in January 2014.
- The first training Smile staff received feedback on in the period 2012-2014 was the "Empowering Grassroots Capacity Building training" for CBOs from 10-12 July 2013 in Delhi. This training has been mentioned in interviews by the second Management group and Wilde Ganzen [Source: 5c endline self-assessment sheet_Group II management_India_Smile, AfC Narrative Reporting 2013 Smile delivered 20140210, Outline Annual Plan AFC programme 2014 (3) Final delivered 30092013]. Wilde Ganzen facilitated the feedback on the trainings [25] from its own consultants and the participants (partner CBOs). The feedback was that:
 - The training had been very well organized by Smile.
 - Smile succeeded very well in engaging experienced and competent trainers that connected to the grassroots context.
 - The training was developed on the basis of the specific needs of the CBO's.
 - Smile has developed a very good database of professional resource persons for different topics, also according to the training report of July 2013; and therefore has the capacity to design, conduct and organize these kinds of trainings with the support of external experts.
 - In general the feedback was very positive with some suggestions on the selection of topics that should have been relevant for the target audience.

The second training that Smile received feedback on was the "Empowering Grassroots Capacity Building workshop" in Bangalore, 27th-29th of January 2014 [Source: 5c end line self-assessment sheet_Group II management_India_Smile, AfC Narrative Reporting 2013 Smile delivered 20140210, Outline Annual Plan AFC programme 2014 (3) Final delivered 30092013]. Detailed information on the feedback given can be found in the minutes that were made during the evening sessions, where Veronika Uhl, Wilde Ganzen and staff from partner organisations CESE and KCDF provided feedback to Smile [Source: Minutes of evening sessions Change the Game meeting Bangalore, India, January 2014, Media Coverage Report - Empowering Grassroots]. The feedback was that:

- The title and objective of the meeting itself was very attractive and meaningful for the capacity building of the partners.
- Organizational Capacity Assessment (OCA) was discussed. On the basis of Kenya exchange visit learning the staff prepared a draft introducing 5C model for OCA. Feedback was given for further improvement.
- The organisation could very well bring the participants through experiential learning within a short period.
- The training helped the NGOs/CBOs to be motivated and capacitated on mobilising support (other than financial support) issues.
- The training methodology was well prepared to address the objective.
- The feedback was helpful for further improvement. It was suggested that more research on national issues would have been helpful to present a clear picture while explaining the future change the game program.

Smile received feedback from the partners that participated in the workshop. According to the training report of July 2013, participants thought that the workshop was very useful, had a good location, was very well organised, and said that income generation should also be included in the modules not just fundraising [Source: AfC Narrative Reporting 2013 Smile delivered 20140210].

- Learning from experience in conducting workshops [26]. Smile organised 7 trainings on local fundraising, 30 people from 15 different organisations per training since the baseline, these were funded by MFS II [20] [Source: 5 C End line Assessment - Group - I - management - Smile – India]. The Smile team has learnt from the resource persons on how to conduct training independently during the course of these workshops [Source: Smile Foundation Narrative, 2012]. The topics that were covered in the trainings were effective leadership for development & strengthening, 5 c model of building organizational competencies and good governance, involving local support for sustainability, better fund utilization, meeting the expectations of donors, good fundraising practices, communicating with the stakeholders etc. [Source: <http://www.smilefoundationindia.org/empowering-grassroots.htm>]

An improved capacity to organise trainings for CBOs has led to the staff becoming more confident in conducting training sessions with the CBOs. The 2012 Outline Reporting Narrative mentions that “the training programs for CBOs start showing results, staff & partners feel more confident in carrying out developmental projects” [Source: Smile Foundation-Narrative 2012].

Centre for Development Innovation
Wageningen UR

www.wageningenUR.nl/cdi

Report CDI-15-004

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Final Report MFS II Joint Evaluations

Country	India
Consortium	Red een Kind
Responsible Dutch NGO	Red een Kind
Project (if applicable)	VTRC Edu Gate
Southern partner organisation	Vocational Training and Rehabilitation Centre

The project/partner is part of the sample for the following evaluation component(s):

Achievement of MDGs and themes	X
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

1. Introduction

This report presents the findings of a project funded and supported by Red een Kind and implemented by the Vocational Training and Rehabilitation Centre (VTRC) in rural parts of Madurai and Dindigul districts in Tamil Nadu, India. The project, titled EDU-GATE, is motivated by the relatively poor quality of school education in the state in spite of high levels of access and enrollment. The main aim of the project is to enhance the educational attainment of children from marginalized communities by providing direct educational support through tuition centres and by strengthening parent-teacher associations so that they may demand better quality education. The report begins by setting out the context (Section 2) and providing a description of the project (Section 3). This is followed by a discussion of the sampling strategy (Section 4) and the data (Section 5). Estimates are presented in Section 6 and the final section contains concluding remarks.

2. Context

The project under review is implemented by Vocational Training and Rehabilitation Centre (VTRC), in rural parts of Madurai and Dindigul districts of Tamil Nadu, a south Indian state. VTRC is an NGO which has since its inception in 1986 been involved in child development activities.

Tamil Nadu is amongst India's richest state (ranked third in terms of per capita GDP), one of the largest recipients of foreign direct investment (ranked second in the country) and also one of the most urbanized states in the country (48.5 per cent in 2011, ranked third). The state has a population of 72 million of which 20 per cent are classified as scheduled caste. The state is also ranked second in terms of its social infrastructure, and according to the 2011 Census, male literacy rate is 87 per cent while female literacy rate is about 74 per cent.

Turning to the project districts, according to the 2011 Census Madurai district has a population of three million, a 60 per cent urbanization rate and literacy rates in rural areas are 77 and 64 per cent for males and females respectively. Dindigul district has a population of 2.1 million, a 35 per cent urbanization rate and literacy rates in rural areas are 82 per cent and 63 per cent for males and female respectively. Both districts record a low child (age 0-6) sex ratio (female to male), a marker of son preference/daughter aversion, of 939 (Madurai) and 942 (Dindigul) in the 2011 Census as against the state child sex ratio of 946. While the primary occupation in the rural areas of both districts is agriculture (rice) both districts boast substantial industrial development. For instance, Madurai is promoted as a second-tier city for information technology (after Chennai) and Dindigul has a major textile industry.

With regard to education, the policy of the State is that every habitation with a population of 300 and above should have a primary school within a distance of 1 km. As per the 1995-96 Policy Note of the Education Department, 87.8 per cent of the habitations in Tamil Nadu and 96.8 of the population had access to primary education. Hence, while access and enrollment is close to 100 per cent, for various reasons the quality of education is a source of concern. According to the Annual Survey of Education Report (ASER), 2011, a report based on responses from over 26,000 students across 29 districts in Tamil Nadu, only about 32 per cent of the students in class 5 could read a simple story in Tamil. Among class 4 students, only 41 per cent could perform subtraction of two-digit numbers, while the curriculum expects them to be able to multiply and divide. Due to concerns about the quality of education and despite the availability of free lunch in government schools, it is quite common for parents even in rural areas to send their children to private schools. This is harder for parents from marginalized communities (schedule caste/tribe, migrant families).

To address quality concerns, the Right to Free and Compulsory Education Act (RTE) introduced in 2010 makes education a fundamental right of every child between the ages of 6 and 14 and specifies minimum norms in elementary schools. Even before the enactment of this legislation, the government of Tamil Nadu implemented several measures to attract children to school and retain them. Some of these measures include: free supply of textbooks, uniforms for all children from class 1 to 12, provision of three eggs per week along with a regular noon meal for all children from class 1 to 8.

Recently, in 2010-2011, the government of Tamil Nadu made a radical shift in pedagogy with the introduction of Activity Based Learning System (ABLS) in primary schools. Although rigorous training is offered to government school teachers, they still need to cope with this new method of teaching. In addition, new infrastructure and teaching aids are being provided to primary schools for effective implementation of the program. While the state clearly recognizes the importance of education, since a majority of parents in the project catchment area are not well educated, it is difficult for them to facilitate the educational development of their children. In this environment, VTRC's EDU-GATE project works to enhance the educational attainment of children from marginalized communities by providing direct educational support through its tuition centres and by strengthening parent teacher associations (PTAs) to demand better quality education.

3. Project description

a. Project duration and budget

The current project started on June 18, 2010 and is expected to end in June 2015. The concept of EDU-GATE was started in MFSI in 2007. The total project budget is Euro 285,900.

b. Project objectives, activities, theory of change

The aim of the project is to enhance access to (quality) education amongst children of marginalised communities living in two districts of Tamil Nadu. The project aims to do this by setting up 100 tuition centres for children in the primary school going age group (6-12 years), by training tuition teachers, by strengthening the functioning of parent-teacher associations, and by encouraging PTA and village educational development committees (VEDC) to lobby the government and ensure access to government (educational) schemes for tuition centre children. The tuition centres aim to provide after-school support including homework assistance or other additional teaching. It also aims to instil in them good habits and values and to create higher educational aspirations. A stylized result chain, which shows the manner in which EDU-GATE expects to accomplish its objectives is provided below.

Stylized result chain

Input

Financial and technical resources from ReK to VTRC

Activities

Children from marginalised groups are enrolled in tuition centres; tuition teachers are trained; parents are encouraged to participate in parent-teacher associations and play an active role in village educational development committees to ensure quality of education

Expected output

3000 children enrolled in tuition centres
100 teachers receive training
15 Parent Teacher Associations trained and strengthened
8 Village Education Development Committees trained to lobby
Textbooks are available for all students and teachers

Attribution gap

Impact

Objective 1/indicator:

Impact on education related outcomes: Class performance, test scores, attendance, retention in school, homework completed on time, educational aspirations

Objective 2/indicator:

Impact on non-education related outcomes: good values and habits

4. Analytical approach and methods

The aim of the evaluation is to identify the effects of the project EDU-GATE on the cognitive and non-cognitive development of children who attend the tuition centres. This includes indicators such as test scores, and formation of habits and values. In June 2012, the project had opened 90 tuition centres with an enrolment of 1,896 children.

We could not gather baseline data as the project had already started and hence we cannot provide a before-after analysis. The analysis focuses on comparing cognitive and non-cognitive outcomes for children living in treatment and control villages at two points of time—that is, in 2012 and two years later in 2014. The evaluation based on the 2014 data may be thought of as an assessment of the sustainability of the intervention. In the first instance we examine whether outcomes differ across children living in treated and control villages and in the second instance we examine whether these differences, if any, still persist.

To identify a control group there were two possibilities (i) the initial idea was to use a pipeline comparison design and to compare children who receive tuition with children who have indicated an interest in tuition but cannot obtain access due to capacity constraints. However, based on the field visit it turned out that there were no constraints as the tuition centres do not turn away any child and indeed all children in the age group 6-12 years in the village where the tuition centres are located attend the centres. As an alternative approach (ii) we obtained a list of villages in each of the three blocks where VTRC operates which do not yet have a centre but at the same time satisfy the conditions that VTRC uses to determine tuition centre location. These conditions are—a relatively small village (about 150 households), the presence of marginalized groups, and the availability of a tuition teacher in the same village. Since these villages have the same observed characteristics and children in these villages also attend government schools the idea was to use these villages and children studying in such schools to create a control group.

While children in category (ii) may live in a village with similar characteristics and attend the same school type as those who live in the “tuition centre villages” they may not be comparable to children living in a different village and attending a different school. To enhance comparability we gathered two rounds of data on children, households, teachers, and schools located in the “tuition centre villages” and the “potential tuition centre villages” and used OLS and propensity score matching to obtain a comparable control group and subsequently examine differences in cognitive skills, non-cognitive skills and moral development which may be attributed to the intervention. The surveys covered about 300 children who receive the intervention and 300 who do not. Power calculations based on a small effect size suggest that the sample has adequate power (0.8).

Based on power calculations we worked with a balanced sample of 300 children in the treatment group and 300 in the control group, split equally across class 2 and class 4. While we could survey children in classes 1 to 5, we have picked classes 2 and 4 due to practical reasons. If we worked with all five classes (i) Tests would have to be prepared for each class (ii) Teachers of all classes would have to be surveyed (iii) Sample of 300 students would be spread thin across all classes. Keeping these considerations in mind we worked with two classes—one from the lower end and the other towards the upper end of primary schooling. For the control, we worked with 10 villages in each of the three blocks in districts Madurai and Dindigul in which the project operates and which satisfy the conditions that VTRC uses to determine location. In these villages we surveyed children, randomly drawn from classes 2 and 4 in 2012 who are attending government schools. Families of the children and teachers were also surveyed and information on the school and teachers were gathered.

There are several limitations. (i) As indicated above the evaluation does not have a “real baseline” as the evaluation is being conducted after the project has been launched and this may make it difficult to identify a clear project effect. (ii) There are no children in the villages where the tuition centres have been set up who are **not** in the tuition centre. The initial idea was to use a pipeline comparison design but this was not possible as all children in a village have access to such centres. This implies that the control group comes from a different village as compared to those who are in the treatment group. While steps were taken to ensure comparability (as discussed above) it is possible that comparing children who live in different villages makes it difficult to obtain a valid control group.

5. Data

a. Household and child survey data

Two rounds of data have been collected. The first of these was collected in 2012 and the second round of data in 2014. Several survey instruments were developed. These included a household questionnaire, designed to gather information on the socio-economic background of children and their households. This questionnaire also included modules to capture educational aspirations, and scenario-based questions to capture attitudes towards cheating, stealing, tolerance; a school and teacher questionnaire to gather information on school facilities, school attendance of children and their grades; Math and Tamil tests for classes 2 and 4 in 2012 and for classes 4 and 6 in 2014.¹ These

¹ To develop the cognitive test instrument of the questionnaire we drew upon Tamil and Mathematics text books for classes 1 (administered to students in class II) and class 3 (administered to students in class IV) used in government schools in Tamil Nadu – see <http://www.textbooksonline.tn.nic.in/>

tests were administered by the evaluating team. To capture the non-cognitive development of children we developed questions based on the kind of habits that VTRC tuition teachers attempt to instil and we also used the teacher response version of a well-known instrument called the strengths and difficulties questionnaire developed by Robert Goodman – for details see <http://www.sdqinfo.com/a0.html>.

Based on power calculations and financial constraints a sample size of 600 children - 300 treated and 300 controls was targeted. In 2012 there were 90 tuition centres, 30 in each of the three blocks—Alanganallur, Natham and Madurai East in two districts, Madurai and Dindigul. For the evaluation, the treatment group consists of ten tuition centres from each block from which 300 children—150 each in classes 2 and 4 — were surveyed. That is, 50 children each from classes II and IV respectively were surveyed in each of the three blocks. Ten control villages were selected in each block. From each of these villages, five students each from classes 2 and 4 (10 students per school per village) were surveyed. These five students each from 2 and 4 were picked randomly from the attendance register (every 2nd or 5th student depending on class strength). For both treatment and control, children were first administered tests to assess cognitive and non-cognitive performance. Subsequently, the households to which the children belong were identified and parents and children were surveyed. Teachers of classes 2 and 4 to which the children belonged were also surveyed. The surveys gathered information on a range of child, parental, household characteristics which may have a bearing on the outcomes of interest. In addition, information on the school, class room conditions and teaching methods that are likely to affect learning outcomes were also gathered. For the follow-up survey in 2014 the same children who had been interviewed in 2012 were re-tested. To obtain cognitive test scores instruments designed to test material taught in classes 4 and 6 were used. To gather all other information in 2014 we used the same survey as had been used in 2012.

Descriptive statistics, based on the first round of survey, for the entire sample as well as for the treatment and control groups are provided in Table 1. In terms of the various socio-economic characteristics - household monthly expenditure and education of the household head are statistically not different between the treatment and control groups. However, children attending VTRC tuition centres are more likely to live in dwellings with *katcha* (not permanent) floors, roofs and walls and their parents are more likely to be self-employed in agriculture or working as agricultural labourers. In contrast, parents of children who do not attend such centres are more likely to be engaged in non-agricultural occupations. Differences in demographic characteristics, while at times statistically different, are not substantial. The religious composition of the two groups is very similar (all Hindu). The control group has a higher proportion of scheduled tribe households but a similar proportion of scheduled caste households and those identifying themselves as other backward

classes as in the treatment group. There are no statistically significant differences in the age and gender composition of children across the two groups. Overall, while there are some differences in the various traits listed in Table 1, the main message emerging from the comparison is that the sampling strategy appears to have delivered a treatment and a control group that is not very different from each other on the basis of observed traits.

b. Other sources of data/ information

In June 2012, the evaluation team visited VTRC. The main aims were to meet core project staff, obtain a better understanding of the project and to gather relevant documents. The team examined annual progress reports and annual plans and conducted several rounds of discussions. Meetings took place with staff of EDU-GATE staff including Professor Raju (Director Community Initiative, EDU-GATE and Health Care Programs), Mr. James Christopher, (Coordinator, Centre for AIDS Rehabilitation and Education Network) Mr. Muthupandian (Field Coordinator), Dr Karthikeyan, (Consultant, VTRC, specialist in HIV medicine and psychiatry) and Mr. Paulus Samuel the director of VTRC. We also interacted with tuition teachers, students attending the tuition centres, parents (mostly mothers), field supervisors, school teachers and the school management committee. We undertook field visits to the following tuition centres:

1. Melamettupatti Union Primary School (Classes 1 to 5) and the Tuition Centre, Village Melamettupatti in Natham block of Dindigul district, Tamil Nadu. At the centre we interviewed the school teacher and tuition teacher, conducted a group discussion with mothers of children from the school who attend VTRC's tuition centre and observed the tuition in progress. We also interacted with the children asking them questions from their textbooks as well as those related to general knowledge.
2. Tuition Centre, Village Vilampatti in Natham block, Dindigul district, Tamil Nadu. We observed a tuition session in this village as well as looked at the attendance register and teacher's diary.
3. Sri Manthaisumy Primary School (Govt. aided private school), Village Vulachikulam, Madurai East block, Madurai. We interacted with children, parents, members of the VEDC and conducted a focus group discussion with school teachers.
4. Vavidaimaruthoor, Madurai district, Alanganalur block. We interacted extensively with field staff across different projects of VTRC including EDU-GATE as well with field supervisors of EDU-GATE.

6. Estimates and Discussion

Tables 2a and 2b contains estimates of residing in a village with a VTRC tuition centre on parental participation. Estimates are provided for both 2012 (Table 2a) and 2014 (Table 2b). The first three columns contain means or proportions while the last three columns of the tables contain three

different sets of estimates. Column 4 contains OLS estimates without any control variables, column 5 contains OLS estimates after controlling for a range of traits including child age, gender and pre-primary school attendance, socio-economic and demographic characteristics including religion and caste and district fixed-effects. Column 6 provides estimates based on propensity score matching (PSM). Tables 3a and 3b provide OLS and PSM estimates of attending a VTRC centre on cognitive and non-cognitive outcomes, respectively, for 2012. Tables 4a and 4b provide the same estimates, but based on data from 2014. There are some differences across the OLS and PSM estimates and while these are pointed out, for the most part the discussion focuses on the OLS estimates as these are based on controlling for a much larger range of traits as compared to the PSM estimates.²

a. Effect of attending a VTRC centre – parental participation

Tables 2a and 2b contains estimates of the effect of living in a village with a VTRC centre on parental participation in village educational committees. In 2012, parents were far more likely to be members of an educational committee with 40 per cent of parents belonging to a village educational committee, however, by 2014 this had dropped to about 14 per cent. Across the two groups there is some evidence that, in 2014, parents in villages where VTRC operates are about 2 to 5 percentage points more likely to belong to an educational committee. However, participation as measured by the number of meetings attended per year is slightly higher amongst parents living in non-VTRC villages.

b. Effect of attending a VTRC tuition centre - education related outcomes

The first 4 rows of Table 3a provide estimates of the effect of attending a VTRC centre on cognitive achievement in Tamil and Mathematics. The estimates show that in class 2 children attending a VTRC centre tend to score less as compared to the control group. For instance, class 2 VTRC tuition centre attendees score about 5-6 per centage points less in Tamil and about 7 to 10 percentage points less in Mathematics. However, in the higher grade, that is class 6 there is no difference in Tamil test scores while in Mathematics the tuition centre attendees score between 3 to 4 percentage points more. A literal interpretation of these estimates is that being a VTRC attendee has a negative effect on achievement for children in class 2 and a positive effect in class 4. An alternative interpretation given the somewhat weaker socio-economic background of children attending VTRC centres and the inability to control for unobserved traits of children, is that children from a weaker socio-economic background join VTRC centres and while they tend to perform worse than non-VTRC attendees in the early years of primary school, by grade 4 they have caught up. This interpretation is also supported

² PSM requires knowledge of factors that determine entry into VTRC centres– that is, information on the economic conditions of the child’s household at the time that the child entered the VTRC centre. However, we only have information on the current situation. This limitation suggests that it is prudent to focus on the OLS estimates as we can control for a number of variables that may have a bearing on the outcomes.

by the patterns that we observe in estimates based on the 2014 data (see Table 4a). For instance, in 2012, children in grade 2 scored 7 to 10 percentage points less than their non-VTRC counterparts. However, in 2014, when they are in class 4 their test scores are no different from their counterparts in non-VTRC villages. For those who were in class 4 in 2012 we found no difference between treatment and control group and we find the same pattern in class 6. At the very least the estimates suggest that even if children who join VTRC centres display lower levels of cognitive achievement initially, by the time they are in an upper grade (class 4) they are performing as well as their non-VTRC colleagues.

The remainder of Table 3a examines differences on a range of education related outcomes including interest in studies, whether they do homework regularly, educational aspirations and attitudes towards cheating in examinations. There are no statistically significant differences across the two groups in terms of educational aspirations. About 34 per cent of both groups of children are interested in engineering and medicine while the rest aspire to earn BA/MA degrees. Attitudes towards cheating are also not statistically different across groups and about 45 per cent of children indicate that they do not consider it appropriate to cheat on an exam in order to pass. The differences that do emerge relate to the regularity with which homework is done and interest in studies. According to parents, children attending VTRC centres are 7 percentage points more likely to do their homework regularly. However, they are slightly less likely (2 percentage points) to be interested in their studies. However, these differences do not seem to persist and in 2014. We find that the two groups of children are statistically the same in terms of all these educational related outcomes.

c. Effect of attending a VTRC tuition centre - non-education related outcomes

According to parents, the estimates reported in column 5 of Table 2b show that at least in 2012, children attending VTRC centres are less likely (8.4 percentage points) to be rated as well-organized as compared to their counterparts. However, in 2014 it is the reverse and those attending the centres are 10 percentage points more likely to be rated as organized. It is possible that this change is a longer-term effect of attending the VTRC centres. The survey included two vignettes designed to capture attitudes and responses to stealing and humane/cruel behaviour. In both years and for both outcomes there are no statistically significant differences between the two groups with regard to attitudes towards stealing and behaving humanely. With regard to habits such as using foul language and wasting food, in 2012, children attending such centres are 8.5 and 12 percentage points less likely to agree that it is fine to use foul language or to waste food. However, the effect is not stable and in 2014 the pattern is the opposite with children who do not attend such centres more likely to indicate that they do not think it fine to use foul language and waste food. The reasons for the

change are not clear and may have to do with changes in the teaching personnel or the increasing influence of peers but literally they indicate that the effect of the tuition centre on such outcomes is not stable.

The teacher version of the strengths and difficulties instrument was used to assess differences between VTRC-centre attendees (treatment) and non-attendees (control) with regard to five non-cognitive aspects. Based on the estimates in Column 5 of Table 3b there do not seem to be clear differences between the two sets of children. For four of the attributes the differences are not statistically significant and for one of them, hyperactivity/inattention the VTRC students are worse off. While the effects are not statistically significant, along all the dimensions teachers indicate that VTRC students experience greater emotional and conduct problems and are less likely to get along with peers and are also less social. However, in 2014 the picture is quite different. Although, once again, for the most part the results are not statistically significant the estimates tend to suggest that VTRC attendees experience less problems as compared to non-attendees. Given the methodology that is available it is hard to pin down whether this is a causal long-term VTRC effect, however, what is clear is that after having attended the VTRC centre for two years there is little to separate the two groups in terms of their non-cognitive strengths and difficulties.

d. Efficiency of the project

The project has a five-year budget of Euro 285,900. This translates into an annual budget of Euro 57,180 for about 2000 children or Euro 28.6 per child per year or about Euro 2.38 per child per month. Depending on the exchange rate this translates into a sum of Rupees 166 to 200 per month per child for two hours spent at a tuition centre for about 5 to 6 days per week. These funds are intended to meet among other costs, scheme administration costs, the costs of the teacher, the salary and transport costs of the supervisor of the tuition centres and the costs of teaching materials. Clarity is still needed on the exact distribution of the expenditures. Notwithstanding this lack of clarity, available information from the Government of Tamil Nadu reveals that in Dindigul and Madurai districts the annual tuition fees which may be charged by private schools (over the period 2013-2016) for children in class 2 ranges between Rupees 6000 to 8000 and in class 4 between Rupees 7000 and 9000. While there may be other fees that private schools charge, compared to these tuition fees the annual per child cost of Rupees 1992 to 2400 for a child attending a VTRC tuition centre may not seem all that efficient.³ An alternative way of looking at the costs versus the scheme effect is from the perspective of parents. The data suggest that in two years the initial 5 percentage point gap in Mathematics and Tamil tests score may be bridged by spending about Rupees 4000 to 5000 (about 4 percent of household expenditure over two years).

³ <http://www.tn.gov.in/miscellaneous/fees.html>

While it is hard to gauge the efficiency of the centres it does seem that the centres are effective in terms of enhancing the cognitive and non-cognitive performance (strengths and difficulties) of children. However, there does not seem to be any difference in terms of habits and values between the two sets of children.

7. Concluding remarks

The paper assessed the impact of a project implemented by VTRC (Vocational Training and Rehabilitation Centre) and funded by Red een Kind. The project aims to to enhance the educational attainment of children from marginalized communities by providing direct educational support through tuition centres and by strengthening parent-teacher associations so that they may demand better quality education. The aim of the evaluation was to identify the effects of the project EDU-GATE on the cognitive and non-cognitive development of children who attend the tuition centres. This includes indicators such as test scores, and formation of habits and values. The paper presented the findings of the evaluation of the effects of attending a VTRC tuition centre on the cognitive and non-cognitive development of children which included outcomes such as educational aspirations, ethical values and habits.

The main findings are that attending a VTRC tuition centre for a longer period contributes to the improvement of cognitive skills compared to children who do not attend it. The estimates presented in the paper indicate that initially upon enrolment children in the VTRC centre do not fare well in school compared to non-VTRC children, their performance improves with the length of time and is as good as their non-VTRC counterparts. There does not seem to be a difference between children attending VTRC tuition centre and non-attendees in being organised or in doing homework regularly as well as in non-cognitive skills such as ethical values. Participation of parents in parent-teacher associations (PTAs) is not significantly different in VTRC operating villages than in villages where they do not have a tuition centre. The extent to which one can imbue the findings with a causal interpretation is circumscribed by the lack of baseline data. To enhance the credibility of the impact evaluation, baseline data and several rounds of follow-up data on the same children needs to be collected.

Based on the statistical analysis, the field work that was conducted and the information gathered from the existing reports it seems that the project does help bridge the initial gap in cognitive performance and non-cognitive attributes between attendees and non-attendees. While determining efficiency is difficult, as compared to the tuition fees that need to be paid in private schools the project does not seem particularly efficient. It does however seem to be well-conceived and suitable for the environment in which it is located. In a context where fee paying after school tuitions are becoming universal, VTRC's EDU-GATE focuses on children who cannot afford such services. VTRC

works to support educational attainment among children from economically and socially marginalised communities whose parents are not well educated or have the time and thus cannot support or supervise them in their school work. Tuition teachers are locally recruited from the villages themselves. The VTRC tuition centres also provide a space for children to spend their time after school reducing parents' anxiety about their safety and whereabouts.⁴

⁴ For instance, interactions with mothers during field visits revealed that most parents are illiterate or have low education and are not in a position to supervise their children's work; most mothers spend their time working for wages and taking care of domestic chores while fathers are not always around physically or otherwise. Mothers felt that after school they did not have to worry about their children's whereabouts as they knew they were studying at the VTRC centres.

Report CDI-15-005

Kusters, C., Mohapatra, B.P., Sethi, S., Buizer, N.N., Das, A., Bhatra R. W., Sen P., 2014. *Endline report – India, VTRC Foundation. MFS II country evaluations; Capacity of Southern Partner Organisations (5C) component*. Centre for Development Innovation, Wageningen University & Research centre. Report CDI-15-005. Wageningen.

This report presents the findings of the endline of the evaluation of the organisational capacity component of the MFS II country evaluations. The focus of this report is India, VTRC. The format is based on the requirements by the synthesis team and NWO/WOTRO. The endline was carried out in 2014. The baseline was carried out in 2012.

Key words: 5C (five core capabilities); attribution; baseline; causal map; change; CFA (Co-financing Organisation) endline; organisational capacity development; SPO (Southern Partner Organisation).

Acknowledgements

We are grateful to all the people that have contributed to this report. We particularly would like to thank the Southern Partner Organisation and the Co-Financing Agency Red een Kind (REK) for their endless patience and support during this challenging task of collecting the endline data. We hope that this endline report will provide useful insights to VTRC, REK, the synthesis team, IOB and NWO/Wotro.

The India 5C evaluation team

List of abbreviations and acronyms

5 C	Capacity development model which focuses on 5 core capabilities
APMEL	Advanced Planning, Monitoring, Evaluation and Learning
Causal map	Map with cause-effect relationships. See also 'detailed causal map'.
Causal mechanisms	The combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome
CDI	Centre for Development Innovation, Wageningen University & Research centre
CFA	Co-Financing Agency
CHE	Community Health Education
COUNT	Christian Outreach Uplifting New Tribes
Detailed causal map	Also 'model of change'. the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change. In the 5C evaluation identified key organisational capacity changes and underlying reasons for change (causal mechanisms) are traced through process tracing (for attribution question).
EHA	Emmanuel Hospital Association
EU	European Union
General causal map	Causal map with key organisational capacity changes and underlying reasons for change (causal mechanisms), based on SPO perception.
HACI	Help a Child India (REK's country partner in India)
HBA	Health Bridge Alliance
HIV	Human Immunodeficiency Virus
HIV/AIDS	Human Immunodeficiency Virus/ Acquired Immune Deficiency Syndrome
HR	Human Resources
ICDS	Integrated Child Development Services

1 Introduction & summary

1.1 Purpose and outline of the report

The Netherlands has a long tradition of public support for civil bi-lateral development cooperation, going back to the 1960s. The Co-Financing System (*Medefinancieringsstelsel*, or 'MFS') is its most recent expression. MFS II is the 2011-2015 grant framework for Co-Financing Agencies (CFAs), which is directed at achieving a sustainable reduction in poverty. A total of 20 consortia of Dutch CFAs have been awarded €1.9 billion in MFS II grants by the Dutch Ministry of Foreign Affairs (MoFA).

The overall aim of MFS II is to help strengthen civil society in the South as a building block for structural poverty reduction. CFAs receiving MFS II funding work through strategic partnerships with Southern Partner Organisations.

The MFS II framework stipulates that each consortium is required to carry out independent external evaluations to be able to make valid, evaluative statements about the effective use of the available funding. On behalf of Dutch consortia receiving MFS II funding, NWO-WOTRO has issued three calls for proposals. Call deals with joint MFS II evaluations of development interventions at country level. Evaluations must comprise a baseline assessment in 2012 and a follow-up assessment in 2014 and should be arranged according to three categories of priority result areas as defined by MoFA:

- Achievement of Millennium Development Goals (MDGs) & themes;
- Capacity development of Southern partner organisations (SPO) (5 c study);
- Efforts to strengthen civil society.
-

This report focuses on the assessment of capacity development of southern partner organisations. This evaluation of the organisational capacity development of the SPOs is organised around **four key evaluation questions**:

What are the changes in partner organisations' capacity during the 2012-2014 period?

To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?

Were the efforts of the MFS II consortia efficient?

What factors explain the findings drawn from the questions above?

The purpose of this report is to provide endline information on one of the SPOs involved in the evaluation: VTRC in India. The baseline report is described in a separate document.

Chapter 2 describes general information about the Southern Partner Organisation (SPO). Here you can find general information about the SPO, the context in which the SPO operates, contracting details and background to the SPO. In chapter 3 a brief overview of the methodological approach is described. You can find a more detailed description of the methodological approach in appendix 1. Chapter 4 describes the results of the 5c endline study. It provides an overview of capacity development interventions of the SPO that have been supported by MFS II. It also describes what changes in organisational capacity have taken place since the baseline and why (evaluation question is 1 and 4). This is described as a summary of the indicators per capability as well as a general causal map that provides an overview of the key organisational capacity changes since the baseline, as experienced by the SPO. The complete overview of descriptions per indicator, and how these have changed since the baseline is described in appendix 3. The complete visual and narrative for the key organisational capacity changes that have taken place since the baseline according to the SPO staff present at the endline workshop is presented in appendix 4.

For those SPOs involved in process tracing a summary description of the causal maps for the identified organisational capacity changes in the two selected capabilities (capability to act and commit; capability to adapt and self-renew) is provided (evaluation questions 2 and 4). These causal maps describe the identified key organisational capacity changes that are possibly related to MFS II

interventions in these two capabilities, and how these changes have come about. More detailed information can be found in appendix 5.

Chapter 5 presents a discussion on the findings and methodology and a conclusion on the different evaluation questions.

The overall methodology for the endline study of capacity of southern partner organisations is coordinated between the 8 countries: Bangladesh (Centre for Development Studies, University of Bath; INTRAC); DRC (Disaster Studies, Wageningen UR); Ethiopia (CDI, Wageningen UR); India (CDI, Wageningen UR; Indonesia (CDI, Wageningen UR); Liberia (CDI, Wageningen UR); Pakistan (IDS; MetaMeta); (Uganda (ETC). Specific methodological variations to the approach carried out per country where CDI is involved are also described in this document.

This report is sent to the Co-Financing Agency (CFA) and the Southern Partner Organisation (SPO) for correcting factual errors and for final validation of the report.

1.2 Brief summary of analysis and findings

Over the last two years VTRC has slightly improved in its capability to act and commit. This was mainly due to a more democratic approach of the leader, an organisational structure that is now in place, a more participatory planning process, improved staff skills and improved procedures to look for funding opportunities. In the capability to adapt and self-renew VTRC also improved slightly. The main improvements in this capability were more critical reflection, more freedom for ideas, improved analytical skills of staff in PME, and improved link with field staff, improved responsiveness to stakeholders and M&E findings being used more strategically. VTRC improved very slightly in the capability to deliver on development objectives as they now have certain efficiency monitoring systems in place that relate to their improved M&E capacity. The organisation improved slightly in its capability to relate because VTRC is involving government departments and community leaders in its strategic planning, they increased their networks and internally the second line leadership is given more responsibilities. Finally there was a very slight improvement in the capability to achieve coherence because there were some strategic changes made in the CARE network programme and they improved their operational guidelines.

The evaluators considered it important to also note down the SPO's perspective on the most important changes in the organisation since the baseline. During the endline workshop the key organisational capacity changes that were brought up by VTRC's staff were: improved competency of staff in Edugate Programme, improved capacity of staff to deliver SRH and HIV/AIDS programme and improved PME. These changes happened to overlap with the key changes that were selected to process tracing. As Red een Kind is the main funder of VTRC, their funding for trainings and support to the organisation have led to most of the organisational capacity changes in VTRC. The improved competency of staff in the Edugate programme was due to improved knowledge and skills of the staff on participatory approach and child rights; and improved knowledge and skills of the tuition teachers. Both these organisational capacity changes can be fully attributed to MFS II supported capacity development interventions. The improved capacity of the staff to deliver the SRH and HIV/AIDS programme was due to increased awareness and knowledge on SRH and HIV/AIDS among VTRC staff and because of the development of IEC material and L&A curriculum. These organisational capacity changes can be attributed by MFS II funded capacity development interventions and by VTRC's participation in the Health Bridge Alliance (HBA) (also MFS II funded but not a capacity development intervention). Improved PME can also be almost entirely attributed to MFS II funded capacity development interventions. Being a member of HBA and going to their meetings was also an important influence on improved PME(also funded by MFS II but not a capacity development intervention).

2 General Information about the SPO – VTRC

2.1 General information about the Southern Partner Organisation (SPO)

Country	India
Consortium	Woord en Daad Red een Kind
Responsible Dutch NGO	Stichting Red een Kind
Project (if applicable)	EduGate CARE Network
Southern partner organisation	Vocational Training and Rehabilitation Centre

The project/partner is part of the sample for the following evaluation component(s):

Achievement of MDGs and themes	X
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

2.2 The socio-economic, cultural and political context in which the partner operates

Vocational Training and Rehabilitation Centre (VTRC) works in four districts of Tamil Nadu, e.g., Madurai, Salem, Dindigul, Dharmapuri, among the vulnerable poor children and women to provide them health care, protection and support and reduce their vulnerability by creating awareness as well as, advocating the protection of children and women's rights so that they are empowered and get opportunities to reach their full potential. It receives MFS II funds for two programmes: CARE Network (health programme) and EDUGATE (Education programme)

Tamil Nadu is one of the better governed states in the Southern part of India. The state came into existence after the bifurcation of the colonial Madras Province and some small princely states into Tamil Nadu and Andhra Pradesh. It spreads over 50,216 sq. miles (2011 census) which constitutes 3.96% of total area of the country and is the eleventh largest state in India. Tamil Nadu with a population of 72 million (2011 census) is the sixth most populous state in India¹. About 51.60% people (2011 census) live in rural area and the rest in the urban area; 80.09% (2011 census) people are literate, while male literacy stands at 86.77% and female at 73.14 (2011 census)².

There is still a sizeable population of children in the school going age group of 6-13 years which is out of school either enrolled or dropped out before completing V/VIII standard owing to various socio-economic problems, however, over the years there has been slight improvement in enrolment and

¹ <http://www.tn.gov.in/tamilnadustate>

² http://www.census.tn.nic.in/PCA_data_highlights/chapter3_literacy_rate.pdf

decrease in dropout of students in both primary and upper primary schools. The enrolment rate at the primary level has increased from 99.29% in 2005-2006 to 99.69% in 2012-2013, and it has gone down at the upper primary level from 98.25% in 2005-2006 to 98% in 2012-2013. The dropout rates indicate slight improvement which is at primary level gone down from 1.91% in 2005-2006 to 0.93% in 2012-13 and at upper primary level gone down from 4.08% in 2005-2006 to 1.70% in 2012-13. The state level achievement survey (SLAS) report on the learning level of children in Tamil and English show an increase. Between 2012 and 2014 the survey indicates that children in standard III who scored above 50% in Tamil improved from 61% (2012) to 84% (2014) and in English from 44% (2012) to 72% (2014). Standard VIII student improved in Tamil from 61% (2012) to 72% (2014) and in English from 39% (2012) to 43% (2014)³.

Since 2011-12 the government of Tamil Nadu has been constantly making efforts to improve the standard of education/school, impart free and compulsory education to all children and provide welfare schemes to reduce the dropout rate. It has ensured continuation of all the welfare schemes till 2014-15 while adding to the already announced schemes, such as, the number of uniform for children has increased from 2 sets in 2011-12 to 4 sets in 2012-13, supply of educational kit (consisting of school bag, geometry box, crayons/ colour pencils and atlases) to the primary students, supply of bi-cycles, free bus passes, financial assistance for the students who lost their bread winning parents (father or mother). The Vision 2023 of the government of Tamil Nadu aims to achieve universal secondary education and more than 50% enrolment in higher education (comprising of vocational and college education). The theme of the vision 2023 is "Tamil Nadu will be known as the innovation hub and knowledge capital of India, on the strength of world class institutions in various fields and the best human talent". To achieve this, it has planned for 100% of all children in primary and upper primary level, eradicate gender bias in education while ensuring quality education, to lay emphasis on girls education by providing support measures like transport, escort facilities, guidance and counselling, to ensure quality inclusive education to every child with special need (CWSN) irrespective of kind, category and degree of the disability, etc ⁴.

Despite government schemes and provisions to widen the scope of education for all the poor and marginal communities, most of them lack access to quality education. This could be due to lack of awareness or inaccessibility of government schemes and provisions, poverty and other social challenges. In this context, VTRC's efforts to contribute to the provision of inclusive education as defined by the Government and to enhance the quality of education among the children of marginalised communities by mobilizing and strengthening civil societies is promising.

Health

The Government of Tamil Nadu is committed and looking forward to build a healthy society by ensuring quality healthcare (preventive and curative care) to all segments of the society through hospitals, dispensaries and institutions. Tamil Nadu ranks second⁵ in the country on indicators related to primary healthcare infrastructure and reproductive and child health care. The sex-ratio stands at 995 female per 1000 male (2011 census) which is above the national average of 940⁶. Total fertility rate (TFR) is 1.7% while India stands at 2.6%. The Infant Mortality Rate (IMR) of the state is 21 per 1000 live births (as per sample registration system 2012); Maternal mortality rate (MMR) has declined from 134 in 2001-03 to 90 per hundred thousand (as per sample registration system 2010-12) and in 2013-14 this has further gone down to 68 per hundred thousand (as per the state health management system survey data)⁷. Female child mortality and under 5 child mortality in Tamil Nadu is relatively low but female child mortality continued to exceed male mortality. The data available with the National rural health mission shows that neonatal mortality constitutes 65% and above, though 99% of deliveries occur at health institutions (both Government and Private). This is perhaps due to poor infrastructure in remote areas and facilities in the hospitals and lack of neonatal child care knowledge

³ Policy Note 2014-2015 Minister for School Education [accessed from: http://cms.tn.gov.in/sites/default/files/documents/sedu_e_pn_2014_15.pdf]

⁴ Vision 2023 [accessed from: http://www.spc.tn.gov.in/pdfs/TN_Vision_2023.pdf]

⁵ Kerala being the best and Pondicherry ranks second together with Tamil Nadu.

⁶ http://www.census.tn.nic.in/PCA_data_highlights/chapter3_literacy_rate.pdf

⁷ http://cms.tn.gov.in/sites/default/files/documents/health_e_pn_2014_15.pdf

among mothers. Over the years there has been a steady decline in MMR and IMR rate due to improved government provisions and awareness campaign with the help of NGOs and civil society organisations.

⁸ In 'Vision 2023' of the government the focus has been on continuing the strengthening of neonatal care services at all the Government Institutions and follow up of neonates by improving Home Based Care for early identification of high risk for appropriate referral services.

HIV/AIDS prevalence rate has declined from 0.37% in 2010 to 0.25% in 2012-13 with the involvement and effective leadership of multi-stakeholders such as, the government, civil society, bilateral and multilateral donors and NGOs etc. The establishment of anti-retroviral therapy centres like, ART centres, ICTCs (Integrated Counselling and Testing Centres) to detect and carry out counselling programmes with patients, further contributed in the decline of the HIV/AIDS prevalence rate in the state⁹. Since 2009 the affected children have been provided financial assistance for education, medical treatment and nutrition under the Tamil Nadu Trust for Children Affected by AIDS (TNTCAA)¹⁰. As per the data released in 2013 by Ministry of Health and Family Welfare, government of India, 90% of HIV infected pregnant women in India are concentrated in 13 high HIV prevalence states which includes Tamil Nadu¹¹.

HIV/AIDS as a theme, according to universal trends is being merged with reproductive and child health and specifically with sexual and reproductive health for better eradication. Now it is looked upon as part of sexual health. Traditionally HIV services have focused on women, leaving the boys and men with minimal services.

Though health indicators such as infant mortality, maternal mortality, child mortality and HIV/AIDS prevalence are beginning to display a decline but lack of awareness among the poor and marginal communities and inaccessibility of the government schemes and programmes continue to be a concern. However, the government's effort, vision and commitment to create a healthy society by providing health care for all and its desire to support NGOs and other civil society's organisations to deliver the health services looks forward to a healthy society. Henceforth, VTRC works in complementary to the efforts of the government to improve health in sexual reproductive health and HIV/AIDS by making health care delivery system in sexual reproductive health and HIV accessible and available through a process of cooperation, strengthening and lobbying with the state health management systems. It also focuses on the prevention of HIV and SRH through increasing the intensity and the coverage of sexuality education through the development and capacitation of change agents.

2.3 Contracting details

When did cooperation with this partner start: 1987

What is the MFS II contracting period: 1st of January 2011 – 31st of December 2015 for both the Edugate and the CARE Network project.

Did cooperation with this partner end: No

If yes, when did it finish: NA

What is the reason for ending the cooperation with this partner: NA

Is there expected cooperation with this partner after 31st of December 2015: No.

2.4 Background to the Southern Partner Organisation

History

Vocational Training and Rehabilitation Centre (VTRC) works among the poor and marginalised children and women in Tamil Nadu to provide care, protection, support and reduce the vulnerability. In the early 80s, a group of like-minded individuals came together to address a major concern of poor and underprivileged children, often orphaned, or abandoned. Steps taken by the State Government to address the issue was hardly enough. There were neither many organizations nor formal groups which took this issue on a priority basis. In most cases it was parents who killed the girl child for dowry and poverty. In 1980's this part of Madurai practised female foeticide. Babies were killed at birth. VTRC was registered on 31st December, 1986 under the Tamil Nadu Societies, Registration Act No. 181 of 1986. The vision of VTRC is – "Little one can become a mighty nation". VTRC's mission has been to provide support to vulnerable children, being child centred and child focused.

Between 1986 and 1988, VTRC continued to address and support the rehabilitation of orphaned, abandoned children, often girls, and in most cases new born babies. During this period 195 children were saved, of which 32 children joined their families later. Children were rescued from hospitals, dustbins and other unheard of places. In certain cases girl children were rescued from hospitals who were admitted as a result of poisoning. In terms of programmes, children's rescue program (girl children, children born outside wedlock), child sponsored programme, children homes, were started in Madurai. In 1988 Peniel Baby Home was established in Madurai with 40 children. The home cares for the babies and rehabilitates them until they become self-sufficient or until they get married. During this period, VTRC also faced the challenge of having specialized child care professionals within their team as the needs of these children were diverse. About 20 specialised child care staff was appointed to strengthen the VTRC team.

During the period 1989-93, VTRC moved its focus to families. A "family need based" programme was launched. This addressed 150 sponsored children with an additional 100 children who joined from outside. Between 1994 and 1997, VTRC revised its strategy from inpatients care to home based care. As a result in 1995 Centre for Aids Rehabilitation and Education (CARE) was established to care for HIV/AIDS infected and affected population in and around Madurai irrespective of caste, religion or creed. To create awareness and counsel parents volunteers were recruited and were sent to villages. VTRC also included in its strategy addressing issues of sexual health, specifically HIV/AIDS. The National Highway 7 stretch, towards south of Madurai, was identified as an area to design interventions. Here a significant number of truck drivers were found to have been infected owing to high risk sexual behaviour. Targeted interventions were designed mainly in Madurai and adjoining 5 districts around Madurai. As a mark of sensitivity, an inclusive HR policy, VTRC recruited 4 HIV positive staff. A centre for Anti-Retroviral Therapy was started in Madurai. Earlier it was only counselling support to which testing facility was added. Through this facility 97 cases with opportunistic infections were registered. A strategy for neighbourhood camps was initiated. Cluster of patients living in a particular Taluk (hamlet) were addressed and they also received nutritional supplement as well as treatment for minor infections. A support group was formed to facilitate these neighbourhood camps which were subsequently held through camps in churches. Schools and colleges were engaged to help in setting up neighbourhood camps.

The next important year was 2000; as VTRC moved on to include commercial sex workers and their children in their interventions. This was a result of working closely on HIV/AIDS. The interventions included facilitation of job opportunities for them so that they did not have to go back to sex work and alternate sources of livelihood are made available. VTRC also worked with some groups in Chennai, the state capital of Tamil Nadu.

During 2004-06, mass media campaigns were organized at the invitation of the District Administration. Multimedia campaigns covering all Development departments like education, revenue and health was carried out to have a large scale awareness around high risk sexual behaviour and the possibilities of certain vulnerable groups contracting HIV/A and providing some kind of guidance. Mass screening of truck drivers were carried out, and alternative ways of engaging with them, primarily

using videos and other educational materials were adopted. Christian business families started supporting these initiatives. Initially churches were not ready to accept the HIV issue which subsequently became a matter of serious concern.

In 2006 MFS-I started funding for HIV/AIDS prevention and Edugate programme. In 2008 CARE Network was established together with three like-minded Faith Based Organisations (Bethel Agricultural Fellowship, Vocational Bible School, Bal Vikas Kendra) for better intervention and prevention of HIV/AIDS with special focus to women and children. During 2008-10 period it reaches out to 7000 patients in about 2000 villages through its various outreach care and support programs. In 2011 Health Bridge Alliance was formed in India among the CFA funded organisations consisting of six partners (The Leprosy Mission Trust India, Emmanuel Hospitals Association, Help a Child of India, Christian Outreach Uplifting New Tribes, CARE Network and Word and Deed India) to give the health programme a wider impact and better sustainability. The alliance focuses on MDG GOALS 4 & 5 and works through a process of together sharing and planning. The second phase of MFS support started in 2011 for the Edugate and CARE Network programme and will end in 2015. VTRC changed its strategy to make health care delivery system in sexual reproductive health and HIV accessible and available through a process of cooperation, strengthening and lobbying with the state health systems.

During 2006-2010 VTRC expanded its educational institute from high school to college. In 2007 it established Peniel Rural College of Education which is another educational unit of Vocational Training and Rehabilitation Centre. Teacher education and pre-service teacher training are introduced in this college. The college was recognized by the National Council of Technical Education. In 2014 it has established an Industrial school for the dropout students for to promote skill development and livelihood. In the period 2006-2010 it had 33 staff and in 2014 it grew to 118 staff on the payroll of VTRC. The budget went down from Euro 92,17 in 2011 to Euro 81,068 in 2012 and in 2014 it is Euro 85,108.80 in the CARE Network project. In the Edugate project the budget went up from Euro 42,098 in 2011 to Euro 47,497 in 2012 and in 2013 it is 48,794 Euro.

To improve the quality of education of children among the marginalised communities and increase the retention rate in the schools VTRC started the Edugate programme in 2007. To achieve this objective it conducts 90 tuition centres through 90 teachers in three districts of Tamil Nadu. Over the years it has strengthened Parents Teachers Association (PTA) for better parenting at home and creates a favourable atmosphere for the children to study and also contribute in the School Management Committee (SME) to improve the standard of education in schools. Since 2014 the organisation started participatory approach in the Edugate programme to involve community (parents of tuition children) in the planning process. Over the period VTRC has been trying to develop strategy and successfully implant it for better sustainability.

Vision

The Little one shall become a mighty nation.

Mission

Our Mission is to provide care, support and reducing the vulnerability of children/women to loss of parents/husbands and alleviating the impact of the parent's/Husbands death or desertion. Our organization believes in advocating the protection of children & women's rights, to help meet their basic needs and to expand their opportunities to reach their full potential.

We are committed to ensure special protection for the infants from female infanticide and respond in emergencies to serve the children & women in co-ordination with our funding partners in times of natural calamities and disasters.

In everything we do the most disadvantaged children and their families in greatest need have priority.

Providing support to vulnerable children, being child centred and child focused.

Strategies

VTRC implements two programmes such as the Edugate programme, CARE Network programme. In the Edugate programme it works through the tuition centres run by tuition teachers to enhance the quality of education of the children of marginalized communities by mobilizing and strengthening civil societies. The children who study in various government schools join/encouraged to join the tuition centres and are provided basic education along with awareness on government schemes/provision, sexual well-being education, HIV/AIDS. They are encouraged with Picnics/heritage walk to further build their personality, spirit of cooperation and knowledge. Children parliaments are streamlined and conducted to lobby for the educational needs of the target area. Parents Teachers Meetings (PTA) and School Management committees (SMC) are capacitated for to improve the quality of education and access to government education schemes. The Participatory approach methodology is followed (since 2014) to involve the community in needs identification and planning to improve the quality of education in the target areas. In the recent past (since 2014) it has established industrial school for the school dropouts aiming at skill building and provide certificate for to improve sustainability.

In the CARE Network programme the focus is to make health care delivery system in sexual reproductive health and HIV accessible and available through a process of cooperation, strengthening and lobbying with the state health systems. The Edugate and the CARE Network programme was converged by taking up health related issues in the tuition centres for creating better awareness among community on health issues and widening the scope for addressing the issues. This programme runs through the change agents and tuition teachers who are capacitated to prevent HIV and SRH through increase intensity and convergence of sexuality education.

3 Methodological approach and reflection

3.1 Overall methodological approach and reflection

This chapter describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

Note: this methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report A detailed overview of the approach is described in appendix 1.

The first (changes in organisational capacity) and the fourth evaluation question are addressed together through:

- **Changes in the 5C indicators since the baseline:** standard indicators have been agreed upon for each of the five capabilities of the five capabilities framework (see appendix 2) and changes between the baseline, and the endline situation have been described. For data collection a mix of data collection methods has been used, including self-assessments by SPO staff; interviews with SPO staff and externals; document review; observation. For data analysis, the Nvivo software program for qualitative data analysis has been used. Final descriptions per indicator and per capability with corresponding scores have been provided.
- **Key organisational capacity changes – 'general causal map':** during the endline workshop a brainstorm has been facilitated to generate the key organisational capacity changes as perceived by the SPO since the baseline, with related underlying causes. For this purpose, a visual as well as a narrative causal map have been described.

In terms of the attribution question (2 and 4), '**process tracing**' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

At the end of this appendix a brief methodological reflection is provided.

3.2 Assessing changes in organisational capacity and reasons for change - evaluation question 1 and 4

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?** And the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This is explained below. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

The evaluators considered it important to also note down a consolidated SPO story and this would also provide more information about what the SPO considered to be important in terms of organisational capacity changes since the baseline and how they perceived these key changes to have come about. Whilst this information has not been validated with sources other than SPO staff, it was considered important to understand how the SPOs has perceived changes in the organisation since the baseline.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information is provided for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the next session on the evaluation question on attribution, as described below and in the appendix 1.

How information was collected and analysed for addressing evaluation question 1 and 4, in terms of description of changes in indicators per capability as well as in terms of the general causal map, based on key organisational capacity changes as perceived by the SPO staff, is further described below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012¹².

Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See

¹² The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

1. **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
2. **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
3. **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
4. **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
5. **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Please see appendix 1 for a description of the detailed process and steps.

3.3 Attributing changes in organisational capacity - evaluation question 2 and 4

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*** and the fourth evaluation question: ***“What factors explain the findings drawn from the questions above?”***

In terms of the attribution question (2), ‘process tracing’ is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Below, the selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

3.3.1 Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

For the detailed results of this selection, in the four countries that CDI is involved in, please see appendix 1. The following SPOs were selected for process tracing:

Ethiopia: AMREF, ECFA, FSCE, HUNDEE (4/9)

India: BVHA, COUNT, FFID, SMILE, VTRC (5/10)

Indonesia: ASB, ECPAT, PtPPMA, YPI, YRBI (5/12)

Liberia: BSC, RHRAP (2/5).

3.3.2 Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ‘ general endline workshop. This workshop was carried out after the initial endline workshop and the interviews

during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained. More information can be found in Appendix 1.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

3.3.3 Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team. These can also be found in appendix 1.

Use of the 5 core capabilities framework and qualitative approach: this has proven to be a very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that

they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
 - Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
 - Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

4 Results

4.1 MFS II supported capacity development interventions

Below an overview of the different MFS II supported capacity development interventions of VTRC that have taken place since 2011 are described. The information is based on the information provided by Red een Kind.

Table 1

Information about MFS II supported capacity development interventions since baseline

Title of the MFS II supported capacity development intervention	Objectives	Activities	Timing and duration	Budget
Training on Theory of Change (facilitated by ICCO)	It was part of the alliance: face to face meetings, REK + other ICCO PRISMA alliance members providing technical support to VTRC	All the staff of VTRC (including animators) learned about ToC as discussions took place with staff that did not participate in the training. Draft ToC for the CARE network is already made. It helped in a better way of planning. The ToC has not been finalised, it is an evolving document and it was also a learning experiment.	16-19 April 2012	The participants expense was around Rs. 80,000.00
Training on Participatory Integrated Child Development (PICD) approach by Red een Kind in Bangladesh	There was a need to from institution based (e.g. orphanage) development to child centred development. It is a diagnostic tool to enter the community and to do this in a participatory way.	The project coordinators of the Edugate and CARE network programme participated and learned about this community-based approach, which is a more sustainable child-friendly approach (within families, not institutions).	5 day workshop in April 2012	INR 38,314
Behaviour Change Communication workshop facilitated by ICCO for the CARE Network project	It was part of the Health Bridge Alliance program	Issues raised: how to link the ToC of the CARE Network to the plan for 2013, handholding as urgent need (transitional period where logframes are still used but ToC is coming up). Discussion on behavioural change framework & exercises in the context of SRH and HIV. Half yearly reports were discussed – handed in by the end of the meeting (7 sept). Discussion on lobby and advocacy, should HBA join the Jeevika movement?	5-7 September 2012	Rs. 36,283
Advanced PMEL training in Nepal	To improve PMEL system	The CARE network coordinator gained skills in reporting and systematic analysis of data.	11-17 September 2013	500 Euros (Under MFS II) 340 Euros from Woord en Daad NL

Trainings for tuition teachers on disability, lesson plans, child psychology, teaching methodology, quality education	Training programmes to Tuition teachers to enhance their skills on quality of basic education and teaching methodology.	Trainings	2011: one 1 day training in June, one 3 day training in July, one 1 day training in September, one 3 day training in October, two 1 day trainings and 1 two day training in November, one 2 day training in December	June 2011: 173.98 Euros July-Sept 2011: 468.57 Euros Oct-Dec 2011: 1947.60 Euros
			2012: one 1 day training in February, two 1 day trainings in March, two 1 day trainings in April, one 1 day training in June, 1 one day training in August, two 1 day trainings in September, one 1 day training in December	Feb-March 2012: 314.28 Euros April-June 2012: 935.47 Euros Aug – Sept 2012: 607.12 Euros Dec 2012: 564.05 Euros
			2013: one 1 day training in February, one 3 day training in May, one 1 day training in June, one 1 day training in July, one 1 day training in October, two 1 day trainings in December	February 2013: 500.11 Euros May- June 2013: 845.31 Euros July 2013: 162.69 Euros October – December 2013: 1483.60 Euros
			2014: two 1 day trainings in February, one 1 day training in March, one 1 day training in April, one 1 day training in June and one 1 day training in July	2014 1757.55 Euros

4.2 Changes in capacity and reasons for change - evaluation question 1 and 4

Below you can find a description of the changes in each of the five core capabilities. This information is based on the analysis of the information per each of the indicators. This detailed information for each of the indicators describes the current situation, and how and why it has changed since the baseline. See also annex 3.

4.2.1 Changes in the five core capabilities

Capability to act and commit

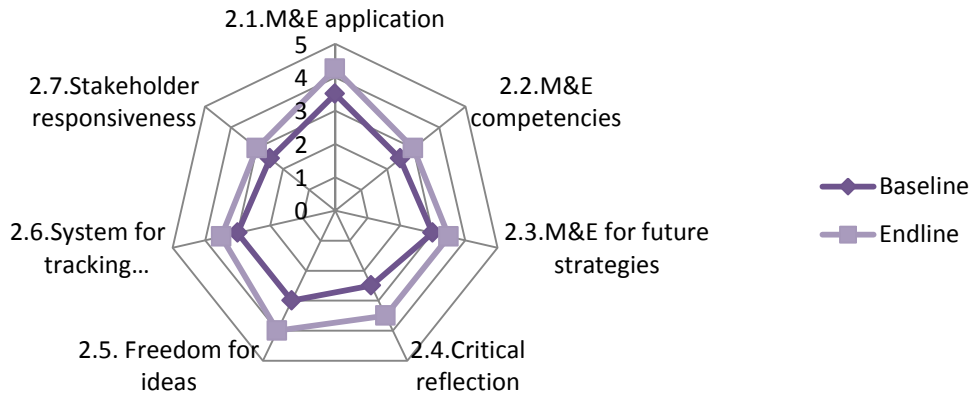

The Executive Director continues to be responsive, democratic, and strategic. The second line leadership is gradually emerging as staff at the programme coordinator level is taking up more responsibility and ownership of projects. Senior management has defined and divided the responsibilities in a good manner and have become more democratic in their approach towards other staff including field level staff. The leader continues to give strategic guidance but with better coordination between the chairman, director and the Care Network coordinator. The operationalization of the strategic plans improved through their dissemination down to the field worker level. While there continues to be no turnover at the head office level, there is a higher turnover at the field level, where staff leave for better opportunities or for personal reasons. Despite this, the organisation continues to encourage the field level staff to go to trainings to improve their future prospects and competency. In case of tuition teachers leaving the Edugate programme, VTRC has a backup list of teachers that can step in on short notice. There was considerable improvement in the organisational structure, which has now been constituted. Roles and responsibilities in written form are clear to all staff and the Human Resource handbook that is available to staff gives details of this administrative structure. VTRC continues to have well-articulated strategies for both the CARE Network and the Edugate programme which are developed on the basis of proper situational/contextual analysis. The day-to-day operations continue to be in line with the strategic plans. Staff are now better able to execute the plans as they are more involved in the planning process. According to the CFA there remains to be a minor gap in what is planned and what is understood by programme staff. Compared to the baseline, staff skills in communicating, computer skills, lobbying and in teaching increased. VTRC staff continue to have access to various trainings both at national and international level after needs assessment of the staff to send them to appropriate trainings. Some of the MFS II funded trainings in the last two years include: Advanced Planning, Monitoring, Evaluation and Learning training, Behaviours Change Communication training, Theory of Change training and a Participatory Integrated Community Development training. Within its Edugate and CARE Network programmes VTRC also organised trainings for its field staff to increase their awareness on e.g. disability and HIV/Aids. In the last two years the biggest strength of VTRC remains their motivated team that wants to serve their communities and work for their wellbeing, though the salary is not very attractive. Staff undergo continuous training which also motivates staff to assume challenging responsibilities. External factors, like transport costs, continue to have an effect on staff turnover. While currently VTRC continues to rely mainly on funding from Red een Kind (Dutch funder), the MFS II funding ending in 2015 has triggered them to have a more clear funding strategy to look into new funding opportunities. This is done through further collaboration with the Health Bridge Alliance, the director's network to access EU funding and until June 2014 VTRC has received support from TEAR Australia. VTRC has improved its funding procedures: proposal writing capacity has improved and a proposal was sent to USAID together with the HBA. The Advanced Planning, Monitoring, Evaluation and Learning (APMEL) training

in Nepal in September 2013 might have helped in better showcasing their work through improved data collection, report and case study writing skills.

Score baseline: 2.5

Score endline: 3.0 (slight improvement)

Capability to adapt and self-renew

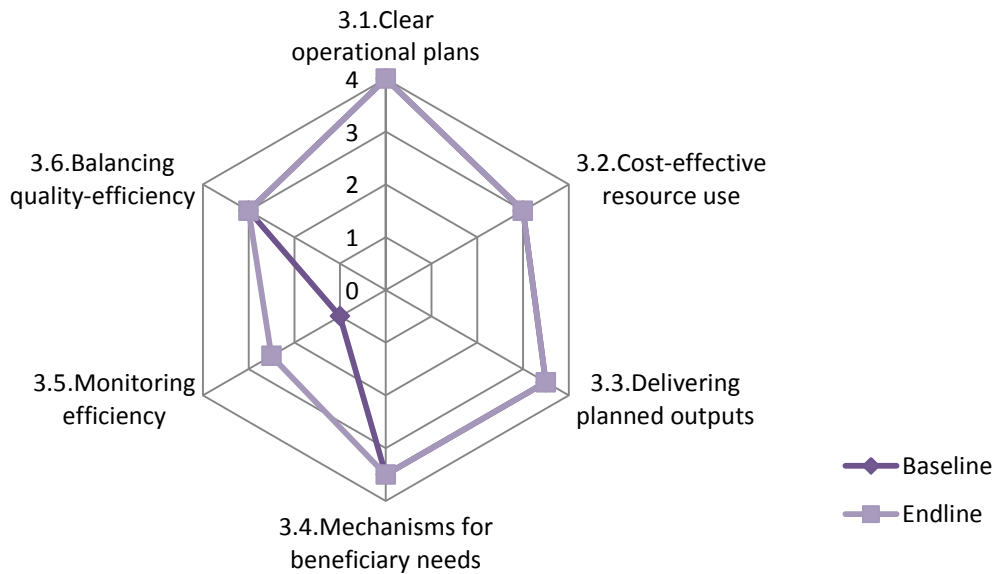

VTRC continues to review the progress of the programmes on a weekly, monthly, quarterly and annual basis. Indicators are set for activities, outputs and outcomes. New formats and a more participatory approach have been incorporated into the existing M&E system as a result of AP MEL workshop. The organisation started using the Organisation-scan (O-scan) to assess and monitor the programme over time. The project coordinators are able to find and address the gaps emerging from the review. The monitoring and evaluation system is now well practiced through a bottom up approach, collecting of data is now happening systematically and is used for reporting, operational and strategic decision making. Staff competencies in M&E have improved through training of the programme coordinators who in turn trained the field staff. Field staff are now providing input for fine-tuning of M&E formats. The organisation continues, however, to depend on the OD consultant to assist in M&E. While data collection is happening more systematically data is mainly used for reporting and operational decision making, not yet for strategic decision making. VTRC is using findings from M&E in its annual plans: e.g. findings from a outcome study in 2013 were used to adapt the annual plan for 2014. VTRC continues to have weekly, monthly, quarterly and annual meetings to review their programmes. Staff feel comfortable to raise problematic issues in their programmes during these meetings. Since the baseline more field staff are engaged in these processes. VTRC continues to plan in a participatory way and staff is free to come up with ideas. During the endline workshop second line leaders were quite active and gave space to other staff in sharing their views. The field staff was much more confident and had a clear understanding of what they want to achieve. VTRC still has a system for keeping itself up to date on the changing local, national and global context and developments through sharing, learning and linking itself with like-minded NGOs, the HBA and exposure visits at local and international level. Since the baseline, VTRC improved in tracking government policies and schemes available for the community. VTRC continues to be open and responsive to engage stakeholders in its planning process and in the last two year they have strengthened their engagement with external stakeholders. For example, VTRC receives input from parents, PHCs, schools, Integrated Child Development Services (ICDS), Panchayaths, SHGs, the child welfare committee and HBA partners.

Score baseline: 2.9

Score endline: 3.5 (slight improvement)

Capability to deliver on development objectives

VTRC continues to have day-to-day operational plans and budgets for each project which the staff fully understand as they are part of the planning process. Operational plans have improved due to an improved monitoring and information system. VTRC continues to use its resources cost-effectively by planning the use of resources as per the budget already approved. Some costs are reduced by using the tuition centres for cluster meetings and linking up with the government to help the community access their schemes (instead of VTRC providing these services themselves). In the last two years planned outputs were delivered except for external reasons which are beyond the control of the organisation (e.g. sometimes, delay occurs due to the delayed fund availability from donors). Outputs are planned, monitored and evaluated. Delivery of outputs is ensured through staff meetings; the clear job responsibilities, performance management system; and field staff planning their activities day by day. VTRC continues to be an organisation that is rooted in the community and starts its planning based on the community's needs. VTRC receives input on whether their services meet beneficiary needs through: parent meetings, stakeholder cluster meetings, Parent Teacher Association meetings, outcome studies, evaluations and satisfaction surveys. There is still no formal mechanism to calculate input-output ratios. However, while during the baseline it was not clear how efficiency was being monitored, now VTRC has a performance monitoring plan, an Organisation-scan (O-scan) that was done in 2011 and in 2013 and a performance appraisal format to monitor staff output.

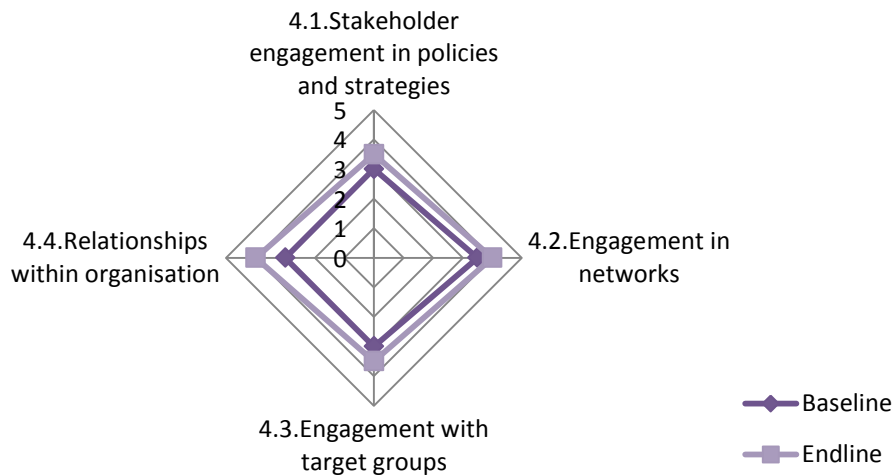

VTRC still balances quality, which is one of its key values, with the efficiency by optimally utilising the common resources and sharing.

Score baseline: 3.0

Score endline: 3.25 (very slight improvement)

Capability to relate

In the last two years VTRC has strengthened its relationship with government line department

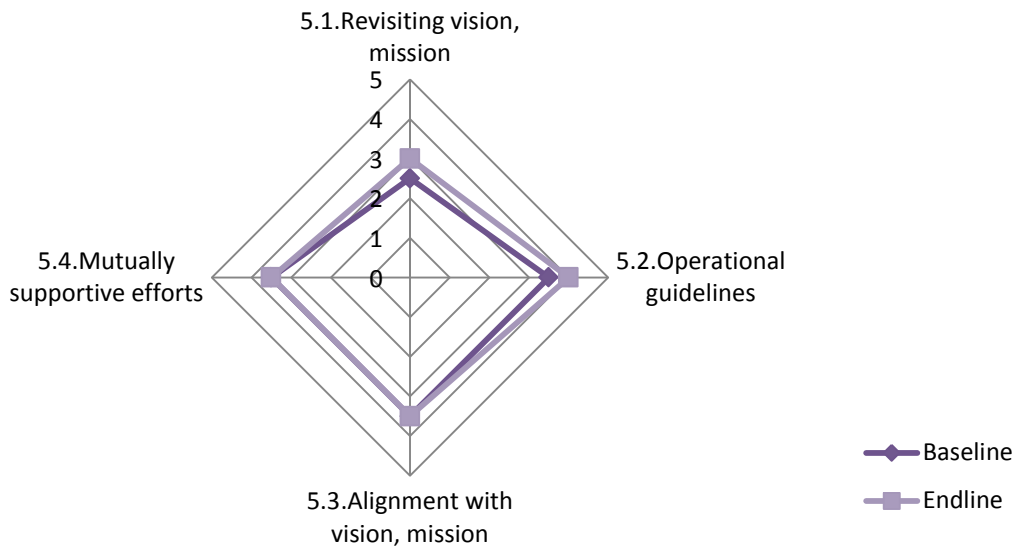

functionaries and community leaders who are engaged in the strategic planning process. Examples include improved report with the PHCs, hospitals and government of Tamil Nadu. VTRC continues to engage community leaders, parents and partners in the HBA in development of their strategies. VTRC continues to be good in networking and linking with key community people. The CARE network still brings most of the national and international links through its involvement in the Health Bridge Alliance. The Edugate programme still needs stronger linkages, while locally relations with Parent Teacher Association (PTA), Village Education Committee (VEC) and School Management Committee (SMC) have been strengthened. VTRC continues to work with staff that is from the same target communities which enables them to have close engagement with the target groups. The community is now more proactively involved in planning, implementing and jointly monitoring the programme. Field staff visit the target groups through self-help group meetings, parent meetings, house visits, village parliaments and medical camps. The staff continues to meet in review meetings to share their views and make strategic plans. There is an open and democratic structure. Trust relationships and better communication between the second line leadership and the chairman have been strengthened. The chairman entrusted the entire workshop process in the hands of second line leadership.

Score baseline: 3.1

Score endline: 3.8 (slight improvement)

Capability to achieve coherence

Representative and managerial staff continues to revisit the vision and mission of the organisation at least once in a year. Apart from this, all staff are now involved in their own project vision and mission exercise. VTRC has made a strategic change in the CARE Network programme to help the target population access government schemes and services instead of VTRC focussing on providing these services itself. VTRC continues to have the following operational guidelines and policies in place: HRM/ staff recruitment policy, finance policy, work place policy, Edugate recruitment policy, guidelines for stock control and maintenance, child protection policy, standard operating procedures, HIV policy, leave policy and travel policy. Over the last two years staff have gained a better understanding of the operational guidelines, the finance policy has been revised and a performance management system policy was introduced. VTRC continues to keep its projects, strategies and operations in line with the vision and mission of the organisation. The projects and programmes that VTRC implement continue to be mutually supportive. For example, the mother and child care project is integrated with the Edugate programme and informative materials from the health project are also used in the tuition centres.

Score baseline: 3.3

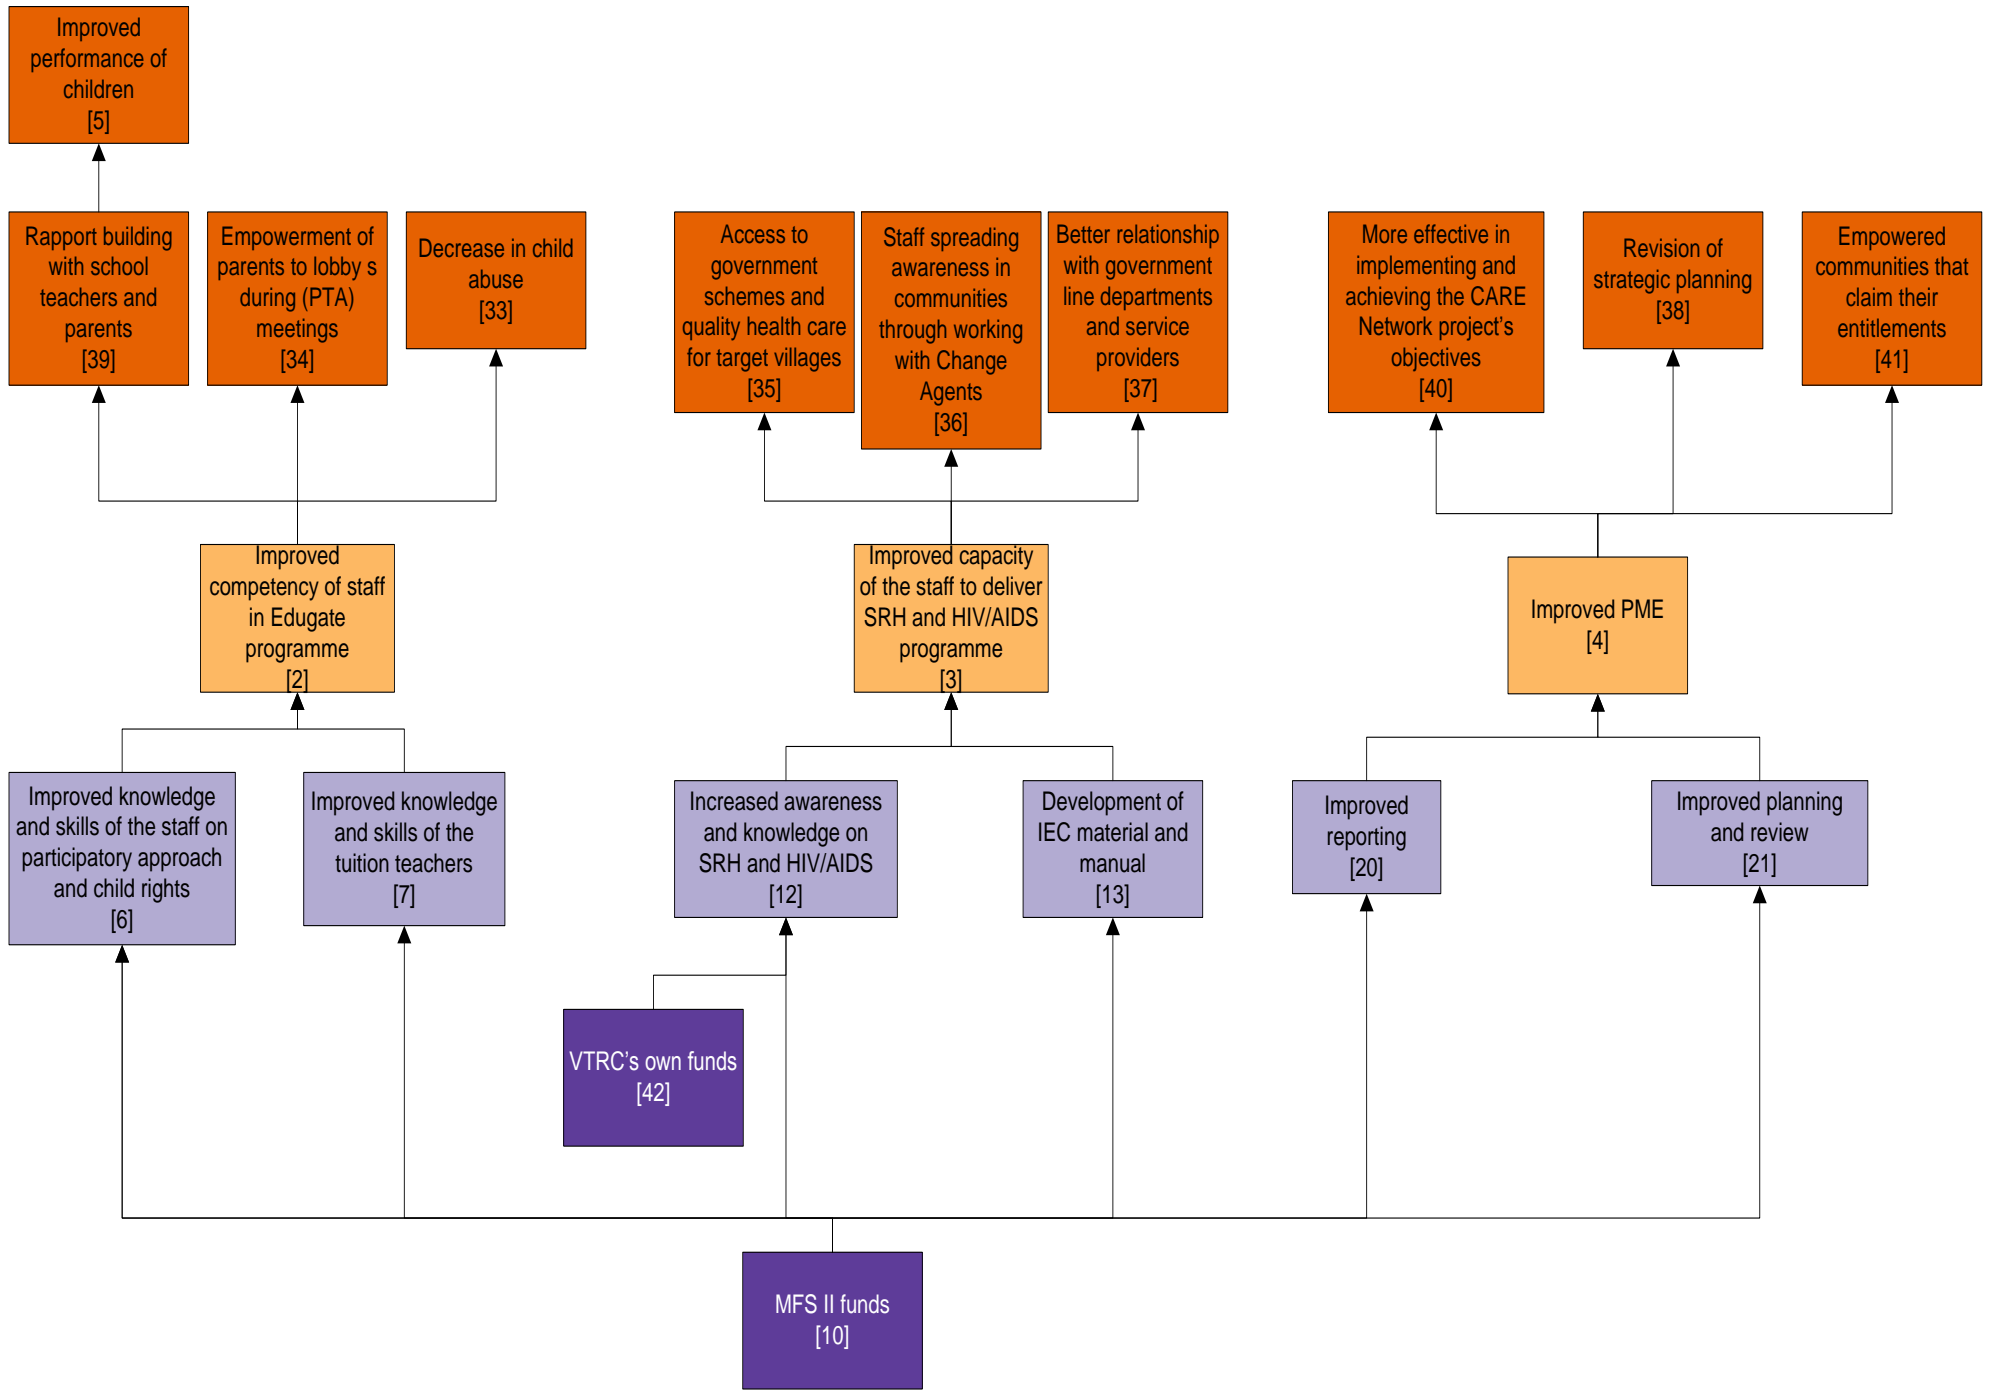

Score endline: 3.5 (very slight improvement)

4.2.2 General changes in the organisational capacity of the SPO

During the endline workshop at the SPO from 5 to 7 August 2014, a discussion was held around what were the main changes in organisational capacity since the baseline and why these changes have taken place. The discussion was visualised in a general causal map as can be seen below. The narrative for the general causal map is also described below. It gives a more general picture of what was seen as important changes in the organisation since the baseline, and how these changes have come about, and that tells the more general story about the organisational changes in the SPO. The evaluators considered it important to also note down the SPO's story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provided by the evaluation team. The detailed narrative can be found in Annex 4.

- The three main changes that happened in the organisation since the baseline were:
- Improved competences of staff in the Edugate programme [2];
- Improved capacity of staff to deliver SRH and HIV/AIDS programme [3];
- Improved Planning, Monitoring and Evaluation (PME) [4]

According to staff present at the endline workshop, the three main changes mentioned above are expected to lead to VTRC being more sustainable as an organisation. They happened to coincide with the outcome areas that were identified for process tracing, so as to get detailed information on how these changes in organisational capacity came about. Therefore the general causal map overlaps strongly with the causal maps developed for each of these outcome areas/organisational capacity changes to be analysed to during the process tracing. All the details about these changes in organisational capacity as well as the underlying factors that influenced these changes are described in the narrative and visual below. These three key organisational capacity changes will be discussed in more detail in the related detailed causal maps, which were a result of process tracing. The three main organisational capacity changes are described in the light orange boxes and the key expected consequences are noted above these cards in dark orange. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the three key organisational capacity changes are listed at the bottom in dark purple. The narrative below describes each key organisational capacity change, and the contributing factors are described from the top to bottom. The numbers in the visual correspond with the numbers in the narrative.

1. **Improved competency of staff in Edugate Programme [2]** is expected to contribute to:

- *Rapport building with school teachers and parents [39]*. Especially the Workshop on Participatory Integrated Child Development (PICD) workshop improved the skill and capacity of the CARE Network and Edugate coordinators to adapt new strategies for participatory approach in the community during interactions and programs. This rapport building [39] helped to improve the performance of children [5].
- *Empowerment of parents to lobby for their own needs and issues during Parent Teacher Association (PTA) meeting [34]*: The Edugate staff created awareness among the parents on child rights and encouraged them to attend the PTA meetings at school and voice their concern.
- *Decrease in child abuse [33]*. Staff knowledge and skills on child rights have improved, which is evident in the fact that the CARE Network coordinator of VTRC indicated that the staff with improved knowledge and skills in child rights could now empower the children and parents on child rights. According to the CARE Network coordinator of VTRC this has resulted in a decrease of child abuse.

Improved competency of staff in the Edugate Programme [2] was due to:

- *Improved knowledge and skills of the staff on participatory approach and child rights [6]*: The Participatory approach is a methodology to enter the community and involve them in needs identification and planning. The participatory approach has been initiated in July 2014 in the Edugate programme. Staff knowledge and skills on child rights have improved, which is evident in the fact that the CARE Network coordinator of VTRC indicated that the staff with improved knowledge and skills in child rights could now empower the children and parents on child rights
- *Improved knowledge and skills of the tuition teachers [7]*: Over the last two years the tuition teachers have improved in their skills and knowledge to apply different teaching methods, provide appropriate and useful information through innovative teaching (e.g. one tuition teacher collects information through web search and teaches the children), and develop lesson plans.

Improved capacity of staff to deliver SRH and HIV/AIDS programme [3]. This organisational capacity change has contributed to the following changes:

- *Access to government schemes and quality health care for target villages [35]*: "With the overall improvement in the capacity of the staff to articulate SRH and HIV issues, the beneficiaries in the target villages were able to secure quality health care and access to various government schemes much more easily during this year."
- *Staff spreading awareness in communities through working with Change Agents [36]*: "The animators and supervisors were capacitated on SRH and HIV issues and they have been taking them forward to the community through Change Agents"
- *VTRC developing better relationships with government line departments and service providers [37]*: "The staff articulated/communicated SRH and HIV issues among different stakeholders much better. Better relationship with the service providers in the government sector facilitated better service delivery to the beneficiaries of the project."

The staff have improved in their capacity in delivering the SRH and HIV/AIDS programme and to train animators, this is evident in the report of Review of Partners' outcomes. This report indicates that the animators trained by the CARE network are able to engage intensively with the target group, leverage the presence of the government facilities and programmes, strengthen existing groups (and create new groups. Improved capacity of staff to deliver SRH and HIV/AIDS programme was due to:

- *Increased awareness and knowledge on SRH and HIV/AIDS [12]*. Over the years the staff has improved their awareness and knowledge on SRH and HIV/AIDS, to identify issues to lobby, better articulation etc., because of several MFS II supported capacity building trainings.
- *Development of IEC materials and lobby and advocacy curriculum [13]*. The development of IEC materials and curriculum has also supported the capacity of VTRC staff to deliver SRH and HIV/AIDS programme. VTRC developed IEC materials on SRH/HIV such as pamphlets and booklets for awareness campaigns in ANCs, PNCs and youth meetings and in the school.

Improved PME [4]. Improved PME has contributed to:

- Revision of strategic planning [38]: e.g. the target group (beneficiaries) was changed;
- More effective in implementing and achieving the objectives of the CARE Network project [40];
- Improved PME, and especially the planning part has led to the communities with which VTRC works becoming better mobilised, informed and empowered which resulted in claiming their entitlements in terms of quality health services from the government [41].

•
Strategic planning and better reporting improved the capacity of the organisation to be more effective in implementing and achieving the CARE Network project's objectives:

- *Improved reporting [20]:* There is significant change in the reporting in the last two years. The reporting has been strengthened with beautiful case studies, success stories, photos etc. The reports are now more structured, well informed and the queries and indicators are better answered.
- *Improved planning and review[21]:* There is improved planning according to Woord en Daad. When comparing the 2011 and 2014 annual plans for the CARE Network programme it is evident that there is significant improvement in the planning process in terms of defining objectives, indicators and outcomes.

