

MFS II EVALUATIONS

Joint evaluations of the Dutch Co-Financing System 2011 - 2015

*Civil Society contribution
towards achieving
the Millennium Development Goals*

Country report

INDIA

July 2015

SGE Stichting Gezamenlijke Evaluaties

Netherlands Organisation for Scientific Research
WOTRO Science for Global Development

PREFACE

This report is one of a series of evaluation reports, consisting of ten reports in total, reflecting the results of the jointly-organised MFS II evaluation:

- eight country reports (India, Bangladesh, Ethiopia, Uganda, Indonesia, DR Congo, Liberia, Pakistan);
- a synthesis report (covering the eight country studies); and
- a report with the results of the international lobbying and advocacy programmes.

This series of reports assessed the 2011-2015 contribution of the Dutch Co-Financing System (MFS II) towards achieving the Millennium Development Goals, strengthening international civil society, setting the international agenda and changing decision-makers' policy and practice, with the ultimate goal of reducing structural poverty. On July 2nd, 2015, the reports were approved by the independent steering committee (see below), which concluded that they meet the quality standards of validity, reliability and usefulness set by the Ministry of Foreign Affairs.

MFS II has been the 2011-2015 grant framework for Co-Financing Agencies (CFAs). A total of 20 alliances of Dutch CFAs were awarded € 1.9 billion in MFS II grants by the Ministry of Foreign Affairs. CFAs receiving MFS II funding work through partnerships with Southern partner organisations supporting a wide range of development activities in over 70 countries and at the global policy level.

The MFS II framework required each alliance to carry out independent external evaluations of the effective use of the available funding. These evaluations had to meet quality standards in terms of validity, reliability and usefulness. The evaluations had to focus on four categories of priority result areas, as defined by the Ministry of Foreign Affairs, and comprise baseline assessments serving as a basis for measuring subsequent progress.

Out of the 20 alliances receiving MFS II funding, 19 decided to have their MFS II-funded activities evaluated jointly. These 19 alliances formed the *Stichting Gezamenlijke Evaluaties (SGE)*¹, which acted on their behalf in relation to the joint MFS II evaluation. The SGE was assisted by an 'Internal Reference Group', consisting of seven evaluation experts of the participating CFAs.

The Netherlands Organisation for Scientific Research (NWO/WOTRO) managed the evaluation and selected ten research teams to carry out the joint MFS II evaluation: eight teams responsible for carrying out studies at country level, one team responsible for the synthesis of these country studies, and one team responsible for the study of international lobbying and advocacy. Each study comprises a baseline assessment (2012) and a final assessment (2014). Research teams were required to analyse the effectiveness, efficiency and relevance of development interventions funded by MFS II. An independent steering committee was appointed to verify whether the studies met with the required quality standards. In its appraisal, the steering committee drew on assessments by two separate advisory committees.

¹ *Stichting Gezamenlijke Evaluaties can be translated as Joint Evaluation Trust.*

The evaluation has been implemented independently. The influence of the CFAs was limited to giving feedback on the first draft reports, in particular to correct inaccuracies. The contents and presentation of information in this report, including annexes and attachments, are therefore entirely the responsibility of the research team and/or NWO/WOTRO.

However, as SGE we are responsible for adding this preface, the list with parties involved and a table of contents, in the cases that the report is a compilation of several reports.

In addition we would like to note that when reference is made to individual case studies, this should be seen as illustrative examples, rather than as representative of a CFA's entire partner portfolio.

The Dutch CFAs participating in this unique joint evaluation are pleased that the evaluation process has been successfully completed, and thank all the parties involved for their contribution (see the next pages for all the parties involved). We hope that the enormous richness of the report will serve not only accountability but also learning.

PREFACE AND ACKNOWLEDGEMENTS

This document provides the overview of the assessment of the MFS II evaluation for India. The document is divided into two parts, starting with an executive summary, then presenting some annexes directly related to the executive summary. In the executive summary we review the different parts of the evaluation, and discuss some of the main results, as well as the main challenges we are faced with. The technical documents on which this executive summary is based are included in the PDF-portfolio.

My thanks go to all contributing authors, including the advisors, for all the work they have done for this evaluation. At times, in line with the baseline evaluation, it has been a quite hectic exercise, not the least because of the severe time constraints we were faced with. Again deadline were extremely difficult to meet. Nevertheless, we succeeded, as a team, to complete almost the entire evaluation, including feedback rounds of the CFAs and SPOs, in time. The endline evaluation has again benefited a great deal from us being able to use background documents from the MFS organizations and the Southern Partner Organizations (SPOs). I am also indebted to the many people from the MFS organizations and SPOs who were willing to discuss their programs and projects with us, and who gave feedback on the draft endline reports.

Robert Lensink

Executive Summary India

1. Introduction

This report documents the assessment for the joint MFS II evaluations of development interventions in India. The assessment of the development intervention combines qualitative and quantitative methods as required by NWO (2011) and consists of three pillars. 1) An evaluation of the millennium development goals (MDGs) of projects financed through MFS II funds. 2) An evaluation on the capacity development of southern partner organizations (SPOs) who are involved in projects financed through MFS II funds. 3) An evaluation of the impact on civil society of SPOs who run projects that are financed through MFS II funds.

This report will finalize the MFS II evaluation that started in 2012 and builds upon the baseline report that was completed early 2013. This executive summary will report the main findings, describe the challenges we were faced with, and explain the methodologies we have used

The executive summary starts by describing the sample of MDG projects and Southern Partner Organizations (SPOs) that have been evaluated. Next, a country background will be given. Finally, summaries of the three pillars of the evaluation, the MDG evaluation, the evaluation of capacity development of SPOs and the civil society strengthening evaluation, respectively, will be provided.

2. The sample

Table 1 provides some basic information about the MDG projects and the SPOs that were evaluated for the three parts of the evaluation. The sample of MDG projects and the group of SPOs that are assessed on capacity development is provided to us by NWO-WOTRO.¹ The “original” sample for MDG has not been changed. However, regarding the capacity development (CD) evaluation some sample changes took place. Jamia Millia Islamia will not be evaluated since the funding relationship with the Dutch MFS organization stopped. Jamia has been replaced by the SPO DRISTI. Since the contract of the Dutch CFA with DRISTI stopped during the baseline, no endline analysis has been done. Reformed Presbyterian Church North East India will not be evaluated because of safety reasons. This SPO has been replaced by COUNT. The “Environmental trust for Sustainable Development”, a SPO originally sampled for the CD evaluation, is dropped from the evaluation since there was no funding relationship anymore with an MFS organization. We did not replace this SPO since at the time we discovered that the funding relation had already ended, no sample changes were allowed anymore. Our final sample consists of 10 SPOs that are involved in the MDG evaluation, and 12 SPOs for the CD evaluation. For a description of the SPOs in the CD evaluation see Section 5.2.1. There are 8 SPOs that appear in both the MDG and CD evaluation. The sample for the civil society evaluation, that contains 10 SPOs, has been drawn during the summer of 2012.

¹ For details see NWO (2011), Call for proposals: Joint MFS II evaluation of development interventions at country level, NWO WOTRO. Section 6.8

SPO: Southern partner organization, MFS: Mede financieringsstelsel organisatie (Co-financing authority), CD: Capacity development sample, MDG: millennium development goal sample, CS: Civil society sample. Note that "Environmental trust for Sustainable Development", a SPO originally sampled for the CD evaluation, is dropped from the evaluation since there was no funding relationship with this SPO anymore. This SPO is not replaced by another SPO since the sample was already closed when we received this information.