The main underlying causes for these three key organisational changes were:

- *MFS II funds [10]:* Red een Kind remains to be the main donor of VTRC and has in that sense contributed to most of the organisational capacity changes over the last two years. Through workshops and trainings ranging from planning (through ToCs, participatory integrated child development approached) and M&E to more specific programme related topics like lesson plans, disability and becoming part of the Health Bridge Alliance to strengthen their knowledge and networks on SRH and HIV/Aids, MFS II has supported the overall organisational capacity of VTRC.
- *VTRC own funds [42]:* there has been one training on SRH and prevention of HIV, that has led Increased awareness and knowledge on SRH and HIV/AIDS [12].

4.3 Attributing changes in organisational capacity development - evaluation question 2 and 4

Note: for each country about 50% of the SPOs has been chosen to be involved in process tracing, which is the main approach chosen to address evaluation question 2. For more information please also see chapter 3 on methodological approach. For each of these SPOs the focus has been on the capability to act and commit and the capability to adapt and self-renew, since these were the most commonly addressed capabilities when planning MFS II supported capacity development interventions for the SPO.

For each of the MFS II supported capacity development interventions -under these two capabilities- an outcome area has been identified, describing a particular change in terms of organisational capacity of the SPO. Process tracing has been carried out for each outcome area. The following outcome areas have been identified under the capability to act and commit and the capability to adapt and self-renew. Also the MFS II capacity development interventions that could possibly be linked to these outcome areas are described in the table below.

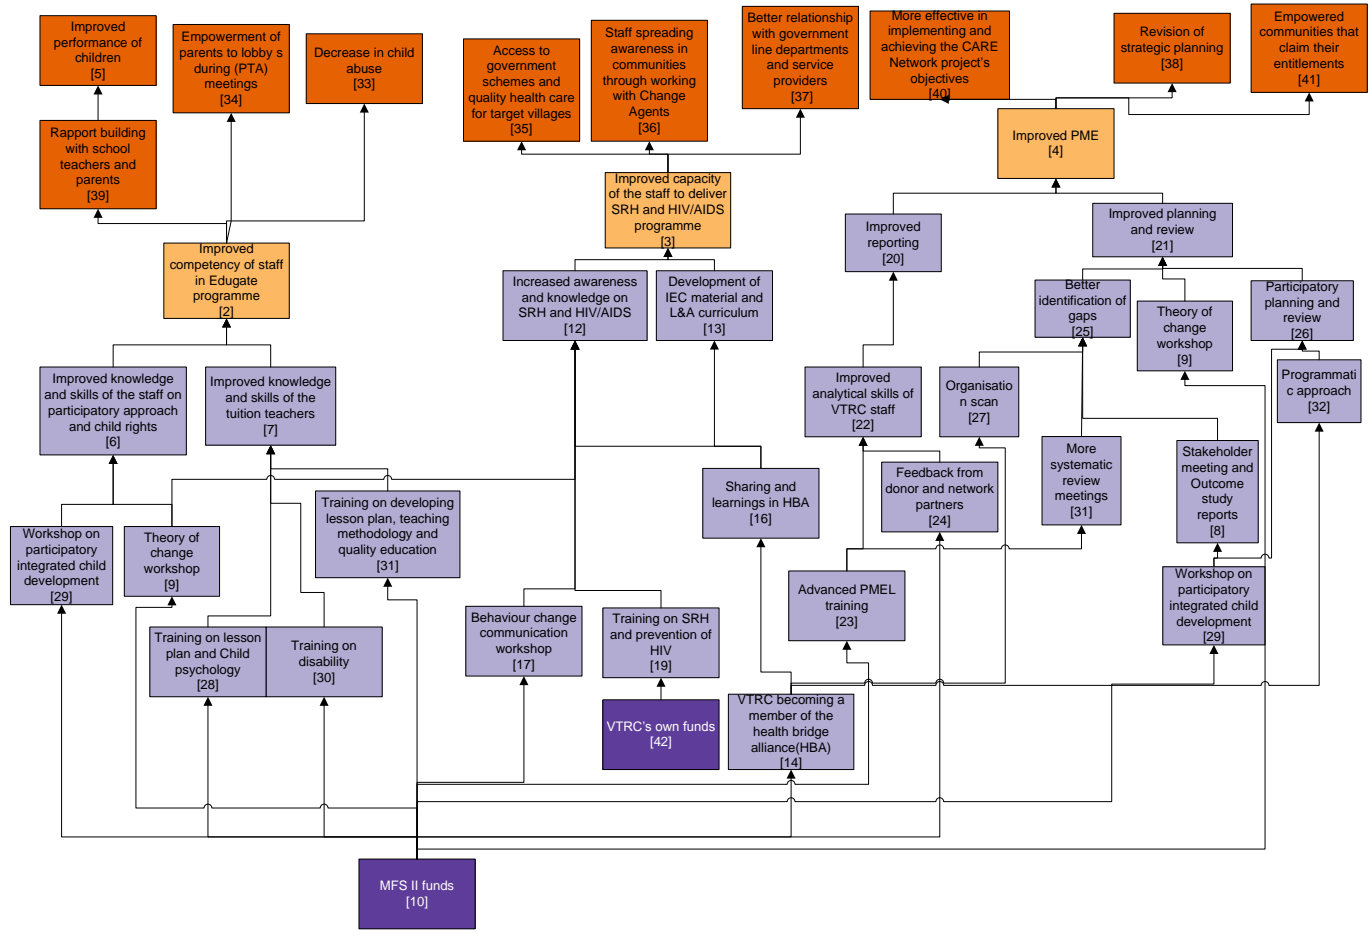

Table 2

Information on selected capabilities, outcome areas and MFS II supported capacity development interventions since the baseline

Capability	Outcome area	MFS II supported capacity development intervention(2)
Capability to act and commit	Improved competences of staff in the Edugate programme	Workshop on Participatory Integrated Child Development, Theory of Change workshop, trainings for tuition teachers on lesson plans, child psychology, disability, teaching methodology and quality education
	Improved capacity of staff to deliver SRH and HIV/AIDS programme	Theory of Change workshop, Behaviour Change Communication workshop
Capability to adapt and self-renew	Improved PME	Advanced PMEL training, Theory of Change workshop, Workshop on Participatory Integrated Child Development.

The next sections will describe the results of process tracing for each of the outcome areas, and will describe to what extent these outcome areas have taken place as a result of MFS II supported capacity development interventions and/or other related factors and actors.

All key organisational capacity changes that were identified during the general map exercise happen to coincide with the outcome areas selected for process tracing. Each of these three areas is described more in detail below, and a full description of these changes and how they have come about is provided in Appendix 5. In the descriptions the numbers refer to the visual which includes all organisational capacity changes and can be found below.

4.3.1 Improved competences of staff in the Edugate programme

Improved competency of staff in Edugate Programme [2] is expected to contribute to:

- *Rapport building with school teachers and parents [39]*. Especially the Workshop on Participatory Integrated Child Development (PICD) workshop improved the skill and capacity of the CARE Network and Edugate coordinators to adapt new strategies for participatory approach in the community during interactions and programs. This rapport building [39] helped to improve the performance of children [5], as is explained below:
- “the children in the tuition centres put up an improved performance due to the initiative of the tuition teachers who personally visit the parents and help creating a favourable environment for the children to read at home and also to regularly attend the school”
- *Empowerment of parents to lobby for their own needs and issues during Parent Teacher Association (PTA) meeting [34]*: The Edugate staff created awareness among the parents on child rights and encouraged them to attend the PTA meetings at school and voice their concern.
- *Decrease in child abuse [33]*. Staff knowledge and skills on child rights have improved, which is evident in the fact that the CARE Network coordinator of VTRC indicated that the staff with improved knowledge and skills in child rights could now empower the children and parents on child rights. According to the CARE Network coordinator of VTRC this has resulted in a decrease of child abuse.

Improved competency of staff in the Edugate Programme [2] was due to improved knowledge and skills of the staff on participatory approach and child rights [6] and improved knowledge and skill of the tuition teachers [7]. Each of these organisational capacity change areas are described below.

Improved knowledge and skills of the staff on participatory approach and child rights [6]

The Participatory approach is a methodology to enter the community and to do this in a participatory way. In this process the community is involved in needs identification and planning. The participatory approach has been initiated in July 2014 in the Edugate programme. This approach has resulted in the active involvement of the community members in planning and monitoring the function of the tuition centers and providing inputs and feedback. Staff knowledge and skills on child rights have improved, which is evident in the fact that the CARE Network coordinator of VTRC indicated that the staff with improved knowledge and skills in child rights could now empower the children and parents on child rights. Knowledge and skills of the staff on participatory approach and child rights [6] improved because of the following capacity building trainings for the staff:

- *Workshop on Participatory Integrated Child Development (PICD) [29]*: PICD workshop was organised in April 2012 in Bangladesh by REK and Word & Deed. The aim was to train the participants on the need to go from an institution-based approach to a community-based approach, which is a more sustainable child-friendly approach (within families, not institutions). Different tools were demonstrated to help the participants learn to work in a participatory process with the community to move from institution based (e.g. orphanage) development to child centered development. This workshop was funded by MFS II [10].
- *Theory of Change workshop [9]*: Theory of Change workshop for CARE network was organised on 16-19 April 2012 at Dhaka by ICCO. Though the workshop was held prior to the baseline, the outcome could be seen in the improved capacity of the staff over the last two years. The aim of the workshop was to help the partners have deeper understanding of Theory of Change and its practice, participatory approach (making sure that the parents participate in a mutual learning activity), civil society strengthening, etc. It helped the staff to adapt the participatory approach more attentively to involve the parents in identifying the needs and issues related to children education. This workshop was funded by MFS II [10].

Improved knowledge and skills of the tuition teachers [7]

Over the last two years the tuition teachers have improved in their skills and knowledge to apply different teaching methods, provide appropriate and useful information through innovative teaching (e.g. one tuition teacher collects information through web search and teaches the children), and develop lesson plans. They also improved their skills in organising classes on a multi class multi-level setting, child psychology, monitoring and evaluating the performance of children. Tuition teachers improved their knowledge and skills because of various in-house trainings:

- *Training on Lesson plan and Child psychology [28]:*
Three days training on lesson plan and child psychology for tuition teachers and staff was organised by VTRC on May 2013. This workshop was funded by MFS II [10].
- *Training on disability [30]:*
Four days training program for tuition teachers and other staff was organised by VTRC on December 2013 supported by MFS II. The other staff that is referred to here, is teaching staff of VTRC that work at Peniel Nursery and Primary school, Peniel High and Higher Secondary school, Peniel Rural College of Education and Infants home. A total of 90 tuition teachers and 7 project staff members of VTRC participated in the training programs. This workshop was funded by MFS II [10].
- *Training on developing lesson plan, teaching methodology and quality education [31]:* This training programme was organised by VTRC for tuition teachers and supervisors in February, May and August of 2012 with the support from MFS II. The aim was to help them develop lesson plans and apply different innovative methods in teaching. This workshop was funded by MFS II [10].

4.3.2 Improved capacity of staff to deliver SRH and HIV/AIDS programme

Another key organisational capacity change that was identified was *the improved capacity of staff to deliver SRH and HIV/AIDS programme [3]*. This organisational capacity change has contributed to the following changes:

- *Access to government schemes and quality health care for target villages [35]:* "With the overall improvement in the capacity of the staff to articulate SRH and HIV issues, the beneficiaries in the target villages were able to secure quality health care and access to various government schemes much more easily during this year."
- *Staff spreading awareness in communities through working with Change Agents [36]:* "The animators and supervisors were capacitated on SRH and HIV issues and they have been taking them forward to the community through Change Agents"
- *VTRC developing better relationships with government line departments and service providers [37]:* "The staff articulated/communicated SRH and HIV issues among different stakeholders much better. Better relationship with the service providers in the government sector facilitated better service delivery to the beneficiaries of the project. Further the staff created better awareness among the school and college going students on SRH and HIV/AIDS issues."

The staff have improved in their capacity in delivering the SRH and HIV/AIDS programme. The improved capacity of VTRC staff to train animators is evident in the report of Review of Partners' outcomes. This report indicates that the animators trained by the CARE network are able to engage intensively with the target group, leverage the presence of the government facilities and programmes (ANC/PNC, schools, SHG support, PLHA support), strengthen existing groups (the ANC/PNC groups, SHG groups) and create new groups (Youth Girls and Youth Boys), and earned the credibility, behaviour change among the youths and adolescents in the communities and trust of the target groups. Improved capacity of staff to deliver SRH and HIV/AIDS programme was due to increased awareness and knowledge on SRH and HIV/AIDS [12] and development of IEC material and lobby and advocacy curriculum for SRH and HIV/AIDS [13]. Each of these areas are further described below.

- *Increased awareness and knowledge on SRH and HIV/AIDS [12].* Over the years the staff has improved their awareness and knowledge on SRH and HIV/AIDS, to identify issues to lobby, better articulation etc., because of several MFS II supported capacity building trainings. This resulted in the communities improve their knowledge and awareness on various health related issues and able to lobby to government for their needs. Increased awareness and knowledge on SRH and HIV/AIDS [12] was due to was due to training of the staff on SRH and HIV/AIDS during the ToC workshop [9], Behaviour Change Communication workshop [17] and a training on SRH and HIV prevention [19]; and sharing and learning at Health Brigade Alliance [16]. The following are some of the external and in-house trainings:
 - *Theory of Change workshop [9]:* Theory of Change workshop for CARE network was organised in 16-19 April 2012 at Dhaka by ICCO. Though the workshop was held prior to the baseline, the outcome could be seen in the improved capacity of the staff over the last two years. The

- workshop also helped VTRC get a deeper understanding of the aims of ICCO Alliance Basic health and HIV/AIDS programme, rights based approach to empower the women to better avail reproductive health rights. Further it improved the knowledge on behaviour change measures that *'Health problems are often a result of individual behaviour of the people at risk and behaviours of people around them (environment), so changing individual behaviour and changing behaviour of the people around them is a possible solution'* which VTRC adapted in its strategic plan. This workshop was funded by MFS II [10].
- **Behaviour Change Communication workshop [17]:** Three days Behaviour change communication workshop was organised in 5-7 September 2012 in Hyderabad by Health Bridge Alliance – India (ICCO – PRISMA Alliance). It aimed at capacitating the participants on behaviour change framework, formulate/discuss lobby and advocacy strategy for the Health Bridge Alliance, etc. It helped VTRC staff improve their knowledge on the determinants of behavioural change communication like risk perception, attitude, social influence and self- efficacy, etc. This workshop was funded by MFS II [10].
 - **Training on SRH and prevention of HIV [19]:** Two days training programme was organised by VTRC for the animators and staff in April 25-26, 2013 at Bethel Community Development Project, Thoppur. The training was funded with VTRC own funds. The objective of the training was to improve the knowledge, approach, attitude of the staff on promotion of SRH and effective HIV prevention. This resulted in the change agents gain knowledge on HIV related symptoms, anti-retroviral therapy, prevention methods, use of herbal medicines to treat HIV/AIDS, etc.
 - **Sharing and learning at Health Brigade Alliance (HBA) [16].** The health Bridge Alliance was formed in 2011 consisting of six partners (The Leprosy Mission Trust India, Emmanuel Hospitals Association, Help a Child of India, Christian Outreach Uplifting New Tribes, CARE Network and Word and Deed India). At the beginning of MFS II [10] the donor suggested that Indian partners form a Programmatic Collaboration to give the programme a wider impact and better sustainability of the programme. Thus, six partners, facilitated by an international coordinator from Red een Kind, joined the coalition and developed a 5 year country plan for the years 2011 to 2015. The multi stakeholder process based on joint analysis, shared vision and objectives and capacity building trainings facilitated VTRC to improve the capacity of the staff and in strategic planning. The following are some of the HBA sharing and learning meetings:
 - **Health Bridge Alliance meeting 5th September 2012** Secunderabad, Hyderabad: The objective was to review the April 2012 Theory of Change and Behavioural Change workshop at Bangladesh, sharing and learning on SRHR issues, how to fine-tune and prepare expert guidance for the ToC. The behaviour change framework was thoroughly discussed. This discussion resulted in VTRC actively promoting and encouraging positive behaviour change among the community by disseminating information regarding the entitlements available for enhanced Reproductive and Child Health (RCH) indicators. It helps promote awareness on various health issues, immunisation, ANC/ PNC, HIV etc.
 - **Health Bridge Alliance meeting 19-21 November 2012, Madurai:** The objective was to review the progress of 2012 program and prepare the action plan for 2013 which included context analysis, Theory of Change, Lobby and Advocacy plan.
 - **Health Brigade Alliance meeting at Chennai in August 2103.** The aim was to discuss/learn/plan on various health related issues, on gender issues having the greatest impact on the health and well-being of households of India. Furthermore there was discussion on Theory of Change, Gender and Right based approach etc.
 - **Development of IEC materials and lobby and advocacy curriculum [13].** Apart from increased knowledge and skills on SRH and HIV/AIDS the development of IEC materials and curriculum has also supported the capacity of VTRC staff to deliver SRH and HIV/AIDS programme. VTRC developed IEC materials on SRH/HIV such as pamphlets and booklets for awareness campaigns in ANCs, PNCs and youth meetings and in the school. The materials are largely developed in the areas of sexual well-being, nutrition, environment, hygiene, SRH, HIV/AIDS, etc. Visualization of the messages in these IEC materials capacitated/facilitated the staff to better translate the awareness campaign. Sharing and learning within the HBA [16] contributed to the development of IEC material and manual on SRH and HIV/AIDS [13].

4.3.3 Improved PME

Improved PME [4] has contributed to revision of strategic planning [38]. Some of the revisions in strategy [38] were as follows:

- The target group (beneficiaries) was changed from 13 -30yrs to 15- 45yrs of age, in order to have a smaller, feasible target population to show tangible results.
- Instead of merely focusing on antenatal care and post natal care in training and mentoring interest groups and change agents, it was decided to give more focus on attitude, social influence and self-efficacy to increase the intention of behaviour change towards sexual being and access services in government facilities.
- Instead of empowering only women, it was also decided to motivate men to function as active partners in restoring family, societal roles and responsibilities.
- VTRC Included lobby and advocacy in the area of child protection in line with the alliance Lobby & Advocacy plan.

Improved PME has also contributed to being more effective in implementing and achieving the objectives of the CARE Network project [40]. Improved PME, and especially the planning part has led to the communities with which VTRC works becoming better mobilised, informed and empowered which resulted in claiming their entitlements in terms of quality health services from the government [41].

Since the baseline in 2012, the staff has improved their capacity in communication/articulation, developing new initiatives etc., because of several MFS II supported capacity building trainings. ICCO in its feedback also stated that skills of the staff in report writing, communication/articulating, conceptualising the idea of community development etc. has improved. Improved planning, monitoring and evaluation (PME) [4] is another key organisational capacity change that took place since the baseline in 2012. This is mainly related to improved reporting [20] and improved planning [21]. Each of these changes are further explained below.

- *Improved reporting [20]*

There is significant change in the reporting in the last two years. The reporting has been strengthened with beautiful case studies, success stories, photos etc. The reports are now more structured, well informed and the queries and indicators are better answered. The staff has improved their capacity in communication/articulation, in report writing. Better reporting was due to:

- *Improved analytical skills [22]:*

The staff improved their skill and are conscious in collecting information from the field and analysing it. The analytical skills of the staff improved primarily due to the Advanced PMEL training in Nepal [23] which was funded by MFS II [10].

- *Advanced PMEL Training [23].* Ten days PMEL training program was organised at Nepal by REK and the Woord en Daad alliance on 11-17 September 2013. The CARE Network coordinator of VTRC attended this training. The objective of the training was to train PME skills, data analysis skill, ToC as basis for a good M&E system, research design, using excel for quantitative data analysis and case studies preparation. It resulted in having more insight on PMEL developing smart indicators and TOC, better report writing
- *Feedback from donor and network partners [24]:*
Help a Child India (HACI) is the country partner for Red een Kind (REK) who supports VTRC through monitoring and evaluating its health project and providing feedback on reports which is supported by MFS II [10]. HACI conducts a midterm evaluation of the CARE Network for REK. REK through HACI contributed in developing formats, questionnaires and guidance for the evaluation study. There were separate questionnaires for the community, government representatives and CARE representatives. Through this evaluation HACI analyses each outcome indicator and gives remarks on each indicator to VTRC.

- *Improved planning and review[21]*

There is improved planning according to Woord en Daad. When comparing the 2011 and 2014 annual plans for the CARE Network programme it is evident that there is significant improvement in

the planning process in terms of defining objectives, indicators and outcomes. VTRC started using participatory approach in planning the Edugate programme since July 2014. As the community is now involved in the planning process, their needs are better identified and planned for. Improved Planning [21] was due to better identification of gaps [25], the theory of change workshop [9] and participatory planning [26]. These are further described below.

- *Better identification of gaps [25].* Gaps in planning are better identified through:
 - *Organisation-scan (O-scan) [27]:* This is a monitoring tool developed by ICCO for its alliance partners to monitor and assess the development of partner organisations (vision & strategy, internal organization, projects and programs and linking & learning). The results of this O-scan report are submitted bi-yearly to the HBA country coordinator as a requirement for MFS funding. This facilitated the organization to find gaps particularly in the CARE Network programme and use it for better planning as a process of organizational development.
 - *More systematic review meetings [31]*

A monthly review meeting is conducted for the both the Edugate and CARE Network programme at the end of every month in which activity planning for the next month is carried out with all the staff members. The reports are not only reviewed but gaps are identified, challenges are discussed and strategies are planned in alignment with the vision of the organisation with an aim to address the gaps and challenges. Following a systematic approach, gaps were better identified. The improved review meetings are primarily the outcome of the Advance PML training on September 2013 in Dhaka [23]. Peer review was also used to review the programme. The review was carried out at different levels: the change agents and the cluster supervisors meet on a weekly basis to review the reports and plan accordingly. Then the programme manager and the cluster supervisors meet on a monthly basis to further discuss and plan on the basis of the weekly findings and [Source: CARE Network - Health - Annual Activity Report – 2013]. VTRC starting using this system because they became a member of the HBA [14].
 - *Stakeholder meeting and Outcome study reports [8]*

This year (2014) VTRC conducted stakeholder meeting in the villages to involve the parents in the review and planning process. The participants were mostly the parents of the tuition children. These meetings facilitate the identification of needs of the parents for better planning the Edugate programme. This was the outcome of Participatory Integrated Child Development (PICD) workshop on April 2012 in Bangladesh [29].
 - It is evident in the assessment sheet CFA perspective that yearly monitoring of VTRC is carried out by country partner Help A Child India (HACI) for REK. As per this VTRC conducted outcome study in October 2013 involving HACI. Five days assessment was carried out at the organization and field level to assess the progress of the project and its impact. It is evident in the outcome study report 2013 that the observations and recommendation were shared with the staff.
- *Capacitated by the Theory of Change (ToC) workshop on April 2012 in Bangladesh [9].*

VTRC developed a strategic plan 2014-15 for the CARE Network programme, based on the ToC concept to empower communities accessing quality health care services for SRH and HIV prevention in 150 villages of Madurai & Salem Districts (Tamil Nadu state). Various pathways are developed on the ToC concept for better achievement of goals in the CARE network programme. Further, using the ToC has helped in planning a process of cooperation, strengthening and lobbying with the state health systems for better implementation. Also there is a peer review and results framework that keeps them on track.
- *Participatory planning and review [26]*

Over the last two years VTRC has streamlined its review and planning meetings by adopting a bottom up approach in planning. According to this process the change agents and tuition teachers get feedback from the communities and together with cluster supervisors meet respectively to review and monitor the programme on a weekly basis. Since 2014 it has adapted a participatory approach process in the Edugate programme where even the communities are actively involved in the planning process after the Participatory Integrated Child Development workshop [29]. They also monitor the functioning of the tuition centres and provide input. It is evident from the fact that on the 20th of July 2014 a stakeholder meeting was held with parents to discuss the annual plan of the Edugate project, based on these discussions a summer camp was included in the new annual plan 2014 so that the children learn through play way method of instruction, through games and cultural activities for the holistic development of children. Participatory planning was also due to VTRC taking the programmatic approach [32].

- *Programmatic approach [32]*

The organisation has been trying to work with the Programmatic Approach as capacitated by ICCO and her Dutch partners in the Health Brigade Alliance [14]. It is a process that leads to multiple stakeholders working together based on a joint analysis of a problematic, shared vision and purpose and clear perspective on the results of the cooperation. In such a process all actors do different things, work at various levels and use their own strengths for the common purpose, as well as share some activities and in particular share, plan and participate in the linking and learning and lobby and advocacy processes.

5 Discussion and conclusion

5.1 Methodological issues

VTRC was well versed with the 5C model, with the endline workshop being attended by management (Director–Communitive Initiative, Care Network Coordinator), programme staff (6 Supervisors, coordinator), HR/Admin (Accountant-Edugate programme, Accountant-Health programme), field staff (3 change agents, 3 tuition teachers) except for 4 supervisors, 3 change agents, 3 tuition teachers, who were also part of the baseline evaluation. Due to prior commitments the director of the organisation was not able to participate in the endline workshop. Evaluators interviewed him after the workshop. His eagerness to improve the quality and organisational strength was indicative of his responsive and involved managerial commitment.

Evaluators interviewed the Organisational Development (OD) consultant (who supports VTRC on a part time basis) which gave insight into the organisational structure, PME system and distribution of roles and responsibility. This was corroborated by the discussions held with the field and managerial staff. Since the baseline, VTRC is mostly working with national level alliance partners. No partners were interviewed as VTRC had already requested during the baseline workshop not to name the network partners they work with, or highlight their bit of work among the communities. This was a conscious decision by VTRC.

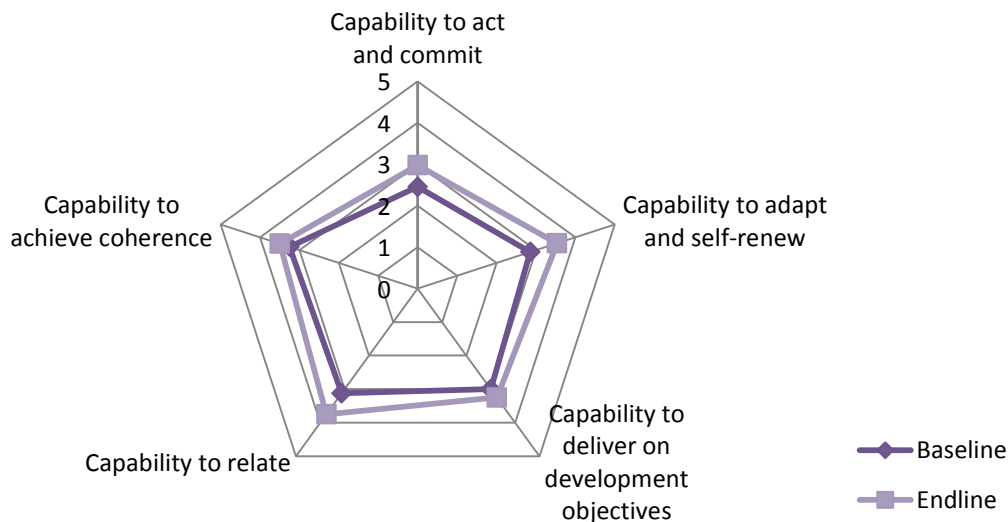

In relation to process tracing, training questionnaires were filled in for all the trainings and events under MFS II supported funding. However, for the staff it was sometimes difficult to recall what they learnt during a specific training as they are exposed to various training programmes and exposure visits (both under MFS II programme and others). Therefore, the observed changes could be attributed to various factors beyond a specific training programme. However, the training questionnaires formed the basis of distinguishing the changes which resulted from a particular training over others. It provided details such as who participated in the training and the consequent changes, ability of the participant to influence other staff, application of training etc. The CARE Network Coordinator of VTRC participated in various training programmes with MFS II support and he filled in all the training questionnaires. Though the tuition teachers and change agents received trainings with MFS II support, they did not fill training questionnaires due to language barrier. (The issue was that they could only communicate in Tamil and the evaluators had to depend on the VTRC staff for translation. Though it may seem reliable, but from an evaluator's perspective it was not admissible). Due to language barrier, the field staff faced difficulty in filling up the self-assessment forms.

In terms of process tracing, there was a difference between the initial causal map (based on initial document review) and the causal map developed during the workshop. In the end, the causal map developed at the workshop was complemented by information from document review. But the participation level and the level of engagement showed amply that the staff was well aware of the programme mandate and had ample freedom to voice their needs and receive training, in order to strengthen their work. The VTRC executive was responsive and had taken the baseline report suggestions seriously to amend certain points of lacunae in their organisational structure.

5.2 Changes in organisational capacity

This section aims to provide an answer to the first and fourth evaluation questions:

1. *What are the changes in partner organisations' capacity during the 2012-2014 period?*
4. *What factors explain the findings drawn from the questions above?*

Whilst changes took place in all five core capabilities, the improvements were only minor. Below the changes in each of the capabilities are further explained, by referring to the specific indicators that changed.

Over the last two years many improvements took place in the indicators under the capability to act and commit. Second line leadership has been strengthened, the director of VTRC trusts him with going to strategic meetings and also has become more democratic in its management approach, so that field staff are now speaking up more and becoming more articulate. This was mainly because of leadership becoming more mature and allowing for a more democratic approach. There was more coordination between the chairman, the director and second line leadership and results based management made it easier to provide strategic guidance as tracking of performance improved. There is now an organisational structure in place, which was lacking during the baseline. Staff now have clear roles and responsibilities and staff now also have a HR handbook which they can use as a reference for administrative regulations, while during the baseline VTRC did not have a clear organizational structure. VTRC has become more participatory in its planning and operations, involving more field staff and having more regular review meetings. Staff have improved their skills in a variety of areas: education, SRH and HIV/AIDS, planning, reporting, M&E, communication and technological skills. When senior staff go to a training, they in turn train the junior staff. While currently VTRC continues to rely mainly on funding from Red een Kind (Dutch funder), the MFS II funding ending in 2015 and changes in the overall donor environment have triggered VTRC to improve its funding procedures. VTRC staff have improved their proposal writing skills and being part of the Health Bridge Alliance (HBA) has allowed them to send in some grant applications. They also write better reports which contributes to the visibility. To make their programmes more sustainable they have taken the initiative to link their target groups to relevant government schemes.

Under the capability to adapt and self-renew VTRC improved on all indicators. As mentioned above field staff found it easier to speak up and became more engaged in critical reflection. There was more freedom for ideas as second line leadership gave more space for this. There were also slight improvements in VTRC tracking its operating environment and being responsive to its stakeholders, which all had to do with their more participatory approach. The Advanced PMEL workshop helped staff to develop new formats and employ new methodologies, especially in involving the community in a participatory way. Field staff now meet more regularly for review meetings with their supervisors for critical reflection. Field staff has become more confident and share more of their ideas. The

organisational scan by ICCO has been used to identify gaps and improve planning. Staff improved their analytical skills in monitoring, data collection and gap identification, the trainings sponsored by REK, the feedback from HACI and the input from the field staff have contributed to this. VTRC is using M&E findings more strategically, e.g. findings from an outcome study in 2013 were used in the Annual Plan for 2014. VTRC has been working more with government line departments to get updates on relevant schemes. Also the engagement with external stakeholders, e.g. parents has increased through for instance meetings with them to fine-tune the annual plan.

In the capability to deliver on development outcomes VTRC remained mostly stable. VTRC did improve in monitoring its efficiency, while there is still no formal mechanism to calculate input-output ratios, as their deliverables are things as “changed behaviour” , they now have certain systems in place that relate to their improved M&E capacity.

In the capability to relate VTRC has somewhat improved. Through its more participatory approach VTRC is now involving government departments and community leaders more in its strategic planning. The HBA has also been a source of input for its planning. VTRC increased its network with the government, for example with PHCs, hospitals and the state government of Tamil Nadu. Regarding internal relations, the second line leadership is given more responsibilities and senior management has become more democratic.

Finally, VTRC has very slightly improved in its capability to achieve coherence as they made some strategic changes in the CARE Network programme to link their target groups to government schemes, they put in place a performance management system policy and have revised their financial policy.

During the endline workshop some key organisational capacity changes were brought up by VTRC’S staff: Improved competency of staff in the Edugate Programme, improved capacity of staff to deliver SRH and HIV/AIDS programme and improved PME. These changes happened to overlap with the key changes that were selected for process tracing. As Red een Kind is the main funder of VTRC, their funding for trainings and support to the organisation have led to most of the organisational capacity changes in VTRC. How the MFS II funding was linked to the three identified key organisational capacity changes will be further be explained below in 5.3.

5.3 Attributing changes in organisational capacity to MFS II

This section aims to provide an answer to the second and fourth evaluation questions:

2. *To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*
4. *What factors explain the findings drawn from the questions above?*

To address the question of attribution it was agreed that for all the countries in the 5C study, the focus would be on the capability to act and commit and the capability to adapt and self-renew, with a focus on MFS II supported organisational capacity development interventions that were possibly related to these capabilities. ‘Process tracing’ was used to get more detailed information about the changes in these capabilities that were possibly related to the specific MFS II capacity development interventions. The organisational capacity changes that were focused on were:

- Improved competences of staff in the Edugate programme;
- Improved capacity of staff to deliver SRH and HIV/AIDS programme; and
- Improved Planning, Monitoring and Evaluation (PME).

The first two organisational capacity changes fall under the capability to act and commit. The last one (PME) falls under the capability to adapt and self-renew. The organisational capacity change areas that were chosen are based on document review as well as discussions with the SPO and CFA. Each of these organisational capacity changes is further discussed below.

The following issues are discussed for the MFS II funded activities that are related to the above mentioned organisational capacity changes:

- a. Design: the extent to which the MFS II supported capacity development intervention was well-designed. (Key criteria: relevance to the SPO; SMART objectives)
- b. Implementation: the extent to which the MFS II supported capacity development was implemented as designed (key criteria: design, according to plans during the baseline);
- c. Reaching objectives: the extent to which the MFS II capacity development intervention reached all its objectives (key criteria: immediate and long-term objectives, as formulated during the baseline);
- d. the extent to which the observed results are attributable to the identified MFS II supported capacity development intervention (reference made to detailed causal map, based on 'process tracing').

Please note that whilst (d) addresses the evaluation question related to attribution (evaluation question 2), the other three issues (a, b and c) have been added by the synthesis team as additional reporting requirements. This was done when fieldwork for the endline process had already started, and therefore inadequate information is available on this. Then again, this wasn't the purpose of this 5c evaluation.

Improved competences of staff in the Edugate programme

The following MFS II capacity development interventions supported by Red een Kind were linked to the key organisational capacity change "improved competences of staff in the Edugate programme":

1. Training on Theory of Change, 16-19 April 2012 (planned during the baseline);
2. Training on Participatory Integrated Child Development (PICD), 5 day workshop in April 2012 (planned during the baseline);
3. Trainings for tuition teachers on disability, lesson plans, child psychology, teaching methodology, quality education (2012-2014) (not planned during the baseline, but details provided during the endline).

The immediate and long term objectives of all the interventions that will be discussed under this key organisational capacity change were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically during the baseline, but rather asked about the expected or observed immediate and long term effects of the interventions.

Training on Theory of Change (ToC), 16-19 April 2012

Design

This intervention was planned during the baseline and had already taken place when the baseline workshop was conducted in November 2012. It is included here as well as in the causal maps and narratives because the effects of this training were observed during the endline and it came up during document review, workshop, interviews and self-assessments. The immediate objective of this training was that all the staff (including animators) learn about ToC, as discussions with staff that did not go to the training would take place and they would be consulted to finalise a Theory of Change for the CARE Network health project. The long term objective was to have a ToC, set goals at community or field level, have a more realistic programme, and to know the underlying assumptions to formulate pathways and indicators in the ToC.

During the baseline workshop VTRC formulated a number of conditions that needed to be in place in order for them to be able to "empower the community in quality child care" (their goal). Many conditions concern involving the community. The long term objective of setting goals at community level to have a more realistic programme is therefore very relevant for VTRC to e.g. work towards meeting the condition "involvement of community in programmes."

Implementation

This intervention was planned for and had already taken place prior to the baseline workshop. The CARE network coordinator, who is also the spokesperson for all projects, attended this training that took place in Dhaka, Bangladesh from 16-19 April 2012. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, as explained in the detailed causal map. The ToC workshop came up in the map and narrative on the organisational capacity change 'improved competences of staff in the Edugate programme'. In this regard we can conclude that this workshop contributed to improved knowledge and skills of the staff on participatory approach and child rights, as the staff gained a deeper understanding of the participatory approach through this TOC workshop and how to involve parents.

Though not the focus of this evaluation, we can provide an indication of the extent to which the objectives as formulated during the baseline, have been achieved. The immediate objective 'all the staff learn about ToC' has been achieved to some extent as HACI (partner of REK who supports VTRC in India) observed that being involved in the ToC training, helped in a better way of planning. The ToC still is not yet finalised, it is an evolving document. According to VTRC the immediate objective of "staff learning about ToC" has been partially achieved and is in process. The long term objective of having a ToC is not yet reached.

Training on Participatory Integrated Child Development (PICD), 5 day workshop in April 2012

Design

This intervention was planned during the baseline and had already taken place when the baseline workshop was conducted in November 2012, but the outcome could be seen in the improved capacity of staff of the last two years. The immediate objective of this training was for VTRC to move from an institution-based approach to a community-based approach, which would be more child-friendly (within families, not institutions). The long term objective was for VTRC to adopt the PICD techniques to initiate community development programmes.

During the baseline workshop VTRC formulated a number of conditions that are needed to be in place in order for them to be able to "empower the community in quality child care" (their goal). Many conditions concern involving the community. The objectives of moving towards a more community-based approach towards child-care and education is very relevant for VTRC to e.g. work towards meeting the condition "involvement of community in programmes."

Implementation

This intervention was planned for and had already taken place prior to the baseline workshop. The CARE network coordinator and the Edugate coordinator attended this training that took place in Dhaka, Bangladesh for 5 days, after the Theory of Change workshop in April 2012. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, as explained in the detailed causal map. The PICD workshop came up in the map and narrative on the organisational capacity change 'improved competences of staff in the Edugate programme'. In this regard we can conclude that this workshop contributed to improved knowledge and skills of the staff on participatory approach and child rights, as different tools were demonstrated to help participants learn to work in a participatory process with the community to move from institution based (e.g. orphanage) development to child centered development.

Though not the focus of this evaluation, we can provide an indication of the extent to which the objectives as formulated during the baseline, have been achieved. The immediate objective 'VTRC to move from an institution-based approach to a community-based approach, which would be more child-friendly' seems to have been reached to some extent. While HACI (partner of REK who supports VTRC in India) is not aware of VTRC using this approach in any new projects, from VTRC reports we can, however, conclude that an exercise of the participatory approach has been done with the community in the Salem and Madurai district.

Trainings for tuition teachers on disability, lesson plans, child psychology, teaching methodology, quality education (2012-2014).

Design

These trainings were not planned for during the baseline by the CFA. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. These trainings were described in a general way by the CFA (in this case HACI representing REK in India) as on the job training for field

staff. The immediate objective of these trainings, according to the CFA, was to improve the capacity of staff in preparing the community towards sustainability. The long term objective was formulated as "the community addresses their issues by themselves."

Working with the community and making them more self-reliant fits well with the goal that VTRC formulated during the baseline to "empower the community in quality child care." The immediate and long term objectives link to the conditions that VTRC formulated to achieve this goal: involvement of community in programmes, improved community awareness on rights of children and making government schemes/facilities accessible to the community. The formulated objectives, although not very specific, were therefore relevant for VTRC.

Implementation

This intervention was not planned for during the baseline and details about the specific design cannot be provided, since this wasn't the focus of the evaluation. Therefore, no judgement can be made on whether this intervention was implemented as designed. However, the following trainings for tuition teachers and supervisors took place:

- 2012: one 1 day training in February on lesson plan and teaching methodology, two 1 day trainings in March on child rights and; leadership and personality, two 1 day trainings in April on disability, one 1 day training in June on the MDGs, 1 one day training in August on quality education, two 1 day trainings in September on disability and PRA, one 1 day training in December on prospective and retrospectives.
- 2013: one 1 day training in February on local resource mobilisation, one 3 day training in May on lesson plan and child psychology, one 1 day training in June on handling multiclass, one 1 day training in July on project objective and goal, one 1 day training in October on motivation, trainings in December on disability and rapport building with the community.
- 2014: two 1 day trainings in February on teaching methodologies, goals, objectives and the role of the tuition teacher, one 1 day training in March on learning skills, one 1 day training in April on low vision and slow learners, one 1 day training in June on impediments to academic achievements and one 1 day training in July on 3R,(Reading, Writing, Arithmetic) and handling multi class technique.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, as explained in the detailed causal map. Some of the trainings for tuition teachers came up in the map and narrative on the organisational capacity change 'improved competences of staff in the Edugate programme': training on lesson plan and child psychology in May 2013, training on disability in December 2013 and training on developing lesson plan, teaching methodology and quality education in February, May and August of 2012. We can conclude that these trainings contributed to improved skills and knowledge of tuition teachers to apply different teaching methods, provide appropriate and useful information through innovative teaching and develop lesson plans.

Though not the focus of this evaluation, we can provide an indication of the extent to which the objectives as formulated during the endline, have been achieved. The immediate objective was 'to improve the capacity of staff in preparing the community towards sustainability,' has been achieved according to the CFA. The long term objective 'the community addresses their issues by themselves' has not yet been achieved. According to the CFA, the community being prepared for sustainability will be established only after the inputs are withdrawn. According to VTRC the tuition teachers have been preparing the community towards sustainability and the teachers will continue to run the centres with community support beyond 2015.

Attribution of observed results to MFS II capacity development interventions

The improved competency of staff in the Edugate programme was due to improved knowledge and skills of the staff on participatory approach and child rights; and improved knowledge and skills of the tuition teachers (see 4.3.1). Both these organisational capacity changes can be fully attributed to MFS II supported capacity development interventions. The improvement on participatory approach and child rights can be attributed to the workshop on PICD and the ToC workshop (both funded by MFS II and discussed above).

For example the ToC workshop helped staff in the Edugate programme to more attentively involve parents and set up School Management Committees to lobby for target children to ensure their right to access government schemes. The improved skills and knowledge of the tuition teachers can be attributed to the trainings they received in February, May and August of 2012 on developing lesson

plans, teaching methodology and quality education. In particular, a three day training on lesson plan and child psychology in May 2013 and a four day training programme on disability in December 2013 further developed the skills and knowledge of the tuition teachers on the respective topics. Since REK remains to be the main funder of VTRC and the Edugate programme is completely funded by REK under MFS II, the improvement in the competency of staff in the Edugate programme can be fully attributed to MFS II funded capacity building interventions.

Improved capacity of staff to deliver SRH and HIV/AIDS programme

The following MFS II capacity development interventions are linked to the key organisational capacity change "improved capacity of staff to deliver SRH and HIV/AIDS programme" (please also see section 4.3):

1. Behaviour Change Communication workshop facilitated by ICCO for the CARE Network project, 5-7 September 2012 (planned during the baseline);
2. Training on Theory of Change, 16-19 April 2012 (planned during the baseline)
3. Participation in Health Bridge Alliance (including going to meetings) (not planned during baseline, not mentioned as a capacity development intervention supported by REK in the endline, but funded by MFS II).

The MFS II capacity development intervention 'ToC workshop' is linked to the key organisational capacity change "improved capacity of staff to deliver SRH and HIV/AIDS programme" has been described under the previous key change (improved competence of staff in the Edugate programme), and only the "reaching objectives" part will be described. The capacity development interventions for which no objectives have been provided during baseline or endline will only be discussed when addressing the attribution question (in this case: participation in HBA).

The immediate and long term objectives of all the interventions (BCC and ToC workshop) that will be discussed under this key organisational capacity change were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically during the baseline, but rather asked about the expected or observed immediate and long term effects of the interventions.

Behaviour Change Communication (BCC) workshop facilitated by ICCO for the CARE Network project, 5-7 September 2012

Design

This intervention was planned during the baseline and had already taken place when the baseline workshop was conducted in November 2012, but the outcome could be seen in the improved capacity of staff of the last two years. The immediate objective of this training was for VTRC to have a more planned approach and to have a different way of tracking results. The long term objective was formulated as "behaviour changes, violence reduced, changes in the communities for a better life."

During the baseline VTRC expressed the need to develop an automated management information system (MIS). In order to do so they felt they needed to work on capturing benefits and outcomes to make links between plans, programmes and achievements on the ground. The immediate objective is therefore very relevant for VTRC. The long term objective is related to VTRC's mission to provide care, support and reduce the vulnerability of children and women. The objectives are therefore relevant for VTRC.

Implementation

This intervention was planned for and had already taken place prior to the baseline workshop. The CARE network coordinator attended this training that took place from 5-7 September 2012 in Hyderabad. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, as explained in the detailed causal map. The BCC workshop came up in the map and narrative on the organisational capacity change 'improved capacity of staff to deliver SRH and HIV/AIDS programme.' We can conclude that this workshop contributed to more awareness and knowledge among VTRC staff on SRH and HIV/AIDS, as it helped staff to improve their knowledge on the determinants of behavioural change communication

like risk perception, attitude, social influence and self- efficacy which could be applied in their SRH and HIV/AIDS programme.

Though not the focus of this evaluation, we can provide an indication of the extent to which the objectives as formulated during the baseline, have been achieved. The immediate objective 'VTRC to have a more planned approach and to have a different way of tracking results' has been achieved to some extent. While HACI (partner of REK who supports VTRC in India) did not really observe any immediate effects of this training, there was some fine-tuning of the indicators which were incorporated into the 2013 Annual plan for the CARE Network project.

Training on Theory of Change (ToC), 16-19 April 2012

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, as explained in the detailed causal map. The ToC workshop came up in the map and narrative on the organisational capacity change 'improved capacity of staff to deliver SRH and HIV/AIDS programme.' In this regard we can conclude that this workshop contributed to awareness and knowledge on SRH and HIV/AIDS among VTRC staff, specifically on behaviour change measures that VTRC has later used in its strategic plan for this CARE Network project.

Though not the focus of this evaluation, under the organisational capacity change "improved competences of staff in the Edugate programme" it has already been discussed to what extent the objectives that were formulated during the endline have been achieved.

Attribution of observed results to MFS II capacity development interventions

The improved capacity of the staff to deliver the SRH and HIV/AIDS programme was due to increased awareness and knowledge on SRH and HIV/AIDS among VTRC staff and because of the development of IEC material and L&A curriculum (see 4.3.2). The increased awareness can be attributed to trainings of staff in SRH and HIV/AIDS and sharing and learnings in the Health Bridge Alliance (participation in alliance and meetings MFS II funded). One of the trainings was a training on SRH and prevention of HIV which was funded by VTRC's own funds on 25-26 April 2013. The change agents (field level staff) gained more knowledge on HIV related symptoms and prevention methods. The other trainings were funded by MFS II and included the ToC training and the Behaviour Change communication (BCC) workshop (both mentioned above). The ToC training helped the CARE network coordinator of VTRC to understand the pathways toward achieving the goal of empowering communities to access quality health care services for SRH and HIV prevention. Furthermore it improved his knowledge on behaviour change measures which was taken up in VTRC's strategic plan. The BCC workshop helped VTRC staff to improve their knowledge on determinants of behavioural change like risk perception, attitude and social influence, which was very relevant for the SRH and HIV/AIDS programme as most of the outcomes concern behavioural change. The sharing and learning within the HBA happened during 3 meetings on 5 September 2012, 19-21 November 2012 and in August 2013, and was possible because VTRC became a member of this alliance through its MFS II funded SRH and HIV/AIDS CARE Network programme. While not directly an MFS II funded intervention of REK, these meetings were funded by MFS II. Most of the change in the increased awareness and knowledge on SRH and HIV/AIDS among VTRC staff can therefore be attributed to MFS II funded capacity development interventions. As for the Development of IEC material and L&A curriculum this can also be attributed to the HBA meetings. During these meetings VTRC and other partners in the alliance were urged to create awareness and lobby on health related issues and trained in developing a lobby and advocacy curriculum on the topic of SRH and HIV/AIDS. All in all, besides from the one training that was funded by VTRC's own funds, the improved capacity of staff to deliver the SRH and HIV/AIDS programme can mainly be attributed to MFS II funded capacity development interventions, and partly to becoming a member of the Health Bridge Alliance, which was also stimulated by being involved in the MFS II funded SRH and HIV/AIDS CARE Network programme.

Improved Planning, Monitoring and Evaluation (PME).

The following MFS II capacity development intervention supported by Red een Kind is linked to the key organisational capacity change "improved Planning, Monitoring and Evaluation (PME)" mainly for the CARE network (SRH and HIV/AIDS) programme and the Edugate programme (please also see section 4.3):

-
1. Advanced PMEL training in Nepal, 11-17 September 2013 (not planned during the baseline, but details provided during the endline);
 2. HACI provides feedback on project progress, quarterly reports and the PME system and through Midterm evaluation of the CARE Network project (not planned during the baseline, no details provided during the endline);
 3. Outcome study conducted by HACI for the Edugate programme (not planned during the baseline, no details provided during the endline)
 4. Participation in Health Bridge Alliance (including going to meetings) (not planned during baseline, not mentioned as a capacity development intervention supported by REK in the endline, but funded by MFS II).
 5. Training on Theory of Change, 16-19 April 2012 (planned during the baseline);
 6. Training on Participatory Integrated Child Development (PICD), 5 day workshop in April 2012 (planned during the baseline);

Below the interventions will be discussed that were either planned during the baseline or not planned during the baseline, but details on the intervention were provided during the endline. The capacity development interventions for which no objectives have been provided during baseline or endline will only be discussed when addressing the attribution question (in this case: Feedback from HACI, outcome study by HACI, participation in HBA). The ToC and PICD workshop also came up under other key organisational capacity changes, for these two workshops only the "reaching objectives" part will be described.

The immediate and long term objectives of all the interventions (APMEL, ToC and PICD workshops) that will be discussed under this key organisational capacity change were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically during the baseline, but rather asked about the expected or observed immediate and long term effects of the interventions.

Advanced PMEL (APMEL) training in Nepal, 11-17 September 2013

Design

This intervention was not planned for by the CFA during the baseline. The immediate effect that was formulated by the CFA during the endline was: "to improve on the PMEL systems that are being implemented in the project." The long term objective was articulated as: "to enable effective decision making based on organised data and information that is relevant and timely."

During the baseline VTRC expressed the need to develop an automated management information system (MIS). In order to do so they felt they needed to work on capturing benefits and outcomes to make links between plans, programmes and achievements on the ground. Furthermore, they wanted to train staff on collecting, organising information and using it in programme strategy development. The immediate and long term objective are therefore very relevant for VTRC.

Implementation

This intervention was not planned for by the CFA during the baseline and details about the specific design cannot be provided, since this wasn't the focus of the evaluation. Therefore, no judgement can be made on whether this intervention was implemented as designed. However, from the document review, self-assessments and workshop we can conclude that this training took place from 11-17 September 2013 in Nepal. The CARE Network coordinator of VTRC attended this training.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, as explained in the detailed causal map. The APMEL training came up in the map and narrative on the organisational capacity change 'improved Planning, Monitoring and Evaluation (PME).' We can conclude that this training contributed to improved analytical skills of VTRC staff which in turn led to improved reporting. The training also contributed to a more systematic review system which led to better gap identification which in turn led to improved planning and review.

Though not the focus of this evaluation, we can provide an indication of the extent to which the objectives as formulated during the baseline, have been achieved. The short term objective "to improve on the PMEL systems that are being implemented in the project," has been reached to some extent. The CFA has observed that the CARE network coordinator gained skills in reporting and

systematic analysis of data. The reports of VTRC have gotten better after this training as they now include e.g. success stories. The CARE network coordinator indicated that it helped him to develop smart indicators and in report writing. The long term objective “to enable effective decision making based on organised data and information that is relevant and timely,” is in development as VTRC slightly improved its strategic use of M&E.

Training on Theory of Change (ToC), 16-19 April 2012

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, as explained in the detailed causal map. The ToC workshop came up in the map and narrative on the organisational capacity change ‘improved PME.’ In this regard we can conclude that this workshop contributed to improved planning and review because the ToC has helped in planning a process of cooperation, strengthening and lobbying with the state health systems for better implementation.

Though not the focus of this evaluation, under the organisational capacity change “improved competences of staff in the Edugate programme” it has already been discussed to what extent the objectives that were formulated during the endline have been achieved.

Training on Participatory Integrated Child Development (PICD), 5 day workshop in April 2012

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, as explained in the detailed causal map. The PICD workshop came up in the map and narrative on the organisational capacity change ‘improved PME.’ In this regard we can conclude that this workshop contributed to on the one hand organising stakeholder meetings for better gap identification and on the other hand participatory planning and review which together led to improved planning and review.

Though not the focus of this evaluation, under the organisational capacity change “improved competences of staff in the Edugate programme” it has already been discussed to what extent the objectives that were formulated during the endline have been achieved.

Attribution of observed results to MFS II capacity development interventions

The improved planning monitoring and evaluation of VTRC was due to improved reporting and improved planning and review (also see 4.3.3). Improved reporting can be attributed to improved analytical skills of VTRC staff which can partly be attributed to the Advanced PMEL training (funded by MFS II) and partly to the feedback from the donor (REK, MFS II) and network partners in the HBA (MFS II funded participation). REK through HACI provides feedback on project progress and the PME system. They have done so by conducting a midterm evaluation of the CARE Network project, providing direct feedback when visiting the projects, providing feedback on quarterly reports and indicators that are used. This support from HACI is funded under MFS II. The improved reporting can thus be fully attributed to MFS II funded capacity development interventions.

The improved planning and review can be attributed to better identification of gaps in planning, the ToC workshop and participatory planning and review. The better identification of gaps took place because of an organisation scan that is done bi-yearly for the HBA partners. VTRC is part of the HBA because of their MFS II funded SRH and HIV/AIDS CARE Network programme and its participation and in the alliance and attendance to meetings is funded by MFS II. Gaps were also better identified because of more systematic review meetings which was primarily a result of the MFS II funded APMEEL training and a peer review system that was implemented after becoming a member of the HBA. Finally the gaps in planning were better identified because of an outcome study conducted by HACI for the Edugate programme and because of organising stakeholder meetings with e.g. parents to get their input for the annual plans. The outcome study was funded by MFS II and the stakeholder meetings were a result of the Participatory Integrated Child Development (PICD) workshop that VTRC staff attended in April 2012 in Bangladesh (funded by MFS II). Planning also improved because of participatory planning and review, which can be attributed to the PICD workshop (funded by MFS II) and to the programmatic approach that VTRC was trained in as a member of the HBA. This programmatic approach is a process where multiple stakeholders work together based on a joint analysis of a problematic, shared vision and purpose and a clear perspective of on the results of the cooperation. In sum, the improved planning and review can be almost entirely attributed to MFS II funded capacity development interventions.

In conclusion, as REK (under MFS II) was the main funder of VTRC and has especially supported the organisation in terms of their PME, all the improvements in terms of PME, especially reporting and planning, can to a large extent be attributed to MFS II funded capacity development interventions, in particular trainings (advanced PMEL; PICD; ToC); feedback from HACI and (MFS II) network partners; and the outcome study and being a member of the Health Bridge Alliance and taking part in their meetings. This alliance is led by ICCO, but VTRC is a member because they work on the CARE Network project that is funded under MFS II by REK.

Appendix 1 Methodological approach & reflection

Introduction

This appendix describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around four key evaluation questions:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

Note: the methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report. At the end of this appendix a brief methodological reflection is provided.

Changes in partner organisation's capacity – evaluation question 1

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?**

This question was mainly addressed by reviewing changes in 5c indicators, but additionally a 'general causal map' based on the SPO perspective on key organisational capacity changes since the baseline has been developed. Each of these is further explained below. The development of the general causal map is integrated in the steps for the endline workshop, as mentioned below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012.¹³ Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

1. **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
2. **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
3. **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
4. **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
5. **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

¹³ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Below each of these steps is further explained.

*Step 1. Provide the **description of indicators** in the relevant formats – CDI team*

- These formats were to be used when collecting data from SPO staff, CFA, partners, and consultants. For each of these respondents different formats have been developed, based on the list of 5C indicators, similar to the procedure that was used during the baseline assessment. The CDI team needed to add the 2012 baseline description of each indicator. The idea was that each respondent would be requested to review each description per indicator, and indicate whether the current situation is different from the baseline situation, how this situation has changed, and what the reasons for the changes in indicators are. At the end of each format, a more general question is added that addresses how the organisation has changed its capacity since the baseline, and what possible reasons for change exist. Please see below the questions asked for each indicator as well as the more general questions at the end of the list of indicators.

General questions about key changes in the capacity of the SPO

What do you consider to be the key changes in terms of how the organisation/ SPO has developed its capacity since the baseline (2012)?

What do you consider to be the main explanatory reasons (interventions, actors or factors) for these changes?

List of questions to be asked for each of the 5C indicators (The entry point is the the description of each indicator as in the 2012 baseline report):

1. *How has the situation of this indicator changed compared to the situation during the baseline in 2012? Please tick one of the following scores:*
 - -2 = Considerable deterioration
 - -1 = A slight deterioration
 - 0 = No change occurred, the situation is the same as in 2012
 - +1 = Slight improvement
 - +2 = Considerable improvement
2. *Please describe what exactly has changed since the baseline in 2012*

3. *What interventions, actors and other factors explain this change compared to the baseline situation in 2012? Please tick and describe what interventions, actors or factors influenced this indicator, and how. You can tick and describe more than one choice.*
- Intervention, actor or factor at the level of or by **SPO**:
 - Intervention, actor or factor at the level of or by the **Dutch CFA (MFS II funding)**:
 - Intervention, actor or factor at the level of or by the **other funders**:
 - **Other** interventions, actors or factors:
 - Don't know.

Step 2. Review the descriptions per indicator – in-country team & CDI team

Before the in-country team and the CDI team started collecting data in the field, it was important that they reviewed the description for each indicator as described in the baseline reports, and also added to the endline formats for review by respondents. These descriptions are based on document review, observation, interviews with SPO staff, CFA staff and external respondents during the baseline. It was important to explain this to respondents before they filled in the formats.

Step 3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)

The CDI team was responsible for collecting data from the CFA:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet – CFA perspective.

The in-country team was responsible for collecting data from the SPO and from external respondents (except CFA). The following formats were sent before the fieldwork started:

- 5C Endline support to capacity sheet – SPO perspective.
- 5C Endline interview guides for externals: partners; OD consultants.

Step 4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team

The CDI team, in collaboration with the in-country team, collected the following documents from SPOs and CFAs:

- Project documents: project proposal, budget, contract (Note that for some SPOs there is a contract for the full MFS II period 2011-2015; for others there is a yearly or 2-yearly contract. All new contracts since the baseline in 2012 will need to be collected);
- Technical and financial progress reports since the baseline in 2012;.
- Mid-term evaluation reports;
- End of project-evaluation reports (by the SPO itself or by external evaluators);
- Contract intake forms (assessments of the SPO by the CFA) or organisational assessment scans made by the CFA that cover the 2011-2014 period;
- Consultant reports on specific inputs provided to the SPO in terms of organisational capacity development;
- Training reports (for the SPO; for alliance partners, including the SPO);
- Organisational scans/ assessments, carried out by the CFA or by the Alliance Assessments;
- Monitoring protocol reports, especially for the 5C study carried out by the MFS II Alliances;
- Annual progress reports of the CFA and of the Alliance in relation to capacity development of the SPOs in the particular country;
- Specific reports that are related to capacity development of SPOs in a particular country.

The following documents (since the baseline in 2012) were requested from SPO:

- Annual progress reports;
- Annual financial reports and audit reports;
- Organisational structure vision and mission since the baseline in 2012;
- Strategic plans;

- Business plans;
- Project/ programme planning documents;
- Annual work plan and budgets;
- Operational manuals;
- Organisational and policy documents: finance, human resource development, etc.;
- Monitoring and evaluation strategy and implementation plans;
- Evaluation reports;
- Staff training reports;
- Organisational capacity reports from development consultants.

The CDI team will code these documents in NVivo (qualitative data analysis software program) against the 5C indicators.

Step 5. Prepare and organise the field visit to the SPO – in-country team

Meanwhile the in-country team prepared and organised the logistics for the field visit to the SPO:

- **General endline workshop** consisted about one day for the self-assessments (about ½ to ¾ of the day) and brainstorm (about 1 to 2 hours) on key organisational capacity changes since the baseline and underlying interventions, factors and actors ('general causal map'), see also explanation below. This was done with the five categories of key staff: managers; project/ programme staff; monitoring and evaluation staff; admin & HRM staff; field staff. Note: for SPOs involved in process tracing an additional 1 to 1½ day workshop (managers; program/project staff; monitoring and evaluation staff) was necessary. See also step 7;
- **Interviews with SPO staff** (roughly one day);
- **Interviews with external respondents** such as partners and organisational development consultants depending on their proximity to the SPO. These interviews could be scheduled after the endline workshop and interviews with SPO staff.

General causal map

During the 5C endline process, a 'general causal map' has been developed, based on key organisational capacity changes and underlying causes for these changes, as perceived by the SPO. The general causal map describes cause-effect relationships, and is described both as a visual as well as a narrative.

As much as possible the same people that were involved in the baseline were also involved in the endline workshop and interviews.

Step 6. Interview the CFA – CDI team

The CDI team was responsible for sending the sheets/ formats to the CFA and for doing a follow-up interview on the basis of the information provided so as to clarify or deepen the information provided. This relates to:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet - CFA perspective.

Step 7. Run the endline workshop with the SPO – in-country team

This included running the endline workshop, including facilitation of the development of the general causal map, self-assessments, interviews and observations. Particularly for those SPOs that were selected for process tracing all the relevant information needed to be analysed prior to the field visit, so as to develop an initial causal map. Please see Step 6 and also the next section on process tracing (evaluation question two).

An endline workshop with the SPO was intended to:

- Explain the purpose of the fieldwork;
- Carry out in the self-assessments by SPO staff subgroups (unless these have already been filled prior to the field visits) - this may take some 3 hours.
- Facilitate a brainstorm on key organisational capacity changes since the baseline in 2012 and underlying interventions, factors and actors.

Purpose of the fieldwork: to collect data that help to provide information on what changes took place in terms of organisational capacity development of the SPO as well as reasons for these changes. The baseline that was carried out in 2012 was to be used as a point of reference.

Brainstorm on key organisational capacity changes and influencing factors: a brainstorm was facilitated on key organisational capacity changes since the baseline in 2012. In order to kick start the discussion, staff were reminded of the key findings related to the historical time line carried out in the baseline (vision, mission, strategies, funding, staff). This was then used to generate a discussion on key changes that happened in the organisation since the baseline (on cards). Then cards were selected that were related to organisational capacity changes, and organised. Then a 'general causal map' was developed, based on these key organisational capacity changes and underlying reasons for change as experienced by the SPO staff. This was documented as a visual and narrative. This general causal map was to get the story of the SPO on what they perceived as key organisational capacity changes in the organisation since the baseline, in addition to the specific details provided per indicator.

Self-assessments: respondents worked in the respective staff function groups: management; programme/ project staff; monitoring and evaluation staff; admin and HRM staff; field staff. Staff were assisted where necessary so that they could really understand what it was they were being asked to do as well as what the descriptions under each indicator meant.

Note: for those SPOs selected for process tracing an additional endline workshop was held to facilitate the development of detailed causal maps for each of the identified organisational change/ outcome areas that fall under the capability to act and commit, and under the capability to adapt and self-renew, and that are likely related to capacity development interventions by the CFA. See also the next section on process tracing (evaluation question two). It was up to the in-country team whether this workshop was held straight after the initial endline workshop or after the workshop and the follow-up interviews. It could also be held as a separate workshop at another time.

Step 8. Interview SPO staff – in-country team

After the endline workshop (developing the general causal map and carrying out self-assessments in subgroups), interviews were held with SPO staff (subgroups) to follow up on the information that was provided in the self-assessment sheets, and to interview staff that had not yet provided any information.

Step 9. Fill-in observation sheets – in-country team

During the visit at the SPO, the in-country team had to fill in two sheets based on their observation:

- 5C Endline observation sheet;
- 5C Endline observable indicators.

Step 10. Interview externals – in-country team & CDI team

The in-country team also needed to interview the partners of the SPO as well as organisational capacity development consultants that have provided support to the SPO. The CDI team interviewed the CFA.

*Step 11. **Upload and auto-code all the formats** collected by in-country team and CDI team – CDI team*

The CDI team was responsible for uploading and auto-coding (in Nvivo) of the documents that were collected by the in-country team and by the CDI team.

*Step 12. Provide the **overview of information** per 5C indicator to in-country team – CDI team*

After the analysis in NVivo, the CDI team provided a copy of all the information generated per indicator to the in-country team for initial analysis.

*Step 13. **Analyse the data and develop a draft description** of the findings per indicator and for the general questions – in-country team*

The in-country team provided a draft description of the findings per indicator, based on the information generated per indicator. The information generated under the general questions were linked to the general causal map or detailed process tracing related causal map.

*Step 14. **Analyse the data and finalize the description** of the findings per indicator, per capability and general – CDI team*

The CDI team was responsible for checking the analysis by the in-country team with the Nvivo generated data and to make suggestions for improvement and ask questions for clarification to which the in-country team responded. The CDI team then finalised the analysis and provided final descriptions and scores per indicator and also summarize these per capability and calculated the summary capability scores based on the average of all indicators by capability.

*Step 15. **Analyse the information** in the general causal map –in-country team & CDI team*

The general causal map based on key organisational capacity changes as perceived by the SPO staff present at the workshop, was further detailed by in-country team and CDI team, and based on the notes made during the workshop and where necessary additional follow up with the SPO. The visual and narrative was finalized after feedback by the SPO. During analysis of the general causal map relationships with MFS II support for capacity development and other factors and actors were identified. All the information has been reviewed by the SPO and CFA.

Attributing changes in partner organisation's capacity – evaluation question 2

This section describes the data collection and analysis methodology for answering the second evaluation question: **To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?**

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process. The box below provides some background information on process tracing.

Background information on process tracing

The essence of process tracing research is that scholars want to go beyond merely identifying correlations between independent variables (Xs) and outcomes (Ys). Process tracing in social science is commonly defined by its addition to trace causal mechanisms (Bennett, 2008a, 2008b; Checkle, 2008; George & Bennett, 2005). A causal mechanism can be defined as “a complex system which produces an outcome by the interaction of a number of parts” (Glennan, 1996, p. 52). Process tracing involves “attempts to identify the intervening causal process – the causal chain and causal mechanism – between an independent variable (or variables) and the outcome of the dependent variable” (George & Bennett, 2005, pp. 206-207).

Process tracing can be differentiated into three variants within social science: theory testing, theory building, and explaining outcome process tracing (Beach & Pedersen, 2013).

Theory testing process tracing uses a theory from the existing literature and then tests whether evidence shows that each part of hypothesised causal mechanism is present in a given case, enabling within case inferences about whether the mechanism functioned as expected in the case and whether the mechanism as a whole was present. No claims can be made however, about whether the mechanism was the only cause of the outcome.

Theory building process tracing seeks to build generalizable theoretical explanations from empirical evidence, inferring that a more general causal mechanism exists from the fact of a particular case.

Finally, explaining outcome process tracing attempts to craft a minimally sufficient explanation of a puzzling outcome in a specific historical case. Here the aim is not to build or test more general theories but to craft a (minimally) sufficient explanation of the outcome of the case where the ambitions are more case centric than theory oriented.

Explaining outcome process tracing is the most suitable type of process tracing for analysing the causal mechanisms for selected key organisational capacity changes of the SPOs. This type of process tracing can be thought of as a single outcome study defined as seeking the causes of the specific outcome in a single case (Gerring, 2006; in: Beach & Pedersen, 2013). Here the ambition is to craft a minimally sufficient explanation of a particular outcome, with sufficiency defined as an explanation that accounts for all of the important aspects of an outcome with no redundant parts being present (Mackie, 1965).

Explaining outcome process tracing is an iterative research strategy that aims to trace the complex conglomerate of systematic and case specific causal mechanisms that produced the outcome in question. The explanation cannot be detached from the particular case. Explaining outcome process tracing refers to case studies whose primary ambition is to explain particular historical outcomes, although the findings of the case can also speak to other potential cases of the phenomenon. Explaining outcome process tracing is an iterative research process in which ‘theories’ are tested to see whether they can provide a minimally sufficient explanation of the outcome. Minimal sufficiency is defined as an explanation that accounts for an outcome, with no redundant parts. In most explaining outcome studies, existing theorisation cannot provide a sufficient explanation, resulting in a second stage in which existing theories are re-conceptualised in light of the evidence gathered in the preceding empirical analysis. The conceptualisation phase in explaining outcome process tracing is therefore an iterative research process, with initial mechanisms re-conceptualised and tested until the result is a theorised mechanism that provides a minimally sufficient explanation of the particular outcome.

Below a description is provided of how SPOs are selected for process tracing, and a description is provided on how this process tracing is to be carried out. Note that this description of process tracing provides not only information on the extent to which the changes in organisational development can be attributed to MFS II (evaluation question 2), but also provides information on other contributing factors and actors (evaluation question 4). Furthermore, it must be noted that the evaluation team has developed an adapted form of ‘explaining outcome process tracing’, since the data collection and analysis was an iterative process of research so as to establish the most realistic explanation for a particular outcome/ organisational capacity change. Below selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

ETHIOPIA

For Ethiopia the capabilities that are mostly targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 1

The extent to which the Dutch NGO explicitly targets the following capabilities – Ethiopia

Capability to:	AMREF	CARE	ECFA	FSCE	HOA- REC	HUND EE	NVEA	OSRA	TTCA
Act and commit	5	4	5	5	5	3	4	4	3
Deliver on development objectives	2	1	1	1	2	1	1	2	1
Adapt and self-renew	4	2	3	4	2	5	3	3	3
Relate	3	1	2	2	3	2	1	3	1
Achieve coherence	2	2	1	1	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Ethiopia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: AMREF, ECFA, FSCE, HUNDEE. In fact, six SPOs would be suitable for process tracing. We just selected the first one per CFA following the criteria of not including more than one SPO per CFA for process tracing

Table 2

SPOs selected for process tracing – Ethiopia

Ethiopia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
AMREF	Dec 2015	Yes	Yes	Yes	Yes	AMREF NL	Yes
CARE	Dec 31, 2015	Partly	Yes	Yes	Yes – slightly	CARE Netherlands	No - not fully matching
ECFA	Jan 2015	Yes	Yes	Yes	Yes	Child Helpline International	Yes
FSCE	Dec 2015	Yes	Yes	Yes	Yes	Stichting Kinderpostzegels Netherlands (SKN); Note: no info from Defence for Children – ECPAT Netherlands	Yes
HOA-REC	Sustainable Energy project (ICCO Alliance): 2014 Innovative WASH (WASH Alliance): Dec 2015	Yes	Yes	Yes	Yes - slightly	ICCO	No - not fully matching
HUNDEE	Dec 2014	Yes	Yes	Yes	Yes	ICCO & IICD	Yes
NVEA	Dec 2015 (both)	Yes	Yes	Yes	Yes	Edukans Foundation (under two consortia); Stichting Kinderpostzegels Netherlands (SKN)	Suitable but SKN already involved for process tracing FSCE
OSRA	C4C Alliance project (farmers marketing): December 2014 ICCO Alliance project (zero grazing: 2014 (2 nd phase)	Yes	Yes	Yes	Yes	ICCO & IICD	Suitable but ICCO & IICD already involved for process tracing - HUNDEE
TTCA	June 2015	Partly	Yes	No	Yes	Edukans Foundation	No - not fully matching

INDIA

For India the capability that is mostly targeted by CFAs is the capability to act and commit. The next one in line is the capability to adapt and self-renew. See also the table below in which a higher score means that the specific capability is more intensively targeted.

Table 3

The extent to which the Dutch NGO explicitly targets the following capabilities – India¹⁴

Capability to:	BVHA	COUNT	DRISTI	FFID	Jana Vikas	Samar thak Samiti	SMILE	SDS	VTRC
Act and commit	5	3	4	4	4	4	4	3	5
Deliver on development objectives	1	5	1	1	1	1	1	2	1
Adapt and self-renew	2	2	1	3	1	1	4	1	4
Relate	3	1	1	1	1	1	2	1	2
Achieve coherence	1	1	1	4	1	1	1	1	2

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, India.

Below you can see a table describing when the contract with the SPO is to be ended and whether SPO and the CFA both expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BVHA, COUNT, FFID, SMILE and VTRC. Except for SMILE (capability to act and commit only), for the other SPOs the focus for process tracing can be on the capability to act and commit and on the capability to adapt and self-renew.

Table 4

SPOs selected for process tracing – India

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BVHA	2014	Yes	Yes	Yes	Yes	Simavi	Yes; both capabilities
COUNT	2015	Yes	Yes	Yes	Yes	Woorden Daad	Yes; both capabilities
DRISTI	31-03-2012	Yes	Yes	No	no	Hivos	No - closed in 2012
FFID	30-09-2014	Yes	Yes	Yes	Yes	ICCO	Yes

¹⁴ RGVN, NEDSF and Women's Rights Forum (WRF) could not be reached timely during the baseline due to security reasons. WRF could not be reached at all. Therefore these SPOs are not included in Table 1.

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew –by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Jana Vikas	2013	Yes	Yes	Yes	No	Cordaid	No - contract is and the by now; not fully matching focus
NEDSF							No – delayed baseline
RGVN							No - delayed baseline
Samarthak Samiti (SDS)	2013 possibly longer	Yes	Yes	Yes	No	Hivos	No - not certain of end date and not fully matching focus
Shivi Development Society (SDS)	Dec 2013 intention 2014	Yes	Yes	Yes	No	Cordaid	No - not fully matching focus
Smile	2015	Yes	Yes	Yes	Yes	Wilde Ganzen	Yes; first capability only
VTRC	2015	Yes	Yes	Yes	Yes	Stichting Red een Kind	Yes; both capabilities

INDONESIA

For Indonesia the capabilities that are most frequently targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 5

The extent to which the Dutch NGO explicitly targets the following capabilities – Indonesia

Capability to:	ASB	Daya ikologi	ECPAT	GSS	Lem bage Kita	Pt. PPMA	Rifka Annisa	WIIP	Yad upa	Yayasan Kelola	YPI	YRBI
Act and commit	4	4	4	5	4	4	5	3	3	2	5	4
Deliver on development objectives	1	1	1	2	2	1	2	1	1	1	1	1
Adapt and self-renew	3	1	2	4	2	3	4	4	1	1	4	3
Relate	1	1	2	3	3	2	1	2	2	2	3	2
Achieve coherence	1	1	1	2	1	1	2	2	1	1	2	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Indonesia.

The table below describes when the contract with the SPO is to be ended and whether both SPO and the CFA expect to focus on these two selected capabilities (MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: ASB, ECPAT, Pt.PPMA, YPI, YRBI.

Table 6

SPOs selected for process tracing – Indonesia

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
ASB	February 2012; extension Feb,1, 2013 – June,30, 2016	Yes	Yes	Yes	Yes	Hivos	Yes
Dayakologi	2013; no extension	Yes	Yes	Yes	No	Cordaid	No: contract ended early and not matching enough
ECPAT	August 2013; Extension Dec 2014	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	Yes
GSS	31 December 2012; no extension	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	No: contract ended early
Lembaga Kita	31 December 2012; no extension	Yes	Yes	No	Yes	Free Press Unlimited - Mensen met een Missie	No - contract ended early
Pt.PPMA	May 2015	Yes	Yes	No	Yes	IUCN	Yes, capability to act and commit only
Rifka Annisa	Dec, 31 2015	No	Yes	No	Yes	Rutgers WPF	No - no match between expectations CFA and SPO
WIIP	Dec 2015	Yes	Not MFS II	Yes	Not MFS II	Red Cross	No - Capacity development interventions are not MFS II financed. Only some overhead is MFS II

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Yayasan Kelola	Dec 30, 2013; extension of contract being processed for two years (2014-2015)	Yes	Not really	Yes	Not really	Hivos	No - no specific capacity development interventions planned by Hivos
YPI	Dec 31, 2015	Yes	Yes	Yes	Yes	Rutgers WPF	Yes
YRBI	Oct, 30, 2013; YRBI end of contract from 31st Oct 2013 to 31st Dec 2013. Contract extension proposal is being proposed to MFS II, no decision yet.	Yes	Yes	Yes	Yes	ICCO	Yes
Yadupa	Under negotiation during baseline; new contract 2013 until now	Yes	Nothing committed	Yes	Nothing committed	IUCN	No, since nothing was committed by CFA

LIBERIA

For Liberia the situation is arbitrary which capabilities are targeted most CFA's. Whilst the capability to act and commit is targeted more often than the other capabilities, this is only so for two of the SPOs. The capability to adapt and self-renew and the capability to relate are almost equally targeted for the five SPOs, be it not intensively. Since the capability to act and commit and the capability to adapt and self-renew are the most targeted capabilities in Ethiopia, India and Indonesia, we choose to focus on these two capabilities for Liberia as well. This would help the synthesis team in the further analysis of these capabilities related to process tracing. See also the table below.

Table 7

The extent to which the Dutch NGO explicitly targets the following capabilities – Liberia

Capability to:	BSC	DEN-L	NAWOCOL	REFOUND	RHRAP
Act and commit	5	1	1	1	3
Deliver on development objectives	3	1	1	1	1
Adapt and self-renew	2	2	2	2	2
Relate	1	2	2	2	2
Achieve coherence	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Liberia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Also, for two of the five SPOs capability to act and commit is targeted more intensively compared to the other capabilities. Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BSC and RHRAP.

Table 8

SPOs selected for process tracing – Liberia

Liberia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BSC	Dec 31, 2015	Yes	Yes	Yes	Yes	SPARK	Yes
DEN-L	2014	No	No	Unknown	A little	ICCO	No – not matching enough
NAWOCOL	2014	Yes	No	No	A little	ICCO	No – not matching enough
REFOUND	At least until 2013 (2015?)	Yes	No	Yes	A little	ICCO	No – not matching enough
RHRAP	At least until 2013 (2014?)	Yes	Yes	Yes	Yes	ICCO	Yes

Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ' general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

Some definitions of the terminology used for this MFS II 5c evaluation

Based upon the different interpretations and connotations the use of the term causal mechanism we use the following terminology for the remainder of this paper:

A **detailed causal map** (or **model of change**) = the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change.

A **causal mechanism** = is the combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome (Beach and Pedersen, 2013, p. 176).

Part or **cause** = one actor with its attributes carrying out activities/ producing outputs that lead to change in other parts. The final part or cause is the change/ outcome.

Attributes of the actor = specificities of the actor that increase his chance to introduce change or not such as its position in its institutional environment.

*Step 1. Identify the **planned MFS II supported capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

Chapter 4.1 and 4.2 in the baseline report were reviewed. Capacity development interventions as planned by the CFA for the capability to act and commit and for the capability to adapt and self-renew were described and details inserted in the summary format. This provided an overview of the capacity development activities that were originally planned by the CFA for these two capabilities and assisted in focusing on relevant outcomes that are possibly related to the planned interventions.

*Step 2. Identify the **implemented capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

The input from the CFA was reviewed in terms of what capacity development interventions have taken place in the MFS II period. This information was be found in the 'Support to capacity development sheet - endline - CFA perspective' for the SPO, based on details provided by the CFA and further discussed during an interview by the CDI team.

The CFA was asked to describe all the MFS II supported capacity development interventions of the SPO that took place during the period 2011 up to now. The CDI team reviewed this information, not only the interventions but also the observed changes as well as the expected long-term changes, and

then linked these interventions to relevant outcomes in one of the capabilities (capability to act and commit; and capability to adapt and self-renew).

*Step 3. Identify **initial changes/ outcome areas** in these two capabilities – by CDI team & in-country team*

The CDI team was responsible for coding documents received from SPO and CFA in NVivo on the following:

- 5C Indicators: this was to identify the changes that took place between baseline and endline. This information was coded in Nvivo.
- Information related to the capacity development interventions implemented by the CFA (with MFS II funding) (see also Step 2) to strengthen the capacity of the SPO. For example, the training on financial management of the SPO staff could be related to any information on financial management of the SPO. This information was coded in Nvivo.

In addition, the response by the CFA to the changes in 5C indicators format, was auto-coded.

The in-country team was responsible for timely collection of information from the SPO (before the fieldwork starts). This set of information dealt with:

- MFS II supported capacity development interventions during the MFS II period (2011 until now).
- Overview of all trainings provided in relation to a particular outcome areas/organisational capacity change since the baseline.
- For each of the identified MFS II supported trainings, training questionnaires have been developed to assess these trainings in terms of the participants, interests, knowledge and skills gained, behaviour change and changes in the organisation (based on Kirkpatrick's model), one format for training participants and one for their managers. These training questionnaires were sent prior to the field visit.
- Changes expected by SPO on a long-term basis ('Support to capacity development sheet - endline - SPO perspective').

For the selection of change/ outcome areas the following criteria were important:

- The change/ outcome area is in one of the two capabilities selected for process tracing: capability to act and commit or the capability to adapt and self-renew. This was the first criteria to select upon.
- There was a likely link between the key organisational capacity change/ outcome area and the MFS II supported capacity development interventions. This also was an important criteria. This would need to be demonstrated through one or more of the following situations:
 - In the 2012 theory of change on organisational capacity development of the SPO a link was indicated between the outcome area and MFS II support;
 - During the baseline the CFA indicated a link between the planned MFS II support to organisational development and the expected short-term or long-term results in one of the selected capabilities;
 - During the endline the CFA indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities;
 - During the endline the SPO indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities.

Reviewing the information obtained as described in Step 1, 2, and 3 provided the basis for selecting key organisational capacity change/ outcome areas to focus on for process tracing. These areas were to be formulated as broader outcome areas, such as 'improved financial management', 'improved monitoring and evaluation' or 'improved staff competencies'.

Note: the outcome areas were to be formulated as intermediates changes. For example: an improved monitoring and evaluation system, or enhanced knowledge and skills to educate the target group on

climate change. Key outcome areas were also verified - based on document review as well as discussions with the SPO during the endline.

*Step 4. Construct the **detailed, initial causal map** (theoretical model of change) – CDI & in-country team*

A detailed initial causal map was developed by the CDI team, in collaboration with the in-country team. This was based on document review, including information provided by the CFA and SPO on MFS II supported capacity development interventions and their immediate and long-term objectives as well as observed changes. Also, the training questionnaires were reviewed before developing the initial causal map. This detailed initial causal map was to be provided by the CDI team with a visual and related narrative with related references. This initial causal map served as a reference point for further reflection with the SPO during the process tracing endline workshop, where relationships needed to be verified or new relationships established so that the second (workshop-based), detailed causal map could be developed, after which further verification was needed to come up with the final, concluding detailed causal map.

It's important to note that organisational change area/ outcome areas could be both positive and negative.

For each of the selected outcomes the team needed to make explicit the theoretical model of change. This meant finding out about the range of different actors, factors, actions, and events etc. that have contributed to a particular outcome in terms of organisational capacity of the SPO.

A model of change of good quality includes:

- The causal pathways that relate the intervention to the realised change/ outcome;
- Rival explanations for the same change/ outcome;
- Assumptions that clarify relations between different components or parts;
- Case specific and/or context specific factors or risks that might influence the causal pathway, such as for instance the socio-cultural-economic context, or a natural disaster;
- Specific attributes of the actors e.g. CFA and other funders.

A model of change (within the 5C study called a 'detailed causal map') is a complex system which produces intermediate and long-term outcomes by the interaction of other parts. It consists of parts or causes that often consist of one actor with its attributes that is implementing activities leading to change in other parts (Beach & Pedersen, 2013). A helpful way of constructing the model of change is to think in terms of actors carrying out activities that lead to other actors changing their behaviour. The model of change can be explained as a range of activities carried out by different *actors* (including the CFA and SPO under evaluation) that will ultimately lead to an outcome. Besides this, there are also '*structural*' elements, which are to be interpreted as external factors (such as economic conjuncture); and *attributes* of the actor (does the actor have the legitimacy to ask for change or not, what is its position in the sector) that should be looked at (Beach & Pedersen, 2013). In fact Beach and Pedersen, make a fine point about the subjectivity of the actor in a dynamic context. This means, in qualitative methodologies, capturing the changes in the actor, acted upon area or person/organisation, in a non sequential and non temporal format. Things which were done recently could have corrected behavioural outcomes of an organisation and at the same time there could be processes which incrementally pushed for the same change over a period of time. Beach and Pedersen espouse this methodology because it captures change in a dynamic fashion as against the methodology of logical framework. For the MFS II evaluation it was important to make a distinction between those paths in the model of change that are the result of MFS II and rival pathways.

The construction of the model of change started with the identified key organisational capacity change/ outcome, followed by an inventory of all possible subcomponents that possibly have caused the change/ outcome in the MFS II period (2011-up to now, or since the baseline). The figure below presents an imaginary example of a model of change. The different colours indicate the different types of support to capacity development of the SPO by different actors, thereby indicating different pathways of change, leading to the key changes/ outcomes in terms of capacity development (which in this case indicates the ability to adapt and self-renew).

Figure 1 An imaginary example of a model of change

Step 5. Identify **types of evidence** needed to verify or discard different causal relationships in the model of change – in-country teams with support from CDI team

Once the causal mechanism at theoretical level were defined, empirical evidence was collected so as to verify or discard the different parts of this theoretical model of change, confirm or reject whether subcomponents have taken place, and to find evidence that confirm or reject the causal relations between the subcomponents.

A key question that we needed to ask ourselves was, "What information do we need in order to confirm or reject that one subcomponent leads to another, that X causes Y?". The evaluation team needed to agree on what information was needed that provides empirical manifestations for each part of the model of change.

There are four distinguishable types of evidence that are relevant in process tracing analysis: *pattern*, *sequence*, *trace*, and *account*. Please see the box below for descriptions of these types of evidence.

The evaluation team needed to agree on the types of evidence that was needed to verify or discard the manifestation of a particular part of the causal mechanism. Each one or a combination of these different types of evidence could be used to confirm or reject the different parts of the model of change. This is what is meant by robustness of evidence gathering. Since causality as a concept can bend in many ways, our methodology, provides a near scientific model for accepting and rejecting a particular type of evidence, ignoring its face value.

Types of evidence to be used in process tracing

Pattern evidence relates to predictions of statistical patterns in the evidence. For example, in testing a mechanism of racial discrimination in a case dealing with employment, statistical patterns of employment would be relevant for testing this part of the mechanism.

Sequence evidence deals with the temporal and spatial chronology of events predicted by a hypothesised causal mechanism. For example, a test of the hypothesis could involve expectations of the timing of events where we might predict that if the hypothesis is valid, we should see that the event B took place after event A took place. However, if we found that event B took place before event A took place, the test would suggest that our confidence in the validity of this part of the mechanism should be reduced (disconfirmation/ falsification).

Trace evidence is evidence whose mere existence provides proof that a part of a hypothesised mechanism exists. For example, the existence of the minutes of a meeting, if authentic ones, provide strong proof that the meeting took place.

Account evidence deals with the content of empirical material, such as meeting minutes that detail what was discussed or an oral account of what took place in the meeting.

Source: Beach and Pedersen, 2013

Below you can find a table that provides guidelines on what to look for when identifying types of evidence that can confirm or reject causal relationships between different parts/ subcomponents of the model of change. It also provides one example of a part of a causal pathway and what type of information to look for.

Table 9

Format for identifying types of evidence for different causal relationships in the model of change (example included)

Part of the model of change	Key questions	Type of evidence needed	Source of information
Describe relationship between the subcomponents of the model of change	Describe questions you would like to answer so as to find out whether the components in the relationship took place, when they took place, who was involved, and whether they are related	Describe the information that we need in order to answer these questions. Which type of evidence can we use in order to reject or confirm that subcomponent X causes subcomponent Y? Can we find this information by means of : Pattern evidence; Sequence evidence; Trace evidence; Account evidence?	Describe where you can find this information
Example: Training workshops on M&E provided by MFS II funding and other sources of funding	Example: What type of training workshops on M&E took place? Who was trained? When did the training take place? Who funded the training? Was the funding of training provided before the training took place? How much money was available for the training?	Example: Trace evidence: on types of training delivered, who was trained, when the training took place, budget for the training Sequence evidence on timing of funding and timing of training Content evidence: what the training was about	Example: Training report SPO Progress reports interviews with the CFA and SPO staff Financial reports SPO and CFA

Please note that for practical reasons, the 5C evaluation team decided that it was easier to integrate the specific questions in the narrative of the initial causal map. These questions would need to be addressed by the in country team during the process tracing workshop so as to discover, verify or discard particular causal mechanisms in the detailed, initial causal map. Different types of evidence was asked for in these questions.

*Step 6. **Collect data** to verify or discard causal mechanisms and develop workshop-based, detailed causal map – in-country team*

Once it was decided by the in-country and CDI evaluation teams what information was to be collected during the interaction with the SPO, data collection took place. The initial causal maps served as a basis for discussions during the endline workshop with a particular focus on process tracing for the identified organisational capacity changes. But it was considered to be very important to understand from the perspective of the SPO how they understood the identified key organisational capacity change/outcome area has come about. A new detailed, workshop-based causal map was developed that included the information provided by SPO staff as well as based on initial document review as described in the initial detailed causal map. This information was further analysed and verified with other relevant information so as to develop a final causal map, which is described in the next step.

*Step 7. **Assess the quality** of data and **analyse data**, and develop the **final detailed causal map** (model of change) – in-country team and CDI team*

Quality assurance of the data collected and the evidence it provides for rejecting or confirming parts of causal explanations are a major concern for many authors specialised in contribution analysis and process-tracing. Stern et al. (2012), Beach and Pedersen (2013), Lemire, Nielsen and Dybdal (2012), Mayne (2012) and Delahais and Toulemonde (2012) all emphasise the need to make attribution/contribution claims that are based on pieces of evidence that are rigorous, traceable, and credible. These pieces of evidence should be as explicit as possible in proving that *subcomponent X causes subcomponent Y* and ruling out other explanations. Several tools are proposed to check the nature and the quality of data needed. One option is, Delahais and Toulemonde's Evidence Analysis Database, which we have adapted for our purpose.

Delahais and Toulemonde (2012) propose an Evidence Analysis Database that takes into consideration three criteria:

Confirming/ rejecting a causal relation (yes/no);

Type of causal mechanism: intended contribution/ other contribution/ condition leading to intended contribution/ intended condition to other contribution/ feedback loop;

Strength of evidence: strong/ rather strong/ rather weak/ weak.

We have adapted their criteria to our purpose. The in-country team, in collaboration with the CDI team, used the criteria in assessing whether causal relationships in the causal map, were strong enough. This has been more of an iterative process trying to find additional evidence for the established relationships through additional document review or contacting the CFA and SPO as well as getting their feedback on the final detailed causal map that was established. Whilst the form below has not been used exactly in the manner depicted, it has been used indirectly when trying to validate the information in the detailed causal map. After that, the final detailed causal map is established both as a visual as well as a narrative, with related references for the established causal relations.

<i>Example format for the adapted evidence analysis database (example included)</i>	<i>Confirming/ rejecting a causal relation (yes/no)</i>	<i>Type of information providing the background to the confirmation or rejection of the causal relation</i>	<i>Strength of evidence: strong/ rather strong/ rather weak/ weak</i>	<i>Explanation for why the evidence is (rather) strong or (rather) weak, and therefore the causal relation is confirmed/ rejected</i>
<i>Description of causal relation</i>				
e.g. Training staff in M&E leads to enhanced M&E knowledge, skills and practice	e.g. Confirmed	e.g. Training reports confirmed that staff are trained in M&E and that knowledge and skills increased as a result of the training		

Step 8. Analyse and conclude on findings– in-country team and CDI team

The final detailed causal map was described as a visual and narrative and this was then analysed in terms of the evaluation question two and evaluation question four: *"To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?"* and *"What factors explain the findings drawn from the questions above?"* It was analysed to what extent the identified key organisational capacity change can be attributed to MFS II supported capacity development interventions as well as to other related factors, interventions and actors.

Explaining factors – evaluation question 4

This paragraph describes the data collection and analysis methodology for answering the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This has been explained in the first section of this appendix. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information was procured for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the process of process tracing as described in the section above.

Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team.

Use of the 5 core capabilities framework and qualitative approach: this has proven to a be very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation

and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
- Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
- Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors , rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people

change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

Appendix 2 Background information on the five core capabilities framework

The 5 capabilities (5C) framework was to be used as a framework for the evaluation of capacity development of Southern Partner Organisations (SPOs) of the MFS II consortia. The 5C framework is based on a five-year research program on 'Capacity, change and performance' that was carried out by the European Centre for Development Policy Management (ECDPM). The research included an extensive review of the literature and sixteen case studies. The 5C framework has also been applied in an IOB evaluation using 26 case studies in 14 countries, and in the baseline carried out per organisation by the MFS II organisations for the purpose of the monitoring protocol.

The 5C framework is structured to understand and analyse (changes in) the capacity of an organization to deliver (social) value to its constituents. This introduction briefly describes the 5C framework, mainly based on the most recent document on the 5C framework (Keijzer et al., 2011).

The 5C framework sees capacity as an **outcome** of an **open system**. An organisation or collaborative association (for instance a network) is seen as a system interacting with wider society. The most critical practical issue is to ensure that relevant stakeholders share a common way of thinking about capacity and its core constituents or capabilities. Decisive for an organisation's capacity is the context in which the organisation operates. This means that **understanding context issues** is crucial. The use of the 5C framework requires a multi-stakeholder approach because shared values and results orientation are important to facilitate the capacity development process. The 5C framework therefore needs to **accommodate the different visions** of stakeholders and conceive different strategies for raising capacity and improving performance in a given situation.

The 5C framework defines capacity as '**producing social value**' and identifies five core capabilities that together result in that overall capacity. Capacity, capabilities and competences are seen as follows:

Capacity is referred to as the overall ability of an organisation or system to create value for others;

Capabilities are the collective ability of a group or a system to do something either inside or outside the system. The collective ability involved may be technical, logistical, managerial or generative (i.e. the ability to earn legitimacy, to adapt, to create meaning, etc.);

Competencies are the energies, skills and abilities of individuals.

Fundamental to developing capacity are inputs such as human, material and financial resources, technology, and information. To the degree that they are developed and successfully integrated, capabilities contribute to the overall capacity or ability of an organisation or system to create value for others. A single capability is not sufficient to create capacity. All are needed and are strongly interrelated and overlapping. Thus, to achieve its development goals, the 5C framework says that every organisation or system must have **five basic capabilities**:

- The capability to act and commit;
- The capability to deliver on development objectives;
- The capability to adapt and self-renew;
- The capability to relate (to external stakeholders);
- The capability to achieve coherence.
-

In order to have a common framework for evaluation, the five capabilities have been reformulated in outcome domains and for each outcome domain performance indicators have been developed.

There is some overlap between the five core capabilities but together the five capabilities result in a certain level of capacity. Influencing one capability may have an effect on one or more of the other capabilities. In each situation, the level of any of the five capabilities will vary. Each capability can become stronger or weaker over time.

Appendix 3 Changes in organisational capacity of the SPO - 5C indicators

Below you will find a description for each of the indicators under each of the capabilities, what the situation is as assessed during the endline, how this has changed since the baseline and what are the reasons for change.

Capability to act and commit

1.1.Responsive leadership: 'Leadership is responsive, inspiring, and sensitive'

This is about leadership within the organisation (operational, strategic). If there is a larger body then you may also want to refer to leadership at a higher level but not located at the local organisation.

The Executive Director continues to be responsive, democratic, and strategic .The second line leadership is gradually emerging and staff at the programme coordinator level is taking up more responsibility and ownership of projects. Second line leadership also represents the organisation in donor meetings and trainings. In fact the director entrusted the entire workshop process in the hands of second line leadership and allowed them to interact freely with the evaluators.

Senior management has defined and divided the responsibilities in a good manner. The chairman transforms the vision into plans, the director is able to motivate the staff and the CARE Network coordinator ensures the implementation of the programmes. Further, the evaluators observed that senior management has attained a level of maturity where they have become more democratic in their approach towards other staff including field level staff. This has resulted in the field staff to be quite articulate and active. Staff now have better access to the leaders to help them fine-tune the weekly and monthly plans.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

1.2.Strategic guidance: 'Leaders provide appropriate strategic guidance (strategic leader and operational leader)'

This is about the extent to which the leader(s) provide strategic directions

The leader continues to give strategic guidance but with better coordination between the chairman, director and the CARE Network coordinator. There is further improvement in terms of the operationalization of the strategic plan through dissemination of the strategic plan down to the field worker level. The director meets project heads at regular intervals to review the progress of the programmes in terms of their objectives. The programme coordinators meet the project staff for reporting and planning. The management has developed a results based measurement framework for the tracking of programmes which makes it easier for the leader to provide strategic guidance.

The leader provides opportunities for second line leaders to participate actively in international and alliance level meetings. The CARE Network coordinator is sent to strategic meetings that concern VTRC's sustainability and continuity as they are seeking alternate sources of funding to support the needs of the organisation.

Score baseline: 2.5

Score endline: 3.5 (improvement)

1.3. Staff turnover: 'Staff turnover is relatively low'

This is about staff turnover.

There has been no change in this indicator. While there continues to be no turnover at the head office level (management and coordinator level) there is a higher turnover, around 40-50%, at the field level (tuition teachers, animators and change agents). The field level staff leave for better opportunities (getting government jobs) or for personal reasons (getting married or family migration). Despite this, the organisation continues to encourage the field level staff to undergo capacity development trainings to improve their future prospects and competency with the aim that the ethics of the organisation spread to wherever they go. To ensure that all field level staff have the competencies to do their work, intermediate training sessions are organised when new staff join the organisation. The organisation has taken steps to ensure that in the event of tuition teachers leaving the Edugate programme, there is a backup list of teachers they can contact to join the organisation on short notice.

Score baseline: 3.0

Score endline: 3.0 (no change)

1.4. Organisational structure: 'Existence of clear organisational structure reflecting the objectives of the organisation'

Observable indicator: Staff have copy of org structure and understand this

During baseline it was observed that the organisation didn't have a clear organizational structure. Over the last two years VTRC has constituted its organizational structure and the roles and responsibilities are very clear to the staff down to the field level. The chairman is the reporting head for both the Edugate and CARE Network programme, while there is a director and a coordinator for CARE Network and the Edugate programme. There are cluster supervisors under each project coordinator who in turn are assisted by animators, change agents and tuition teachers. Further there is a HR/administration head for each programme. The Organisational Development consultant continues to provide M&E support to the organisation. Earlier the focus was more towards education but now VTRC works on both education and health. There are clear job descriptions and responsibilities for the staff in a written form. The Human Resource handbook for the employees is available which gives details of the administrative structure.

Score baseline: 1.0

Score endline: 3.0 (considerable improvement)

1.5. Articulated strategies: 'Strategies are articulated and based on good situation analysis and adequate M&E'

Observable indicator: strategies are well articulated. Situation analysis and monitoring and evaluation are used to inform strategies.

VTRC continues to have well-articulated strategies for both the CARE Network and the Edugate programme which are developed on the basis of proper situational/contextual analysis and M&E to identify and address issues.

Some examples of how VTRC has re-articulated its strategies based on situational analysis and M&E findings are described below.

- This year VTRC has identified, articulated and adapted new strategies and approach for its CARE Network programme for better achievement of its objectives. Earlier the strategy was to provide services to the target population whereas the new strategy is to help the target population access government schemes and services by linking them with officials of the line departments. Basically it means making the health care delivery system on sexual reproductive health and HIV accessible and available through a process of cooperation, strengthening and lobbying with the state health systems. Based on the current context and lessons learned from outcome studies conducted during September 2013, the following strategy changes were made in the CARE Network project:

- The target group (beneficiaries) is changed to 13 -30yrs from 15 to 45 years of age, in order to have a smaller, feasible target population to show tangible results.
- Instead of merely focusing on antenatal and postnatal care in training and mentoring for interest groups and change agents, it is decided to give more focus on attitude, social influence and self-efficacy to increase the intention of behaviour change towards sexual wellbeing.
- Instead of empowering only women, it is decided to motivate men to function as active partners in restoring family, societal roles and responsibilities.
- Included lobby and advocacy in the area of child protection in line with alliance L&A plan.
- In its Edugate programme VTRC also articulated its strategies based on the context analysis.
- They noticed a higher dropout rate among children from HIV affected and migrant labourer families, as they do not receive the parental support needed for completing their classwork and are often needed to generate sufficient income. This led to VTRC integrating the Edugate and CARE Network programme for better achievement and sustainability of both programmes.
- Dropouts rates were also higher under physically and mentally challenged children. In the plan for 2013 in addition to external mainstreaming of disability, internal mainstreaming of disability among staff was included.
- Based on a stakeholders meeting at the project office to elicit views to fine-tune the annual plan of 2014 with parents of tuition children and tuition teachers, a summer camp was included in the annual plan and budget for 2014.

Score baseline: 3.0

Score endline: 3.0 (no change)

1.6.Daily operations: 'Day-to-day operations are in line with strategic plans'

This is about the extent to which day-to-day operations are aligned with strategic plans.

The day-to-day operations continue to be in line with the strategic plans. The ability of the staff to plan and execute those plans on a day to day basis has improved. The annual planning process starts in the month of September and the field coordinators represent the field staff in the planning process. The leader of VTRC has initiated this more participatory planning process in which due emphasis is given to the inputs of the field staff. Monthly meetings are held with the staff and their inputs are sought for the planning process. The monthly meetings are held in 6 clusters. The change agents and tuition teachers (the field staff) get feedback from the communities and meet on a weekly basis to review and make plans. The review findings and weekly planning are then reviewed and discussed with the programme managers and cluster supervisors. The improvement in the review and planning system helped in the improvement of the day-to-day operation of the programme. According to the CFA, there is however, still a minor gap between what is planned and what is understood by programme staff to be implemented. Sharing and learning at Health Bridge Alliance and MFS II capacity building trainings further contributed in VTRC's skills in strategic and operational planning for better sustainability.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

1.7.Staff skills: 'Staff have necessary skills to do their work'

This is about whether staff have the skills necessary to do their work and what skills they might they need.

Over the last two years the skills of staff have significantly improved through trainings and exposure visits. They improved their skill and knowledge in Planning, Monitoring, Evaluation and Learning (PMEL), Sexual and Reproductive Health (SRH), HIV/AIDS, community health education (CHE), rights based approach, behavioural change communication, and theory of change. Staff skills also improved in focussed data collection, data analysis, report writing, case study writing and use of technology. VTRC is planning to change from logframe to theory of change framework for planning the annual strategy.

The senior management underwent training in financial management, vision casting, advanced PMEL and related training. In turn they train the junior/field level staff. The CFA has indicated that the field staff in general has improved in their confidence to deliver the outputs. Also the evaluators observed that the field staff has improved their communication skills. Though some field level staff could not speak English they expressed their views confidently in their local language. During baseline the field staff needed continuous handholding but now they act independently based on the monthly work plan. Further their confidence helped the staff to do lobby at the block and district level.

During the baseline a gap in the capacity of teachers and computer skills was flagged. Over the last two years tuition teachers in the Edugate programme have improved their skills in: innovative use of technology in creating tools and enhancing student's capabilities (e.g. collecting information, downloading teaching methodologies, using SMS and e-mail), making lesson plans, teaching students, counselling parents, organising classes in multi-class and multi-level settings, child psychology and in monitoring and evaluating the performance of children.

In the CARE Network programme, staff gained adequate knowledge on SRH and HIV/AIDS over the last two years. This helped them to clearly communicate to the target audience and disseminate information on health issues, government schemes and entitlements through SHGs in the community. Staff have also improved in lobbying in the PHCs. Skills improved because of trainings funded by MFS II and were further facilitated by the government providing laptops, cheap internet facilities and better communication with the PHCs staff.

Score baseline: 3.0

Score endline: 3.5 (slight improvement).

1.8. Training opportunities: 'Appropriate training opportunities are offered to staff'

This is about whether staff at the SPO are offered appropriate training opportunities

VTRC staff continue to undergo various trainings and exposure visits both at national and international level which contributed in their capacity building as well as of the organisation. The organisation continues to do a needs assessment of the staff to give appropriate trainings. During the last two years the following training opportunities were offered to the staff:

- Workshop on Participatory Integrated Child Development (PICD) workshop was organised on April 2012 in Bangladesh by REK and Woord en Daad. The aim was to train staff on the need to go from institution based (e.g. orphanage) development to child centred development. It is a diagnostic tool to enter the community and to do this in a participatory way. This resulted in the ability to adapt new strategies for participatory approaches in the community during interactions and programs.
- Theory of Change workshop for CARE network was organised in April 2012 in Dhaka, Bangladesh by ICCO. Its aim was to help the partners gain a deeper understanding of Theory of Change and its practice, programmatic approach inputs, civil society strengthening, institutional change, rights based approach & gender, initiate and measure behaviour change, Programmatic Approach, Co-responsibility and Decentralisation (ProCoDe) agenda etc. It helped VTRC to develop a draft Theory of Change for the Health Brigade Alliance, to incorporate a rights based approach in their programmes, and it also helped specifically in measuring outcomes concerning behavioural change. Further it empowered the staff to converge the Edugate and the CARE Network programme by taking up health related issues in the tuition centres for better implementation and achievement of the programmes. Programmatic approach helped VTRC along with other HBA alliance partners to find out common problematic area. Though all partners do different things, work at various levels but use their own strengths for the common purpose, as well as share some activities and participate in the linking and learning process. This improves the visibility of their work at country and international level and further help in joint approach for funding.
- Trainings on developing lesson plans, teaching methodology and quality education training were organised by VTRC for its tuition teachers and supervisors in 2012 with the support from MFS II. It aimed to help them develop lesson plans and apply different innovative methods in teaching. It resulted in teachers being able to provide appropriate and useful information through innovative teaching and creating a resource hub for accessing information when needed.

- Behaviour Change Communication workshop was organised in September 2012 in Hyderabad by Health Bridge Alliance – India (ICCO – PRISMA Alliance). It was aimed at reviewing the Bangladesh meeting on Behaviour change and preparing a Behaviour change framework in the context of SRH and HIV/AIDS for Indian alliance partners. This helped the alliance partners to fine-tune the indicators to measure behaviour change.
- Advanced PMEL training program was organised in Nepal by REK and the Woord en Daad alliance from 11 till 17 September 2013. The objective of the training was to train in PME skills, data analysis skills, Theory of Change as basis for a good M&E system, research design, using excel for quantitative data analysis and preparation of case studies. It resulted in having more insight on PMEL, developing smart indicators and better report writing.
- Trainings on lesson plans and child psychology for tuition teachers and staff in May 2013 were organised by VTRC. The faculty of Peniel College of Education was involved to impart on the teaching methodology suited to the tuition centres, child psychology, handling children with multi grade and multilevel situations, preparation and implementation of lesson plan, conducting academic assessment and evaluation etc.
- Training on SRH and prevention of HIV was organised by VTRC for the animators and staff on April 25-26, 2013 at the Bethel Community Development Project, Thoppur. The objective of the training was to improve the knowledge, attitude and presence of the field staff on promotion of SRH and effective HIV prevention.
- In 2012 and 2013 trainings were given on disability for Edugate staff. Staff awareness increased on disability in order to empower the community to access relevant government schemes and services.
- Mr. Yenco from Malaysia conducted 4days capacity building programs on personality and Christian perspective of development in 2013.
- Mr. Garden Brown from USA facilitated a 5 day training programs on Community Health Education (CHE) for project staff of VTRC in 2013.

Score baseline: 3.0

Score endline: 3.0 (no change)

1.9.1.Incentives: 'Appropriate incentives are in place to sustain staff motivation'

This is about what makes people want to work here. Incentives could be financial, freedom at work, training opportunities, etc.

In the last two years there has been no major change in this indicator. The biggest strength of VTRC is that they have a motivated team of people who want to serve their communities and work for their wellbeing. The people are honest and committed. The staff belongs to the target communities and though the salary is not very attractive, they get great satisfaction in serving and empowering their community. Staff undergo continuous training and exposure visits and gain rich experience from organising community development programmes. This also motivates staff to undertake and assume challenging responsibilities.

Score baseline: 3.0

Score endline: 3.0 (no change)

1.9.2.Funding sources: 'Funding from multiple sources covering different time periods'

This is about how diversified the SPOs funding sources are over time, and how the level of funding is changing over time.

While currently VTRC continues to rely mainly on funding from Red een Kind (Dutch funder), the MFS II funding ending in 2015 and changes in the overall donor environment have triggered VTRC to nurture new funding opportunities:

- TEAR Australia has been supporting VTRC's projects up to June 2014.
- The leader has tried to associate with like-minded organisations both at national and international level to leverage new funders. Grant applications through various alliances have been prepared and submitted to access EU funding, because of the director's network and enterprising attitude.

- VTRC has linked up its target groups to access government schemes and provisions for better sustainability of its CARE Network programme.
- In the last two years VTRC has strengthened convergence with Health Bridge Alliance (HBA) to explore new areas of funding opportunities and write proposals together to approach new funders. All partners within the alliance work with the Programmatic Approach, Co-responsibility and Decentralisation (ProCoDe) agenda, which they were trained in by ICCO in April 2012. This agenda stands for promotion of cooperation between actors in the global south, designing programmes closer to the context through regional offices, looking at the thematic knowledge of each partner to define their niche and approaching new donors. For example, in the last two years VTRC along with other HBA members initiated a joint proposal for a SRH programme to USAID which is in the pipeline. After 2015 the focus of the HBA will be: strategic programme development, knowledge and skills sharing and resource mobilization.

Score baseline: 1.5

Score endline: 1.75 (very slight improvement)

1.9.3. Funding procedures: 'Clear procedures for exploring new funding opportunities'

This is about whether there are clear procedures for getting new funding and staff are aware of these procedures.

Over the last two years there has been a slight improvement in the funding procedures. One of the main procedures to reach out to the new funders is ProCoDe agenda (as mentioned above) through the HBA alliance which they were trained in by ICCO and its Dutch partners. New funding opportunities are explored and a new proposal on SRH was developed as a co-applicant in the HBA and sent to USAID. Other opportunities are also being explored in health related aspects. VTRC staff have improved their capacity for developing proposals and doing necessary documentation work for raising funds. A training in proposal writing helped in this. The Advanced Planning, Monitoring, Evaluation and Learning (APMEL) training in Nepal in September 2013 aimed at training the participants to create a concrete and coherent system for results based measurement, to write thought provoking and effective reports and case studies and to improve qualitative and quantitative data collection. This might have also helped in visibility and better showcasing of VTRC's work for fundraising.

Score baseline: 1.0

Score endline: 2.0 (improvement)

Summary of capability to act and commit

The Executive Director continues to be responsive, democratic, and strategic. The second line leadership is gradually emerging as staff at the programme coordinator level is taking up more responsibility and ownership of projects. Senior management has defined and divided the responsibilities in a good manner and have become more democratic in their approach towards other staff including field level staff. The leader continues to give strategic guidance but with better coordination between the chairman, director and the Care Network coordinator. The operationalization of the strategic plans improved through their dissemination down to the field worker level. While there continues to be no turnover at the head office level, there is a higher turnover at the field level, where staff leave for better opportunities or for personal reasons. Despite this, the organisation continues to encourage the field level staff to go to trainings to improve their future prospects and competency. In case of tuition teachers leaving the Edugate programme, VTRC has a backup list of teachers that can step in on short notice. There was considerable improvement in the organisational structure, which has now been constituted. Roles and responsibilities in written form are clear to all staff and the Human Resource handbook that is available to staff gives details of this administrative structure. VTRC continues to have well-articulated strategies for both the CARE Network and the Edugate programme which are developed on the basis of proper situational/contextual analysis. The day-to-day operations continue to be in line with the strategic plans. Staff are now better able to execute the plans as they

are more involved in the planning process. According to the CFA there remains to be a minor gap in what is planned and what is understood by programme staff. Compared to the baseline, staff skills in communicating, computer skills, lobbying and in teaching increased. VTRC staff continue to have access to various trainings both at national and international level after needs assessment of the staff to send them to appropriate trainings. Some of the MFS II funded trainings in the last two years include: Advanced Planning, Monitoring, Evaluation and Learning training, Behaviours Change Communication training, Theory of Change training and a Participatory Integrated Community Development training. Within its Edugate and CARE Network programmes VTRC also organised trainings for its field staff to increase their awareness on e.g. disability and HIV/AIDS. In the last two years the biggest strength of VTRC remains their motivated team that wants to serve their communities and work for their wellbeing, though the salary is not very attractive. Staff undergo continuous training which also motivates staff to assume challenging responsibilities. External factors, like transport costs, continue to have an effect on staff turnover. While currently VTRC continues to rely mainly on funding from Red een Kind (Dutch funder), the MFS II funding ending in 2015 has triggered them to have a more clear funding strategy to look into new funding opportunities. This is done through further collaboration with the Health Bridge Alliance, the director's network to access EU funding and until June 2014 VTRC has received support from TEAR Australia. VTRC has improved its funding procedures: proposal writing capacity has improved and a proposal was sent to USAID together with the HBA. The Advanced Planning, Monitoring, Evaluation and Learning (APMEL) training in Nepal in September 2013 might have helped in better showcasing their work through improved data collection, report and case study writing skills.

Score baseline: 2.5

Score endline: 3.0 (slight improvement)

Capability to adapt and self-renew

2.1.M&E application: 'M&E is effectively applied to assess activities, outputs and outcomes'

This is about what the monitoring and evaluation of the SPO looks at, what type of information they get at and at what level (individual, project, organisational).

There is improvement in this indicator. While VTRC continues to review the progress of the programmes on a weekly, monthly, quarterly and annual basis, now indicators are set for activities, outputs and outcomes to monitor and evaluate the programme. In the last two years new formats and a methodology have been incorporated into the existing M&E system as a result of APMEL workshop. New methods and approaches are adopted to have effective review and monitoring. A participatory approach has been adopted where there is a bottom up approach for better monitoring and evaluation of the program. The community is directly involved in the process by giving feedback and input on the tuition centres and the health programme in the monthly meetings. The tuition teachers, change agents and supervisors meet weekly to review and monitor the programme. The reports are then reviewed and monitored by the supervisors and programme managers on a monthly basis. Every month a general staff meeting is organised to monitor the programmes and review the reports where the director also participates. The project coordinator monitors the budget and the planned cash flow as per the plan of action. He reports any deviation in the plan of action to the project manager who is consulted in a review meeting to take necessary actions.

In the last two years the organisation started using the Organisation-scan (O-scan). This facilitated the organization to find gaps particularly in the CARE Network programme and use it for better planning as a process of organizational development. Peer review and results framework system was also used to review the programme. The review was carried out at different levels: the change agents and the cluster supervisors meet on a weekly basis to review the reports and plan accordingly. Then the programme manager and the cluster supervisors meet on a monthly basis to further discuss and plan on the basis of the weekly findings. Performance monitoring plan tool is used particularly in the Edugate programme through a participatory approach to monitor and evaluate the programme. In this tool appropriate indicators are set to assess the enrolment and daily attendance of the students and their progress/performance in the school which further helps in assessing the performance of the teachers. The reports are reviewed on a weekly basis by the tuition teachers and supervisors, weekly

reports are then reviewed by the supervisors and coordinators on a monthly basis, monthly reports are then reviewed on a quarterly and half yearly basis by the coordinator and project manager. On the basis of the outcome of the review meetings actions are taken/planned for better management and implementation of the programme to improve the efficiency of the work.

During baseline the monitoring system was present in theory but not in practice. This has improved over the last two years. The endline evaluation team observed that the monitoring and evaluation system is well practiced through a bottom up approach. Collecting of data is now happening systematically and data is mainly used for reporting and operational and strategic decision making.

Score baseline: 3.5

Score endline: 4.25 (improvement)

2.2.M&E competencies: 'Individual competencies for performing M&E functions are in place'

This is about whether the SPO has a trained M&E person; whether other staff have basic understanding of M&E; and whether they know what information to collect, how to process the information, how to make use of the information so as to improve activities etc.

VTRC continues to depend on the OD consultant to assist in the M&E. However, since the baseline in 2012 the staff has improved their knowledge and analytical skill in monitoring, quality and structured data collection and analysis, gap identification. Staff are aware of what data is needed to be collected from the field for further planning and addressing the gaps. Specific formats are in place to capture data. The staff are trained to use the monitoring formats. The programme coordinators for Edugate and the CARE Network improved their competency in M&E and report writing through various capacity building trainings organised by the Red een Kind and continuous feedback from HACI (Red een Kind's country partner who supports VTRC in monitoring and evaluating). Further the field level staff also improved their competency in M&E as the skill and knowledge is transferred through various in-house trainings. This is evident as input from the field staff has been used for fine-tuning the M&E formats.

Score baseline: 2.5

Score endline: 3.0 (slight improvement)

2.3.M&E for future strategies: 'M&E is effectively applied to assess the effects of delivered products and services (outcomes) for future strategies'

This is about what type of information is used by the SPO to make decisions; whether the information comes from the monitoring and evaluation; and whether M&E info influences strategic planning.

There is slight improvement in this indicator. The organisation continues to receive feedback and support from Help a Child India (MFS II organisation) and an OD consultant for strategic planning. In the last two years staff have improved their skills in analysing data and incorporating it in the future strategic planning. For example, the findings, learning and suggestions of an outcome study in 2013 were analysed and incorporated in the annual activities plan for 2014. This is also evident in the strategic change in the CARE Network programme. After proper situational analysis the management made strategic changes for the target group, in their approach and organizational set up for better implementation and sustainability of the programme. Data collection is happening more systematically and data is used for reporting and operational and strategic decision making.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

2.4.Critical reflection: 'Management stimulates frequent critical reflection meetings that also deal with learning from mistakes'

This is about whether staff talk formally about what is happening in their programs; and, if so, how regular these meetings are; and whether staff are comfortable raising issues that are problematic.

VTRC continues to have weekly, monthly, quarterly and annual meetings to review the programmes to find gaps and take measures to address them. A general meeting has been organised every month since the baseline for all the staff and the chairman. This provides a platform for all the staff to participate in the reflection process. Staff are comfortable to raise problematic issues and can talk about the happenings in their programmes during these meetings. Since the baseline more field staff are engaged in regular reflection. Change agents meet their supervisors weekly and tuition teachers monthly. They also communicate with each other by phone. Through adopting a new participatory approach even the community members are finding gaps in the programmes and giving inputs in the meetings organized with them in the tuition centre. There are proper minutes of the meetings which are further used for strategic planning.

Score baseline: 2.5

Score endline: 3.5 (improvement)

2.5. Freedom for ideas: 'Staff feel free to come up with ideas for implementation of objectives

This is about whether staff feel that ideas they bring for implementation of the program are welcomed and used.

VTRC continues to plan in a participatory way and staff is free to come up with ideas. The evaluators observed during the endline workshop that the second line leaders were quite active and gave space to other staff in sharing their ideas and views. The field staff was much more confident since the baseline while sharing their views in the workshop and had clear understanding of what they wanted to achieve. The field staff gives inputs for fine-tuning the formats.

Score baseline: 3.0

Score endline: 4.0 (improvement)

2.6. System for tracking environment: 'The organisation has a system for being in touch with general trends and developments in its operating environment'

This is about whether the SPO knows what is happening in its environment and whether it will affect the organization.

VTRC still has a system of tracking the environment they are operating in. VTRC has a system for keeping itself up to date on the changing local, national and global context and developments through sharing, learning and linking itself with like-minded NGOs, the HBA and exposure visits at local and international level. Since the baseline, VTRC improved in that they now work more closely with government line departments for updated information in new schemes and policies available for the community. For instance, following the information of the Government's Secretary of Education, VTRC found out that the government has the obligation to provide two basic drinking water facilities and a toilet in all schools. Another example comes from the CARE Network programme. VTRC found that rapid urbanisation and sudden economic developments led to job craving which further led to migration of male population to job enticing areas in a large number. This has put people in a vulnerable situation causing a threat to the sexual wellbeing of the community as most of them got infected with HIV/AIDS. In relation to this VTRC has changed its strategy to address sexual reproductive health by making health care delivery system in SRH and HIV accessible and available through a process of cooperation, strengthening and lobbying with the state health systems. In the Edugate programme VTRC initiated an industrial training centre for the drop out students of the target community following the information, that VTRC gathered through a baseline survey for this programme while visiting the villages and schools, that poverty is one of the reasons for dropout and that people from the target communities have experience and skill but without certificate and formal technical degree they are debarred from opportunities.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

2.7. Stakeholder responsiveness: 'The organisation is open and responsive to their stakeholders and the general public'

This is about what mechanisms the SPO has to get input from its stakeholders, and what they do with that input.

VTRC continues to be open and responsive to engage stakeholders in its planning process while the last two years they have strengthened their engagement with external stakeholders. For example, a stakeholders meet was organised on July 2013 at the project office with the tuition students' parents to elicit their views to fine tune the annual plan of 2014. They wanted a summer camp for children to be included in the annual plan and budget of 2014 and this was incorporated. Field staff get feedback from parents through monthly parent-teacher-meetings at the tuition teachers and house visits. Relationships with PHCs, schools, ICDSs, Panchayaths, SHGs and the child welfare committee have improved for receiving their input. Various consultation meetings of stakeholders on various lobby issues with regard to health care were held in 2014 at different clusters. In the Health Bridge Alliance the partners meet once or twice a year to share and discuss health related issues and together develop strategies to address the issues and also develops proposals together to approach new donors.

Score baseline: 2.5

Score endline: 3.0 (slight improvement).

Summary of capability to adapt and self-renew

VTRC continues to review the progress of the programmes on a weekly, monthly, quarterly and annual basis. Indicators are set for activities, outputs and outcomes. New formats and a more participatory approach have been incorporated into the existing M&E system as a result of APMEEL workshop. The organisation started using the Organisation-scan (O-scan) to assess and monitor the programme over time. The project coordinators are able to find and address the gaps emerging from the review. The monitoring and evaluation system is now well practiced through a bottom up approach, collecting of data is now happening systematically and is used for reporting, operational and strategic decision making. Staff competencies in M&E have improved through training of the programme coordinators who in turn trained the field staff. Field staff are now providing input for fine-tuning of M&E formats. The organisation continues, however, to depend on the OD consultant to assist in M&E. While data collection is happening more systematically data is mainly used for reporting and operational decision making, not yet for strategic decision making. VTRC is using findings from M&E in its annual plans: e.g. findings from an outcome study in 2013 were used to adapt the annual plan for 2014. VTRC continues to have weekly, monthly, quarterly and annual meetings to review their programmes. Staff feel comfortable to raise problematic issues in their programmes during these meetings. Since the baseline more field staff are engaged in these processes. VTRC continues to plan in a participatory way and staff is free to come up with ideas. During the endline workshop second line leaders were quite active and gave space to other staff in sharing their views. The field staff was much more confident and had a clear understanding of what they want to achieve. VTRC still has a system for keeping itself up to date on the changing local, national and global context and developments through sharing, learning and linking itself with like-minded NGOs, the HBA and exposure visits at local and international level. Since the baseline, VTRC improved in tracking government policies and schemes available for the community. VTRC continues to be open and responsive to engage stakeholders in its planning process and in the last two years they have strengthened their engagement with external stakeholders. For example, VTRC receives input from parents, PHCs, schools, ICDSs, Panchayaths, SHGs, the child welfare committee and HBA partners.

Score baseline: 2.9

Score endline: 3.5 (slight improvement)

Capability to deliver on development objectives

3.1. Clear operational plans: 'Organisation has clear operational plans for carrying out projects which all staff fully understand'

This is about whether each project has an operational work plan and budget, and whether staff use it in their day-to-day operations.

VTRC continues to have day-to-day operational plans and budgets for each project which the staff fully understand as they are part of the planning process. Projects have detailed work plans for the year. The activity and budget plan are briefed to the project staff and are further broken down to quarterly basis. The monthly planning and review are also done based on the approved budget and planned activities. Reports are generated on a monthly basis internally and on a quarterly basis to the donor. During the above process, all categories of staff are involved at different levels and it is an insurance that all are aware of the information. Over the period the operational plans have improved due to an improved monitoring and information system where appropriate data is collected, analysed and documented. This information is used in the planning process. This was basically the outcome of capacity building trainings for example: Advanced Planning, Monitoring, Evaluation and Learning training helped improve in results based measurement and data analysis.

Score baseline: 4.0

Score endline: 4.0 (no change)

3.2. Cost-effective resource use: 'Operations are based on cost-effective use of its resources'

This is about whether the SPO has the resources to do the work, and whether resources are used cost-effectively.

VTRC continues to use its resources cost-effectively by planning the use of resources as per the budget already approved. By converging the Edugate and CARE Network project they use the tuition centres as a location for the resource centre and cluster meetings. The organisation is changing its strategy from being a service provider to also improve access of the target population to access government schemes by raising awareness of the communities and establishing relations with the government officials. Also better linking up with the government line departments helps them to use government institutes for their cluster meetings and government provisions for health care project. For example: Sanitary napkins and vitamin tablets are distributed from the PHCs to adolescent girls. All these further contribute in cost-cutting effort of the organisation.

Score baseline: 3.0

Score endline: 3.0 (no change)

3.3. Delivering planned outputs: 'Extent to which planned outputs are delivered'

This is about whether the SPO is able to carry out the operational plans.

In the last two years planned outputs were delivered except for external reasons which are beyond the control of the organisation (e.g. sometimes, delay occurs due to the delayed fund availability from donors). Outputs are planned, monitored and evaluated for each project in the annual activity plans. M&E of outputs is done in weekly, monthly, quarterly and annual meetings. Delivery of outputs is ensured through these meetings; the updated HR handbook with clear job responsibility for each staff and a performance management system; and field staff planning their activities day by day. The activity reports for 2012, 2013 and 2014 show that all of the planned targets for the annual indicators were reached, e.g. number of village in which awareness campaigns on SRH & HIV were held, number of girls child retained till class VIII, number of meetings with government official for relationship building and linkages, number of capacity building for the staff, number of PTA meetings, etc.

Score baseline: 3.5

Score endline: 3.5 (no change)

3.4.Mechanisms for beneficiary needs: 'The organisation has mechanisms in place to verify that services meet beneficiary needs'

This is about how the SPO knows that their services are meeting beneficiary needs

VTRC continues to be an organisation that is rooted in the community and starts its planning based on the community's needs. There are regular parent meetings in the tuition centres. There are also stakeholder meetings in the clusters and the Parent Teachers Association (PTA) meets twice in a year. These meetings help VTRC understand whether their services meet the beneficiaries needs. The outcome study and evaluation report of HACI have indicated that VTRC has made the desired impact in the lives of the community. The projects themselves have mechanisms like feedback meetings and satisfaction surveys to get input from the community to assess whether their needs are being met.

Score baseline: 3.5

Score endline: 3.5 (no change)

3.5.Monitoring efficiency: 'The organisation monitors its efficiency by linking outputs and related inputs (input-output ratio's)'

This is about how the SPO knows they are efficient or not in their work.

There is still no formal mechanism to calculate input-output ratios. Their deliverables are things as "changed behaviour" which is hard to do a cost-benefit analysis on. However, while during the baseline it was not clear how efficiency was being monitored, now there are certain systems in place. VTRC has a performance monitoring plan that is used for planning, managing and documenting data collection. Through weekly and monthly review of outputs of the projects, efficiency is measured. The Organisation-scan (O-scan) was done in 2011 and again in 2013. By comparing the scores of 2011 and 2013 they observe the effectiveness and efficiency of the CARE Network programme implementation. Performance monitoring plan tool was used through a participatory approach to assess the performance of the students and teachers which helped in monitoring the effectiveness of the Edugate programme. The organisation has a performance appraisal format to monitor staff output and outcome and the efficiency is linked with deliverables. There is no under- or overspending and record keeping for expenditure is well structured and organised.

Score baseline: 1.0

Score endline: 2.5 (considerable improvement)

3.6.Balancing quality-efficiency: 'The organisation aims at balancing efficiency requirements with the quality of its work'

This is about how the SPO ensures quality work with the resources available

There has been no change in this indicator. VTRC as an organization still has quality as one of its key values. The organisation balances the quality of its programme implementation with the efficiency of managing their operations. They do this by optimally utilising the common resources by sharing, learning and periodically reviewing the utilisation of resources.

Score baseline: 3.0

Score endline: 3.0 (no change)

Summary of capability to deliver on development objectives

VTRC continues to have day-to-day operational plans and budgets for each project which the staff fully understand as they are part of the planning process. Operational plans have improved due to an improved monitoring and information system. VTRC continues to use its resources cost-effectively by planning the use of resources as per the budget already approved. Some costs are reduced by using the tuition centres for cluster meetings and linking up with the government to help the community access their schemes (instead of VTRC providing these services themselves). In the last two years

planned outputs were delivered except for external reasons which are beyond the control of the organisation (e.g. sometimes, delay occurs due to the delayed fund availability from donors). Outputs are planned, monitored and evaluated. Delivery of outputs is ensured through staff meetings; the clear job responsibilities, performance management system; and field staff planning their activities day by day. VTRC continues to be an organisation that is rooted in the community and starts its planning based on the community's needs. VTRC receives input on whether their services meet beneficiary needs through: parent meetings, stakeholder cluster meetings, Parent Teacher Association meetings, outcome studies, evaluations and satisfaction surveys. There is still no formal mechanism to calculate input-output ratios. However, while during the baseline it was not clear how efficiency was being monitored, now VTRC has a performance monitoring plan, an organisation-scan (O-scan) that was done in 2011 and in 2013 and a performance appraisal format to monitor staff output. VTRC still balances quality, which is one of its key values, with the efficiency by optimally utilising the common resources and sharing.

Score baseline: 3.0

Score endline: 3.25 (very slight improvement)

Capability to relate

4.1. Stakeholder engagement in policies and strategies: 'The organisation maintains relations/ collaboration/alliances with its stakeholders for the benefit of the organisation'

This is about whether the SPO engages external groups in developing their policies and strategies, and how.

There is slight improvement in this indicator. In the last two years VTRC has strengthened its relationship with government line department functionaries and community leaders who are engaged in the strategic planning process. Government teachers are for example seen as a stakeholder, so VTRC works with them to ensure access of their target group to government school facilities. The organisation has also established good rapport with government machineries like PHCs, hospitals and the government of Tamil Nadu. The VTRC coordinator is now one of the resource persons for the Tamil Nadu government on the child protection policy, which in turn has benefitted the organisation. The change in strategy to use participatory integrated approach for community development facilitated the involvement of community leaders in policy and strategy meetings for their input. Parents Teachers Association (PTA) meetings are organised twice a year to review and monitor the programme. In the cluster level meetings the cluster supervisors, change agents and community leaders meet on a weekly basis to review and make strategic plans. This indicates the involvement of community leaders in planning. The government functionaries such as doctors are engaged in evaluation of the health project to get feedback. The Health Bridge Alliance (HBA) sharing and learning meetings continue to provide strategic guidance and feedback to its alliance members while planning the health care projects.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

4.2. Engagement in networks: 'Extent to which the organization has relationships with existing networks/alliances/partnerships'

This is about what networks/alliances/partnerships the SPO engages with and why; with they are local or international; and what they do together, and how do they do it.

VTRC continues to be good in networking and linking with key community people, such as panchayat leaders, ward counsellors and gram sabhas. The CARE network still brings most of the national and international links through its involvement in the Health Bridge Alliance through which they meet partners, including ICCO Alliance partners like Edukans, Prisma, KerkinActie, Share People, ZZG, Oikocredit and Yente; and other partners like TLM, W&D, COUNT and EHA. While efforts are being taken to strengthen linkages for the Edugate project with NGOs for lobby and advocacy, these have

not materialised yet. The relationship with Parent Teacher Association (PTA), Village Education Committee (VEC) and School Management Committee (SMC) has been strengthened which resulted in getting better input and lobby for the better implementation of the Edugate programme. In the last two years, VTRC has improved its engagement with the government. The organisation has established good rapport with government machineries like PHCs, hospitals and the government of Tamil Nadu. The VTRC coordinator is now one of the resource persons for the Tamil Nadu government on the child protection policy, which in turn has benefitted the organisation paving way for engaging other government officials.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

4.3.Engagement with target groups: 'The organisation performs frequent visits to their target groups/ beneficiaries in their living environment'

This is about how and when the SPO meets with target groups.

Since baseline there is a slight improvement in this indicator. VTRC continues to work with staff that is from the same target communities which enables them to have close engagement with the target groups. Now the community is involved more proactively in planning and implementing the programme through community engagement in joint monitoring. Various vision casting meetings were organised for the communities in different clusters where the community leaders participated and discussed on various health related issues. In the Grama sabhas (village parliament) tuition teachers, students and community leaders came together to discuss issues like quality education and government education schemes in their villages. Medical camps are organised with the help of government functionaries with a focus on needs assessment of children and adults with disability, creating awareness on SRH and HIV/AIDS related issues in the target villages. The change-agents have formed Self-Help Groups and Youth groups and they meet on a weekly basis. The tuition teachers meet the parents in the tuition centres and in their respective houses on a monthly basis.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

4.4.Relationships within organisation: 'Organisational structure and culture facilitates open internal contacts, communication, and decision-making'

How do staff at the SPO communicate internally? Are people free to talk to whomever they need to talk to? When and at what forum? What are the internal mechanisms for sharing information and building relationships?

The staff meets together in the review and monitor meetings to share their views and make strategic plans. The tuition teachers and change agents meet the coordinators in the monthly meeting and cluster meetings respectively. The coordinators and the project manager meet during quarterly review and planning meetings. During the monthly general meeting all the staff including the chairman meet to share their views and discuss on strategic issues. There is an open and democratic structure in operation which helps all the staff communicate freely, share views and participate in decision making. The organisation has adapted a participatory approach in planning and to further strengthen the internal and external. Trust relationships and better communication between the second line leadership and the chairman have been strengthened. This is evident from the fact that the chairman entrusted the entire workshop process in the hands of second line leadership and other administrative matters while he was away for a workshop.

Score baseline: 3.0

Score endline: 4.0 (improvement)

Summary of capability to relate

In the last two years VTRC has strengthened its relationship with government line department functionaries and community leaders who are engaged in the strategic planning process. Examples include improved report with the PHCs, hospitals and government of Tamil Nadu. VTRC continues to engage community leaders, parents and partners in the HBA in development of their strategies. VTRC continues to be good in networking and linking with key community people. The CARE network still brings most of the national and international links through its involvement in the Health Bridge Alliance. The Edugate programme still needs stronger linkages, while locally relations with Parent Teacher Association (PTA), Village Education Committee (VEC) and School Management Committee (SMC) have been strengthened. VTRC continues to work with staff that is from the same target communities which enables them to have close engagement with the target groups. The community is now more proactively involved in planning, implementing and jointly monitoring the programme. Field staff visit the target groups through self-help group meetings, parent meetings, house visits, village parliaments and medical camps. The staff continues to meet in review meetings to share their views and make strategic plans. There is an open and democratic structure. Trust relationships and better communication between the second line leadership and the chairman have been strengthened. The chairman entrusted the entire workshop process in the hands of second line leadership.

Score baseline: 3.1

Score endline: 3.8(slight improvement)

Capability to achieve coherence

5.1.Revisiting vision, mission: 'Vision, mission and strategies regularly discussed in the organisation'

This is about whether there is a vision, mission and strategies; how often staff discuss/revise vision, mission and strategies; and who is involved in this.

Representative and managerial staff continues to revisit the vision and mission of the organisation at least once in a year. Apart from this, all staff are now involved in their own project vision and mission exercise. (Field) staff are briefed on the vision and mission annually. There has, however, been no change in the vision and mission of the organisation. VTRC has made a strategic change in the CARE Network programme for better sustainability of the project. The new strategy is to help the target population access government schemes and services by linking them with officials of the line departments, instead of VTRC focussing on providing these services itself. Basically it means making health care delivery system in sexual reproductive health and HIV accessible and available through a process of cooperation, strengthening and lobbying with the state health systems.

Score baseline: 2.5

Score endline: 3.0 (slight improvement)

5.2.Operational guidelines: 'Operational guidelines (technical, admin, HRM) are in place and used and supported by the management'

This is about whether there are operational guidelines, which operational guidelines exist; and how they are used.

VTRC continues to have the following operational guidelines and policies in place: HRM/ staff recruitment policy, finance policy, work place policy, Edugate recruitment policy, guidelines for stock control and maintenance, child protection policy, standard operating procedures, HIV policy, leave policy and travel policy.

Since the baseline in 2012 VTRC has fine-tuned its policies for better performance of the organisation:

- Performance Management System Policy was introduced to improve the formal employee performance appraisal system. Key result areas have been set to assess the performance. On a quarterly and annually basis.

-
- Finance policy was revised in 2013. It is evident from the endline evaluation workshop discussion and by comparing the 2012 finance policy with 2014 finance policy. To strengthen it the objectives were revised and new clauses were incorporated, such as, that staff have to adhere to the financial procedures outlined in the policy documents and that financial reporting and monitoring are done periodically. There is clarity of roles and responsibility for unit heads, accountants, and junior assistants. Guidelines were developed for the internal control system and different financial forms and formats were developed for transparency in accountancy.

In comparison with the baseline staff now have a better understanding of the operational guideline.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

5.3.Alignment with vision, mission: 'Projects, strategies and associated operations are in line with the vision and mission of the organisation'

This is about whether the operations and strategies are line with the vision/mission of the SPO.

VTRC continues to keep its projects; strategies and operations in line with the vision and mission of the organisation. The new strategy that was developed in 2014 continues to be in line with its mission and vision.

Score baseline: 3.5

Score endline: 3.5 (no change)

5.4.Mutually supportive efforts: 'The portfolio of project (activities) provides opportunities for mutually supportive efforts'

This is about whether the efforts in one project complement/support efforts in other projects.

The projects and programmes that VTRC implement continue to be mutually supportive. For example the organisation's mother and child care project is integrated with the Edugate programme. Also the health care project is linked with the Edugate project and is implemented in the same clusters. All the health care programmes addressed in the community involve the tuition teachers, the children and their parents. In this way the programme on SRH and HIV issues also reaches the beneficiaries of tuition centres. For children who are above 10 years, sexual wellbeing education is given as per the module developed by the health care project. Similarly the Information, Education, Communication (IEC) materials are being used to educate and sensitize the staff and children of the tuition centres project.

Score baseline: 3.5

Score endline: 3.5 (no change)

Summary of capability to achieve coherence

Representative and managerial staff continues to revisit the vision and mission of the organisation at least once in a year. Apart from this, all staff are now involved in their own project vision and mission exercise. VTRC has made a strategic change in the CARE Network programme to help the target population access government schemes and services instead of VTRC focussing on providing these services itself. VTRC continues to have the following operational guidelines and policies in place: HRM/ staff recruitment policy, finance policy, work place policy, Edugate recruitment policy, guidelines for stock control and maintenance, child protection policy, standard operating procedures, HIV policy, leave policy and travel policy. Over the last two years staff have gained a better understanding of the operational guidelines, the finance policy has been revised and a performance management system policy was introduced. VTRC continues to keep its projects, strategies and operations in line with the vision and mission of the organisation. The projects and programmes that VTRC implement continue to be mutually supportive. For example, the mother and child care project is integrated with the

Edugate programme and informative materials from the health project are also used in the tuition centres.

Score baseline: 3.3

Score endline:3.5 (very slight improvement)

Appendix 4 Results - key changes in organisational capacity - general causal map

As the changes in organisational capacity in the general causal map and the detailed causal maps overlap completely, please refer to Appendix 5 for the detailed narrative and map.

Appendix 5 Results - attribution of changes in organisational capacity - detailed causal maps

During the endline process, key organisational capacity changes have been identified in the following capabilities: capability to act and commit; capability to adapt and self-renew. These two capabilities have been chosen for the purpose of process tracing since these are the two capabilities that have most frequently been targeted by the CFAs. The organisational capacity changes that have been identified are based on a potential link with MFS II supported capacity development activities in these two capabilities, and on a variety of sources (secondary data as well as endline workshop data). The process tracing methodology has been adapted to the purpose of this evaluation and to investigate closely the underlying causes for these identified organisational capacity changes, and the extent to which these changes can be attributed to MFS II supported organisational capacity strengthening activities .

The evaluation team carried out an end line assessment at VTRC from 5 to 7 August 2014. During this workshop, the team made a recap of key features of the organisation in the baseline in 2012 (such as vision, mission, strategies, clients, partnerships). This was the basis for discussing changes that had happened to the organisation since the baseline. The three main changes that happened in the organisation since the baseline were:

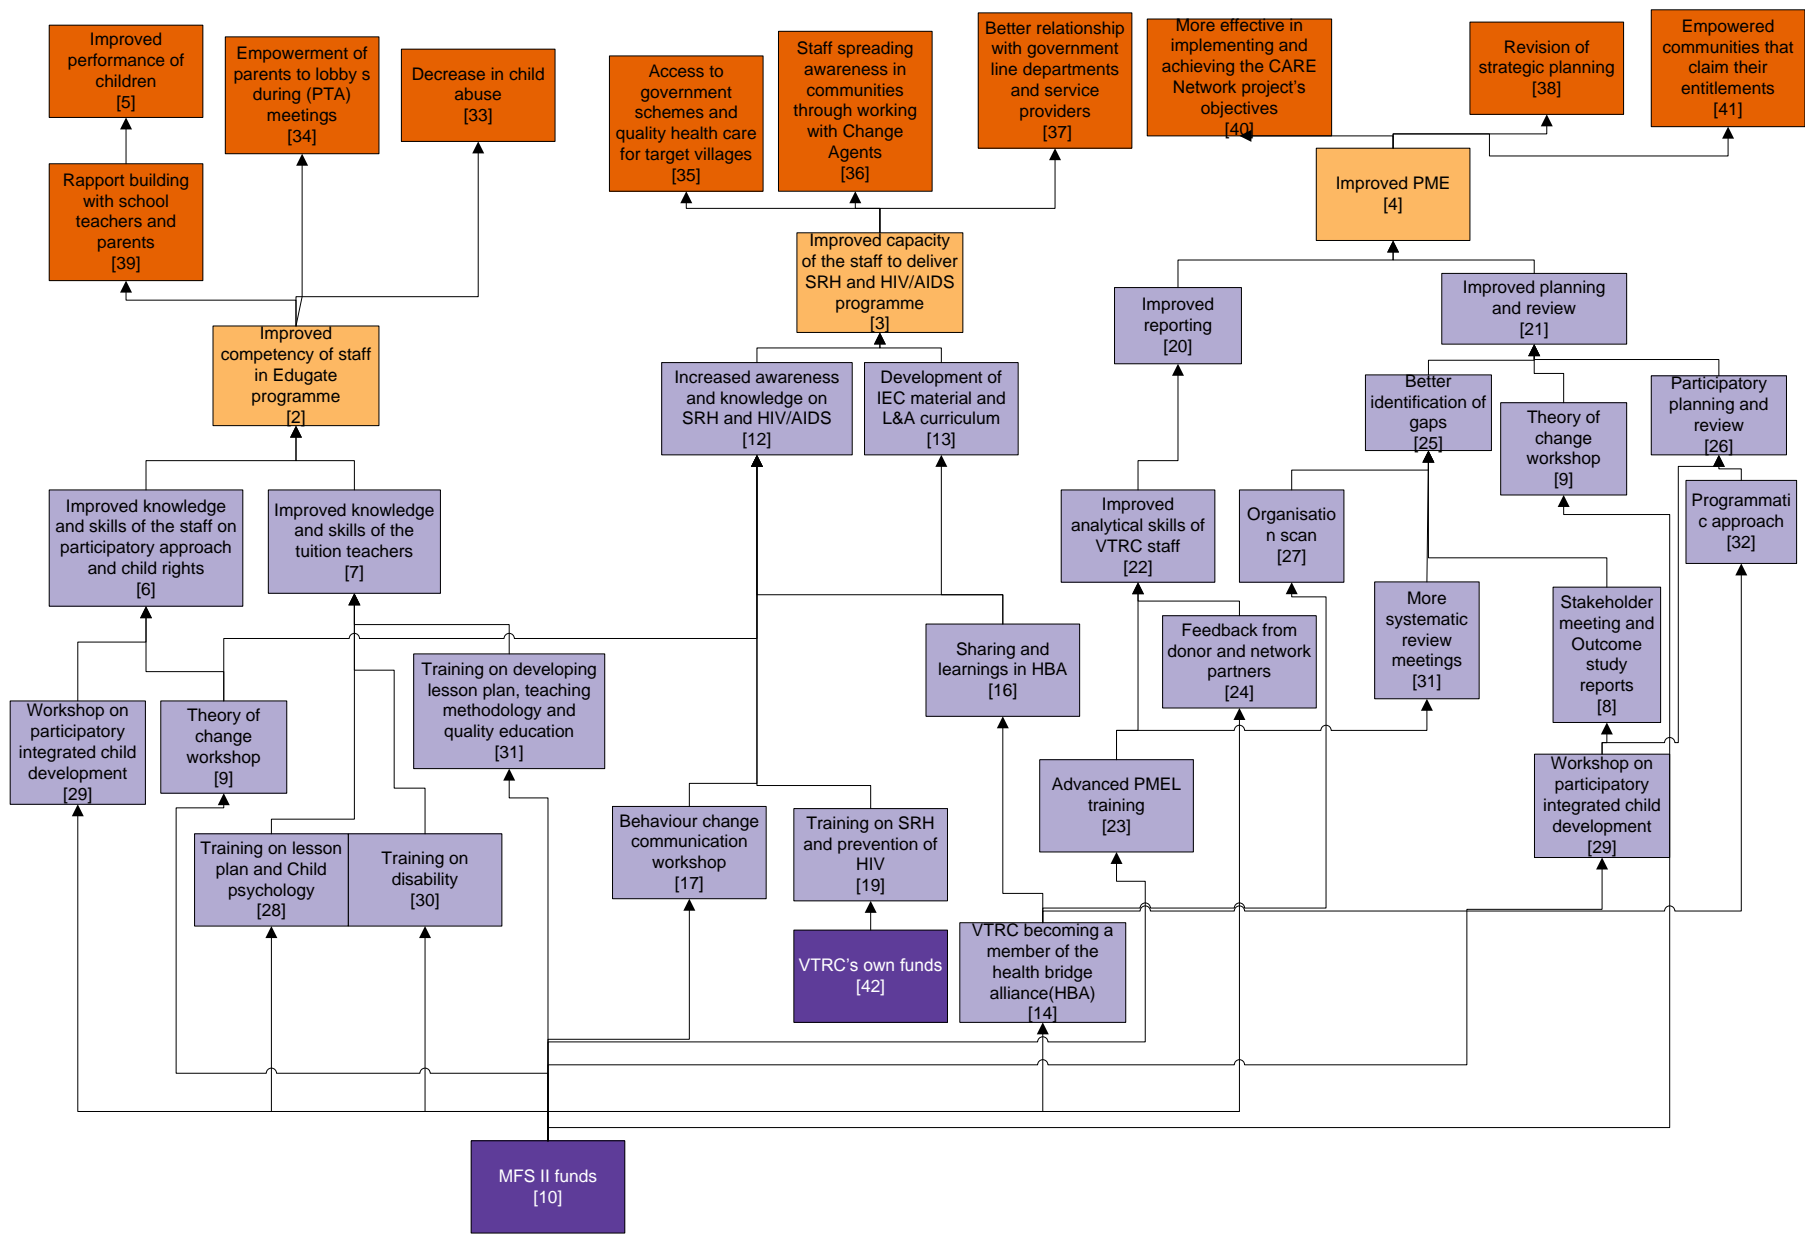

1. Improved competences of staff in the Edugate programme [2];
2. Improved capacity of staff to deliver SRH and HIV/AIDS programme [3]; and
3. Improved Planning, Monitoring and Evaluation (PME) [4]

Since its inception VTRC has been committed to care, protect and uplift orphan, destitute and poor children/women to help meet their basic needs and to expand their opportunities to reach their full potential. It began with caring for the orphans and advocating the protection of children and women's rights, then gradually shifted its focus towards building a healthy, prosperous, value based and child caring society in alignment with its vision 'The little one shall become a mighty nation'. There has been constant effort by the organisation to improve its capacity to be sustainable in achieving its goals. VTRC becoming the partner member of Health Bridge Alliance (MFS II funded) further strengthened the organisation's ability to achieve goals [Source: CARE Network Annual Plan - 2011 (Existing Format), gv - 5C_baseline_report_India_VTRC_17012013_CK, VTRC Historical timeline table & narrative, 5c endline interview guide_OD consultants_selected indicators_VTRC].

Successive governments' changing policies for the NGOs, local contextual issues and VTRC's commitment to strengthen its target community further caused the organisation to improve its capacity to be sustainable. According to staff present at the endline workshop, the three main changes mentioned above are expected to lead to VTRC being more sustainable as an organisation. They happened to coincide with the outcome areas that were identified for process tracing, so as to get detailed information on how these changes in organisational capacity came about. Therefore the general causal map overlaps strongly with the causal maps developed for each of these outcome areas/organisational capacity changes to be analysed to during the process tracing. All the details about these changes in organisational capacity as well as the underlying factors that influenced these changes are described in the narrative and visual below.

These three key organisational capacity changes will be discussed in more detail in the related detailed causal maps, which were a result of process tracing. The three main organisational capacity changes are described in the light orange boxes and the key expected consequences are noted above these cards in dark orange. Light purple boxes represent factors and aspects that influence the key

organisational capacity changes (in light orange). Key underlying factors that have impacted the three key organisational capacity changes are listed at the bottom in dark purple. The narrative below describes each key organisational capacity change, and the contributing factors are described from the top to bottom. The numbers in the visual correspond with the numbers in the narrative.

Capability to act and commit - outcome area 'Improved competency of staff in Edugate Programme'

Improved competency of staff in Edugate Programme [2] is expected to contributed to:

- Rapport building with school teachers and parents [39]. Especially the Workshop on Participatory Integrated Child Development (PICD) workshop improved the skill and capacity of the CARE Network and Edugate coordinators to adapt new strategies for participatory approach in the community during interactions and programs. An exercise of the participatory approach was done with the community in Salem and Madurai district. It further helped the staff in rapport building with other stakeholders like school teachers and parents and members of School Management Committee [Source: 5c endline _ questionnaire _ training _ participant _ perspective _ India_VTRC_PICDworkshop2012, 5C endline_support to capacity development sheet_CFA perspective_India_VTRC_RedeemKind_NB, CARE Network Evaluation Report, Annual report – 13]. This rapport building [39] helped to improve the performance of children [5], as is explained below:
 - Improved performance of children [5]: “the children in the tuition centres put up an improved performance due to the initiative of the tuition teachers who personally visit the parents and help creating a favourable environment for the children to read at home and also to regularly attend the school” [Source: Annual report Edugate 2013 p.4]. Due to personal effort of the tuition teachers the children improved their performance in the school, increased their attendance and girl children were retained in school till class VIII. The school teachers gave thank you cards to the tuition teachers for their effort and also invited them to educate the children on various social and health related issues in the school [Source: 5C endline_support to capacity development sheet_SPO perspective_India_VTRC(3) - updated - 24 03 2014, Annual report – 13, 5c endline self-assessment sheet_field staff_India_VTRC 1, Endline evaluation workshop 2014 VTRC].The dropout of children in the situation centres is almost negligible in the target locations. The fact that Children parliaments are becoming a good lobby instrument could be seen from them identifying social issues and trying to solve these social issues through the local government [Source: Annual report – 13].
 - Empowerment of parents to lobby for their own needs and issues during Parent Teacher Association (PTA) meeting [34]: The Edugate staff created awareness among the parents on child rights and encouraged them to attend the PTA meetings at school and voice their concern. As is evident in the annual report 2013 of the Edugate programme the parents demanded proper maintenance of toilets and also demanded the administration to initiate an English medium section in the school as parent lack the money to send their children to private schools where English is taught. [Source: Annual report – 13, 5C endline_support to capacity development sheet_SPO perspective_India_VTRC(3) - updated - 24 03 2014].
 - Decrease in child abuse [33]. Staff knowledge and skills on child rights have improved, which is evident in the fact that the CARE Network coordinator of VTRC indicated that the staff with improved knowledge and skills in child rights could now empower the children and parents on child rights. According to the CARE Network coordinator of VTRC this has resulted in a decrease of child abuse [Source: 5C endline_support to capacity development sheet_SPO perspective_India_VTRC(3) - updated - 24 03 2014].

Improved competency of staff in the Edugate Programme [2] was due to improved knowledge and skills of the staff on participatory approach and child rights [6] and improved knowledge and skill of the tuition teachers [7]. Each of these organisational capacity change areas are described below.

Improved knowledge and skills of the staff on participatory approach and child rights [6]

The Participatory approach is a methodology to enter the community and to do this in a participatory way. In this process the community is involved in needs identification and planning. The participatory approach has been initiated in July 2014 in the Edugate programme. This approach has resulted in the active involvement of the community members in planning and monitoring the function of the tuition centers and providing inputs and feedback. For example, on the 20th of July 2014 a stakeholder meeting was held with parents to discuss the annual plan of the Edugate project. Based on these discussions a summer camp was suggested by parents and planned in the new annual plan [Source:

Annual Plan - 2014 Edu Gate]. VTRC indicated that they adopted the participatory approach in identifying and addressing issues through an active participation of the community [Source: 5C endline_support to capacity development sheet_SPO perspective_India_VTRC(3) - updated - 24 03 2014].

Staff knowledge and skills on child rights have improved, which is evident in the fact that the CARE Network coordinator of VTRC indicated that the staff with improved knowledge and skills in child rights could now empower the children and parents on child rights. According to the CARE Network coordinator of VTRC this has resulted in a decrease of child abuse [Source: 5C endline_support to capacity development sheet_SPO perspective_India_VTRC(3) - updated - 24 03 2014]. During parents-teachers-association (PTA) meeting in the tuition centres the teachers, animators and project supervisors impressed upon the parents the need for better parenting, with a specific focus on the girl child, avoidance child rights violations, vigilance on incidence of sex abuse and trafficking of children [Source: Annual report – 13, Annual report final – 270112]. Knowledge and skills of the staff on participatory approach and child rights [6] improved because of the following capacity building trainings for the staff:

- Workshop on Participatory Integrated Child Development (PICD) [29]: PICD workshop was organised in April 2012 in Bangladesh by REK and Word & Deed. The aim was to train the participants on the need to go from an institution-based approach to a community-based approach, which is a more sustainable child-friendly approach (within families, not institutions). Different tools were demonstrated to help the participants learn to work in a participatory process with the community to move from institution based (e.g. orphanage) development to child centered development. This workshop improved the skill and capacity of the CARE Network and Edugate coordinators to adapt new strategies for participatory approach in the community during interactions and programs. An exercise of the participatory approach was done with the community in Salem and Madurai district [Source: 5c endline _ questionnaire _ training _ participant _ perspective _ India_VTRC_PICDworkshop2012, 5C endline_support to capacity development sheet_CFA perspective_India_VTRC_RedeemKind_NB, CARE Network Evaluation Report, Annual report – 13]. This workshop was funded by MFS II [10].
- Theory of Change workshop [9]: Theory of Change workshop for CARE network was organised on 16-19 April 2012 at Dhaka by ICCO. Though the workshop was held prior to the baseline, the outcome could be seen in the improved capacity of the staff over the last two years. The aim of the workshop was to help the partners have deeper understanding of Theory of Change and its practice, participatory approach (making sure that the parents participate in a mutual learning activity), civil society strengthening, etc. It helped the staff to adapt the participatory approach more attentively to involve the parents in identifying the needs and issues related to children education. This resulted in the involvement of project supervisors in the Parent Teacher Association meetings both at tuition centers and schools which was earlier only attended by tuition teachers. It also taught the staff to strengthen civil society such as School Management Committee (SMC)¹⁵ to lobby for the target children to ensure access to government schemes and programmes [Source: Source: Annual report – 13, 5C endline_support to capacity development sheet_CFA perspective_India_VTRC_RedeemKind_NB). This workshop was funded by MFS II [10].

Improved knowledge and skills of the tuition teachers [7]

Over the last two years the tuition teachers have improved in their skills and knowledge to apply different teaching methods, provide appropriate and useful information through innovative teaching (e.g. one tuition teacher collects information through web search and teaches the children), and develop lesson plans. They also improved their skills in organising classes on a multi class multi-level setting, child psychology, monitoring and evaluating the performance of children [Source: Endline Evaluation workshop 2014 VTRC, Annual report – 13]. Improved skills and knowledge of the staff led to better performance of the children in the schools which resulted rapport building with stakeholders like school teachers, parents and members of School Management Committee [5] [Source: 5C

¹⁵ SMCs are cabinet like groups, democratic in character, vested with powers to formulate school development plans, budget items, incur expenditure and become collectively responsible and accountable.

endline_support to capacity development sheet_SPO perspective_India_VTRC(3) - updated - 24 03 2014, Annual report – 13]. It is evident from the increased number of children enrolled in the primary, secondary and high school level in 2012 and 2013 compared to 2011 that the tuition teachers have improved their knowledge and skills in teaching the students and communicating with the parents on child rights, gender, hygiene etc. In 2013 a total of 72 Parent Teacher Association (PTA) meetings were organised by the tuition teachers, where they emphasized better parenting at home. During PTA meetings at school, members of the PTA are voicing their concern. For example the members of PTA voiced their concern to the school administration to initiate sections in the schools that teach in English as they were unable to send their children to private schools which collect exorbitant fees. They also called for maintenance of the toilets in the school as children often complained of poor maintenance [Source: Annual report – 13, Annual report Edugate 2013 p.4, Endline Evaluation workshop 2014 VTRC]. Tuition teachers improved their knowledge and skills because of various in-house trainings:

- Training on Lesson plan and Child psychology [28]:

Three days training on lesson plan and child psychology for tuition teachers and staff was organised by VTRC on May 2013. The faculties of Peniel College of Education were involved to impart on the teaching methodology suited to the tuition centres, handling children with multi grade and multilevel situations, preparation and implementation of lesson plan, conducting academic assessment and evaluation, handling slow learners and children with learning difficulties, liaison and rapport building with parents and other stake holders, and child psychology. This resulted in the tuition teachers to develop better lesson plans, provide useful information to the students, better management of children, educating the parents to create conducive environment for children to study, etc. It also capacitated them to ask feedback from the school teachers on the performance of the children to identify academically weak children and provide special attention [Source: VTRC - Edugate - Annual Training Details – 2013, 5C endline_support to capacity development sheet_SPO perspective_India_VTRC(3) - updated - 24 03 2014, Annual report – 13]. This workshop was funded by MFS II [10].

- Training on disability [30]:

Four days training program for tuition teachers and other staff was organised by VTRC on December 2013 supported by MFS II. The other staff that is referred to here, is teaching staff of VTRC that work at Peniel Nursery and Primary school, Peniel High and Higher Secondary school, Peniel Rural College of Education and Infants home. Among these three trainings two were for VTRC staff working in community development programs and one for working in academic institutions. The program was facilitated by Mr. Stephen of Integrated Rural Community Development Society (IRCDS) in Thiruvallur and the Head Master of Bethshan Special school, Madurai. A total of 90 tuition teachers and 7 project staff members of VTRC participated in the training programs. The facilitators presented a graphic picture and account of the disability in India and the concept of inclusive education being implemented towards mainstreaming disability. While elaborating on the different types of disability and the various government schemes now available for persons with disability, they felt the strong need for every institution having a disability policy, making all buildings accessible to children with disability. They presented several case stories to highlight the plight of the disabled in their fight for rights and privileges and how society was growing insensitive to the needs and aspirations of people with disability. Besides answering the queries of participants, they also distributed a few copies of the manual containing government circulars/orders on disability. As VTRC is privileged in running academic institutions and big community outreach programs, this training not only improved the knowledge of the staff on disability but also generated responsibility to sensitize the community towards mainstreaming disability and making its work places disability friendly Staff improved their knowledge to create awareness on disability and empowered the community to access government schemes and services [Source: Annual report – 13, 5C endline_support to capacity development sheet_SPO perspective_India_VTRC(3) - updated - 24 03 2014]. This workshop was funded by MFS II [10].

- Training on developing lesson plan, teaching methodology and quality education [31]: This training programme was organised by VTRC for tuition teachers and supervisors in February, May and August of 2012 with the support from MFS II. The aim was to help them develop lesson plans and apply different innovative methods in teaching. It capacitated the tuition teachers to provide appropriate and useful information through innovative teaching [Source: VTRC - Edugate - Annual training calendar – 2012, Annual report Edugate – 2012]. This workshop was funded by MFS II [10].

Capability to act and commit - outcome area 'Improved capacity of staff to deliver SRH and HIV/AIDS programme [3].'

Another key organisational capacity change that was identified was the improved capacity of staff to deliver SRH and HIV/AIDS programme [3] [Source: 5C endline_support to capacity development sheet_SPO perspective_India_VTRC(3) - updated - 24 03 2014]. This organisational capacity change has contributed to the following changes:

- Access to government schemes and quality health care for target villages [35]: "With the overall improvement in the capacity of the staff to articulate SRH and HIV issues, the beneficiaries in the target villages were able to secure quality health care and access to various government schemes much more easily during this year." [Source: CARE Network Narrative Annual Report – 2012]. The adolescent girls received government provisions like napkins, iron tablets, vitamin powder etc., which improved in their health status [Source: Case Studies].
- Staff spreading awareness in communities through working with Change Agents [36]: "The animators and supervisors were capacitated on SRH and HIV issues and they have been taking them forward to the community through Change Agents" [Source: CARE Network Narrative Annual Report – 2012]. There is increase in the number of registration of the ANC/PNC women. 100% hospital delivery in 2013 as targeted in 2013 annual plan [Source: CARE Network Evaluation Report].
- VTRC developing better relationships with government line departments and service providers [37]: "The staff articulated/communicated SRH and HIV issues among different stakeholders much better. Better relationship with the service providers in the government sector facilitated better service delivery to the beneficiaries of the project. Further the staff created better awareness among the school and college going students on SRH and HIV/AIDS issues." (Source: CARE Network Narrative Annual Report – 2012). Looking at the distinct improvement in the behaviour and knowledge of the students on child rights, personal hygiene, HIV and AIDS, sexual violence and child abuse etc., several schools in the project area demanded VTRC intervention for the education of the students on sexual wellbeing and HIV. The SHGs could access government facilities such as managerial and leadership training, skills development training etc., under the government livelihood mission programme [Source: Endline Evaluation Workshop 2014 VTRC, CARE Network Evaluation Report, CARE Network - Health - Annual Activity Report - 2013.doc, CARE- Review of Partners Outcomes]. Government functionaries began to assist and support regularly in reaching out, motivating and educating pregnant women and young mothers and responded to the need of the ANC/PNC women (more acutely felt by first-time pregnant women staying with in-laws) for encouragement and support on regular ANC care, nutrition, convincing family and husbands on issues etc. [Source: CARE Network Evaluation Report].

The staff have improved in their capacity in delivering the SRH and HIV/AIDS programme [Source: 5C endline_support to capacity development sheet_SPO perspective_India_VTRC(3) - updated - 24 03 2014]. The improved capacity of VTRC staff to train animators is evident in the report of Review of Partners' outcomes. This report indicates that the animators trained by the CARE network are able to engage intensively with the target group, leverage the presence of the government facilities and programmes (ANC/PNC, schools, SHG support, PLHA support), strengthen existing groups (the ANC/PNC groups, SHG groups) and create new groups only (Youth Girls and Youth Boys), and earned the credibility, behaviour change among the youths and adolescents in the communities and trust of the target groups [Source: CARE- Review of Partners Outcomes].

Improved capacity of staff to deliver SRH and HIV/AIDS programme was due to:

- Increased awareness and knowledge on SRH and HIV/AIDS [12]
- Development of IEC material and lobby and advocacy curriculum for SRH and HIV/AIDS [13]

Each of these areas are further described below.

Increased awareness and knowledge on SRH and HIV/AIDS [12].

Over the years the staff has improved their awareness and knowledge on SRH and HIV/AIDS, to identify issues to lobby, better articulation etc., because of several MFS II supported capacity building trainings. This resulted in the communities improve their knowledge and awareness on various health related issues and able to lobby to government for their needs. Further VTRC's intervention escalates the action and result [Source: 5C endline_support to capacity development sheet_CFA perspective _India _VTRC_RedeemKind_NB, 5c endline interview guide_OD consultants_selected indicators_VTRC, 5c endline self-assessment sheet_management_India_VTRC, 5C endline_support to capacity development sheet_SPO perspective_India_VTRC(3) - updated - 24 03 2014, CARE Network - Half yearly Activity Report - 2014]. Increased awareness and knowledge on SRH and HIV/AIDS [12] was due to due to Training of the staff on SRH and HIV/AIDS, during the ToC workshop [9], Behaviour Change Communication workshop [17] and Training on SRH and prevention of HIV [19]; and sharing and learning at Health Brigade Alliance [16]. The following are some of the external and in-house trainings:

- Theory of Change workshop [9]: Theory of Change workshop for CARE network was organised in 16-19 April 2012 at Dhaka by ICCO. Though the workshop was held prior to the baseline, the outcome could be seen in the improved capacity of the staff over the last two years. The aim of the workshop was to help the partners have deeper understanding of Theory of Change and its practice, the difference between log-frame and Theory of Change, programmatic approach, behaviour change, ICCO Alliance Basic Health and HIV/AIDS program, rights based approach and gender, etc. It helped VTRC develop a strategic plan 2014-15 for CARE Network programme on the basis of Theory of Change. Clear pathways are planned to reach the goal to empower communities accessing quality health care services for SRH and HIV prevention in 150 villages of Madurai & Salem Districts (Tamilnadu state) [Source: Theory of change - narrative - CARE network - Updated - December 2013, 5c endline_questionnaire_training_participant_perspective _India_VTRC_ToCworkshop2012]. The workshop also helped VTRC get a deeper understanding of the aims of ICCO Alliance Basic health and HIV/AIDS programme, rights based approach to empower the women to better avail reproductive health rights. Further it improved the knowledge on behaviour change measures that *'Health problems are often a result of individual behaviour of the people at risk and behaviours of people around them (environment), so changing individual behaviour and changing behaviour of the people around them is a possible solution'* which VTRC adapted in its strategic plan [Source: Theory of change - narrative - CARE network - Updated - December 2013, 5C endline_support to capacity development sheet_CFA perspective_India_VTRC_RedeemKind_NB, 5c endline_questionnaire_training_participant_perspective _India_VTRC_ToCworkshop2012].
- It also capacitated the staff to converge the Edugate and the CARE Network programme to take up health related issues in the tuition centers for better implementation and achievement of the programmes [Source: Endline Evaluation Workshop 2014 VTRC]. This workshop was funded by MFS II [10].
- Behaviour Change Communication workshop [17]: Three days Behaviour change communication workshop was organised in 5-7 September 2012 in Hyderabad by Health Bridge Alliance – India (ICCO – PRISMA Alliance). It aimed at capacitating the participants on behaviour change framework, formulate/discuss lobby and advocacy strategy for the Health Bridge Alliance, etc. It helped VTRC staff improve their knowledge on the determinants of behavioural change communication like risk perception, attitude, social influence and self- efficacy, etc. [Source: 5c endline self-assessment sheet_management_India_VTRC, 5c endline_questionnaire_training_participant_perspective_India_VTRC_BCCworkshop2012, Minutes - HBA Hyderabad Sept 2012]. This workshop was funded by MFS II [10].
- Training on SRH and prevention of HIV [19]: Two days training programme was organised by VTRC for the animators and staff in April 25-26, 2013 at Bethel Community Development Project, Thoppur. The training was funded with VTRC's own funds [42]. The objective of the training was to improve the knowledge, approach, attitude of the staff on promotion of SRH and effective HIV prevention. This resulted in the change agents gain knowledge on HIV related symptoms, anti-retroviral therapy, prevention methods, use of herbal medicines to treat HIV/AIDS, etc. [Source:

2011, 2012, 2013 - Health Training Details.xlsx, Staff capacity building programme minutes report Apr'13 (1)].

- *Sharing and learning at Health Brigade Alliance (HBA) [16].* The health Bridge Alliance was formed in 2011 consisting of six partners (The Leprosy Mission Trust India, Emmanuel Hospitals Association, Help a Child of India, Christian Outreach Uplifting New Tribes, CARE Network and Word and Deed India). [Source: VTRC Historical timeline table & narrative, Health Bridge Alliance - Evaluation Report - Draft Version, CARE Network Evaluation Report]. During MFS I period (2006-2010) these six organisations were individually implementing health related projects for poor and vulnerable sections of India as part of a global health programme supported with funds from the Dutch government that Prisma accessed through ICCO cooperation and made available to partners of Prisma and their Indian counterparts. At the beginning of MFS II the donor suggested that Indian partners form a Programmatic Collaboration to give the programme a wider impact and better sustainability of the programme. Thus, six partners, facilitated by an international coordinator from Red een Kind, joined the coalition and developed a 5 year country plan for the years 2011 to 2015. The multi stakeholder process based on joint analysis, shared vision and objectives and capacity building trainings facilitated VTRC to improve the capacity of the staff and in strategic planning. [Source: Health Bridge Alliance - Evaluation Report - Draft Version, CARE Network Evaluation Report, CARE Network - Program Activity Narrative Report - 1st Quarter 2014]. The following are some of the HBA sharing and learning meetings:
 - **Health Bridge Alliance meeting 5th September 2012** Secunderabad, Hyderabad [Source: Minutes -HBA Hyderabad Sept 2012, CARE- Review of Partners Outcomes]: It was organised by Word & Deed India and Mr. Christopher & Dr. Shanti Davidar of VTRC participated in the meeting. The objective was to review the April 2012 Theory of Change and Behavioural Change workshop at Bangladesh, sharing and learning on SRHR issues, how to fine-tune and prepare expert guidance for the ToC. The behaviour change framework was thoroughly discussed. This discussion resulted in VTRC actively promoting and encouraging positive behaviour change among the community by disseminating information regarding the entitlements available for enhanced Reproductive and Child Health (RCH) indicators. It helps promote awareness on various health issues, immunisation, ANC/ PNC, HIV etc. It is in the process of promoting positive values among the younger people which is expected to show long term results. It is evident that more and more people are aware of the causes of HIV and Sexual Transmitted Disease and are openly talking about it and seeking help. This is also evident from the increased number of youths who have gone for HIV testing during the current year. Also key SRHR and HIV/AIDS issues in India are discussed and strategy developed how to address the issues, e.g. complementing the public health movement by providing evidence showing lack of access to government services [Source: CARE- Review of Partners Outcomes].
 - **Health Bridge Alliance meeting 19-21 November 2012, Madurai** [Source: Madurai Minutes-HBA – 2012]: The objective was to review the progress of 2012 program and prepare the action plan for 2013 which included context analysis, Theory of Change, Lobby and Advocacy plan. Also the alliance partners reviewed the India Health Alliance Country Plan for 2011-2015 and the Lobby and Advocacy Plan for each Partner. The alliance partners were supported in developing / identifying tools for Behavior Change.
 - **Health Brigade Alliance meeting at Chennai in August 2103** [Source: HBA Meet August 2013 - Chennai - Minutes of the Meeting]. The aim was to discuss/learn/plan on various health related issues, on gender issues having the greatest impact on the health and well-being of households of India. Furthermore there was discussion on Theory of Change, Gender and Right based approach etc. Also Lobby and Advocacy plans were discussed and action points were drafted up to November 2013 for each partner organisation and for the alliance as a whole.

Development of IEC materials and lobby and advocacy curriculum [13].

Apart from increased knowledge and skills on SRH and HIV/AIDS the development of IEC materials and curriculum has also supported the capacity of VTRC staff to deliver SRH and HIV/AIDS programme. VTRC developed IEC materials on SRH/HIV such as pamphlets and booklets for awareness campaigns in ANCs, PNCs and youth meetings and in the school. The materials are largely developed in the areas of sexual well-being, nutrition, environment, hygiene, SRH, HIV/AIDS, etc. [Source: CARE Network - Half yearly Activity Report – 2014, CARE Network - Health - Annual Activity Report – 2013]. Visualization of the messages in these IEC materials capacitated/facilitated the staff to better translate the awareness campaign [Source: Endline Evaluation workshop VTRC 2014]. This resulted in improvement not only in knowledge and perceptions about SRH/HIV but change in attitude, behavior and response across the target population. It is evident from the project evaluation by Dr. Vijay Aruldoss from 20th May to 29th May 2014 that the IEC materials on SRH/HIV were developed and were largely used in the awareness campaigns and programs organised in the target villages [Source: CARE Network Evaluation Report, CARE Network - Half yearly Activity Report – 2014, CARE Network - Health - Annual Activity Report – 2013]. Apart from IEC materials, the Health Bridge Alliance partners developed a Lobby and Advocacy curriculum in 2013. The aim of this curriculum is to capacitate the partners in skills and knowledge about designing a campaign for awareness and lobbying, identifying milestones, developing linkages/alliances with civil society, government officials, academicians and international NGOs, how to make your voice heard to your issues. As a result the individual alliance partners are expected to create awareness and lobby on various health related issues such as sexual reproductive health, HIV/AIDS, child abuse, malnutrition, etc., at the local, district and state level and the Health Bridge Alliance at the national level. The objective of VTRC is also to create awareness on SRH, HIV/AIDS, child rights, etc., and lobby for the needs of the community by adapting a participatory approach (this was discussed above). This curriculum capacitates the staff to develop better a strategy for awareness and lobby. [Source: Advocacy and Lobbying workshop Curriculum 2013, L&A Plan Alliance PI33 Options, Endline Evaluation workshop 2014 VTRC]. So sharing and learning within the HBA [16] contributed to the development of IEC material and manual on SRH and HIV/AIDS [13].