3. Country background

Before describing some details of the evaluation, it is relevant to give some background information about India in relation to the projects and SPOs that we will evaluate. In recent years, India has been described as a clientelist state, a fragile state, and a state with skewed development priorities. However, even as the world's largest democracy remained resilient in the face of the global economic crisis, the country faces a critical challenge similar to several other BRICS counterparts – high growth has been accompanied by persistent pockets of poverty and inequality.

The country has seen a change in political regime almost with an overwhelming rejection of the path of policy inadequacy and corruption by bringing in the right wing party to power at the center. With about 35 per cent of votes the ruling party managed to secure 75 per cent of parliamentary seats. It has had 4 consecutive favorable monsoons, meaning better crops each year, after the elections of 2013 the oil prices have reduced, taking off the burden of subsidy and fiscal deficit partially from the government's shoulders. Manufacturing, infrastructure and energy are struggling back to track. But each of these indicators hides a deeper fragility which is stretching the undergirding of Indian society.

In 9 months of the current government's rule, there has been 200 and more vandalisation of churches across India. In Last two months has seen 5 in Delhi without a single arrest despite the CC TV footage. Minorities, Dalits and the urban women are sensing unfreedom in the name of Indian culture and its protection by male lumpens.

In terms of human development the following changes could be observed.

The HDI is an average measure of basic human development achievements in a country. Like all averages, the HDI masks inequality in the distribution of human development across the population at the country level. The 2010 HDR introduced the Inequality-Adjusted HDI (IHDI), which takes into account inequality in all three dimensions of the HDI by 'discounting' each dimension's average value according to its level of inequality. The IHDI is basically the HDI discounted for inequalities. The 'loss' in human development due to inequality is given by the difference between the HDI and the IHDI, and can be expressed as a percentage. As the inequality in a country increases, so does the loss in human development. India's HDI for 2013 is 0.586. However, when the value is discounted for inequality, the HDI falls to 0.418, a loss of 28.6 percent due to inequality in the distribution of the dimension indices.

India's HDI value for 2013 is 0.586— which is in the medium human development category— positioning the country at 135 out of 187 countries and territories. Between 1980 and 2013, India's HDI value increased from 0.369 to 0.586, an increase of 58.7 percent or an average annual increase of about 1.41 percent. India's progress in each of the HDI indicators increased. Between 1980 and 2013, India's life expectancy at birth increased by 11.0 years, mean years of schooling increased by 2.5 years and expected years of schooling increased by 5.3 years. India's GNI per capita increased by about 306.2 percent between 1980 and 2013.

The Gender Inequality Index (GII) reflects gender-based inequalities in three dimensions – reproductive health, empowerment, and economic activity. Reproductive health is measured by maternal mortality and adolescent birth rates; empowerment is measured by the share of parliamentary seats held by women and attainment in secondary and higher education by each gender; and economic activity is measured by the labor market participation rate for women and men. The GII can be interpreted as the loss in human development due to inequality between female and male achievements in the three GII dimensions. India has a GII value of 0.563, ranking it 127 out of 152 countries in the 2013 index. In India, 10.9 percent of parliamentary seats are held by women, and 26.6 percent of adult women have reached at least some secondary education

compared to 50.4 percent of their male counterparts. For every 100,000 live births, 200 women die from pregnancy related causes; and the adolescent birth rate is 32.8 births per 1000 live births. Female participation in the labor market is 28.8 percent compared to 80.9 for men.

The 2010 HDR introduced the Multidimensional Poverty Index (MPI), which identifies multiple deprivations in the same households in education, health and living standards. The education and health dimensions are each based on two indicators, while the standard of living dimension is based on six indicators. All of the indicators needed to construct the MPI for a household are taken from the same household survey. The indicators are weighted to create a deprivation score, and the deprivation scores are computed for each household in the survey. A deprivation score of 33.3 percent (one-third of the weighted indicators), is used to distinguish between the poor and nonpoor. If the household deprivation score is 33.3 percent or greater, the household (and everyone in it) is classed as multidimensionally poor. Households with a deprivation score greater than or equal to 20 percent but less than 33.3 percent are near multidimensional poverty. (Calderon and Kovacevic 2014).

The most recent survey data that were publically available for India MPI estimation refer to 2005/2006. In India 55.3 percent of the population are multidimensionally poor while an additional 18.2 percent are near multidimensional poverty. The breadth of deprivation (intensity) in India, which is the average of deprivation scores experienced by people in multidimensional poverty, is 51.1 percent. The MPI, which is the share of the population that is multi-dimensionally poor, adjusted by the intensity of the deprivations, is 0.282.

The coefficient of human inequality is a direct measure of inequality which is an unweighted average of inequalities in three dimensions mentioned above. In fact recent studies show that inequality of income has touched an all-time high in the last 35 years in India. Though the percentage of poor has come down substantially to about 22 per cent from 29.

Against this backdrop, several landmark rights-based legislation frameworks such as Mahatma Gandhi National Rural Employment Guarantee Act, Right to Education, Forest Rights Act and Right to Information Act emerged as cornerstones of enabling strategies. This also brought in to the fore about 2.5 million women as elected representatives in the third tier of governance through a constitutional mandate (73rd and 74th Amendment Act ,1992) Sustained focus on attaining high GDP growth rates with inadequate attention given to the pattern and inclusiveness of growth lies at the heart of India's development paradox. The NGO sector has played an important role in the process of transformation of this paradox into a conundrum.

In the last few years the the GOI passed a law after debating over 6 years in September 2013, called Land Acquisition Rehabilitation and Resettlement Act (LARR). This Act provided for consent of 80 percent of the landholders in an area and 70 per cent of people who are going to be affected (fishermen, landless laborers etc) by it for a private buyer. A social Impact Assessment by an independent agency was made mandatory prior to acquisition of land for any purpose by the government stating the intent, purpose and objective of acquisition. Compensation for rural land was to be 4 times the revenue circle rates (which means according to the quality of the land the tax you pay to govt, e.g. irrigated, unirrigated, rain fed etc.) and in urban and semi urban areas 2 times the circle rates. Certain exemptions were incorporated, such as Nuclear plants, railways, Dams for hydroelectric projects and Special Economic Zones (where standard labor laws would not be applicable and tax exemptions and subsidies by the govt would be provided to the investor).There was severe opposition to the Act from the farmers' side, because they found out that the accruing benefits of the land being taken from them are being sold to private industry at astronomical prices against the compensation that they receive. The Industry side opposed it because they found the whole process of social consent as a speed breaker in the development and growth process. The civil society raised the issue of "Development for whom?"

In December 2014, the newly elected NDA government through an ordinance (executive dictat when the parliament is not in session) diluted the consent clause and added some more exemption criteria to the law, which basically helped big industry and private developers in buying farm land. The Supreme Court received thousands of appeals for repealing this Act and the Ordinance.

In essence it is subjudice. But the debate of fair compensation and transparency in acquisition has spread all over the country along with Growth and Development. Given that it was an election year, states were very much tilted towards stemming the anger of common farmers and yet kept the door of negotiation with the big industry open.