Capability to adapt and self-renew - outcome area 'Improved PME [4]'

Improved PME has contributed to revision of strategic planning [38] [Source: Endline evaluation workshop of VTRC; CARE - 2014 annual strategy changes, 5c endline self-assessment sheet_management_India_VTRC] Some of the revisions in strategy [38] were as follows:

- The target group (beneficiaries) was changed from 13 -30yrs to 15- 45yrs of age, in order to have a smaller, feasible target population to show tangible results.
- Instead of merely focusing on antenatal care and post natal care in training and mentoring interest groups and change agents, it was decided to give more focus on attitude, social influence and self-efficacy to increase the intention of behaviour change towards sexual being and access services in government facilities.
- Instead of empowering only women, it was also decided to motivate men to function as active partners in restoring family, societal roles and responsibilities.
- VTRC Included lobby and advocacy in the area of child protection in line with the alliance Lobby & Advocacy plan.

Improved PME has also contributed to being more effective in implementing and achieving the objectives of the CARE Network project [40] [Source: Health Bridge Alliance - Evaluation Report - Draft Version, 2014]. Improved PME, and especially the planning part has led to the communities with which VTRC works becoming better mobilised, informed and empowered which resulted in claiming their entitlements in terms of quality health services from the government [41] [Source: Health Bridge Alliance - Evaluation Report - Draft Version, Endline evaluation workshop of VTRC, 5c endline self-assessment sheet_management_India_VTRC, Theory of change - narrative - CARE network - Updated - December 2013].

Improved planning, monitoring and evaluation (PME) [4]: Strategic planning and better reporting improved the capacity of the organisation to be more effective in implementing and achieving the CARE Network project's objectives [Source: Health Bridge Alliance - Evaluation Report - Draft Version, 2014]. Since the baseline in 2012, the staff has improved their capacity in communication/articulation, developing new initiatives etc., because of several MFS II supported capacity building trainings. ICCO in its feedback also stated that skills of the staff in report writing, communication/articulating, conceptualising the idea of community development etc. has improved [Source: 5C endline_support to capacity development sheet_CFA perspective_India_VTRC_RedeemKind_NB, 5c endline interview guide_OD consultants_selected indicators_VTRC, 5c endline self-assessment sheet_management_India_VTRC, 5C endline_support to capacity development sheet_SPO perspective_India_VTRC(3) - updated - 24 03 2014].

Improved planning, monitoring and evaluation (PME) [4] is another key organisational capacity change that took place since the baseline in 2012. This is mainly related to improved reporting [20] and improved planning [21]. Each of these changes are further explained below.

Improved reporting [20]

There is significant change in the reporting in the last two years. The reporting has been strengthened with beautiful case studies, success stories, photos etc. The reports are now more structured, well informed and the queries and indicators are better answered. The staff has improved their capacity in communication/articulation, in report writing [Source: 5c endline interview guide_OD consultants_selected indicators_VTRC, 5C endline_support to capacity development sheet_CFA perspective_India_VTRC_RedeemKind_NB]. Better reporting was due to improved analytical skills [22] and feedback from donor and network partners [24], as described below.

- *Improved analytical skills [22]:*

The staff improved their skill and are conscious in collecting information from the field and analysing it. The analytical skills of the staff improved primarily due to the Advanced PMEL training in Nepal [23] which was funded by MFS II [10] [Source: 5c endline interview guide_OD consultants_selected indicators_VTRC, 5C endline_support to capacity development sheet_CFA perspective_India_VTRC_RedeemKind_NB].

- **Advanced PMEL Training[23].** Ten days PMEL training program was organised at Nepal by REK and the Woord en Daad alliance on 11-17 September 2013. The CARE Network coordinator of VTRC attended this training. The objective of the training was to train PME skills, data analysis skill, ToC as basis for a good M&E system, research design, using excel for quantitative data analysis and case studies preparation. It resulted in having more insight on PMEL developing smart indicators and TOC, better report writing [Source: Advanced PMEL training Report APC Nepal, 5c endline _questionnaire_training_participant_perspective _India_VTRC_APMEL training2013, 5c endline self-assessment sheet _management _India_VTRC].

- **Feedback from donor and network partners [24]:**

Help a Child India (HACI) is the country partner for Red een Kind (REK) who supports VTRC through monitoring and evaluating its health project and providing feedback on reports which is supported by MFS II [10]. HACI conducts a midterm evaluation of the CARE Network for REK. REK through HACI contributed in developing formats, questionnaires and guidance for the evaluation study. There were separate questionnaires for the community, government representatives and CARE representatives. Through this evaluation HACI analyses each outcome indicator and gives remarks on each indicator to VTRC. It gives direct feedback when visiting the projects and through phone, skype, email with CARE Network coordinator. VTRC also receives feedback on its quarterly reports from HACI. This has all helped to improve VTRC's staff's, especially the CARE Network coordinator, analytical skills so that they deliver better reports [Source: 5C endline_support to capacity development sheet_CFA perspective_India_VTRC_RedeemKind, 5c endline_assessment sheet_Dutch co-financing organisations_India_VTRC_RedeemKind, CARE- Review of Partners Outcomes, CARE Network Evaluation Report].

Improved planning and review[21]

There is improved planning according to Woord en Daad. When comparing the 2011 and 2014 annual plans for the CARE Network programme it is evident that there is significant improvement in the planning process in terms of defining objectives, indicators and outcomes [Source: 5C endline_support to capacity development sheet_CFA perspective_India_VTRC_RedeemKind, CARE Network - Annual Plan - Health – 2014, CARE Network Annual Plan - 2011 (Existing Format)]. VTRC started using participatory approach in planning the Edugate programme since July 2014. As the community is now involved in the planning process, their needs are better identified and planned for. In the CARE Network programme the strategy has been changed to focus on 15-35 age groups, to give more focus on attitude, social influence and self-efficacy to increase the intention of behaviour change towards sexual being and accessing services in government facilities. Furthermore the CARE Network programme is focused on empowering and motivating both men and women to function as active partners in restoring family, societal roles and responsibilities, etc. for better implementation of the programme. Improved Planning [21] was due to better identification of gaps [25] and participatory planning [26] and the theory of change workshop [9]. These are further described below.

- Capacitated by the Theory of Change (ToC) workshop on April 2012 in Bangladesh [9] [Source: Theory of change - narrative - CARE network - Updated - December 2013, 5C endline_support to capacity development sheet_CFA perspective_India_VTRC_RedeemKind_NB, 5c endline_questionnaire_training_participant_perspective_India_VTRC_ToCworkshop2012]. VTRC developed a strategic plan 2014-15 for the CARE Network programme, based on the ToC concept to empower communities accessing quality health care services for SRH and HIV prevention in 150 villages of Madurai & Salem Districts (Tamilnadu state). Various pathways are developed on the ToC concept for better achievement of goals in the CARE network programme. Further, using the ToC has helped in planning a process of cooperation, strengthening and lobbying with the state health systems for better implementation. Also there is a peer review and results framework that keeps them on track.
- Better identification of gaps [25]. Gaps in planning are better identified through:
 - Organisation-scan (O-scan) [27]: This is a monitoring tool developed by ICCO for its alliance partners to monitor and assess the development of partner organisations (vision & strategy, internal organization, projects and programs and linking & learning). The results of this O-scan report are submitted bi-yearly to the HBA country coordinator as a requirement for MFS funding [Source: http://www.iccokia.org/southernafrika/assets/File/icco_alliance_annual_report_2010_lowres.pdf, HBA Meeting minutes Dahka April 2012]. This facilitated the organization to find gaps particularly in the CARE Network programme and use it for better planning as a process of organizational development.
 - More systematic review meetings [31]

A monthly review meeting is conducted for the both the Edugate and CARE Network programme at the end of every month in which activity planning for the next month is carried out with all the staff members. The reports are not only reviewed but gaps are identified, challenges are discussed and strategies are planned in alignment with the vision of the organisation with an aim to address the gaps and challenges. Following a systematic approach, gaps were better identified. The improved review meetings are primarily the outcome of the Advance PML training on September 2013 in Dhaka [23]. This is evident in the theory of change narrative for CARE network 2013, that identified gaps in existing government and non-government programs which helped in better planning for SRHR programme implementation [Source: Health Bridge Alliance - Evaluation Report - Draft Version, CARE Network Evaluation Report, 5c endline self-assessment sheet_management_India_VTRC, Theory of change - narrative - CARE network - Updated - December 2013, CARE Network - Health - Annual Activity Report – 2013, Advanced PMEL training Report APC Nepal]. Peer review was also used to review the programme. The review was carried out at different levels: the change agents and the cluster supervisors meet on a weekly basis to review the reports and plan accordingly. Then the programme manager and the cluster supervisors meet on a monthly basis to further discuss and plan on the basis of the weekly findings and [Source: CARE Network - Health - Annual Activity Report – 2013]. VTRC starting using this system because they became a member of the HBA [14].

- Stakeholder meeting and Outcome study reports [8]
This year (2014) VTRC conducted stakeholder meeting in the villages to involve the parents in the review and planning process. The participants were mostly the parents of the tuition children. These meetings facilitate the identification of needs of the parents for better planning the Edugate programme. E.g. in the July 2014 stakeholder meeting the parents suggested about the summer camp for children to be included in the annual plan and budget of 2014, and consequently it was incorporated in the annual plan 2014. This was the outcome of Participatory Integrated Child Development (PICD) workshop on April 2012 in Bangladesh [29] [Source: Annual Plan - 2014 Edu Gate], funded by MFS II [10].
- It is evident in the assessment sheet CFA perspective that yearly monitoring of VTRC is carried out by country partner Help A Child India (HACI) for REK. As per this VTRC conducted outcome study in October 2013 involving HACI. Five days assessment was carried out at the organization and field level to assess the progress of the project and its impact. It is evident in the outcome study report 2013 that the observations and recommendation were shared with the staff [Source: Outcome study Report - VTRC - Educate Program]. ICCO also gives donor perspective feedback on quarterly reports and during the annual visit to the organisation. This further facilitated the staff to identify the gaps and review the strategic plan [Source: 5C endline_support to capacity development sheet_CFA perspective_India_VTRC_RedeemKind_NB, Edugate – Annual Report – 13].
- Participatory planning and review [26]
Over the last two years VTRC has streamlined its review and planning meetings by adopting a bottom up approach in planning. According to this process the change agents and tuition teachers get feedback from the communities and together with cluster supervisors meet respectively to review and monitor the programme on a weekly basis. The reports and feedback are then reviewed and monitored by the supervisors and programme managers on a monthly basis and make strategic/operational plans. Every month a general staff meeting is organised where the director also participates to monitor the programmes and review the reports and plans [Source: CARE Network Evaluation Report, 5c endline self-assessment sheet_management_India_VTRC]. Since 2014 it has adapted a participatory approach process in the Edugate programme where even the communities are actively involved in the planning process after the Participatory Integrated Child Development workshop [29]. They also monitor the functioning of the tuition centres and provide input. It is evident from the fact that on the 20th of July 2014 a stakeholder meeting was held with parents to discuss the annual plan of the Edugate project, based on these discussions a summer camp was included in the new annual plan 2014 so that the children learn through play way method of instruction, through games and cultural activities for the holistic development of children [Source: 5c endline self-assessment sheet_management_India_VTRC, 5C endline_support to capacity development sheet_CFA perspective_India_VTRC_RedeemKind_NB, Annual Plan – 2014]. Participatory planning was due to VTRC taking the programmatic approach [32].
- Programmatic approach [32]
The organisation has been trying to work with the Programmatic Approach as capacitated by ICCO and her Dutch partners in the Health Brigade Alliance [14]. It is a process that leads to multiple stakeholders working together based on a joint analysis of a problematic, shared vision and purpose and clear perspective on the results of the cooperation. In such a process all actors do different things, work at various levels and use their own strengths for the common purpose, as well as share some activities and in particular share, plan and participate in the linking and learning and lobby and advocacy processes [Source: Health Bridge Alliance - Evaluation Report - Draft Version, HBA Meeting minutes August 2013 Chennai].

Centre for Development Innovation
Wageningen UR
P.O. Box 88
6700 AB Wageningen
The Netherlands

www.wageningenUR.nl/cdi

Report CDI-15-005

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

CECOEDECON end line report

MFS II country evaluations, Civil Society component

Report CDI-15-026

Klaver, D.C., Desalos, C., Hofstede, M., Wadhwa S., Pandey R., Madaan A., Mohapatra B.P., 2015, *CECOEDECON end line report; MFS II country evaluations, Civil Society component*, Centre for Development Innovation, Wageningen UR (University & Research centre) and India Development Foundation (IDF). Report CDI-15-026. Wageningen.

This report describes the findings of the end line assessment of the Centre for Community Economics and Development Consultants Society (CECOEDECON), partner of ICCO.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses CECOEDECON's contribution towards strengthening Civil Society in India and it used the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2012. Key questions that are being answered comprise changes in the five CIVICUS dimensions to which CECOEDECON contributed; the nature of its contribution; the relevance of the contribution made and an identification of factors that explain CECOEDECON's role in civil society strengthening.

Keywords: Civil Society, CIVICUS, theory based evaluation, process-tracing

Acknowledgements

IDF and CDI are thanking the staff and the leaders of all Southern Partner Organisations that participated in collecting information for the evaluation of the contribution of these partner organisations to creating a vibrant civil society in India. They also thank the Co-Funding Agencies and the Dutch Consortia they are a member of for making background documents available. We hope that this evaluation can support you in better positioning yourself in the Civil Society Arena of India.

1 Introduction

This report presents the civil society end line findings of CECOEDECON in India which is a partner of ICCO under the ICCO Alliance. It is a follow-up to the baseline assessment that was carried out in 2012. According to the information provided during the baseline study CECOEDECON is working on MDG 1 – private sector and agriculture.

These findings are part of the overall evaluation of the joint MFS II evaluations to account for results of MFS II-funded or –co-funded development interventions implemented by Dutch CFAs and/or their Southern Partner Organisations (SPO) and to contribute to the improvement of future development interventions. The civil society evaluation uses the CIVICUS framework and seeks to answer the following questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- What factors explain the findings drawn from the questions above?

The CIVICUS framework that comprises five dimensions (civic engagement, level of organization, practice of values, perception of impact and contexts influencing agency by civil society in general) has been used to orient the evaluation methodology.

Changes in the civil society arena of the SPO

In the 2012 – 2014 period, the two most important changes that took place in the civil society arena of CECOEDECON are related to ‘Civic Engagement’ and ‘Level of Organisation’. Most important changes observed with regards civic engagement relates to the fact that all Village Development Committees (VDCs), Kisan Seva Samiti (KSS) at block level and their apex body KSSMS at state level have taken a more leading role for their future. Evidence provided for this consists of the fact that they drafted their Vision Document and that they prepared a People’s Manifesto together with CECOEDECON and Sanjha Manch in view of the 2013 state and the 2014 general elections: 39 of these demands were included in the manifestoes of the two leading national parties. At the same time some evidence has been collected that shows that KSS and VDCs’ have improved their services to their constituents and that they increasingly take the lead in ensuring that entitlements of their communities are made available to them.

With regards to ‘level of organisation’, CECOEDECON managed to diversify its financial resources with funding coming from new international donors, government and private sector. The VDCs and the KSS increasingly take up grassroots mobilisation to negotiations with ministers and obtained an increased understanding of different micro and macro level issues.

These findings were obtained through an analysis of documents, a workshop and follow-up interviews with the SPO, and interviews with external resources persons working in civil society organisations that receive support from the SPO; other civil society organisations with whom the SPO is collaborating; public or private sector agents and; external resource persons capable of overlooking the MDG or theme on which the SPO is concentrating.

Attribution - Contribution analysis

Based upon an analysis of the projects and programmes financed by the Dutch CFAs a selection was made of SPOs to be included in an in-depth process tracing trajectory and those to be included for a quick contribution assessment. CECOEDECON was amongst those SPOs selected for in-depth-process tracing.

Because of the integrated nature of the SPO programme, only one combined outcome has been looked at: KSSs (five KSSs in Jaipur, Baran, Tonk districts of Rajasthan) are capable to influence public sector policies and practices. The evaluation team looked at the extent to which these KSSs were able to

“function as key implementing, coordinating, monitoring and evaluating institutions for government schemes and policies [...] at community level”, were strengthening Panchayati Raj Institutions and became independent enough to bring about a collective Farmers’ Movement as stated in the PIIRD V programme proposal. In practice, many results were achieved but with a different degree of involvement of the KSSs. Two examples of policy changes have been looked at: 1) Field trials for Genetically Modified seeds that were stopped by the previous Rajasthan government were publicly reconfirmed in May 2014 by the new Government; 2) On May 6 three procurement centres for Bengal gram (chickpea) and mustard were inaugurated in Chaksu, Phagi and Malpura blocks that would guarantee Minimum Support Prices (MSP). When the government put up a limit that only two sacks would be procured per farmer whereas they had harvested dozens of sacks, the government was again pressurised after which it declared to take four sacks per person on May 13, 2014.

With the information available it is hardly possible to conclude upon the extent to which these KSSs are capable of functioning independently from CECOEDECON and to what extent their organisational capacity has increased since the 2012 baseline study. We observe however that in both cases KSSs are capable to represent the needs of their constituencies and to react upon their demands, as well as to mobilise them when action is needed; that KSSs are able to engage with government administrations and elected bodies, and that they know their rights, at least when MSPs are concerned. We also observe that KSSs are still dependent upon CECOEDECON in financial and material terms and occasionally also in technical terms. Another observation with regards to the information obtained is that the boundaries between CECOEDECON, KSSMs and KSSs and VDCs are blurred.

The outcomes achieved are to be seen as the result of a *causal package*, consisting of CECOEDECON and KSSM with its constituents, as well as their more than 25 year lasting relationship. Within this causal package, either CECOEDECON takes the initiative or KSSM and its constituents.

Other actors and factors that are important in achieving the outcomes but in themselves do not explain the outcome (necessary but not sufficient) consist of CECOEDECON's huge network at both Rajasthan state and national level.

Relevance

Interviews with staff of CECOEDECON, with external resource person, with the liaison officer of ICCO, as well as contextual information helped to assess the relevance of CECOEDECON's interventions in terms of; its Theory of Change (ToC) for Civil Society as designed during the baseline study; the context in which CECOEDECON is operating, and; the Civil Society policies of ICCO.

The interventions of CECOEDECON are relevant in relation to its Theory of Changes constructed in 2012. These interventions support the empowerment of people and support them in claiming their rights and fulfilling their responsibilities. As such, they also align with CECOEDECON's overall goal which is 'Empowerment of people that is inclusive', however progress being made to the achievement of this goal is still scarce and anecdotal.

With regards to the context in which CECOEDECON is operating, its interventions and outcomes achieved are relevant because they have contributed towards the empowerment of community-based organisations such as the VDCs, KSSs and KSSMs; they have brought together influential people/sections like academicians, ex bureaucrats, media, opinion makers, farmer organisations etc. with regards to the issue of GM field trials in the state. Moreover, farmers are more aware of their rights and have joint CECOEDECON in its lobby and advocacy efforts to halt the introduction and the use of GM seeds in the state.

With regards to the Civil Society policies of ICCO, the organisation's interventions are relevant because they contribute to ICCO's Food and Nutrition Security Program which aims to strengthen civil society by improving local sustainable food and nutrition systems and supporting communities to claim their right to food.

Explaining factors

The information related to factors that explain the above findings was collected at the same time as the data were gathered for the previous questions. The evaluation team looked at internal factors within CECOEDECON, the external context in which it operates and the relations between CECOEDECON and ICCO.

Internal factors within the SPO that explain the findings are: its dedicated staff, although it has been difficult to retain younger staff; the organisational structure which includes representatives of the target groups in the Executive Committee; the credibility of the executive leadership and the maturity of the organisation which has a huge network.

The most important external factor that explains the findings is the political situation that CECOEDECON used as a conducive environment to bring about changes.

The most important factors that explain the findings with regards to the relation between CECOEDECON and ICCO consist of the long lasting relationship between the two organisations that was based upon respect and trust.

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the MDG/theme CECOEDECON is working on. Chapter three provides background information on the partner organisation, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with ICCO. An evaluation methodology has been developed for the evaluation of the Civil Society component which can be found in appendix 2 of the country report; however, deviations from this methodology, the choices made with regards to the selection of the outcomes for contribution analysis, as well as difficulties encountered during data collection are to be found in chapter 4. The answers to each of the evaluation questions are being presented in chapter 5, followed by a discussion on the general project design in relation to CS development; an assessment of what elements of the project design may possibly work in other contexts or be implemented by other organisations in chapter 6. Conclusions are presented in chapter 7.

2 Context

This paragraph briefly describes the context CECOEDECON is working in. A description of the Civil Society Context assessed according to the CIVICUS framework is provided in appendix 3 of the country report for Civil Society.

2.1 Political context

Rajasthan is the largest state in India in terms of area, but in terms of population it is the eighth. At the time of the baseline in 2012, the Indian National Congress was in power in the state. Following the 2013 state elections, the right-wing Bharatiya Janata Party (BJP), came to power. In the 2014 general elections, the BJP won a majority and also formed the government at the centre. With the BJP in power at the centre and the state, there was a likelihood of greater cohesion in policies. However the central government and that of Rajasthan differ in opinion and approaches regarding Genetically Modified Organisms; the centre has been giving indications towards a greater push for GM crops and field trials, which is in contrast to the Rajasthan government's stand that has banned field trials for GM crops¹.

Agriculture is the biggest sector in terms of employment (approximately 61% of the workforce is engaged in it, as per the 2011 census data), though it contributes only for 19.60% to the state's GDP and is plagued by a low growth rate. One of the reasons for this is that more than half of the area under cultivation in Rajasthan is rain fed and farmers can only harvest a single crop in a year. Furthermore, this situation is exacerbated by recurrent droughts and a precarious ground water situation. However, despite these disadvantages, Rajasthan still represents a big agricultural input market and it is for this reason that seed companies with GM seeds want to penetrate the state's market to sell seeds to farmers.

2.2 Civil Society context issues with regards to the MDG

Among the most important changes with regard to the civil society context in Rajasthan, since 2012 have been – poverty reduction and the change in government, which could impact the fight against GM crops field trials².

Poverty in Rajasthan has seen drastic reduction over past couple of years. According to the IMF (International Monetary Fund), during 2009-10 and 2011-12, the average decline in Rajasthan's poverty head count rate was 5.05 per cent, which was the third highest among 16 big states of India³. The decline in the poverty head count rate has been linked to the welfare schemes introduced by the Congress-led state government of 1998 and 2008. The trend of introducing new welfare schemes and supporting the existing ones by Congress party's rival, the BJP when it came to power in 2003-2008 helped in its continued and effective implementation⁴.

The GM companies tried hard to enter the agriculture market of Rajasthan, through various means. However, while the previous Union Minister for Environment and Forests banned the commercial

release of BT brinjal⁵, the Congress-led state government went a step further and burnt the ongoing field trials of GM crops in the state. The BJP government, which came to power in the state in 2013, has continued with the policies of the previous government, and the incumbent agriculture minister of Rajasthan has declared that his government will not start the field trials of GM crops.

The gains made by the civil society through stopping the GM field trials and bringing the farmers' agenda to the forefront in Rajasthan, now seem to be threatened by the newly elected BJP government at the centre which has given indications that the GM field trials might be restarted. This, along with its drive to attract big industry funds, is seen by many as clashing directly with the farmer's agenda in the state. The Prime Minister, Narendra Modi, since his stint as the Gujarat Chief Minister, is considered to be pro-business and predisposed towards the interests of industrial houses. Since the party came to power in early 2014, it has quickly passed environment clearances for "polluting industries" like the POSCO project in Odisha. This was in spite of massive protests surrounding these projects⁶. This is an indication that the rights of the poor, tribal groups and farmers might play second fiddle to his "development drive".

The outgoing Congress government announced a number of welfare schemes before and during the elections, e.g. revision of minimum wages, increase in scholarships, free health care services and free medicine for the poor, relaxation in eligibility for pensions etc. Since proper and timely implementation of these welfare schemes needed massive applications and outreach, NGOs were roped towards facilitating this and thus, the interaction between the government and NGOs working on these themes improved over this period.

Rajasthan is considered as one of the driest states in the country. This year, almost 21 out of 33 districts received less than 70 per cent rainfall than they were supposed to, creating fears of a possible drought, and crop failure.

In terms of climate change policies, India still holds to the "common but differentiated responsibilities (CBDR)" approach vis-à-vis the developed countries. India in the context of CBDR believes that, since the developed countries are more responsible for climate change, should therefore, carry more responsibility in reducing their current carbon footprint. The Kyoto Protocol has been extended to 2020 with 192 participant states, including India⁷.

The **Bt brinjal** is a suite of transgenic brinjals (also known as an eggplant or aubergine) created by inserting a crystal protein gene (*Cry1Ac*) from the soil bacterium *Bacillus thuringiensis* into the genome of various brinjal cultivars. The insertion of the gene, along with other genetic elements such as promoters, terminators and an antibiotic resistance marker gene into the brinjal plant is accomplished using *Agrobacterium*-mediated genetic transformation.

3 CECOEDECON and its contribution to civil society/policy changes

3.1 Background of CECOEDECON

The Centre for Community Economics and Development Consultants Society (CECOEDECON) was founded by a small group of young, committed social workers to provide immediate relief to the victims of devastating floods in Jaipur district in 1982. CECOEDECON has since then evolved into a civil society organization pursuing integrated participatory development and advocating human rights.

The organization has an authentic and informed perspective of micro-macro dynamics. The criterion for undertaking interventions is that they should lead to community self-reliance and empowerment. Thus, its work centres on the unfulfilled needs and ignored rights of partner communities.

Since its inception, the organization has tried and tested various approaches to development, emphasizing different strategies, while working at the local, state, national and international level. Through the long experiences and learning's the organization gradually shifted from a project approach to a programme approach to rural development in 2000. It was believed that this more holistic approach to rural development serves to integrate various components to address the issues of poor and marginalized community and further build community empowerment. The shift represented a significant step towards incorporating the Rights Based Approach in to the organization's programmes. CECOEDECON's 29 years of development work has contributed significantly to the capacity building of its partner community, civil society and NGO's.

The organisation stimulates the formation and strengthening of CBOs by relying on branch / block offices. Each branch office serves around 100 villages, which are in turn split into 5 clusters of 20 villages each to raise the effectiveness of the interventions. Branch offices work very closely with Village Development Committees (VDC) and are the primary source of information to CECOEDECON on the progress being made by them. At this moment CECOEDECON has 15 branch offices.

Both VDCs, youth and women committees are federated at block level in Kisan Seva Samiti (KSS), which in their turn are federated in one apex body at state level, which is the Kisan Seva Samiti Mahasangh (KSSM).

Vision: "To achieve such development which is socially acceptable, economically viable, environmentally sound, effective in impact and addressing the needs and issues of the under privileged and marginalized people."

Mission: "To enhance the capacities of marginalised communities and other partners, by engaging in multiple strategies at different levels, so that they are able to take action independently to secure their rights for long term well-being"

Strategies: CECOEDECON adopts a number of strategies that have been developed over a period of time, based on past experiences, lessons learned from various reviews/ reflections and from the new challenges emerging in the external environment. It makes a difference in Core Organisational and Core Development strategies.

CECOEDECON has 172 staff of which 31 are female (figures 2009). At present, four of the nine board members are female⁸. Its organizational structure accords a very significant place for the multi-disciplinary Executive Committee (EC), which is an integral part of entire structure. The EC also includes representatives from satellite institutions and Kisan Seva Samiti (KSS). Since the 'Board Retreat' in 2007, the EC members play an important role not only in providing direction and policy

⁸ <http://www.CECOEDECON.org.in/boardmembers.html> 25-11-2014

guidelines but also in actively participating in the regular project/programs. It authorizes the Secretary to lead, direct, manage, and be accountable for overall operations of CECOEDECON. It also appoints a 'Director' who is responsible for programme direction, planning monitoring, training, liaising and resource mobilization.

3.2 MFS II interventions related to Civil Society

The fifth Participatory Initiative for Integrated Rural Development (PIIRD) covers five blocks (namely Chaksu, Niwai, Phagi, Malpura and Shahbad) of the Tonk, Baran and Jaipur districts of Rajasthan. It has three thematic areas: Livelihood Security (through farm and off farm/non-farm income), Economic Justice (Trade negotiations, Land acquisitions, Climate change, GMOs and Biodiversity) and Basic Rights (Children Rights, Health rights, gender, social security). In addition to these three thematic areas, CECOEDECON also works on its own organisational development and on institutional development. This last topic includes the strengthening of village institutions such as Panchayats, VDCs, women and youth groups and a civil society building component including democratic rights and establishing dialogues with other CSOs on governance and accountability issues.

With the new contract signed for the April 2012 – March 2014 period, ICCO's contribution to PIIRD programme is only 14%. This has been detailed in the contract agreement covering the period April 2012-March 2014.

Within the thematic area on livelihood security and financed by ICCO, only the forming of farmers clubs can be related to civil society building (level of organisation). The target was 15 farmer clubs formed (unclear whether it relates to the overall period of implementation or to a milestone per year).

Within the thematic area on economic justice, ICCO only supports activities under the specific objective 2 "To generate awareness among community members on the climate change related issues, lobby for implementation of actions for climate change at all levels." These are all related to the CIVICUS dimension on perception of impact / policy influence.

Within the thematic area on basic rights, ICCO funded activities specifically linked to the girls (specific objective 3: "To undertake interventions for adolescent girls to enhance their self-esteem and empower them with life skills") and connected to the CIVICUS dimensions civic engagement and perception of impact.

With regards to the component on organisational and institutional development, ICCO supports activities that strengthen the capacities of communities to undertake Planning Monitoring and Evaluation actions (and therefore to ask their partners to be accountable), and that strengthen the lobby and advocacy capacities of the apex institution which is the Kisan Seva Samiti Mahasangh (KSSM) at state level. These are related to CIVICUS dimension on perception of impact. ICCO also supports activities that are aimed at building a stronger civil society linking CSOs across states. These can be linked to CIVICUS dimension on perception of impact but also on level of organisation.

4 Data collection and analytical approach

4.1 Adjustments made in the methodology of the evaluation

Fourteen staff attended the first day of the workshop, of which five persons were field staff, one programme manager, five members of executive leadership and three members from the HR and administration departments. 11 respondents attended the detailed interview session on the claimed outcomes on the second day of the workshop. Even though only the availability of the executive leadership and programme manager had been requested, the field staff was also present for these interviews which was appreciated by the evaluators. This was because CECOEDECON leadership felt that the staff members from the field who had been workshop participants on the first day had years of on-ground experience, and that their information base, knowledge and perceptions would enrich the evaluation of the organisation's achievements and drawbacks over the past two years. The discussion that ensued saw equal and enthusiastic participation by all levels of CECOEDECON. The responses to most queries were an amalgam of information and views that came from across the organisation's hierarchies.

After several discussions between the evaluation team members and to give full consideration to the integrated nature of the work CECOEDECON does, it was decided to develop only one model of change focusing on strengthening intermediate organisations.

4.2 Difficulties encountered during data collection

Most of the external resource persons interviewed during the first phase of the end-line evaluation process were in some way or the other linked to the organisation (members of Intermediate Organisations like KSSs, VDCs etc), except two (a development academic and a female representative of a Panchayat Raj Institution - PRI)). Consequently, a new set of external resource persons had to be identified for interviews towards filling up information gaps and soliciting objective opinions; for example, representatives of large networks like Wada Na Toda, GM Free Coalition of India were approached.

With regards external resource people, finding a respondent from the state government willing to be interviewed was very challenging which is understandable given that bureaucratic protocol forbids unauthorised and impromptu communication. Persistent efforts, however, saw one block level official agreeing to provide the evaluators with his feedback on CECOEDECON, this on assurance of anonymity.

Since not many substantially significant NGOs exist in the areas in which CECOEDECON is working with MFS II funding, seeking rival opinions or explanations was difficult. The gap in evidence was filled, to some extent, by researching for newspaper coverage and printed reports, as also conducting corroborating interviews.

The nature the activities CECOEDCON engages in is very varied—ranging from technical-issue-driven themes like GM crops and climate change to administrative and brick and mortar concerns like the setting up of procurement centres for lentil or grain- making it challenging for the evaluators to ascertain the organisation's role in the outcomes it claimed were its achievements. In fact, for some outcomes CECOEDECON had led the change, in others it had been an able collaborator with other change agents. To distinguish and define this varying degree of CECOEDECON's role in the outcomes was demanding. Moreover the limited contribution of ICCO to the overall programme made asserting the contribution of MFS II to strengthen civil society difficult.

4.3 Identification of two outcomes for in-depth process tracing

During the plenary session of the workshop, the CECOEDECON staff listed more than a dozen outcomes under both the pre-selected Civil Society Strategic Outcomes for contribution analysis (Civic Engagement and Strengthening Intermediate Organisations). The workshop proceedings, however, led the evaluators to realise that evidence for a number of claimed outcomes was insubstantial; these outcomes were therefore eliminated as subjects for further study. Four outcomes—namely, ‘preparation of vision document’, ‘opening of Minimum Support Price (MSP) procurement centres’, ‘campaign against GM seeds’ and ‘preparation of the People’s Manifesto’—were identified for detailed process tracing.

Later at the documentation stage, according to the methodology’s initial intent, the four outcomes were organised under the two pre-selected CSSOs. Barring ‘preparation of the People’s Manifesto’, the three remaining outcomes were seen as suitable to be studied with regard to CECOEDECON’s efforts at strengthening its Intermediate Organisations, the KSS and VDCs. This even as, the preparation of a People’s Manifestos for state assembly and national elections showed up as the only outcome (in terms of evidence to confirm or reject it) that was the consequence of CECOEDECON’s efforts to increase civic engagement. Pursuing this single outcome for in-depth study seemed to add very little incremental value to the evaluation, and hence it was excluded as a subject for further investigation.

The impact outcome chosen is: KSSs (five KSSs in Jaipur, Baran, Tonk districts of Rajasthan) are capable to influence public sector policies and practices. As stated in CECOEDECON PIIRD Vth phase 2012-2015 proposal, “the upcoming phase [Vth phase] is about consolidation of the KSS as key *implementing, coordinating, monitoring and evaluating* institution for government schemes and policies [...] at the community level.” In terms of capacity, the evaluation team broke these aspects along various lines:

1. KSSs are recognised as a body to represent the needs of their constituencies;
2. KSSs are able to follow and monitor the changes (linked to government schemes and policies) influencing the lives of their constituencies;
3. KSSs are able to generate the appropriate resources needed for their actions;
4. KSSs are able to mobilise their constituencies when needed;
5. KSSs are able to relate with other CSOs and actors in Rajasthan;
6. KSSs are able to relate with government and political parties.

The degree of achievement of these aspects varies greatly.

We are focussing upon the KSSs as middle level organisational institutions between VDCs and the KSSMS. While the selected members of VDCs form the KSS, members of KSSs collectively form the KSSMS. Hence, analysing capacities of the KSSs give us the advantage to cover CBOs like VDCs and the KSSMS also, in an indirect manner.

This outcome relates to ICCO’s contribution to strengthen the capacities of communities to undertake Planning Monitoring and Evaluation actions (and therefore to ask their partners to be accountable), and that strengthen the lobby and advocacy capacities of the apex institution which is the Kisan Seva Samiti Mahasangh (KSSM) at state level.

5 Results

5.1 Results obtained in relation to intervention logic

Based on the input-output-outcome analysis prepared in May 2014, we can conclude that in general, CECOEDECON has reached the targets set in the contract with ICCO. The following outputs have been realised for each of the themes.

Livelihood security

From the 10 agricultural models planned to be implemented during the contract period, all have been achieved but it is not clear exactly when. With regards farmers clubs, the 2013-2014 report mentions that 15 farmers clubs out of 15 planned were formed. The 2012-2013 report mentions that 75 out of the 75 planned courses for the farmer clubs were done. In March 2014, 19 out of the 20 planned were achieved. The 2013-2014 report states that a study on the impacts of water harvesting structures was carried out in Chaksu and Niwai Blocks where more than 20 Water Harvesting Structures were covered. The link with climate adaptation is not clearly made in the report.

Economic justice

As planned, CECOEDECON attended the UNFCCC meetings in 2013 and in 2014 with a team of delegates. They also participated in National Consultation meetings such as a pre-COP consultation. Nevertheless, the outcome of the participation in these meetings, which was meant to negotiate the inclusion of perspectives of small and marginal farmers in the climate change agenda, is not clear. Considering the mobilization on adequate regulatory mechanism for GMOs (linked to BRAI bill), 2 planned events have been achieved in urban areas but only 33% of the awareness generation activities were done, reaching 330 participants. There is no specification about this deviation. By March 2014, 80% of the planned awareness generation activities on the theme were achieved in rural areas, reaching 1540 participants. Three planned advocacy meetings with media were held (the last one being a press-conference) and by March 2014 the issue had been discussed with different stakeholders during meetings on people's manifesto as well as in all 5 blocks during several sub-group meetings (such as KSS, Youth groups etc.). Capacity building of biodiversity committees did not take place because these committees were not set up by the government as agreed. To overcome this issue it was decided to work on awareness generation of community members regarding the formation of Biodiversity Management Committees. A People's Biodiversity Register was also prepared.

Basic rights

By March 2013, one girl camp was held with less participants than envisioned in the proposal (36 instead of the 50 planned). These girls did receive five courses on life skills. By March 2014 another camp was held with 69 participants, which was more than envisioned. However, they only received 3 sessions on life skills. What is surprising is that the life skills courses were conducted in 3 different places (Shahbad, Newai and Phagi). They had respectively 59, 42 and 10 participants, which add up to more than the number of participants of the camp. The activities seem to have achieved their goal as described in the 2012-2013 report.

Organisation and institutional development

Two exercises on Community Score Cards (CSC) were done: one in the village Gaundhi of Phagi block in June 2012 on the Public Distribution System with a follow up in October 2012 and another one in January 2013 in Suratrapura village on School Management Committees, also with a follow up. Over the project period and as planned, two trainings in monitoring tools were implemented (it is not clear whether these are different than the 2 CSC exercises) and one on resource mobilization for staff. In terms of mobilization and advocacy for alliance building, influencing stakeholders and authorities on issues of overlooked rights at various level of governance; 8000 copies of the newsletter 'AWAJ' of KSSM were meant to be disseminated. Although the newsletter is mentioned to be an important publication for the project, the reports do not specify how many copies were disseminated.

As stated in the 2013-2014 report, the consolidated charter of demands (people's manifesto) was submitted to all the political parties and their manifesto committees in a published form. It followed five regional consultations that fed into a national consultation.

The planned study on status of civil society organizations in India has been implemented. The evaluators used some of the results in the description of the general socio-economical context of India.

5.2 Changes in civil society in the 2012-2014 period

5.2.1 Civic engagement

Civic engagement describes the formal and informal activities and participation undertaken by individuals to advance shared interests at different levels. Participation within civil society is multi-faceted and encompasses socially-based and politically-based forms of engagement.

With regards to civic engagement, the end-line process showed a slight improvement of the already high score given during the baseline process.

For the last thirty years, CECOEDECON has been working on the creation of Village Development Committees (VDCs) and other CBOs at village level, then started to organise these into a representative structure at block level (5 KSS created in three districts), called the Kisan Sewa Samitis (KSSs) and in a later stage an apex body, named Kisan Sewa Samiti Mahasangh (KSSMS) was created at state level that now represents the above mentioned categories in society. In these structures the representation of women at a 50 percent is mandatory and the total number of members was also decided upon in early stages and did not expand. Since the 2012 assessment, and also before that, CECOEDECON's intervention zone has not expanded to other blocks and districts.

Since the 2012 baseline, these CBOs improved the quality of their services to their constituents: for example, the KSSs are now more independent, and manage to take the lead in ensuring that entitlements of their communities are made available to them⁹.

All VDCs, KSS and their apex body the KSSMS came together to brainstorm and chart out future plans for themselves in a series of meetings held in the CECOEDECON office, which resulted in an indigenously documented mandate and a way-forward strategy in February 2013, titled the Vision Document, which shows that these CBOs are taking more of a leading role for their future.

Also, like during the baseline, CECOEDECON continues to work with the Sahariya tribe through the CBO, Sahariya Vikas Manch (SVM), to secure their rights through broad-based interventions including education, agriculture, natural resource management, securing land rights. The organisation started to work with the Nat community in Kotkhawada village of the Chaksu block to address chronic poverty and illiteracy of Nat girls and women who are caught into prostitution since 2012.

As observed during the baseline assessment the VDCs, KSS and KSSM play a central role in the planning, monitoring and evaluation of programme activities.

More than during the baseline, CECOEDECON is working on forging and nurturing links with legislatures, parliamentarians and PRI (Panchayati Raj Institution) members, as a means to show the VDCs and the KSS the values of working and interacting with these elected representatives. In view of the 2013 state assembly and of the 2014 general elections, CECOEDECON, together with the KSSMS, and the CSO-coalition Sanjha Manch prepared People's Manifestos which included demands raised by these organisations and presented it before national political parties, like BJP and the Congress: Thirty nine of these demands were included in the election manifestoes of the two leading national political parties, BJP and the Congress.

⁹ CECOEDECON staff

Also, CECOEDECON with the KSSs and Public Advocacy Initiatives for Rights and Values in India (PAIRVI), organised five block level consultations with PRI members on Panchayati Raj related issues where around 300 participants, including the media, participated.

Score baseline 2012 on an absolute scale from 0-3: 3

Score end line 2014, relative change on a scale of -2 → +2 1

5.2.2 Level of organization

This dimension assesses the organisational development, complexity and sophistication of civil society, by looking at the relationships among the actors within the civil society arena. In general, we can conclude that CECOEDECON has made slight improvements with regards this dimension between 2012 and 2014, with considerable improvements being made in the composition of its financial resources.

CECOEDECON is still or even more connected to local, national and international networks on the issues of food security, sustainable agriculture, environment, farmer's rights etc. Since the baseline it engaged in some new relations such as the South Asian Network for Social and Agricultural Development (SANSAD), the National Social Watch Coalition (NSWC) or the Centre for Environment Concerns (CEC). Its most intensive collaboration remains with the VDCs, KSSs and KSSMS. In the past period the capacities of these CBOs have again been strengthened and collaboration intensified beyond routine, including other CSOs, when KSSM elaborated its Vision Document; when the People's Manifesto was drafted and campaigned for; when the campaign against the GM field trials continued and; when the Minimum Price Support procurement centres were created by local governments. Like they had during the baseline, CECOEDECON personnel named the VDCs, KSSs and KSSMS as the best defendants of the marginalised.

Increasingly CBOs take up grassroots mobilisation to negotiations with ministers with an increased understanding of different micro and macro level issues. The field staff credited the Sahariya Vikas Manch (SVM) as having capably defended the interests of its community, this with support from the Ekta Parishad.

After ending its partnership with ICCO, CECOEDECON has been able to diversify the composition of its resource base by identifying new international donors, obtaining different supports from the government and private sector foundations, as well as through income generating activities such as renting the office location. Increasingly food and beverage costs during protests and rallies are borne by villagers themselves¹⁰.

Score baseline 2012 on an absolute scale from 0-3: 3

Score end line 2014, relative change on a scale of -2 → +2 1

5.2.3 Practice of Values

Practice of Values refers to the internal practice of values within the civil society arena. Important values that CIVICUS looks at such as transparency, democratic decision making, taking into account diversity that are deemed crucial to gauge not only progressiveness but also the extent to which civil society's practices are coherent with their ideals. The situation with regards this dimension described during the baseline remains unchanged at the time of the end line.

Though none of the structures in place are remarkably different from the time of the baseline, CECOEDECON's executive leadership and programme managers felt that downward accountability within the organisation had improved over the past two years, and attributed such positive change to the board becoming more systematic and its members taking a more active part in the organisation's projects. The field staff and HR and Accounts staff, meanwhile, observed no change in downward accountability. The composition of social organs has not changed either since the baseline. Like in 2012, CECOEDECON continues to be audited annually by external auditors as per statutory requirement. It conducts internal audits twice in a year. The executive leadership said that over the

¹⁰ KSS members

past two years efforts have been made towards enhancing transparency, accuracy and refined information regarding accounts. CECOEDECON's Financial Manual is updated regularly, even as its internal financial systems are rigorously monitored by the programme staff. Financial statements are shared by the accounts unit with the programme staff on a monthly basis for accuracy and proper follow up.

Score baseline 2012 on an absolute scale from 0-3: 3
Score end line 2014, relative change on a scale of -2 → +2 0

5.2.4 Perception of Impact

Civil Society arena—changes

In the 2012 -2014 period the following moderate improvements were observed in the civil society arena to which CECOEDECON seemingly has contributed.

In the first place the VDC, KSSs, KSSMS and the CBO SVM that supports the Sahariya people are increasingly capable to identify their own needs and organise appropriate action. They are increasingly aware on how to access welfare schemes and other public schemes. A major achievement is that the KSSMS and its members have drafted their own 'Vision Document" that presents their strengths and weaknesses as a community support structure and strategies for the future.

Some KSSs have shown to be capable to lobby the local governments with regards to the establishment of minimum support price procurement centres, meant to source agricultural harvests at a minimum price when market prices are very low; conduct crop risk and damage assessments that helped to lobby the government to obtain compensation when harvests are destroyed by climate conditions such as the 2014 hail storm, and; obtain drinking water facilities in 2013, that the KSSs had been lobbying for since 2010.

On two occasions and after a training provided by CECOEDECON, KSSs and public service deliverers have been using the community scorecard tool to assess the quality of services delivered. A first experience targeting the Public Service Delivery System in general ¹¹ showed improvements within the first three months of the assessment and the second one, focussing on school management quality did however not lead to considerable improvements.

CECOEDECON continues to support SVM in defending the rights of the Sahariya people with regards to reclaiming their land; access to education; recognition of their Scheduled Tribe rights to special reservations to be respected for jobs in the public sector.

Despite these improvements since the baseline and based upon 30 years of support, the CBOs still state that they are technically and financially dependent upon CECOEDECON.

Collaboration with and influencing the public and private sector

Apart from these more or less independent activities, the VDCs, KSSs, KSSMS and SVM have joined many of the initiatives taken by CECOEDECON with regards to the ongoing campaign to sustain the ban of GM crops and field trials in Rajasthan state; the Rights to Service Act; the effective implementation of the Pre-Conception and Pre-Natal Diagnostic Techniques Act to stop female foeticide and the like.

Together with the above mentioned organisations, CECOEDECON grasped the opportunity of both the 2013 state elections and the national elections in 2014 to draft a People's Manifesto based upon several meetings organised at block level and state level. Thirty nine demands of this manifesto were included in the election manifestoes of the two leading national political parties, BJP and the Congress in 2014.

CECOEDECON, as during the baseline in 2012, has continued working with government agencies to ensure that their target groups get access to a number of welfare and development schemes such as the National Bank for Agriculture and Rural Development (NABARD) financial support. Example of

¹¹ PDS in the country facilitates the supply of food grains and distribution of essential commodities to a large number of poor people through a network of Fair Price Shops at a subsidized price on a recurring basis. Refer, <http://epds.nic.in/>

these include its support given for paperwork to be done by both the state agency and its target groups when the eligibility criteria for pension were enlarged; support given to the government in its annual campaign to boost school enrolment; assistance to Directorate of Soil and Water Conservation (DSWC) with its watershed evaluation; organisation of training for government officials; work with the public health sector for appropriate drinking water facilities.

No changes are to be observed with regards to collaboration with and influencing the private sector: CECOEDECON continues to receive funding from a range of private sector organisations but no evidence exists that it is working towards influencing their Corporate Social Responsibility policies and practices.

Score baseline 2012 on an absolute scale from 0-3: 2

Score end line 2014, relative change on a scale of -2 → +2 1

5.2.5 Civil Society Environment

The social, political and economic environment in which civil society operates affects its room for manoeuvre. The civil society context has been described in chapter 3. In this section we describe how CECOEDECON is coping with that context.

The factors affecting negatively CECOEDECON's work have remained the same since the baseline: a) fund crunch; b) reduction in monetary support from international donors; c) changes in the Foreign Contribution (Regulation) Act 2010 (FCRA 2010)¹² which made getting foreign funding difficult; c) drought and attempts of the government to cut on relief work; d) resistance from the community and doctors when opposing female foeticide and child marriage.

To counteract financial constraints, the organisation has been successfully looking to diversify its funding base but in practice it was not enough and according to staff CECOEDECON is being pushed to change its approach from programme-base to project-base¹³.

In the 2012–2014 period, the new centre-right government further imposed more conditions on NGO and foreign funders under the FCRA as a means to restrict internationally-funded non-governmental activities on sensible issues as GM crops.

A positive change in the context relates to changed government rules to direct diversion of CSR funds from philanthropic activities to the development sector, which has helped generate new funding sources for CECOEDECON.

Score baseline 2012 on an absolute scale from 0-3: 2

Score end line 2014, relative change on a scale of -2 → +2 1

5.3 To what degree are the changes attributable to the Southern partners?

Based upon an analysis of all projects and programmes financed by the Dutch NGOs in India, Indonesia and Ethiopia, four orientations strategic for civil society development were identified as a focus for answering the attribution/contribution questions: Ensuring that more people from more diverse background are engaging in civil society activities; ensuring that the organisations that receive support from the SPO are capable of playing their role in civil society–intermediate organisations; strengthening the relations with other organisations in civil society to undertake joint activities, and; influencing policies and practices of public or private sector organisations. For India the focus is on enhancing civic engagement and strengthening intermediate organisations.

¹² FCRA 2010, an act to regulate the acceptance and utilisation of foreign contribution by certain persons or associations. Refer, <http://indianexpress.com/article/india/india-others/only-11-of-22-ngos-in-ib-report-are-fcra-compliant-none-filed-13-14-statement/99/>

¹³ When asked, the field staff could not elaborate more on this issue. Nevertheless it clearly shows a concern.

As described in paragraph 4.3 for CECOEDECON only one strategic orientation was maintained (intermediate organisations) after concluding that the organisations over the past years has worked with the same number of VDCs, KSS, KSSM and VSM, with the same number of persons of which 50 % are women. However within this one strategic orientation, the evaluators looked at the extent to which the KSS are capable to represent the needs of their constituencies (civic engagement).

5.3.1 Strengthening Community Based Organisations

The PIIRD V project document states that KSS should be able to function as key implementing, coordinating, monitoring and evaluating institution' for government schemes and policies such as MNERGA, Right to Education, Right to information, food security and social security schemes, mid-day meal, ICDS, disaster management, trade issues and issues related to credit etc. at the community level. They will be strengthening the Panchayati Raj Institutions. Apart from this they should be able to become independent functioning units that can work to bring about a collective Farmers' Movement on different issues of marginalized.

The workshop with CECOEDECON revealed that since the baseline many outcomes were achieved with regards to policy influencing in which the VDCs, KSS and KSSM were involved at different degrees, such as the drafting of the Vision Document, authored by the KSSM in a very participatory process; continuous efforts to stop GM seed field trials by the Government; ensuring that farmers can benefit from the government's policy on MSP and lobbying before state elections in 2013 and national elections in 2014; and many other outcomes.

Based upon this the following impact outcome was chosen to assess the capacity of the KSS: KSSs (five KSSs in Jaipur, Baran, Tonk districts of Rajasthan) are capable to influence public sector policies and practices. However CECOEDECON does not keep records that systematically monitor how KSS and VDCs are performing.

We used two outcomes of policy influencing to find out what role the KSS played in these. The first relates to the fact that GM crops are banned in Rajasthan and that GM field trials have also stopped, but that these decisions needed to be confirmed after the 2013 elections when the Congress Government was replaced by that of a right wing BJP Government. The second relates to continued efforts of CECOEDECON and KSS and KSSM to guarantee minimum support prices (MSP) to agricultural harvests when open market prices are too low for small farmers to cover the costs. Since 2012 this led to two outcomes achieved:

Examples used

1. *Field trials for GM seeds stopped by the previous Rajasthan government and publicly reconfirmed in May 2014 by the new Government.* Efforts to stall the promotion of GM (Genetically Modified) crops in the state have been going on since a very long time. CECOEDECON and the KSS are part of a larger group (GM Free Coalition) that works on this issue across the country. Because of a series of efforts, the field trials of GM crops were stopped in the state during previous government's tenure in March 2012 (before the baseline assessment). However in the light of the 2013 state elections, networking with mainstream political parties to make Rajasthan a GM free state were continued as a means to prevent that a new government would reverse the anti-GM campaigns' success. In May 2014 the new minister of agriculture re-confirmed in a newspaper interview that his BJP government would not restart such field trials.
2. *On May 6 three procurement centres for Bengal gram (chickpea) and mustard were inaugurated in Chaksu, Phagi and Malpura blocks that would guarantee MSPs. When the government put up a limit that only two sacks would be procured per farmer whereas they had harvested dozens of sacks, the government was again pressurised after which it declared to take four sacks per person on May 13, 2014.* MSPs are one of the long term issues related to agriculture that has been the focus of the work of CBOs as KSS and KSSMS. As a rule, if the market price of a crop is below MSP rate, then the government procures it at the MSP rate to ensure income security and thus ensures financial stability for the farmers.

In 2014, there has been a bumper crop of chickpea in Jaipur and Tonk districts and the open market price dropped below the MSP rate without procurement centres being opened in these districts. In April-May 2014, farmers approached their KSSs and together with KSSM and CECOEDECON the government was lobbied.

For both examples we identified three rival pathways, the first assuming that VDCs, KSS and KSSM were capable to achieve these outcomes on their own; the second assuming that they still needed assistance from CECOEDECON and the third that other actors and factor explain the outcomes related to the May 2014 declaration regarding GMOs in the agricultural sector and that of the procurement centres opened.

Field trials for GM seeds stopped by the previous Rajasthan government and publicly reconfirmed in May 2014 by the new Government

Pathway one: KSS, KSSM alone managed to obtain this declaration of May 2014.

Information that *confirms* this pathway:

- The members of the KSSs and KSSMS met with the former and the new agricultural minister after assembly elections and convinced him to keep the field trials stalled in the state, a declaration of which was published in a newspaper^{14,15};
- Two respondents however state that the KSS and KSSM are capable of operating in an independent way but do not provide clear examples¹⁶. KSS members state that they now only ask support from CECOEDECON for ‘those things where we are not able to understand something, otherwise most of the interventions-needs assessments etc. we do at our own.’

From a 2011 campaign that resulted in the cancellation of a Memorandum of Understanding between the State of Rajasthan and seed company Monsanto we observe that VDCs, KSS and Farmers organizations of the three of the 33 districts and the 5 blocks where CECOEDECON is intervening, have been able to submit memorandums to the Chief Minister of Agriculture in 2011 in which they raised their concerns about a MoU signed between Monsanto and the State of Rajasthan.

CECOEDECON at the time, making use of the Right to Information Act ad found out that the MoU violated the law. Additional lobbying with representatives from the legislature and parliamentarians, use of media and rallying were other strategies used at the state level. The CBOs were also able to sensitize the departments concerned at their own local government levels, rallied and sensitized Members of Legislative Assembly and the Media. In consequence 46 Gram Panchayats passed a resolution that they would not use GM seeds in their area. The initiative for this campaign was however taken by CECOEDECON and implemented together with KSSM the KSS and VDC, together with a platform of 150 organisations (NGOs, media, CBOs, academics) called Sanjha Manch¹⁷. Apart from this, CECOEDECON's role was perceived to be crucial in terms of providing scientific knowledge to their CBOs and other farmer organisations; seeking expert advice when needed (finding out that the MoU was breaching the laws in place); mobilizing people and providing key facilities necessary to meet and functioning as a key resource centre¹⁸.

Sanjha Manch

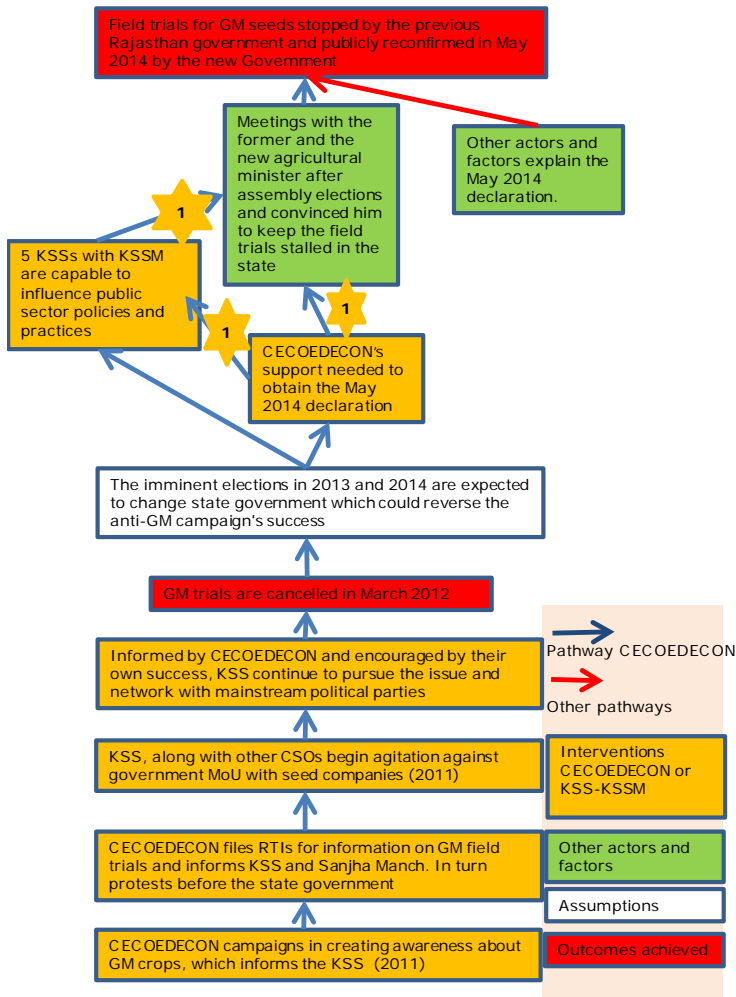

Figure 1: Pathways that possibly explain outcomes and conclusions about the nature of the relations between pathways and the outcome, Capacity of KSS to stop GM trials in 2014

After this campaign KSSs created the awareness and mobilised communities on the issue of “No to GM Food” and the harmful effects of GM crops to facilitate the shift to organic farming. This contributed towards the Agriculture Minister of India signing the petition to ensure access to safe food and promotion of organic farming. Also the KSSMS, along with other farmers’ unions like Bhartiya Kisan Sangh, Bharatiya Kisan Union etc. met the Chief Minister of the state to convince him to stop the GM field trials. The CM ordered the trials to be stopped in 2013, which was reported in newspapers¹⁹.

These previous experiences suggest that KSSM and the KSS do know the issues at stake when addressing GMOs as well as know how to campaign successfully, which is supportive of the pathway that they themselves were capable to convince the new Minister to reconfirm the ban upon GM seeds.

Information that *rejects* this pathway:

- A CECOEDECON staff member acknowledges the risk that VDCs, KSSs and KSSMS are dependent upon skilled professionals for technical inputs and assistance in identifying current as well as emerging issues and states that such assistance was being and is being provided by the SPO. This is being confirmed by others who say that the ‘second or third rung leadership’ has not yet been developed, making it difficult for CECOEDECON to withdraw²⁰ and KSSM and KSS members who state that they are being financially and materially supported, although they are increasingly trying to overcome this dependency.

¹⁹ Interview with KSSMS

²⁰ Another academic and another resource person.

Pathway two: CECOEDECON's support needed to obtain the May 2014 declaration

Apart from the fact that CECOEDECON informed and advised KSSM to meet the former Chief Minister Ashok Gehlot and the current agriculture minister Prabhulal Saini, more information confirms their contribution. After the previous government has declared a ban on GM seeds in March 2012 and had stopped GM field trials in 2013, a CECOEDECON staffer explains that they maintained steady communication with the new agriculture minister from BJP, even before the assembly elections, on the issue in 2013. Before the elections the minister agreed to these ideas and committed to continue the ban on GM seeds when his party would come to power. CECOEDECON met him after the elections and asked him to keep his promise which was confirmed by a public statement in a newspaper interview²¹.

Pathway three: other actors and factors explain the May 2014 declaration.

A respondent from GM Free Coalition acknowledged that CECOEDECON contributed a lot on the GMO issue in Rajasthan, but there were other organisations and individuals also, like Right to Food Campaign, NCPRI, Aruna Roy etc. who also worked on the issue and that collective pressure led to the change. Further he said that political will was also important as the Congress government of Rajasthan took a firm stand on this (despite pressure from their own party led central government). This statement however refers to the previous government in place in Rajasthan and not to the recent declaration by the new government.

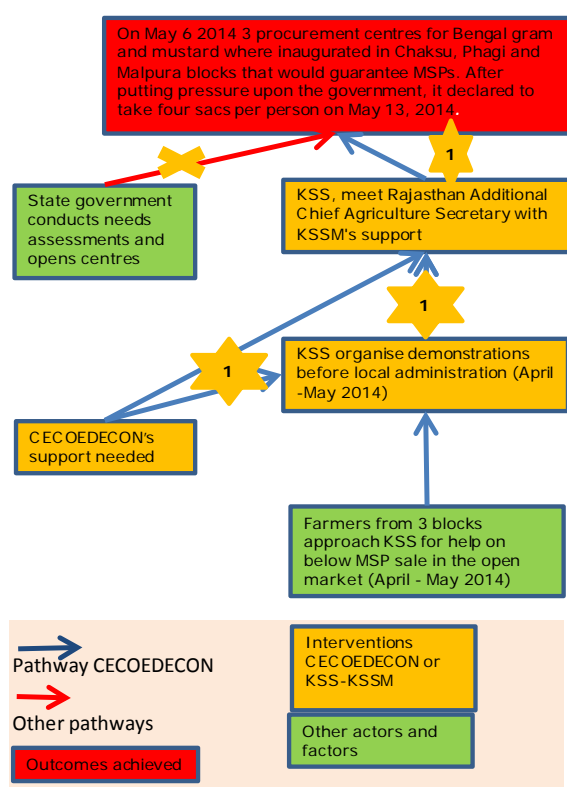

Figure 2: Pathways that possibly explain outcomes and conclusions about the nature of the relations between pathways and the outcome, Capacity of KSS to obtain 3 procurement centres

On May 6 2014 three procurement centres for Bengal gram (chickpea) and mustard were inaugurated in Chaksu, Phagi and Malpura blocks that would guarantee MSPs. After putting pressure upon the government, it declared to take four sacs per person on May 13, 2014.

Pathway one: KSS, KSSM alone successfully lobbied for the procurement centres

²¹ Interview with CECOEDECON staff

Information that *confirms* this pathway:

- After the three centres were already opened for chickpea and mustard, farmers observed that they could only obtain the MSP for two sacks, whereas they had dozens of sacks to sell. The KSS mobilized themselves and sent a memorandum to the Chief Minister with support of KSSM, after which the government increased the limit to four sacks²²;
- KSSM assessed the returns on investment by farmers for chickpea and concluded these were too low, after which they met with the agricultural secretary of Rajasthan who then accepted the opening of the centres²³;
- Two respondents state in very general terms that the KSS and KSSM are capable of operating in an independent way²⁴. KSS members state that they now only ask support from CECOEDECON for 'those things where we are not able to understand something, otherwise most of the interventions-needs assessments etc. we do at our own.'

CECOEDECON, the KSS and KSSM have been working for a long time on the issue of MSP. In 2012-2013 for example they have organized meetings with small and marginal farmers to discuss amongst others the MSP. In each of the five blocks memorandums were developed to draw attention of the state on these issues and also VDCs mobilized farmers in their respective villages. After organizing a big Dharana and rally on the issue of MSP state government took a positive decision of increasing Rs. 100 on the MSP of wheat and also declared to open more than 60 buying centers for Baza²⁵. This would suggest that KSS and VDCs know their rights by now and can ask for the opening of MSP procurement centres.

Information that *rejects* this pathway in favour of support provided by CECOEDECON:

- When observing that chickpea was sold below the MSP in the open market in 2014, farmers demanded interventions after which KSS, KSSM with support of CECOEDECON demonstrated before the administration, resulting in the opening of the three procurement centres²⁶;
- Some respondents say that KSS and KSSM are not yet capable of operating independently from CECOEDECON because the 'second or third rung leadership' has not yet been developed, making it difficult for CECOEDECON to withdraw²⁷. At the same time KSSM and KSS members state that they are being financially and materially supported, although they are increasingly trying to overcome this dependency.

Information that *rejects* both the involvement of the KSS and that of CECOEDECON:

One resource person from the government states that the government should be credited for the opening of the procurement centres and was unaware of CECOEDECON having worked on the MSPs or that any protests were organized by people. According to him a meeting with the MLA of his area had been enough to open the centres.

Discussion and conclusion

With the information available it is hardly possible to conclude upon the extent to which the KSSM, the KSS and the VDC are capable of functioning independently from CECOEDECON and to what extent their organisational capacity has increased since the 2012 baseline study. We observe however that in both cases KSS are capable to represent the needs of their constituencies and to react upon their demands, as well as to mobilise them when action is needed; that KSS are able to engage with government administrations and elected bodies ranging from local government to state government and can draft memorandums if necessary, and; that they know their rights, at least when MSPs are concerned. We also observe that KSS and KSSMS are still dependent upon CECOEDECON in financial and material terms and occasionally also in technical terms. Another observation with regards to the information obtained is that the boundaries between CECOEDECON and the KSSMS with its constituents are blurred.

²² Interview with CECOEDECON staff

²³ KSSM interview

²⁴ Interview with academic and with KSS member

²⁵ CECOEDECON: Important highlights of 2012-13

²⁶ CECOEDECON staff

²⁷ Another academic and another resource person.

The outcomes are to be seen as the result of a *causal package*, consisting of CECOEDECON and KSSM with its constituents, as well as their more than 25 year lasting relationship. In this causal package CECOEDECON acts as a resource centre; provides financial and material support; raises the awareness and provides information to grass root organisations on their rights to state schemes and on their livelihood conditions, and; provides technical support on both content and ways to lobby governments.

KSSM and its constituents on the other side also provide CECOEDECON its legitimacy to lobby and advocate the government, to support the government in the implementation of its schemes and to advise the government. Within this causal package, either CECOEDECON takes the initiative or KSSM and its constituents.

Other actors and factors that are important in achieving the outcomes but in themselves do not explain the outcome (necessary but not sufficient) consist of CECOEDECON's huge network at both Rajasthan state and national level.

5.4 What is the relevance of these changes?

5.4.1 Relevance of the changes in relation to the Theory of Change of 2012

As described in the 2012 theory of change, CECOEDECON's overall goal is 'Empowerment of people that is inclusive'. This goal will be reached if people are aware of their rights and responsibilities. This also entails understanding of one's rights in relation to its needs, being able to negotiate one's rights and to influence policies. The other side of the coin consists of people knowing and respecting their duties as citizens. Important conditions necessary to make people aware of their rights and responsibilities are the following: 1) People, households being economically sustainable, experiencing social dignity and experiencing equal opportunities; 2) Gender equality; 3) Favourable schemes and policies for development and strong government institutions for implementation 4) International context and positive policy framework are also necessary for people's empowerment 5) Networks are necessary to ensure that people, communities, NGOs, governments and private companies work together towards shared concerns and causes, and; 6) Access to justice is compulsory for empowerment and needs to be quick, fair and inexpensive.

As shown earlier, PIIRD V was implemented as planned (at least the ICCO funded part that we analysed) and PIIRD aligned with the ToC developed in 2012. A number of outcomes related to women issues have been mentioned during the workshop with CECOEDECON staff but this perspective put in light in the ToC was not further checked (ICCO only supported the girls camps). Condition 6 related to access to justice was not checked either.

The outcomes achieved are well aligned with the ToC drawn out in 2012. The interventions in, both the ToC and MoC, remain the same which include trainings, mobilisation of community, workshops, documentation, campaign, advocacy, networking and meetings. The outcome selected during process tracing ('KSSs have the capacity to influence public policies and practices) with the examples chosen (influence on GMO policies, influence on MSP practice) is relevant to achieve the first condition in the 2012 ToC which is about economical sustainability (condition 1) and for the achievement of the third condition with regards to favourable schemes and policies. The gender condition seems to have been achieved, given the mandatory 50 % representation of women in all CBOs that work with CECOEDECON, though this was not assessed by the evaluation team. With regards to condition 5 we observe that the networks between CDVs, KSS, the KSSM and CECOEDECON have been strengthened, but that networking with private sector did not materialise, whereas collaboration and influencing government has improved and hence contributes to the overall goal of the 2012 ToC.

No interventions contributed towards achieving the sixth condition which is about access to justice and that of an enabling international context and policy environment.

In the past two years, CECOEDECON has also started to focus on social and environmental stability along with economic sustainability, both topics that were not very outspoken in the 2012 ToC.

CECOEDECON's interventions are in line with its very encompassing 2012 theory of change, but evidence that its overall goal 'people empowered' had been achieved is still scarce and anecdotal.

5.4.2 Relevance of the changes in relation to the context in which the SPO is operating

CECOEDECON has contributed towards the empowerment of community-based organisations such as the VDCs, KSSs and KSSMS. The ownership amongst these organisations has increased and they are better able to identify, raise and find ways to address their issues/concerns, making them more confident in knowing and claiming their rights. Also, they are said to maintain a monitoring mechanism to check their progress at various levels (no evidence found). CECOEDECON has also been successful in bringing together influential people/sections like academicians, ex bureaucrats, media, opinion makers, farmer organisations etc. with regards the issue of GM field trials in the state.

Through its work, CECOEDECON has made the farmers more aware of their rights and in turn the changes brought to by CECOEDECON are relevant for the community at large. Although this has not been studied into details, it was mentioned by several interviewees that the changes have particularly benefited women who have been empowered through activities such as SHG formation and have gained increased political participation through interventions such as Special Gram Sabha for women.

It is essential to mention that CECOEDECON has been working in the same area for a long time and that achievements at the level of these communities are more difficult to pin point to the last 2 years. A testimony beyond the MFS II period that highlights the impact of CECOEDECON towards building a vibrant civil society, mostly at community level is as follows: "I am uneducated, but because of the interaction with CECOEDECON I have learnt a lot. When I first came in touch with the organization, one CECOEDECON official told me about the importance of education, and asked me to educate my children. I did the same and now one of my girls is a teacher, another boy is a Rojgaar Sahayak Secretary, one daughter is working in the Swachch Pariyojna and one boy is in class twelve"²⁸.

In Rajasthan, agriculture is the biggest sector in terms of employment but the sector is plagued by a low growth rate. One of the reasons for this is that more than half of the area under cultivation is rain fed and has one harvesting season. Rajasthan represents a big input market for seed companies that promote the use of GM seeds, which will make farmers dependent upon these companies. CECOEDECON has concentrated on the arrival of GM seeds for many years and it was successful in stopping their introduction in the state, despite the new right wing political party in power since 2013.

5.4.3 Relevance of the changes in relation to the policies of the MFS II alliance and the CFA

ICCO has three core strategies: policy influencing, civil society and poverty alleviation. These three strategies are adapted into each programme. CECOEDECON falls into ICCO's Food and Nutrition Security Program. This programme aims to strengthen civil society by improving local sustainable food systems and supporting communities to claim their right to food. It is about how civil society –SPOs and target groups - is strengthened and capacitated through addressing their own issues, whether it is economic justice, WASH or other livelihood issues. It is also about how they get mobilised, raise their voice, and express their needs in relevant platforms. ICCO's policies are further defined at country level. The achievements of CECOEDECON and its work with the CBOs definitely align with ICCO's Civil Society policy.

It is worth mentioning that ICCO is only funding the girls' camps activity in the PIIRD Vth programme as an activity linked to gender issues. This is surprising knowing the interest ICCO has always shown to advancing the rights of women worldwide.

²⁸ SVM and KSSM member

5.5 Explaining factors

5.5.1 Internal factors

CECOEDECON's chief executive Sharad Joshi was one among a small group of young social workers who founded the organisation by providing immediate relief to the victims of devastating floods in Jaipur district in 1982. The organisation has since evolved from its modest beginnings as a relief agency into an NGO pursuing integrated participatory development and advocating human rights. CECOEDECON's criterion for undertaking interventions is that they should lead to community self-reliance and empowerment. And this principle has been incorporated into CECOEDECON's internal structure as well, which attributes a very significant place for the Executive Committee (EC), which comprises members of the KSSs. The EC plays an important role in providing direction and policy guidelines, as also in actively participating in the organisations' projects/programmes.

To instil yet more relevant externalities within its internal systems, CECOEDECON's document "Planning Assessment—Way Forward", states that the organisation analyses the context in which it works at four levels: (i) global, (ii) national, (iii) state (iv) local. It takes into account the interrelatedness of issues at all these levels and integrates macro issues into its grassroots work and vice versa.

CECOEDECON seems to have a high staff retention rate. As evidenced during the baseline and the end line evaluation workshops, most of participant staff members, including those from the field, have spent long years in the organisation, some around three decades. This makes for rich experience and long-lasting relationships at the ground level, in turn helping consolidate the organisation's reputation among target communities, as well as the other actors and networks in the state's development sector. The organisation's influence—in the state, nationally and internationally—is derived, in fact, from this connect and standing it enjoys with the target communities on the ground: As also from Sharad Joshi's personal credibility and contacts within the sector, including policymakers, bureaucrats, other NGOs.

CECOEDECON, however, did mention a staffing issue that it is contending with of late. Though its older staff remains loyal to the organisation's cause, the rising expectations of the new generation of development sector professionals was making new recruitment and retention of professional recruits a challenge.

CECOEDECON is considered as a large and mature organisation that has reached significant results at community level (example given with the mass mobilisation around the food security bill which was passed in 2013) and has been able to spread out without losing out of sight its focus on poverty alleviation and direct support to communities.

It has however not adjusted significantly with regards to its changing environment. One of the issues concerns its funding strategies and its ongoing dependence upon foreign aid. A second observation from the evaluation team is that an exit strategy with regards to supporting VDC and KSS for more than 25 years is missing, which enables those CBOs to evolve beyond the support given by CECOEDECON. At the same time such relations also represent an important asset for the organisation which nearly has become a network beyond generations.

These aspects make both the SPO and its CBOs more vulnerable.

5.5.2 External factors

CECOEDECON continues to be relevant to, and derive relevance from, its externalities.

The organisation works at ensuring that the VDCs, the KSS and KSSM remain connected with the larger issues at stake by ensuring their interface with the world outside. Therefore it coaches these CBOs to understand the value of interacting with to interact with elected representatives. The VDCs, KSSs and KSSMS interact with local government organisations whenever need arises, like they did to ensure that a parallel system of girdawari (crop loss assessment) was set up for deciding about the appropriate compensation for farmers whose crops were lost due to heavy hail storms in 2014. The CBOs are also connected to other CSOs and networks. To cite an instance, the KSSs interacted with other organisations during the national consultation on agriculture issues such as farmers' suicides in

December 2013, while preparing the People's Manifesto and with Sanjha Manch in their struggle against GM field trials in the state. The People's Manifesto, in fact, is an example of how CECOEDECON used the election year 2014 to engage itself, and its CBOs, with different sections of society and political parties towards bringing forth farmers' concerns while enlisting mainstream electoral concerns. The Annual Report PIIRD (April 2013 to March 2014) states that CECOEDECON organised a series of media workshops at the block level, which helped it and its CBOs to establish linkages with local media.

5.5.3 Relation CFA-SPO

ICCO has been supporting CECOEDECON for almost 30 years which shows the mutual trust and respect the two organisations have with each other. Before MFS funding ICCO provided core funding to the SPO. In 2013, it was decided to end the relationship not because of targets not reached but because ICCO has changed its strategy. This decision was properly informed and shared. Together they discussed how to make the shift as smoothly as possible. With the information the evaluation team has at hand there are not prominent factors with regards the relation between ICCO and CECOEDECON that could explain the findings.

6 Discussion

6.1 Design of the intervention

CECOEDECON has been working with the VDCs, the KSS for more than 25 years. In the last ten years it has shifted from a project approach to a more holistic and programme approach as well as creating the KSSM as the apex for the CBOs. Despite these many years of collaboration, speaking from a donor and a project driven perspective which seeks results within two to five years only, we conclude that CECOEDECON's design failed in creating CBOs that can operate independently from CECOEDECON. From a longer term and movement building perspective we observe that CECOEDECON has become successful in creating a movement that by now is capable to represent its constituencies that are capable to orient CECOEDECON's interventions because it is represented in the SPO's Executive Committee as well as through the issues that emerge from grass roots to state level. CECOEDECON has thus become part of the movement in which it plays the role of resource centre and coach.

In this sense it is not possible to address the question of replicability as a new project because after 30 years all the persons in the VDCs, the KSS, the KSSM and CECOEDECON staff have become members of one big family that, we hope, will continue with the next generation.

Key questions that we ask ourselves with regards to the design and that remain without an answer are:

- Why did CECOEDECON decide to limit its interventions to three districts out of 33 districts in the State of Rajasthan?
- We conclude that this intervention zone, together with other actors working at state level was enough to achieve policy outcomes and changes in practice at state level and in the districts concerned. However could more have been achieved at state level if CECOEDECON would have expanded its interventions to more blocks in the three districts or to other districts?

6.2 Replication of the intervention

As mentioned earlier, CECOEDECON has been working in the same areas for almost 30 years. Through this constant presence it was able to bring true changes to the communities. Over the years, the staff which is dedicated to the organisation (let us keep in mind that the Executive Director has been involved since the beginning of the organisation), has been able to create not only deep relationships with the communities but also links with the government. These characteristics are very specific to CECOEDECON and it seems very unlikely that another organisation is able to replicate this way of working, even in similar communities. It is also important to mention that the context has drastically changed in the last 30 years and that the (foreign) aid funds which were at that time available are shrinking making it even more challenging to replicate this way of working.

With regards replicating in another state, it is important to note that in the last 2 years and even longer, Rajasthan has benefited from a stable environment (witnessing state and central elections bringing a political party more in favour of industries into power). This has not been the same in other states (North East suffers ethnical conflicts, Odisha is very poor, etc.) which would make the replication of CECOEDECON's model quite challenging.

7 Conclusion

This chapter presents the conclusions for each of the evaluation question as well as concludes on the design of the interventions.

Changes in the civil society arena of the SPO

In the 2012 – 2014 period, the two most important changes that took place in the civil society arena of CECOEDECON are related to 'Civic Engagement' and 'Level of Organisation'. Most important changes observed with regards civic engagement relates to the fact that all Village Development Committees (VDCs), Kisan Seva Samiti (KSS) at block level and their apex body KSSMS at state level have taken a more leading role for their future. Evidence provided for this consists of the fact that they drafted their Vision Document and that they prepared a People's Manifesto together with CECOEDECON and Sanjha Manch in view of the 2013 state and the 2014 general elections: 39 of these demands were included in the manifestoes of the two leading national parties. At the same time some evidence has been collected that shows that KSS and VDCs' have improved their services to their constituents and that they increasingly take the lead in ensuring that entitlements of their communities are made available to them.

With regards to 'level of organisation', CECOEDECON managed to diversify its financial resources with funding coming from new international donors, government and private sector. The VDCs and the KSS increasingly take up grassroots mobilisation to negotiations with ministers and obtained an increased understanding of different micro and macro level issues.

Contribution analysis

Because of the integrated nature of the SPO programme, only one combined outcome has been looked at: KSSs (five KSSs in Jaipur, Baran, Tonk districts of Rajasthan) are capable to influence public sector policies and practices. The evaluation team looked at the extent to which these KSSs were able to "function as key implementing, coordinating, monitoring and evaluating institutions for government schemes and policies [...] at community level", were strengthening Panchayati Raj Institutions and became independent enough to bring about a collective Farmers' Movement as stated in the PIIRD V programme proposal. In practice, many results were achieved but with a different degree of involvement of the KSSs. Two examples of policy changes have been looked at: 1) Field trials for Genetically Modified seeds that were stopped by the previous Rajasthan government were publicly reconfirmed in May 2014 by the new Government; 2) On May 6 three procurement centres for Bengal gram (chickpea) and mustard were inaugurated in Chaksu, Phagi and Malpura blocks that would guarantee Minimum Support Prices (MSP). When the government put up a limit that only two sacks would be procured per farmer whereas they had harvested dozens of sacs, the government was again pressurised after which it declared to take four sacs per person on May 13, 2014.

With the information available it is hardly possible to conclude upon the extent to which these KSSs are capable of functioning independently from CECOEDECON and to what extent their organisational capacity has increased since the 2012 baseline study. We observe however that in both cases KSSs are capable to represent the needs of their constituencies and to react upon their demands, as well as to mobilise them when action is needed; that KSSs are able to engage with government administrations and elected bodies, and that they know their rights, at least when MSPs are concerned. We also observe that KSSs are still dependent upon CECOEDECON in financial and material terms and occasionally also in technical terms. Another observation with regards to the information obtained is that the boundaries between CECOEDECON, KSSMs and KSSs and VDCs are blurred.

The outcomes achieved are to be seen as the result of a *causal package*, consisting of CECOEDECON and KSSM with its constituents, as well as their more than 25 year lasting relationship. Within this causal package, either CECOEDECON takes the initiative or KSSM and its constituents.

Other actors and factors that are important in achieving the outcomes but in themselves do not explain the outcome (necessary but not sufficient) consist of CECOEDECON's huge network at both Rajasthan state and national level.

Relevance

The interventions of CECOEDECON are relevant in relation to its Theory of Changes constructed in 2012. These interventions support the empowerment of people and support them in claiming their rights and fulfilling their responsibilities. As such, they also align with CECOEDECON's overall goal which is 'Empowerment of people that is inclusive', however progress being made to the achievement of this goal is still scarce and anecdotal.

With regards to the context in which CECOEDECON is operating, its interventions and outcomes achieved are relevant because they have contributed towards the empowerment of community-based organisations such as the VDCs, KSSs and KSSMS; they have brought together influential people/sections like academicians, ex bureaucrats, media, opinion makers, farmer organisations etc. with regards to the issue of GM field trials in the state. Moreover, farmers are more aware of their rights and have joint CECOEDECON in its lobby and advocacy efforts to halt the introduction and the use of GM seeds in the state.

With regards to the Civil Society policies of ICCO, the organisation's interventions are relevant because they contribute to ICCO's Food and Nutrition Security Program which aims to strengthen civil society by improving local sustainable food and nutrition systems and supporting communities to claim their right to food.

Explaining factors

Internal factors within the SPO that explain the findings are: its dedicated staff, although it has been difficult to retain younger staff; the organisational structure which includes representatives of the target groups in the Executive Committee; the credibility of the executive leadership and the maturity of the organisation which has a huge network.

The most important external factor that explains the findings is the political situation that CECOEDECON used as a conducive environment to bring about changes.

The most important factors that explain the findings with regards to the relation between CECOEDECON and ICCO consist of the long lasting relationship between the two organisations that was based upon respect and trust.

Design

The outcomes achieved are the result of long-lasting relations between CECOEDECON, VDCs, KSS and later the KSSM, as well as with the respective governments of the place. The outcomes are to be seen as the investments of more than 30 years, with the presence of a charismatic leader, dedicated staff and a stable political environment.

Similar long term investments would be needed to replicate CECOEDECON's intervention strategy in other places or by other organisations.

Table 2

Summary of findings.

When looking at the MFS II interventions of this SPO to strengthen civil society and/or policy influencing, how much do you agree with the following statements?	Score
The CS interventions were well designed	7
The CS interventions were implemented as designed	8
The CS interventions reached their objectives	6
The observed outcomes are attributable to the CS interventions	7
The observed CS outcomes are relevant to the beneficiaries of the SPO	8

Score between 1 to 10, with 1 being "not at all" and 10 being "completely".

Appendix 1 Civil Society Scores

This table presents the appreciation of the evaluation team regarding changes occurred for each indicator between 2012 and 2014 on a scale of -2 to + 2

Dimension		Indicators	Question	Change
Civic engagement	1	Needs of marginalised groups	How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies?	+1
	2	Involvement of target groups	What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities?	+1
	3	Political engagement	How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups?	+2
Level of organisation	5	Relations with other organisations	In the past 12 months what has been the most intensive interaction you had with other CSOs?	0
	5	Frequency of dialogue with closest CSO	In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with?	+1
	6	Defending the interests of marginalised groups	Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs?	+1
	7	Composition current financial resource base	How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendance to workshops of other CSOs; costs for organisational growth and/or networking?	+2
Practice of Values	8	Downward accountability	To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them?	0
	9	Composition of social organs	What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for?	0
	10	External financial auditing	How regularly is your organisation audited externally?	0
Perception of impact	11	Client satisfaction	What are the most important concerns of your target groups? How do your services take into account those important concerns?	+1
	12	Civil society impact.	In the past 12 months, what impact did you have on building a strong civil society?	+1
	13	Relation with public sector organisations.	In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives?	+1
	14	Relation with private sector organisations	In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective?	0
	15	Influence upon public policies, rules, regulations	How successful have you been in influencing public policies and practices in the past 2 years?	+1
	16	Influence upon private sector agencies' policies, rules, regulations.	How successful have you been in influencing private sector policies and practices in the past 2 years?	0
CS context	17	Coping strategies	In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society.	+1

-2 = Considerable deterioration

-1 = A slight deterioration

0 = no change occurred, the situation is the same as in 2012

+1 = slight improvement

+2 = considerable improvement

Appendix 2 Changes in civil society indicators between 2012 and 2014

2.1 Civic Engagement

2.1.1 Needs of the marginalised groups

CECOEDECON's vision continues to be to empower the most marginalised, such as women, children, Dalits, landless, small and marginal farmers. It does this through setting up and supporting CBOs such as the Village Development Committees (VDCs), Kisan Sewa Samitis (KSSs) and Kisan Sewa Samiti Mahasangh (KSSMS) in five blocks of the Tonk, Baran and Jaipur districts of Rajasthan.

The past two years have shown quantifiable increment neither in the number of the CBOs associated with CECOEDECON, nor in the membership figures of such CBOs. Expectedly so given that the project's structure predetermines that each block—namely Chaksu, Niwai, Phagi, Malpura and Shahbad—has a KSS that comprises the presidents of the VDCs under its purview; the VDC members having been elected and/or selected by the community at the village level. The five KSSs thus constituted, in turn, elect members of the KSSMS, the apex body of this federated structure. Membership strength in all the CBOs is fixed by rule, with a 50 per cent mandatory reservation for women.

Having said which, CECOEDECON was unanimous that there is a qualitative improvement in the services that these CBOs are providing to the target groups. The KSSs are now more independent, and manage to take the lead in ensuring that the entitlements of the community are made available to it. Also, CECOEDECON itself seems to be relying much more on its associate CBOs than earlier. The organisation's PIIRD Vth Phase Proposal (2012-2015) states that even though there are systemic challenges with fewer staff at the branch level but the same number of villages to cover, newer outreach and monitoring mechanisms have been introduced in the past two years. This has been done by utilising the strengths of local level functionaries from the VDCs and KSSs.

Also, like during the baseline, CECOEDECON continues to work with the Sahariya tribe through the CBO, Sahariya Vikas Manch (SVM), to secure their rights through broad-based interventions including education, agriculture, natural resource management, securing land rights.

Since 2012, CECOEDECON has also begun work with the Nat²⁹ community in Kotkhawada village of the Chaksu block. Chronic poverty and illiteracy have traditionally forced Nat girls and women into prostitution. Through an Anti-Human Trafficking project supported by UN Women³⁰, CECOEDECON is educating and skilling the community in livelihoods such as tailoring, poultry etc.

Score: +1

2.1.2 Involvement of target groups

As at the time of the baseline, so also now, CBOs associated with CECOEDECON have a formal role in its programme implementation. The KSSs and other active community members participate in the scanning of context and prioritisation of issues before each PIIRD phase (now in its Vth phase). The Yearly Plans of Operations (YPOs) for all themes are designed by the respective units in the organisation along with the KSSs. Thereafter, the VDCs and KSSs take the responsibility of identifying

²⁹ The Nat community has been provided special status as that of a Scheduled Caste under the Indian Constitution. They are traditionally nomadic and as such, marginalised from the mainstream. *Refer*, <http://www.peoplegroupsindia.com/profiles/nat/>

³⁰ UN Women is a United Nations organisation dedicated to gender equality and the empowerment of women.

community members for participation in various trainings, demonstrations, assigning responsibilities to community members for giving memorandums to the chief minister, undertaking fact finding missions, nominating persons for participation in international events, etc. The role of the CBOs continues through regular monitoring of activities at the field level, participating in evaluation exercises such as annual output monitoring and occasional monitoring through the use of tools such as the Community Score Card (CSC).

Most significantly, perhaps, beginning December 2012, the VDCs, KSSs and KSSMS came together to brainstorm and chart out future plans for themselves in a series of meetings held in the CECOEDECON office. Three decades of achievements, challenges and opportunities were shared, different strategies mapped. And the result was the publication of an indigenously documented mandate and a way-forward strategy in February 2013, titled the Vision Document.

These achievements can be largely attributed to capacity enhancement trainings by CECOEDECON. For instance, a two-day joint refresher training programme for all the KSSs and the KSSMS was held in Shahbad in November 2013.

Barring the field staff that saw the situation as unchanged since the baseline, all others in CECOEDECON thought their target groups had become much more confident and decisive.

Score: +1

2.1.3 Intensity of political engagement

Though CECOEDECON is apolitical, it works hard on forging and nurturing links with legislatures, parliamentarians and PRI (Panchayati Raj Institution) members, and ensuring that CBOs associated with it understand the value of interacting with elected representatives. Towards this, CECOEDECON empowers communities to participate in political processes through voter education, PRI trainings, and guidance in negotiations with administration, ministers and political leaders.

The state assembly and general elections were held in 2013 and 2014 respectively. CECOEDECON and its associate CBOs, along with other civil society organisations and networks, sought active public involvement in the nation's political life and development.

Five regional meetings were organised by CECOEDECON, the KSSMS, and the CSO-coalition Sanjha Manch³¹ in the Kota, Jhunjhunu, Tonk, Jaisalmer and Jaipur districts before the state assembly elections in 2013. The demands raised in these meetings by groups and organisations representing Dalits, deprived and marginalised sections, farmers, tribal groups and women were incorporated in a publication titled the People's Manifesto. A similar Manifesto was brought out before the general elections in 2014. Thirty nine of these demands were included in the election manifestoes of the two leading national political parties, BJP and the Congress.

Also, CECOEDECON's Annual Report April 2012 to March 2013 records the organisation's, along with the KSSs and Public Advocacy Initiatives for Rights and Values in India (PAIRVI)³², having organised five block level consultations with PRI members on Panchayati Raj related issues. Around 300 participants, including the media participated. The current status of Panchayats after having been given charge of five new departments by the state government was discussed. Most PRI members agreed that the allocation was not backed by political will, and the panchayats, without funds and functionaries, still dependent on administrative officers. Other issues discussed were: capacity building of PRI members on the five new departments, monitoring of Gram Sachivalaya (village secretariats)

³¹ Sanjha Manch is a collective of 150 partners (NGOs, media, CBOs, academicians) in Rajasthan. Their main aim is to strengthen the civil society movement in the state and develop its capacity on issues such as GMOs, bio-fuels, SEZs, drinking water, malnutrition and social violence etc.

³² PAIRVI provides advocacy and capacity building support to grassroots organisations and CBOs. Refer, http://www.pairvi.org/about_us.php

meetings, monitoring of the Rajiv Gandhi IT centers and Anganwadi Centers³³, and direct budget transfer to the panchayats; these were included in the People's Manifesto.

Score: +2

2.2 Level of Organisation

2.2.1 Relations with other organisations

Like at the time of the baseline, CECOEDECON continues to engage with many local, national and international organisations and networks on the issues of food security, sustainable agriculture, environment, farmer's rights etc.

CECOEDECON's Annual PIIRD Report April 2013-March 2014 states that though its primary relations are with its CBOs (the VDCs, KSSs, KSSMS), the organisation:

- is still a part of *state level* processes PAIRVI, Sanjha Manch, with new additions since the baseline being the Rajasthan Social Watch (RSW)³⁴, and the State Campaign on Millennium Development Goals³⁵;
- at the *national and international level* continues to be associated with the Voluntary Action Network India (VANI)³⁶, Wada Na Todo Abhiyan (WNTA)³⁷, Sa-Dhan³⁸, Oxfam India³⁹, People's SAARC⁴⁰, UN Millennium Development Goals, World Social Forum⁴¹, UNCTAD⁴² and Beyond Copenhagen⁴³ with new collaborations with South Asian Network for Social and Agricultural Development (SANSAD)⁴⁴, National Social Watch Coalition (NSWC)⁴⁵, Centre for Environment Concerns (CEC)⁴⁶, Delhi School of

³³ Anganwadi centres come under the Integrated Child Development Scheme (ICDS). The main objective of this programme is to cater to development needs of children in the age group of 3-6 years. *Refer*, <http://www.archive.india.gov.in/citizen/health/health.php?id=62>

³⁴ RSW is an umbrella organisation consisting of CSOs, citizens and communities monitoring governance towards professed goals of social development. It comes under the ambit of National Social Watch. *Refer*, <http://www.socialwatchindia.net/coalition/rajasthan-sw/82-rajasthan-social-watch>

³⁵ Although the state has made big leaps in achieving the MDG goals, it is likely to miss the deadline of 2015. A major reason for this failure is believed to be the delivery mechanism that has been unable to reach all sections of society.

⁴⁴ The main aim of SANSAD is poverty reduction and another aspect of its aim is to partner with various organisations with similar objectives. *Refer*, <http://www.sansad.org.in/aboutus.htm>

⁴⁵ NSWC is associated with the international Social Watch (www.socialwatch.org) process which is a civil society response to pursue the agenda of World Social Summit held in Copenhagen that the state should pursue and demonstrate changes in social development parameters beyond the economic development.

⁴⁶ CEC's activities are focused on raising awareness and building capabilities on issues of poverty, forestry, gender, agriculture and power sector reforms. *Refer*, <http://www.cechyd.org/activities.htm>

Social Work Society, and Sustainable Agriculture Information Network⁴⁷. CECOEDECON has also developed key roles in networks like Food and Water Security Coalition India (FWSCI)⁴⁸ and GM Free Coalition⁴⁹.

Notable among the seminars and conferences that CECOEDECON, and/or its associate CBOs, were a part of: a) World Social Forum, 2013 held at Tunis, Tunisia b) Conference of Parties (CoP 19) under the auspices of UNFCCC50 held at Warsaw, Poland in November 2013 c) Meeting in Bhopal on the Millennium Development Goals (MDGs) organised by the Madhyanchal Forum⁵¹, Church's Auxiliary for Social Action (CASA)⁵² and CECOEDECON in February 2013.

The executive leadership said that the past two years had seen CECOEDECON get into new collaborations with Global Alliance for Vaccines and Immunization (GAVI)⁵³ and Women Power Connect.

Score: 0

2.2.2 Frequency of dialogue with closest civil society organisation

CECOEDECON has monthly interactions with the VDCs, KSSs and KSSMS; such meetings were a regular feature even at the time of the baseline. Over and above these, according to the Annual PIIRD Report April 2013-March 2014, CECOEDECON organised KSS general body meetings in all five programme blocks to strengthen the CBOs; VDC chairpersons of all the villages participated. The past two years, moreover, saw CECOEDECON interacting with its associate CBOs on issues and campaigns beyond the routine—like the People's Manifesto, KSSMS' Vision Document, the sustained campaign against the GM field trials and the setting up local government procurement centres at minimum support prices. For many of these activities, they partnered with larger organisations and networks such as the Sanjha Manch, WNTA, PAIRVI, GM Free Coalition and Beyond Copenhagen. The People's Manifesto is, in fact, an illustration of CECOEDECON, the KSSs, WNTA and Sanjha Manch's collaborating to achieve commendable success.

Personnel across CECOEDECON's hierarchies felt that the intensity of their engagement with other CSOs had improved considerably between 2012 and 2014.

Score: +1

2.2.3 Defending the interests of marginalised groups

Like they had during the baseline, CECOEDECON personnel named the VDCs, KSSs and KSSMS as the best defendants of the marginalised. The past two years have seen these CBOs take up grassroots mobilisation to negotiations with ministers with an increased understanding of different micro and macro level issues, such as climate change, GMOs, biodiversity, women's empowerment, etc.

⁴⁷ Sustainet in India was initiated as a network of CSOs to develop effective sets of Good Agricultural Practices (GAP), whose focus is sustainable agriculture. *Refer*, <http://www.sustainet.org/index-en.html>

⁴⁸ FWSCI was created to bring together ICCO partners to develop a discourse on food and water security in India. It focuses on the changing context, such as, changing role of governments, increasing involvement of civil society organisations and mercerisation of development etc. *Refer*, <http://fwsci.com/about-us/about-us>

⁴⁹ GM Free Coalition is a movement against GM crops and pesticides. It's a collective of various CSOs that have come together to create greater awareness about their movement across the world. *Refer*, <http://www.gmofreeglobal.org/en/mission>

⁵⁰ United Nations Framework Convention on Climate Change, the main goal of this United Nations body is to stabilize greenhouse gas concentrations in the atmosphere at a level that will prevent dangerous human interference with the climate system.

⁵¹ Madhyanchal Forum is a platform of voluntary organisations and individuals, facilitated by CASA, for collective action in Madhya Pradesh. It is aimed at bringing together NGOs, development promoters, practitioners, experts and policy makers to explore strategic development in key areas-local self-governance, sustainable livelihoods, disaster management and preparedness, gender mainstreaming, youth building, globalisation and poverty issues.

⁵² CASA is a relief and development organisation, promoting the growth of the marginalised groups towards sustainable development and self-sufficiency. *Refer*, <http://casa-india.org/pages/about-us/about-casa.html>

⁵³ GAVI is an international organisation that works on providing access to vaccines to children, especially, in the developing countries. *Refer*, <http://www.gavi.org/about/mission/>

The field staff credited the SVM as having capably defended the interests of its community, this with support from the Ekta Parishad⁵⁴.

Score: +1

2.2.4 Composition financial resource base

CECOEDECON was a partner of the ICCO alliance for more than 25 years; this funding stopped in March 2014. Despite which CECOEDECON has managed to retain the level of its activities, this by identifying new donors and fund raising strategies.

While CECOEDECON continues to receive financial support from Action against Hunger (ACF)⁵⁵, the Hunger Project, Misereor and Save the Children, the organisation's new funding sources comprise Global Alliance for Improved Nutrition (GAIN)⁵⁶, UNDP (United Nations Development Programme)⁵⁷, UN Women, SWISSAID⁵⁸ and Strategic Climate Fund (SCF)⁵⁹.

CECOEDECON's work with Integrated Child Development Services (ICDS)⁶⁰, State Institute of Rural Development (SIRD)⁶¹ and NABARD continues. A new funding support from government has been found in Department of Women & Child Development (DWCD).

The organisation also receives funding from private sector organisations that it works with on a project basis, Suzlon Foundation being one among them.

CECOEDECON's infrastructure is now being increasingly utilised to generate revenue; the building is often rented out to organisations and even government departments for workshops and seminars.

The community is also contributing to field costs more than earlier. Members from the KSSs shared that food and beverage costs during protests and rallies are often borne by villagers themselves.

The executive leadership observed that it has yet to find the same levels of financial support as had been provided by ICCO.

Score: +2

2.3 Practice of Values

2.3.1 Downward accountability

CECOEDECON's PIIRD Vth Phase Proposal (2012-2015) says that its organisational structures have been deeply influenced by its past experiences and lessons learned from reviews and reflections. The organisation has a nine member board, including four women and the board's Secretary. One of the members from the board is on the CECOEDECON's Committee Against Sexual Harassment (CASH). Presently, the structure accords a very significant place for the Executive Committee (EC),

⁵⁴ Ekta Parishad is a people's movement dedicated to non-violent principles of action. Their main aim is to give the marginalised control over their livelihood resources, especially, land, water and forest. *Refer*, <http://ektaparishad.com/en-us/about/mission.aspx>

⁵⁵ ACF was founded in 1979 by a group of French intellectuals, the organisation exclusively focuses on eradicating hunger. *Refer*, <http://www.actionagainsthunger.org/about/acf-international>

⁵⁶ GAIN is a Geneva, Switzerland based not-for-profit organisation working on fighting malnutrition.

⁵⁷ UNDP is a United Nations body, which works with 170 countries to build their capabilities to withstand crisis and push for a kind of growth improves the quality of life. *Refer*, <http://www.undp.org/content/undp/en/home/ourwork/overview.html>

⁵⁸ In India, SWISSAID's main focus is on promotion of people's cooperative movement for livelihood development, it also works on curbing discrimination and violation of human rights by democratising CSOs and empowering the marginalised. *Refer*, <http://www.swissaid.ch/en/india>

⁵⁹ SCF is a framework that organises the funds towards actions aimed at addressing climate change challenges. *Refer*, <https://www.climateinvestmentfunds.org/cif/node/3>

⁶⁰ ICDS aims at providing services to pre-school children in an integrated manner so as to ensure proper growth and development of children in rural, tribal and slum areas. *Refer*, <http://www.icds.gov.in/#>

⁶¹ SIRD's focus is on the qualitative development in the ongoing rural development schemes and sensitise the elected representatives of Panchayat Raj Institutions (PRIs) to be proactive through capacity building activities. *Refer*, <http://www.sird.tn.nic.in/about.htm>

which is a multi-disciplinary team. Importantly, the EC also has representation from the KSSs. The EC plays an important role in providing direction and policy guidelines, as also in actively participating in the organisations' projects/programmes. The EC authorises the Secretary to lead, direct, manage, and be accountable for overall operations of CECOEDECON, and also appoints a Director who is responsible for programme direction, planning, monitoring, training, liaisoning and resource mobilisation.

To implement the mandate of the EC and the board, CECOEDECON has structures like the Core Group (CG) and the Core Team (CT). The CG comprises the Secretary, Director, two Co-directors, three Deputy Directors and the president of the KSSMS. The CT is a bigger unit comprising all members of the CG, along with unit heads, branch in-charges and the KSS presidents of the branches. The representation of CBOs in the CG and CT provides them with an opportunity to be a part of the key decision making system of the organisation. It also enhances decentralised, participatory and collective decision making processes that are instrumental to increase the ownership and the organisational effectiveness. The current structure recognises the interrelatedness of the teams and also the autonomy of CBOs.

It may be noted, however, that the CBOs find no representation in the board, the highest decision making body of CECOEDECON.

The executive leadership pointed out that programme heads, CBO representatives and Directors attend the board meetings, which are regular, and inform others about the progress and challenges discussed. At the ground level, the field staff said they share the YPOs and budget with all the VDCs, KSSs and the KSSMS, and take their inputs regarding the budget.

Though none of the above is remarkably different from the time of the baseline, CECOEDECON's executive leadership and programme managers felt that downward accountability within the organisation had improved over the past two years, and attributed such positive change to the board becoming more systematic and its members taking a more active part in the organisation's projects. The field staff and HR and Accounts staff, meanwhile, observed no change.

Score: 0

2.3.2 Composition of Social Organs

At the time of the end line CECOEDECON had a nine member board comprising distinguished professionals from different fields including social work, activism, education, research, community leaders, judiciary, and media. Fifty per cent of the board members are from marginalised groups such as women, Scheduled Castes/Scheduled Tribes (SC/ST) and ethnic minorities.

It was the same in 2012. And other than the executive leadership everybody saw the situation as unchanged.

Score: 0

2.3.3 External financial auditing

Like in 2012, CECOEDECON continues to be audited annually by external auditors as per statutory requirement. It conducts internal audits twice in a year. The executive leadership said that over the past two years efforts have been made towards enhancing transparency, accuracy and refined information regarding accounts. CECOEDECON's Financial Manual is updated regularly, even as its internal financial systems are rigorously monitored by the programme staff. Financial statements are shared by the accounts unit with the programme staff on a monthly basis for accuracy and proper follow up.

Score: 0

2.4 Perception of Impact

2.4.1 Client satisfaction

The important concerns of CECOEDECON's target groups in 2012 were access to alternative livelihoods in changing climatic conditions, equal opportunities, effective and transparent implementation of government's welfare schemes, participatory and good governance practices and the needs of small and marginalised farmers like Minimum Support Price (MSP) etc. These concerns remain the same even now. Expectedly so, they are long term issues that cannot have been resolved in a two year span. Towards addressing these concerns, CECOEDECON continues to engage in institution building and capacity enhancement by involving the community, and especially so its marginalised sections. The organisation has also been active in terms of informing the community about a number of welfare schemes and assisting government agencies in their effective implementation; this also by mobilising public participation in effective implementation of government schemes.

KSS and KSSMS members said that the past two years had seen CECOEDECON service many local concerns and demands of its target groups through mentoring these CBOs. These ranged from ensuring drinking water supply to certain blocks in the project areas, setting up of government procurement centres so that farmers could sell at MSP rates, setting up a parallel crop damage assessment system to ensure compensation for farmers after a hailstorm. The CBO members also spoke of CECOEDECON's support in preparation of the Vision Document in April 2013; venue for the three-day workshop organised for this, and office space for consultations, among other things, was provided by CECOEDECON, they said.

The period between 2012 and 2014 had CECOEDECON assisting the government better implement its schemes. One such instance was when, in 2013, the government relaxed eligibility for pension and a large number of people qualified as a consequence, making completion of paperwork by deadline problematic. CECOEDECON stepped in to help the administration locate such beneficiaries, and then assisted many a beneficiary with the required paperwork. Another example of CECOEDECON's supporting the government is its annual Naamankan Abhiyaan (Enrolment Drive) to boost enrolments in schools. Rallies, meetings, door to door campaigns are undertaken to ensure that no child remains out of classrooms.

An SVM member said that CECOEDECON assisted his organisation in addressing the needs and concerns of the Sahariya community, with respect to: a) availing benefits under a government scheme that provides financial support towards coaching Sahariya youth such that they can compete in government recruitment exams; b) filing claims for land earmarked but not allocated to Sahariyas; c) facilitating access to education for Sahariya girls by setting up a special residential school for class 10 failed Sahariya girls in Shahbad in 2012; d) filing a writ petition in the High Court in 2012 for securing Sahariya's special reservation within the ST category for government posts.

A woman Panchayat representative said that CECOEDECON organised exposure trips in 2012 and 2013 to raise awareness on the importance of special Gram Sabhas⁶² for women. She said she had participated in an exposure trip to Maharashtra in 2013 which helped her implement and organise separate Gram Sabhas for women of her panchayat every third month. She also said that CECOEDECON campaigned in 2013 for the removal of discriminatory two child eligibility norm⁶³ for PRI elections. Further, CECOEDECON collected written statements against this rule from all the five Gram Panchayats of Chaksu block and submitted the proposal to a state government minister.

Most significantly, perhaps, the *Annual Report April 2012 to March 2013* cites instances of the Community Score Card (CSC) being used in this period. The CSC measures public accountability especially at the local and facility level. In June 2012, after being trained by CECOEDECON,

⁶² Gram Sabha is a constitutionally mandated mechanism through which grassroots' constituencies hold Panchayats accountable. Gram Sabha constitutes all the adult citizens of a village who have the right to vote. Most Gram Sabha meetings witness limited participation of people due to a lack of awareness. Refer <http://thpindia.org/what-we-do/making-panchayats-effective/>

⁶³ Refer <http://www.thehindu.com/todays-paper/tp-national/tp-otherstates/demand-to-do-away-with-twochild-norm-in-rajasthan/article6330231.ece>

community people, Public Delivery System (PDS)⁶⁴ dealers, a sarpanch, an aganwadi worker and the co-secretary of NREGA participated in using CSC to evaluate the PDS in Phagi block's Gaundhi village; a follow up in October showed considerable improvement in the PDS service. In January 2013, a School Management Committee⁶⁵ (SMC) was marked on the CSC by local committee members, teachers and community people; the follow up did not show much improvement.

Score: +1

2.4.2 Civil Society impact

CECOEDECON continues to work in the community through the VDCs at village level, KSSs at block level, the KSSM at state level and the SVM which represents the Sahariya tribe. During the 2012 evaluations, CECOEDECON claimed that the KSSs were beginning to acquire the form of a people's movement by becoming forum for the community to raise its demands and problems and take actions to address them. To some extent the developments over the past two years do suggest that the KSSs have indeed become platforms for the rural community in their areas, and are now, relatively, more independently capable of delivering occasional resolutions to the target groups' concerns. They are certainly better able to identify and assess their own needs and figure out ways to cater to them with or without support from CECOEDECON.

Instances of this between 2012 and 2014 are:

- a. When a bumper harvest of the Bengal Gram in the Jaipur and Tonk districts saw open market prices crash in April-May 2013, forcing farmers into distress sale, farmers approached the KSSs for help. The KSSs, along with the KSSMS, organised protests, lobbied with the administration, till the government announced the setting up of procurement centres where Bengal Gram would be bought at the MSP in one and two blocks of Tonk and Jaipur districts respectively;
- b. A hailstorm in March 2014 destroyed crops ready for harvesting in parts of the project areas. The VDCs with support from the KSSs took the initiative to launch a parallel Girdavari, or crop risk/damage-assessment process, to assess the damage to farmers due to the calamity. This decision was taken without consultations with CECOEDECON, and the organisation was told only later that information gained through such a loss-assessment exercise would be used by the KSSs to approach the concerned government authorities for compensation, and further advocacy;
- c. Sustained efforts by the KSSs led to drinking water finally being supplied to the Chaksu, Phagi and Niwai blocks from the Bisalpur dam in 2012-13. Though the government had announced such supply to these blocks in 2010, non-implementation had seen the communities here frustrated.

Simultaneously, the KSSs were also effective grassroots advocates and negotiators for more expansive issues that CECOEDECON had initially introduced them to. Like for the continuing struggle against GM crops in Rajasthan. The KSSs, as part of a delegation with CECOEDECON, met the newly elected state agriculture minister to convince him against resuming such field trials; a media announcement to the effect was made by the minister in May 2014.

Also, 2014 saw the SVM successful in defending the special reservation for the Sahariya tribal groups in government jobs by getting wrongful appointments done by the Rajasthan Public Service Commission cancelled through a stay, after approaching the state High Court.

The CECOEDECON personnel were unanimous that their associate CBOs had indeed improved since the baseline. They observed that the learnings over the past two years and before have now enabled the VDCs, KSSs and KSSMS become self-sufficient in prioritising their needs and strategising to address them, thus increasing their sense of ownership.

⁶⁴ PDS in the country facilitates the supply of food grains and distribution of essential commodities to a large number of poor people through a network of Fair Price Shops at a subsidized price on a recurring basis. Refer, <http://epds.nic.in/>

⁶⁵ SMCs were established as per requirements of the Right to Education Act, its main purpose is to monitor the working of the school, prepare and recommend school development plan etc. Parents of children play an important role in these committees. Refer, http://ccs.in/internship_papers/2012/271_how-functional-are-school-management-committees-in-the-present-context_sijan-thapa.pdf

However, though these CBOs do appear to be in a better position to address the community's concerns during the last two years, they themselves accept that their dependence on CECOEDECON for technical as well as financial assistance has not ended. They are, therefore, not yet the people's movement that CECOEDECON aims for them to be.

In terms of teaming up with other CSOs and networks, and CECOEDECON's position in civil society, representatives of multi-organisation national platforms like WNTA and GM Free Coalition of India agreed that the organisation has successfully networked with them on issues like preparation of the People's Manifestos for state assembly and national elections and stalling of the GM field trials in the state.

Score: +1

2.4.3 Relations with Public Sector Organisations

During the baseline, the CECOEDECON staffers said other than directly engaging with the government and elected representatives, they also work with Public Sector Organisations (PSOs) like NABARD and various state agencies to further the interests of their target groups in thematic areas of livelihood security, basic rights, economic justice and institutional development. These trends continued over the past two years and interaction with NABARD increased to facilitate micro-financing and development of SHGs in CECOEDECON's project areas.

The *Annual Report PIIRD April 2013 to March 2014* mentions that CECOEDECON received active assistance from government agencies on issues like anti-trafficking project in Kotkhawda, Chakasu block. CECOEDECON personnel said that they: a) assisted the government departments in the implementation of the pension drive; b) collaborated with the Directorate of Soil and Water Conservation (DSWC) for watershed evaluation; c) worked with Aganwadi training centres with the support of ICDS, DWCD; d) organised trainings of trainers (ToT) for gender responsive governance with support of SIRD; e) their interactions with the Public Health Engineering Department (PHED) for the development of drinking water infrastructure increased over the past two years.

Score: +1

2.4.4 Relations with Private Sector Agencies

In 2012 CECOEDECON had said it works with private sector agencies like Suzlon Foundation, Sir Dorabji Tata Trust (SDTT), PepsiCo Foundation, ENI⁶⁶, Rathi Steel, American Express Bank, Polyglu etc on issues like rural development, healthcare and child development. In 2014, while the executive leadership asserted the situation in this regard has improved, the field staff said some of the former partnerships, like with SDTT, have ended and they are unaware of new ones. The programme managers qualified that new collaborations with smaller private sector companies like Sriram Limited, Sri Hari Limited have been forged. Other forms of documents and reports authored by CECOEDECON did not provide information about the status of projects with the new, smaller players but indicated that work with Suzlon Foundation is continuing.

Score: 0

2.4.5 Influence upon public policies, rules, regulations

During the baseline evaluation, CECOEDECON had listed a number of policy level successes, like cancellation of the state government's MoUs with GM seed companies, stalling GM field trials, resolving the land claims of Sahariya tribal groups, putting forth the demands of people before political parties

⁶⁶ ENI is an Italy based integrated energy company. Refer, http://www.eni.com/en_IT/company/company-profile/company-profile.shtml

prior to elections, and effective implementation of the PCPNDT Act (Pre-Conception and Pre-Natal Diagnostic Techniques)⁶⁷ and the Lok Seva Guarantee Adhiniyam⁶⁸.

In 2014, CECOEDECON personnel claimed to have continued their efforts to harness the changes achieved previously. For example, they said that CECOEDECON had sustained the campaign against GM field trials by keeping mainstream political parties in the state informed about the farmers' concerns against it in the wake of upcoming elections. This had ensured that the change in government post elections did not translate into a change on the decision to ban GM field trials. Also, the efforts of SVM in defending the reservations rights for Sahariya tribal groups saw it pursuing related land rights cases, campaign to improve PRIs also continued. Abolition of the discriminatory two child norm as an eligibility criterion to contest Panchayat elections remained an advocacy issue, as did the need for exclusive women meetings before the Gram Sabhas. The evaluators, however, have no evidence to substantiate whether or not any of the changes are indeed being implemented.

CECOEDECON's participation in consultative meetings and assistance in the drafting of, the State Girl Child Policy was listed as another achievement. The evaluators could not corroborate the degree of CECOEDECON's contribution to the process.

The *Annual Report PIIRD April 2013 to March 2014* mentions the inclusion of many of the demands listed in the People's Manifesto in the election manifestoes of mainstream political parties. Thirty nine of these demands were included in the election manifestoes of the two leading national political parties, BJP and the Congress.

Score: +1

2.4.6 Influence upon private sector agencies' policies, rules, regulations

During the baseline CECOEDECON had said they were not engaged in influencing rules, regulations and policies of the private sector agencies. In 2014, most of the respondents maintained this. The executive leadership, though, said CECOEDECON was influencing CSR (Corporate Social Responsibility) policies of private sector agencies to make them more development oriented; no specific instances were listed as substantiation of this claim.

Score: 0

2.5 Civil society environment

2.5.1 Coping strategies

During the baseline evaluations, CECOEDECON had listed the primary problems that changing environment had thrust their way: a) fund crunch; b) reduction in monetary support from international donors; c) changes in the Foreign Contribution (Regulation) Act 2010 (FCRA 2010)⁶⁹ which made getting foreign funding difficult; c) drought and attempts of the government to cut on relief work; d) resistance from the community and doctors when opposing female foeticide and child marriage. Particular mention had been made regarding the rising expectations of the new generation of development sector professionals which is making recruitment and retention of professional staff difficult.

⁶⁷ PCPNDT Act, 1994 is an Act of the Parliament of India enacted to stop female foeticides and arrest the declining sex ratio in India. The act banned prenatal sex determination. Refer, http://www.unicef.org/india/media_3285.htm

⁶⁸ LokSeva Guarantee Adhiniyam (Right to Service Act) in 2011. This act aims at a time-bound service delivery for 108 services by 15 government departments. Its 2008 campaign for a People's Manifesto was successful in that 22 of the demands in the Manifesto were included in the Indian National Congress (INC) party's manifesto for Rajasthan.

⁶⁹ FCRA 2010, an act to regulate the acceptance and utilisation of foreign contribution by certain persons or associations. Refer, <http://indianexpress.com/article/india/india-others/only-11-of-22-ngos-in-ib-report-are-fcra-compliant-none-filed-13-14-statement/99/>

As coping strategies, they had spoken of increasing the organisations' efforts to develop multiple sources of funding, donor education, use of laws and programmes like Right to Information, Right to Education, the rural employment guarantee Act MNREGA, Rajasthan's Right to Services Act etc.

CECOEDECON's evolving context over the past two years has seen most of its problems continuing, and some aggravated. The fund crunch persists, with many international donors withdrawing support, even base, from India. The FCRA is being implemented more sternly than was earlier by the newly elected centre-right BJP government. The government has, in fact, imposed a number of conditions on NGOs and foreign funders in an effort to restrict internationally-funded non-governmental activities on issues such as anti-GM campaigns among others. Another negative development reported by CECOEDECON's personnel is the shifting of the organisation's work from programme mode—which ensures holistic development—to project mode—which is more specific and narrow—due to funding problems.

However, some positive changes were also listed, like change in government rules to direct diversion of CSR funds from philanthropic activities to the development sector, which has helped generate new funding sources for organisations such as CECOEDECON. Further, 2014 being an election year had CECOEDECON actively engaging with different sections of society, political parties and the media in chalking out the People's Manifesto. According to the *Annual PIIRD Report April 2013-March 2014* CECOEDECON organised a series of media workshops at block level, which helped it and its CBOs establish genuine linkages with local media, which, in turn, assured the organisation of a positive coverage. Along with these, CECOEDECON staffers pointed out that the organisation and its associate CBOs have been successful in widening their resource base by increasing collaboration with government agencies and getting financial support from them.

Report CDI-15-026

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Report CDI-15-029

Klaver, D.C., Desalos, C., Hofstede M., Wadhwa, S., Mohapatra, B.P., February 2015, *CENDERET end line report; MFS II country evaluations, Civil Society component*, Centre for Development Innovation, Wageningen UR (University & Research centre) and International Development Foundation (IDF). Report CDI-15-029. Wageningen.

This report describes the findings of the end line assessment of the Indian organisation CENDERET that is a partner of Cordaid.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses CENDERET's efforts towards strengthening Civil Society in India and it used the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2012. Key questions that are being answered comprise changes in the five CIVICUS dimensions to which CENDERET contributed; the nature of its contribution; the relevance of the contribution made and an identification of factors that explain CENDERET's role in civil society strengthening.

Keywords: Civil Society, CIVICUS, theory based evaluation, process-tracing

1 Introduction

This report presents the civil society end line findings of Centre for Development Research & Training (CENDERET) in India which is a partner of Cordaid under the Partners for Resilience Alliance. It is a follow-up to the baseline assessment that was carried out in 2012. According to the information provided during the baseline study, CENDERET is working on MDG 1, private sector and agriculture (CENDERET also works on MDG 7a, b – sustainable living environment & forests and biodiversity).

The end-line assessment for CENDERET did not take place as expected. Since the baseline CENDERET has not been operational in the field because financial transfers by Cordaid did not arrive on the bank account of CENDERET. CENDERET then closed its regional offices and sent staff home. Communication with Cordaid was broken and despite efforts by Cordaid to re-establish the relation and by training newly hired staff, the Dutch NGO concluded to stop its collaboration with CENDERET. Internal factors that may explain this interruption of the partnership also are the sudden resignation of the coordinator during the baseline study and the fact that his successor unfortunately passed away just after having taking over the coordination responsibilities. Another external factor, not confirmed, possibly consists of the Foreign Contribution Regulation Act 2010¹ and CENDERET being unable to adjust to this act.

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the governance issues CENDERET is working on. Chapter three provides background information on CENDERET, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with Cordaid. Chapter 4 provides the information collected by the evaluation team, based upon which it was decided to discontinue the end line study. Conclusions are presented in chapter 5.

2 Context

This paragraph briefly describes the context Cenderet is working in. A description of the Civil Society Context assessed according to the CIVICUS framework is provided in appendix 3 of the country report for Civil Society.

2.1 Political context

Odisha is one of India's poorest states, with 63.2 per cent of people living below the poverty line². High prevalence of poverty is considered to be mainly a rural phenomenon—the state's level of rural poverty being the country's worst at 60.8 per cent—but it also has regional variations. As such there are major differences between the coastal and the inland regions, coastal being more prosperous of the two³.

The 2014 General Elections had the state continuing to show a preference for the regional party, Biju Janta Dal (BJD), which has been in power since 2000. Naveen Patnaik, the Chief Minister of Orissa with his BJD party, won 20 out of 21 Lok Sabha seats in the elections. With this they have ensured that the right wing Bharatiya Janata Party (BJP) which gained power at the Centre has limited influence in the state. In order to extend gratitude towards the female population that voted in high numbers during this election⁴, the government has introduced a new policy called the Odisha State Policy for Girls and Women 2014. Under this new policy, "the stamp duty for registration of a house or land purchased in the name of a woman or gift deeds of immovable property would be lower than that of men"⁵.

Odisha is part of the "red corridor" in India, considered the hub of Naxalite activities. In 2013, there were 22 civilian deaths due to Naxal-related activities and in 2014 so far there have been 30 civilian deaths⁶. Although, there has been a lull in Naxal activities compared to the 2011-2012 period, they still occupy a strong position in the state.

The rise of left extremism or Naxalism⁷ is sharply linked to the lack of development in the regions where it became prominent. With the evolution of the movement, most of the Naxals have come to adopt the Maoist ideology; the Maoists are banned in India. In Odisha, however, they exercise control in the western districts of Nuapada, Bargarh, Sambalpur, Bolangir and Kalahandi. Here, the state's presence is at a minimum level, and the Maoists run their own courts, "Jan Adalats", and levy taxes on traders⁸. In the 2005-2014 period, across India, there have been 6,606 fatalities caused in relation to Maoist activities⁹.

2.2 Civil Society context issues with regards to MDG 1

With regards to Civil society in Odisha continues to face much of the same issues that it did at the time of the baseline. Adding to the challenges that come with poor social and human indicators,

⁵ Refer, <http://indianexpress.com/article/india/politics/naveens-thank-you-note-orissa-set-to-clear-new-policy-for-women/>

⁶ Refer, http://www.satp.org/satporgtp/countries/india/maoist/data_sheets/anl_cas_oris.asp

⁷ The Naxalite movement traces its origins from the Naxalbari uprising in 1967, the Maoist struggle in India is an outcome of this uprising. Naxalism was borne out of the marginalisation of the forest dwellers in Naxalbari village in West Bengal. It picked up support in the surrounding areas with the common cause of fighting marginalisation, lack of development and poverty faced by rural India. With the adoption of the Maoist ideology the movement became violent.

⁹ Refer, http://www.satp.org/satporgtp/countries/india/maoist/data_sheets/fatalitiesnaxal05-11.htm

Odisha has long been the site of a battle over land grab, Naxalism and natural disasters, the harshest of which struck the state a year after the baseline in the form of Super Cyclone Phailin.

According to Census 2011, 83.31 per cent of Odisha's population is rural, where land is an important commodity, providing not only housing but also sustenance to the people. The issue of land grabbing in Odisha has garnered attention due to its often exploitative and insensitive nature. Odisha is a resource rich state of India, offering iron-ore, bauxite, coal and manganese in abundance. The state industrialisation drive has been hampered due to protests by the tribal population on whose land it hopes to set up industries.

Odisha which is prone to natural calamities like floods and cyclones was hit by cyclone Hudhud on 18th October 2014. Dealing with regular natural disasters, hampers much of the other work, as time and effort is then spent in dealing with the problems in the aftermath of a disaster.

Phailin, a Very Severe Cyclonic Storm (VSCS), hit Odisha on the 12th of October 2013 with a wind speed touching almost 220 kmph. The intensity of the cyclone placed it inside category 5 of the Saffir-Simpson Hurricane Wind Scale (SSHWS)¹⁰. The cyclone affected the lives of about 13.2 million people, causing 44 casualties, destroying 256,600 homes and resulting in damages worth INR 89,020 million (equivalent US\$ 1,450 million) in its wake¹¹. The strong winds and heavy torrential rains were responsible for the maximum amount of structural and physical damage. Due to the efforts of the Odisha government large-scale evacuation of people had taken place in the days leading up to the cyclones entry into the state, thus, avoiding major loss of life.

During and after the cyclone, numerous NGOs came together to rehabilitate and to provide relief to victims of the disaster. ActionAid formed a consortium of NGOs like ADRA, Oxfam, Christian Aid and Plan, this was along with another consortium formed by the NGO Save the Children to help the government in the post-Phailin period in providing relief work, rebuilding infrastructure and rehabilitation¹².

¹⁰ There are five categories on the SSHWS scale, fifth being the highest category on the scale. Any cyclone inside this category is capable of causing catastrophic damage.

3 CENDERET and its contribution to civil society/policy changes

3.1 Background CENDERET¹³

Centre for Development Research & Training (CENDERET) was set up in October 1988 as the rural and social development wing of the Xavier Institute of Management, Bhubaneswar (XIMB) to highlight the issues in rural and deprived sections of the society. It is a Civil Society Organisation registered under the Societies Registration Act (No. XXI of 1860). CENDERET tries to improve the quality of life of the most vulnerable & the most neglected categories in society. The Xavier Institute is one of India's premier institutes in Labour Management, Social Work and Rural Development in India. Established in 1987, the Institute owes its origin to a Social Contract between the Government of Odisha and the Orissa Jesuit Society. It was started by Jesuit Father Bogiart, who visualised CENDERET as a resource centre to work towards bringing cohesion in policy and implementation in achieving rural empowerment and development. The Government of Odisha provided land and financial support for the establishment of the institute.

The collaborative approach of CENDERET primarily aims at providing and facilitating a process of capacity building of its partners that in their turn contribute to creating the conditions for sustainable development. The centre: facilitates and moderates development processes in accordance to its vision, mission and goals (see below); Initiates learning-reflection-action processes with stakeholders using various strategies, and; addresses issues of equality and social justice at community level.

CENDERET's activities are implemented through its three Regional Resource Centres (RRCs), established in different regions of the state of Orissa (i.e. in Western, Southern, and Eastern zones) through a Central Coordination Unit operating from XIMB Campus at Bhubaneswar.

Vision:

A resource centre catalysing sustainable development for empowering the rural people of Orissa.

Mission:

- To become an effective resource centre of committed and competent professionals;
- To facilitate processes such as action research, capacity building, networking and promotion of livelihood support options;
- To promote participatory development involving all stakeholders;
- To coordinate all our activities towards the empowerment of rural people of Orissa to influence public policy and opinion.

Goal:

- To create an entrepreneurial society;
- CENDERET be a learning organization;
- Creation of sustainable rural livelihood options.

¹³ based mainly on: <http://w3.ximb.ac.in/cenderet> (19112014)

3.2 MFS II interventions related to Civil Society

The MFS II funded project 'Community Based Disaster Risk Reduction and Management (CBDRRM)' contributes to the overall objective "The vulnerable and marginalized communities and their members facing the wrath of regular hazards and disasters have improved upon their respective quality of life through reduction in intended risks, vulnerabilities shown through positive impacts on their individual and community life." It is in fact the continuation of the project that started in 2009. According to CENDERET the project entered a new phase, integrating wetland aspects and concentrating in the Mahanadi deltaic regions of Orissa.

CBDRRM consists of 5 outcomes to be achieved in 55 villages: By the end of the project

1. at least 60% of the cultivable land belonging to the most marginalized community members of 55 villages affected due to flood/water logging/ Drought brought under repair/ rehabilitation to reduce the crop and horticulture damage by 60%;
2. the livestock capital of the 55 villages has increased by quantity and quality by the end of the project;
3. the fish production increased in 35 villages for about 40% of the total households and these households get benefit from fishing;
4. existing alternative practices will have strengthened and enhanced;
5. human and animal casualties will not be occurring due to hazards in the project operational areas.

There is no typical budget related to civil society building but in each of these outcomes and apart from technical interventions, activities are related to the Civicus dimensions 'civic engagement' and 'perception of impact'.

Typical civic engagement activities are: volunteers who will be monitoring animal diseases in order to prevent epidemics and to provide first treatments under the livestock related outcome (2); develop a duckry by the communities under the aquaculture outcome (3).

Typical 'perception of impact' activities related to civil society building are: Formation of farmers club and capacity building training and linkage (outcome 1); Strengthening existing natural resource management committees (outcome 3); Formation and strengthening of producers groups/ tenant groups (outcome 4); Training and orientation on business management, marketing and value addition (outcome 4).

Addendum	extended till 30 th June, 2013		Euro 181,023	not known

Sources: Project documents

Cordaid supported CENDERET through Partners for Resilience for the CBDRRM project and through the Community of Change alliance for the programme called Women Empowerment through Institutional growth with Inclusion and Equity (WEIGIE).

4 Explaining factors

Cordaid was contacted in March 2014 at the start of the end-line process. CDI was then informed that its partnership with CENDERET had ended in December 2013. Both Cordaid and CENDERET stated that it was not worthwhile to do the end line evaluation, because all staff previously involved with the project had been fired already in 2012, and that a new director in charge of the programme had only been appointed one month prior to our first contact. Also none of the partner organisations that participated in the workshop of 2012 seemed to be contact with CENDERET at that moment.

The evaluation team was informed that another SPO of the Partner for Resilience alliance had taken over part of CENDERET's activities, Netcoast that also is strengthening the performance of village committees. Later we were however informed that "As a matter of a factual correction, there is no complete takeover of CENDERET's actions by Netcoast – as the project areas are completely different. There is indeed sharing of capacity building interventions, but with a very limited follow up in the CENDERET villages for various reasons – including human and technical resource requirement for taking up interventions in an area with limited networks." As a consequence we decided not to explore this path further.

4.1 Timeline

On October 18th 2013, Cordaid sent a letter to CENDERET informing them about the closure of the programme. CDI did not receive communications between Cordaid and CENDERET that cover the time between the baseline study and when contact was sought for the end-line. Information missing comprises for example an overview of financial transfers that seem to have been delayed and led to the closure of the three regional offices and reminders sent from both sides, etc.). The October 18th letter however enabled CDI to construct a historical timeline.

Table 2

Historical timeline

Date	Issue
January 2011	beginning of the new phase of the project
July 2012	project is extended until June 2013 with an additional budget of €181,023.00
End 2012 – Oct 2013	Transfer of Cordaid funding was hindered and therefore CENDERET could not implement its programme. CENDERET had to close the Regional Offices with financial consequences
First semester 2012	During the MFS II evaluation baseline process, the coordinator of CENDERET resigned. His successor unfortunately passed away one month after having taken over.
July 2013	Contract signed with Caritas for a duration of 2 years to continue the programme (on behalf of Cordaid) CENDERET received INR 10 lakh as 1st instalment from Caritas (this transfer was also delayed).
September 2013	CENDERET starts re-launching the programme
October 18th 2013	Official letter closing the programme following a visit by Cordaid staff from India.
October 22th 2013	Official response by CENDERET (On the basis of the information we received from Cordaid in April 2014, CENDERET had not sent their last report on the project)
November 2013	Cordaid HQ visited India (visit related to the Cyclone Phailin that hit Odisha in October 2013) and had a meeting with CENDERET about the situation and concerns with the programme.
December 2013	Final closure of the programme. CENDERET does not react to a mail dated December 2nd by Cordaid requesting for final reporting on content and expenses made.
Annual report 2013 Partners for Resilience	This report mentions that 'despite significant efforts, implementing partner CENDERET was not able to secure government permission to receive funds from Cordaid.
April 2014	A new coordinator for CENDERET is appointed
April 2013	IDF evaluation team has contacted CENDERET to start the evaluation: the coordinator informs IDF that all staff has gone and states that Cordaid has to give its approval with the workshop
May 19 th 2014	Cordaid sent a mail to CENDERET informing them that it would not be necessary for them to take part in the evaluation anymore
End November 2014	Facebook page of Partners for Resilience in India does not mention CENDERET as partners anymore (only Caritas India and Netcoast are mentioned)

Letter dated 18th October 2013 from Cordaid and other e-mail messages

4.2 Internal factors

CENDERET has a strong management structure. It is governed under the management of XIMB which is in the hands of a Governing Board, consisting of senior representatives from the Government of India, the State Government of Orissa, the Jesuit Society of Orissa and a group of eminent Industrialists and Academicians. The project management structure itself includes a coordinator, coordinators and teams for each of the 3 regions as well as administration and financial staff. The DRR proposal for 2009-2012 clearly defined the division of tasks. The coordinator is overall in charge of the project. He is specifically in charge of the reporting (both narrative and financial) to Cordaid. It is not clear whether the planned MIS and planned management structure (“we are planning to have a clear plan document containing the following within the financial period: [...] a coordinated and well managed project structure with management decision making principles and operational aspects”) were put in place. Nevertheless, the organisational scan of CENDERET prepared by Cordaid in 2011 was very positive. In many sections, CENDERET scored the highest number of points. For example, the staff and the leader were assessed as competent, the management was transparent, administrative and HR procedures were in place, etc.

Also and according to documents from CENDERET, CENDERET has grown as a major player in Orissa, an actor recognised by the state. It is therefore surprising that the situation deteriorated to the point that the programme had to close. This can only be partly explained by the resignation of the coordinator in 2012 and his successor unfortunately passing away after eight months. It should also be noted that after the regional offices were closed and with the financial flow re-established, CENDERET recruited new staff that however did not have the appropriate background to run the PFR programme (agricultural and not in natural disaster) and who did not perform although capacity building took place. Cordaid made an effort to train this new staff in vain.

The evaluation team has been informed about tensions amongst the leadership of XIMB and CENDERET and mismanagement of funds that was made known to Cordaid already in 2011. Funds were not sufficiently trickling down to the three field offices, one of the reasons that CENDERET was not able to provide an adequate answer to the 2013 cyclone Phailin that struck Odisha followed by massive floods covering 14 districts.

4.3 External factors

CENDERET has not been able to secure a government permission to receive funds from Cordaid (see for further details chapter 2.2.4 with regards to the FCRA which apparently impacted upon the relation between Cordaid and CENDERET). It can come as a surprise considering that CENDERET is part of XIMB which includes in its board representatives from the government of Orissa. As a consequence of the delay of funds, work of CENDERET was delayed of 1 year (end 2012-2013).

Cordaid also feared that the work to be done following the cyclone Phailin in October 2013 would delay the implementation of the programme which had just re-started.

4.4 Relations CFA-SPO

When financial transfers were hampered, CENDERET took the initiative to close the 3 regional centres and consequently fired staff *without* informing Cordaid. This is remarkable since the relationship between the two organisations dates back the late 90's during which several programmes were implemented. Cordaid invested in training the new team, but concluded that they were still not up to the task as mentioned earlier.

Doubts about the partnerships already started before the extension of the contract in 2012 and since then the relationship may have deteriorated.

5 Conclusion

The end-line assessment for CENDERET did not take place as expected. Since the baseline CENDERET has not been operational in the field because financial transfers by Cordaid did not arrive on the bank account of CENDERET. CENDERET then closed its regional offices and sent staff home. Communication with Cordaid was broken and despite efforts by Cordaid to re-establish the relation and by training newly hired staff, the Dutch NGO concluded to stop its collaboration with CENDERET. Internal factors that may explain this interruption of the partnership also are the sudden resignation of the coordinator during the baseline study and the fact that his successor unfortunately passed away just after having taking over the coordination responsibilities. Another external factor, not confirmed, possibly consists of the Foreign Contribution Regulation Act 2010¹⁴ and CENDERET being unable to adjust to this act.

Report CDI-15-029

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Report CDI-15-021

Klaver, D.C., Desalos, C., Hofstede, M., Wadhwa S., Pandey R., Madaan A., Mohapatra B.P., February 2015, *Centre for Sustainable Agriculture end line report; MFS II country evaluations, Civil Society component*, Centre for Development Innovation, Wageningen UR (University & Research centre) and International Development Foundation (IDF). Report CDI-15-021. Wageningen.

This report describes the findings of the end line assessment of the Centre for Sustainable Agriculture (CSA) in India that is a partner of Hivos.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses CSA's efforts in strengthening Civil Society in India based upon the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2012. Key questions that are being answered comprise changes in the five CIVICUS dimensions to which CSA contributed; the nature of its contribution; the relevance of the contribution made and an identification of factors that explain CSA's role in civil society strengthening.

Keywords: Civil Society, CIVICUS, theory based evaluation, process-tracing

Acknowledgements

IDF and CDI are thanking the staff and the leaders of all Southern Partner Organisations that participated in collecting information for the evaluation of the contribution of these partner organisations to creating a vibrant civil society in India. They also thank the Co-Funding Agencies and the Dutch Consortia they are a member of for making background documents available. We hope that this evaluation can support you in better positioning yourself in the Civil Society Arena of India.

1 Introduction

This report presents the civil society end line findings of CSA in India which is a partner of Hivos under the Dutch Consortium People Unlimited 4.1. It is a follow-up to the baseline assessment that was carried out in 2012. According to the information provided during the baseline study, CSA is working on the MDG 1, private sector and agriculture (the SPO also works on MDG 7a, b – sustainable living environment & forests and biodiversity).

These findings are part of the overall evaluation of the joint MFS II evaluations to account for results of MFS II-funded or –co-funded development interventions implemented by Dutch Co-Funding Agencies (CFA) and/or their Southern Partner Organisations (SPO) and to contribute to the improvement of future development interventions. The civil society evaluation uses the CIVICUS framework and seeks to answer the following questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- What factors explain the findings drawn from the questions above?

The CIVICUS framework that comprises five dimensions (civic engagement, level of organization, practice of values, perception of impact and contexts influencing agency by civil society in general) has been used to orient the evaluation methodology (see appendix 1 of the country report).

1.1 Changes in the civil society arena of the SPO

In the 2012 – 2014 period the two most important changes that took place in the civil society arena of the SPO are related to ‘civic engagement’ and ‘perception of impact’. Most important changes observed with regards to the first CIVICUS dimension consist of CSA having increased its outreach in terms of small and marginalised farmers through the creation of three additional cooperatives to the seven existing which increasingly become self-sustaining in both technical and financial terms. In absolute figures, more women became a member, also took positions in the cooperative board, and became community leaders. CSA helped with the establishment of a women-only cooperative and together with another NGO and an umbrella organisation of NGOs and intellectuals (RSV) established a Women Farmer’s Forum for widows of farmers who committed suicide.

With regards to the ‘perception of impact’ dimension, CSA managed to increase the market opportunities for its producer cooperatives and female self-help groups at higher market prices and strengthened the organisational performance of the cooperatives. In the past two years CSA managed to engage with more NGOs and it influenced the practices of public sector agencies with regards to the concept of a Non Pesticide Model (NMP) of farming for small farmers, it increased its outreach through the media and to other states. Until to date it is still difficult to influence existing policies but a law for a separate budget for agriculture was passed in the State legislative assembly in May 2014.

These findings were obtained through an analysis of documents, a workshop and follow-up interviews with CSA, and interviews with external resources persons working in civil society organisations that receive support from CSA; other civil society organisations with whom the SPO is collaborating; public or private sector agents and; external resource persons capable of overlooking the MDG or theme on which the SPO is concentrating.

1.2 Contribution analysis

Based upon an analysis of the projects and programmes financed by the Dutch CFAs a selection was made of SPOs to be included in an in-depth process tracing trajectory and those to be included for a quick contribution assessment. CSA was amongst those SPOs selected for in-depth-process tracing.

The impact outcome chosen under the strategic orientation related to civic engagement is the improvement in the engagement of women in CSA's farmers' cooperatives. In the 2012-2013 period, female membership in the seven official cooperatives increased from 86 to 129 women, and in percentage of total membership female participation increased from 20% to 21% whereas CSA aims for 30 percent of female membership. In three out of the seven cooperatives women constitute 50 % of the board members whereas the target is 50% for all cooperatives. Favourable conditions (necessary to explain the outcome achieved but not sufficient) that might have helped CSA with this increased female participation are the high organisation grade of women in Self Help Groups; the presence of a public sector programme that also promotes CSA's NPM concept amongst female SHGs; CSA's producer and consumer cooperatives in place and performing, and; the feminisation of agriculture in the last decades. After these conditions were in place the NGO Rural & Environment Development Society (REDS) and CSA could start the promotion of women into the cooperatives, CSA based upon its track record in agriculture and the cooperative structure which provides an attractive market outlet and REDS with its track record in supporting women in CMSA. Both actors possibly explain the outcome (not necessary but sufficient).

The impact outcome chosen under the strategic orientation strengthening intermediate organisations is the enhancement in the capacities of CSA's cooperatives (the seven registered and three unregistered) between 2012 and 2014 towards ensuring livelihood security of farmers. Favourable conditions (necessary the outcome but not sufficient) that might have helped CSA with building the capacities of the cooperatives include the growing demand for organic produce in the state that helps farmers to fetch a better price for their produce and thereby motivated them to scale up their activities; the presence of the public sector programme that also promotes CSA's NPM concept amongst female SHGs and other farmers (even before CSA started its work around NPM); and the presence of public advisory centres that impart trainings to the farmers of CSA cooperatives on issues of crop production and management, and organic farming practices. This in turn facilitated CSA's efforts to promote sustainable agricultural practices amongst the members of the cooperatives which in turn secured their incomes: there are multiple pathways that explain the outcomes and CSA's support is just one of them.

1.3 Relevance

Interviews with staff of CSA, with external resource person, with the liaison officer of Hivos, as well as contextual information helped to assess the relevance of CSA's interventions in terms of; its Theory of Change (ToC) for Civil Society (SC) as designed during the baseline study; the context in which CSA is operating; the CS policies of Hivos.

With regards to the baseline ToC, the interventions and outcomes achieved are relevant because they align with CSA's overall goal to realise income security for female and male farmers who engage in NPM farming and organic farming at lower costs and higher incomes. Linking producer organisations with consumer organisations and other market outlets, as well as linking them with government schemes to access subsidies and engaging with other NGO networks to lobby for favourable policies also show that CSA has been capable of shifting its technology centric approach to a broader sustainable livelihoods approach.

With regards to the context in which CSA is operating, its interventions and outcomes achieved are highly relevant given the fact that 56 % of India's population is dependent upon agriculture for its livelihood, of which 95% are small and marginal farmers. CSAs NPM concept of farming considerably increases the income profits for small farmers, has been adopted by para agencies for wide-spread dissemination and is currently being discussed as a strategy to reduce India's carbon footprint. Linking professional farmer organisations to markets, as well as to government schemes for subsidies, also contributes to embedding these organisations into their political environment. Promoting the

participation of women in these professional structures will help to prepare these women to become leaders in the agricultural sector.

With regards to the CS policies of Hivos, CSA's interventions and outcomes are relevant because they perfectly fit into its Green Entrepreneurship programme, aiming to mobilise the capacities of small and marginalised (female) farmers to negotiate with government and market institutions.

1.4 Explaining factors

The information related to factors that explain the above findings was collected at the same time as the data were gathered for the previous questions. The evaluation team looked at internal factors within CSA, the external context in which it operates and its relations with Hivos.

Most important factors within CSA that explain the findings consist of the fact that CSA has a charismatic leader, who enjoys respect from both government and NGOs. This director is well connected with organisations within Andhra Pradesh, with those in other states and has become a renowned figure on television and in the written press. CSA's vision and its way of working seem largely to be informed by this director who managed to shift CSA's vision to focus on farmers' livelihoods rather than on organic agricultural production.

The information made available by both CSA and Hivos show that these relations were effective and not hampering any development intervention.

The most important external factors that possibly have hampered progress being made are the political turmoil in the past two years that ultimately led to Andhra Pradesh being split into two separate states in June 2014. The following bureaucratic division has caused procedural delays in the process of registration of the cooperatives and reduced government support, which is gradually improving due to CSA's awareness meetings. Other external factors that impact upon the success of CSA's intervention are related to scanty rainfall and perpetual cyclones that destroyed agricultural produce and claimed thousands of lives. A more general trend which will possibly affect CSA's intervention in the coming years is a general disinterest shown by youngsters to earn a living as a farmer.

1.5 How to read this report

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the issues CSA is working on. Chapter three provides background information on CSA, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with Hivos. An evaluation methodology has been developed for the evaluation of the Civil Society component which can be found in the annex of the country report; however, deviations from this methodology, the choices made with regards to the selection of the outcomes for contribution analysis, as well as difficulties encountered during data collection are to be found in chapter 4. The answers to each of the evaluation questions are being presented in chapter 5, followed by a discussion on the general project design in relation to CS development; an assessment of what elements of the project design may possibly work in other contexts or be implemented by other organisations in chapter 6. Conclusions are presented in chapter 7.

2 Context

This paragraph briefly describes the context CSA is working in. A description of the Civil Society Context assessed according to the CIVICUS framework is provided in appendix 3 of the country report for Civil Society.

2.1 Political context

Andhra Pradesh was formed in 1953 with Hyderabad as its capital; it was the first state in independent India to be created on linguistic grounds. The state has a history of communist and peasant movements and till some years back, Maoist insurgents were active in the Adilabad region of the state. The democratic movement for separate statehood for Telangana started as a protest against backwardness and deprivation of the region, but years of neglect hardened it and the demand for a separate state picked up momentum. In December 2009, the government of India declared the decision to start the process of formation of separate Telangana, but it had to be put on hold due to violent protest at a number of places by anti-Telangana parties.

However, the movement continued for all these years and series of bandhs, road blockades, rallies etc., both for and against a separate Telangana rocked the state. Decision to bifurcate the state was taken in a Congress Working Committee meeting in July 2013, which is the highest decision making body of Congress party that ran the United Progressive Alliance (UPA II) government at the Centre, and the state government in Andhra Pradesh. The separate state came into existence on 2 June 2014, after the necessary legislative process for the same was completed. Currently, K. Chandrashekhara Rao of the Telangana Rashtra Samiti is the chief minister of Telangana while Chandrababu Naidu of Telugu Desham Party is the chief minister of Seemandhra (the remaining part of erstwhile Andhra Pradesh) with BJP support; Hyderabad is the joint capital of both the states.

The bifurcation of the state resources, departments and officials caused prolonged delays and indecision on a number of government functions and decisions. The political scenario was also highly charged because of upcoming assembly and parliamentary elections and the division of state. Due to these reasons, civil society organisations had to face a number of problems e.g. delays in government grants or sanctions, processing of application and registration of cooperatives/trusts etc.

2.2 Civil Society context issues with regards to the MDG

A major challenge documented in the 2012 baseline study is that the civil society in Andhra Pradesh (AP) faced was the issue of Naxal¹ violence² and with it the continuing agrarian crisis and farmers suicides. With regards to these, the situation has not changed remarkably in the current context. One significant change has been the culmination of the Telangana movement³. The movement was a long and often violent struggle over the bifurcation of AP, beginning in 1969 and ending with the creation of Telangana on 2nd June 2014. This change has created a new set of challenges for AP's civil society.

¹ The Naxalite movement traces its origins from the Naxalbari uprising in 1967, the Maoist struggle in India is an outcome of this uprising. Naxalism was borne out of the marginalisation of the forest dwellers in Naxalbari village in West Bengal. It picked up support in the surrounding areas with the common cause of fighting marginalisation, lack of development and poverty faced by rural India. With the eventual adoption of the Maoist ideology the movement has become violent.

² There have been 6601 left-wing extremism related fatalities in India since 2004-9th November 2014. Since 1968 Andhra Pradesh has recorded 6430 fatalities. *Refer,*
http://www.satp.org/satporgtp/countries/india/states/andhra/data_sheets/annual_casualties.asp

³ *Refer,* <http://www.firstpost.com/politics/from-1948-to-2013-a-brief-history-of-the-telangana-movement-998093.html>

Naxal violence in the state has continued, albeit, at a much diminished level than what it was before 2010. In 2013, the Ministry of Home Affairs (MHA) expressed concerns over the resurgence of Naxal activities in the state due to the turbulence caused over the Telangana issue. Telangana, an economically backward region compared to the rest of AP, is also an area with “zero-governance” making it susceptible to Naxal activities. In 2013, there were 10 Naxal-related civilian fatalities in the unified state of AP, this was up from six in 2012⁴.

The agrarian crisis which has been marring the lives of people in the state, has continued unabated. A serious lack of land reforms, continued drought, and increasing dependence on genetically modified (GM) seeds and pesticides, has created a life of debt for the farmer. The condition of the Indian farmer worsened following the liberalisation of the Indian economy in the 1990s. Due to this, there was a withdrawal of bank loans to the farming sector, increasing the farmers' dependence on money lenders and creating huge debts for them when the crops failed. The continued cycle of debt and crop failure has pushed a number of farmers towards suicide. The Telangana region and now state, has recorded the highest number of farmer suicides in the country after Vidarbha in Maharashtra, overall in India, a total number of 296,438 farmers have committed suicide since 1995⁵. In 2013 in AP, there were 2014 farmer suicides⁶. In Telangana there have already been 350 farmer suicides since its creation⁷.

In 2014, Rythu Swarajya Vedika (RSV), an umbrella organisation of farmers groups and non-governmental organisations, released a Farmers' Agenda⁸ in the lead up to the 2014 elections in the state. The government has tried to bring in “quick fix(s)” with loan waivers, the most recent of which is for Rs 43,000 crore, this is in spite of the growing financial crisis in the state⁹. The agenda demanded that the government be more invested in the agriculture sector, bring in land reforms, improve the safety regulations over GM seeds and regulate seed prices. The use of GM crops adding to farmer distress and suicide remains controversial, with polarising opinions on the matter. The Technical Expert Committee (TEC) appointed by the Supreme Court in 2012 made recommendations where it sought a 10-year moratorium on field trials of GM crops¹⁰. The GM seeds marketed by private seed companies are very expensive, which adds to the already high cost of inputs. In such a scenario, crop failure, due to drought, or other reasons pushes the farmer already deep in debt over such high costs towards suicide.

The bifurcation of the state has brought with it, its own set of challenges. The immense tensions and hostility between pro and anti-Telangana supporters in the lead up to the division has left its mark. It is visible in the lack of cooperation between the two governments. The states have already taken the issues of water & power sharing, management of institutions, funds demarcation to the central government for resolution¹¹. This deadlock has created water shortage in Hyderabad and the hinterlands. A farming sector which faces regular droughts is highly dependent on irrigation facilities, which have been hit due to the water shortage.

3 CSA and its contribution to civil society/policy changes

3.1 Background of CSA

Before its registration as a trust fund in 2004, the Centre for Sustainable Agriculture (CSA) functioned for 15 years as the Sustainable Agriculture desk of the Centre for World Solidarity (CWS). It has successfully demonstrated that regenerative and resource conserving technologies and practices of agriculture can bring both environmental and economic benefits to farmers and farming communities. Its models of Non Pesticide Management (NPM) agriculture have served the interests of many impoverished rural communities and have also been adopted by the government of Andhra Pradesh in its 2004-2009 Society for Elimination of Rural Poverty (SERP) programme, followed by a federal state programme as of 2010. Apart from NPM, CSA also promoted organic agriculture.

CSA is a professional resource organization engaged in establishing models of sustainable agriculture working in partnership with NGOs and Community Based Organizations (CBO) by scaling up the successes and engaging with the establishment for a policy change.

CSA believes in promoting sustainable agricultural technologies that are based on farmers' knowledge and skills, their innovation based on local conditions and their use of nature's products and processes to gain better control over the pre-production and production processes involved in agriculture. CSA works with farmers to conserve their resources and their rights.

The main objectives of the organization are:

- To improve the quality of life of farming communities by promoting environmentally safe and sustainable methods that would enhance the quality and quantity of crop/plantations/livestock yields especially in tribal and dryland areas.
- To enhance the participation of farmers, both women and men, in all processes of problem analysis, technology development, evaluation, adoption and extension leading to food security and self-reliance among farmers and rural communities.
- To facilitate community access and control over natural resources and to build institutions and coalitions at different levels for strengthening People's Agriculture Movements, which focus on empowerment of marginalized sections like Women, Dalits, Adivasis and Minorities.
- To develop a Sustainable Agriculture Resource Network that promotes sharing of knowledge, material and human resources. To serve as a repository for documenting, collecting, storing, collating and disseminating information/success stories from different sources on sustainable agriculture.
- Understand the role of agriculture in contributing to climate change and developing sustainable agriculture practices which can help in mitigating and adapting to climate change.

CSA is also engaged in establishing and working with Community Based Organisations (CBO) to address their agriculture based livelihoods.

CSA works in rain-fed areas (for example Ananthpur, Mahaboobnagar district of Andhra Pradesh, Wardha in Maharashtra), areas with intensive cultivation of commercial crops and suffering severe ecological and economic crisis (Faridkot district of Punjab, Guntur, Warangal districts of AP) and Tribal areas (Araku and Nallamala in AP, Chattisgarh Tribal areas), covering at this moment 150 villages. CSA is working on the peri-urban vegetable value chain in and around Hyderabad, Vishakapatnam, Guntur, Warangal and other towns in AP. CSA provides technical support to organizations in Orissa and Karnataka. CSA is also engaged in policy advocacy work mainly on the impacts of chemical and GM technologies, their regulatory systems, public support systems to small and marginal farmers and

revitalizing rain-fed agriculture. CSA is actively engaged with the government and people on the agriculture and climate change debate¹².

CSA works mainly in the following six domains:

- Policy advocacy: CSA focuses on policy changes that support which promote sustainable agriculture and bring in effective regulations on unsustainable and exploitative practices.
- Sustainable Production: The focus is to develop and promote locally adapted integrated farming systems and other on-farm and off-farm livelihoods.
- Human Resource Development: Building resource pool of farmers, scientists, academicians, and nutritionists etc. who would help in supporting sustainable farming models, building farmers institutions and promoting agriculture based small and medium business enterprises
- Farmers Institutions: Building farmers institutions improve their bargaining power and realizing their rights.
- Marketing: Building small and medium enterprises which can increase the farmers share in the consumer price and can improve village economy are needed to sustain the farming based livelihoods.
- Pro-farmer media: CSA would have a special focus on using media both for grass root work and policy advocacy.

In 2012, CSA had 12 staff members of whom two are women. As described in their 2014 brochure, CSA's board of management is composed of seven members of which 2 are women and one is a farmer.

3.2 MFS II interventions related to Civil Society

Out of the five on-going programs of CSA (Building Farmers Institutions, Supporting small holder Agriculture, Establishing Farmers Seed Network, Adapting to Climate Change, Scaling up Sustainable Agriculture), the program Building Farmers Institutions is supported by Hivos.

Hivos has been supporting CSA as an independent organisation since 2006. The current contract runs between April 2011 – March 2015 and is entitled “Building Farmers’ Institutions for Sustaining Farming Livelihoods” for which the main objective is “Organising farmers into institutions for production and accessing markets for sustaining farming livelihoods.” The programme is articulated around four results areas:

1. Establishing integrated farming system models which are ecologically and economically sustainable;
2. Building farmers’ cooperatives which improve farmers’ access to markets;
3. Building capacities of farmers, agricultural workers and civil society workers for the promotion of sustainable agriculture;
4. Lobbying and campaigning for a better and supportive policy environment for sustainable agriculture.

The second result area corresponds to the CIVICUS dimensions of “civic engagement” and “level of organisation”. It aims at increasing farmers’ income and improving their food self-reliability through the strengthening of farmer’s cooperatives and through the creation of a consumer cooperative This result area was chosen for further evaluation of CSA's contribution to building a strong civil society.

The fourth result area 4 on Lobby and Advocacy aims at pressurizing the government to revisit certain policies like Minimum Support Price, Seed Bill, Biotechnology Regulatory Authority of India (BRAI), crop insurance, GMOs. Because CSA does most of this work through Rythu Swarajya Vedika (a

¹² <http://csa-india.org/who-we-are/> 12-11-2014

farmer's federation working towards basic rights of the farmers), we can link this to the CIVICUS dimensions "level of organisation" and/or "perception of impact".

The contract with Hivos contains a special clause to support female farmers to take up leadership roles, as resource persons, as decision-makers and as role models. This should ultimately lead to the improvement of their status, their recognition, knowledge and participation etc. This gender related issue is directly linked to the CIVICUS dimension on "civic engagement" and it was chosen for process tracing to assess the specific contribution of CSA with support of People Unlimited 4.1.

3.3 Basic information

Table 1

Basic information

Criterion	Basic information
Name of SPO	Centre for Sustainable Agriculture
Consortium	People Unlimited 4.1
CFA	Hivos
Start date of cooperation	1996 (as part of CWS), 2006 as CSA
MDG/theme	MDG 1
MFS II project name	Building Farmers' Institutions for Sustaining Farming Living hoods
Contract period	April 1, 2011 - March 31, 2015
Total budget Hivos	€ 232, 050.
Other donors if applicable	N/A
Estimation of % of budget for Civil Society ¹³	26 % per year

Source: Contract Intake Form, Project Documents

¹³ Costs that relate to civil society development or policy influence are those costs that possibly contribute to the development of the CIVICUS dimensions, excluding coordination and office costs; staff costs and financial reserves.

4 Data collection and analytical approach

4.1 Adjustments made in the methodology of the evaluation

Whereas the latest progress report and documents were not available when the input-output-outcome analysis was done (in April 2014), they had been made available before the fieldwork which helped the evaluation teams to prepare a list of possible outcomes as well as provided support to draw the list of external persons to interview.

During the plenary part of the workshop on process tracing, CSA staff listed nine outcomes under the two pre-selected civil society strategic orientations, namely Civic Engagement and Strengthening Intermediate Organisations (IOs). These outcomes were discussed at length the following day by all workshop participants *across the CSA hierarchy*. Inputs by everyone added up to make for the responses CSA forwarded as final. As a consequence, no separate forms were filled in by the each category of staff present¹⁴.

4.2 Difficulties encountered during data collection

The primary hurdle through the data collection was language. None among the evaluators was conversant in Telugu, which was the only language spoken by most of the field staff, cooperative members and community resource persons. The dependence on translators slowed proceedings, and some of the original nuances might have been lost in translation.

The second challenge was with regard to evidence. Almost all the figures provided by CSA and the cooperatives associated with it had to be taken at face value—these were variously regarding membership strength, numbers of female members in the cooperatives, easy loans given for small business ventures etc. Few documents like meeting registers, minutes etc. exist to confirm or reject the figures. There were no records of such figures maintained by the government or some objective third party. In fact, evidence for some of the claimed outcomes, like say influencing policies on women farmers, was so flimsy that it could neither be confirmed nor rejected with any certainty and it therefore had to be dropped from the analysis at a later stage.

Though a large number of external resource persons were interviewed for CSA (representatives of farmers' organisation, ASHA, CMSA, REDS, a development practitioner and one academic along with cooperative members, women CRPs etc.), some of them had lost touch with the organisation over the past two years and could not give exact information regarding the claimed outcomes¹⁵. While some of them were rivals of CSA, and were extremely critical of it without having detailed information on CSA's present activities. The evaluators had to be extra cautious that the analysis was corrected for interviewee prejudices.

Between the baseline and the end line, Hivos closed its office in Bangalore and all staff pertaining to HIVOS in Bangalore departed at the latest in the end of 2013. This influenced the data collection

¹⁴ Out of the 14 participants of the workshop, were present: two members of the executive leadership, three programme managers and two personnel from the Human Resources and Administration departments. A member of CSA's board was present only for a brief period and provided a generalised opinion on the organisation's work.

¹⁵ CSA changed its strategy from a production oriented approach into a livelihoods approach. This might possibly explain that its network has decreased in the past years

process to the point that the evaluation team was only able to interview a former Hivos staff involved with CSA until 2010. Getting information from the CFA has been a challenge.

4.3 Identification of two outcomes for in-depth process tracing

The project documents helped to preselect two outcomes. These are:

- For the civil society strategic orientation (CSSO) linked to civic engagement: “Enhancing the membership and quality of women’s engagement in farmer’s cooperatives”;
- For the civil society strategic orientation around strengthening intermediate organisation “Capacitating Farmer’s cooperative towards ensuring livelihood security”.

Nevertheless the analysis of the project documents showed a large amount of work done on lobby and advocacy on different topics with Rythu Swarajya Vedika and other actors. Instead of focusing on strengthening intermediate organisations it could have been possible to assess the contribution of CSA on a different civil society strategic orientation namely ‘influencing policies and practices’.

CSA agreed with the two outcomes chosen. They said the past two years had seen the organisation consciously strategizing to increase the participation of women in the cooperatives, and to increase livelihood security of farmers.

5 Results

5.1 Results obtained in relation to project logframe

With regards to the first result area, no progress seems to have been documented and it seems like this result area has been merged with the third result area, “building capacities of farmers, agricultural workers and civil society workers for the promotion of sustainable agriculture”, a major outcome achieved is that the Madhya Pradesh state government has taken an initiative to include food and agriculture as part of all the courses for 2nd to 10th classes as of 2012. Instead of having a separate subject on agriculture, farming is integrated into all the courses including maths and history. CSA is developing syllabus on agriculture¹⁶. Also a considerable number of farmers were trained in different agricultural topics – number of participants unknown; an unknown number of farmers have adopted organic agriculture –number unknown, 2000 planned, and; articles were published in different magazines accessible for farmers.

With regards to the second result area “building farmer’s cooperatives which improve their access to markets”, 8 producer and one consumer cooperatives were officially established in 2012, covering 47 villages. Six of the producer cooperatives received further training in 2013. The annual report shows that membership of the producer cooperatives has grown (from 320 members in 2012 to 505 members in 2013), that household income of members increased in 2013 as a result of the adoption of new agricultural practices (from 50000 to 69900 Rupees). Apart from this relations were built between the consumer and the producer cooperatives. Members of cooperatives start to plan collective actions.

With regards to the fourth result area, “lobbying and campaigning for a better and supportive policy environment for sustainable agriculture, CSA works with Rythu Swarajya Vedika (a farmer’s federation working towards basic rights of the farmers). With this federation and with the support of the cooperatives established by CSA, different meetings have been taken place with government officials on the controversial BRAI bill and cotton farming, CSA’s proposal for a Bio safety Protection Act, the agricultural budget, a draft AP Seed Bill, employment possibilities in the agricultural sector (NREGA scheme) etc. To the knowledge of the evaluation team no policy changed occurred so far, except that a task force on sustainable agriculture and farmers’ income commission—was included in the 2014 election manifestoes of mainstream political parties and that a separate budget for agriculture was passed in the AP legislative assembly in May 2014.

5.2 Changes in civil society in the 2012-2014 period with particular focus on the relevant MDGs & themes in the selected country?

5.2.1 Civic Engagement

Civic engagement describes the formal and informal activities and participation undertaken by individuals to advance shared interests at different levels. Participation within civil society is multi-faceted and encompasses socially-based and politically-based forms of engagement.

Since the baseline assessment in 2012, CSA has made slight improvements in advancing the interests of marginalised groups in AP. It has expanded its outreach from 3,326 to 4,841 small and marginalised farmers through the creation of three more cooperatives in the process of being

¹⁶ Progress report 2012

registered. CSA has also taken clear actions to enhance the participation of women in agriculture. It created for example an exclusive women’s cooperative, the Sri Gayatri Women’s Mutually Aided Cooperative, in Kadapa district which awaits its registration. Unfortunately changes have not evenly spread in the cooperatives: the number of women Community Resource Persons¹⁷ has grown to 47 % of the total number of CRPs but the increase of female members varied greatly between cooperatives and only three out of the seven cooperatives respect the mandate requesting 50 per cent of their board members to be women. CSA, together with NGO REDS, took up the issue of farmer suicides and succeeded to get the widows avail compensation and mobilised resources for their children’s education and livelihood. CSA also started a pilot project, the Women Farmers’ Forum (WFF)¹⁸ in Anantapur district in 2013 to address the specific needs of this group.

The cooperatives became more self-sustaining and more independent of CSA since 2012. For example, farmer members are extensively involved in identifying their needs and exploring possible solutions and ask consequently support from CSA. Farmers are also able to plan both crop production and marketing activities, with some cooperatives even saving and then using such savings to fund business ventures. CSA’s own interventions—like at the time of the baseline—continue to be informed by its target groups’ needs but at the district level CSA has come to rely more on Rythu Swarajya Vedika (RSV)¹⁹. Like in the baseline, and despite being apolitical, CSA continues to engage regularly with local self-government and periodically with elected representatives. CSA has gained credibility so as the use of information provided by CSA to farmers’ organisations or political parties can be witnessed.

Score baseline 2012 on an absolute scale from 0-3: 2
Score end line 2014, relative change on a scale of -2 → +2 +2

5.2.2 Level of Organisation

This dimension assesses the organisational development, complexity and sophistication of civil society, by looking at the relationships among the actors within the civil society arena.

The intensity of collaboration between CSA and other actors in the civil society arena has slightly improved since the baseline. In the 2012-2014 period CSA has been intensifying its collaboration with the associations intrinsic to its core interventions: the seven farmers’ cooperatives and the local NGOs that support CSA in identifying and addressing the target groups’ needs - REDS, CROPS, PEACE and Vennala Cooperatives. CSA has also been intensifying its dialogue with the national RSV and ASHA²⁰ networks because all three organisations shared, among others, the desire to influence political manifestoes favourably for farmers given the imminent elections in 2014 and were eager to bring forward farmers’ concerns in the newly formed Telangana State. As a consequence and as mentioned earlier, farmers’ cooperatives are more capable of defending the interests of the small and marginal farmers who comprise its constituencies, including those families affected by suicides. CSA has continued working with a large number of CSOs in India – not necessarily comprising farmers, and

¹⁷ Community Resource Persons (CRPs) are individuals or leaders from within the community whom organisations choose and provide with the necessary exposure, technical training and expertise. These individuals are then capable of continuing the organization’s work and taking it forward long after the intervention stops. Refer, http://www.greenfoundation.in/mksp/?page_id=898

¹⁸ The Women Farmers’ Forum (WFF) serves as a platform for these women to meet and discuss their personal issues, agricultural issues, seed problems etc. every month. CSA and REDS also linked WFF to the Rythu Swarajya Vedika in 2013 (WFF members are now RSV members also), though there are other women’s organisations also, which are members of RSV

¹⁹ Rythu Swarajya Vedika (RSV) is an umbrella organisation of NGOs and intellectuals working to ensure sustainable livelihoods for agricultural communities in Andhra Pradesh. It is part of the nationwide Alliance for Sustainable and Holistic Agriculture (ASHA). Refer, <http://www.downtoearth.org.in/content/farmers-andhra-pradesh-release-their-agenda-2014-elections>

²⁰ Alliance for Sustainable and Holistic Agriculture or ASHA is an alliance of about 400 diverse organisations drawn from more than 20 states across India that came together through the Kisan Swaraj Yatra (Oct-Dec 2010), a nation-wide mobilisation around Food-Farmers-Freedom. Refer, https://www.facebook.com/AshaKisanSwaraj/info?ref=page_internal

through its involvement in the international network SAAPE²¹ with lobby and advocacy activities, CSA has reached CSOs in Nepal, Bangladesh, Sri Lanka, Pakistan and Maldives. Like at the time of the baseline, CSA continues to have multiple funding sources and according to CSA staff the financial situation improved in the last two years; in 2014, CSA even won two awards that contributed to its funds. Nevertheless and in terms of sustainability, concerns remain: funds from Hivos contribute towards the bulk of CSA staff salaries and in 2012-2013, it accounted for 21% of the budget but Hivos' funding ends in March 2015.

Score baseline 2012 on an absolute scale from 0-3: 2
Score end line 2014, relative change on a scale of -2 → +2 +1

5.2.3 Practice of Values

Practice of Values refers to the internal practice of values within the civil society arena. Important values that CIVICUS looks at such as transparency, democratic decision making, taking into account diversity that are deemed crucial to gauge not only progressiveness but also the extent to which civil society's practices are coherent with their ideals.

In terms of practice of values little has changed since the baseline, certainly when it comes to CSA. Downward accountability remains well in use, at CSA level but also in the cooperatives. During the baseline it was announced that the project fund related information would be shared with CSA's partners but at the time of the end-line this type of transparency has not taken place yet. CSA has requested its farmers' cooperative to have a gender-balanced board. As mentioned earlier this has only be reached in 3 out of the 7 cooperatives, although improvements were noticed; CSA itself has only 2 women in its board and 1 farmer, same composition as during the baseline. With regards to external financial auditing, CSA provided information of the audits for Hivos project, like during the baseline. The farmers' cooperatives also have started to commission external audits, which is a major change compared to the baseline.

Score baseline 2012 on an absolute scale from 0-3: 3
Score end line 2014, relative change on a scale of -2 → +2 0

5.2.4 Perception of Impact

Perception of Impact assesses the perceived impact of civil society actors on politics and society as a whole as the consequences of collective action. In this, the perception of both civil society actors (internal) as actors outside civil society (outsiders) is taken into account. Specific sub dimensions for this evaluation are the extent to which the SPO has contributed to engage more people in social or political activities, has contributed to strengthening CSOs and their networks, has influenced public and private sector policies.

In general, the dimension on "perception of impact" shows slight to good improvements.

CSA has strengthened its engagement in the wider civil society arena of AP and beyond. In the first place, in order to alleviate farmer concerns, they supported the cooperatives through the provision of loans, training, diversifying income generating activities such as poultry by the Enabavi cooperative in 2013 aiming at making farmers more resilient against climate changes, and working towards increasing the farmers and their cooperative's access to government schemes. In consequence, the consumer cooperative Sahaja Aharam²² procured produce worth about Rs. 3.5 million from its producer cooperatives, women self-help groups and other organic farmers for which they were given a 10-25 percent better price than those who sold in the regular market in the April 2013 – March 2014 period.

²¹ Constituted in circa 2000 SAAPE, or the South Asia Alliance for Poverty Eradication, works on poverty eradication in a holistic way, with a special focus on food sovereignty, gender justice, demilitarisation, democratisation and social justice issues in South Asia. It brings together existing like-minded networks to strengthen and build on their work; to make explicit the links between different issues that impact on poverty; and to link and bring a regional understanding to national level campaigns. Refer, <http://www.saape.org/>

²² CSA's consumer cooperative

Meanwhile the farmers' cooperatives have increased their accountability to their constituencies as well as shown commitment in incorporating women as board members for at least 3 out of 7 of them. CSA managed to engage more agencies in NPM/organic farming and to take into consideration small farmers issues as a result of meetings and organic fairs in which local officials participated. CSA enlarged its outreach through its partnership with media. The past two years, CSA expanded its work into other states, Bihar and Maharashtra, through partnerships with their governments on scaling up programmes. Besides linking farmers' cooperatives to private food marketing agencies and entrepreneurs and bringing farmers to organic certification, CSA has started working with the Corporate Social Responsibility initiatives of Reliance Foundation towards promoting sustainable agriculture and is in discussions to collaborate with others. As stated in the baseline it is difficult to influence agricultural public policies that prioritise an industrial model of farming. Some positive outcomes to take into consideration are that a task force on sustainable agriculture and farmers' income included small farmers concerns in the 2014 election manifestoes of mainstream political parties and that a separate budget for agriculture was passed in the AP legislative assembly in May 2014. CSA has therefore been more successful in influencing *practices* of the public sector than influencing its policies.

Score baseline 2012 on an absolute scale from 0-3: 2
Score end line 2014, relative change on a scale of -2 → +2 +2

5.2.5 Civil Society Context

The social, political and economic environment in which civil society operates affects its room for manoeuvre. The civil society context has been described in chapter 3. In this section we describe how CSA is coping with that context.

CSA slightly improved its ability to cope with the changing environment since the 2012 baseline study.

Much of its work, like the registration of three new farmer cooperatives, suffered from the near standstill of the state government and administration due to the State bifurcation process which lead to the creation of Telangana on June 2nd 2014. In that context, CSA conducted several awareness meetings and produced a report on how the agriculture and agriculture-based livelihoods in the newly formed states could be sustained. CSA is also considering creating another office in Seemandhra, as the current office is in Telangana.

CSA collaborated intensively with networks like RSV and ASHA—at the state and national levels during the general election period in 2014, aiming to include small farmers' concerns in the political parties' manifestoes.

Realising that climate change is heavily impacting upon small farmers' livelihoods, CSA has started to support farmers and cooperatives in the diversification on income generating activities beyond agricultural production.

Score baseline 2012 on an absolute scale from 0-3: 3
Score end line 2014, relative change on a scale of -2 → +2 +1

5.3 To what degree are the changes attributable to the Southern partners?

This paragraph assesses the extent to which some outcomes achieved can be "attributed" to CSA. Starting with an outcome, the evaluation team developed a model of change that identifies different pathways that possibly explain the outcome achieved. Data collection was done to obtain evidence that confirms or rejects each of these pathways. Based upon this assessment, the evaluation team concludes about the most plausible explanation of the outcome and the most plausible relation between (parts of) pathways and the outcome. The relations between the pathways and the outcomes can differ in nature as is being explained in table 6.

Table 2

Nature of the relation between parts in the Model of Change

Nature of the relation between parts and other parts or outcome	
The part is the only causal explanation for the outcome. No other interventions or factors explain it. (necessary and sufficient)	
The part does not explain the outcome at all: other subcomponents explain the outcomes.	
The part explains the outcome but other parts explain the outcome as well: there are multiple pathways (sufficient but not necessary)	
The part is a condition for the outcome but won't make it happen without other factors (necessary but not sufficient)	
The part is a contributory cause it is part of a 'package' of causal actors and factors that together are sufficient to produce the intended effect.	

Sources: Mayne, 2012; Stern et al, 2012

The following paragraph assesses CSA's contribution to two outcomes. Each paragraph first describes the outcome achieved and the evidence obtained to confirm that the outcome has been achieved. It then presents the pathways identified that possibly explain the outcomes, as well as present information that confirms or refutes these pathways. The last section concludes in the first place about the most plausible explanation of the outcome, followed by a conclusion regarding the role of the SPO in explaining the outcome.

5.3.1 Strategic Orientation Civic Engagement

The outcome chosen is the improvement in the engagement of women in CSA's farmers' cooperatives, CBOs it supports. CSA aims for 30 per cent of female membership in all 10 cooperatives (of which seven have been officially registered) and a representation of 50 per cent of women in the cooperative boards, and to have more exclusively women cooperatives.