3.1 Millennium Development Goals and the non-governmental sector

MDG 1

During the period between 1973-74 and 1999-2000, the incidence of poverty expressed as a percentage of people below the poverty line declined continuously from 54.9 per cent to 26 per cent. According to estimates produced by the India Development Foundation, the percentage of population below poverty line for 2004-2005, is 37.2 (41.8 for rural and 25.7 for urban India—following the Tendulkar Committee line(2009) and 28.3 for rural and 25.7 for urban – combined 27.5---following the National Sample Survey estimates).

One of the most enabling legislations for food security and employment generation in India is the MGNREGS. The Act was brought into force in 200 districts in 2005 and in 2008 expanded to cover the entire country. The MGNREGS differs from most poverty mitigation schemes so far in one fundamental way: it recognizes employment as a legal right. Its spill overs include boost to rural economy, financial literacy and inclusion, regeneration of community assets and greater gender equality. The scheme has been criticized by many researchers as well government documents for the rampant corruption in its implementation, as well as fabrication of information on eligible persons; delays in, and non-payment of, wages; works abandoned half-way; etc. However, there are some positives too of the programme like increasing agricultural wages, stopping temporary migration, creating employment in the lean agricultural seasons, etc. For a quick independent summary, see <http://www.prsindia.org/theprsblog/?p=3013>.

The five randomly selected projects under evaluation -D1, D2, D3, D5, and D6 (see Table 2 below) – deal with livelihood and entrepreneurial training, financial inclusion, social and community asset creations and mobilization of women’s groups for financial sustainability and market access.

MDG 2

In the last decade, measures like enactment of the Right to Education (RTE) and flagship campaigns like Sarva Shiksha Abhiyan have universalized education shifting the focus from literacy to effective formal education, broadening the outreach of school education significantly. Also, with the opening up of the economy and the consequent rise in employment opportunities it provides, the emphasis has shifted to a form of education that can improve social and human capital and increase employment potential.

We have witnessed huge emphasis in government expenditure on elementary education with the budget outlay more than doubling from Rs. 152,847 crores in year 2004-05 to Rs. 372813 crores in 2009-10. However, the continuous increase in investments in the education sector has failed to improve education outcomes. The only strong improvement seems to be that nearly 96.5 percent children between the ages of six and fourteen years are enrolled in some form of school.

There are three projects in our sample that primarily focus on MDG 2: D4, D9 and D10 (see Table 2 below). These projects involve educational attainment, enrolment, outcomes, and access to children

between 6-14. These projects are also spread across both economically backward states to the more developed ones. The main parameters for assessment (of various educational interventions) purposes have been awareness about RTE and its mandate, community level involvement in educational outcomes, access of poor and the marginalized children to quality education.

MDG 4, 5, 6

The Government of India in 2005 initiated the National Rural Health Mission (NRHM). The Plan of Action included increasing public expenditure on health, reducing regional imbalance in health infrastructure, district management of health programs, community participation and ownership of assets, induction of management and financial personnel into district health system, and operationalizing community health centers into functional hospitals

India contributes the maximum number of maternal deaths (68 000) to the global estimate of 358 000 maternal deaths annually. The target for 2015 is 109 per 100 000 and though there has been a 17 per cent decline in MMR estimates from 254(2004-2006) to 212 (2007-2009), for India only 3 states in India have realized the MDG target and only 3 will follow suit. Around 47 per cent of children below the age of 5 years are malnourished which is comparable to most under developed economies of the world. This is not because of lack of resources but failure of governance and service delivery mechanisms.

The focus of the one project (D7, see below) selected for evaluation was on access and quality of services related sexual reproductive health. This is directly connected to maternal health care, decision making over reproductive priorities, strengthening law enforcement and access to judicial remedies and finally creating community level safeguards and support groups.

MDG 7

India, with over a billion people, only produces 660 billion KWh of electricity. Yet over 600 million Indians, have no access to electricity, and limited access to other clean sources of energy. Energy poverty is one of the barometers of the governance deficit we face in India.

However, there are also some serious concerns. Environmental clearance becomes a conflicting issue for mineral and energy development. Moreover, the access to forest and for especially those dependent on it for livelihood has become an issue of concern. Our sample only contains one project, D2, that partly focuses on MDG 7. This project, however, also aims to contribute to MDG 1.

Good Governance

Good governance in India is centered on accountability mechanisms for corruption (mainly defined in terms of collusive action and abuse of discretion), movements for protection of livelihood and resources, and transparency in political decision making process. The focus is on processes, delivery mechanisms, and setting indicators for evaluation. In 2005 India passed the Right to Information Act, which enables a common citizen to seek information from the Government within a stipulated period of time - the movements for transparency and accountability draws heavily on this Act. Our sample contains one project, D8, that aims to improve Good Governance. This project, as will be explained below, primarily aims to increase fund raising.

Analysis of civil society in India

The term civil society organization has acquired a loaded connotation in recent times. With one NGO (not for profit/trust/Community based organization) for 400 people, India had about 3.3 million registered NGOs in 2009. At the turn of the twenty first century, civil society organizations have mainly focused on issues of food security, livelihood protection, conservation of natural resources

and rights of the marginalized and issues of social justice and equity. In the last decade the civil society movement has taken a turn towards advocacy, implementation, monitoring and evaluation, and evidence based policy making.

In recent times the surge of protests against gagging of free media, pro corporate lobbying of political parties, land legislations which are bound to be declared ultra vires by the Supreme court and which has brought together small and middle farmers together against the government policy of non-transparent acquisition of land and inappropriate compensation process, demand for cleaner energy other than nuclear ones, focus of civil society on climate change, women's empowerment is seen to be the face of a changing India. It is certainly not the supine civil society one envisaged 5 years ago.

Using CIVICUS' criteria to assess the space civil society has to flourish in India, this space has changed slightly in the 2010 – 2014 period. Except for the right to food, the state slightly improved its commitments to ensure several other basic rights and the prevalence of corruption decreased slightly. The World Values Survey observes an improvement of people's happiness in the 2010-2014 period (38.2 percent) as compared to that of 2005-2009 (28.9 percent). No other changes occurred in comparison to the criteria used by CIVICUS.

However, during the MFS II period the GOI the government amended the Foreign Contribution Regulation Act (2011) which further restricted those persons and civil society organisations that can receive foreign contributions. Although this Act seemingly did not have consequences for the Dutch CFAs and their partners, a leaked report of India's International Bureau suggests that protests against (governmental) development projects were allegedly fuelled by foreign-funded NGOs, mentioning Greenpeace, Cordaid, Hivos, Oxfam, Amnesty and ActionAid². These NGOs are allegedly funding organizations which are working in politically sensitive sectors such as the mining sector and the agricultural sector with regards to Genetically Modified Food production. Foreign contributions to support SPOs that work on human rights issues, governance and sensitive sectors like mining, forestry and agriculture are increasingly being monitored.

The last two years also saw a new funding opportunity emerging with the Companies' Act 2013 and the Companies' (Corporate Social Responsibility Policy) Rules 2014. The Act and the Rules demand that every company, private or public, with a net worth of Rs 5 billion or a turnover of Rs 10 billion or net profit of Rs 5 billion, will be required to spend at least 2 percent of its average net profit from the preceding three financial years on corporate social responsibility³.