In the 2012-2013 period, female membership in the seven official cooperatives increased from 86 to 129 women, and in percentage of total membership female participation increased from 20% to 21% - the cooperatives grew from 430 to 616 members in the same period²³. In three out of the seven cooperatives women now constitute 50 % of the board members; a fourth cooperative shows an increase in female representation in the board, two show a decline and in the last cooperative the membership stayed the same at 25% of the board members. At the same time the number of female Community Resource Persons (CRPs) associated with the seven cooperatives has gone up from 19 to 35 women. CRP successfully adopted sustainable agricultural practices and can disseminate these practices amongst other members. 47 % of all CRPs are now female and in three cooperatives 50 % of all CRP or more are female. Within the cooperatives, members start to register under a female name rather than the male head of household and there is some indication that women's bargaining position in their respective households is increasing, because they get involved in marketing of their produce which was predominantly a male activity before. Although women do not have access to land, they are involved in 70% of all agricultural activities.

The first pathway that potentially explains the outcome consists of a variety of activities carried out by CSA to increase female participation in the cooperatives. CSA assumes that women play an important role in agriculture but are neglected when it comes to planning/investments/policies etc. in the sector, and hence this needs to be overcome through awareness building, campaigns, increased policy emphasis and investment in issues of women farmers.

The following information provides evidence *in favour of this pathway* by highlighting the fact that CSA started to engage women in the cooperative structure:

- CSA started to realise that women are responsible for 70 % agricultural activities, although they do not own land, nor an income related to these activities. They also realised that agriculture is needed to ensure a sustainable livelihood. They started awareness raising activities for both men and women to engage women in cooperatives²⁴.

²³ Calculation based upon CSA annual report 2013-2014 and figures given later by CSA

²⁴ CSA and interview with a CRP

- CSA has been undertaking awareness building exercises, capacity building trainings and imparting knowledge to the women on the issues of adoption of sustainable agricultural practices, cost reduction, marketing, livelihood diversification and thereby income security. This has been an ongoing practice in the seven registered and three unregistered cooperatives associated with it and has been taking place prior to 2012 as well.
- Some other initiatives were also taken by CSA in promoting the engagement of women with cooperatives. CSA organised meetings with male members of cooperatives in 2012 and 2013 to encourage them to bring their wives to meetings.
- CSA and CRPs are teaching women of the cooperatives how to obtain access to financial support from government schemes (no information on results)²⁵.
- While engaging with CSA's interventions, women in CSA's cooperatives found that participation in livelihood enhancement activities is important. Realising this and benefitting from CSA's interventions, more and more women farmers started engaging in cooperative activities, thereby enhancing the membership of women in such cooperatives.
- CSA instituted a norm that 50 % of cooperative board members need to be of female sex.
- In the February – May 2013 period the average participation of women to training sessions was 48 percent.
- Generally speaking CSA is widely known for its Non Pesticide Management (NPM) concept in agriculture that considerably decreases the input costs for farmers at similar or higher yields. This concept combined with CSA's efforts to organise farmers into cooperatives and to search a market outlet for their agricultural produce by, amongst others, the creation of a consumer cooperative, might explain the farmers' adherence to the cooperative structure in the general sense and that of women in particular.

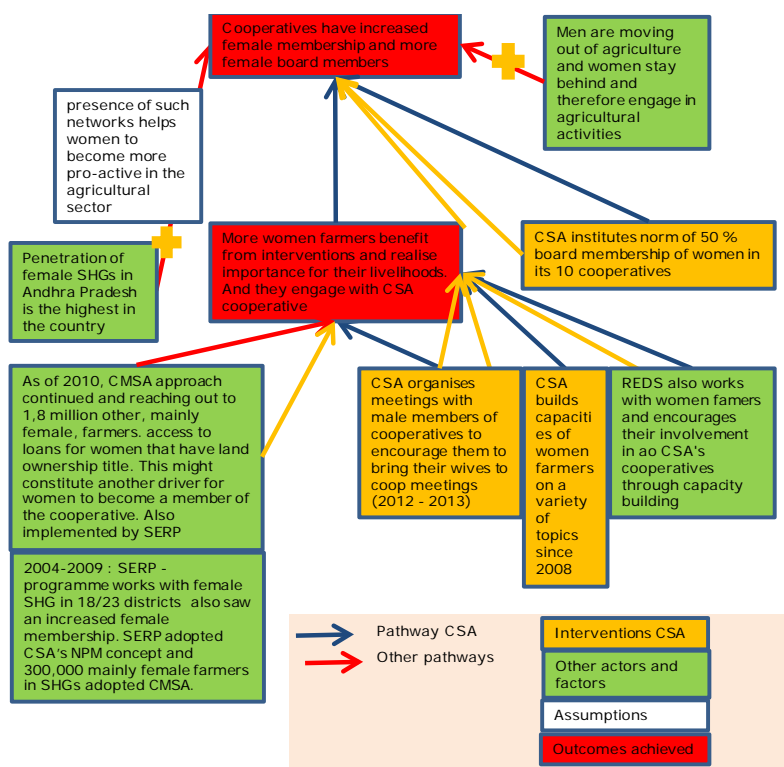

Figure 2 Pathways that possibly explain outcomes and conclusions about the nature of the relations between pathways and the outcome, civic engagement

²⁵ CSA and interview with a CRP

Information that *rejects CSA's contribution* to increased participation of women in the ten cooperatives and agriculture is the following:

- Not all ten cooperatives saw an increase in membership and equal representation of women in the board. This either illustrates that CSA did not work with all cooperatives to ensure more female participation, or that other actors and factors are in place that explain an increase in female membership and board representation²⁶. A Community Resource Person states some cooperatives working with the Society for Elimination of Rural Poverty (SERP) programme (a para-statal programme that works with female SHG in 18 of the 23 districts of the state, covering 38,646 villages), that also saw an increased female membership. The SERP programme adopted CSA's NPM concept in the 2004-2009 period under the name of Community Managed Sustainable Agriculture (CMSA). In that period some 300,000 mainly female farmers, organised in Self Help Groups adopted CMSA which currently presents a bold alternative to conventional input-intensive agriculture in Andhra Pradesh that has the highest consumption of pesticides and fertilizers in the country²⁷. CSA initially worked with the SHGs under the SERP programme²⁸.
- As of 2010, another programme is continuing the extension of CMSA, reaching out to 1,8 million other, mainly female, farmers^{29,30}. SERP provides access to loans for women that have the legal documents that show that family land is also being registered under their names³¹, which might constitute another driver for women to become a member of the cooperative. SERP claims to reach 80 % attendance of female farmers when working in the villages.
- According to All India Kisan Sabha (AIKS)³², NGOs have not succeeded in the past to increase the participation of women in agriculture nor in their peasant union. The unions, however, started showing an increasing interest in engaging women in agriculture since a general trend is that men are moving out of agriculture and women stay behind as a consequence of the 'feminisation of agriculture' and start to join cooperatives³³.
- REDS is also working with CSA's cooperatives and in the same mandals and districts to support widows to continue farming and helping them avail of government compensations that are their due. Apart from their support to CSA's cooperatives they support many more SHGs in 172 villages 45 Gram Panchayaths of 10 mandals.
- Andhra Pradesh counts some 12 million women organised in SHGs that represent 21 % of all SHGs in India, the highest percentage in the country. These SHGs function as saving and credit groups inspired by the Grameen banking system. Whereas they used to include agricultural income generating activities in the past, they now increasingly produce goods for semi-industrial enterprises and other means and not through farm based agriculture practices. However their performance and impact in society is contested. One article concludes that the organisational performance of these SHGs is usually below standards, and that loans provided do not help members to get out of poverty. Very poor people easily drop out of these SHGs³⁴. Geethanjali R. and Prabhakar K. (2013) conclude that women participating in SHG experience an impact at individual, family and community as a whole because they get access to credit. Being a member of an SHG also empowers women to

²⁶ Observation by evaluation team

stand up for their rights in wages, education, health etc.³⁵. This research was conducted in Kadapa district, where CSA helped to establish a women-only cooperative.

Conclusion

Based upon the analysis of the information available we conclude that the most valid explanation for improved engagement of women with farmers' cooperatives is the role played by CSA in increasing women participation in cooperative activities. However, CSA's interventions are sufficient to explain the outcome on their own but not necessary: Other actors that possibly also explain the enhanced female participation in the cooperatives supported by CSA are:

- REDS that supports CSA's cooperatives also, in particular helping widows of farmers who committed suicide to obtain the compensation from government schemes.
- The SERP programme that has organized millions of women in SHG who now know how to its Community Managed Sustainable Agriculture approach which is based upon CSA's NPM.

Conditions in place for this to happen are that Andhra Pradesh has the highest concentration of women SHGs that enables women to be more pro-active in other affairs of rural life, be it agriculture or cooperatives and a general trend that men are leaving agriculture and that women stay behind and take over agricultural responsibilities beyond the traditional task divisions in agriculture and at household level.

CSA's role has been that of raising the awareness of both men and women regarding their role in agriculture and related activities; then that of organising the women, imparting training to them, and encouraging them to take up leadership positions in the cooperatives and active roles in agricultural activities. CSA's move from agricultural production to sustainable livelihoods that also includes the establishment of the producer and the consumer cooperatives has been important to start working with women, as well as its NPM that has been scaled up in the past 10 years through para-statal agencies.

5.3.2 Strategic Orientation Intermediate Organisations

The impact outcome chosen is enhancement in the capacities of CSA's farmers' cooperatives (including the seven registered and three unregistered cooperatives) between 2012 and 2014 towards ensuring livelihood security of farmers. Realising the need for securing incomes of the farmers of its cooperatives, CSA shifted focus from NPM to increased production and yields in sustainable agriculture.

As a result of CSA's efforts, the cooperative members have diversified their sources of income by taking up non-farm based livelihood activities such as backyard poultry, compost making, seed processing, dairy, sericulture etc. for their own use as well as selling it to other farmers³⁶. The average increase in income for the farmers of the seven registered cooperatives who adopted multiple activities ranges from Rs. 10,000 to Rs.35,000³⁷. The Haritha cooperative in Vizayanagaram district has incorporated dairy as one of commercial activities in 2013 to support the incomes of its members. Similarly, poultry was introduced in Warangal district's Enabavi cooperative in 2013 for which the farmers reported to have received financial support from CSA, while Kadiri cooperative in Anantapur now produces and sells seeds³⁸. CSA extended its support to the farmers of the Enabavi cooperative

³⁸ source: CSA

for selling seeds by extending support to them in acquiring mini mobile seed processing units and packaging material. Farmers from Punnami cooperative reported to have received CSA support in establishing bank linkages for their dairy related initiatives. They also started producing their own compost which brought them a savings of Rs. 4000 when compared to the market price³⁹. Farmers of Tungabhadra cooperative made average savings of Rs. 7000 per season on fertilisers and pesticides through reliance on own production and adoption of organic practices. Fifteen farmers who received training in raising kitchen gardens at Mutlyala Chervu village reported an increase in their household income by Rs. 2,000 along with considerable savings on vegetable purchase—Rs. 30,000 collectively for all the 15 families. The technical trainings imparted by CSA helped farmers of the Kadapa cooperative to apply organic manure “Sanjeevani” to 87 acres of land owned by 17 farmers, particularly in agricultural and horticultural crops. This increased their incomes from Rs. 18,000 to Rs. 25,000 per farmer due to yield improvement and cost reduction⁴⁰.

Farmers of these cooperatives have been able to plan crop production and marketing activities, are involved in self-evaluation of their needs, actively participate in convergence meetings and organic fairs to avail benefits of government schemes and market their produce. For instance, the Enabavi and Mulugu cooperatives acquired mobile mini seed processing units in 2013-14 with 90 per cent of the costs financed through DoA subsidies⁴¹. Further, the Kadiri cooperative, a part of CMSS (Community Managed Seed System), is now receiving subsidies from the state’s Department of Agriculture (DoA)⁴².

Also, farmers and farmers’ organisations are increasingly engaging with Rythu Swarajya Vedika (RSV) to participate in activities aimed at favourable policy changes for farmers⁴³. Apart from this, farmers prepare their business models to avail of easy credit under CSA’s value chain fund and maintain records of their produce for third party certification and marketing of their produce. All these activities have led to an increase in incomes of the farmers associated with CSA.

The first pathway that potentially explains the outcome consists of a variety of activities carried out by CSA towards capacitating farmers to adopt sustainable agricultural practices, diversify livelihoods, access government schemes, improve marketing of their produce, and increase reliance on own production of inputs for cost reduction. CSA organised farmers into producer cooperatives to promote adoption of NPM practices and established their linkage with consumer cooperative, Sahaja Aharam for the marketing of organic produce of the cooperatives. Over the years of its engagement with the farmers, CSA focused its activities on building the capacities of the farmers to help them secure their livelihood while following sustainable agricultural practices. Towards that end, farmers have found themselves preparing business plans, production and thrift activities, use easy loans provided by CSA to make profits, avail benefits of government schemes through convergence meetings organised by CSA, and improve marketability of their produce through participation in CSA annual organic fairs and obtaining third party certification of their produce.

The following information provides evidence *in favour of this pathway* by highlighting the activities undertaken by CSA to capacitate farmers’ cooperatives in the state:

- CSA formed seven cooperatives and has been providing assistance to another three cooperatives for registration. CSA has imparted business development skills to the farmers of the cooperatives and provided assistance to farmers in enhancing their access to institutional credit⁴⁴.
- CSA has started work on community managed seed bank system. Kadiri Cooperative of Ananthapur district is a part of CMSS (Community Managed Seed System), as a part of which farmers are getting subsidy from Department of Agriculture (DoA), Andhra government⁴⁵.
- CSA has imparted technical trainings to farmers on preparation of bio-fertilisers, green manures and local inputs such as vermi-compost, which has helped them reduce their cost of production⁴⁶.

⁴² source: CSA

⁴³ source: CSA (moderately strong piece of evidence)

⁴⁴ CSA and interview with cooperative board members

⁴⁵ CSA (weak piece of evidence)

- CSA has helped cooperatives diversify their sources of livelihood by helping them take up non-farm based livelihood activities such as poultry, seed processing, compost making, sericulture etc.⁴⁷.
- CSA provides financial assistance to the cooperatives through the provision of easy loans under the value chain fund established by it to help them scale up their commercial activities⁴⁸.
- CSA assists the farmers in obtaining benefits of government schemes such as subsidies for seed processing units and on farm equipment by organising convergence meetings with line departments⁴⁹.
- With the help of Sahaja Aharam cooperative federation, other CSOs, government departments and public sector organisations, CSA has been organising annual organic fairs to develop an interface between farmers, buyers and government institutions, to enable farmers to share their learning and experiences and to help farmers market their produce⁵⁰.
- CSA facilitates the process of obtaining third party certification for the organic produce of the farmers of its cooperatives to promote marketing of such produce⁵¹.

Information that *rejects CSA's contribution* to strengthening the capacities of the farmers' cooperatives in AP towards ensuring livelihood security of farmers is the following:

- SERP, through its CMSA programme that started in 2004, has been working with poor farmers in AP towards adoption of sustainable non-pesticide agriculture practices to reduce the costs of cultivation and increase net incomes⁵². SERP has initiated Farmer Field Schools (FFS) to support technology transfer through community-based local best practicing farmers. About 20-25 families are organised into a group which is assisted by a paid village activist (practicing farmer) and paid cluster activist (for a group of five villages). Technology transfer is promoted through sharing knowledge, observations and experiences by community best practitioners called CRPs (Community Resource Persons) who have successfully adopted CMSA practices. Capacity building is done through provision of financial support and technical inputs in the form of technology transfer for promoting adoption of sustainable agricultural practices and supporting incomes of poor farmers. SERP has made the farmers aware of the low cost agriculture for the last eight years on this issue. The programme began with 400 acres but now it spreads over 14000 villages and 56 lakh acres gross (roughly 40 per cent of total AP agricultural land). SERP's interventions include providing bank linkages, gender empowerment, and capacity building etc. to enable the SHGs function effectively. It has also worked on social security schemes like pensions, insurance, health and nutrition indicators, land access, dairy and help to poorest of the poor, disabled persons etc.⁵³.
- Increase in demand for organic produce has led helped farmers getting better prices for their produce⁵⁴. Organic products, which until now were mainly being exported, are now finding consumers in the domestic market⁵⁵. This is because higher demand vis. a vis. supply leads to increased bargaining power for the farmers who can then sell their organic products at higher prices and earn greater incomes. As a result, farmers' incomes have increased and they are being incentivised to increase the supply of organic produce.

- All India Kisan Sabha named another organisation, Deccan Development Society (DDS) that has been promoting organic agriculture in the state, although on a small scale⁵⁶⁵⁷.
- All India Kisan Sabha (AIKS) said that many farmers themselves are not interested in diversification since huge capital investment and scale is needed to make profits out of activities such as poultry and dairy, which is difficult for farmers. For activities like convergence meetings with line departments, AIKS attributed peasant organisations, political groups and government will.
- A CRP mentioned DAATTC (District Agriculture Advisory and Transfer of Technology Centre), attached to state agriculture university called ANGRAU (Acharya N.G. Ranga Agricultural University) that imparts trainings to the farmers on crops, seed production and organic farming practices⁵⁸⁵⁹.

⁵⁶ The Deccan Development society is projecting a working model for the people oriented participative development in the areas of food security, ecological agriculture, and alternate education. It is also trying to reverse the historical process of degradation of the environment and people's livelihood system in this region through a string of land related activities such as Perma-culture, Community Grain Bank, Community Gene Fund, Community Green Fund and Collective Cultivation through land Lease etc. These activities, alongside taking on the role of Earth care is also resulting in Human Care, by giving the Women a new found dignity and profile in their village communities. The Society is trying to relocate the people's knowledge in the area of Health and Agriculture. <http://ddsindia.com/www/default.asp> (moderately strong piece of evidence)

⁵⁷ DDS is the National Steering Committee Member and the AP State Secretariat for the Organic Farming Association of India [OFAI] India's only organization of grassroots organic farmers. OFAI is committed to promote organic farming in India through mobilization of farmers, training in organic techniques, workshops and policy advocacy. OFAI's labeling scheme through Participatory Guarantee System [PGS] provides an assurance of guarantee of organically grown produce exclusively for domestic consumers. OFAI rejects organic farming for export purposes. <http://ddsindia.com/www/aboutus.htm> (moderately strong piece of evidence)

⁵⁸ To give technological backup and lend support to the extension agencies of the line departments, Acharya N.G.Ranga Agricultural University has reorganized the University extension services and established 'District Agricultural Advisory and Transfer of Technology Centre(DAATTC) at each district headquarters of the state with a team of scientists. One such centre at Anantapur falling under scarce Rainfall zone of Andhra Pradesh started functioning since 5th December, 1998 with three scientists <http://www.anantapur.gov.in/html/agri-dep-profile.htm> (strong piece of evidence)

⁵⁹ To create awareness and to develop capacity building on the Pre & Post harvest operations, the Government in 1999 introduced farmers training programmes four per year in each AMC with the Co-ordination of Agriculture / Horticulture 42 depts and Agricultural University / District Agricultural Advisory and Transfer of Technology Centre (DATTC). <http://ap.meeseva.gov.in/DeptPortal/Download-lat/White%20Paper%20on%20Agriculture%20Department.pdf> (strong piece of evidence)

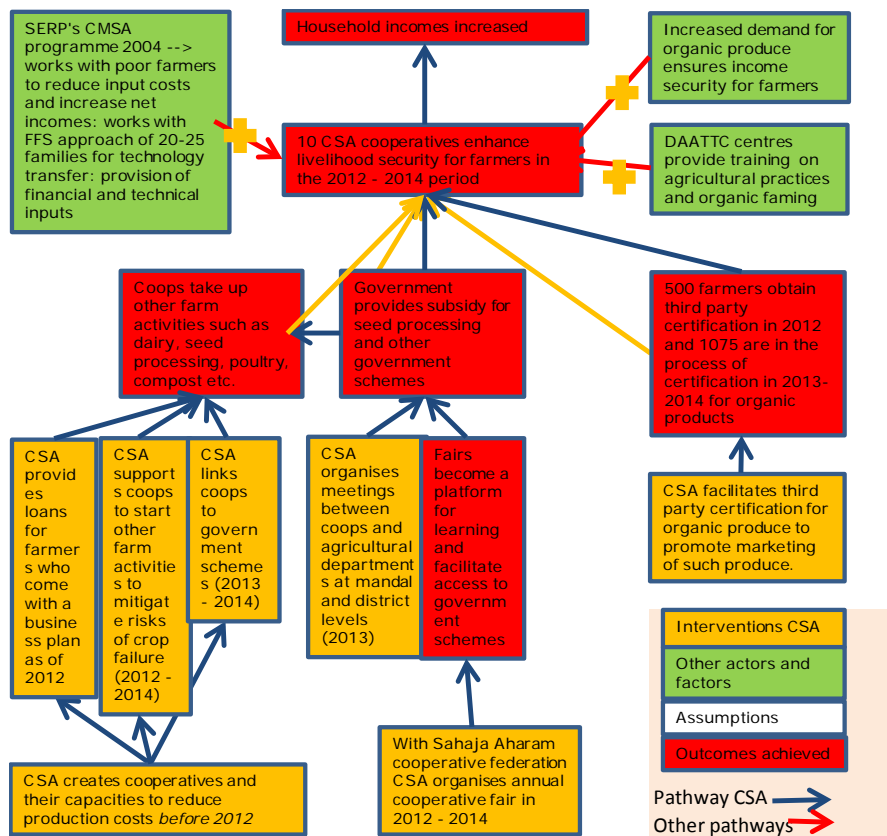

Figure 3 Pathways that possibly explain outcomes and conclusions about the nature of the relations between pathways and the outcome, intermediate organisations

Conclusion

Apart from CSA's direct interventions that helped build capacities of farmers associated with its cooperatives towards ensuring livelihood security for the farmers, the following other actors and factors might have helped achieve its outcome.

Favourable conditions (*necessary but not sufficient*) that might have helped CSA with building cooperative capacities include the growing demand for organic produce in the state that helped farmers fetch a better price for their produce and thereby incentivised and motivated them to scale up their activities; the presence of the SERP programme that also promotes CSA's NPM concept amongst female SHGs and other farmers (even before CSA started its work around NPM); and presence of DAATTC centres that impart trainings to the farmers of CSA cooperatives on issues of crop production and management, and organic farming practices. This in turn facilitated CSA's efforts towards promotion of sustainable agricultural practices among farmer cooperatives through strengthening their capacities to secure their incomes from the adoption of farm and non-farm based livelihood activities. (*not necessary but sufficient*).

According to the evaluators, CSA assumes an important role in capacitating farmers through their engagement with its cooperatives. CSA has strengthened these cooperatives to secure farmers' livelihood through adoption of sustainable agricultural practices, diversify their incomes through taking up non-farm based livelihood activities, enabled them to access government schemes, imparted technical trainings to the farmers to promote cost-reduction, and enabled them to market organic produce through third party certification and organic fairs.

In its initial years, CSA was entirely focused on alternative technology transfer towards NPM, through awareness building and training. Over the years, CSA felt the need for shifting the emphasis of its programme from NPM to increased production and yields in sustainable agriculture to securing incomes for the farmers of its cooperatives. This was done through capacity building trainings as well as financial support in terms of easy loans and repayment options to integrate markets. Alongside, CSA also realised that work would have to begin on expanding the income basket of farmers. Awry weather patterns, unexpected droughts are making producing food alone a risky proposition for the

farmers and income sources need multiplying in this scenario. It was felt that cattle, poultry, sericulture, seed and manure production could be developed as additional sources of income, and efforts in this direction were made.

Along with the above mentioned activities, CSA is now making interventions towards collective bargaining and action, involving the farmers through cooperatives to get access to government schemes which are run by Ministry of Agriculture, horticulture and NABARD. Also, the need to market the organic product of farmers was felt and Joint Organic Food Melas (Fairs) are organised so that cooperatives can have an interface with the buyers. Such melas were organised at the state level in 2012, 2013 and 2014. To further increase the marketability of the organic product produced by farmers associated with the cooperatives, CSA entered into third-party certification agreement with Aditi Organics identified by Government of India, in 2012, so as to ensure better price and better income. All these steps, it thought would help in capacitating farmers in becoming self-reliant in farm as well as non-farm livelihood activities and ensuring livelihood security for farmers.

The MFS II funding contributes to the salaries, office expenses of CSA staff. And since the same staff is employed for various interventions, separating MFS II and non MFS II components of CSA's work is difficult. Hivos' support has been crucial for strengthening CSA staff capacities which has, in turn, facilitated other activities undertaken by CSA towards capacitation of cooperatives to secure livelihood. However, the activities specifically funded using Hivos support are—promoting seed cooperatives and marketing of seeds, workshops with stakeholders, building market linkages, campaign for promotion of organic food, organising annual organic fairs, convergence with line departments, capacity building trainings for cooperatives for production and marketing of organic produce, rural appraisal programmes for needs assessment, campaigning for a separate budget and organising support to obtain third party certification.

5.4 What is the relevance of these changes?

5.4.1 Relevance of the changes in relation to the Theory of Change of 2012

As described in the 2012 theory of change, CSA's overall goal is to achieve income security for farmers, which implies that farmers, including organic farmers, are prepared to be linked to markets. CSA had mentioned three major conditions to reach the goals: 1. Favourable policies in terms of providing a better income of farmers and a better share of the margins in the supply chain; 2. Favourable markets; 3. Ecologic and economic sustainable agricultural technology. Two fundamental strategies had been identified: the organisation of farmers to improve their bargaining capacity and their education through effective extension services. Special emphasis had been made on creating a women friendly farming environment.

The two outcomes selected during process tracing are clearly in line with the 2012 ToC. The various changes noted in the 5 CIVUCUS dimensions (increased number of (self-sustaining) farmers' cooperatives, clear "internal" policies favouring women, improvement in the practice of public policies in favour of small or marginal farmers, successes of convergence meetings with government agencies and of cooperatives organic fairs to mention a few) show to some extent the successes made to achieve the 3 important conditions. Nevertheless, one can note a slight shift towards institutions and livelihood. Initially the overall strategy sounded like a technology centric approach (like NPM) but later it moved more to building institutions to help farmers in achieving livelihood security, favourable policy environment etc. Socio-economic research has also started now, while the focus of research earlier was only on technologies. Better practices have also evolved for institutions other than just technologies as a result of beginning of research on that too. For example, earlier CSA did not focus much on marketing and thought that the farmers' better organic products would be sold "automatically" at better prices. At present, CSA is putting more emphasis upon marketing.

5.4.2 Relevance of the changes in relation to the context in which the SPO is operating

CSA believes that unless agriculture in India is in a better shape and farmers are prosperous, no development is viable. To do so, they are trying to bring larger policy level changes, income security policies for farmers in the long run, while also working for short term achievements like immediate help to farmers via diversification and cost reduction, with the help of cooperatives. A large section of India's population is engaged in agriculture (56% of India's population is dependent on agriculture for its livelihood—of which 95% are small and marginal farmers) and would directly benefit from CSA's successes. This would help solve the agrarian crisis, getting farmers out of the poverty trap and therefore stopping the consequent farmer suicides.

CSA's NPM concept, later adopted by the state-agency SERP under the name of CMSA, is decreasing the costs for inputs with 22% and increasing the total profit per acre with a factor of 2.8⁶⁰. Mainstream agricultural research and extension institutions and other programs providing subsidies to farmers for usage of chemical fertilizers and pesticides are still sceptic on the CMSA concept and more dialogue is needed between the farmers and scientific community practicing sustainable agriculture. The current dialogue on role of agriculture in adaptation to climate change and reduction of carbon footprint through reduction in usage of chemical fertilizers has also started. This augurs for a possible second 'green' revolution, particularly for rain fed areas⁶¹. CMSA presents a bold alternative to conventional input-intensive agriculture in a state that has the highest consumption of pesticides and fertilizers in the country.

Strengthening the capacities of the cooperatives increasingly helps to ensure livelihood security for farmers. As a cooperative board members mentioned, earlier the local moneylenders used to exploit farmers who were forced into distress sales. Now, with the help of cooperatives, farmers are better informed. They are getting facilities like loans in an easy way and they are also making profits on agriculture. This has improved the situation of farmer households in economic terms and as a consequence benefitting the society as a whole. Besides economic benefits, the CRPs mentioned that producing in an organic way also leads to improvement in health. Several respondents (cooperative board members, retired Professor also vice-president of farmers' union also president of cooperative) mentioned that working through cooperatives is relevant since horizontal transfer of technologies (from farmers to farmers; imitating the neighbouring village) is successful in India. An ex staff of Hivos mentioned that building coalitions has a huge impact on policy making in India and that the sharing of learning benefits not only the community or the village but also the entire nation.

The relevance of CSA's activities towards the engagement of women in farmers' organisations and cooperatives, its support to the Women Farmers' Forum (WFF) and the women only cooperatives is also quite high. Women, 50% of the population, have an important role in agriculture. Beyond directly supporting women, these changes would benefit the entire society. As several respondents mentioned, women do most of the agricultural work, even the most difficult one. Nevertheless, technologies are not in line with their needs and culture makes it that women don't go to markets. To get women mobilised in leadership positions, one has to cut through patriarchy and other obstacles. Quoting one respondent "I believe unless you work with women, no positive change is possible. Women should be mandatorily involved. It will take time, but that is needed." A woman CRP mentioned that more and more women are able to come up and discuss their issues and that because of their association with the cooperatives, women's bargaining power within the households has also increased.

5.4.3 Relevance of the changes in relation to the policies of the MFS II alliance and the CFA

People Unlimited 4.1 (also called the Hivos Alliance) is an alliance of four organisations: Hivos, IUCN NL, Mama Cash and Press Now. As detailed in the MFS II subsidy application for the 2011-2015 period, the Hivos Alliance should deploy four interrelated programmes to contribute – in a result-

⁶⁰ <http://forbesindia.com/article/on-assignment/back-to-the-roots-for-andhra-pradesh-farmers/17822/1?utm=slidebox#ixzz3Gm1yc04R>

⁶¹ <http://cigrasp.pik-potsdam.de/adaptations/community-managed-sustainable-agriculture-cmsa>

oriented and sustainable manner – to building and strengthening civil society in the South as the cornerstone of structural poverty alleviation. These programmes are: Green Entrepreneurship, Rights & Citizenship, Expression & Engagement and Action for Change.

According to an ex Hivos staff, CSA's programme aligned with Hivos Civil Society strategy. CSA's programme is a part of Hivos Green Entrepreneurship programme. It was designed around how to mobilise and build the capacities of small and marginal farmers including women to negotiate with the government and the market. Its aim is to tackle the asymmetry of power that leads to an asymmetry in access to information and consequently to a limited access and control over resources. If farmers are to get a bigger share of the economic margin, one needs to strengthen cooperatives, producer companies, and build their skills so that they climb higher in the value chain (from local to national to even international markets). Training farmers in the process of analysing what is good for their agriculture will possibly influence how they get represented in public policy. The special emphasis CSA has put in the last 2 years on strengthening the position of women in agriculture via an exclusive women cooperative and setting a mandate for a gender balanced board is certainly in line with Hivos gender mainstream policy. The fact that CSA interacts more (intensively) with (more) CSOs, networks like ASHA and RSS and the public agencies fit into Hivos way of working. As an ex Hivos staff said: "Many changes cannot happen alone or within projects: Building like-minded coalition of CS actors including target groups like farmers and women is essential."

5.5 Explaining factors

5.5.1 Internal factors – organisational capacity CSA

CSA director Dr. G.V. Ramanjaneyulu, popularly known as Dr Ramoo, is a renowned figure; articles about CSA appear routinely in national and local magazines and newspapers, with Dr. Ramoo being the interviewee or the source of information in most of them. He also appears as an expert and advocate of sustainable non pesticide agriculture on many television news shows. His participation in June 2012 in the popular television show Satyamev Jayate which is hosted by an Indian celebrity and addresses social issues throughout the country and additionally includes the mobilisation of financial resources saw tremendous viewer response from across the country, with Rs 30 lakhs being sent in as donations, an amount that added up to make Rs 40 lakh over the past two years. The programme showcased CSA's work. Further, Dr Ramoo's television appearances on channels such as MAHA TV, Sakshi TV, HMTV, AIR, TV5, TV9 etc., have influenced discussions and debate on issues related to agriculture such as farmer suicides, the need to promote sustainable agriculture, to have a separate budget for agriculture and maintenance of bio-diversity. CSA has also launched an online TV channel called Krishi (meaning 'Farming' in Hindi) and has a website called www.indiaforsafefood.in. Dr Ramoo is very active on Facebook⁶² and updates his posts to inform his over 3300 followers about issues pertaining to sustainable agriculture.

Dr Ramoo enjoys respect and influence within the activist community as well. This finds manifestation in the fact that CSA is well networked—locally and nationally, with for example Rythu Swarajya Vedika⁶³ and ASHA⁶⁴ respectively—with other organisations that work on its issues. His expertise is recognised, and often drawn upon, by the government. In 2012, he chaired the state government committee on school education on the introduction of sustainable agriculture as a topic in the regular school syllabus for school children from class 2 to class 10. CSA won two awards for 'best innovations impacting rural livelihoods and for its invaluable contribution in improving lives of rural poor' from

⁶² <https://www.facebook.com/gv.ramanjaneyulu?fref=ts>

⁶³ Rythu Swarajya Vedika (RSV) is an umbrella organisation of NGOs and intellectuals working to ensure sustainable livelihoods for agricultural communities in Andhra Pradesh. It is part of the nationwide Alliance for Sustainable and Holistic Agriculture (ASHA).

⁶⁴ Alliance for Sustainable and Holistic Agriculture or ASHA is an alliance of about 400 diverse organisations drawn from more than 20 states across India that came together through the Kisan Swaraj Yatra (Oct-Dec 2010), a nation-wide mobilisation around Food-Farmers-Freedom. Refer, https://www.facebook.com/AshaKisanSwaraj/info?ref=page_internal

state governments other than Andhra's, the Bihar Innovation Forum⁶⁵ award in January 2014 and the Maharashtra Rural Livelihood Mission (MSRLM)⁶⁶ award 2013-14 which had a cash component of Rs. 5 lakh.

Within the organisation too, CSA's vision and its articulation seem largely to be informed by Dr Ramoo. During the end line, he spoke of CSA, over the past two years, having evolved its mandate from being a technical assistant in matters of organic farming to strategising and working on increasing the livelihood of farmers—because farmers wouldn't take to organic farming till it made economic sense to them. Dr Zakir Husain, the joint director, who had been on a sabbatical during the 2012 baseline workshop, was present for the end line. He seemed to be the link between the CSA's field areas and organisations' Hyderabad office.

5.5.2 Relations Hivos - CSA

Hivos has been supporting Centre for World Solidarity (CWS) since 1996 in its initiative to promote sustainable agriculture that was spearheaded by Centre for Sustainable Agriculture (CSA), the sustainable agriculture desk of CWS. CSA received a first support from Hivos in 2006, when it established itself as an independent organisation. The current contract lasts until March 2015.

Since the baseline study Hivos closed its office in Bangalore in December 2013 and expected to open its new office in the first semester of 2014 in Mumbai. Based upon the interview with former Hivos staff in liaison with CSA, as well as the communications between Hivos and CSA, relations were effective and not hampering any development intervention.

5.5.3 External factors

The past two years saw political turmoil in the state of AP as the demand for a separate Telangana⁶⁷ state gained strength and ruled the political discourses, debates and discussions. The long, violent struggle ended up translating into the state's bifurcation into two separate states—Telangana and Seemandhra on June 2nd, 2014⁶⁸. More protests, demonstrations, and suicides followed up⁶⁹ slowing down the functioning of the state government departments and administration. For CSA cooperatives, bureaucratic division following state bifurcation meant procedural delays in the process of registrations of cooperatives as well as reduced government support for their activities. In response to this, CSA conducted several awareness meetings on the issue of bifurcation of state and its implications for agriculture and allied activities and also came out with a report to that effect. CSA has also planned to come up with a new office in Seemandhra to continue its activities in the region while its current office is in Telangana.

The state's agrarian crisis continued in 2012 and 2013 with the state registering deficit or scanty rainfall in many of its districts coupled with perpetual cyclones such as Nilam, Meher and Phailin destroying yields of standing crops such as paddy, pulses etc. and affecting agricultural productivity, apart from claiming thousands of lives. This was accompanied by shortage of food grains, scarcity of fodder for livestock and deteriorating economic situation of the farmers of the state. Farmers' suicides

⁶⁵ The Bihar Innovation Forum (BIF) is a platform which offers opportunity to various stakeholders to present innovative solutions and ideas which can help create a more sustainable impact in rural Bihar. It is developed and supported by the Bihar Rural Livelihoods Promotion Society (BRLPS). Refer, <http://www.biharinnovationforum.in/pages.php?pid=8>

⁶⁶ The Maharashtra Rural Livelihood Mission (MSRLM) is an institution that both enables and empowers the poor to access better livelihoods. It is responsible for integration of livelihoods innovation across various sub-sectors. Refer, <http://msrlm.org/mrlif/>

⁶⁷ The Telangana movement, a struggle in Andhra Pradesh for a separate state of Telangana came to a conclusion with its creation on 2nd June 2014, making it India's 29th state. The 'Jai Telanagan' movement began in 1969, over cultural and economic differences with the larger state of Andhra Pradesh. Refer, <http://timesofindia.indiatimes.com/india/15-facts-you-need-to-know-about-Telangana/articleshow/35955351.cms>

⁶⁸ The Andhra Pradesh Reorganisation Act, 2014 for the bifurcation of Andhra Pradesh into two states was given the go ahead by the President on 1st March 2014. This was following decades long struggle for Telangana. Refer, <http://reorganisation.ap.gov.in/index.jsp>

⁶⁹ The announcement to divide Andhra Pradesh met with celebration on the Telangana side and protests and suicides on the Andhra and Rayalseema side. 13 districts were shut down in Seemandhra as protests took place. A home guard is said to have committed suicide after hearing the news about the division. Refer, <http://www.hindustantimes.com/india-news/telangana-triggers-protests-suicides-clamour-for-more-states-grows-across-india/article1-1101346.aspx>

continued in many parts of cotton and chilly growing areas of Andhra even after 2012. The period between 2012 and 2014 saw CSA working in collaboration with local partner, REDS⁷⁰, networks like RSV and ASHA, and Caring Citizen's Collective⁷¹ to provide support to the families affected by farmer suicides, especially in availing compensation from the concerned government departments. Towards this, meetings with women from such families were held at the district level in Kadiri and the state level in Hyderabad in September of 2013 as a result of which all the pending cases of ex-gratia for farmers' suicide families were settled by the District Collector in Medak district.

The period between 2012 and 2014 saw CSA witness a growing disinclination amongst youngsters for farming and farm-based livelihoods contributed by low productivity and yields, low profits, high input costs and growing risk of crop failure. Towards this, CSA organised trainings focused on reviving youth interest in farm based livelihood activities, particularly, sustainable agricultural practices. Realising the concerns of the farmers in adoption of such activities, CSA consciously shifted focus from enhancing productivity to enhancing household incomes and promoted other non-farm based livelihood activities amongst farmers of its cooperatives. It also facilitated marketing of the organic produce of its farmers by organising annual organic cooperative fairs and obtaining third party certification for the produce of the farmers. It has also planned to launch a professional marketing agency, which would ensure sale of such products at good prices.

⁷⁰ REDS or Rural & Environment Development Society, was registered as a not-for-profit organisation in 1996 to further the well-being of rural communities. REDS activities are mainly focused on rural development, sustainable agriculture, child rights, anti-trafficking and empowering CBO's to gain control over natural resources. See <http://redskadiri.wordpress.com/about/>

⁷¹ Caring Citizens' Collective (CCC) comprises social activists, academicians, intellectuals and journalists who formed it in 2007 in Andhra Pradesh. The CCC volunteers work in the Telangana region of AP where the farmer suicides are high specifically in Medak, Mahabubnagar and Warangal districts. A beginning has been made to support the education of the children belonging to farmer's families affected by suicides. In addition to supporting the children's education, CCC is also working hard to assist the suicide and starvation deaths affected families to obtain financial and other required assistance from the government. *Refer*, <http://www.lamakaan.com/events/548>; <http://www.actionaid.org/india/what-we-do/andhra-pradesh/our-response-acute-agrarian-crisis-and-spate-farmer-suicides-medak>

6 Discussion

6.1 Design of the intervention

This section discusses whether the project, through the two interventions selected for in-depth study namely 'Improved engagement of women in farmers' organisations—Women Farmers' Forum (WFF) and cooperatives—in Andhra Pradesh' for civic engagement and 'Farmers' Cooperatives in Andhra Pradesh capacitated towards ensuring livelihood security for farmers' for strengthening intermediate organisations, is well designed and suitable for the environment in which it was implemented.

As noted by all interviewees and by a further literature study, there is no denial that putting emphasis on strengthening the role of women in agriculture is essential. "Women empowerment is the pre-requisite to boost agricultural production" (Dr. Narayan G. Hegde, date unknown⁷²). One should note and praise CSA for truly mainstreaming gender in its interventions. Although it was generally mentioned in their 2012 ToC, CSA has looked for specific solution to empowering women in rural areas (and not only mentioning need for education without doing justice to the capabilities women are already showing).

When it comes to investing in small farmers' cooperatives, CSA's work is in line with IFAD, FAO and WFP who state that "Smallholder farmers gain big benefits from agricultural cooperatives including bargaining power and resource sharing that lead to food security and poverty reduction"⁷³. 2012 was even named International Year of the Cooperatives (IYC). It can be interesting to look back at the theory on farmers' collectives from Oakeshott (2011) where he stated that cooperatives were difficult to create and sustain. Most importantly, he "suggested that strong emphasis must be put on conditions necessary for cooperative success and that the single most important condition is that of good leadership" (1-2)⁷⁴. The evaluation synthesis report commissioned by IFAD for the 2012 IYC⁷⁵ also stated more challenges such as "establishing cooperatives and building up their networks and vertical support organizations, are demanding tasks, their management is even more demanding, particularly owing to their democratic nature and large, often poorly educated membership". We can credit CSA for being able to create these cooperatives and showing to some extent the results these have been able to achieve for example in terms of increased income for the members. With regards to the functioning of the cooperatives, the above mentioned evaluation synthesis report mentioned some common issues:

- Inadequate organization by rural populations;
- Poor reputation of cooperatives; Effects of economic liberalization;
- Lack of experience and relative financial weakness of cooperatives;
- Lack of competencies and systems; Poor infrastructure;
- Lack of vertical integration and linkages; and inadequate finance.

The report also mentions the interventions IFAD did to overcome these issues and for which the success was relatively satisfactory:

- Building up capacity (usually in the form of technical assistance, training, workshops and study visits) at all levels;
- Strengthening institutions (helping to establish cooperatives and providing technical assistance or funds for basic infrastructure, equipment, and technical or managerial backstopping);
- Provision and strengthening of financial services;
- Technical assistance for special tasks and studies;
- Supporting vertical structures for advocacy and policy dialogue with government and traders.

⁷² Dr. Narayan G. Hegde, (Date unknown) New technologies to enhance agricultural production and sustainable rural livelihood, BAIF

⁷³ in 'Agricultural cooperatives are key to reduce hunger and poverty', <http://www.ifad.org/media/press/2011/76.htm>

⁷⁴ in IFAD Brief 122: The Renewed Case for Farmers' Cooperatives: Diagnostics and Implications from Ghana. <http://www.ifad.org/drd/agriculture/122.htm>

⁷⁵ IFAD's Engagement with Cooperatives, A Study in Relation to the United Nations International Year of Cooperatives by IFAD Independent Office of Evaluation, March 2013

The interventions of CSA (like capacity building, providing loans for diversification of activities, creating platforms for exchange of information with the public agencies (the convergence meetings) and others for marketing (like the organic cooperatives fairs) are to some extent similar to the ones mentioned by the evaluation synthesis report. In that sense we can say that these interventions are well designed. Nevertheless it is essential to continue efforts in linking the cooperatives with public agencies and to reinforce the links between cooperatives (horizontal and vertical links).

6.2 Replication of the intervention

CSA's interventions at organising farmers, and inclusion of women in these organisations (cooperatives), certainly benefited from the fact that Andhra Pradesh already had a culture of SHGs. The women farmers in AP, therefore, have already been exposed to the advantages of such thrift and entrepreneurial activities. So, a predisposition to joining cooperatives might have existed. This might not be the same in other states. And similar work that CSA is doing in AP might therefore have to focus much more on awareness building in other states.

CSA has been able to identify concerns that are indigenous to the state, and emotive for the local farmers—working with the widows from farmers' suicide families, and not focus on technical issues that farmers mostly unlettered have difficulty to grasp⁷⁶. Replication, therefore, must keep in mind that farmers' organisations must be grounded in local concerns, so that farmers feel they have a personal stake.

Besides formal registration and as stated in the evaluation synthesis report commissioned by IFAD for the 2012 IYC, "sustainability also calls for sector integration and links to local community structures (development councils, municipalities, networks of organizations, and so on), as well as for empowering cooperatives and involving them in value chains. However, because local community structures or value chain participants are often weak, project support needs to be long-term." Further, "capacity-building among cooperative leaders, staff, ordinary members and government cooperative staff is relatively easy to organize when external resources are available. However, operating cooperatives calls for entrepreneurship, which is not easily taught, as well as economic and commercial skills that require not just classroom teaching but also follow-up instruction and coaching, years after the original training." For that matter, "development of cooperatives calls for long-term projects (up to 9-10 years) because preparation, planning, recruitment and capacity-building all involve a considerable period of time." Since some of the cooperatives have just started during the MFS II period, like the women exclusive cooperative in Vempalli, so as other innovations like the Women Farmer's Forum and for continuity and sustainability reason we advise to continue funding the intervention. It might be that forming an exclusive women cooperative for agricultural/livelihood aspects is quite original but other women exclusive cooperatives exist⁷⁷ and it would be interesting to link up the women initiatives to these already existing groups.

What would be interesting is for CSA to truly follow the evolution of the cooperatives, not only in terms of figures (of memberships or income for example) but also in terms of internal performance. For that matter we think the 5 capabilities model can be a good support.

⁷⁶ Comparatively, Gene Campaign, another partner of Hivos working on almost similar issues, seems to have made lesser impact than CSA, both quantitative and qualitative. One of the reasons for this could be the fact that, unlike CSA which has connected with the farmers on many emotive local issues like suicides, Gene Campaign has more or less remained a technical resource organisation for its target groups—the provider of indigenous seeds and teacher of the SRI farming technique. Biodiversity, seed conservation, climate change which are Gene's concerns and issues have yet to percolate down to and be owned by the mostly unlettered rural men and women who are its target, and who are disadvantaged by the fact that they had no access to the larger context and issues involved in Gene Campaign's work.

⁷⁷ in Dr. Muzamil Jan, Successful Women Cooperatives in India

7 Conclusions

7.1 Changes in the civil society arena of the SPO

In the 2012 – 2014 period the two most important changes that took place in the civil society arena of the SPO are related to 'civic engagement' and 'perception of impact'. Most important changes observed with regards to the first CIVICUS dimension consist of CSA having increased its outreach in terms of small and marginalised farmers through the creation of three additional cooperatives to the seven existing which increasingly become self-sustaining in both technical and financial terms. In absolute figures, more women became a member, also took positions in the cooperative board, and became community leaders. CSA helped with the establishment of a women-only cooperative and together with another NGO and an umbrella organisation of NGOs and intellectuals (RSV) established a Women Farmer's Forum for widows of farmers who committed suicide.

With regards to the 'perception of impact' dimension, CSA managed to increase the market opportunities for its producer cooperatives and female self-help groups at higher market prices and strengthened the organisational performance of the cooperatives. In the past two years CSA managed to engage with more NGOs and it influenced the practices of public sector agencies with regards to the concept of Non Pesticide Model of farming for small farmers, it increased its outreach through the media and to other states. Until to date it is still difficult to influence existing policies but a law for a separate budget for agriculture was passed in the State legislative assembly in May 2014.

7.2 Contribution analysis

The impact outcome chosen under the strategic orientation related to civic engagement is the improvement in the engagement of women in CSA's farmers' cooperatives (of which seven have been officially registered to date). CSA aims for 30 per cent of female membership in all 10 cooperatives with a representation of 50 per cent of women in the cooperative boards, and to have more exclusively women cooperatives. Apart from this, CSA has established a Women Farmers' Forum (WFF), where widows of farmers who committed suicide find a platform to share their concerns. Favourable conditions (necessary but not sufficient) that might have helped CSA with this increased participation in female farmers in cooperatives in absolute number as well as in comparison with men are the high organisation grade of women in SHGs; the presence of the SERP programme that also promotes CSA's NPM concept amongst female SHGs; CSA's producer and consumer cooperatives in place and performing, and; the feminisation of agriculture in the last decades. After these conditions were in place REDS and CSA could start the promotion of women into the cooperatives, CSA based upon its track record in agriculture and the cooperative structure which provides an attractive market outlet and REDS with its track record in supporting women in CMSA. Both actors possibly explain the outcome (not necessary but sufficient).

The impact outcome chosen under the strategic orientation strengthening intermediate organisations is the enhancement in the capacities of CSA's farmers' cooperatives (including the seven registered and three unregistered cooperatives) between 2012 and 2014 towards ensuring livelihood security of farmers. Favourable conditions (necessary but not sufficient) that might have helped CSA with building cooperative capacities include the growing demand for organic produce in the state that helped farmers fetch a better price for their produce and thereby incentivised and motivated them to scale up their activities; the presence of the SERP programme that also promotes CSA's NPM concept amongst female SHGs and other farmers (even before CSA started its work around NPM); and presence of DAATTC centres that impart trainings to the farmers of CSA cooperatives on issues of crop production and management, and organic farming practices. This in turn facilitated CSA's efforts towards promotion of sustainable agricultural practices among farmer cooperatives through strengthening their capacities to secure their incomes from the adoption of farm and non-farm based livelihood activities. (not necessary but sufficient)

7.3 Relevance

With regards to the baseline ToC, the interventions and outcomes achieved are relevant because they align with CSA's overall goal which is to achieve income security for female and male farmers who engage in NPM farming and organic farming at lower costs and higher incomes. Linking producer organisations with consumer organisations and other market outlets, as well as linking them with government schemes to access subsidies and engaging with other NGO networks to lobby for favourable policies also show that CSA has been capable of shifting its technology centric approach to a broader sustainable livelihoods approach.

With regards to the context in which CSA is operating, its interventions and outcomes achieved are highly relevant given the fact that 56 % of India's population is dependent upon agriculture for its livelihood, of which 95% are small and marginal farmers. CSAs NPM concept of farming considerably increases the income profits for small farmers, has been adopted by para agencies for wide-spread dissemination and is currently being discussed as a strategy to reduce India's carbon footprint. Linking professional farmer organisations to markets, as well as to government schemes for subsidies, also contributes to embedding these organisations into their political environment. Promoting the participation of women in these professional structures will help to prepare these women to become leaders in the agricultural sector.

With regards to the CS policies of Hivos, CSA's interventions and outcomes are relevant because they perfectly fit into its Green Entrepreneurship programme, aiming to mobilise the capacities of small and marginalised (female) farmers to negotiate with government and market institutions.

7.4 Explaining factors

Most important factors within CSA that explain the findings consist of the fact that CSA has a charismatic leader, who enjoys respect from both government and NGOs. This director is well connected with organisations within Andhra Pradesh, with those in other states and has become a renowned figure on television and in the written press. CSA's vision and its way of working seem largely to be informed by this director who managed to shift CSA's vision to focus on farmers' livelihoods rather than on organic agricultural production.

The information made available by both CSA and Hivos show that these relations were effective and not hampering any development intervention.

The most important external factors that possibly have hampered progress being made are the political turmoil in the past two years that ultimately led to Andhra Pradesh being split into two separate states in June 2014. The following bureaucratic division has caused procedural delays in the process of registration of the cooperatives and reduced government support, which is gradually improving due to CSA's awareness meetings. Other external factors that impact upon the success of CSA's intervention are related to scanty rainfall and perpetual cyclones that destroyed agricultural produce and claimed thousands of lives. A more general trend which will possibly affect CSA's intervention in the coming years is a general disinterest shown by youngsters to earn a living as a farmer.

7.5 Design of the intervention

Concluding on the general design of the intervention, it can be noted that both the areas that CSA's work focuses on that were assessed during this evaluation- women in agriculture and cooperatives - are relevant to the context and in line with work of other agricultural agencies like IFAD or FAO. Because of all pre-conditions at play in Andhra Pradesh (high presence of SHGs, work of SERP programme), it would be more challenging to implement exactly the same programme in another state and more awareness raising activities might be necessary beforehand. CSA has benefited from a long standing experience in the (geographical) area and has been able to connect to the needs of its target groups leading to successes that other SPOs working in the same sector have not reached. The

SPO could benefit from linking its work with women to other initiatives in this field and to a more thorough follow-up of the improvement of the capacity of its cooperatives to make them autonomous.

Table 3

Summary of findings.

When looking at the MFS II interventions of this SPO to strengthen civil society and/or policy influencing, how much do you agree with the following statements?	Score
The CS interventions were well designed	8
The CS interventions were implemented as designed	9
The CS interventions reached their objectives	7
The observed outcomes are attributable to the CS interventions	5
The observed CS outcomes are relevant to the beneficiaries of the SPO	10

Score between 1 to 10, with 1 being "not at all" and 10 being "completely".

Appendix 1 Civil Society Scores

This table presents the appreciation of the evaluation team regarding changes occurred for each indicator between 2012 and 2014 on a scale of -2 to + 2

- 2 = Considerable deterioration

- 1 = A slight deterioration

0 = no change occurred, the situation is the same as in 2012

+1 = slight improvement

+2 = considerable improvement

Dimension		Indicators	Question	Change
Civic engagement	1	Needs of marginalised groups	How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies?	+2
	2	Involvement of target groups	What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities?	+2
	3	Political engagement	How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups?	+1
Level of organisation	5	Relations with other organisations	In the past 12 months what has been the most intensive interaction you had with other CSOs?	+1
	5	Frequency of dialogue with closest CSO	In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with?	+1
	6	Defending the interests of marginalised groups	Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs?	+1
	7	Composition current financial resource base	How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendance to workshops of other CSOs; costs for organisational growth and/or networking?	+1
Practice Values	8	Downward accountability	To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them?	0
	9	Composition of social organs	What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for?	0
	10	External financial auditing	How regularly is your organisation audited externally?	+1
Perception of impact	11	Client satisfaction	What are the most important concerns of your target groups? How do your services take into account those important concerns?	+2
	12	Civil society impact.	In the past 12 months, what impact did you have on building a strong civil society?	+2
	13	Relation with public sector organisations.	In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives?	+1
	14	Relation with private sector organisations	In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective?	+1
	15	Influence upon public policies, rules, regulations	How successful have you been in influencing public policies and practices in the past 2 years?	+2
	16	Influence upon private sector agencies' policies, rules, regulations.	How successful have you been in influencing private sector policies and practices in the past 2 years?	Not applicable

CS cont ext	17	Coping strategies	In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society.	+1
-------------------	----	-------------------	---	----

Appendix 2 Changes in civil society indicators between 2012 and 2014

2.1 Civic Engagement

2.1.1 Needs of marginalised groups SPO

CSA aims to promote non-pesticidal farming techniques towards the adaptation of ecological practices among farmers—including small, marginal and women farmers, sharecroppers, tenants and Dalits—in six districts of Andhra Pradesh (AP). To further its cause CSA has helped constitute seven registered farmers' cooperatives over the past seven years⁷⁸—three more formed between 2012 and 2014 are in the process of getting registered—and a consumer cooperative called Sahaja Aharam⁷⁹. The cooperatives are initiated to promote collective action and participation in all the agricultural practices starting from seed to market. CSA expanded its outreach from 3326 farmers in 2012⁸⁰, to 4841 farmers in 2014⁸¹.

The Hivos Annual Report 2013-14 credits CSA for an evident “emphasis to enhance the participation of women through focusing on interventions related to women.” This has led to an increase in women members in five cooperatives, with the cumulative women membership in all seven rising from 86 in 2012 to 129 in 2014. Moreover, in 2012-13 only 20 women-headed households were members of these cooperatives, in 2013-14 this number increased to 54. The number of women Community Resource Persons (CRPs)⁸² has also grown in six cooperatives; in 2012, 19 out of 52 CRPs were women, in 2014, 35 out of 74 are women (a rise from 36 per cent to 47 per cent). Further, the period between 2012 and 2014 saw the constitution of an exclusive women's cooperative, the Sri Gayatri Women's Mutually Aided Cooperative in Kadapa district. CSA has already formatted the by-laws for registration of this cooperative, but its registration stands delayed due to bifurcation of Andhra Pradesh (AP). Significantly, in 2012, a mandate introduced 50 per cent women representation cooperatives' boards. Currently, the boards of three of the seven cooperatives are complying.

These upswings related to women's participation in the cooperatives, however, must note the fact that in five out of the seven cooperatives, women comprise only five to 21 per cent of the membership, also women's representation in boards declined in two cooperatives.

Further, in 2013, CSA extended support families affected by farmer suicides⁸³. A meeting of widows from such families and women-headed households was facilitated by CSA, with assistance from local NGO REDS (Rural & Environment Development Society)⁸⁴, in September 2013 at Kadiri in REDS office.

⁷⁸ The first cooperative, named Enabavi, was constituted in 2008.

⁷⁹ Sahaja Aharam was established in the year 2008, it is the marketing wing of Centre for Sustainable Agriculture (CSA).

⁸⁰ Contract number 1002883 and “Sustaining Farming based Livelihoods” Objectives and Achievements in the last phase of HIVOS-supported work: 2006-2011

⁸¹ CSA's Annual Report 2013-14: Building Farmers Institutions for Sustaining Farming Livelihoods

⁸² Community Resource Persons (CRPs) are individuals or leaders from within the community whom organisations choose and provide with the necessary exposure, technical training and expertise. These individuals are then capable of continuing the organization's work and taking it forward long after the intervention stops. Refer, http://www.greenfoundation.in/mksp/?page_id=898

⁸³ The number of farmers who have committed suicide since 1995 is more than 290, 000 according to the National Crime Records Bureau. The rate of farmer suicide in Andhra Pradesh is nearly three times the national average. A family that loses a family member to suicide due to debt is guaranteed a one-time payment of Rs 150, 000 from the government. Refer, <http://www.nytimes.com/2014/02/23/world/asia/after-farmers-commit-suicide-debts-fall-on-families-in-india.html>

⁸⁴ REDS or Rural & Environment Development Society, was registered as a not-for-profit organisation in 1996 to further the well-being of rural communities. REDS activities are mainly focused on rural development, sustainable agriculture, child rights, anti-trafficking and empowering CBO's to gain control over natural resources. See <http://redskadiri.wordpress.com/about/>

Twenty five women farmers participated. CSA also helped such widows avail compensation and mobilised resources for their children's education and livelihood. While doing so it felt the need for a separate women farmers' forum, it therefore conducted consultative and preparatory meetings for it in collaboration with REDS and finally started a pilot project for the Women Farmers' Forum (WFF)⁸⁵ in Anantapur district in 2013.

Score: +2

2.1.2 Involvement of target groups SPO

There was a divergence of views in the hierarchy with regard to this indicator. The field and managerial staff reported no changes over 2012-14; this even as they acknowledged the involvement of the farmers, cooperative members and farmers' representatives in formulating production and business plans and participation in policy discussions as well as drafting charter of demands. The CSA executive leadership, meanwhile, reported a significant improvement in the level of member participation and decision making in the cooperatives over the past two years. Compared to earlier, the cooperatives are now: a) extensively involved in identifying their needs and exploring possible solutions; b) able to plan both crop production and marketing activities, with some cooperatives even saving and then using such savings to fund business ventures; c) active negotiators in accessing various government schemes which they were earlier unaware of and unable to negotiate individually.

Importantly, farmers and farmers' cooperatives associated with CSA are increasingly engaging with Rythu Swarajya Vedika (RSV)⁸⁶ in understanding and engaging with policy change. For instance, the Women's Farmers' Forum constituted by CSA is linked to RSV.

The HIVOS Annual Report 2013-14 also observes a considerable enhancement in member participation and the approach for collective bargaining in the cooperatives. It states that the farmer members have taken a step ahead in performing various activities collectively, like generating share capital, taking collective responsibility for membership drives and transacting business. This has sufficiently increased the understanding on cooperative principles among farmers, along with collective action, beginning from drafting production plans to collective marketing.

Six of its associate cooperatives have availed loans from CSA in 2013; the total amount lent is Rs. 726,000 of which Rs.10,000 has been repaid by one cooperative. Two cooperatives have taken loan from Sahaja Aharam (Enabavi⁸⁷ and Punnami⁸⁸ - Rs. 150,0000 each). Enabavi has repaid Rs. 80,000 while Punnami has repaid the entire amount and has applied for fresh loan this year. The Enabavi cooperative has, in fact, already made substantial progress in the last Rabi⁸⁹ season through initiating aggregation and collective marketing of its members' produce. Also, their growing ownership of Enabavi has the cooperative's current members keen on enhancing its membership base, as also extending its work to other villages.

It may be noted that even as the cooperatives become more self-sustaining, and indeed more independent of CSA, CSA's own interventions—like at the time of the baseline—continue to be informed by its target groups' needs. Such needs assessments are done through participatory approaches like surveys, focus group discussions and research studies, as also by the occasional requests for assistance that come from the target groups. Review and planning meetings are held with field staff before the onset of the sowing seasons, who, in turn, conduct regular village level meetings with farmers groups and communities for crucial inputs.

⁸⁵ The Women Farmers' Forum (WFF) serves as a platform for these women to meet and discuss their personal issues, agricultural issues, seed problems etc. every month. CSA and REDS also linked WFF to the Rythu Swarajya Vedika in 2013 (WFF members are now RSV members also), though there are other women's organisations also, which are members of RSV.

⁸⁶ Rythu Swarajya Vedika (RSV) is an umbrella organisation of NGOs and intellectuals working to ensure sustainable livelihoods for agricultural communities in Andhra Pradesh. It is part of the nationwide Alliance for Sustainable and Holistic Agriculture (ASHA).

⁸⁷ Enabavi Organic Farmers Cooperative was formed to support the various activities of the farmers of Enabavi village and to also improve their collective bargaining power in the markets.

⁸⁸ Punnami is an organic farmer's cooperative supported by Centre for Sustainable Agriculture (CSA).

⁸⁹ Rabi is the second cropping season in India, it means spring in Arabic. The Rabi cropping season is from October-March

The CSA personnel shared that the past two years have seen some additions to CSA's feedback mechanisms. At the district level CSA has come to rely on identifying target group needs and response through the RSV. Phone calls, interaction with farmers through media and large scale interaction with farmers have also been intensified to remain in constant communication with the ground. Information exchange also happens through the farmers help line set up by CSA.

Some instances of such community driven interventions are: a) in 2013, farmers in the Vizianagaram area shared their desire to raise livestock for income enhancement and domestic use with the CSA field staff. CSA, in turn, located a temple in Vishakhapatnam that was donating cows and bullocks, it paid the transportation cost, and had about 200 animals delivered and distributed amongst the Vizianagaram farmers; b) the Punnami, in 2013, requested CSA to help facilitate its need for cow urine to prepare organic manure. CSA has since organised a mobile unit that collects cow urine from various households and then distributes it to those who need it in 21 surrounding villages.

Score: +2

2.1.3 Intensity of political engagement SPO

Despite being apolitical, as already mentioned in the baseline report, CSA continues to engage regularly with local self-government and periodically with elected representatives. CSA runs a monthly bulletin for policy makers called the *Rythu Mitra*, and a monthly magazine Tolakari on technology and policy issues. It publishes an analysis of the annual national budget from the farmers' perspective, Agriwatch. It works with farmers' organisations to put forth a 'Farmers' Manifesto' before elections. CSA organises meetings and seminars with elected representatives at the village, block and the district levels, as well as the MLAs (Members of Legislative Assemblies) on policy related issues to sensitise them. In many instances farmers and farmers' groups themselves ask CSA to highlight their concerns in local elected bodies and in meetings with government officials.

Score: +1

2.2 Level of Organisation

2.2.1 Relations with other organisations SPO

As during the baseline, so also now, associations intrinsic to CSA's core interventions involve the seven cooperatives it mentors and supports, and the local NGOs that CSA engages to help it identify and address target group needs. At the time of the baseline CSA had three local NGOs as partners, it now has four: REDS, CROPS (Centre for Rural Operation Programme Society)⁹⁰, PEACE (Peoples Action for Creative Education)⁹¹ and Vennala Cooperative in the Anantapur, Warangal, Nalgonda and Kadapa districts respectively.

Further, the period between 2012 and 2014 saw CSA consolidating its engagement with the RSV and ASHA networks at the state and national levels respectively. CSA authored reports on budget analysis, farmers income security, road map for sustainable agriculture and these were used to develop the lobbying agendas of these networks which in turn were mentioned in the election manifestoes of political parties. CSA along with RSV and ASHA organised a national workshop in Delhi in September of 2013 focusing on "Rethinking economic policies to ensure income security in agriculture". It also, with ASHA playing an active organiser's role, participated in the Peoples' Biodiversity Festival in Hyderabad in October of 2012. In 2014, CSA along with RSV and ASHA, held a meeting on agricultural

⁹⁰ CROPS or the Centre for Rural Operation Programme Society is based in Andhra Pradesh's Warangal district. It has along with CSA been responsible for making Enabavi, a tiny village in Andhra Pradesh the first completely organic, free of pesticides, fertilisers and Genetically modified crops village. Refer, <http://www.thehindu.com/todays-paper/tp-national/tp-andhrapradesh/enabavi-farmers-create-history/article3060052.ece>

⁹¹ PEACE or Peoples Action for Creative Education is a grassroots voluntary organisation established in 1986 in Andhra Pradesh. It works for rural development especially of women, children and poor & marginal farmers. Refer, http://www.peaceap.org/about_us.html

issues, priorities and challenges in newly formed state of Telangana. NGOs, CBOs, cooperatives, political party leaders, farmers, participated in this event.

The past two years also saw CSA tying up with various organisations, and not necessarily comprising only farmers, to combat the challenges thrown up by the state's agrarian crisis. The executive leadership shared that CSA and RSV are planning to promote a special women farmers' cooperative with the families affected by suicides. A meeting of women farmers from such bereaved families and women-headed households was, in fact, organised in Kadiri in September 2013 by CSA with the support of REDS. CSA later facilitated the proceeding of a state level meeting of such families organised by Caring Citizens' Collective (CCC)⁹² in October of 2013 in Hyderabad. CSA also engaged regularly with Jana Vignana Vedika (JVV)⁹³ and the All India People's Science Network⁹⁴ on issues of agrarian crisis and sustainable agriculture. CSA organised district level network meetings addressing agrarian crisis including farmers' suicides in the Warangal⁹⁵ and Nalgonda⁹⁶ districts in February 2014.

Over and above these CSA's past relations with the following CSOs continue since the baseline: ActionAid, OXFAM International, Centre for World Solidarity (CWS)⁹⁷, Open Source Seed Initiative (OSSSI)⁹⁸, Deccan Development Society (DDS)⁹⁹, Chetna Organic¹⁰⁰ and the Vivekananda Kendriya Trust (Kanyakumari)¹⁰¹. CSA also organised a Cooperative Mela (Fair) in February 2014 in collaboration with Accion Fraterna Ecology Centre, Anantapur, which shared 50 per cent of the expenses.

⁹² Caring Citizens' Collective (CCC) comprises social activists, academicians, intellectuals and journalists who formed it in 2007 in Andhra Pradesh. The CCC volunteers work in the Telangana region of AP where the farmer suicides are high specifically in Medak, Mahabubnagar and Warangal districts. A beginning has been made to support the education of the children belonging to farmer's families affected by suicides. In addition to supporting the children's education, CCC is also working hard to assist the suicide and starvation deaths affected families to obtain financial and other required assistance from the government. Refer, <http://www.lamakaan.com/events/548>; <http://www.actionaid.org/india/what-we-do/andhra-pradesh/our-response-acute-agrarian-crisis-and-spate-farmer-suicides-medak>

⁹³ Jana Vignana Vedika (JVV), is an organisation working towards popularisation of science among the people. It started in 1988 in Andhra Pradesh. It has three main aims, one, science for the people, second, science for progress, and third, science for self-reliance. Refer, <http://jvv.org.in/about.php>

⁹⁴ The All India People's Science Network (AIPSN) came into being in 1988. It organizes All India People's Science Congress (AIPSC) every two years. It was born out of the People's Science Movement (PSM) of the 1970s, it has evolved around the concept of conscious application of science for social activism. Refer, <http://aipsc2010.weebly.com/organisation.html>

⁹⁵ A district-level meeting on women farmers' issues was held in Warangal on February 19th February 2014 to discuss issues related to women-headed farmer families and suicide affected farmer families. All the participants felt an urgent need to establish a Vadhika (Forum) on women's issues at district-level.

⁹⁶ A district-level women farmers meeting was held in Nalgonda on February 25th, 2014 to identify the issues related to the rights of women farmers, especially single women and widows from farmer suicide families. A decision was taken to form a committee at district-level to fight for women's right to education, land and livelihood. Also, a district-level committee comprising 12 women farmers was formed and the process was facilitated by CSA, RSV and PEACE. This meeting was covered extensively by the media.

⁹⁷ Centre for World Solidarity (CWS) emerged from Action for World Solidarity (ASW) a Berlin-based charitable organisation. Its offices are located in Secunderabad, Telangana. The organisation makes various interventions on issues of gender, dalits, adivasis, forest and agriculture. The last is carried out in collaboration with CSA. Refer, <http://www.cwsy.org/html/wware.html>

⁹⁸ Open Source Seed Initiative (OSSSI) is dedicated to maintaining fair and open access to plant genetic resources worldwide. Launched by three academics from the *University of Wisconsin*, OSSSI aims to provide an alternative to the patent-protected seeds sold by major corporate seed producers, but partners and customers are free to use the open-source seeds to make money, as long as they don't patent any of their developments. Refer, <http://www.opensourceseedinitiative.org/about/mission-vision/>; <http://www.opensourceseedinitiative.org/>

⁹⁹ The Deccan Development Society (DDS) is a two-decade old grassroots organisation working in about 75 villages with women's Sanghams (voluntary village level associations of the poor) in Medak District of Andhra Pradesh. The organisation mainly represents women, dalit women. It works on ensuring these women have food security and eventual food sovereignty. Refer, <http://www.indiaorganic.net/institutions/dds.html>

¹⁰⁰ Chetna Organic aims to improve the livelihood of small farming households by helping them create innovative farming systems to become more sustainable and profitable. Refer, <http://www.solidaridad.nl/files/The%20Chetna%20Story.pdf>

¹⁰¹ Vivekananda Kendriya Trust, part of the Vivekananda Kendra which has the twin aims of "Man-making and nation-building". The purpose of the organisation is to offer "spiritual oriented service mission". Refer, <http://www.vivekanandakendra.org/english/mission>

A CSA board member said that the organisation's advocacy and campaigns have now reached CSOs in Nepal, Bangladesh, Sri Lanka, Pakistan and Maldives through the international network SAAPE (South Asia Alliance for Poverty Eradication)¹⁰² which is working to promote food sovereignty in the region. The executive leadership added that the past two years had also seen donor agencies seeking CSA's support to buttress the fieldwork of their partners.

Score: +1

2.2.2 Frequency of dialogue with closest civil society organisation SPO

The CSA personnel were unanimous that the frequency of interactions between CSA and its closest associates had increased since the baseline. Constant communication is maintained with the cooperatives through meetings held in the field and the CSA office, and over the phone. Business plans, livelihood diversification, trainings, etc. are discussed. Interactions with local NGO partners are also called regularly. These are about thrashing out operational matters, and on occasion also ad-hoc so as to frame responses on emerging issues. Meetings with RSV are held twice a month on issues such as credit, insurance, tenant farmers' issues, etc. Meetings with ASHA is held once every three months, the agenda often pertains to CSA's providing technical support to the network's members (NGOs) on issues such as seed management. The past two years, however, saw CSA, RSV and ASHA meet each other over and above the regular meetings given the imminent elections in 2014, and the desire of these organisations to influence manifestoes favourably for farmers.

CSA continued to update all the CSOs in its contact with the most current literature and news on production and policy related issues on sustainable agriculture.

Score: +1.

2.2.3 Defending the interests of marginalised groups SPO

The past two years saw the farmers' cooperatives supported by CSA becoming more capable of defending the interests of the small and marginal farmers who comprise its membership. Also, CSA, along with a local partner REDS, the RSV and ASHA networks, and the citizen's collective CCC, undertook activities especially focused at addressing the concerns of the families affected by farmer suicides due to the state's agrarian crisis. Meetings with women from such bereaving families were held at the district level in Kadiri and the state level in Hyderabad.

The executive leadership named the US-based Open Source Seed Initiative (OSSI) as potentially being able to strengthen a Community Managed Seed System (CMSS)¹⁰³ in providing farmers with good quality foundation seeds and strengthening legal systems in favour of farmers in the long run.

Score: +1

2.2.4 Composition financial resource base SPO

Like at the time of the baseline, CSA continues to have multiple funding sources: grants from donor agencies for particular projects/activities; donations from individuals; consultancies and trainings to other CSOs; consultancies with the governments for delivering particular services; proceeds from the sales of organic seeds and food; resource generation from developing and selling publications.

¹⁰² Constituted in circa 2000 SAAPE, or the South Asia Alliance for Poverty Eradication, works on poverty eradication in a holistic way, with a special focus on food sovereignty, gender justice, demilitarisation, democratisation and social justice issues in South Asia. It brings together existing like-minded networks to strengthen and build on their work; to make explicit the links between different issues that impact on poverty; and to link and bring a regional understanding to national level campaigns. *Refer*, <http://www.saape.org/>

¹⁰³ The Community Managed Seed System (CMSS) is an initiative that started in 2011 with the objective of meeting the requirements of both seed producers and consumers. Under this system, the Department of Agriculture provides a form of subsidy and overall there is control established over seed production, supply and distribution. *Refer*, <http://www.thehindu.com/sci-tech/science/community-managed-system-sows-the-seeds-of-success/article5322435.ece>

Funds from HIVOS contribute towards the bulk of CSA staff salaries, this funding ends in March 2015. In HIVOS' CSA Assessment Document for 2011-2012 its contribution to CSA was 33 per cent, this figure is at 21 per cent in a similar document for 2012-13. The percentage of contributions by other parties and CSA-generated income, meanwhile, shot up from 67 to 79 per cent in 2011-12 and 2012-13 respectively.

Qualifying that concerns regarding fund mobilising for the working capital for various cooperatives did exist, the executive leadership and managers, in fact, assessed CSA's financial situation as having largely improved over the past two years. They said that more public institutions are expressing willingness to collaborate with it, and that CSA has emerged as a lead organisation in providing technical support on sustainable agriculture techniques and practices to various organisations across the country being supported by World Bank, ActionAid, and Reliance Foundation¹⁰⁴ etc. Discussions have been initiated with various donors, agencies and concerned individuals for floating a marketing agency that could cater the fund flow through marketing as a social enterprise. The field staff, however, perceived no change vis a vis funding. They reported only partial success in CSA's attempts to raise money by offering consultancy to commercial projects, government departments and NGOs on organic farming. They were more satisfied with the revenues being generated by selling products like vermi-compost, organic manure etc. to farmers.

Two awards won in 2014 by CSA contributed to its funds: the best rural innovation award for non pesticidal management in Bihar Innovation Forum¹⁰⁵ which included Rs 7 lakh as prize money; the best rural innovation award for 'community managed sustainable agriculture' in Maharashtra Rural Livelihood Mission (MSRLM)¹⁰⁶ which had a cash component of Rs. 5 lakh. Also, the television show Satyamev Jayate that CSA had participated in June 2012 had seen a tremendous viewer response from across the country, with Rs 30 lakhs being sent in as donations; this amount saw an increment over the past two years with CSA receiving cumulative donations of over 40 lakhs.

Score: +1

2.3 Practice of Values

2.3.1 Downward accountability

CSA's executive leadership continues to be answerable to the staff meetings, HR committee within the organisation and the Board of Trustees. And this accountability is shared by all the organisations created by CSA. For instance, the farmers' cooperatives are accountable to their general body and executive committee.

Project wise an annual planning meeting is conducted with all staff members. Logframes and action plans are prepared, and activities are implemented as per these. Project performance and achievements are reviewed with the Project Management Committee. Partner organisations provide action plans and activity reports every six months, with un-audited statement of accounts. CSA takes the approval of the Board of Trustees on all the policies, and all programmes are reviewed for programme achievement in the trustee's meeting.

The programme managers saw no change in the situation as compared to the baseline. They, in fact, expressed the need for a more proactive HR committee, more monthly meetings, internal auditing processes and increased disclosure of project fund related information to CSA's partners. The field staff agreed, saying that the leadership's baseline announcement of its decision to disclose project

¹⁰⁴ Reliance Foundation was set up in 2010 by an initiative of Reliance Industries Limited (RIL). It works in tandem with partners on issues of rural transformation, education, health, urban renewal and culture & heritage. Refer, http://www.reliancefoundation.org/about_us.html

¹⁰⁵ The Bihar Innovation Forum (BIF) is a platform which offers opportunity to various stakeholders to present innovative solutions and ideas which can help create a more sustainable impact in rural Bihar. It is developed and supported by the Bihar Rural Livelihoods Promotion Society (BRLPS). Refer, <http://www.biharinnovationforum.in/pages.php?pid=8>

¹⁰⁶ The Maharashtra Rural Livelihood Mission (MSRLM) is an institution that both enables and empowers the poor to access better livelihoods. It is responsible for integration of livelihoods innovation across various sub-sectors. Refer, <http://msrlm.org/mrlif/>

fund information to its partner organisations and associated farmers had not been implemented yet. Contrarily, the executive leadership reported considerable improvement vis a vis CSA's accountability issues. This is to be attributed to an increased awareness amongst cooperatives on the need for accountability, book keeping and maintenance of balance sheet and increased membership to enhance the value of share capital. Personnel from the Human Resources, Administration and Accounts department said that CSA's monitoring systems had improved at each level through community involvement, local partners and CSA staff.

Score: 0

2.3.2 Composition of social organs SPO

CSA's seven-member board comprises a farmer and two women. The board membership in the farmers' cooperatives is mandated to have 50 per cent women's representation. More than half of the farming community CSA works with belongs to socially backward classes. Barring the leadership, all other staff in CSA reported no change with regard to the representation of the marginalised in CSA and its associate cooperatives.

This opinion is sustained by the figures concerning the evolution of cooperative board members between 2012-2014: Already in 2012-2013, and also in 2013-2014, only three cooperatives out of the seven had 50 per cent women. In one cooperative three men replaced women on the board. In another cooperative several board members left but were not replaced: eventually there were less women than men on the board. The leadership said considerable increase in women's participation in its cooperatives, and the achievements of its women-led cooperatives, since the baseline were illustrations of such improvement

Score: 0

2.3.3 External financial auditing SPO

As in the baseline, so also now, CSA undergoes an audit conducted by an external agency annually. However, the executive leadership observed considerable improvement in the organisation's auditing processes because the past two years had seen such audits—conducted by external auditors—being initiated in the cooperatives as well. Staff from the Human Resources, Administration and Accounts reported improved financial control, regulation and management systems since 2012.

Score: +1

2.4 Perception of Impact

2.4.1 Client satisfaction SPO

At the time of the baseline, CSA staff listed livelihood and income security as the most important concerns of its target groups. While these remain the same, CSA has taken many significant steps to alleviate such concerns between 2012 and 2014.

CSA has made efforts in organising farmers around input production by promoting seed cooperatives and extending input based support to all its cooperatives, which, in turn, has helped reduce input costs and dependence on external sources for such inputs. Farmers from two CSA cooperatives said that the cost of cultivation has gone down due the farmers now producing vermi-compost and seeds for their own consumption, which has also reduced dependence on fertilisers and pesticides. Farmers of their cooperatives had benefitted by saving an average of Rs. 7,000 per season on account of this, they added.

CSA provided interest free loans to farmers for seed procurement and other livelihood activities. Similar loans are issued by CSA's consumer cooperative Sahaja Aharam. This is through the Value Chain Fund started as a pilot in 2012 and institutionalised in 2013; under this, easy loans are provided for a business model from the CSA-created corpus fund, the loans are interest free in the first year

with farmers deciding on their repayment schedule based on the cooperatives financial performance. Farmers from the Punnami cooperative said they had received a loan of Rs. 1.5 lakhs under the Value Chain Fund for procurement and marketing of grains, which was interest free in its first year. The cooperative, after making a profit, has applied for a fresh loan to upscale their activities.

Apart from providing financial support/working capital to the farmers, CSA provided technical trainings on seed processing, compost making, preparation of bio-fertilisers and organic manure; a farmer from the Tungabhadra Cooperative verified that its women members had received three such trainings on preparation and marketing of bio-fertilisers in 2013.

To increase the marketability of the organic foods being produced by the farmers associated with the cooperatives, CSA entered into third-party certification agreement with Aditi Organics, accredited by Government of India in 2012. CSA helps cooperatives obtain licenses to market their produce as organic—500 and 1075 farmers associated with CSA obtained such certification in 2012 and 2013 respectively. Farmers from CSA cooperatives agreed to have gone through the certification process for their produce where the certification agency, Aditi Organics, randomly chose the farmers for the inspection of the produce.

CSA also works on building a community managed seed bank system in collaboration with REDS, as a part of which farmers obtain subsidies from state DoA (Department of Agriculture) for producing and selling seeds. This is still in its early stages of development.

CSA has also been facilitating government support for the cooperatives by building a large scale convergence between cooperatives and various schemes in government line departments such as the DoH (Department of Horticulture), DoA, NABARD (National Bank for Agriculture and Rural Development)¹⁰⁷, etc. Farmers from cooperatives confirmed that they had received such support from CSA in accessing mobile processing seed units through DoA for marketing of seeds, obtaining benefits under Tank-Silt application programme, and obtaining subsidies for the purchase of farm equipment under the DoA Yantralakshini scheme to promote mechanisation in agricultural activities.

Over the years, its work with the farmers to promote non-pesticidal agricultural practices, CSA realised that awry weather patterns and unexpected droughts, are making producing food alone a risky proposition for the farmers. Therefore, it started its work to expand farmers' income basket by promoting diversification of livelihood by helping cooperatives take up activities such as backyard poultry, compost making, seed processing, dairy, sericulture etc. to support their incomes. The Haritha cooperative in Vizayanagaram district has incorporated dairy as one of commercial activities in 2013 to support the incomes of its members. Similarly, poultry was introduced in Warangal district's Enabavi cooperative in 2013 for which the farmers reported to have received financial support from CSA, while Kadiri cooperative in Anantapur now produces and sells seeds. CSA extended its support to the farmers of the Enabavi cooperative for selling seeds by providing them mini mobile seed processing units and packaging material, said farmers. Farmers from Punnami cooperative reported to have received CSA support in establishing bank linkages for their dairy related initiatives. Fifteen farmers who received training in raising kitchen gardens at Mutlyala Chervu village reported an increase in their household income by Rs. 2,000 along with considerable savings on vegetable purchase—Rs. 30,000 collectively for all the 15 families.

CSA engages in influencing policies related to women in agriculture. It organised a state-level workshop on women land rights and food sovereignty in September 2013 in Hyderabad. CSA, in collaboration with REDS, constituted the Women Farmers' Forum (WFF) as a pilot in Anantapur district in 2013 with the aim to organise women farmers- especially those belonging to farmer suicide families and women headed households and provide them a platform where they can discuss, debate and plan and execute strategies around issues concerning women farmers. It helps women farmers avail benefits of the government's programme Mahila Kisan Sashaktikaran Pariyojna (MKSP)¹⁰⁸. Also, plans

¹⁰⁷ National Bank for Agriculture and Rural Development (NABARD) was set up by the Reserve Bank of India (RBI) in 1982, for the upliftment of rural India by increasing the credit flow for improving agriculture and rural non-farm sector. Refer, <https://www.nabard.org/english/mission.aspx>

¹⁰⁸ Mahila Kisan Sashaktikaran Pariyojana (MKSP) is a Ministry of Rural Development project and aims at empowering women in agriculture by making "systemic investments to enhance their participation and productivity". It also works to

are underway to promote a women's cooperative that focuses on equity, food security and enhancement of livelihood options.

CSA and Sahaja Aharam started organising Organic Farmers Cooperative Mela/Fair (OCFM) in 2012 in order to provide a platform to bring organic producers, farmers' cooperatives, NGOs, consumers, government institutions and policy makers together. This, to enable shared learning on organic farming, improve the bargaining power of farmers, improve market access to enable them to get a better share in consumer price and enable the farmers to access various government schemes. CSA approaches organisations like NABARD, APMAS, Chetna Organics, CWS, Cooperative Development Foundation (CDF), Bala Vikasa etc. to ensure their participation in such fairs. These are annual fairs and until now three have been organised in 2012, 2013 and 2014. CRP member from one of the cooperatives, who attended the 2013 organic fair, reported to have observed good demand for safe and organic food in the fair.

Score: +2

2.4.2 Civil society impact SPO

According to CSA staff and as already described in the baseline report, CSA has been working meaningfully at organising farmers into groups/cooperatives/producer companies to access more markets and gain better percentage in the consumer price. However, over time, especially the past two years, CSA has also emerged as a leading organisation in providing technical guidance and support on sustainable agriculture, seed production etc to various groups across the country supported by, to name a few, the World Bank, ActionAid and Reliance Foundation.

CSA's focus has been to get increasing numbers from civil society to engage in the cause of sustainable agriculture. Towards this CSA has worked with a range of people from different platforms and at all levels; ranging from the government's DoA to the World Bank funded project called 'Community Managed Sustainable Agriculture' (CMSA)¹⁰⁹ to the very mainstream media. CSA constantly works at building alliances with civil society organisations like NGOs, farmers' organisations, human rights organisations and coordinating these; and especially strengthening the ASHA network comprising more than 400 members from about 25 organisations across the country.

According to one of CSA's board members, CSA through its partnership with South Asia Alliance for Poverty Eradication (SAAPE) has been involved in spreading the message on promotion of food sovereignty amongst the not so active CSOs in South Asian countries such as Nepal, Bangladesh, Sri Lanka, Pakistan and Maldives. Further, through its partnership with media (channels such as MAHA TV, Sakshi TV, HMTV, AIR, TV5, TV9 etc.), CSA has been able to influence discussions and debate on issues related to agriculture, farmer suicides, need to promote sustainable agriculture, separate budget for agriculture and maintenance of bio-diversity. This has taken the debate on agriculture to the general public where citizens are discussing policies related to agriculture and opting to buy organic safe food. Positive media response has in turn fed back into CSA's activities and helped it to enlarge its outreach.

While some of CSA's partners appreciate its efforts and achievements towards building up a strong civil society network and said that it provides cooperatives both financial and technical support, others said that it has not been able to affect a considerable improvement on promotion of sustainable agricultural practices and non-farm livelihood practices in the state and attribute it largely to government programmes.

Score: +2

grant women more control and power over production resources. *Refer,*
<http://rural.nic.in/sites/downloads/latest/SGSY.pdf>

¹⁰⁹ The Community Managed Sustainable Program was initiated in 2006-07 by CSA and REDS. The program developed out of the agriculture crisis. A part of the program was to enable women self-help groups in different villages to become self-sufficient and manage their own seed production.

2.4.3 Relation with public sector organisations SPO

The past two years have seen CSA continuing, and expanding, its work with the public sector. All sections of the CSA staff interviewed said that efforts were made to build large scale convergence between the cooperatives and various administrative line departments and agencies. Especially so in the DoA, DoH, DoS (Department of Sericulture), the Commissioner and Registrar of Cooperatives (CRC) and NABARD. Facilitating such convergence was now easier because of CSA's enhanced access to these government departments and agencies compared to earlier. Many public sector agencies now look at CSA as a partner organisation to be engaged in the implementation of development programmes. CSA also mobilised organic agri-inputs and subsidies for its cooperatives the state's DoA and DoH. Further, NABARD, DoA, DoH and NIRD (National Institute of Rural Development) have been collaborating with CSA in organising the Organic Cooperative Mela (Fair) held every year since 2012. CSA conducted seed trials with two government agriculture institutions: PDK Vidyapeethin Akola, Maharashtra and the Acharya N G Ranga Agricultural University in Hyderabad.

Over and above, these the past two years saw CSA expanding its work into other states through partnerships with their governments on scaling up programmes, this especially in Bihar and Maharashtra; for which was awarded by the Bihar Innovation Forum and the Maharashtra Rural Livelihood Forum in January 2014. CSA has also been providing training to farmers on sustainable agriculture practices in Odisha, Chhattisgarh through the states' Rural Livelihood Missions. CSA worked as a consultant with the Maharashtra State and Agricultural Marketing Board.

CSA's increasing success in its collaboration with the public sector was, however, held suspect by the respondent from para-statal agency SERP (Society for Elimination of Rural Poverty)¹¹⁰ who had a negative experience with CSA when the two had worked together from 2005 to 2008. The SERP official maintained his baseline position that NGOs like CSA do not have the capacity to upscale their activities and this can only be done by public or para-statal organisations. The official regretted that CSA has barely maintained contact with SERP, an important player in the NPM activities in the state's rural parts.

Score: +1

2.4.4 Relation with private sector agencies SPO

Like in 2012, CSA remains open to sharing information and interacting with private sector actors to the extent that such collaborations are in line with its ambitions for small and marginal farmers. To encourage its cooperatives to market their produce, it works with private food marketing agencies and entrepreneurs. Also, CSA has been providing market linkages to producers' organisations through non-profit as well as private marketing agencies like Hyderabad Goes Green, Good Seeds Hyderabad, Deccan Organics-Hyderabad, Sristi Naturals-Hyderabad, Sahaja Samrudha-Banglore, Thanal (NGO) Trivandram (Kerala), Restore-Chennai and Malladi Exports. CSA's efforts to get farmers in its associate cooperatives third party certification programme for organic products in the past two years has had it working with the Bangalore-based Aditi Certifications Pvt. Ltd. Notably, CSA has started working with the CSR (Corporate Social Responsibility)¹¹¹ initiatives of Reliance Foundation towards promoting sustainable agriculture. Discussions for collaboration with Michael & Susan Dell Foundation and HSBC Bank are on.

Score: +1

¹¹⁰ SERP or Society for Elimination of Rural Poverty is an autonomous society of the Department of Rural Development, Government of Andhra Pradesh. SERP has been a key organization in the development of community based organisations and self-help groups in the state to facilitate poverty reduction through social mobilization. Refer, <http://www.serp.ap.gov.in/SHGAP/FrontServlet?requestType=CommonRH&actionVal=loadaboutus>

¹¹¹ The Companies Act 2013 as well as Companies Corporate Social Responsibility Policy Rules 2014 demands that every company, private or public, with a net worth of Rs 500 crore or a turnover of Rs 1,000 crore or net profit of Rs 5 crore, will be required to spend at least 2 per cent of its average net profit from preceding three financial years on corporate social responsibility. Refer, http://www.business-standard.com/article/companies/an-overview-of-csr-rules-under-companies-act-2013-114031000385_1.html

2.4.5 Influence upon public policies, rules, regulations SPO

In the past CSA has been successful in stalling the Seed Bill¹¹² and influencing the Biotechnology Regulatory Authority Bill (BRAI)¹¹³ by mobilising civil society. It also mobilised public opinion on farmers' suicides in the state such that policy makers had to take note of it.

But, as established during the baseline, significantly influencing agricultural policies is still a distant reality because the establishment believes in an industrial model of farming, while CSA is arguing for more ecologically sustainable agriculture managed by communities and small holders. Despite which, the CSA Annual Report 2013-2014 states that the organisation conducted various campaigns and advocacy activities—through RSV and ASHA—to influence policy change through creating pressure on the government to revisit policies on Minimum Support Price (MSP)¹¹⁴, the Seed Bill, bio-technology and GMOs (Genetically Modified Organisms) including other issues like crop insurance and direct income support to farmers. The required data used for such campaigns were sourced from the cooperatives. There are, however, no remarkable success stories to narrate as a consequence. Except that some of these farmers' issues—such as a task force on sustainable agriculture and farmers' income commission—were included in the 2014 election manifestoes of mainstream political parties. Also, years of lobbying saw a separate budget for agriculture being passed in the AP legislative assembly in May 2014.

The efforts of CSA, and its associate CBOs and CSOs, however, impacted many public sector practices:

- The CSA Annual Report 2013-2014 states that as a result of persistent efforts of CSA, CCC and other partners of RSV, all the pending cases of exgratia for farmers' suicide families were settled by the District Collector in Medak district. Several meetings at district level and regional level were organized in the past year and the participants, along with CSA, were farmers, farmer suicide families, NGO's, farmer union leaders, and concerned citizens.
- NABARD, and the Andhra's Pradesh's DoA, DoH and DoS, because of CSA's interventions, granted subsidies for farmers, sanctions for projects, farm mechanisations and licenses for cooperatives to produce and market seeds. Some instances: a) in 2013, the DoA provided subsidy worth Rs 15 lakhs for farm implements like tractors, threshers, sprayers etc for the resource centre of Tungabhadra cooperative in Kurnool district; services of these implements are made available to cooperative members and other farmers at minimal charge; b) the Enabavi and Mulugu cooperatives acquired mobile mini seed processing units in 2013-14 with 90 per cent of the costs financed through DoA subsidies; c) the Kadiri cooperative, a part of CMSS (Community Managed Seed System), is now receiving subsidies from the state's DoA.
- CSA successfully approached the APMIP (Andhra Pradesh Micro Irrigation Project) for help with providing sprinklers and drip irrigation equipment to farmers in 2013.
- CSA also had intensive interactions with the Commissioner and Registrar of Cooperatives (CRC) over the 2012-14 period. The CRC visited the Enabavi cooperative in November 2013 and agreed to sanction money for construction of a warehouse there.
- Earlier green manure seeds were not produced in AP and state government would import them from the north Indian states. Beginning 2013, the Tungabhadra cooperative has started producing such seeds and AP Seeds, the government body on seeds, has started purchasing it at reasonable rates.
- The CSA-facilitated convergence meetings saw 500 acres in Kadapa district's Kondapuram village linked to the National Food Security Mission (NFMS), supported by NABARD, in 2013. The latter provided seeds in the form of grant. The same year, under the INSIMP (Integrated Nutrient Security

¹¹² The Seed Bill, 2004 seeks to regulate the production, distribution and sale of seeds. It requires that every seller of seeds meet certain minimum standards. New amendments have been proposed to the bill in April 2010 and November 2010, the government has accepted most of the recommendations of the standing committee. *Refer*, <http://www.prsindia.org/billtrack/the-seeds-bill-2004-104/>

¹¹³ The Biotechnology Regulatory Authority of India (BRAI) was set up as an independent authority on the basis of BRAI bill, 2013. One of its main purposes is to regulate the research, transport, import, containment, environmental release, manufacture, and use of biotechnology products. *Refer*, <http://www.prsindia.org/billtrack/the-biotechnology-regulatory-authority-of-india-bill-2013-2709/>

¹¹⁴ The Minimum Support Price (MSP) is a scheme by the government of India to protect the interests of the farmers. Under this scheme, the government declares the minimum support prices of agricultural produces assuring the farmers that their produce will be purchased.

Millet Program), 20 farmers owning 20 acres of land in Kurnool district's Erladinne village were given a similar grant for seeds.

- CSA organised exposure visits to successful organic farms through ATMA (Agriculture Technology Management Agency) and the DAATT (District Agriculture and Technology Transfer) centres.

The leadership observed that CSA, since the baseline, has strengthened its position as a credible information source for farmers' cooperatives which now use such information to negotiate in the convergence meetings with government line departments organised by CSA. Many MPs, MLAs and Panchayat representatives consult CSA on agriculture related issues because of its reputation. CSA's reports and experiences are, in fact, used by political parties while planning policy on farmers' livelihood issues. Importantly, CSA's lobbying over the past years saw the inclusion of farmers' issues—such as a task force on sustainable agriculture and farmers' income commission—in the 2014 election manifestoes of mainstream political parties. This through RSV at the state level and ASHA (Alliance for Sustainable and Holistic Agriculture)¹¹⁵ at the national level; these networks incorporated several of CSA's recommendations in the farmers' issues they were pushing to be included as agenda for the 2014 general elections. Also CSA's demand for a separate agriculture budget for Andhra Pradesh was finally conceded, with such a budget being presented in the state legislative assembly in 2013-14¹¹⁶.

Score: +2

2.4.6 Influence upon private sector agencies' policies, rules, regulations SPO

Much like it had said during the baseline, CSA maintained that any influence that it might have had on the private sector is largely through having pushed for regulations by government, and not directly. Also, more private agencies are getting involved with organic marketing, some private pesticide companies and new entrepreneurs have started coming up with organic farming inputs like bio pesticides, manures, etc; and though CSA might have contributed to this trend it certainly does not claim sole credit for it. Another indirect influence might have been CSA's success in having convinced some private sector companies to divert CSR funds towards sustainable agriculture practices.

Score: Not Applicable

2.5 Civil Society context

2.5.1 Coping strategies

Andhra Pradesh became a site of political tumult as the demand for a separate Telangana¹¹⁷ state gathered frenzy over the past two years. The long, and often violent, struggle for Andhra's bifurcation that began in 1969, finally saw the Parliament appointing 2 June, 2014 for the creation of Telangana¹¹⁸. The announcement triggered off more protests and suicides¹¹⁹. Overall, the period between 2012 and 2014 saw the state government and administration at near standstill. Much of

¹¹⁵ Alliance for Sustainable and Holistic Agriculture or ASHA is an alliance of about 400 diverse organisations drawn from more than 20 states across India that came together through the Kisan Swaraj Yatra (Oct-Dec 2010), a nation-wide mobilisation around Food-Farmers-Freedom. Refer, https://www.facebook.com/AshaKisanSwaraj/info?ref=page_internal

¹¹⁶ The Andhra Pradesh government presented the first ever separate agricultural budget in August 2014. The total agricultural budget is for Rs 13,110.39 crores. Refer, <http://www.financialexpress.com/news/andhra-pradesh-presents-first-ever-separate-agriculture-budget/1281660>

¹¹⁷ The Telangana movement, a struggle in Andhra Pradesh for a separate state of Telangana came to a conclusion with its creation on 2nd June 2014, making it India's 29th state. The 'Jai Telanagan' movement began in 1969, over cultural and economic differences with the larger state of Andhra Pradesh. Refer, <http://timesofindia.indiatimes.com/india/15-facts-you-need-to-know-about-Telangana/articleshow/35955351.cms>

¹¹⁸ The Andhra Pradesh Reorganisation Act, 2014 for the bifurcation of Andhra Pradesh into two states was given the go ahead by the President on 1st March 2014. This was following decades long struggle for Telangana. Refer, <http://reorganisation.ap.gov.in/index.jsp>

¹¹⁹ The announcement to divide Andhra Pradesh met with celebration on the Telangana side and protests and suicides on the Andhra and Rayalseema side. 13 districts were shut down in Seemandhra as protests took place. A home guard is said to have committed suicide after hearing the news about the division. Refer, <http://www.hindustantimes.com/india-news/telangana-triggers-protests-suicides-clamour-for-more-states-grows-across-india/article1-1101346.aspx>

CSA's work, including registration of three new cooperatives for instance, suffered as a consequence. Despite which CSA attempted an appropriate response to this evolving context by conducting several awareness meetings around the formation of Telangana, and producing a report on how the agriculture and agriculture-based livelihoods in the newly formed states could be sustained. Also, plans are afoot to establish another office in Seemandhra, as the current office is now in Telangana.

The general elections in 2014 saw CSA collaborate with networks like RSV and ASHA—at the state and national levels—towards ensuring that farmers' issues are included in the political parties' manifestoes.

Meanwhile, the state's agrarian crisis continued. The 2011 Kharif¹²⁰ and 2012 Rabi seasons had been declared as drought-hit. This along with farming practices heavily reliant GMO seeds and private companies had seen farmers incurring heavy losses¹²¹, and a spate of farmer suicides¹²². Even as the impact of all this spilled over into 2013-14, unseasonal rains and hailstorms in many of the project areas compounded the problems. And farmers' suicides continued in many parts of cotton and chilly growing areas of Andhra even post 2012¹²³. At the time of the baseline, CSA and ASHA had been among the first CSOs to organise fact finding missions to the affected areas and release the reports, they had also conducted hearings on the issue¹²⁴.

Score: +1

¹²⁰ Kharif comes from Arabic and means autumn. It is a term used to describe a cropping season in India from July-October. The cropping season in the Indian subcontinent revolves around the monsoon rains.

Refer, http://www.arthapedia.in/index.php?title=Cropping_seasons_of_India_-_Kharif_%26_Rabi

¹²¹ With a 15 per cent deficit in the south-west monsoon and consequent damage to rain-fed crops in more than 85 lakh acres, the Andhra government had declared the 2011 kharif season as drought-hit in 856 mandals. Four of CSA's project implementing districts—Anatapur, Kadapa, Kurnool and Nalgonda—came under these. It was reported that 51, 5300 farmers incurred severe loss due to the drought. As a consequence, the rabi season 2011-12 was also affected. There was a severe shortage of water for irrigation, even for drinking. Forcing many farmers to turn to dairy. In Anatapur, for instance, farmers shifted from high water intensive crops (paddy) to less water requiring crops like maize and fodder crops, etc. The farmers' protests against the government's low minimum support prices (MSPs) took a turn with paddy farmers from the Godavari Delta declaring a 'Crop Holiday'. Increasing costs of cultivation, lack of procurement for paddy, low MSPs forced farmers in the fertile Godavari districts—called the 'rice bowl of Andhra--to leave their lands fallow. The state government appointed a committee under Mohan Kanda, a retired IAS officer, to study the issue and make recommendations. CSA made a presentation on this issue and also a detailed presentation to the Kanda Committee. Refer, <http://www.thehindu.com/news/national/andhra-pradesh/ap-to-receive-rs-714-cr-as-drought-relief-from-centre/article3349818.ece>

¹²² During October-November, 2011 about 95 farmers' suicides were reported in six Andhra districts. Refer, <http://www.downtoearth.org.in/content/95-farm-suicides-month-andhra-pradesh>

¹²³ "Five states account for two-thirds of all farm suicides in the country one among them being Andhra Pradesh. Suicide rates among Indian farmers in 2013 was 47 per cent higher than they were for the rest of the population in 2011". <http://www.thehindu.com/opinion/columns/sainath/farmers-suicide-rates-soar-above-the-rest/article4725101.ece>

Report CDI-15-021

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Report CDI-15-34

Klaver, D.C., Wadhwa S., Pandey R., Madaan A., Mohapatra B. P., February 2015, *Centre for Workers' Management end line report; MFS II country evaluations, Civil Society component*, Centre for Development Innovation, Wageningen UR (University & Research centre) and India Development Foundation (IDF). Report CDI-15-034. Wageningen.

This report describes the findings of the end line assessment of the *Centre for Workers' Management (CWM)*, which is a partner of Hivos.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses CWM's contribution towards strengthening Civil Society in India whilst using the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2012. Key questions that are being answered comprise changes in the five CIVICUS dimensions to which CWM contributed; the nature of its contribution; the relevance of the contribution made and an identification of factors that explain CWM's role in civil society strengthening.

Keywords: Civil Society, CIVICUS, theory based evaluation, process-tracing

Acknowledgements

IDF and CDI are thanking the staff and the leaders of all Southern Partner Organisations that participated in collecting information for the evaluation of the contribution of these partner organisations to creating a vibrant civil society in India. They also thank the Co-Funding Agencies and the Dutch Consortia they are a member of for making background documents available. We hope that this evaluation can support you in better positioning yourself in the Civil Society Arena of India.

1 Introduction

This report presents the civil society end line findings of Centre for Workers' Management (CWM) in India which is a partner of Hivos under the People Unlimited 4.1 Alliance. It is a follow-up to the baseline assessment that was carried out in 2012. According to the information provided during the baseline study CWM is working on the theme Governance.

These findings are part of the overall evaluation of the joint MFS II evaluations to account for results of MFS II-funded or –co-funded development interventions implemented by Dutch CFAs and/or their Southern Partner Organisations (SPO) and to contribute to the improvement of future development interventions. The civil society evaluation uses the CIVICUS framework (see appendix 1) and seeks to answer the following questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- What factors explain the findings drawn from the questions above?

The CIVICUS framework that comprises five dimensions (civic engagement, level of organization, practice of values, perception of impact and contexts influencing agency by civil society in general) has been used to orient the evaluation methodology.

Changes in the civil society arena of the SPO

In the 2012 – 2014 period, the two most important changes that took place in the civil society arena of CWM are related to 'level of organisation' and 'practice of values'.

With regards to level of organisation, CWM intensified its interactions with a limited number of trade unions (a maximum of five unions of the 41 unions they consider part of their constituents), in particular those of the garment and domestic workers sectors where by tradition most workers are female. Apart from the support given to these three unions, CWM started to position workers' struggles in global supply chains systems, as a means to reorient lobby and advocacy strategies of trade unions and to engage them in international networks. The SPO further expanded its international network and its financial resource base.

With regards to 'practice of values' CWM became a little bit more transparent to the trade unions it supports, by means of creating a website that was recommended since 2008, but which is not kept up to date, and by reorganising its board that now also includes persons with a relevant background in training and research which is needed to improve CWM's effectiveness in its support to the workers organisations.

These findings were obtained through an analysis of documents, a workshop and follow-up interviews with the SPO, and interviews with external resources persons working in civil society organisations that receive support from the SPO; other civil society organisations with whom the SPO is collaborating; public or private sector agents and; external resource persons capable of overlooking the MDG or theme on which the SPO is concentrating.

CWM's contribution to changes

Based upon an analysis of the projects and programmes financed by the Dutch CFAs a selection was made of SPOs to be included in an in-depth process tracing trajectory and those to be included for a quick contribution assessment. CWM was amongst those SPOs selected for in-depth-process tracing.

In the first place the evaluation assessed CWM's contribution to the increase in membership and the quality of women's engagement in two trade unions, the Garments and Fashions Workers Union (GAFWU) and the domestic workers' union Penn Thozhilalargal Sangam (PTS). Both unions are working in typically female sectors. The most plausible explanation of this outcome is a combination of the two trade unions already having shown to defend the interests of their constituents *before* MFS II;

CWM making its support approach more demand-oriented *during* MFS II; supporting the unions to use a template to calculate a need-based minimum wage indexed to inflation developed by CWM (in 2008) that helped to negotiate wage hikes with the government, and; other actors who helped to position garment workers' concern in an international and supply chain context.

In the second place the evaluation team explained the capacity of the Garment and Textile Workers Union (GATWU) in Karnataka state to successfully negotiate a minimum wage hike and to finally ensure that industries started to pay dearness allowances to their workers according to the regulations in place. This outcome is most likely explained by the fact that GATWU is a mature organisation; support received by Workers' Right Consortium and Clean Clothes Campaign in targeting the international brands that source their products from the garment factories in Karnataka *before and during* MFS II, and CWM's technical support to calculate a needs-based inflation indexed minimum wage as an input for negotiations on these wages with the industry and the government.

CWM has been working with all three trade unions on a regular basis since 2008 – 2009 and these unions received more support than any other union that CWM considers as its constituents. *During the MFS II period*, CWM improved the quality of its services by means of making it more demand-driven and by means of including not only the union leaders, but also the second and the third rung. CWM itself became aware of the importance targeting international brands as a means to improve working conditions for women.

Relevance

Interviews with staff of CWM, with external resource person, with the former programme officer of Hivos, as well as contextual information helped to assess the relevance of CWM's interventions in terms of; its Theory of Change (ToC) for Civil Society as designed during the baseline study; the context in which CWM is operating, and; the Civil Society policies of Hivos.

The changes to which CWM contributed along with many other actors are relevant in relation to its 2012 Theory of Change and the external context. However these changes only concern some five to six of the 41 trade unions that the organisation is supporting.

CWM is a very relevant organisation in relation to the Rights and Citizenship programme of the People Unlimited 4.1 alliance, but the partner organisation did hardly contribute to this programme.

Explaining factors

The information related to factors that explain the above findings was collected at the same time as the data were gathered for the previous questions. The evaluation team looked at internal factors within CWM, the external context in which it operates and the relations between CWM and Hivos.

The most important factor that explains the evaluation findings is within CWM. Some of the critical issues mentioned in an external evaluation report of 2008 have been addressed as of 2012, such as the creation of a new and more performant board that now comprises professionals in the field of research and advisory on the one side and representatives of unions on the other side. However, CWM's current strategic and operational planning, monitoring and evaluation in place hamper the organisation to effectively and efficiently make a considerable difference for the trade unions that it supports. The past two years have seen some changes into more effective interventions and more strategic relations with other organisations to make this difference, which is promising and should be pursued.

Design of the intervention

The design of CWM's interventions requires a further critical reflection in order to make it replicable at a wider scale by CWM in the first place.

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the governance theme CWM is working on. Chapter three provides background information on the partner organisation, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with Hivos. An evaluation methodology has been developed for the evaluation of the Civil Society component which can be found in the appendix of the country report; however, deviations from this methodology, the choices made with regards to the selection of the outcomes for contribution analysis, as well as difficulties encountered during data collection are to be found in chapter 4. The answers to each of the evaluation questions are being presented in chapter 5, followed by a discussion on the general project design in relation to CS development; an assessment of what elements of the project design may possibly work in other

contexts or be implemented by other organisations in chapter 6. Conclusions are presented in chapter 7.

2 Context

This paragraph briefly describes the context CWM is working in. A description of the Civil Society Context assessed according to the CIVICUS framework is provided in appendix 3 of the country report for Civil Society.

2.1 Political context

With growing tensions between the industry workers and management, the newly elected right-wing Bharatiya Janata Party (BJP) government at the centre, in October 2014, proposed changes in labour laws. This move has been lauded by corporates and industries, as it shows the government is making efforts to create an investment friendly environment in the country. The trade unions on the other hand see this as a move which will further “depress wage levels and give a free hand to the corporates to hire and fire workers”.¹ Rajasthan with the BJP in power has already started a similar process that is being severely criticised by trade unions.²

In terms of change in the political context, these have been the most significant changes in the past few years. It remains to be seen if these statements and proposals by the government will take any concrete shape, as the demand for reforming labour laws has been present for a long time, with only token promises made by the government. The issue has been gaining increasing prevalence in the current discourse following the industrial violence that took place in Maruti Suzuki’s Manesar Plant in Haryana.

To understand the political economy of industrial relations and trade union movement in independent India, one must be familiar with the course of collective bargaining around wages and facilities for workers which goes back to recommendations of the Fair Wage Committee, 1948, that mooted the concept of a minimum wage to be paid by all industries; this later became a law and organised sector unions achieved fair indexation and an extra month’s salary as bonus. Another landmark is the Trade Union Act (1926), which facilitates unionisation in organised and unorganised sectors. But both of these laws had their own limitations in practical life. For example, the right to form trade union and register it does not mean that the employer must recognise the union and absence of such a legal compulsion enables even the organised sector to bypass collective bargaining of wages and not recognise such unions which are more assertive in terms of demanding workers’ rights.

This was the case in 2009-10, when most of the well-known workers struggles were on the issue of formation or for recognition of the trade union for collective bargaining³. The same trend has continued over the past two years, and incidences like Maruti workers strike and violence in July 2012 emerged because of these reasons⁴. On the minimum wage front, an employer in the informal sector like construction work, domestic work, physical labour etc can fire an employee at will without advance notice or reason, and absence of measures for security of a fixed period of employment in this sector gives the employer a huge advantage over the employee, who most of the time agrees to work below minimum wages so as to save his employment.

³ e.g. Hyundai Workers Struggle for Recognition of the Union, Nokia Workers Struggle for Wage Hike and Against Victimization, MRF Workers Struggle for Recognition of Union, Pricol Workers Struggle for Recognition of Union, Graziano Workers struggle for Unionization, The Case of Trade Union Repression in Nestle, Vivva Global Workers Struggle for Minimum Wages and Unionization, Rico Auto Workers Struggle for Unionization and Sunbeam Workers Struggle for Democratisation of the union.

⁴ Refer, http://www.business-standard.com/article/companies/maruti-s-striking-labour-problem-111091500040_1.html

The period from 1991 till date is considered as the phase of full-fledged economic reforms, decline in public sector and formal employment, continued decline of bargaining power of centralised unions, increasing contractualisation and outsourcing, poorer implementation of labour laws in special economic zones. This has given rise to plethora of non-mainstream workers' organisations which inform, enable, and advocate for localised, sector specific unions, and filing petitions in the court for implementation of rights has also become a very important recourse for trade unions and workers' organisations in last two or three decades.

3 Description of the SPO and its contribution to society/policy changes

3.1 Background of the SPO

Centre for Workers' Management (CWM) is a resource centre for trade unions, created in 1991, to serve working people and their organisations. It was created because according to its understanding working people and even their collective movements lack the time, resources and sometimes even the skills to take forward medium and long term strategies.

CWM works with grass root workers organisations in the rural, garment, domestic, auto, metal and plantation sector, and aims at organising contract workers, casual workers and the self-employed, mainly in the unorganised sector. It seeks to address the issues of rural workers and workers with non-standardised urban jobs. CWM works with 41 trade unions and has a total outreach of about 700,000 workers, of which 40 percent are women⁵.

Since its registration as a society in 1991, the Centre for Workers' Management (CWM) has been involved in various activities related to research, training, issue-based advice and campaign and information dissemination on areas of industrial democracy and workers' rights. The organisation has a constituency of workers and workers' organisations with which it interacts actively, and which benefits from its inputs.

CWM's long-term goal is for trade unions to expand democracy in the enterprises, in industry and in the economy. Towards this end its immediate objectives are to:

- Furthering of industrial democracy;
- Aid trade unions in their understanding of the enterprise, industry and economy;
- Assist trade unions in using this understanding for more effective collective bargaining;
- Facilitate the expansion of a trade union network with a common set of objectives;
- Provide trade unions with research and campaign support on legislative and policy changes that affect work, wages, industry and the economy.
- Working with trade union organisations on issues of collective bargaining and organisational democracy;
- Research, documentation and education on new forms of worker organisations, including cooperatives;
- Research and campaign on legislation related to labour and capital regulation;
- Trade union education, towards building an effective cadre at the workplace/ region/ sector of work;
- Assisting building of networks among worker organization.

Since 2012, when CWM counted 16 staff members of which 7 female, CWM has grown in staff numbers: at the end of 2013 it had 3 principal researchers (2 female); 1 campaign coordinator (female) ; 5 researchers & educators (1 female); 5 administrative and financial staff (2 female) and 13 campaign staff (2 female).

⁵ Hivos Project document 2012 -2014

3.2 MFS II interventions related to Civil Society

CWM is collaborating with Hivos since 2004. In November 2012 it ended a four-year programme, which was followed by a second programme that lasted until September 2014.

The following table relates CWM's core interventions with the CIVICUS dimensions, based upon the contract agreements made for the 2008-2012 contract and that of 2012 – 2014.

Most of the interventions foreseen in both the 2008-2012 and the 2012 – 2014 contracts with Hivos, aim to influence public sector policies and practices: Related expected results in the 2008-2012 period comprised the "improvement of the legal framework to protect and promote unionisation" and of "the capacity of unions to uphold labour rights and bargain on behalf of their constituencies". In the 2012 – 2014 period this was continued by means of the expected result "provide workers' activists with robust information to advance their concerns". Three other expected results in the same contract were meant to contribute to this;

1. Developing a curriculum and train workers on a regular basis which should culminate in the creation of full-fledged worker schools in 2016. This is a follow up of the 2008-2012 result to create trade union training school activities in Chennai, Surat and Patna;
2. Conduct sectoral and policy or legislative issue based research which is also a follow up of a result in the previous contract.
3. Use these findings to assist workers organisations and social movements in their lobby and campaign efforts, which is also to be seen as a continuation of the previous contract.

The 2012 – 2014 contract further explicitly mentions expected results under the 'practice of values' CIVICUS dimension, consisting of a reconstitution of CWM's board as a means to ensure plurality and diversity.

⁶ Costs that relate to civil society development or policy influence are those costs that possibly contribute to the development of the CIVICUS dimensions, excluding coordination and office costs; staff costs and financial reserves.

4 Data collection and analytical approach

4.1 Adjustments made in the methodology of the evaluation

Only minor adjustments were made in the methodology: due to the unclear and incomplete progress reports it was not possible to conduct an input – output- outcome analysis in line with the results/ outcomes to be achieved according to the contract requirements. CWM simply does not report against these results but reports against education, research and advocacy or campaigns.

Only four CWM staff attended the evaluation workshop at the beginning of the end line study whereas according to the 2013 annual review CWM counts some 27 staff, amongst which 13 campaign staff and 5 researchers. The four workshop attendants were one research head; one programme staff; one administrative head, and one board member. These all participated together in follow up interviews the day after the workshop. One of the consequences is that the triangulation of information from different staff of CWM has been limited.

4.2 Difficulties encountered during data collection

As mentioned already, the progress reports produced by CWM are missing quality and do not provide oversight of progress being made since 2008 and no efforts were made to improve the quality of these reports, which all have been accepted by Hivos.

In the first place the reports do not follow the logical framework described in the project proposals and instead reporting is organised according to education, research and documentation, lobby and advocacy work and occasionally new forms of organisation.

Further we observe that several parts of progress reports have just been copied and pasted from previous reports, in particular when CWM is asked to report against its logical framework:

1. Reporting against result area 1 of the annual report 2010-2011 (page 29-39) is an exact copy of the text in the 2009-2010 report under the same heading. The same applies for result area 2 (page 31 in the 2010-2011 report) and 3 (page 31-32 in the 2010-2011 report). This is also valid for the report covering April 2011 – March 2012
2. Reporting against the 3 result areas in the progress reports covering 2012 and 2013 is a copy-paste exercise again, in addition to other pieces of texts which have been copied from different reports. The 3 result areas are part of "Part F. Questions related to the result indicators of Hivos' overall programme".

The in-country evaluation team faced the following problems during further data collection:

In the first place trade union representatives were reluctant to be interviewed, because the Indian government has become increasingly insistent on ensuring that there is no foreign funding in political protests and labour issues. Trade unions are therefore wary of responding to requests to be participants in evaluations regarding foreign funding.

In the second place the collection of documents that provide evidence was a hurdle: Labour departments associated with the government are known for their inefficiency regarding maintaining proper records, such as the minutes of proceedings of Karnataka's Tripartite Wage Board on the issue of wage rise for garment sector workers, in which CWM's partners participated. Similarly, documented membership figures of the trade unions were difficult to corroborate. As, other than the unions themselves, no other state body conducts a yearly or bi-annual check or headcount to ascertain the actual membership (it is done for longer intervals, and the standards of such verification are not

rigorous); hence trade unions generally succeed in inflating their membership figures because of faults in the verification processes⁷.

However, the evaluators sought to compensate for this lack of paperwork and written evidence by allowing the use of accounts of two or more external resource people or concerned parties as corroborating evidence, so as to substantiate a finding or attribute the changes to an actor.

4.3 Identification of two outcomes for in-depth process tracing

CWM was selected for in-depth process tracing of outcomes associated with the strategic orientation Civic Engagement and that of Strengthening Intermediate Organisations.

The first outcome to be explained and in relation with civic engagement is that of union membership increasing, as well as the quality of the engagement of women in these trade unions. The evaluation team looked at two Chennai-Based unions: Penn Thozhilallar Sangam (PTS) which organises domestic workers and Garments And Fashions Workers Union (GAFWU).

The second outcome to be explained is that of the rise in the minimum wages in the garment sector and the implementation of Dearness Allowance (DA) norms in Karnataka state, in which the Garment and Textile Workers Union (GATWU) is involved. This outcome relates to “the capacity of unions to uphold labour rights and bargain on behalf of their constituencies” and “provide workers’ activists with robust information to advance their concerns” which are results to be obtained when accomplishing the Hivos contracts and which are related to the CS orientation of Intermediate Organisations.

The reasons for selecting these outcomes is that CWM has been working with these unions since 2009 in a consistent way, whereas all other interventions are seemingly scattered around a wide range of issues; these observations are made based upon the progress reports made available.

⁷ <http://www.newindianexpress.com/nation/Trade-union-membership-CPI-eclipses-its-big-brother/2013/06/03/article1617463.ece> ; http://articles.economictimes.indiatimes.com/2013-04-06/news/38327411_1_india-trade-union-congress-membership-indian-railways ; http://www.business-standard.com/article/economy-policy/unions-use-different-criteria-to-top-headcount-106122801014_1.html

5 Results

5.1 Results obtained in relation to intervention logic

The quality of CWM's progress reports does not allow for a detailed overview of outputs and outcomes achieved versus targets set and hardly against their outputs which are education, documentation and research and campaigning. No monitoring takes place at the outcome level. CWM works in the following sectors or topics: the National Rural Employment Guarantee Act (NREGA); minimum wages; contract labour; plantation labour; engineering and metal work; garment; domestic workers and; construction. Apart from these other themes that CWM worked on are Free Trade Agreements, Human Rights and New Industrial Areas.

Table 2 presents an overview of those sectors that have received support since 2008-2009.

Table 2

Outputs delivered according to sectors that received most frequent attention and those that received considerable less or scattered attention and location

Outputs delivered	Sectors receiving most attention	Sectors receiving scattered attention	Concentration of activities in
Education	Women activists in trade unions; NREGA and rural employment	Plantation labour Engineering and metal work Construction	Chennai and Bangalore
Documentation and research	NREGA and rural employment; Women workers	Mapping of New Industrial Areas Contract labour	i) Gujarat (2 times), (ii) Tamil Nadu and (iii) Uttar Pradesh (2 times); (iv) Karnataka; (v) Madhya Pradesh;
Campaigning	Universal Social Security Bill NREGA	Contract labour Free Trade Agreements	Unknown

Sources: project progress reports 2008 – 2013

With regards to the results to be delivered under the Hivos contracts we observe the following:

- 'Women activists', which according to Hivos needed to be a cross sectoral theme, has only been addressed in the garment and the domestic workers' sector, which are typical feminine sectors.
- CWM's intention to establish worker activist schools has not materialised in the 2012-2014 contract period.
- The number of workers organisations with whom CWM works is not clear: figures are constantly changing in the reports (38 according to an excel sheet made available during the baseline study; 41 according to the 2012 – 2014 project proposal and 50 unions in other documents). The progress reports only mentions support to eight trade unions.

5.2 Changes in civil society in the 2012-2014 period

5.2.1 Civic engagement

Civic engagement describes the formal and informal activities and participation undertaken by individuals to advance shared interests at different levels. Participation within civil society is multi-faceted and encompasses socially-based and politically-based forms of engagement.

Civic engagement has slightly improved since the baseline, because CWM has a) systematised the process of beneficiary interaction through better targeted research and education b) structured workshops and meetings together with activist leaders of the unions c) increasingly used the workshop mode or focus group discussions to check outcomes and test ideas, and d) engages also with the union second and sometimes third leadership's level, whereas before it only worked with the executive

leadership of the trade unions. This has been observed in particular in the garment and domestic workers sector.

CWM works with 41 trade unions and has a total outreach of about 700,000 workers, of which 40 percent are women according to the 2012 – 2014 project documents⁸. However the document analysis of progress reports only identifies concrete activities with eight unions.

Table 3 presents an overview of persons reached through education, research and documentation and campaigns before MFS II (March 2011) and during MFS II (after March 2011). The evaluation team has not been able to verify these data, implying that these only represent tendencies. The percentage of women reached through CWM's education and research and documentation together did only slightly increase from 59 percent before March 2011 to 61.3 percent during the MFS II period, with a significant decline of female participation (54.6%) in educational activities during the MFS II period.

Table 3

Persons reached through different outputs delivered by CWM, including sex ratios

Heading	Persons reached through CWM activities before March 2011 (figures of 2 years available)		Persons reached through CWM activities before March 2011 (figures of 3 years available)	
	Women	Total	Women	Total
Education	844 (61.5%)	1371	1178 (54.6%)	2159
Research and documentation	18615 (58.7%)	31700	43840 (62.0%)	71275
Campaigns	615500 (41.6%)	1480000	Figures not available or unreliable	
Total education and Research and development	19459 (59.0%)	33071	45018 (61.3%)	73434

Table caption (e.g. source).

Since the baseline assessment, CWM discontinued its activities to address rural workers' issues in the new worksites created by the NREGA scheme⁹ because its ideas to support rural workers to understand their rights vis-à-vis the scheme rather than to enrol a maximum number of workers into the scheme was not what the government had asked for.

CWM intensified however its collaboration to unions in the primarily female workforce in the garment sector in Bangalore (Karnataka state) and Chennai (Tamil Nadu state), in particular GATWU¹⁰ and GAFWU¹¹ and the Chennai-based domestic workers union PTS¹².

Score baseline 2013 on an absolute scale from 0-3 **2**
Score end line 2014, relative change on a scale of -2 → +2 **0**

5.2.2 Level of organization

This dimension assesses the organisational development, complexity and sophistication of civil society, by looking at the relationships among actors within the civil society arena.

⁸ Hivos Project document 2012 -2014

⁹ The National Rural Employment Guarantee Act, 2005 is an Act to provide for the enhancement of livelihood security of the households in rural areas of the country by providing at least one hundred days of guaranteed wage employment in every financial year to every household whose adult members volunteer to do unskilled manual work and for matters connected therewith or incidental thereto. See <http://nrega.nic.in/rajaswa.pdf>

¹⁰ GATWU: Garment and Textile Workers' Union in Bangalore. See <http://gatwu.org.in/> GATWU was formed in 2005 and was officially registered in 2006 in Bangalore. They are committed to building the power of the working class in the Karnataka garment industry and building a movement with like-minded organizations to advance the interests of workers and their families. GATWU is fighting for living wages, better working conditions, safe and harassment-free working environments, and freedom of association.

¹¹ Garments and Fashion Workers' Union (GAFWU) is a Chennai (Tamil Nadu) based workers' union, more than 95% of whose members are women. The union works for the rights of garment-apparel sector workers, and is a partner organisation of the CWM.

¹² Penn Thozhilalar Sangam is an organisation working in Chennai, with a neighbourhood based focus. Most of its members are women, and it also works for making government services accessible to women workers' in a neighbourhood. It is also a partner organization of the CWM.

CWM managed to increase its interactions with other civil society actions since the baseline and some trade unions managed to become more performing in defending the interests of their members.

In the first place the organisation intensified its interactions with a activists of various grassroots workers organisations, such as with the two aforementioned unions in the garment sector and the domestic workers organised in Penn Thozhilallar Sangam (PTS); various plantation workers associations/unions; auto workers' unions.

After the Rana Plaza incident in April 2013, when an eight-store garment factory collapsed in Bangladesh, CWM together with Transnational Information Exchange (TIE¹³), supported the creation of a network of trade unions in the garment sector in South Asia, including GAFWU and GATWU. Those two unions collaborated intensively with CWM on issues as a fair minimum wage, developing a bargaining strategy based upon the understanding of the global supply chain, and struggles against workplace violence.

The two unions and PTS have improved their performance in the past period: their trade union membership has increased, some of them have developed grass roots leadership and in particular GATWU effectively participated in the tripartite committee on a wage hike in Karnataka's garment sector.

Apart from the three mostly female trade unions with which CWM interacted intensively in the past years, only some unions of rural workers and tea plantation workers are said to have developed grass roots leaders. It is this performance of the trade unions that explains the extent to which the interest of workers can be defended.

Due to the absence of a solid M&E system, the extent to which other trade unions have increased their membership, their internal performance and their capacity to negotiate with employers and the government is unknown. According to CWM staff however, generally speaking, increasingly workshop costs are borne by trade unions themselves, which is to be interpreted as a principle important for the autonomy of the unions.

In the past two years, apart from its collaboration with TIE, the SPO further expanded its international network with organisations as the Workers' Rights Consortium (WRC)¹⁴, TIE, Rosa Luxembourg Stiftung (RLS)¹⁵ and the International Labour Rights Forum (ILRF)¹⁶. Those organisations and ActionAID are partly intervening and partly financing CWM's interventions. This expansion is to be interpreted as CWM's strategy becoming more mature in defending its target groups.

CWM's own financial resource base improved since 2011 whereas Hivos' contribution decreased from 48 to 29 percent of all funds available. Two important donors are the Rosa Luxembourg Stiftung and ActionAid, but most donors are more inclined to pay for project costs, rather than institutional costs that were mostly financed with Hivos funding. This new financial situation is seen as a concern.

Score baseline 2013 on an absolute scale from 0-3 **2**
Score end line 2014, relative change on a scale of -2 → +2 **1**

¹³ Transnational Information Exchange (TIE) is a global grassroots network of workers active in workplaces and communities. It includes both union and non-union activists in the formal and informal sectors. TIE aims to encourage, organise, and facilitate international consciousness and cooperation among workers and their organisations in various parts of the world. See http://www.tie-germany.org/who_we_are/index.html

¹⁴ Workers' Rights Consortium (WRC) is an independent labour rights monitoring organization, conducting investigations of working conditions in factories around the globe. Their purpose is to combat sweatshops and protect the rights of workers who make apparel and other products. See <http://www.workersrights.org/>

¹⁵ The Rosa Luxemburg Foundation is one of the largest political education institutions in Germany today and sees itself as part of the intellectual current of democratic socialism. The foundation evolved from a small political group, "Social Analysis and Political Education Association", founded in 1990 in Berlin into a nationwide political education organisation, a discussion forum for critical thought and political alternatives as well a research facility for progressive social analysis. See <http://www.rosalux.de/english/foundation.html>

¹⁶ International Labor Rights Forum is a human rights organization that advocates for workers globally. See <http://www.laborrights.org/about>

5.2.3 Practice of Values

Practice of Values refers to the internal practice of values within the civil society arena. Important values that CIVICUS looks at such as transparency, democratic decision making, taking into account diversity that are deemed crucial to gauge not only progressiveness but also the extent to which civil society's practices are coherent with their ideals.

CWM's situation with regards to 'practice of values' has slightly improved since the baseline. CWM aims to ensure accountability at three levels: accountability to the target group; accountability to the board and strong internal audits supported by robust external audits.

Accountability to the target groups has improved by means of a deeper and continuous engagement with trade unions that CWM works with. The absence of a CWM website at the baseline, which has been recommended since 2008, was conspicuous, especially since CWM is in the field of information generation and dissemination. The CWM website is now up, has a news ticker update, but the upcoming events listed and the publications uploaded on the site date from 2012 (observations made in April and October 2014).

At the time of the baseline, four out of the five CWM's *board* members (all male) held posts in workers organisations that were federated in the New Trade Union Initiative (NTUI) as an umbrella organisation of independent trade unions in the organised and unorganised sector.

The new board still counts five persons (one women), two of which represent trade unions and three other members include professionals committed to CWM's objectives but having a wider experience in action research, education and in similar organisations as a means to improve the SPO's performance.

Generally speaking the board has become more diverse in terms of gender and background, and in comparison to the baseline situation, it works more systematically and regularly, which is expected to improve CWM's performance. Factors that have supported the performance of the board consist of more rigorous compliance standards of CWM's funder Rosa Luxembourg Stiftung, the annual review mechanism introduced by Hivos, financing of board meetings and quarterly internal audits.

No changes occurred with regards to external financial auditing, which is mandatory for all NGOs in India.

Score baseline 2013 on an absolute scale from 0-3	1
Score end line 2014, relative change on a scale of -2 → +2	1

5.2.4 Perception of Impact

Perception of Impact assesses the perceived impact of civil society actors on politics and society as a whole as the consequences of collective action. In this, the perception of both civil society actors (internal) as actors outside civil society (outsiders) is taken into account. Specific sub dimensions for this evaluation are the extent to which the SPO has contributed to engage more people in social or political activities, has contributed to strengthening CSOs and their networks, has influenced public and private sector policies.

Civil society arena - changes

Generally speaking, CWM's impact upon civil society, in particular upon the trade unions that it is working with did not change since the baseline: apart from the capacity of five to six trade unions of the 41 that CWM works with to influence the public and private sector becoming stronger, no other changes occurred. The concerns of all trade unions consist of the right to associate and to collectively bargain; the right to a minimum and a living wage; universal social security and; livelihood and workers' rights¹⁷.

In the garment sector in Karnataka and Tamil Nadu, minimum wages were increased due to interventions of GATWU and GAFWU, that also became active in organising workers in the Special

¹⁷ Project documents

Economic Zone (right to associate and to collectively bargain), and addressed sexual harassment at the work floor (livelihood and workers' rights) in a Special Economic Zone, which was a rare thing as even by law, trade union activities are not allowed within the SEZ premises. Other impacts observed are an increase in membership of unions working in the garment sector; GAFWU started with 103 female members from one Bangalore factory in 2009 and actually counts 694 members from three districts of Karnataka state; increased interactions between GAFWU and PTS which helped to raise the awareness of women regarding their rights in their workspace, as well as grass root leadership. After the Rana Plaza incident both GATWU and GAFWU have joined a South Asian network of trade unions in the garment sector, which will further help to address value chain wide issues in the sector.

A research paper by CWM that relates the prevalent low wages of women workers in the tea plantations of Northern Bengal to a rise in child labour in 2013¹⁸ brought the issue in the centre of discussion (the right to a minimum and a living wage and livelihoods and workers' rights).

The facilitation of an international fact finding mission on violations of trade union rights at Maruti-Suzuki made the issue a matter of international concern amongst trade unions and democratic rights organisations (right to associate and to collectively bargain). Also efforts were made to link the trade unions in the auto sector to international networks that defend the rights of workers.

Although this impact is important for the five to six trade unions concerned, CWM did not identify other changes in the other 35 unions it works with.

Box 1: Living Wage

The issue of a living wage has gained urgency today, in the context of high inflation rates and increasing income disparities. Real poverty is a large concern of trade unions representing workers in the informal sector. Measurement of poverty and changing government definitions which push down wage norms make it difficult for unions to address the question of wage fixation. Norms like the 15th ILC have become a farce in the face of continuous pressure to push wages down. Trade union representation on wage fixing committees becomes ineffective in the face of absence of reliable and consistent data and analysis. At the same time, weakening of public social security measures available to the poor, further impacts real wages. A systematic region and sector specific series of studies on wages to workers linked to family employment and expenditure patterns, including aspects like incidence of forced employment of children in families of informal sector workers is a priority. The study information also needs to continuously feed into campaigns for fair wages, and is a just method of wage indexing.

Source: Advancing Industrial Democracy for Economic and Social Equality, Centre for Workers' Management: 1 October 2008–30 September 2012

Collaboration with and influencing the public and private sector

CWM, by principle does not engage with the public sector, nor influence their policies. The same applies for the private sector. The organisation seeks to be an anonymous catalyst in the trade union movement. Therefore, the core belief behind all its interventions is that workers must represent themselves, should be self-managed and self-governed; and that CWM's role should only be limited to playing facilitator and enabler. The organisation also states that this is the task of the trade unions that defend the interests of workers. Evidence has been found for the garment sector:

- With support of CWM, in the 2012 – 2014 period, GATWU became a member of the tripartite committee for minimum wages in the garment sector in Karnataka that comprised representatives of the public and the private sector and GATWU as a representative of a trade union.
- This same trade union and GAFWU were successful in raising the minimum wage of the garment sector in Karnataka and in Tamil Nadu.

¹⁸ CWM and ILRF, (April 2013), *Brewing Misery: Condition of Working Families in Tea Plantations in West Bengal and Kerala*, (April 2013), CWM (Delhi) and International Labour Rights Forum (Washington), *together with two trade unions in the tea plantations – the Paschim Banga Cha Bagan Shramik Karmachari Union (PBCBSKU) (West Bengal) and the Plantation Working Class Union (PWCU) (Kerala), funded by International Labour Rights Forum.*

- On two occasions workers affiliated to GAFWU resisted sexual harassment at the workplace, by filing complaints against it, something that was rare in earlier times.
- One of the two trade unions paved the way for the union's entry into a SEZ for the first time.

No other examples of policy influencing by trade unions that received CWM's support were mentioned by the SPO.

Score baseline 2013 on an absolute scale from 0-3 **1**
Score end line 2014, relative change on a scale of -2 → +2 **0**

5.2.5 Civil Society Environment

The social, political and economic environment in which civil society operates affects its room for manoeuvre. The civil society context has been described in chapter 3. In this section we describe how NNET is coping with that context.

While the past two years have seen new challenges thrust upon workers and unions, the backdrop has been consistently bleak. As Hivos' 2012-2014 contract with CWM sums up, the situation of labour in India is in a churn of an unprecedented order due to pro-market and liberal policies for some years. Even in the formal sector informal employment has increased from 39 to 46 per cent between 1990 and 2005 and is estimated at 51 per cent for 2010. This growing informality has put pressure on wages, and working conditions are far below those of standard employment, adversely impacting not just the formal but also the informal sector.

Other than this, the economic downturn, consequent retrenchment, increasing contractualisation of the workforce and spiralling inflation between 2012 and 2014 provided for a particularly difficult environment for workers. Controversies on mining contracts between government and the corporates multiplied; these were about violations of environmental norms and displacement issues impacting livelihoods of indigenous people and rural workers. Rural to urban migration continued unabated despite NREGA, which still suffers from widespread corruption and inappropriate implementation.

The right to dissent, meanwhile, has been under attack. Attempts at unionising and union struggles are met with increasing employer repression; often the government and police are complicit. The Maruti-Suzuki automobile workers brought to attention the attack on right to association and spread of contract employment in all forms of work¹⁹. The struggles against displacement in Jagatsinghpur and Niyamgiri in Orissa, and around nuclear power generation sites in Kudamkulam, all brought to fore the contradictions between unregulated industrialisation and democratic rights.

The Foreign Contribution (Regulation) Act 2010 challenged CWM further, because it prohibits the use of foreign fund for unionisation. Those working with unions now have to be extra cautious that their foreign-funded activities are not linked with union formation.

Although CWM states that engaging with new national and international workers' networks will bring to the fore issues and concerns of women workers and those working in the auto industries, generally speaking, CWM did not develop coping strategies to counter these tendencies; its strategies of working with trade unions remained the same, apart from minor changes in terms of intensifying the nature of the support.

5.3 To what degree are the changes identified attributable to the interventions of the Southern partners?

This paragraph assesses the extent to which some outcomes achieved can be “attributed” to CWM. Starting with an outcome, the evaluation team developed a model of change that identifies different pathways that possibly explain the outcome achieved. Data collection was done to obtain evidence that confirms or rejects each of these pathways. Based upon this assessment, the evaluation team concludes about the most plausible explanation of the outcome and the most plausible relation between (parts of) pathways and the outcome. The relations between the pathways and the outcomes can differ in nature as is being explained in table 4.

Table 4

Nature of the relation between parts in the Model of Change

Nature of the relation between parts and other parts or outcome	
The part is the only causal explanation for the outcome. No other interventions or factors explain it. (necessary and sufficient)	
The part does not explain the outcome at all: other subcomponents explain the outcomes.	
The part explains the outcome but other parts explain the outcome as well: there are multiple pathways (sufficient but not necessary)	
The part is a condition for the outcome but won't make it happen without other factors (necessary but not sufficient)	
The part is a contributory cause it is part of a 'package' of causal actors and factors that together are sufficient to produce the intended effect.	

Sources: Mayne, 2012; Stern et al, 2012

The following paragraph assesses CWM's contribution to two outcomes. Each paragraph first describes the outcome achieved and the evidence obtained to confirm that the outcome has been achieved. It then presents the pathways identified that possibly explain the outcomes, as well as present information that confirms or refutes these pathways. The last section concludes in the first place about the most plausible explanation of the outcome, followed by a conclusion regarding the role of the SPO in explaining the outcome.

5.3.1 Strategic Orientation 1: Civic Engagement

The outcome achieved

Two Chennai-based unions, Garments and Fashions Workers Union (GAFWU) and Penn Thozhilalargal Sangam (PTS) have enhanced their membership, as well as the quality of women's engagement in trade unions.

In the 2011 – 2014 period, membership and the quality of women's engagement in two trade unions, that of the Chennai-based unions, GAFWU and PTS has improved. These unions are defending the interests of workers in the garment sector and the domestic-help sector, by nature female oriented sectors.

The membership of PTS grew from 297 persons in 2001 to 18300 in 2013 and PTS only has female members. The average annual growth (32 percent) was however more spectacular before 2011 than between 2011 and 2013 (10 percent). Whereas the union had 4 branches in 2007, in 2014 it had 145 branches, implying that the union is now present in many more places than earlier. Since 2008, the number of second level leaders in PTS has increased from 3 to 15 in 2014 and also the number of local leaders at branch level has increased.

The membership of GAFWU has increased from 112 persons in 2009 to 723 persons in 2013. Female membership has oscillated over these years between 85 percent (2012) and 96 percent (2013). Its most spectacular growth was in 2010 (55 percent), whereas the average growth as of 2011 is 29 percent. The number of factories where GAFWU is active has increased from one factory in 2009 to five factories in 2014. Despite not being an all women union, currently all GAFWU's leadership - first, second and third rung – constitutes of female members.

Pathways that explain the outcome and information that confirms or rejects these pathways

1. The *first* pathway that possibly explains the outcome is the support given by CWM since at least 2008.

Information that confirms this:

CWM, together with Malarchi has worked with GAFWU and PTS since 2008 by means of capacity building, conducting research as an input to conduct evidence-based advocacy, and by coaching them to design their advocacy strategy.

Also *before* MFS II, GAFWU managed to influence the Tamil Nadu Minimum Wage Committee to pass a wage revision and PTS was successful in including domestic workers as a category eligible for a minimum wage (2009). This campaign was supported by CWM that developed a template for computing a need-based minimum wage indexed to inflation which was tested and finalised by workers organisations at a workshop in 2008. This template was used by GAFWU to negotiate improved wages. Other support consisted of: capacity building efforts for both trade unions in collaboration with Malarchi, and; research on collective bargaining with PTS.

During MFS II, CWM changed the way it works with both trade unions in Tamil Nadu and another Karnataka-based union in the garment sector (GATWU). Firstly, all three unions were clubbed together because they were working in female dominated sectors. Secondly, the content was re-designed with the target group and modified during courses and workshops when necessary; participants decided upon their follow-up strategies and plans of action, rather than CWM; more women (also from the second level rung) per union participated in the workshops and courses; more focus group discussions took place with target groups. Thirdly, CWM supported both GATWU and GAFWU to prepare workers' testimonies to be submitted to a people's tribunal in Bangalore, discussing working conditions in the garment sector. Fourthly, CWM conducted research on global supply chains in the garment sector and informed both GATWU and GAFWU about the results, which helped those unions and CWM realise the role of local factories in the global supply chains. As a consequence of which they also convinced them to change part of their campaign strategies to target the brands for better wages. This was followed up by a workshop in November 2013 during which they developed bargaining strategies within a tripartite framework. This framework also included international brands in the negotiations involved for better working conditions.

Both PTS and GAFWU confirmed that CWM, as a resource centre, has played an important role in increasing their capacities to defend female workers in their work place. In consequence membership has increased, as women experienced improvements in their working place and in their salaries.

2. The *second* pathway that possibly explains the outcome consists of other unions and resource centres having engaged with the garment sector and domestic workers in Tamil Nadu.

Information that confirms this pathway: PTS and Malarchi combined resources to conduct the study on Minimum Wages across sectors by the end of 2013, in line with the 2012 survey which was supported by CWM. The findings were circulated among workers of different unions and the labour department of the government, followed by public meetings in worker-dominated areas. PTS also informed NTUI about the findings of the study and made recommendations to NTUI's work and policies.

CWM, together with Transnational Information Exchange (TIE)²⁰, helped both GATWU and GAFWU to integrate a South Asian network of trade unions. The International Union League for Brand Responsibility attended the above mentioned November 2013 workshop during which bargaining strategies including international brands were developed

3. The *third* pathway that possibly explains the increase in union membership consists of Tamil Nadu enjoying some of the best human development indicators in India. This, in turn, is assumed to

²⁰ Transnational Information Exchange is a global grassroots network of workers active in workplaces and communities. It includes both union and non-union activists in the formal and informal sectors. TIE aims to encourage, organise, and facilitate international consciousness and cooperation among workers and their organisations in various parts of the world. See http://www.tie-germany.org/who_we_are/index.html

have positively influenced the working conditions of women and their increased participation in Trade Unions.

Information that *confirms* this pathway comes from CWM staffs who state that the government's welfare schemes reach target groups effectively and efficiently, that the state is ensuring the provision of maternity benefits, pensions and better working conditions for women in particular. Indian Human Development reports also confirm the comparatively high human development indicators.

Information that *rejects* this pathway comes from both PTS and GAFWU who state that despite higher gender indicators for Tamil Nadu in reports, practice and reality are really different because most of the state provisions do not reach their constituents, who are among the poorest of the poor. These statements are confirmed by reports and articles that highlight the difficult environment for activism, including labour rights in general.

4. The *fourth pathway* explains increases in membership because GAFWU and PTS already successfully influenced the government in the past. As already mentioned above, GAFWU's most spectacular growth was in 2010, one year after they had successfully influenced the minimum wage committee to pass a revision in 2009. The most spectacular growth of PTS occurred however in 2006, *before* it successfully influenced the same committee to make domestic workers eligible for minimum wages. PTS' average annual growth in membership and that of GAFWU were higher before MFS II than during MFS II, however membership figures of 2014 and 2015 are missing.

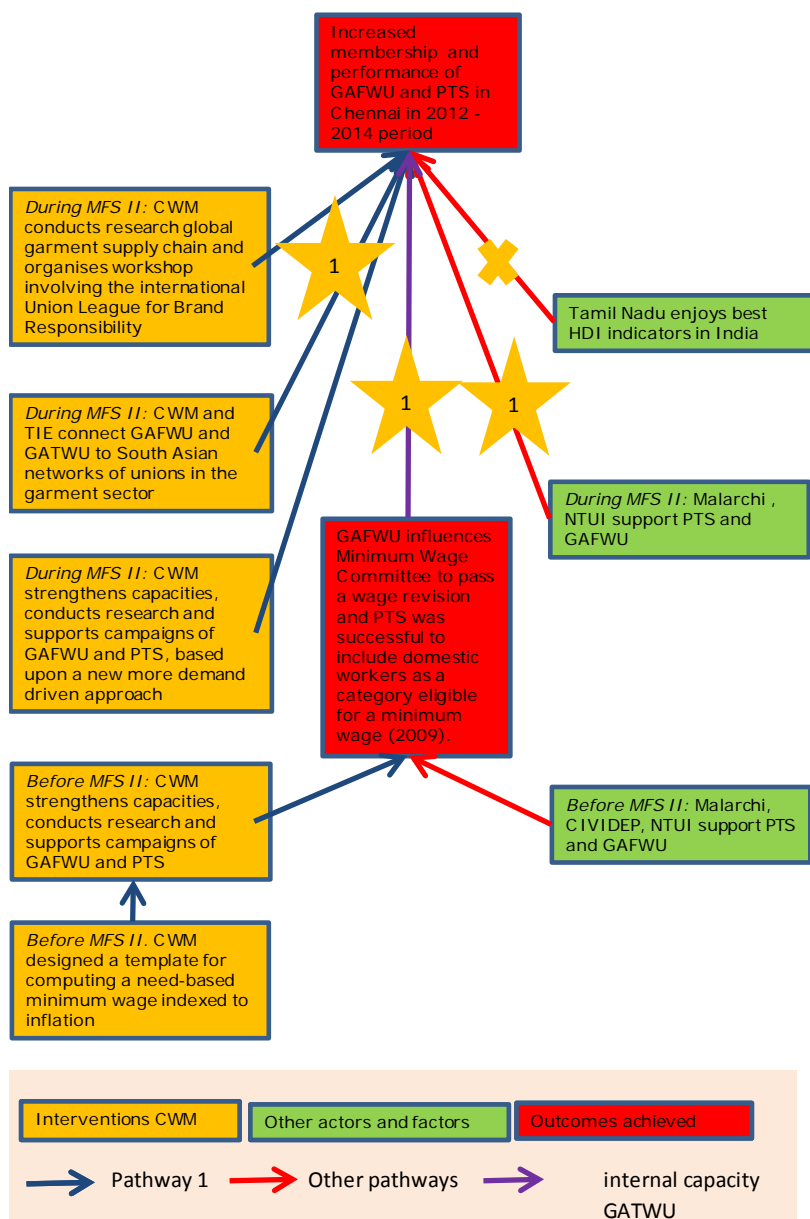

Figure 1 Pathways that possibly explain outcomes and conclusions about the nature of the relations between pathways and the outcome, GAFWU and PTS

Conclusions

Based upon the analysis of the information available, we conclude that the most plausible explanation for the increased female membership of GAFWU and PTS are to be explained by a combination of the role played by the unions themselves in terms of conducting wage surveys, campaigning and negotiating minimum wage hikes (pathway 4), in collaboration with CWM (pathway 1), other actors (pathway 2). These three are part of a causal package that together is minimally sufficient and necessary to explain the outcome. An other factors that might have contributed to this increased membership is the collapse of the eight store garment factory in April 2013 in Bangladesh that received a lot of media attention and mobilised western countries in addressing working conditions in the garment sector by targeting the international brands.

CWM's collaboration with both GAFWU and PTS had already began before the MFS II phase when it started to disseminate a template to calculate a need-based minimum wage indexed to inflation which was finalised in 2007. This template has been used in particular by GAFWU *before and during MFS II* to calculate minimum wages in the sector as an input to lobby for minimum wage hikes. Apart from this, regular courses and workshops organised since 2008 have helped the unions to improve their performance and become more effective in defending the rights of their constituents. CWM's engagement with international actors, resulting in its 2013 research of the global supply chains to

which both Karnataka and Tamil Nadu based factories are related, as well as their support to integrate GATWU and GAFWU in a South Asian network of unions, further helped to increase the performance of the trade unions.

5.3.2 Strategic Orientation 2: Strengthening IOs

Outcome

The capacity of Garment and Textile Workers Union (GATWU) in Karnataka state to influence policies and practices, and in particular in relation to a rise in the minimum wages in the garment sector and the implementation of Dearness Allowance (DA) norms in Karnataka.

GATWU was officially created in 2006, currently it has some 6500 members and it democratically elected its Executive Committee for the first time in 2011. It carries out awareness raising programmes at the gates of factories, has trained 15,000 workers, supports them to get access to government welfare schemes, and mobilises them for lobby and advocacy activities. Apart from this its intention is to conduct an annual wage survey as of 2012. GATWU is a member of NTUI and the International Union League for Brand Responsibility, has a number of local allies including Alternative Law Forum (ALF), and international allies, including Worker Rights Consortium (WRC), International Labour Rights Forum (ILRF) and Clean Clothes Campaign (CCC). Since its creation it has influenced policies and their implementation of both factories and the government of Karnataka²¹. No other trade unions exist in Karnataka that organise the workers in the garment sector, 90 percent of which are female.

Evidence for the outcome

Following a direction of the High Court of Karnataka, the tripartite Minimum Wage Advisory Board of workers, managements and government representatives was again established and it decided upon a revision of minimum wages in the garment sector. GATWU was the only trade union which was an official member of the Advisory Board. The new notification of April 2014 provides for an increase in the daily wages by an average of Rs. 60 a day, inclusive of the Dearness Allowance which is applicable since April 2013. Some 400,000 workers are supposed to be benefitting from this wage hike which is the highest one-time increase in minimum wages since 1979.²²

The wage hike is the result of a long itinerary that started in 2009, when the labour department of the government published a notification announcing a wage hike, which was refused by employers and not enforced by the government that in 2010 also published a new notification with a lower wage hike. In consequence GATWU went to the High Court which in a March 2013 ruling ordered that wages should be revised after tripartite talks.

Also the 2009 wage hike is to be explained by lobby efforts of GATWU, in collaboration with support from CWM, NTUI and WRC at the international level.

With regards to the Dearness Allowance, due to the pressure of GATWU all Bangalore major exporters except for one paid the DA for 2013. GATWU started with an awareness campaign through gate meetings and distributed pamphlets to help workers to learn their rights. In 2011-2012 it was supported by its international allies-Clean Clothes Campaign and Workers Rights Consortium and together they took up the issue with manufacturers and brands²³. The union estimates its intervention has helped over 100,000 workers to get an additional Rs.408 per month as DA. This is a significant amount, being nearly 10 percent of the wage of the workers.²⁴

²² Source: The Hindu: Highest one-time hike in minimum wages, 1 May 2014.

²³ Website GATWU

²⁴ Issues of Garment Sector Labour and the Global Supply Chain: Some learnings from Bangalore (April 2013)

1. The first pathway explains the outcomes achieved through collaboration with CWM.

Information that confirms this pathway

Minimum-wage surveys initiated by CWM

GATWU and WRC credit CWM for having developed in 2007 the template for computing a need-based minimum wage indexed to inflation. GATWU and CWM conducted a survey in 2012 to calculate the minimum wage. In 2013 GATWU was sufficiently capacitated to conduct a second survey more independently from CWM. The findings of these surveys are discussed with workers as a means to raise their awareness. GATWU aims to conduct these surveys annually but no evidence has been found that such a survey was conducted in 2014.²⁵²⁶²⁷ The minimum wage calculations were used as an input by GATWU to negotiate the revision of the official minimum wages set by the government of Karnataka. According to CWM, GATWU was very effective in the tripartite minimum wage sub-committee where minimum wages were discussed.

Workers' Rights Consortium (WRC) observes that workers organisations supported by CWM have all been active in addressing issues of minimum wages and garment sector workers' rights. Many activists in the sector can now explain the legal provisions for minimum wages in the state.

Nature of the collaboration with CWM

As already mentioned in the previous paragraph concerning GAFWU and PTS, CWM has changed its approach of working with the three trade unions during MFS II. CWM intensified its support to the garment sector by clubbing the three unions together where possible. It changed its training and workshop approach, making these more demand driven and participatory, involving more than before the second and occasionally the third tier of the union to plan for future actions. GATWU states that their understanding on minimum wages and other issues like female workers' conditions at the workplace has improved through their relations with network partners like CWM. They ask for CWM support when required. Other respondents like ALF and All India Trade Union Congress (AITUC) confirm that CWM provides an added value to GATWU, because of their trade union experience and that these have had a huge impact on garment sector workers in Bangalore. AITUC also states that no other trade union is capable of representing the garment sector workers and that AITUC failed to do so. The same respondent also states that AITUC asks CWM's support from time to time.

International orientation of CWM increased

Since the baseline study, CWM has also increasingly tried to assess the position of workers and Indian factories into the global value chain and the global brands that these factories are working for. At the same time they have developed a new campaign strategy that targets these international brands that are sensible to consumer pressure as a means to introduce change at the shop-floor. Meanwhile they have engaged with other NGOs to engage their constituent unions in international union networks. Concrete examples given are the following:

- Together with Transnational Information Exchange (TIE), CWM set up a network of South Asian trade unions in the garment sector, including GATWU and GAFWU.
- CWM conducted global supply chain studies in the garment sector and concluded that informing brands about workers' conditions could possibly increase pressure upon local factories to improve these conditions.²⁸²⁹
- November 2013, CWM, GATWU, GAFWU and Union League for Brand Responsibility, which is new globally working league, discussed minimum wage situation in the sector and developed an

²⁹ a study on the global supply chain prepared by CWM for garment sector in Bangalore in 2013

understanding wage campaign including bargaining strategies within a tripartite framework, and also using international brand in negotiations.

- Further, it engages in a constant dialogue with TIE and WRC, and is currently facilitating the interaction of garment workers from Bangladesh with different organisations in Germany around the cause of Rana Plaza collapse of Bangladesh.³⁰

Information that rejects this pathway

In the first place the evaluators observe that GATWU was already internationally oriented *before* CWM came to the conclusion that targeting consumer sensitive global brands helps to introduce changes at the work floor in Karnataka state. GATWU has campaigned with the Clean Clothes Campaign (CCC) since 2005 – 2006, targeting G-Star in the Netherlands and their supplier FFI in Karnataka. Although this campaign was a very tough one, gaining global media attention whilst GATWU and NTUI were brought to court by FFI, the campaign informed GATWU's future campaigns to include international brands. With the newly established international Union League for Brand Responsibility (2012), GATWU is organising workers in three factories that produce for Adidas³¹.

In the second place, WRC already published the relations between the garment factories in Karnataka and international brands in March 2010, based upon which they started organising meetings of unions with representatives of international brands to reinstate the wage hike notification of 2009³².

In the third place, no evidence was found that CWM played a role with regards to the Dearness Allowance Campaign that in 2013 resulted in all but one factory paying the DA conform regulations. GATWU's website states that CCC and WRC helped the union to increase the pressure through the brands, whilst GATWU spread the awareness of workers through gate meetings, pamphlet distributions, other meetings and training. Mohan Mani (2014) from CWM confirms this in his writings.³³

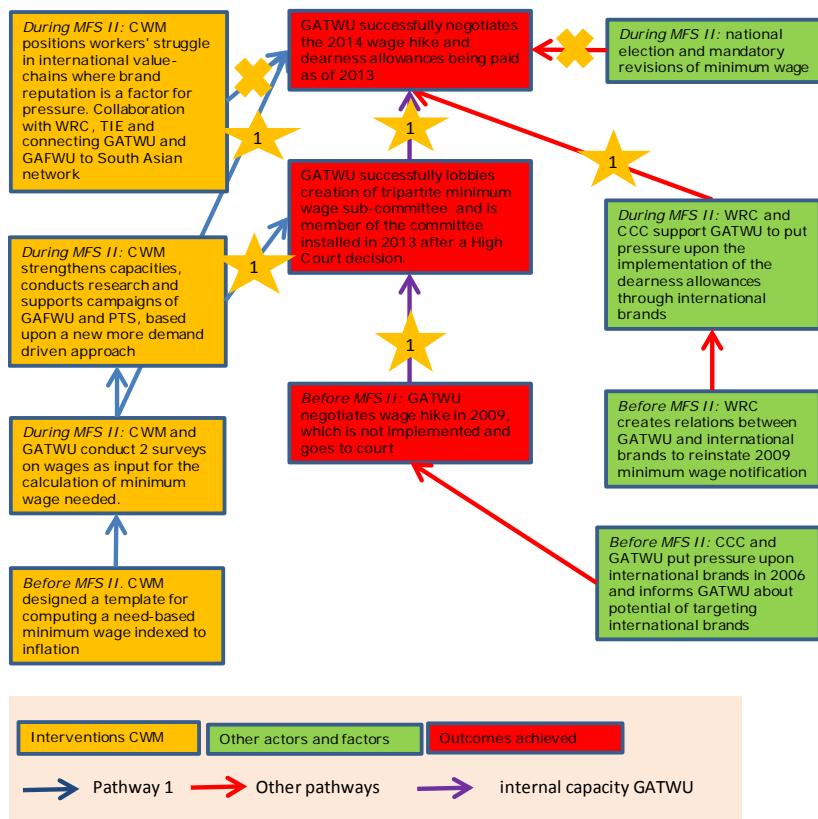

Figure 2 Pathways that possibly explain outcomes and conclusions about the nature of the relations between pathways and the outcome, GATWU

- The second pathway consists of international pressure explaining the wage hike notification of 2014 and the payment of the Dearness Allowances in 2013, as a result of the collapse of the eight store Bangladeshi garment factory in April 2013; Rana Plaza.

The Rana Plaza accident raised the awareness of EU countries and the US that changes in the garment sector are necessary. Seven OECD countries called on companies to "donate generously to the [Rana Plaza Donor] Trust Fund, either for the first time or with a second contribution to come to an appropriate amount" in June 2014. But funds are still missing and some of the brands are refusing to compensate the victims of the collapse of the eight store high factory³⁴.

Apart from this wakeup call of OECD countries, the Dutch and the German Governments endorsed the principle of a living wage being paid to workers in the garment sector in 2013, but until so far these principles have not (yet) been operationalised by the sector itself³⁵. These commitments were made during a conference convened by both governments in November 2013, regrouping business, international organisations, NGOs and trade unions, including GATWU, CCC and NTUI. No evidence has been found so far that these initiatives have contributed to an improvement of the working situation in the factories of Karnataka state.

- The 2014 wage hike in Karnataka state is explained by means of the 2014 national elections or because wages need to be revised every three to five years, which is mandatory according to the Minimum Wage Act. No evidence was found that the national elections and the mandatory review of minimum wages explain the wage hike of 2014, nor those wage hikes of 2001 and 2009, the last of which only became effective in 2014. According to GATWU many wage hikes notified by the government have

³⁴ http://www.tuac.org/en/public/e-docs/00/00/0E/D8/document_news.phtml

³⁵ <http://www.cleanclothes.org/news/2013/11/26/living-wage-conference-2013-berlin-25-26-november-2013>

been stayed because of industry opposition in 1979, 1986, 1993, 2001, 2007 and 2009. The three to five year mandatory revisions of the minimum wage did not occur in the garment sector in Karnataka either: the 2009 wage hike notification (not implemented) followed a previous notification of 2001. Between 2001 and 2014, no other notifications became effective.

Conclusion:

The most plausible explanation of GATWU's capacity to successfully negotiate wage hikes and ensure that dearness allowances are being paid is a combination of causes:

- In the first place, GATWU's has proven to be a mature grass root worker organisation before MFS II because it already successfully negotiated the 2009 wage hike, which unfortunately did not materialize and already worked with the CCC in the 2005-2006 period without interventions from CWM.
- In the second place, GATWU has received support from both WRC and CCC before and during MFS II, in particular in terms of becoming aware that exercising pressure through international brands helps to improve workers' conditions as of 2006 and beyond, before CWM started to realise the importance of chain-wide thinking during MFS II period.
- In the third place, CWM's technical support to calculate need-based minimum wages as a starting point for negotiations, as well as their support to GATWU's negotiations with the industry and the government.

These three causes are part of the *causal package* that explains the outcomes obtained during MFS II. Together they are a *minimally sufficient and necessary explanation* of the outcome.

The evaluators did not find a causal relation between CWM's efforts during MFS II to support GATWU at the international level, because GATWU already realised the importance of this as of 2006. Also the mandatory three to five year minimum wage revisions and the national elections do not explain the outcomes achieved.

The most important role of CWM in explaining the outcome starts with the template it made to compute a need-based minimum wage, indexed for inflation in 2007, which was used by GATWU in 2012 and 2013 to calculate minimum wages needed as a means to raise the awareness of garment sector workers and to continue negotiations with the government and the industry. Its second important contribution is the collaboration and guidance it offers upon request and which has become more demand driven since MFS II.

5.4 What is the relevance of these changes?

5.4.1 Relevance of the changes in relation to the Theory of Change of 2012

According to the ToC of 2012, CWM's ultimate goal is an 'Equitable and socially just society'. In order to achieve this, CWM works towards the creation of a 'new generation of workers and activists' that requires a new kind of leadership - the worker activist- that needs to reinsure the right to collective bargaining, also in Special Economic Zones and; that needs to create sound politically independent trade unions. Also the further democratisation among trade unions' is needed in order promote this new generation of workers and worker –activists, which would lead to more dialogue, more sharing, and decision making based upon consensus. Both conditions would lead to 'unity among workers', as well as to the 'right to association' and the 'right to collective bargaining', which, would further ensure that trade unions working together for the larger cause of 'universal security' and 'income based taxation', impacting the conditions of all the workers across sectors. Further, 'democratic industrialisation' would enable an atmosphere where the needs of the workers will be voiced, heard and addressed. In this pathway, the role of CWM perceives for itself, focuses on the 'emergence of new generation of workers activists' and 'trade union democratisation'. They intervene by means of documentation and research to discover significant moments in trade union history as a way to chart out the best way forward from the past and present learnings.

The changes achieved by the five to six trade unions that CWM worked with still relevant in the light of its 2012 ToC but in comparison the total number of unions that it works with these are minimal changes.

5.4.2 Relevance of the changes in relation to the context in which the SPO is operating

The present day civil society context relating to labour and labour rights in India has been in the making for long, especially so since Liberalisation set off economic reforms in 1991. The public sector steadily declined since, privatisation brought in contractualisation of a kind that ignored labour rights and union activities saw a downfall.

The increase in use of contract labour—workers hired on temporary contracts through government-licensed intermediary or contractors—by industries, has led to increasing incidences of industrial violence.³⁶ This is mainly because of the exploitative nature of this form of labour. By hiring contract labourers industries are able to cut down on costs and increase profits, this is on the cost of the workers experiencing, “anxiety over job security, lack of social security, exploitation at the hands of contractors, low wages, unequal treatment by trade unions and abusive behaviour from permanent workers and supervisors”.³⁷

Most recently, the Manesar Plant (Haryana) of Maruti Suzuki India Ltd. witnessed industrial violence. The workers at the plant organised protests in August 2011 against the dismissal of 60 of their colleagues and the company’s refusal to accept the Maruti Suzuki Employees Union (MSEU). In July 2012, the skirmishes between the management and the workers culminated with the death of the HR manager and also, injured 100 people of the management by the rioting workers. The plant was subsequently shut for a month following this incidence, and 500 permanent and 1800 contract workers were dismissed. The Haryana police arrested 147 workers in connection to this, they are still in prison.³⁸ There have been other instances of industrial violence, caused by friction between the workers and the management. In 2008, the CEO of Graziano Transmission India, an auto component maker, was beaten to death by 200 workers. In November 2010, an Assistant General Manager of Allied Nippon, again an auto parts maker, was stoned to death by angry workers. In March 2011, a Deputy General Manager of Powmex Steel, was killed when the workers set his car on fire.³⁹

It is under this contextual landscape that organisations like Centre for Workers’ Management (CWM) work. Their work is increasingly shaped by these growing challenges and issues faced by the labourers.

Apart from this local context, since the baseline and maybe triggered by the Rana Plaza incident, CWM has made efforts to position workers in global value chains, which helped to realise that not only the Indian industries and the Indian government need to be addressed, but also international brands that source from Indian factories. CWM’s work is highly relevant, but its effectiveness over the past two years shows that it is not capable to significantly contribute to changing the context.

5.4.3 Relevance of the changes in relation to the policies of the MFS II alliance and Hivos

CWM has been a partner of Hivos for more than 10 years. At the time of concluding the 2012 -2014 contract Hivos stated that CWM’s work fitted into its ‘Rights and Citizenship programme in India which intensely focused on the informal sector. CWM was Hivos’ only partner that maintained relations with worker organisations in both the formal and informal labour sector, reaching out to 41 trade unions and 700,000 workers (40% women) of both the formal and informal sector. CWM has been a partner of Hivos for more than 10 years. At the time of concluding the 2012 -2014 contract Hivos stated that CWM’s work fitted into its ‘Rights and Citizenship programme in India which intensely focused on the informal sector. women) of both the formal and informal sector. The contribution of the workers' organisations in the creation and strengthening of the New Trade Union Initiative (NTUI) in the beginning of the decennium has provided a fresh perspective on issues of labour and law that are non-political party aligned and representative of a wider mix of workers (everyone from sex workers to metal workers).

Apart from this, according to Hivos in 2012, CWM was at a critical juncture as far as its institutional history is concerned because they intended to create a Workers School in 2013. This school envisaged to be a process where second line leaders within trade unions would be equipped with sector-specific knowledge as well as pedagogical understandings of the economy to be able to do their job better. Further Hivos hoped to collaborate with CWM to support other Hivos partners to refine an advocacy agenda on the issue of Agricultural Labour/employment⁴⁰.

When looking back at CWM in 2014, with Hivos' support CWM was to introduce changes in its institutional set-up in the 2012 – 2-14 period as recommended already in 2008. However CWM did not make any progress on the workers' school since the baseline and failed to clearly position itself as such an institute that is capable to do research and education.

5.5 Explaining factors

5.5.1 Internal factors

Hivos conducted a capability assessment in 2012 which is presented in the following table.

Its average score for the capability to act and commit is 5.3 on a scale of 1 (lowest score) to 9 (highest score). The major observation made by Hivos is that CWM had to reconstitute its board by December 2012, which has been done. The performance of the new board seems to have improved in comparison to the board that was in place in 2012. Barring Gautam Mody, CWM's director until 2012, and who is now NTUI's General Secretary, none of the other CWM board members are on NTUI's board which indicates that the separation between CWM and any one other organisation, recommended since 2008, is slowly materialising.

Its average score for the capability to perform is a 4.8 explained by Hivos' observation that its strategic and operational planning, monitoring and evaluation procedures needed to be revised in order to ensure monitoring not only at output, but also at outcome level, as well as the relevance of outputs delivered. These systems were meant to engage the organisation into a critical reflection on its position in the wider labour context and its added value. CWM has not improved these systems since 2012.

Its capability to relate was assessed at 6 points and mentions in particular relations with trade unions. Since 2012, CWM has strengthened its relations with many other actors and seeks their collaboration to jointly work with worker organisations. However relations with trade unions only concentrate upon some intensively.

CWM's capability to adapt and self-renew was appreciated with an average of 6 points, because the 2008 external evaluation had concluded that the organisation responds adequately to trends and changes in the context and uses up-to-date strategies and knowledge. Since 2012, CWM has made its collaboration with worker organisations more demand-driven and including a more global value chain perspective together with other actors. Whilst these confirm CWM's capacity to adapt and self-renew, CWM's added value in the labour sector would increase if it were able to become more effective in working with more trade unions. The evaluation team also questions CWM's capability to adapt and self-renew in relation to the recommendations made by an external evaluation team, of which some have been implemented as of 2012 only and some are still pending, such as is the case of the website, which is not being maintained.

⁴⁰ Contract Intake Form, Hivos, September 2012

Its capability to maintain consistency scored 5 points in 2012: CWM at that moment in time was aware of the need for an organisational restructuring as well as the need to strike a balance between working with trade unions on a day to day basis and upon demand on the one side, and its own strategic priorities; that of creating a workers' school and more engagement with larger policy issues. No changes were observed regarding this in this 2014.

Under the same capability Hivos observes that CWM is addressing gender sensitive issues at the workplace of female workers and has been recruiting female staff to further develop the issue.

Since 2012, when CWM counted 16 staff members of which 7 female, CWM has grown in staff numbers: at the end of 2013 it had 3 principal researchers; 1 campaign coordinator; 5 researchers & educators; 5 administrative and financial staff and 13 campaign staff. How many of these are female is unknown.⁴¹ The evaluation team did not find evidence that this increase in staff helped to serve more trade unions or to implement other activities that fit into CWM's vision and mission.

Table 5
CWM capabilities' assessment 2012

1 is lowest score - highly unsatisfactory
9 is highest score - highly satisfactory
unknown score possible in first year

Capability	Scores
1 Capability to act and commit	5.3
1.1 The organisation has a clear purpose and acts on decisions collectively. The leadership is accepted by staff, inspiring, action-oriented and reliable	6
1.2 The organisation is capable to mobilise sufficient financial resources, and (where relevant) non material resources from members/ supporters.	4
1.3 The organisation is internally transparent and accountable. (Relations between staff, direction and board; quality of decision-making process)	6
2 Capability to perform	4.8
2.1 The number, composition and expertise of staff is adequate in view of the organisation's objectives and programmes. (Indicate when there is high staff turnover)	5
2.2 The organisation has a coherent and realistic strategic plan. (Context and problem analysis; Theory of Change; quality of formulation of objectives, intended results and indicators; explanation of strategic choices)	4
2.3 The quality of financial and administrative management is adequate. (Budget, funding plan, financial management, financial report)	6
2.4 The organisation has an appropriate monitoring and evaluation process (documentation & data collection, involvement of stakeholders, quality of analysis and learning) and uses it for accountability and learning purposes.	4
3 Capability to relate	6
3.1 The organisation maintains relevant institutional relationships with external stakeholders and is seen as credible and legitimate. (Indicate main strategic relationships and collaboration with other actors)	7
3.2 The organisation is accountable to and communicates effectively with its primary constituents/ beneficiaries. (Describe downward or horizontal accountability process; specify for women)	5
4 Capability to adapt and self-renew	6
4.1 The organisation (management) responds adequately to trends and changes in the context and uses up-to-date strategies and knowledge.	8
4.2 The organisation (management) encourages and supports internal learning and reflection processes. (Conditions, incentives)	4
5 C5.1: Capability to maintain consistency	5
5.1 The organisation is capable to maintain consistency between ambition, vision, strategy and operations. The management is able to deal strategically with external pressure and conflicting demands.	5
5.2 To what extent has the organisation formulated objectives with regard to the position of women and issues of gender equality?	6
5.3 To what extent does the organisation have internal gender expertise?	4

⁴¹ CWM, annual review 2013

Capability		Scores
5.4	To what extent does the organisation maintain relations with key GW&D actors in its context, e.g. women's movement, women's organisations, gender experts?	
5.5	What is the percentage of women working in the organisation?	30% - 40%
5.6	To what extent is staff working in management or senior staff positions female?	> 50%

Source: Hivos, September 2012, Partner Capacity Assessment Form

5.5.2 External factors

Apart from the worsening context for labourers in both the formal and informal sector, no other external factors explain the findings of this evaluation.

5.5.3 Relation CFA-SPO

Hivos closed its office in Bangalore in 2013 and a new office was opened in Mumbai in 2014. The last liaison officer that worked with CWM since 2010 quit her job in 2012. Since then the new Hivos office did not follow up on the contract with CWM. CWM has appreciated Hivos' support that helped to support institutional costs. Other donors are more inclined to pay for programme activities. Hivos, together with Rosa Luxembourg Stiftung also provided technical support to CWM, in particular to create a new board which brings a diverse experience set to evolve and monitor its programme.

6 Discussion

6.1 Design of the intervention and replicability

There is a gap between CWM's vision, mission and the 2012 Theory of Change that reflect highly ideological ambitions which are relevant in India's context on the one side and its intervention strategies on the other side that basically comprise training, research & documentation and support of trade unions in their campaigns. The relations between these three outputs and the concerns of all trade unions which are; the right to associate and to collectively bargain, the right to a minimum and a living wage, universal social security and, livelihood and workers' rights are not clear and not reflected in the project documents. Perhaps they were only materialised in the garment sector and the domestic worker sector with three of the 41 trade unions that CWM works with.

The organisation continued to reply to demands coming from day-to-day base and failed to scale up its efforts by thinking more strategically as it wished to do, including the creation of a worker activist school⁴².

With the constitution of a new board that apart from trade union activists also counts academia and other experts, CWM is expected to set clearer strategic priorities in the coming years and implementing these.

The intervention is not suitable for replication, because it would not effectively and efficiently lead to sustainable development outcomes.

⁴² Baseline workshop information

7 Conclusion

Changes in the civil society arena of the SPO

In the 2012 – 2014 period, the two most important changes that took place in the civil society arena of CWM are related to 'level of organisation' and 'practice of values'.

With regards to level of organisation, CWM intensified its interactions with a limited number of trade unions (a maximum of five unions of the 41 unions they consider part of their constituents), in particular those of the garment and domestic workers sectors where by tradition most workers are female. Apart from the collaboration with these three unions, CWM started to position workers' struggles in global supply chains systems, as a means to reorient lobby and advocacy strategies of trade unions and to engage them in international networks. The SPO further expanded its international network and its financial resource base.