Analysis of organizational (capacity) development in India

We understand capacity development as a concept that focuses on understanding the obstacles that inhibit people, governments, international organizations and NGOs from realizing their goals and enhancing their abilities to achieve measurable and sustainable results. The ability to carry out effective work in this sector required training, perspective building, clear cut perception of goals and ability to generate a process for achieving the goal. Rights based approach, human rights based perspectives on entitlements, and innovative modes of approaching the issue of poverty and development were lacking in the personnel of this sector.

³ Refer, http://www.business-standard.com/article/companies/an-overview-of-csr-rules-under-companies-act-2013-114031000385_1.html

The effective achievement of MDG goals within an appropriate policy framework, which takes into account the dimensions of diversity and democratic deficit, could only be bridged through an empowered and enabled civil society intervention.

4. Endline evaluation of MDG projects

4.1 Basic information

Table 2 provides basic information about the MDG projects in our sample. See Table A1 in Appendix 1 for an overview of the different MDGs. Table 2 gives the name of the projects, the MFS organization that is responsible; the SPO that runs the project and the starting date as well as the end date of the projects together with the available budget. The table also shows the main MDG the project focuses on, as well as the main outcome indicator, and the main interventions.

Table 2 shows that 5 projects focus on MDG 1. Project D1 aims to enhance the institutional capacities of four Micro Finance Institutions located in Orissa in order to improve the livelihoods of disadvantaged families (giving priority on women). D2 aims to improve livelihoods of minor forest produce collectors by organizing self-help groups and cooperatives which may help to break monopoly power of traders. This project also aims to sustain biodiversity, and hence also deals with MDG 7. D3 aims to improve the livelihood options of Indian small farm holding households involved in cotton cultivation through making their farming systems more sustainable and more profitable. Important interventions include trainings to farmers, organizing farmers into self-help groups (SHGs), support to farmer groups to develop a spirit of entrepreneurship, organizing exposure visits, writing and dissemination of training manuals in vernacular languages, maintaining functional certification (for organic cotton) and full functionality of the COFA website. D5 aims to improve livelihood options and alleviate the poverty of women by introducing them to small scale poultry farming. The main actions envisaged were trainings given to women to teach them to become poultry farmers. In addition, the project aims at the development of a coalition on broiler poultry farming so that members can collaborate with each other on technical expertise. D6 aims to create sustainable livelihood promotion through effective management of the cooperative where all the SHGs linked with the cooperative will manage the regular savings, loan disburse, loan refund and record maintenance. The main interventions include training and knowledge dissemination.

Table 2 also shows that 3 projects deal with MDG 2. D4 aims to ensure quality education for children aged 6 to 14 and provide vocational training for children aged 15 to 18. The project includes capacity strengthening in local organizations so as to enable them to initiate and lobby for better local educational policies, raising awareness of the importance of good education at the local level, and providing a life skills training and training in skills to stimulate income generating activities for youngsters. The main objective of D9 is to improve cognitive, non-cognitive and moral development of children by living in a foster home and/or attending a COUNT school. The interventions include vocational training, a foster home/educational component which provides for children living in foster homes and supports two schools, and scholarships for children living in foster homes and so-called VRF scholarships. The D10 project involves the setting up of 100 tuition centers for children in the primary school going age group (6-12) in order to help them perform better in school and to create higher educational aspirations.

One project, D7, focuses on improving MDG 3, 4, 5 and 6. The primary objective of this project is to alter/influence the strong son preferences of households through information dissemination and behavioral change campaigns. Also one project, D8, focuses on "good governance". This project deals with fundraising. The main aim is to increase donations from the Indian middle class to benefit poor children. The ultimate goal is to establish a self-supporting funding mechanism.

The table clearly indicates the variety of project aims, and interventions. Even though several projects focus on similar MDGs and/or conduct seemingly similar type of interventions the projects are difficult to compare for details differ enormously. For example, in many projects trainings are conducted, but these trainings vary vastly: some focus on adults, some on children; some deal with fund arising issues, others with gender issues etcetera. The variety in project aims and project interventions makes it very complicated, if not impossible, to compare impacts of the different projects.

It should also be noticed that in almost all cases there are multiple interventions per project, such as different types of trainings for the project members, as well as for instance providing credit. This has complicated the impact analyses considerably for impacts are very difficult to disentangle. In general, we decided to evaluate entire programs. See the MDG reports for details.

4.2 Impact evaluation details

The evaluation needs to address five questions: 1) what changes in outcomes do take place during the 2012-2014 period? 2) are the observed results attributable to the project interventions of the SPOs (i.e. the impact of the intervention)?; 3) Are the observed results relevant to the project beneficiaries?; 4) Is the project implemented efficiently? and 5) what factors explain the findings, i.e. are there reasons why a project has been a success or not.⁴

The different MDG evaluations have been organized such that the five main questions can be answered as good as possible. For reasons of space, all details cannot be provided in this country summary. Yet, in this sub-section we try to summarize the impact evaluation information that is relevant in the light of the main evaluation questions. We will also point out some challenges we were faced with. In section 4.3 we will end the summary report on MDG by valuing each MDG project in terms of the main evaluation questions.

Table 3 provides basic information on impact evaluation details for the different MDG projects. The table gives information about the evaluation strategy used and the sample sizes. It also indicates whether evaluations suffered from serious attrition and/or power problems, which may affect the rigor of the analyses considerably. Finally it shows whether the intervention had a significant impact on the main outcome indicator, which has been specified in Table 2.

For all MDG projects, but D8, a household survey has been conducted. More in particular, we have used a common questionnaire for all MDG projects, and added per project, specific blocks which are related to the theories of change per project. Using these questionnaires we were able to identify the changes in the main outputs and outcomes per project over the project period. In the PDF-portfolio we add a document with details about the questionnaires used for each.

Theory of change

The first step in the MDG evaluation was obtaining a clear idea about the theory of change of each of the individual projects. This starts by clarifying the inputs used for the project. Subsequently, we examined the activities planned/undertaken by the SPO leading to the required outputs resulting in the desired outcomes. The outcomes are then translated to indicators specific to each of the projects. Where possible we tried to use uniform indicators for similar projects, e.g. general expenditures as a poverty indicator. Finally we have addressed possible risks which may degrade the theory of change. Since the contents of the MDG projects differ enormously there is not a common

⁴ For exact details see NWO (2011), Call for proposals: Joint MFS II evaluation of development interventions at country level, NWO WOTRO. Section 6.5

theory of change for all projects. The detailed theories of change per project are given in the individual MDG reports.

Impact evaluation methods

The MDG evaluation is predominantly done using quantitative evaluation techniques, although in some cases the quantitative analyses are supplemented with qualitative information, see MDG reports for details. In theory, the most rigorous quantitative evaluation method would be a randomized controlled trial (RCT) since an RCT, under certain assumptions, guarantees that control and treatment groups only differ due to the intervention. However, we could not conduct RCTs for we had to evaluate ongoing projects. In other words, we had to conduct retrospective evaluations that assess the program's impact after it has been implemented, using observational data. Yet, we tried to use the most rigorous evaluation methodology possible, given the content of the project, the availability of baseline and endline data, and possibilities to gather data for a comparison group. Obviously, given the variety of impact methodologies that could be used, the possibility to rigorously attribute a change in outcome variables to the intervention differs per project. For details on the precise methodologies used, see the individual MDG reports. Below, in section 4.3 we will explain how we value the different impact evaluation methods used.