With regards to 'practice of values' CWM became a little bit more transparent to the trade unions it works with by means of creating a website that was recommended since 2008, but which is not kept up to date, and by reorganising its board that now also includes persons with a relevant background in training and research which is needed to improve CWM's effectiveness in its support to trade unions. The overlap of functions and roles between CWM and the New Trade Union Initiative (NTUI) considerably decreased.

Contribution/ attribution analysis

In the first place the evaluation assessed CWM's contribution to the increase in membership and the quality of women's engagement in two trade unions, the Garments and Fashions Workers Union (GAFWU) and the domestic workers' union Penn Thozhilalargal Sangam (PTS). Both unions are working in typically female sectors. The most plausible explanation of this outcome is a combination of the two trade unions already having shown to defend the interests of their constituents *before* MFS II; CWM making its support approach more demand-oriented *during* MFS II; supporting the unions to use a template to calculate a need-based minimum wage indexed to inflation developed by CWM (in 2008) that helped to negotiate wage hikes with the government, and; other actors who helped to position garment workers' concern in an international and supply chain context.

In the second place the evaluation team explained the capacity of the Garment and Textile Workers Union (GATWU) in Karnataka state to successfully negotiate a minimum wage hike and to finally ensure that industries started to pay dearness allowances to their workers according to the regulations in place. This outcome is most likely explained by the fact that GATWU is a mature organisation; support received by Workers' Right Consortium and Clean Clothes Campaign in targeting the international brands that source their products from the garment factories in Karnataka *before and during* MFS II, and CWM's technical support to calculate a needs-based inflation indexed minimum wage as an input for negotiations on these wages with the industry and the government.

CWM has been working with all three trade unions on a regular basis since 2008 – 2009 and these unions received more support than any other union that CWM considers as its constituents. *During the MFS II period*, CWM improved the quality of its services by means of making it more demand-driven and by means of including not only the union leaders, but also the second and the third rung. CWM itself became aware of the importance targeting international brands as a means to improve working conditions for women.

Relevance

The changes to which CWM contributed along with many other actors are relevant in relation to its 2012 Theory of Change and the external context. However these changes only concern some five to six of the 41 trade union that the organisation is supporting.

CWM is a very relevant organisation in relation to the Rights and Citizenship programme of the People Unlimited 4.1 alliance, but the partner organisation did hardly contribute to this programme.

Explaining factors

The information related to factors that explain the above findings was collected at the same time as the data were gathered for the previous questions. The evaluation team looked at internal factors within CWM, the external context in which it operates and the relations between CWM and Hivos. The most important factor that explains the evaluation findings is within CWM. Some of the critical issues mentioned in an external evaluation report of 2008 have been addressed as of 2012, such as the creation of a new and more performant board and a further separation between CWM and NTUI. However, CWM's current strategic and operational planning, monitoring and evaluation in place hamper the organisation to effectively and efficiently make a considerable difference for the trade unions that it supports. The past two years have seen some changes into more effective interventions and more strategic relations with other organisations to make this difference, which is promising and should be pursued.

Design of the intervention

There is a big gap between CWM's highly ideological ambitions and the interventions that it does: training, research & documentation and support trade unions in their campaigns. The design requires a further critical reflection in order to make it replicable at a wider scale by CWM in the first place in relation to other trade unions.

Table 6

Summary of findings.

When looking at the MFS II interventions of this SPO to strengthen civil society and/or policy influencing, how much do you agree with the following statements?	Score
The CS interventions were well designed	5
The CS interventions were implemented as designed	5
The CS interventions reached their objectives	6
The observed outcomes are attributable to the CS interventions	6
The observed CS outcomes are relevant to the beneficiaries of the SPO	7

Score between 1 to 10, with 1 being "not at all" and 10 being "completely".

Appendix 1 Civil Society Scores

This table presents the appreciation of the evaluation team regarding changes occurred for each indicator between 2012 and 2014 on a scale of -2 to + 2

- 2 = Considerable deterioration

- 1 = A slight deterioration

0 = no change occurred, the situation is the same as in 2012

+1 = slight improvement

+2 = considerable improvement

Dimension		Indicators	Question	Change
Civic engagement	1	Needs of marginalised groups	How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies?	0
	2	Involvement of target groups	What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities?	+1
	3	Political engagement	How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups?	0
Level of organisation	5	Relations with other organisations	In the past 12 months what has been the most intensive interaction you had with other CSOs?	+1
	5	Frequency of dialogue with closest CSO	In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with?	+1
	6	Defending the interests of marginalised groups	Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs?	+1
	7	Composition current financial resource base	How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendance to workshops of other CSOs; costs for organisational growth and/or networking?	+1
Practice of Values	8	Downward accountability	To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them?	+1
	9	Composition of social organs	What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for?	+1
	10	External financial auditing	How regularly is your organisation audited externally?	0
Perception of impact	11	Client satisfaction	What are the most important concerns of your target groups? How do your services take into account those important concerns?	0
	12	Civil society impact.	In the past 12 months, what impact did you have on building a strong civil society?	+1
	13	Relation with public sector organisations.	In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives?	0
	14	Relation with private sector organisations	In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective?	0
	15	Influence upon public policies, rules, regulations	How successful have you been in influencing public policies and practices in the past 2 years?	0
	16	Influence upon private sector agencies' policies, rules, regulations.	How successful have you been in influencing private sector policies and practices in the past 2 years?	0

CS context	17	Coping strategies	In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society.	-1
---------------	----	-------------------	---	----

Appendix 2 Changes in civil society indicators between 2012 and 2014

2.1 Civic Engagement

2.1.1 Needs of the marginalised groups

HIVOS' 2012-2014 contract with CWM states that the latter (in 2012) worked with 41 trade unions and has a total direct outreach of about 7 lakh workers—of whom 40 per cent are women—and that its annual indirect outreach is over a million workers per year. The evaluators had no independent way of verifying this quantitative claim, both as to whether the numbers were indeed as had been stated in 2012 or if they have increased or decreased since.

CWM works as a resource centre for trade unions comprising rural, garment, domestic, plantation, auto, metal and mining workers, and aims at organising contract workers, casual workers and the self-employed, mainly in the unorganised sector. It seeks to address the issues of the rural workers and workers with non-standardised urban jobs.

Its commitment to the larger needs of workers having remained constant, the past two years have seen CWM increasing focus on concerns and issues of women workers. CWM's Work Plan 2012-2013, in fact, records its intent to engage with new forms of organisation of primarily women workers, and address issues of women leadership and patriarchy in traditional unions.

True to this, between 2012 and 2014 CWM closely engaged with unions in the primarily women workforce dominated garment sector in Bangalore and Chennai—GATWU⁴³ and GAFWU⁴⁴—as also interact intensively with the Chennai-based all-women union PTS⁴⁵. Also, with the help of an Action Aid supported programme, CWM along with PTS, works with urban women workers from socially and economically disadvantaged sections. The underlying aim of all these activities is to highlight issues of fair minimum wage, increasing the role of women as primary wage earners and seek to build conditions for collective learning and action for women's rights.

HIVOS' partner capacity assessment form (October 2012-September 2014) corroborates this. It states that CWM works with organisations of women workers, industries where women are predominant and on issues of marginalisation related to caste and work-related stigma (unorganised workers in general, municipal workers, sex workers). HIVOS, however, scores CWM at a four out of nine on internal gender expertise.

⁴³ GATWU: Garment and Textile Workers' Union in Bangalore. See <http://gatwu.org.in/>

GATWU was formed in 2005 and was officially registered in 2006 in Bangalore. They are committed to building the power of the working class in the Karnataka garment industry and building a movement with like-minded organizations to advance the interests of workers and their families. GATWU is fighting for living wages, better working conditions, safe and harassment-free working environments, and freedom of association.

⁴⁴ Garments and Fashion Workers' Union (GAFWU) is a Chennai (Tamil Nadu) based workers' union, more than 95% of whose members are women. The union works for the rights of garment-apparel sector workers, and is a partner organisation of the CWM.

⁴⁵ Penn Thozhilalar Sangam is an organisation working in Chennai, with a neighbourhood based focus. Most of its members are women, and it also works for making government services accessible to women workers' in a neighbourhood. It is also a partner organization of the CWM.

CWM's only shift from its pre-baseline documented goals is its failure to address rural workers' issues in the new worksites created by NREGA⁴⁶. CWM had expressed intent to help rural workers understand their rights vis-à-vis the scheme. This has not happened. CWM attributes this to the government's pressure that more and more rural labour opt to work under NREGA, and that NGOs be contracted to facilitate this. CWM thought it best to keep out of this scenario where NGOs were seen as adding to the quantitative, not qualitative, enhancement of NREGA.

Score: 0

2.1.2 Involvement of target groups

During the baseline evaluation, CWM's executive leadership made it clear that the organisation seeks to be an anonymous catalyst in the trade union movement. Therefore, the core belief behind all its interventions is that workers must represent themselves, should be self-managed and self-governed; and that CWM's role should only be limited to playing facilitator and enabler. This was reiterated during the end line workshop. CWM maintains a high level of interaction with the beneficiary groups, said the leadership; qualifying that while there is no formal mechanism for involvement of beneficiaries in CWM's planning processes, needs of beneficiary groups are closely factored in, through an iterative process of research and documentation, education and problem solving intervention.

Having said which, the CWM staff, across hierarchies, felt that the target groups' level of participation in the analysis, planning and evaluation of the organisation's activities had improved in the past two years. This was variously seen as being a consequence of: a) CWM having systematised the process of beneficiary interaction through better targeted research and education b) workshops and meetings now being structured along with activist leaders of the unions c) using the workshop mode or focus group discussions to check outcomes and test ideas which, in turn, informed the next steps d) involving the union leadership's second, and sometimes even the third tier, in deliberating on the next steps.

End line score: +1

2.1.3 Intensity of political engagement

CWM does not interact with political parties and elected bodies. The staffers said that such interaction is exclusively the remit of the target group. But that CWM staff is kept informed by the unions of such interactions, if any, so as to ensure exposure and improve their effectiveness.

Score: Not applicable

2.2 Level of Organisation

2.2.1 Relations with other organisations

HIVOS' partner capacity assessment in their 2012-2014 contract with CWM scored the latter at a seven out of nine on Capability to Relate. It noted that CWM maintains relevant institutional relationships with external stakeholders and is seen as credible and legitimate.

⁴⁶ The National Rural Employment Guarantee Act, 2005 is an Act to provide for the enhancement of livelihood security of the households in rural areas of the country by providing at least one hundred days of guaranteed wage employment in every financial year to every household whose adult members volunteer to do unskilled manual work and for matters connected therewith or incidental thereto. See <http://nrega.nic.in/rajaswa.pdf>

During the end line evaluation workshop, the CWM staff was unanimous that there had been considerable improvement in their relations with other civil society organisations in the period between the baseline and the end line evaluations.

CWM said that its most intensive interactions in the past 12 months have been with: a) Garment and Textile Workers' Union (GATWU), Bangalore, Karnataka b) Garment and Fashion Workers' Union (GAFWU), Chennai, Tamil Nadu c) Penn Thozhilalar Sangam (PTS), Chennai, Tamil Nadu d) Various plantation workers associations/unions in North Bengal e) Auto Workers' unions (unnamed) f) New Trade Union Initiative (NTUI⁴⁷) Malarchi⁴⁸, Chennai g) Action Aid⁴⁹, India h) Workers' Rights Consortium⁵⁰, Washington DC (WRC), USA i) Transnational Information Exchange (TIE⁵¹), Germany j) Rosa Luxembourg Stiftung⁵², Germany k) International Labour Rights Forum⁵³, Washington DC, USA

CWM said that its engagement with the all-women's union PTS, and unions in the garment sector which have a predominant women workforce, such as GATWU and GAFWU, is more focused since 2012. These interactions are around the issues of statutory minimum wage for garment workers and for domestic workers, leadership development for women trade union leaders, and issues that directly affect women at work such as violence at the workplace, low wages, absence of regulation, safe public transport; provisioning of public facilities like crèche etc. The engagement in the garment sector has in particular become stronger with CWM being engaged in helping set up a network of trade unions (involving TIE) in the garment sector in South Asia, including GATWU and GAFWU from India and trade unions from Sri Lanka and Bangladesh. CWM has brought together its engagement with multiple actors, in India and abroad, to take forward experience sharing as part of collective learning.

CWM's international networking also seems to have improved over the past two years. The organisation has both strengthened and derived strength from international bodies like WRC and TIE. The CWM staffers said that the aim behind this was not to address specific issues but a result of maturing of their strategy. CWM's work with WRC, for instance, involves raising workers' complaints with them, which is then presented by WRC at international platforms. CWM's work with TIE, on the other hand, is driven towards the need to throw up a self-sustaining union network in the garment and the auto industry that is able to take up its indigenous issues and address them through collective action/collective bargaining.

Score: +2

2.2.2 Frequency of dialogue with closest civil society organisation

The CWM staff agreed, in differing degrees, that the frequency of their interactions with their partner CSOs had increased in number and quality terms in the past two years. In 2012 the leadership had

⁴⁷ New Trade Union Initiative is a national trade union federation in India founded in 2002. Refer <http://ntui.org.in/ntui/>

⁴⁸ Malarchi is a Chennai-based women's resource centre founded in 2001. Sujata Mody, President, PTS is a founding member of Malarchi.

⁴⁹ ActionAid India is an anti-poverty agency, working in India since 1972 with the poor people to end poverty and injustice together. See <http://www.actionaid.org/india/who-we-are-1>

⁵⁰ Workers' Rights Consortium (WRC) is an independent labour rights monitoring organization, conducting investigations of working conditions in factories around the globe. Their purpose is to combat sweatshops and protect the rights of workers who make apparel and other products. See <http://www.workersrights.org/>

⁵¹ Transnational Information Exchange (TIE), is a global grassroots network of workers active in workplaces and communities. It includes both union and non-union activists in the formal and informal sectors. TIE aims to encourage, organise, and facilitate international consciousness and cooperation among workers and their organisations in various parts of the world. See http://www.tie-germany.org/who_we_are/index.html

⁵² The Rosa Luxembourg Foundation is one of the largest political education institutions in Germany today and sees itself as part of the intellectual current of democratic socialism. The foundation evolved from a small political group, "Social Analysis and Political Education Association", founded in 1990 in Berlin into a nationwide political education organisation, a discussion forum for critical thought and political alternatives as well a research facility for progressive social analysis. See <http://www.rosalux.de/english/foundation.html>

⁵³ International Labor Rights Forum is a human rights organization that advocates for workers globally. See <http://www.laborrights.org/about>

said that CWM did not interact intensively with any trade union in particular. In 2014, however, the leadership shared that now CWM typically interacts many times in a month with some of its partner unions. Other staff pointed out that the change has also been about using different modes for dialogue not just limited to meetings, regular flow of information through emails and telephones have been a communication feature since 2012.

To illustrate the growing intensity of its engagements with its partners, CWM cited its interactions with GATWU and GAFWU, all sharing a common agenda of campaign for a fair minimum wage, bargaining strategy based on understanding of the global supply chain, and struggle against workplace violence. This has resulted in a more intensive interaction between CWM, GATWU and GAFWU. The TIE network has also facilitated a closer interaction.

Score: +1

2.2.3 Defending the interests of marginalised groups

Both in 2012 and 2014, the CWM staff has been categorical that trade unions, and trade union networks, are the best defendants of the interests of workers; they are elected organisations of workers, and help deepen democracy, empowerment, and in build sustainable interventions.

The CWM staff felt that the situation, on this count, has improved between 2012 and 2014. Within the various key sectors that CWM has been engaged with: a) there has been strengthening of some trade unions b) trade union membership has increased in unions such as GAFWU and PTS c) some unions, like GAFWU and PTS, have also developed grass roots leadership, including women as leaders of unions representing women workers in garments, domestic work, rural workers and tea plantation work d) there has been an improvement in the effectiveness of many such unions vis a vis their ability to use available skills, resources and experience that is a result of capacity building; such as GATWU's effective participation in negotiations in the tripartite committee on wage hike in Karnataka's garment sector.

Score: +1

2.2.4 Composition financial resource base

The baseline evaluation had found CWM in a precarious financial position. In a May 2011 letter, Hivos, whose contract with CWM had ended in September 2012, had informed CWM of a funding crisis and that it would be withdrawing its support from the organisation upon ten years of completion of funding. CWM's Work Plan 2012-2013, however, mentioned that the organisation expected to enter into a new contract for an equitant amount from October 2012. A letter from Hivos to CWM, dated September 2011, emphasised that CWM needs to place 'urgent priority on addressing the issue of financial sustainability, including looking at the option of charging associate trade unions for the provision of support.'; the message was repeated in a letter to CWM in December 2011. Even so, CWM in its Work Plan 2011-2012 estimated the total budget of CWM in the 2009-2012 period—and that only included confirmed grants—and showed an increasing dependency on HIVOS starting with 76 per cent in 2009-2010 to 88 per cent in 2011 to 2012. Eventually though, Hivos did get into a contract with CWM for October 2012 to September 2014.

This being the background, during the end line evaluations, the staff felt that CWM's financial situation improved between 2012 and 2014. But the board member thought it had deteriorated.

A three year contract with Rosa Luxembourg Stiftung (RLS) beginning January 1, 2013 seems to have contributed largely to CWM's newfound sense of financial stability. And there is now also assured funding from Action Aid for the Child Support Project up to 31 December 2015.

The CWM staff sees this new fund inflow as having averted an imminent financial crisis at around the time of the baseline evaluations. They credit CWM for having successfully managed to raise funds from donors other than Hivos—and ending their dependence solely on Hivos. The staff pointed out that certain costs, like say pertaining to workshops held with unions, are now increasingly borne by the

host trade unions themselves; this is seen as a crucial issue of principle important for the autonomy of the unions. CWM however does finance its own costs (office costs, salaries, travel) for all the work that contributes to their activities.

The CWM board member's less enthusiastic, and perhaps more pragmatic, perception of the organisation's current funding situation is based on the fact that Hivos has been a key, and almost sole, source of support for institutional costs; though some part of the review exercise is now financed by the RLS. The reduction and uncertainty with regard to support from Hivos has led to some curtailment of CWM's work. It has also resulted in a decline in available resources as staff has been required to raise additional resources, manage with less and put in time for compliance. Also, finally, CWM is still dependent on donor support for all its fixed costs.

Score: +1

2.3 Practice of Values

2.3.1 Downward accountability

CWM aims to ensure accountability at three levels: a) accountability to the target group; b) through strong internal audit supported by robust external audit; c) through its board. Having said which, CWM has been assessed in the past as having too many overlaps with workers' organisations. This has challenged different evaluators—at separate points in time—in being able to measure CWM's accountability to its target groups, funders and board.

HIVOS' Organisational Assessment 2004 states that CWM worked with various independent workers organisations whose efforts contributed to the establishment of NTUI in 2001. Since then, CWM continued association with these organisations that were affiliated to the NTUI. At the time of the baseline, four out of five of CWM's board members held posts in NTUI.

CWM has made some changes to address the above mentioned concerns in the past two years. And all CWM's staff said that these changes have improved the organisation's accountability systems and structures.

The CWM board has now been reconstituted; barring Gautam Mody who is now NTUI's General Secretary, none of the other CWM board members are on NTUI's board. The CWM board has been widened to include professionals committed to CWM's objectives but with a wider experience of similar organisations and issues. This has assisted in addressing accountability as also offering diversity in mentoring.

The leadership said that there has been greater systematising and regularity of board meetings and staff meetings over the past two years, and these have helped get inputs on CWM's work. Also, there are now more detailed and regular interactions with the target group, which has improved accountability.

The board member said that compliance standards of Rosa Luxembourg Stiftung have led to improved accountability. And the annual review mechanism introduced by HIVOS has helped integrate planning with the annual compliance requirements—financing of board meetings, quality internal audit and capable external audit firm are supported by HIVOS. In its 2012-2014 contract with CWM, HIVOS' partner capacity assessment scores CWM at a five out of nine on its Capability to Relate, and comments that CWM is accountable to and communicates effectively with its primary constituents/beneficiaries.

The absence of a CWM website, at the time of the baseline, was conspicuous, especially since CWM is in the field of information generation and dissemination. The CWM website is now up (<http://www.cwm.org.in>), has a news ticker update, but the upcoming events listed and the publications uploaded on the site are not beyond late 2012.

Score: +1

2.3.2 Composition of social organs

CWM is a registered society with a board of governors, representatives of trade unions and activists. The organisation's governing council comprises five members.

Upon HIVOS's request for a stronger representation of women in CWM's Board, it was indeed reconstituted in 2012 and now includes one female and four male persons.

The board now has two—40 percent—trade unionists as members. The inclusion of three members from academia and action research has been deliberate considering the need to maintain a high standard of research and education.

CWM's former female co-executive head has become its executive head after the baseline assessment.

However, there seems to be a significant divergence of views on the board reconstitution within CWM. The executive leadership felt that the representation of the marginalised has deteriorated in the new board given that the inclusion of action researchers and academics has been at the cost of losing trade union activists. Other staff and the board member, on the other hand, saw it as considerable improvement due to a woman being inducted into the board. These changes are being attributed to have been driven by CWM's internal processes, but not without feeling the pressure to be seen to be 'inclusive'. HIVOS's assessments and support is said to have been an essential driver towards the board's reconstitution.

Score: +1

2.3.2 External financial auditing

There is a quarterly internal audit of CWM as an organisation. External audits are held annually, within 90 days of the year end, with a report presented to the board. CWM prepares accounts with the use of Tally ERP.9 software. The audits are paid for by the HIVOS grant.

Score: 0

2.4 Perception of Impact

2.4.1 Client satisfaction

In 2012 the CWM staff—and documents authored by them—listed the following as the major concerns of its target groups: a) right to associate and collective bargaining b) right to a minimum as well as living wage⁵⁴ c) livelihood and workers' rights d) lack of universal social security. These concerns were seen as aggravated by growing rural to urban migration, consequent unemployment, falling wages and abandonment of labour regulation. The declining rural economy further strengthened traditional hierarchies and created new forms of labour oppression—hitting hardest the most marginalised: women and dalits.

Over the past two years, CWM has continued to service the concerns of its target groups by being a resource centre for workers' unions; such that these unions can look to CWM for information and guidance to best understand the issues at play, both nationally and internationally. And use this understanding while strategising for and negotiating with industry and government to further workers' causes.

CWM increased its focus on issues pertaining to women workers in the past two years. Its interactions with unions in the women workforce dominated garment and domestic-help sector has seen a surge in the membership of such unions, as also an emerging women leadership.

For instance, garment sector union GAFWU in 2009 had a few women and about three women leaders from one garment factory. Now, it has women members and leaders from five factories in three Tamil Nadu districts. Despite not being an all-women union, currently its entire leadership—first, second and third rung—constitutes women. Because of this quantitative and qualitative growth of its women members, women workers affiliated to GAFWU chose to fight against sexual harassment at the workplace, and filed two cases of sexual harassment (between 2012 and 2013). One of them paved the way for the union's entry into a Special Economic Zone for the first time. This was a rare thing as even by law, trade union activities are not allowed within the SEZ premises.

Further, these intensive interactions have also contributed significantly to an increase in the daily wages in Karnataka's garment sector and a draft notification for the same in Tamil Nadu in 2014.

The CWM hierarchies were at variance as to why their target groups remained burdened with the same chronic concerns despite intensive interventions by their organisation in the past two years. They said that the organisation's service to its targets group could not affect a remarkably large impact because of the worsening of policy and political environment, as also employer attitudes, towards workers; adding that there is now a strong attack by employers, with government's complicity, on the workers' right to freedom of association.

Score: 0

⁵⁴ The issue of a living wage has gained urgency today, in the context of high inflation rates and increasing income disparities. Real poverty is a large concern of trade unions representing workers in the informal sector. Measurement of poverty and changing government definitions which push down wage norms make it difficult for unions to address the question of wage fixation. Norms like the 15th ILC have become a farce in the face of continuous pressure to push wages down. Trade union representation on wage fixing committees becomes ineffective in the face of absence of reliable and consistent data and analysis. At the same time, weakening of public social security measures available to the poor, further impacts real wages. A systematic region and sector specific series of studies on wages to workers linked to family employment and expenditure patterns, including aspects like incidence of forced employment of children in families of informal sector workers is a priority. The study information also needs to continuously feed into campaign for fair wages, and a just method of wage indexing, *Advancing Industrial Democracy for Economic and Social Equality, Centre for Workers' Management: 1 October 2008–30 September 2012*

2.4.2 Civil society impact

CWM's focus on concerns and issues of women workers' has resulted in the growth—both in terms of membership numbers of women and the geographical expanse—of some of the unions associated with it. There has been a constant and steady increase in women's engagement with GAFWU, which has more than 95 per cent women membership—it had 103 women as members from one Bangalore factory in 2009 and in 2013 it had 694 members from three districts of Karnataka. The membership in the all women PTS, associated with the domestic work and construction sector, has also grown from 297 to 18300 between 2001 and 2013. CWM has been organising workshops, training sessions etc to make workers, especially women workers, aware of their rights and develop leadership. Many of these workshops were conducted under the MFS II interventions. As a result of their interactions with GAFWU and PTS, women members of these unions now have enhanced levels of awareness of their rights in their workspace; on two occasions workers affiliated to GAFWU resisted sexual harassment at the workplace, by filing complaints against it, something that was rare in earlier times. CWM's engagement with unions in the garment sector that employs mostly women, has also contributed largely to the raising of daily wages in Karnataka and a draft notification towards the same in Tamil Nadu.

CWM's associate unions have benefited from its efforts to universalise the understanding of workers' rights. They have been connected, sometimes through CWM, to national and international workers' networks. With a much less segmented and targeted approach, the unions know now that even a specific struggle for minimum wages in Karnataka's garment sector is linked to other national and international actors and factors.

All levels in CWM' hierarchy felt that its impact over civil society has improved. Apart from the above mentioned, they see CWM as having contributed to: a) linking the prevalent low wage of women workers in the tea plantations of Northern Bengal to a rise in child labour and bringing this to the centre of discussions b) facilitating international fact finding on violations of trade union rights at Maruti-Suzuki and making the issue a matter of international concern amongst trade unions and democratic rights organisations.

Score: +1

2.4.3 Relation with public sector organisations

CWM staff and board said, as they had in 2012, that CWM does not deal with the public sector. The executive leadership, however, saw a change for the better; because a CWM partner union GATWU became member of the tripartite committee for minimum wages in the garment sector in Karnataka; and negotiated effectively in the committee comprising government and industry.

Score: Not Applicable for CWM; 0 or +1 for trade unions

2.4.4 Relation with private sector agencies

CWM does not interact directly with the private sector. This is done by the unions.

Score: Not applicable for CWM; no information available for trade-unions

2.4.5 Influence upon public policies, rules, regulations

CWM has no direct involvement in influencing public policies. However the staffers argued that some of their partner unions in the garment sector had addressed the minimum wage issue effectively in the past two years. Static for long, the minimum wage in Karnataka's garment industry has now been raised, and Tamil Nadu has issued a draft notification for a rise.

CWM's Annual Report 2010-2011 noted that the erstwhile UPA government's attempt to unlink the NREGA wage to inflation led to a campaign by various CSOs for an inflation indexed wage. CWM was asked for its inputs by its constituent unions. The campaign saw the government backtracking and

bringing in a formula compensating for inflation. Indexation of the NREGA wage has now come into place three years but NREGA's implementation has been slack.

Though the CWM staffers do not claim sole credit for any of the above mentioned achievements, they see it as an improvement in their partner unions' capacities influence public policies.

Score: Not Applicable for CWM; +1 for trade-unions.

2.4.6 Influence upon private sector agencies' policies, rules, regulations

CWM has no direct interactions with the private sector. These matters are left to trade unions.

Score: Not Applicable for CWM; no information available for trade-unions

2.5 Civil society environment

2.5.1 Coping strategies

While the past two years have seen new challenges thrust upon workers and unions, the backdrop has been consistently bleak. As Hivos' 2012-2014 contract with CWM sums up, the situation of labour in India is in a churn of an unprecedented order due to pro-market and liberal policies for some years. Even in the formal sector informal employment has increased from 39 to 46 per cent between 1990 and 2005 and is estimated at 51 per cent for 2010. This growing informality has put pressure on wages, and working conditions are far below those of standard employment, adversely impacting not just the formal but also the informal sector.

Other than this, the economic downturn, consequent retrenchment, increasing contractualisation of the workforce and spiralling inflation between 2012 and 2014 provided for a particularly difficult environment for workers. Controversies on mining contracts between government and the corporates multiplied; these were about violations of environmental norms and displacement issues impacting livelihoods of indigenous people and rural workers. Rural to urban migration continued unabated despite NREGA, which still suffers from widespread corruption and inappropriate implementation.

The right to dissent, meanwhile, has been under attack. Attempts at unionising and union struggles are met with increasing employer repression; often the government and police are complicit. The Maruti-Suzuki automobile workers brought to attention the attack on right to association and spread of contract employment in all forms of work⁵⁵. The struggles against displacement in Jagatsinghpur and Niyamgiri in Orissa, and around nuclear power generation sites in Kudamkulam, all brought to fore the contradictions between unregulated industrialisation and democratic rights.

The Foreign Contribution (Regulation) Act 2010 challenged CWM further, because it prohibits the use of foreign fund for unionisation. Those working with unions now have to be extra cautious that their foreign-funded activities are not linked with union formation.

Although CWM states that engaging with new national and international workers' networks will bring to the fore issues and concerns of women workers and those working in the auto industries, generally speaking, CWM did not develop coping strategies to counter these tendencies; its strategies of

Report CDI-15-034

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Report CDI-15-023

Klaver, D.C., Desalos, C., Hofstede, M., Wadhwa S., Pandey R., Madaan A., Mohapatra B.P., Kalra A., February 2015, *Gene Campaign end line report; MFS II country evaluations, Civil Society component*, Centre for Development Innovation, Wageningen UR (University & Research centre) and International Development Foundation (IDF). Report CDI-15-023. Wageningen.

This report describes the findings of the end line assessment of Gene Campaign in India that is a partner of Hivos.

The evaluation was commissioned by NWO-WOTRO, the Netherlands Organisation for Scientific Research in the Netherlands and is part of the programmatic evaluation of the Co-Financing System - MFS II financed by the Dutch Government, whose overall aim is to strengthen civil society in the South as a building block for structural poverty reduction. Apart from assessing impact on MDGs, the evaluation also assesses the contribution of the Dutch Co-Funding Agencies to strengthen the capacities of their Southern Partners, as well as the contribution of these partners towards building a vibrant civil society arena.

This report assesses Gene Campaign (GC) efforts in strengthening Civil Society in India based upon the CIVICUS analytical framework. It is a follow-up of a baseline study conducted in 2012. Key questions that are being answered comprise changes in the five CIVICUS dimensions to which Gene Campaign contributed; the nature of its contribution; the relevance of the contribution made and an identification of factors that explain Gene Campaign's role in civil society strengthening.

Keywords: Civil Society, CIVICUS, theory based evaluation, process-tracing

1 Introduction

This report presents the civil society end line findings of Gene Campaign (GC) in India which is a partner of Hivos under the Dutch Consortium People Unlimited 4.1. It is a follow-up to the baseline assessment that was carried out in 2012. According to the information provided during the baseline study, Gene Campaign is working on the theme 'governance'.

These findings are part of the overall evaluation of the joint MFS II evaluations to account for results of MFS II-funded or –co-funded development interventions implemented by Dutch Co-Funding Agencies (CFA) and/or their Southern Partner Organisations (SPO) and to contribute to the improvement of future development interventions. The civil society evaluation uses the CIVICUS framework and seeks to answer the following questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- What factors explain the findings drawn from the questions above?

The CIVICUS framework that comprises five dimensions (civic engagement, level of organization, practice of values, perception of impact and contexts influencing agency by civil society in general) has been used to orient the evaluation methodology.

Changes in the civil society arena of the SPO

In the 2012 – 2014 period the most important changes that took place in the civil society arena of Gene Campaign are related to the CIVICUS dimensions 'Civic engagement' and 'Perception of impact'.

For the first dimension Gene Campaign managed to increase the number of Farmers Clubs (FCs), Seed Management Committees (SMCs) and Self Help Groups (SHGs). In total some 317 farmers in 30 villages have adopted the System of Rice Intensification proposed by Gene Campaign. Farmers, women, youth and tribal people show increased capacity to take ownership of their livelihoods and some of their organisations established. Apart from this the number of intellectual property rights for indigenous seeds registered by farmers under the Protection of Plant Variety and Farmers Rights Act has increased from 18 to 144 in the past two years, showing that Gene is capable to strengthen farmer's rights vis-à-vis private seed companies.

A slightly negative change can be observed with regards to the dimension 'Perception of Impact'. Many respondents had expected that Gene Campaign would grow out to become an example of an organisation capable of expanding its work to other areas and contexts. However networking with other NGOs in Jharkhand has seen a decline in the past two years and at national level Gene did not play a convincing role in the RRA Network of NGOs.

These findings were obtained through an analysis of documents, a workshop and follow-up interviews with Gene Campaign, and interviews with external resources persons working in civil society organisations that receive support from Gene Campaign; other civil society organisations with whom the SPO is collaborating; public or private sector agents and; external resource persons capable of overlooking the MDG or theme on which the SPO is concentrating.

Attribution questions

Based upon an analysis of the projects and programmes financed by the Dutch CFAs a selection was made of SPOs to be included in an in-depth process tracing trajectory and those to be included for a quick contribution assessment. Gene Campaign was amongst those SPOs not selected for in-depth-process tracing. With regards to some of the outcomes of Gene, a quick contribution analysis was conducted that results in the following table:

Table 1

Outcomes achieved and contribution by Gene Campaign

Outcome and performance	Contribution by Gene Campaign
Farmers clubs: 20 FCs of which 16 established in the 2012 – 2014 period Four of the 20 FC's have been registered by Gene Campaign One FC has been successful in commercializing vermin-compost	There are multiple explanations of the creation of farmer clubs; 1) through MFS II funding with Gene 2) NGOs including GC receive subsidies from National Bank for Agriculture and Rural Development (NABARD), 3) farmers create their own FC because they receive NABARD support when registered.
Seed Management Committees in charge of managing seed banks: four established Not yet mature to take over GC's role in the management of the seed banks	No other organisations found that establish SMCs
Self Help Groups: 16 new SHG established of 20 supported by Gene Campaign One SHG reported that is successfully commercializing its products	There are multiple explanations of the creation of farmer clubs GC reactivated a number of SHGs created earlier by other NGOs. NABARD and other government programmes financially supports the creation of SHG and many NGOs engage in this in Jharkhand
Promotion of sustainable agricultural practices: Only 350 farmers have adopted SRI and some activities introduced by Gene will take a long time to be adopted at a larger scale, such as poultry, animal husbandry and horticulture	Apart from Gene, many other actors, including the government are working on sustainable agricultural practices

Relevance

Interviews with staff of Gene Campaign, with external resource person, with the liaison officer of Hivos, as well as contextual information helped to assess the relevance of Gene Campaign's interventions in terms of; its Theory of Change (ToC) for Civil Society (SC) as designed during the baseline study; the context in which Gene Campaign is operating; the CS policies of Hivos.

With regards to the baseline ToC which mentioned two the importance of having market linkages and favourable policies, Gene's interventions and outcomes are not relevant because they did not address these issues.

With regards to the context, Gene Campaign's work is relevant because of the extreme poverty and illiteracy rate in Jharkhand state which implies that securing rural people's livelihoods and protecting their rights with regards to indigenous seeds and land is key. With regards to the People Unlimited 4.1 MFS II programme Gene's position under the Green Entrepreneurship programme was initially relevant but did not materialise because Gene was not capable of playing a constructive role in the joint lobby and advocacy foreseen with other Hivos partners

Explaining factors

The information related to factors that explain the above findings was collected at the same time as the data were gathered for the previous questions. The evaluation team looked at internal factors within Gene Campaign, the external context in which it operates and its relations with Hivos.

Since the baseline assessment, staff turnover in the field office of Gene in Jharkhand has increased, which is mainly to be explained by the hierarchical structures in the organisation that hamper local staff to take ownership of the vision and mission of Gene beyond their daily work. Relations with Hivos did not influence the findings, because the relation between both organisations has remained constructive, though Hivos' expectations of Gene's role in the Green Entrepreneurship programme were not met.

The following chapter briefly describes the political context, the civil society context and the relevant background with regards to the governance issues Gene Campaign is working on. Chapter three provides background information on Gene Campaign, the relation of its MFS II interventions with the CIVICUS framework and specific information on the contract with Hivos. An evaluation methodology has been developed for the evaluation of the Civil Society component which can be found in appendix 2 of the main report; however, deviations from this methodology, the choices made with regards to the selection of the outcomes for contribution analysis, as well as difficulties encountered during data collection are to be found in chapter 4. The answers to each of the evaluation questions are being presented in chapter 5, followed by a discussion on the general project design in relation to CS development; an assessment of what elements of the project design may possibly work in other

contexts or be implemented by other organisations in chapter 6. Conclusions are presented in chapter 7.

2 Context

This paragraph briefly describes the context Gene Campaign is working in. A description of the Civil Society Context assessed according to the CIVICUS framework is provided in appendix 3 of the country report for Civil Society.

2.1 Political context

In 2000, Jharkhand, the twenty-eighth state of India had been carved out from the state of Bihar. Since then, political instability in Jharkhand continues with its eighth Chief Minister Arjun Munda resigning in 2013 after losing majority due to the withdrawal of support by the Jharkhand Mukti Morcha (JMM), a regional political party born out the desire for a separate state. Since its creation, Jharkhand has seen nine chief ministers and imposition of President Rule three times. The current chief minister is JMM's Hemant Soren.

The movement for the creation of Jharkhand revolved around the neglected needs for development in this region lagging behind its neighbours. People hoped that the creation of their own state would improve the situation. Political instability has prevented this, policies and governance have suffered. The growing corruption and exploitative extraction of Jharkhand's resources has continued unabated. Violence related to Left extremism has aggravated the state's disadvantages.

Jharkhand has poor social and human development indicators. It has the second highest poverty headcount ratio in India at 36.96 per cent¹. Education is low at 66.4 per cent, with female literacy at 56 per cent².

2.2 Civil Society context issues with regards to the MDG

The civil society in Jharkhand continues to be burdened by the same issues as it did in 2012—Naxalism³, state brutality, controversies surrounding big industries and displacement of ethnic tribal population due to mining.

The dismal situation in Jharkhand in the first ten years of its creation since 2000, was clearly spelt out in the report titled, "Jharkhand Human Rights Report 2001-2010", compiled by the Jharkhand Human Rights Movement (JRHM). According to the report, since its formation there have been 7,563 reported

¹ http://mospi.nic.in/Mospi_New/upload/mdg_2014_28jan14.pdf

² <http://jharkhand.gov.in/web/guest/facts&figures>

³ The Naxalite movement traces its origins from the Naxalbari uprising in 1967, the Maoist struggle in India is an outcome of this uprising. Naxalism was borne out of the marginalisation of the forest dwellers in Naxalbari village in West Bengal. It picked up support in the surrounding areas with the common cause of fighting marginalisation, lack of development and poverty faced by rural India. With the adoption of the Maoist ideology the movement became violent.

rapes, 3,398 dowry⁴ atrocities, 576 custody deaths and over 100 hunger deaths in Jharkhand⁵.

The state of Chhattisgarh was considered the worst hit in terms of Naxal related violence, but Jharkhand overtook it in 2011. Although the numbers have since gone down, the state is still acutely affected by the violence. By itself Jharkhand accounted for 40 per cent of the countrywide incidents and 58 per cent of deaths related to Naxalism in the first few months of 2013⁶.

According to the JRHM report, since the states formation there have been 550 people killed in 'encounters', and 4372 people have been arrested for being considered Maoists. The report further states that the government had signed 102 MoUs with various corporations since the creation of the state. Industry giants like Arcelor-Mittal had to pull out in 2011 because of the protests by the tribal groups against their proposed steel plant⁷.

There is a deep political-corporate nexus in Jharkhand and as such any forms of protests against these benefactors of these MoUs are met with strong and inhuman response from the government⁸.

The state was also undergoing immense upheaval in the tribal belt not only due to the activities of the naxalites but also due to the "development" forces in the form of government and big industries.

The kind of development that the government has tried to bring in over the years mainly includes the setting up of polluting industries. These industries which require acres of land are displacing the tribal population who live on these resource rich regions. For the indigenous tribes Jal, Jangal and Zameen (Water, Forest and Land) are their only means of survival. The government after facing protests from members of civil society, including tribal groups have resorted to arm-twisting tactics, like arresting them on forged cases, charging them with being Maoists, and even firing at peaceful protests⁹.

The Bokaro steel plant which was set up in 1964 in Jharkhand displaced 12,990 families of them 2,707 were tribal¹⁰. It's been nearly 50 years but these families are still awaiting compensation for their land. The efforts that the government is now making are account of the massive protests across the state against mining and industries taking over their land¹¹.

The growing protests pushed the government to pass a new act called the Right to Fair Compensation and Transparency in Land Acquisition, Rehabilitation and Resettlement Act, 2013. It replaced a 120-year-old law put in place during the British colonial period called the Land Acquisition Act, 1894. The most important aspect of the new law will be that it will ensure that industries obtain consent of over 80 per cent of the people whose land they wish to acquire. Also, the compensation will be four times the current practice in rural areas¹².

⁴ According to the Dowry Prohibition Act, 1961, dowry is defined as the act of giving any property or valuable security directly or indirectly, by one party in a marriage to another party in the marriage. In India, this is in an act of giving payment in cash/ or kind by the bride's family to the bridegrooms family. The National Crime Records Bureau have shown that one woman is killed every hour, when her family fails to meet the insistent and often outrageous demands made by her in-laws and husband. 3 Description of the Gene Campaign and its contribution to civil society/policy changes

3.1 Background of Gene Campaign

Gene Campaign was set up in 1993 by Dr. Suman Sahai, working together with a group of scientists, environmentalists and economists. The organisation wanted to react upon the alarming international development regarding genetic resources and the threats these posed on the livelihoods of tribal communities depending on these resources. Gene Campaign is a research and advocacy organisation which works with village communities as well as at policy making level.

At the local level, Gene Campaign has established one Master Gene Seed Bank and seven Community Gene Seed Banks in Jharkhand. It also provides training to farmers on sustainable agriculture practices, thereby increasing their capacities to generate an income. Gene Campaign has also established itself as a leading research organisation in agriculture and brought out numerous case studies and publications. Gene Campaign's members have served on various expert committees of the central government and legislative bodies. For this Gene Campaign received the Genome Saviour Award in 2009. Making agriculture sustainable is an important part of Gene Campaign's work, and they are training village communities in producing and using organic agricultural inputs.

As stated before, Gene Campaign does not only work at village level but also aims to influence the national debate on biodiversity. They have successfully lobbied for a law that grants legal rights to farmers and defending their intellectual property rights their fight against patents. Gene Campaign presented the first draft of a biodiversity legislation in 1997 and were in this way contributing to the Biological Diversity Act that passed in 2002.

Vision

Adequate food, assured livelihoods and better incomes for rural and tribal communities, based on sustainable food production and self-reliant economic growth.

Mission Statement

Gene Campaign's goal is to work for the empowerment of rural and Adivasi communities and for national laws and policies that support food and livelihood security and increase rural incomes. The organisation aims to raise a public debate on the ethics of the new biology and its applications, and to formulate policy in this controversial area.

3.2 MFS II interventions related to Civil Society

This evaluation looks at the project 'Improving the Food and Nutrition Security of Farm Families in Rainfed Areas of Jharkhand'. This project aims to improve community-based production of high quality seeds that would help farmers to become less dependent on the state for their seed inputs. Gene Campaign's main interventions focus on the creation of Farmer Clubs (FCs), Seed Management Committees (SMCs) and Self Help Groups (SHGs). These interventions are a clear example of strengthening civic engagement. Moreover, Gene Campaign capacitates these CBOs by training them to carry out the work on their own. As such, they are strengthening these intermediate organisations. Gene Campaign hopes that the model they use in this project will be copied in other parts of the country. In the 2012 – 2014 period GC, that works in three blocks of two districts in Jharkhand has expanded the numbers of the CBOs it supports: it is currently supporting 20 Farmers Clubs (FCs), of which 16 were formed between 2012 and 2014; has established 9 seed banks, 3 of them between

2012 and 2014; has formed 4 Seed Management Committees (SMCs) between 2012 and 2014, and; 22 Self Help Groups (SHGs), of which 16 have been formed between 2012 and 2014.

Gene Campaign is part of the Revitalising Rainfed Agriculture (RRA) Network¹³. Their role in this network is to lobby for community-based seed production by using their project as an example.

The partnership between Gene Campaign and Hivos ended in September 2013.

3.3 Basic information

Table 2

SPO basic information.

Criterion	Basic information
Name of SPO	Gene Campaign
Consortium	People Unlimited 4.1
CFA	Hivos
Start date of cooperation	
MDG/theme	Biodiversity and MDG 1
MFS II project name	Improving the Food and Nutrition Security of Farm Families in Rainfed Areas of Jharkhand
Contract period	October 2010 – September 2013
Total budget Hivos	€192,500
Other donors if applicable	Not applicable
Estimation of % of budget for Civil Society ¹⁴	12 %

¹⁴ Costs that relate to civil society development or policy influence are those costs that possibly contribute to the development of the CIVICUS dimensions, excluding coordination and office costs; staff costs and financial reserves.

4 Data collection and analytical approach

4.1 Adjustments made in the methodology of the evaluation

The project document and progress reports were helpful to obtain an overview of the outputs achieved versus outputs planned. However no specific objectives and targets have been formulated and this was reflected in the progress reports. The evaluators have not been able to consult the January – September 2013 progress report.

Rather than focussing on two separate strategic orientations (civic engagement, intermediate organisations, policy influencing and networking) as identified for the evaluation, these two were clubbed together into one focussed assessment; Namely: ‘Enhancing Civic Engagement and Strengthening Intermediate Organisations: Increase in the number of FCs, SMCs, SHGs and capacitating them towards promoting self-dependent sustainable agricultural practices’.

This was done because the workshop with Gene Campaign in Jharkhand revealed that most its work is around enhancing civic engagement by forming community-based organisations (CBOs) towards their cause, and that its activities towards strengthening CBOs are at too preliminary a stage to merit separate and sustained scrutiny. The overall outreach of all GC’s programmes, moreover, is not remarkably large, as their activities have effectively remained constrained to three blocks in two districts of Jharkhand.

Also, a decision was taken against having separate interviews after the workshop with various levels of the GC staff participants, as dictated by the methodology guidelines. This was because the amount of information available with the GC staffers in Jharkhand was so sparse that they wanted to consult each other while responding to the evaluation’s queries and filing such collaboratively-arrived-at responses separately would have been a meaningless exercise. The alternative, rival explanations to the outcomes identified were: a) encouragement/financial incentives/insistence by government agencies like NABARD¹⁵ (National Bank for Agriculture and Rural Development), DST¹⁶ (Department of Science and Technology) etc. to promote SRI¹⁷ (System of Rice Intensification), formation of FCs (Farmer Clubs) and SHGs (Self Help Groups) b) work by other NGOs like NBJK¹⁸ (Nav Bharat Jagriti Kendra), SPWD¹⁹ (Society for Promotion of Wastelands Development) etc.

4.2 Difficulties encountered during data collection

It is important to note that Gene Campaign (GC) is an influential research and advocacy organisation. It is headquartered in Delhi, and is linked to many national and international organisations and networks. In line with Hivos’ support given, the MFS II evaluation’s focus, however, was on GC’s work in Jharkhand.

The evaluators initiated both baseline and end line evaluation processes with the GC Delhi headquarters, contacting them first. The headquarters kindly put the evaluators in touch with its Jharkhand-based personnel. No one from GC’s headquarters chose to participate in the evaluation

¹⁵ See <https://www.nabard.org/english/home.aspx>

¹⁸ See <http://nbjk.org/>

¹⁹ See <http://www.spwd.org/>

processes either in 2012 or in 2014. The evaluation workshops were held with the GC Jharkhand staff in the state's capital Ranchi both times.

The sample size of respondents during the first day of end line evaluation workshop was eight, which included three field staff, three field coordinators and two members of executive leadership. This is the current strength of GC Jharkhand. The meagre number of respondents was in keeping with GC's staff strength which has shrunk from fourteen to eight since the baseline.

The primary problem the evaluators faced was the weak information base of the respondents. An evident disconnect between GC's Delhi headquarters and its Jharkhand branch had functionaries at all levels of GC Jharkhand's hierarchy lacking big picture vision, as well as smaller nuggets of information on many counts. And these insufficiencies rolled out into lack of written reports, documents, and evidence etc. for most of the claimed outcomes.

On a number of indicators, the views of field staff and executive leadership were contradictory. This could have been due to attempts by the executive leadership to mask the organisation's limitations. Or, could be attributed to yet another disconnect in GC, not just between the headquarters and the regional branch, but also Jharkhand leadership and its field workers.

At any rate, GC Jharkhand' performance over the past two years seems to have been lower than the expectations of other actors in the state's development sector. Naturally therefore, the evaluators found that the number of external resource persons who could help in verifying/rejecting GC's claimed outcomes had shrunk since the baseline. Those who did oblige the evaluators with interviews on GC had very limited information available with them regarding its work over the past two years. The other challenge was that most of the CBO representatives were farmers and/or mostly unlettered rural men and women, who were disadvantaged by the fact that they had no access to the larger context and issues involved in GC's work.

5 Results

5.1 Results obtained in relation to project logframe

The partnership between Hivos and Gene Campaign ended in September 2013. The evaluation were not able to consult the January 2013 – September 2013 progress report which was due in June 2014. Therefore the results incorporated in this report only include the information up to December 2012.

The 2010 project document does not formulate objectives to reach. In a broader sense the document states that Gene Campaign “needs to scale up the existing work on providing seed from the seed banks, to produce significantly larger volumes of seed to support cultivation and food production; this is best done in partnership with the community, starting modestly and building up the seed quantum generated to fulfill an increasing percentage of the requirement of farmers”. No targets were set.

Five outputs were formulated to reach this general objective: These outputs are presented in the table below and only represent the achievements between 2010 and 2012.

Table 3
Outputs planned vs outputs realised

Outputs planned	Achieved
1. Provide weather advisory to help farmers plan their cultivation • Train local youth as climate managers so that they can produce and understand the advisory and communicate its contents to farmers using mobile telephony (quantities unknown)	<ul style="list-style-type: none"> GC established linkages with agromet services and has regular access to the agromet advisories (every 5 days) Agromet’s advises are shared with farmers by setting up notice boards at Gene Seed Bank First steps made to convert agromet advisory issued to SMS format in local language to be shared through mobile telephony. the in-country evaluation team however observes that farmers are still complaining that agromet services are not accessible (see indicator 5.1 in the appendix 4)
2. Conservation of crop genetic diversity & establishing Seed Banks as Seed Sources • Collection and characterization of traditional varieties to conserve genetic diversity • Develop seed desiccation technology to reduce seed moisture to enable long term storage • Store the core agro biodiversity collection in Master Gene Bank and other Banks • Store larger seed volumes for multiplication in Seed Banks • Establish 2 Seed Banks, in partnership with the local community • Strengthen local committees set up to manage the Seed Banks, hand over responsibility increasingly to such Village Samitis • Register farmer varieties with Plant Variety Authority to establish their ownership	<ul style="list-style-type: none"> 50 seed samples of traditional varieties of paddy have been collected from Orissa and Jharkhand. Seeds are processed, dried and added in the Gene Seed Bank 101 traditional varieties made available for farmers 9 Gene Seed Banks are provided with 5 varieties having a quantity of 25 kg each. These varieties will be provided to communities for multiplication and cultivation so as to increase the seed volume in the Gene Seed Banks 5 Management committees with 5 members set up (1 reported in 2011, 5 reported in 2012. Not clear whether this adds up to 6 or whether 5 in total are set up)
3. Community based production of quality seeds • Establish a program to generate good quality, certified seeds of locally adapted rice varieties, as well as a contingency crop.	<ul style="list-style-type: none"> Program started in 2011 Beneficiaries for seed production are selected in several villages
4. Making crop production sustainable and high yielding • Improve soil health • Establish SRI to cultivate rice in low water conditions and increase yields • Establish SRI under upland, medium land and lowland conditions	<ul style="list-style-type: none"> Soil testing kits are being utilized for soil testing of the field selected for seed production at the initial stage, and to promote soil health improvement measures to the farmers 6 types of Azolla collected which will help to improve soil health 2 new vermicompost units set up in two blocks Gene Campaign is promoting and acting as a resource organization to provide technical support, and provide training to the staff and farmers in SRI methodology in 4 districts. Gene Campaign itself motivated 185 farmers to use SRI methodology
5. Lobby and Advocacy with RRA Network • Lobby government to scale up soil health program • Lobby for the creation of water bodies through NREGA • Lobby at the national level for shifting subsidies to bioorganic cultivation specially in rain fed areas • Lobby for policy focus on decentralized seed production	No results reported

5.2 Changes in civil society in the 2012-2014 period

5.2.1 Civic Engagement

Civic engagement describes the formal and informal activities and participation undertaken by individuals to advance shared interests at different levels. Participation within civil society is multi-faceted and encompasses socially-based and politically-based forms of engagement.

Generally speaking there has been a slight improvement in the engagement of more farmers, women, tribal groups and youth in Gene Campaign's activities.

Gene Campaign intervenes in three blocks of two districts and now works in 30 villages with 317 farmers having adopted the System of Rice Intensification proposed by Gene Campaign in two of the three blocks (figures of the third block unknown). In 2012, Gene Campaign worked only in 9 villages of these two blocks and with 48 farmers. These farmers are working in 20 farmer clubs, 16 new clubs being formed in the 2012 – 2014 period.

Apart from the farmer clubs nine seed banks are now operational (six in 2012); four new Seed Management Committees (CMC) have been formed as well as 16 new Self Help Groups which makes a total of 20 SHGs being supported by Gene Campaign.

GC prefers to work on project locations where at least fifty percent of the population consists of tribal people, whereas Jharkhand on average has about 28 per cent tribal population. They also state to work with women and youth, although no disaggregated figures were made available.

Past experiences show that Gene Campaign is very responsive to its beneficiary needs: upon request, they supported farmers to grow another paddy variety than proposed by Gene Campaign. Farmers, after needs identification, receive seeds from the seed banks and advice about organic fertilisers, organic pesticides, nursery preparation, transplantation techniques etc. Farmers have to return three times the amount of seed they take.

No changes in the 2012 – 2014 period as regards to the intensity of participation of farmers, women and youth into project identification, programming and evaluation, as well as political engagement of these persons.

Score baseline 2012 on an absolute scale from 0-3:	3
Score end line 2014, relative change on a scale of (-2, +2):	0

5.2.2 Level of organization

This dimension assesses the organisational development, complexity and sophistication of civil society, by looking at the relationships among the actors within the civil society arena.

Gene Campaign's position in the civil society arena in Jharkhand has deteriorated since 2012 according to field staff and external resource persons whereas Gene Campaign's executive leadership in Jharkhand states that its position has improved.

In Jharkhand, local NGOs used to work together with Gene Campaign in terms of sharing information, supporting each other and farmers to register their seed varieties under the Plant Protection Variety and Farmers' Rights Act (PPVFRA) 2001; so that they are paid royalty if seed companies use their seeds. Or, requesting these NGOs to supply their farmers with seeds from GC's seed banks. The deterioration of the collaboration is explained by various reasons, such as Gene Campaign moving to the more isolated Ormanjhi block; decline in finances and differences of opinion between GC's chairperson and the NGO Shiva that is the only other organisation in Jharkhand working on similar issues.

Some Farmer Clubs, SHGs and seed banks have become more self-reliant and start to become financially sustainable and improve the livelihoods of their members which is a positive development. However the adoption rate of the Rice Intensification System including the use of indigenous seeds as promoted by Gene Campaign is estimated at less than 5 percent of all farmers (some 350 farmers) and that farmers increasingly use hybrid seeds because hybrid seed companies grow increasingly

powerful. Meanwhile other NGOs in Jharkhand have become more powerful in introducing sustainable agriculture.

At the national level interactions with national and international social movements are said to have increased but no further details were provided²⁰.

Score baseline 2012 on an absolute scale from 0-3: 3
Score end line 2014, relative change on a scale of (-2, +2): 0

5.2.3 Practice of values

Practice of Values refers to the internal practice of values within the civil society arena. Important values that CIVICUS looks at such as transparency, democratic decision making, taking into account diversity that are deemed crucial to gauge not only progressiveness but also the extent to which civil society's practices are coherent with their ideals.

The 'practice of values' dimension has slightly declined in the past two years; Gene Campaign has a charismatic leader at the national level where decisions are made and the Jharkhand office is the implementing body at local level without being informed about the wider vision and strategies of the organisation. Also the farmer clubs, the SHGs and the Seed Management Committees are not aware about Gene Campaign's vision, mission and financial resources.

This situation causes frustration at the Jharkhand branch, causing people to leave. Gene Campaign misses the opportunity to become more accountable to tribal people, women and youth that are represented in its field office.

The field office is not aware about financial auditing procedures in their organisation.

Score baseline 2012 on an absolute scale from 0-3: 1
Score end line 2014, relative change on a scale of (-2, +2): -1

5.2.4 Perception of impact

Perception of Impact assesses the perceived impact of civil society actors on politics and society as a whole as the consequences of collective action. In this, the perception of both civil society actors (internal) as actors outside civil society (outsiders) is taken into account. Specific sub dimensions for this evaluation are the extent to which Gene Campaign has engaged more people in social or political activities, has contributed to strengthening CSOs and their networks, has influenced public and private sector policies.

Generally speaking Gene Campaign's impact at Jharkhand level has slightly improved as far as farmers, women, youth, tribal populations are concerned and the organisational structures that were formed (farmer clubs, self-help groups, seed banks and seed management committees). However no changes were observed regarding its relations with the public sector, including influencing policies. No relations exist with the private sector.

As mentioned in the previous dimensions, more farmers, women, youth and tribal populations are now engaged in Gene's project activities and some organisations established have become more self-reliant, enabling more people to earn a living. Promising livelihood activities mentioned are poultry, nursery raising and vermin-compost manufacturing. Exposure visits organised by Gene Campaign for its target groups help them to obtain new ideas about activities to improve their livelihoods and are said to have lessened their concerns about income, seed purchasing and lack of irrigation over the past two years. The seed banks now contain 972 varieties of indigenous seeds that are being conserved. Field staff is genuinely available for its targets groups.

Collaboration of Gene Campaign with other NGOs in Jharkhand has decreased in the past two years and that they missed the opportunity to take a leading role the local NGO network to improve agricultural practices²¹. It is however through this NGO network that Gene has disseminated

²⁰ Data collection took place in Jharkhand and not in Delhi where Gene Campaign is located.

²¹ Field staff and ex-Hivos staff.

information among farmers on the need to register their seed varieties under the Plant Protection Variety and Farmers' Rights Act (PPVFRA) 2001, so that companies using their seeds are legally bound to pay them a royalty. The number of such registrations has increased from 18 to 144 in the past two years, showing that Gene is capable to strengthen farmer's rights vis-à-vis private seed companies.

Gene Campaign continues working with public sector organisations as agricultural research institutes, state universities and the National Bank for Agriculture and Rural Development (with three ongoing projects) as it did in 2012. They continued their active involvement with the ministry of agriculture. Apart from supporting farmers to register their intellectual property rights regarding seeds, no other policy influencing activities take place in Jharkhand, mostly because staff is said not to have the capacity to engage with high level decision makers. Only the founder of Gene is engaged in policy influencing at national and international level.

Score baseline 2012 on an absolute scale from 0-3: 2
Score end line 2014, relative change on a scale of (-2, +2): +1

5.2.5 Environment

The social, political and economic environment in which civil society operates affects its room for manoeuvre. The civil society context has been described in chapter 3. In this section we describe how Gene Campaign is coping with that context.

No changes did occur with regards to the context in which Gene is operating and how Gene is coping with these challenges. Major challenges consist of two of the three blocks were Gene is operating are still being affected by Naxalism. However, Gene Campaign staff indicates that they feel that Naxals are not a threat as they see Gene Campaign as a valuable organisation.

Farmers continue to be pressured to sell their land to the mining industry because their land is mineral rich.

A 2011-12 Narrative Report authored by GC for Hivos lists some of the specific challenges faced by its Jharkhand unit vis a vis the environment they function in. These remain the same in 2014: a) farmers are not able to hold on to their harvest till the end of seed processing and certification period because of immediate financial need, a revolving "Buy Back Fund" is required to buy up the seed from farmers and settle accounts with them after seed sale; there are currently no funds for this b) because of the poor market infrastructure and connectivity, majority of the farming communities prefer to restrict production for family use c) non availability of agro met services makes farmers more prone to the vagaries of climate change d) small land holdings of majority of farmers makes it difficult to organise farmers for seed production e) drought, erratic rainfall and lack of support from government is leading to increased rice fallows every year f) in the changing climatic conditions farmers are keen to cultivate and produce seeds of high yielding varieties (read GM and hybrid seeds).

Score baseline 2012 on an absolute scale from 0-3: 3
Score end line 2014, relative change on a scale of (-2, +2): 0

5.3 To what degree are the changes attributable to the Southern partners?

For Gene Campaign, the strategic orientations to focus on in this evaluation are civic engagement and the strengthening of intermediate organisations. During the evaluation process it became clear that in the case of Gene Campaign these two orientations are highly intertwined. This is because most activities focus both on the setting up of CBOs as on capacitating them. Therefore it was chosen to combine the two orientations in this section, and write up the explanations for the different activities.

5.3.1 Forming of Farmers Clubs

Farmers' Clubs (FCs) act as village bodies that inform farmers about various government schemes and help farmers avail them, disseminate best sustainable agriculture practises, plan and execute small business plans and assist members in getting loans etc. Gene Campaign's Jharkhand branch has been

establishing FCs to act as intermediaries between it and farmers. In the last two years, they have established 16 new FCs in the two Jharkhand districts that are their project area.

However, another reason for this increase in the number of FCs is the pressure by NABARD, which Gene Campaign staffers said was funding a significant part of their activities. NABARD has been very insistent that NGOs being funded by it must establish FCs. Also, NABARD has been providing financial assistance to newly formed and registered FCs, resulting in villagers themselves getting interested in forming and registering FCs to avail such financial assistance.

The evaluators assess that all the above mentioned actors—and the factors that have been the consequence of their actions—have contributed to the expansion of the number of FCs. Gene Campaign's efforts have of course been an important component.

However, it may be noted that, the FCs thus established by Gene Jharkhand are still at a very primary stage, as only four of them (out of 20) are registered with NABARD and until so far only one FC has been successful in commercially producing vermin compost.

5.3.2 Seed Banks

The primary aim of Gene Campaign is conservation and promotion of traditional seed varieties and towards this it has been establishing seed banks, Seed Management Committees (SMCs), and conducting activities around collection of rare, indigenous seeds. Three new seed banks have been created in the last two years, four SMCs have been formed and 78 new varieties (of a total of 972) have been discovered and conserved in Gene Campaign's Master Seed Bank.

It must be noted, however, that the SMCs are in their initial stage of development. They are meant to act as community management institutions of the seed banks after the exit of Gene Campaign, a role that they do not seem to be ready for yet; also Gene Campaign staffers too are reluctant to hand over complete responsibilities to them clearly. These facts show that the SMCs are far from having capacitated such that they will cease to be effective if gene campaign were to exit in the near future.

Since there is no evidence or report which indicates that any other actor or factor is working on this issue in Jharkhand, the evaluators conclude that only Gene Campaign could be credited for making them happen.

5.3.3 Self Help Groups

The 16 new SHGs or the Mahila Samitis formed between 2012 and 2014 are not all formed from scratch by the Gene Campaign. Some of them were established by other NGOs, like NVJK (Nav Bharat Jagriti Kendra) and SPWD (Society for Promotion of Wasteland Development), but they became defunct once these NGOs pulled out. Such SHGs were re-activated by Gene Campaign.

A prominent success story of these SHGs is Saraiphool Mahila Samiti in Mailghongsa village, which developed a nursery on a commercial scale and started selling plants and making profits. But other SHGs have not been able to register such success yet, and it seems they are yet to develop as self-sustained women bodies.

The establishment of SHGs has also become easier over these past years because of high insistence of government and other funding agencies on SHG formation building. The bigger challenge is to make them self-sustained and exit, which Gene Campaign is yet struggling with.

Since setting up SHGs is an activity which is being promoted and implemented at a large scale by a number of actors, the evaluators believe that other than Gene Campaign, NGOs like NBJK, KGVK, banks like NABARD and government programmes like SGSY (Swarnajayanti Gram Swarozgaar Yojna) etc. also played direct or indirect yet limited roles in achieving the outcome.

5.3.4 Promotion of Sustainable Agriculture

Gene Campaign promotes sustainable agriculture practises, like SRI, use of indigenous seeds, bio-fertilisers and vermin-compost etc. It has made a number of efforts in this regard and arranged a number of trainings, outreach exercises. However, the state government of Jharkhand also promotes SRI through networks like ASHA (Alliance for Sustainable and Holistic Agriculture) and provides

financial incentives for this. NGOs like SPWD (Society For Promotion of Wastelands Development) are also promoting this in the districts where Gene Campaign is working.

Despite all these efforts, the coverage of SRI technique is still extremely low (less than 350 farmers associated with Gene Campaign have adopted it). Gene Campaign has also imparted trainings regarding backyard poultry, animal husbandry, orchards development etc. to farmers in these years but these are long term initiatives and their results will take some time to show up.

The evaluators assess that for this outcome, a number of other actors than Gene and other factors have a role to play. These are: the state government, ASHA, SPWD. Also, other than these, renowned environmentalist Vandana Shiva's organisation Navdanya has also started working in some parts of Jharkhand recently, but neither the evaluators nor those interviewed have detailed information of Navdanya's work.

5.4 What is the relevance of these changes?

5.4.1 Relevance of the changes in relation to the Theory of Change of 2012

During the baseline in 2012 the Theory of Change indicated that the overall goal of Gene Campaign was sustainability of farmers. The two conditions for this goal are market linkages and favourable policies. Generally speaking the outcomes achieved as described in 5.2 and in 5.3 in the first place support the strengthening of CBOs, but evidence exists that only some CBOs are capable of engaging with local markets. No activities by Gene have been reported where they try to establish market linkages in Jharkhand.

No improvements in policies have been reported nor efforts undertaken by the Jharkhand office to improve policies at this level. It is to be observed that Gene has not attempted to influence the ministry of agriculture's policy of boosting agriculture with the use of hybrid seeds instead of indigenous seeds.

5.4.2 Relevance of the changes in relation to the context in which the SPO is operating

Gene Campaign is mostly working on capacity building of farmers. They aim to have farmers take ownership of the seeds that they produce and make them more self-sufficient. Moreover, Gene Campaign believes that the indigenous seed varieties which have not been genetically modified are important to preserve. Therefore they motivate farmers to use these indigenous varieties and their knowledge of growing them, in order to preserve the seeds. This is the main goal of the Seed Banks.

Apart from this Gene Campaign is supporting farmers to protect their intellectual property rights with regards to the indigenous seeds they grow and conserve.

In relation to the context these efforts are valuable, because increasingly private seed companies are intruding local markets to sell hybrid seeds and are trying to commercialise indigenous seeds without any compensation for the farmers that invested in these seeds. Also the ministry of agriculture is now promoting the use of hybrid seeds to boost agricultural production.

Also these interventions are relevant when considering the extreme poverty and the illiteracy rate of Jharkhand's population. Any act of organising these populations and to help them to claim their rights, be it with regards to indigenous seeds or protecting their access to land, is to be considered relevant for securing their livelihoods.

5.4.3 Relevance of the changes in relation to the policies of the MFS II Alliance and the CFA

People Unlimited 4.1, as detailed in their MFS II programme should deploy four interrelated programmes that build and strengthen civil society in the South as the cornerstone of structural poverty alleviation. These programmes are: Green Entrepreneurship, Rights and Citizenship, Expression and Engagement, and Action for Change.

An ex-Hivos employee indicated that Gene Campaign's project is in alignment with Hivos' civil society strategy. It has been managed under the Green Entrepreneurship programme as it aims to mobilize farmers and build their capacities. The cooperation between Hivos and Gene Campaign was twofold: on the one hand Hivos supported them in the project described in this report, and on the other hand they were involving Gene in a network of NGOs in which Gene's charismatic leader was believed to be of great value which unfortunately did not materialise. We could conclude that Gene Campaign's outcomes achieved so far were not that relevant for Hivos' Green Entrepreneurship programme although it was promising at the beginning of the MFS II programme.

5.5 Explaining factors

5.5.1 Internal factors – Gene Campaign's Organisational Capacity

A disconnect between GC's Delhi-headquartered leadership and its Jharkhand branch personnel was apparent at the time of the baseline, as also during the end line. No one from the headquarters participated in either of the evaluation workshops in 2012 and 2014, both held in Jharkhand's capital Ranchi. The workshops made it evident that the executive, managerial and field level staff in GC Jharkhand lacked the organisation's larger vision, were uninformed regarding the broader issues at stake, and unaware of GC's work outside of the state.

A similar schism seems to exist between the executive and the ground-level staff within the Jharkhand branch too. The views and the information shared by the field staff and executive leadership were contradictory on a number of indicators, indicating yet another disconnect in GC, not just between the headquarters and the regional branch, but within the Jharkhand branch.

The past two years also saw GC Jharkhand's staff strength shrinking from fourteen to eight. External resource persons who have been in the know of GC Jharkhand's functioning observed that the high turnover was the consequence of the staff being demotivated, and often at the receiving end of harsh feedback. The vision from the top, they said, is hardly ever transmitted to the ground levels.

5.5.2 Relations Alliance - CFA-SPO

Hivos had expected Gene Campaign to contribute more to the NGO network. As this has not been materialised, they have been slightly disappointed. However, Gene's work in Jharkhand has been appreciated, including its impact upon civil society; the farmer clubs, self-help groups and seed management committees.

5.5.3 External factors

Although Gene Campaign is working under very severe conditions, these have not influenced their outcomes obtained. They manage to be operational in two blocks where Naxalists are in power. The severe poverty and high illiteracy rates may affect the slow improvement of CBOs becoming self-sufficient and the increasing presence of private seed companies that sell hybrid seeds may impact negatively upon their work, but no evidence has been observed to substantiate this.

Positive factors are for instance the support given by the government with regards to the promotion of sustainable agricultural development, including the financial support needed for NGOs to support this type of development. However it should be noted that the government aims to promote the use of hybrid seeds, which require less labour and generate higher yields.

6 Discussion

6.1 Design of the intervention

According to the Census 2011, Jharkhand's population is 32,988,134, of which about 76 per cent is rural at 25,055,073; Jharkhand's Department of Agriculture (DoA) says 80 per cent of the state's rural population is involved in agricultural activities, which makes agriculture the employment and primary source of their income.

Meanwhile, GC Jharkhand's work in three blocks of two districts in Jharkhand has established 20 Farmers Clubs (FCs), nine seed banks, constituted four Seed Management Committees (SMCs) and formed 22 Self Help Groups (SHGs). These numbers though commendable, are not statistically remarkable given the large numbers involved in Jharkhand's agriculture sector. A Ranchi-based development academic observed that the adoption rate of the SRI technique by farmers trained by Gene Campaign is negligible and that some might have adapted the technique but use hybrid seeds which requires less labour inputs and has higher yields. He added that there might be very few farmers who are repeat users of the SRI farming technique after one, or at most two, cropping seasons.

The past two years have not seen any noteworthy intervention or strategy to upscale Gene Jharkhand's work in the state, at least none that the Jharkhand branch staff were aware of and could inform the evaluators about. Till blueprints of such strategies are in the making, Gene Jharkhand's work cannot be leveraged into accruing significant benefits for the cause of sustainable agriculture using indigenous inputs.

Also, for sustainable agricultural practices using indigenous seed varieties to become popular, government buy-in is imperative. Actors in Jharkhand's development sector interviewed for the baseline and end line evaluations maintained that none among Gene Jharkhand's present staff have access to the language or the larger vision to lobby with the government. Only Gene's founder chairperson has this ability, and has lobbied effectively at the national and international levels in the past. However, no similar efforts were undertaken at the level of Jharkhand's agriculture policies. Regretting this, the experts pointed out that, lobbying is the need of the hour in Jharkhand given that the government is looking to raise the state's low agricultural productivity, this through pushing hybrid seeds. No documentation or dissemination of information to push for the link between increase in productivity through indigenous seeds and farming practices is being done by GC.

As a conclusion we can say that the programme of Gene Campaign was not designed well enough, especially as it was not taking the local needs into account. In order for it to have succeeded more it is necessary to implement a good needs-assessment at local level before implementing the programme. Farmers are often illiterate people and do not always understand the underlying reasons for Gene Campaigns work, such as climate change. It is therefore necessary to educate them on the background of the work and ask for their inputs before implementing such an intervention.

6.2 Replication of the intervention

The evaluation team believes that the intervention as it was now is not ready for any form of replication, be it in another context or by another organisation. However, on the last possibility there are some issues that should be improved in order for the programme to be more successful.

The single largest hindrance to the development of Gene Jharkhand's work has been the branch personnel's lack of access to the broader issues at stake. Both during the baseline and the end line, the branch personnel remained unaware of their own significance in the chain of national and international activities—or indeed even the activities—to promote sustainable agricultural practices using indigenous inputs. At the most basic level, this meant that, no one, including Gene Jharkhand's

executive leadership, even knew to what end the data being generated by them on ground was being used for. Some knowledge of this might have helped the personnel acquire a sense of purpose larger than just establishing FCs and seed banks. Some of this could even have percolated down to the farming community that is Gene Jharkhand's target.

Participation in seminars, lectures, workshops discussing the broader picture might have helped. So also a more encouraging engagement with the organisation's Delhi headquarters, with the branch office informed routinely of the activities of the other Gene branches.

The FCs and SMCs would also benefit from information percolating down to them.

Also, a much more vibrant engagement with the policymakers—bureaucrat parliamentarians and politicians included—is imperative for the project's impact to be meaningful to farmers all over the state, and indeed nationally.

7 Conclusion

Changes in the 2012-2014 period

In the 2012 – 2014 period the most important changes that took place in the civil society arena of Gene Campaign are 'Civic engagement' and 'Perception of impact'.

For the first dimension Gene Campaign managed to increase the number of Farmers Clubs (FCs), Seed Management Committees (SMCs) and Self Help Groups (SHGs). In total some 317 farmers in 30 villages have adopted the System of Rice Intensification proposed by Gene Campaign. Farmers, women, youth and tribal people show increased capacity to take ownership of their livelihoods and some of their organisations established. Apart from this the number of intellectual property rights for indigenous seeds registered by farmers under the Protection of Plant Variety and Farmers Rights Act has increased from 18 to 144 in the past two years, showing that Gene is capable to strengthen farmer's rights vis-à-vis private seed companies.

A slightly negative change can be observed with regards to the dimension 'Perception of Impact'. Many respondents had expected that Gene Campaign would grow out to become an example of an organisation capable of expanding its work to other areas and contexts. However networking with other NGOs in Jharkhand has seen a decline in the past two years and at national level Gene did not play a convincing role in the RRA Network of NGOs.

Contribution analysis

The evaluation did a quick contribution scan for four outcomes (Farmer Clubs, Seed Management Committees, Self Help Groups and the promotion of sustainable agriculture and concludes that Gene's contribution is most evidence when the Seed Management Committees are concerned. Apart from Gene Campaign, many other NGOs and the government are financially and technically supporting the creation of self-help groups, farmer clubs as well as promoting sustainable agricultural practices although these may not always include the use of indigenous seeds.

Relevance of these changes

With regards to the baseline ToC which mentioned two the importance of having market linkages and favourable policies, Gene's interventions and outcomes are not relevant because they did not address these issues.

With regards to the context in which Gene Campaign is operating, its interventions and outcomes achieved are relevant because farmers need to become more aware of the threats to their yields, and motivate them to use indigenous varieties.

With regards to the CS policies of Hivos, Gene Campaign's interventions and outcomes are relevant because it is in line with Hivos' Green Entrepreneurship programme which aims to build the capacities of farmers. The programme is very relevant to the work of Hivos in general. However, the cooperation between Hivos and Gene Campaign was not only on the project level, but also on the involvement of Gene Campaign in the RRA Network of NGOs. Here they were supposed to be an example for other organisations and scale up their programme. This has not happened, which makes their work not relevant in that respect.

Explaining factors

The information related to factors that explain the above findings was collected at the same time as the data were gathered for the previous questions. The evaluation team looked at internal factors within Gene Campaign, the external context in which it operates and its relations with Hivos.

Since the baseline assessment, staff turnover in the field office of Gene in Jharkhand has increased, which is mainly to be explained by the hierarchical structures in the organisation that hamper local staff to take ownership of the vision and mission of Gene beyond their daily work. Relations with Hivos did not influence the findings, because the relation between both organisations has remained constructive, though Hivos' expectations of Gene's role in the Green Entrepreneurship programme were not met.

Project Design

The evaluation team believes that the intervention as it was now is not ready for any form of replication, be it in another context or by another organisation. Conditions that need to be in place in order to ensure more favourable development outcomes in the first place relate to the organisational structure and culture of the implementing organisation that needs to share responsibilities and information with regards to its vision, mission and implementation strategies across the organisation from top leadership to field staff directly working with grass roots organisations. Such an organisation also needs to avail of the necessary capacity to be able to engage with key policy makers that decide upon policies and procedures that affect the livelihoods of rural people.

Table 4

Summary of findings.

When looking at the MFS II interventions of this SPO to strengthen civil society and/or policy influencing, how much do you agree with the following statements?	Score
The CS interventions were well designed	3
The CS interventions were implemented as designed	7
The CS interventions reached their objectives	8
The observed outcomes are attributable to the CS interventions	6
The observed CS outcomes are relevant to the beneficiaries of the SPO	7

Score between 1 to 10, with 1 being "not at all" and 10 being "completely".

Appendix 1 Civil Society Scoring Tool

Gene Campaign

This table presents the appreciation of the evaluation team regarding changes occurred for each indicator between 2012 and 2014 on a scale of -2 to + 2

- 2 = Considerable deterioration

- 1 = A slight deterioration

0 = no change occurred, the situation is the same as in 2012

+1 = slight improvement

+2 = considerable improvement

Dimension		Indicators	Question	Change
Civic engagement	1	Needs of marginalised groups	How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies?	+1
	2	Involvement of target groups	What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities?	0
	3	Political engagement	How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups?	0
Level of organisation	5	Relations with other organisations	In the past 12 months what has been the most intensive interaction you had with other CSOs?	-1
	5	Frequency of dialogue with closest CSO	In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with?	-1
	6	Defending the interests of marginalised groups	Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs?	+1
	7	Composition current financial resource base	How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendance to workshops of other CSOs; costs for organisational growth and/or networking?	0
Practice of Values	8	Downward accountability	To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them?	-1
	9	Composition of social organs	What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for?	0
	10	External financial auditing	How regularly is your organisation audited externally?	Not applicable

Perception of impact	11	Client satisfaction	What are the most important concerns of your target groups? How do your services take into account those important concerns?	+1
	12	Civil society impact.	In the past 12 months, what impact did you have on building a strong civil society?	+1
	13	Relation with public sector organisations.	In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives?	0
	14	Relation with private sector organisations	In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective?	Not applicable
	15	Influence upon public policies, rules, regulations	How successful have you been in influencing public policies and practices in the past 2 years?	0
	16	Influence upon private sector agencies' policies, rules, regulations.	How successful have you been in influencing private sector policies and practices in the past 2 years?	Not applicable
CS context	17	Coping strategies	In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society.	0

Appendix 2 Changes in civil society indicators between 2012 and 2014

2.1 Civic Engagement

2.1.1 Needs of the marginalised groups

How does Gene Campaign take the needs of its beneficiaries/ target groups, in particular marginalised groups into account in its planning, actions, activities, and/or strategies?

Gene Campaign (GC) continues to work on sustainable agriculture through preservation and production of indigenous seed varieties and cultivation techniques. Towards this, they work closely together with local stakeholders, who are mostly farmers with medium and small landholdings faced with poor soil productivity and lack of good seeds. GC visits villages and consults the local communities. Among them are also women, youth and people from tribal communities. Involvement of local beneficiaries is an important part in project implementation.

Towards this, the past two years have seen GC—that works in three blocks of two districts in Jharkhand—expanding the numbers of the CBOs it supports and guides by: a) establishing 20 Farmers Clubs (FCs), of which 16 were formed between 2012 and 2014 b) setting up nine seed banks, three of them between 2012 and 2014 c) constituting four Seed Management Committees (SMCs) between 2012 and 2014 e) forming 22 Self Help Groups (SHGs), of which 16 have been formed between 2012 and 2014.

The GC staffers said that their work had expanded from seven villages to 12 villages in the Angara block of Ranchi districts between 2012 and 2014; only 44 farmers in the block were using the SRI²² (System of Rice Intensification) technique two years ago, now 210 farmers are. Similarly, the Ormanjhi block had not more than four farmers in two villages using the SRI technique in 2012, now, 117 farmers from 18 villages in block are using the technique.

A GC authored 2011-12 Narrative Report cites an instance which showcases how community needs sometimes even reshape the organisation's documented plans. Since a majority of farmers' families, on a certain seed distribution occasion, were uninterested in the seed production of the traditional Gundaribhog (scented rice) because of its low yield, changes were made in the intended results as agreed in the programme document—and new varieties were added after consultation with scientist of the Ranchi-based Birsa Agriculture University²³ (BAU) and participating families; marketing potential of the produced seed was however kept in mind while making these changes.

Barring the field staff who saw the situation as unchanged, all other levels in GC's Jharkhand branch said that the involvement of target groups had improved. It was observed that GC's interactions with

²² System of Rice Intensification (SRI) emerged in the 1980's as a synthesis of locally advantageous rice production practices encountered in Madagascar by Fr Henri de Laulanie, a Jesuit Priest who had been working there since 1961. SRI is a combination of several practices those include changes in nursery management, time of transplanting, water and weed management. Its different way of cultivating rice crop though the fundamental practices remain more or less same like in the conventional method; it just emphasizes altering of certain agronomic practices of the conventional way of rice cultivation. All these new practices are together known as System of Rice Intensification (SRI). SRI is not a fixed package of technical specifications, but a system of production with four main components, viz., soil fertility management, planting method, weed control and water (Irrigation) management. See <http://www.sri-india.net/html/aboutsri.html>

²³ Birsa Agricultural University (BAU) is an agricultural university established on June 26, 1981 at Kanke, Ranchi in Jharkhand and was formally inaugurated by the then Prime Minister of India, Indira Gandhi. Its primary objective is to develop area specific technologies and manpower in the field of agriculture, animal husbandry and forestry for the agricultural development of the plateau region of Bihar and economic upliftment of tribal and other backward class population of the region. See <http://www.bauranchi.org/about-bau/>

associated SHGs were earlier only regarding SHG formation, but now member needs are discussed to create awareness on income generation activities. GC also organises exposure visits for farmers of FCs and members of SHGs on the issues of integrated farming model, SRI, horticulture, drip irrigation, poultry, duckery, modern techniques, machines and equipment etc. Further, GC provides information on agriculture to interested village youth. Also, when innovative activities, like mushroom cultivation, are met with initial resistance or hesitation, GC staffers spend more time with the community to gain its trust and discuss its wishes.

Score: +1

2.1.2 Involvement of target groups

What is the level of participation of Gene Campaign's beneficiaries/target groups, in particular the marginalised groups, in the analysis, planning and evaluation of its activities?

GC ensures participation of different target groups like women, youth and tribal people in their work, not just by identifying their needs, but also by involving them in planning of projects. Since Jharkhand has about 28 per cent tribal population, GC prefers implementing its projects in areas where the population consists of at least fifty per cent tribal people.

Hivos' December 2012 Interim Report states that GC conducts meetings with farmers of various villages and hears their concerns regarding seeds. It is only after such consultative meetings, where the provision of land for seed bank construction is also discussed, that a committee is formed by the villagers to decide on the details of the seed bank's construction. These meetings are also attended by the gram pradhan, panchayat cashier, panchayat samiti members, ward members and Jila Parishad members. Also, before the rice sowing season, the GC team prepares a list of farmers interested in paddy cultivation. For this, notices calling interested farmers to contact their gram pradhan or concerned panchayat representatives are put up in villages. Farmers are asked to register their names, along with the details of their land type (lowland, medium land, upland). Once the list is made, these farmers are called to one of GC's seeds banks where seeds are distributed according to the land type of the farmer. The seed is given in a barter system, farmers having to return three times the amount of seed they take. During the seed distribution, the farmers are also given information about organic fertilisers, organic pesticides, nursery preparation, transplantation etc.

The FCs, SMCs and SHGs formed and supported by GC are, in fact, the best guarantors of the target groups' participation in the organisation's planning, strategies and activities. The numbers of such CBOs have grown in the period between the baseline and the end line.

Over and above this, local Jharkhand youth continue to be a part of the GC's regional office; this in its own way can also be perceived as community input.

However, at around the time of the baseline, GC enjoyed some intense partnerships with local NGOs, and involved them in most of their planning and implementing activities. End line interviews conducted with such organisations indicated the waning of such relationships over the past two years.

The GC Jharkhand executive leadership maintained that the organisation continues to engage the target group in its work just like earlier. But the coordinators and staff in the field observed that there has been an improvement in target group participation. They said that the Gram Sabha²⁴ meetings are now being used by GC staffers to assess and service local needs better, as also seek opinions and ideas of the community to formulate strategies and work plans.

Score: 0

²⁴ The Gram Sabha (GS) is the cornerstone of the entire scheme of democratic decentralisation in India initiated through the 73rd Amendment to the Constitution. Hence, the success or failure of the Panchayati Raj system largely depends on how powerful and effective the GS is at the decentralised level to fulfil the desires and inspirations of the people. Article 243(B) of the Constitution defines the GS as a body consisting of persons registered in the electoral rolls relating to a village comprised within the area of the Panchayat at the village level. With regard to its powers and authority, Article 243 (A) of the Constitution says that the GS may exercise such powers and perform such functions of the village level as the Legislature of a State may, by law, provide. It is in the light of this that State legislatures have endowed certain powers to this corporate body relating to the development of the village. See <http://pib.nic.in/feature/feyr2000/fapr2000/f030420001.html>

2.1.3 Intensity of political engagement

How intense is Gene Campaign's (individual staff or organisational) participation in (locally) elected bodies and/or sectorial user groups?

GC is apolitical. Working as it does in a state that is rife with left extremism, it is very important that GC be perceived as such by those who it works with and, indeed, works for.

At the local level, however, GC has always continued to consult the village leader and the village level elected representatives (Panchayat members) before the start of a project or programme. Discussing programmes, gaining trust and sharing perspectives with them gives the GC activities backing from authority and makes project implementation more secure.

The only change in GC's engagement with elected village representatives between the baseline and the end line evaluations is that it now uses the gram sabha meetings to assess community needs and introduce its plans and activities among villagers. This helps building better rapport with community and the panchayats' approval is built into programme from the beginning.