D5 is the only project for which we were not able to conduct an endline since it was plagued by Naxalite activities.⁵ Therefore, we assessed impact via a standard cross-sectional comparison methodology, using only one round of data. We realize that the results of this analysis may suffer from unobserved heterogeneity, and hence may not be due to the project intervention. We conducted a simple before-after analysis for the fund-raising project D8 as it was impossible to identify a comparison group. The obvious drawback here is that impacts may be caused by issues not related to the project for a comparison group has not been identified. We also organized a field experiment in order to examine different fundraising strategies, and to test the relevance of the \$1:\$1 matching investment mechanism used by the Action for Children (AfC) program in terms of raising funds from the middle class. For all other projects, two rounds of data have been collected, both for treatment and comparison groups. In these cases, we either used a double-difference (DD) methodology (for D1, D2, D3 and D4), possibly extended with propensity score matching, or two rounds of cross-sectional comparisons (D6, D7, D9 and D10). The advantage of a DD specification is that it controls for unobserved heterogeneity that does not change over time.

One of the main problems we were faced with is that most interventions related to the projects in our MDG sample have already been started (long) before the baseline data gathering took place. One project (D3) started in 2008, five projects (D1, D2, D4, D5, and D7) started in 2009, two projects (D6 and D10) started in 2010 and one project (D8) started in 2011. One project (D9) even runs already since 1993. Hence, all projects have been ongoing for several years. Since the baseline survey is not a "real" pre-intervention baseline, as it is not conducted before the program started, a DD methodology measures the incremental impact of the program, i.e. the impact of being "longer" in the program, and not the average impact of the program. Since for some projects it does not make sense to expect an incremental effect, the DD methodology is not appropriate. Therefore simple cross-sectional comparisons, again sometimes together with PSM, separately for the base and endline, are conducted for these types of projects. The obvious drawback of the latter approach is that it does not control for unobserved heterogeneity, and hence it may be the case that measured impacts are biased due to unobserved characteristics of the treatment and/or comparison groups.

Sample: Procedures, supervision and training

⁵ The decision not to conduct an endline has been approved by the synthesis team and by WOTRO.

The questionnaires for the household surveys were designed in three parts: (a) information on demographics and household characteristics (a) information on key outcome indicators for the project objectives and (c) information on factors that theoretically could affect the outcomes. The first was a common set used for all the MDG evaluations. For information covering (b) and (c) there were overlaps for some of the projects while some were, obviously, unique to particular projects. Each questionnaire was translated into the local language with the help of local researchers keeping mind the various dialects in the project areas. The questionnaires were piloted among similar households who were not in the project areas. The pilots were conducted by IDF personnel with the help of the local researchers. Since the (a) block questions have been used many times in other work that IDF had carried out, the main purpose of the pilots were to test the efficacy of the questions and authenticity of the answers in information blocks (b) and (c). The pilots also gave us information about the way the trainings needed to be conducted as well as the time that had to be budgeted for each respondent.

After the pilot and fine-tuning of the survey questionnaire, the sample frame was developed from which the sample is to be drawn. The sample frame and the method of sampling was determined by the specific project.

The training was conducted on-site after the surveyors were selected. The survey agencies were selected based on past IDF experiences of working with them, the capacity of the agencies and recommendations from other organizations they have worked with before. IDF conducts its trainings with a 3-member team consisting of an in-house trainer, the researcher(s) on the project and a local survey expert to take count of local dialects, accents and practices (especially important when asking questions of women in the household). The trainings took a minimum of two days and a maximum of five. In some cases, the trainees were made to conduct dummy surveys after the training before they were allowed out into the field.

After the training, a detailed plan was drawn up regarding how the survey would be implemented. The agency had to submit a detailed time-sheet copies of which were kept with the supervisor and the researcher at IDF. Hard copies of filled up questionnaires were sent back to IDF where the data was digitized, statistical tests conducted, missing data identified and appropriate actions taken to ensure that the data set was complete and authentic.

The sample size for each project was determined by the design of the project, the availability of financial resources and the time-frame within which the survey had to be completed. Using the total funds available as a constraint, the sample size per project is determined by the total amount of beneficiaries of the project. As a general rule the sample size of the control group per project was about the same sample size as the treatment group. The period of the survey was not only determined by the timings of the evaluation, but also the seasonal activities in some of the cases.

Comparison groups

For all MDG projects, but D8, we managed to gather data for at the least one reference (control) group. D8 is a special case for the project focuses on in-country fundraising, for which a suitable comparison group is not available. It should be noticed, though, that for it several projects it turned out to be very difficult to find reference groups that are not affected by similar interventions. A clear example is project D1, which focuses e.g. on the impact of microcredit. For this project we are able to find non-members with similar observable characteristics. However, it turned out to be difficult to find non-members who do not have access to microcredit from another MFI. Obviously this has implications for the impact analyses. If a comparison group has been affected by a similar intervention, our impact analysis does not provide information on the impact of the treatment as such, but shows whether the SPO we consider does better than a possible other NGO conducting a similar intervention. For details, we refer to the individual MDG reports. In addition, as households

may decide to not participate in the treatment, some projects measure impacts in terms of intention to treat effects e.g. measure the impact of initial assignment to the treatment assignment and not of the treatment eventually received. This in particular holds for project D7, but also for other projects such as D2. D7 uses community awareness campaigns at the village level. The approach that has been used for this project is to compare outcomes of households living in villages that are and are not treated by awareness campaigns. Since households in the treatment villages may actually not have been treated, the impact is like an intention to treat analysis. For some MDG projects, we sampled two reference groups in order to conduct heterogeneous treatment effects. This, for instance, holds for project D3. Regarding D3, the first control group is a group of farmers who were offered the choice to participate in the intervention (training and support in organic farming) and declined, and another group which are a group of farmers in an area where the SPO has identified and plans to intervene in the coming year. Additional challenges we faced during the field work is that groups who were initially identified as control groups when actually approached by enumerators informed us that they had in fact just joined the intervention (which was the case for D5, the poultry farming intervention), and that groups who were members of the treatment group during the baseline, have selected themselves out of the program during the evaluation period, the latter holds for project D2. This suggests that in some cases, the process of the receipt of the intervention is very dynamic, which obviously complicates the impact analyses.

Power

The funds available for the MFS evaluation allow for approximately 7000 questionnaires, both in the baseline and the endline. Taking into account that we have 10 projects for which we need to collect data from controls and treatments, this comes down to a sample of, on average, 350 treatments and 350 controls (with a balanced design). However, as can be seen in Table 3, the sample sizes per project differ considerably. The differences in sample size are related to the differences in the number of beneficiaries of the projects, to ensure that the impact analyses will provide representative outcomes for the different projects. The sample size is important for the power of the analysis as too low a power may lead to false non-rejections –so-called false negatives–, i.e. concluding that there is no impact while there is an impact. However, since the budget basically determined the maximum sample sizes, formal power analysis to determine sample sizes were not useful and therefore not conducted during the baseline. Originally, we planned to conduct formal power analyses for all projects after the second round of data collection, so-called retrospective power analyses. The idea was that it might be useful to conduct reverse power analysis (see Thomas, 1997) in order to determine the minimum effect sizes that could be detected given the pre-determined sample sizes and given a power of say 80 percent. However, while the importance of ex-ante power analysis in the planning stage is without discussion, the relevance of retrospective power analysis is controversial (See Thomas, 1997 and Lenth, no date), even considered to be fundamentally flawed, used in whatever way (see Hoenig and Heisey, 2001). The main reason is that it is immediately obvious that as the significance level increases, retrospective power decreases. Hence in case there is a significant effect, the power will be high, while the power will by definition be low if there is no significant effect. This implies that if we find a significant effect, a power analysis becomes redundant for apparently the power of the test is big enough. It also implies that if we do not find a significant effect the power is apparently too low to pick up the observed effect size. A similar reasoning holds for the reverse power analyses: if the impact is insignificant apparently the sample is too small to pick up the possible effect. Additional information that can be obtained by conducting the reverse power analyses is minor. Retrospective power analyses, also in the form of reverse power analyses suffer from the “power approach paradox” (PAP), for details see Hoenig and Heisey (2001). Because of the fundamental critiques on retrospective power analyses, and the fact that performing power analyses in a panel framework with fixed effects, as is the case for our double difference models, are not trivial, we decided that it was on the discretion of the project leaders of the different MDG projects to conduct **formal** power analyses. For our sample of MDG projects a

formal power analysis has only been done for project D4. **Informal** expert expertise on the power of the analyses has been given for all projects and is summarized in Table 3. For most projects we believe that sample sizes are big enough to pick up the potential impact of the projects.⁶ However, power problems may be serious for two projects, D6 and D8. Regarding D8, the power problem only relates to the experiment, but does not affect the main part of the evaluation.

Attrition

The impact analyses can be severely affected by non-random attrition, and may lead to an overestimate of the impact of the project if unsuccessful members drop out of the program or to an underestimate if the most successful members leave the project. Fortunately, in our sample, most projects evaluations did not suffer from serious attrition problems. Yet, D2, D4, D5 and D9 experienced problems due to attrition. For further detail see the individual reports.

Impacts

Notwithstanding the above mentioned caveats, the impact analyses show that seven out of the ten evaluated MDG projects have resulted in a significant impact on the main outcome. As made clear above it does not directly imply that a particular program is successful if a significant effect is found as it may be driven by other factors. It is also not said that not finding a significant impact means that the project is not effective. E.g. the result of project D6 may well be explained by the serious power issues. However, the general picture is an indication that overall the assessed projects have some impact. For the exact details and robustness we refer to the individual details.

Efficiency

The impact evaluation also contains an efficiency analysis of the MDG projects. Efficiency analyses, or more restricted cost-effectiveness analyses, are important since costs and benefits determine the relevance of a project. However, while during the last decade the focus has been on improving benefit measurement, measuring costs lacks behind. There is little sense of how to apportion costs to particular benefits, how to value opportunity costs, etcetera. Thus, conducting cost-effectiveness analyses are extremely important, but there is not yet a standard approach available that can be used in practice. Ideally one would conduct a welfare analysis for all projects, but this is not possible as the necessary data is lacking. Standard models for efficiency analysis like data envelopment analysis and stochastic frontier analysis require many homogeneous projects and are therefore also not applicable to our sample. Therefore, we tried to use a simple as possible approach. That is, per project, the costs of main outputs, if available, are compared with the benchmarks found in the literature as summarized by AIID (see AIID, 2014). However, in some cases even such an analysis could not be performed as no benchmark was available. In general, the analyses suggest that projects are at the least reasonably cost-effective. But then again, the cost-effectiveness analyses are extremely crude.

⁶ According to Cohen a standardized effect size of 0.2 to 0.3 might be a "small" effect, around 0.5 a "medium" effect and 0.8 to infinity, a "large" effect. For a very simple case, where we assume that all observations are independent, a sample size of around 350 should be sufficient to identify an effect size of 0.2. This suggests that our sample sizes should in general be big enough to detect relatively small impacts of the intervention. Obviously, this is a very rough estimate.

Table 2: Basic information MDG Projects

Project Code	Name	SPO	Consortium	MDG	MFS II Budget	Main outcome	Main interventions	Project start Date	Project end Data
D1	Graduating NGOs into Micro finance Institution in Orissa-Phase 2.	Rashtriya Gramin Vikas Nidhi (RGVN)	Hivos Alliantie (People Unlimited 4.1)	MDG 1	37,106 Euros	Livelihood (indicator: expenditures)	Formalising existing MFIs; trainings	July 2009	June 2012
D2	Mobilisation of Community to Strengthen MFP based livelihoods of Tribal Women in South Rajasthan.	Samarthak Samiti	Hivos Alliantie (People Unlimited 4.1)	MDG 7a,b	1, 62,921 Euro	Livelihood (indicator: expenditures)	organising self-help groups and cooperatives	April 2009	March 2014
D3	COFA Institution Building	Forum for Integrated Development (FFID)	ICCO Alliance	MDG 1	134,215 Euro	Livelihood (indicator: monthly household consumption)	trainings to farmers; organizing farmers into self-help groups (SHGs)	October 2008	September 2014
D4	Dahar	Lohardaga Gram Swaraiya Sansthan (LGSS)	ICCO Alliance	MDG 2	35,000 Euros and kept 20,000 Euros + 13,447	Learning (indicator: exam scores)	Setting up an education programme; Vocational training	May 2009	31 October 2014
D5	VBN Poultry Coalition	PRADAN	ICCO Alliance	MDG 1	111,486 euro	Livelihood (indicator: Number of poultry sheds built)	trainings	December 2009	March 2012 (Institutional support to 2013)
D6	India participation in community	People's Jana Vikas	Communities of change	MDG 1		Livelihood (indicator)	Trainings	May 2010	April 2013

development					expenditure)					
D7	Community awareness building on girl child and conscientiousness building on PC & PNDT Act through NGO Intervention	Bihar Voluntary Health Association (BVHA)	SRHR Alliance	MDG 3, 4, 5, and 6	Euro 43,016	awareness of various laws (indicator: greater awareness of pre-conception pre-natal diagnostic techniques act)	Information dissemination; behavioural change campaigns	March 2009	March 2012	
D8	Action for Children	Smile Foundation	Together4Change	Good governance		In-country fundraising	Trainings and promotional activities	January 2011	December 2015	
D9	Education Program / Program for Financial Sponsorship and Scholarships "Agape Homes and Bethlehem Day Care Centre"	Christian Outreach Uplifting New Tribes (COUNT)	Red een kind/ woord en daad	MDG2	€ 280,000 per year for the part that is evaluated € 2,243,800 for the entire project	Learning (indicator: cognitive achievement in mathematics)	vocational training,, a foster home	1993	2020	
D10	VTRC Edu Gate	Vocational Training and Rehabilitation Centre's (VTRC)	Red een kind/ woord en daad	MDG2	€ 285,900	Learning (indicator: cognitive achievement in Tamil and Maths)	Setting up tuition centres	June 2010	June 2015	

Table 3: Information on impact analyses for MDG Projects

Project Code	Information comparison group sampled	Baseline and Endline information	Evaluation Design	Sample Size baseline Treatment	Sample Size baseline Control	Serious attrition problems from baseline to endline	Serious Power problems with respect to the main outcome indicator	Significant impacts on main outcome
D1	Yes	Yes	1; 2	300/300	150/150/ 350/200	No	No	Yes (one out of two groups)
D2	Yes	Yes	1; 2	145	157/250	Yes	No	Yes but dissipates over time.
D3	Yes	Yes	1	200/200 /100/100	300/300	No	No	Yes
D4	Yes	Yes	1; 2	450	225	Yes	No	Yes
D5	Yes	No	3	73/74	125/28	Yes	No	Yes
D6	Yes	Yes	3	375	200/200	No	Yes	No
D7	Yes	Yes	3	700	700	No	No	No
D8	No	Yes	4, 5	50,000/50,000 ¹	50,000 ¹	No	Yes for experiment not for normal analysis.	Yes
D9	Yes	Yes	2; 3	279	289	Yes	No	Yes
D10	Yes	Yes	2; 3	300	300	No	No	No

Notes regarding evaluation designs: 1 refers to double difference method; 2 refers to propensity score method; 3 refers to cross-sectional comparison between treatment and comparison groups; 4 refers to before-after analysis and 5 refers to RCT. For details, see the individual MDG reports. Multiple numbers in the Sample Size columns denote that we have used more treatment or control groups. For the exact details we refer the reader to the individual reports.

1) These numbers refer to the amount of letters in the experiment.

Table 4: General Scores

Project	D1	D2	D3	D4	D5	D6	D7	D8	D9	D10
The project was well designed	8	8	10	8	10	8	5	8.5	8	8
The project was implemented as designed	10	10	10	6	10	6	10	8.5	9	6
The project reached all its objectives	7	6	7	8	7	6	5	8.5	8	6
The observed results are relevant to the project beneficiaries	8	8	7	10	7	8	10	NA	8	8
The project was implemented efficiently	9	6	10	NA	10	6	10	8	9	6
The observed results are attributable to the project interventions ¹⁾	7	6	7	7	5	6	8	5	6	6

Scores are running from 1 (worst) to 10 (best). The evaluation of project D8 does not focus on the endusers. Therefore the relevance question could not be answered. D4 lacks an efficiency analysis as no benchmark is available.

1) This question deals with the rigor of the analysis, thus, these grades do not value the project or the project design as such.

4.3 General Findings of the MDG evaluation

We end the MDG evaluation part of this report by valuing the program in terms of the main evaluation questions (see the beginning of section 4.2). These questions are summarized in table 4. The general finding is that the evaluated projects are well designed; most projects score an 8, 9, or 10. The main exception is project D7. The problem here is that the SPO tried to cover a large number of villages, which resulted in a thin spread of the intervention. The project lacked depth and resulted in too little effort (on a per capita basis) to tackle a problem as large and complex as sex selection.

It appears that half of the projects are implemented as designed (score of 10) and two other projects almost (score 8 or 9). The reason for a lower score on D4 is because the project is operating in a conflict zone. The 6 in the case of D6 reflects delays in the implementation of the plan mainly due to extraneous circumstances (religious issues) and/or due to cyclone Phailin. In any case, as far as we can tell the project was not implemented on time and so the main reason for the 6 is delays in implementation. D10 received a 6, as on the basis of the field trip it was felt that implementation was not very effective. There were, in some cases, more students in each tuition center than planned, there were difficulties in hiring tuition teachers and there were problems finding places to conduct the tuition.

From Table 3 it was clear that for seven out of the 10 projects a significant effect on outcome was found. However, as most projects have multiple outcomes, a score has been given on how well the project achieved all of its objectives. Here we can see that not all objectives are met. Yet, all projects still meet most of their objectives, or their most important ones, as all projects scored at least sufficient with the exception of D7. A major reason for the low score of D7 is the inadequate design of the project, see also above. It seems to be very important that the design of project D7 will be improved as the intervention as such is highly relevant for the project beneficiaries.

All projects scored a seven or higher on the relevance aspect. This aspect measures the fit between the main problems the beneficiaries are facing and the main objectives of the project. Note that since project D8 does not focus on the end-users, we could not score this project on this aspect.

The efficiency analyses suggest that the examined projects are reasonable up to very efficient. Half of the projects even score a 9 or a 10 on efficiency. However, recall that the efficiency analyses are conducted in an extremely crude way and therefore can only provide a first indication of the cost-effectiveness of the projects. Much more analyses are needed to obtain more rigorous cost-benefit estimates.

Finally we score on how well each result could be attributed to the project intervention. This question deals with the rigor of the analysis. In other words, it values how well we are able to attribute the impacts to the project intervention. Thus, these grades do not value the project or the project design as such. Nor do they reflect our ability to assess the efficiency of the project as discussed above. We have used the following grading system. If we were able to construct identical control and treatment groups, and if there were no serious other evaluation problems, like attrition and/or power problem, we decided to grade the project with a 9 or a 10. Since identical control and treatment groups will in general only be obtained by large scale RCTs, a 9 or 10 is only used for projects for which the main analyses have been done by using a RCT. This was never the case for our India sample. We based the grading system for our sample on the degree to which a randomization could be mimicked. We

decided to grade projects with an 8 if a double difference methodology has been used with pre-intervention data and if there were no other serious issues that affected the evaluation. In our sample, we only graded D7 with an 8. While we lacked pre-intervention data, and did not use a DD methodology, we found it appropriate to give this evaluation a high score for the treatment and control villages seem to be observational identical and since the intervention was randomly allocated. If the impact evaluation was based on two rounds of data, and a double difference approach without pre-intervention data, or if PSM methods could be used, without serious other problems, we graded the evaluation with a 7. Projects D1, D3, and D4 fulfilled these requirements. While D2 also uses a DD approach, we graded the evaluation with a 6 since there were quite some members who selected themselves out of the project, which may cause attrition problems. We also graded D6, D9, and D10 with a 6 e.g. due to attrition problems or problems with finding an appropriate control group. We graded project evaluations with a five if either we were not able to select a comparison group at all or could use only one round of data. This applies to projects D5 (one round of data) and D8 (no comparison group).

5. Evaluation of capacity development of Southern Partner Organizations (5C evaluation)

5.1 Methodological approach

The overall evaluation approach for evaluating capacity development of the SPOs is a participatory, theory-based approach using theories of change, impact pathways and process tracing⁷⁸, in a before-after comparison. The overall evaluation design is centered around the 4 evaluation questions:

1. What are the changes in partner organizations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described in more detail in Appendix 2

⁷ In Stern et al, 2012: Evaluation and IE in particular, is an opportunity to test a program's theory through the links in the causal chain. In terms of method, this tendency is close to 'process tracing' (George and McKeown, 1985, Collier 2011), defined by Aminzade (1993) as: 'theoretically explicit narratives that carefully trace and compare the sequences of events constituting the process...'. These causal chains are represented graphically as causal maps or neural networks.

⁸ Stern et al (2012) say there are 'three main designs that show promise to reinforce existing IE practice when dealing with complex programs – theory-based; case-based and participatory'.

The first (changes in organizational capacity) and the fourth evaluation question are addressed together through:

- **Changes in the 5C indicators since the baseline:** standard indicators have been agreed upon for each of the five capabilities of the five capabilities framework (see Appendix 3) and changes between the baseline, and the endline situation have been described. For data collection a mix of data collection methods has been used, including self-assessments by SPO staff; interviews with SPO staff and externals; document review; observation. For data analysis, the Nvivo software program for qualitative data analysis has been used. Final descriptions per indicator and per capability with corresponding scores have been provided.
- **Key organizational capacity changes – ‘general causal map’:** during the endline workshop a brainstorm has been facilitated to generate the key organizational capacity changes as perceived by the SPO since the baseline, with related underlying causes. For this purpose, a visual as well as a narrative causal map have been described.

In terms of the attribution question (2 and 4), ‘**process tracing**’ is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organizations. Theory-based evaluation can help to understand why a program works or fails to work and they attend to not only what a programs do but also to how participants respond⁹. The theory based approach also allows space for the evaluation to reflect the complex nature of the development process, particularly when focusing on changes in organizational capacity. To deal with the attribution question (2), the theory-based approach ‘(outcome explaining) process tracing’ is used.

This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organizations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organizational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

The evaluators have considered the internationally agreed upon evaluation standards as useful guidelines for their work, and ranked in order of importance: 1. Utility, 2. Feasibility, 3. Propriety, 4. Accuracy, 5. Evaluation Accountability, which are ranked in order of importance. Within the boundaries of the conditions set for this evaluation, the evaluators have as much as possible adhered to these standards, particularly utility, whilst the setup of the evaluation seems to focus more on the accuracy standard.

⁹ Carol H. Weiss (2007).

Organizational capacity is complex and seen as an outcome of an open system. Within a complex system, multiple processes operate simultaneously and by no means in isolation. Interactions between these processes can result in unpredictable and evolving results. According to Stern et al (2012), there are “three main designs that show promise to reinforce existing IE practice when dealing with complex programs – theory-based; case-based and participatory”. In order to understand changes in organization capacity, it is important to develop a deep understanding of the change process and the dynamics that affect organizational change of organizations. Simple linear input-activities-outputs-outcomes-impact chains do not suffice for complex issue like organizational capacity.

The evaluation is participatory in that SPO staff and stakeholders are engaged in a process of self-reflection, learning and validation of findings. Having interactive workshops with staff is part of this.

The evaluation process is also participatory in terms of design and analysis. The overall methodology, including standard indicators and a Likert scale, has been designed by the Centre for Development Innovation (CDI), Wageningen University and Research center (WUR; Ethiopia, India, Indonesia, Liberia), in collaboration with ETC Foundation (Uganda) and Disaster Studies (WUR; DRC), covering in total 6 out of 8 countries. For the endline process CDI has also taken a lead in methodological development, especially in terms of process tracing, for all the 8 countries in the MFS II evaluation. CDI is involved in 4 out of the 8 countries for the 5C evaluation. Due to the nature of the evaluation (multiple countries, with multiple institutions carrying out the evaluation), all possible efforts were made to design a standard methodology to be used across countries. This included a set of common indicators (32); and data collection tools for six countries¹⁰. The 5 capabilities were reformulated in outcome domains and for each outcome domain performance indicators have been developed. See also Appendix 4. The methodology has been shared with the country based evaluation teams, the country project leaders, the synthesis team, and MFS-II organizations for feedback. Detailed guidelines and tools have been developed by CDI for the baseline and endline, and these have been piloted in each of the countries CDI is involved in, in line with training the in-country team. Country based evaluators have had a critical input in reviewing and adapting these detailed guidelines and tools. This enhanced a rigorous data collection process. Rigorous analysis of the qualitative data is done with the assistance of the NVivo software program. The qualitative data analysis software allows for a transparent and systematic analytical process across an international team. During data collection, analysis and sense-making, the overall 5C coordinator (CDI) provided training, coaching and mentoring and carried out quality checks for each of the 4 5C country teams that CDI is involved in (Ethiopia, India, Indonesia, Liberia). Details specific to the SPO are described in chapter 5.1 of the SPO reports. A detailed explanation of the methodological approach is provided in Appendix 2.

5.2 Key findings and conclusions

This chapter includes brief descriptions for each Southern Partner Organization (SPO) included in this capacity development (5C) evaluation, and provides main findings and conclusions of the evaluation, in relation to the 4 core evaluation questions as described in the previous section. Please note that two SPOs have not been included in the endline study: DRISTI - the contract with Hivos had already been finished in January 2012. Therefore only, the baseline could be conducted. Women’s Rights Forum, funded by Mama Cash, was dropped from the 5C

¹⁰ DRC, Ethiopia, India, Indonesia, Liberia, Uganda

evaluation, since, even after many attempts, the organization could not be reached, either by the evaluation team or the Co-Financing Agency (CFA). It was then agreed to drop this SPO from the 5C evaluation.

5.2.1 Key information on the Southern Partner Organizations (SPOs)

Please find below a brief description of the key information on the Southern Partner Organizations.

BVHA

Bihar Voluntary Health Association (BVHA) is a secular and voluntary association of charitable Hospital and Health Centers established in the year 1969 by the Medical Mission Sisters. It was registered in February 1970 under the Societies Registration Act XXI of 1860 at Patna, Bihar. The organization aims to make Health a reality for the people of Bihar especially the weaker section/unprivileged segment of the society through Voluntary Organization/Institutions, Charitable Hospitals, Public Health Service, groups/professionals/individuals engaged in health sector and with the active involvement and the participation of the community. The organization not only works as a service provider but is also actively involved in capacity building programs of voluntary organizations and developing model programs for major health problems e.g. Reproductive Health Issues, malaria, tuberculosis, diarrhea, iodine deficiency disorders (IDD), Kala-azar, water borne diseases ,tobacco related diseases, life style disorder etc. BVHA mainly works through its member and non-member organizations in Bihar to create a healthy community. It conducts programs to build up the capacity of voluntary agencies in program planning, implementation and management. It facilitates community health action by promoting social justice in the provision and distribution of health care encouraging voluntary health action of people and enabling them through various support services so that it addresses their health needs by accessing the Primary Health Services and basic health services rights through community and voluntary organization's participation. However, the advocacy and liaising with the Government is the major activity of BVHA as the ultimate responsibility of health is of the State Government.

COUNT

Christian Outreach Uplifting New Tribes (COUNT) is an organization which works amongst the remote tribal population of undivided Andhra Pradesh, Odisha and Chhattisgarh. It works as the social and developmental organ of Agape Fellowship (AF), which is a faith based organization, focusing on social, cultural, educational and developmental opportunities for the tribals. COUNTCOUNT works mostly with tribals and the socially and economically downtrodden people groups. COUNT's vision is 'a holistic ministry uplifting the underprivileged, the rural, tribal and slum dwellers – educationally, economically, socially and spiritually. Its mission is 'In Christ-like spirit, sharing Agape love, building individuals and developing new societies. Motto: In three words – love, wisdom and growth – expresses the main objective of the organization.' COUNT runs various developmental programs such as the education program, HIV/AIDS awareness program and vocational training program for its target population.

FFID

The Forum for Integrated Development (FFID) was established on 10th March, 1995 as not-for-profit - organization under the Andhra Pradesh Societies Act 1350 Fasli (Act of 1350F). FFID's emphasis is to develop, promote and popularize alternative models in agriculture, natural resources management, soil and water conservation, agro-ecology and non-conventional energy sources leading to sustainability in social, economic and ecological development. FFID works among the poor rural (disadvantaged) communities of the undivided Andhra Pradesh (comprising Seemandhra (formerly known as Coastal Andhra and Rayalaseema) and Telangana), Odisha and Maharashtra to empower them, enhance their livelihood and food security. The vision of FFID is to promote economically and socially viable agrarian based livelihoods in rain-fed and other ecologically depressed regions through sustainable agriculture. The mission of FFID is to develop and promote alternative models in agriculture, agro-ecology and non-conventional energy sources for sustainability in social, economic and ecological environmental development. FFID continues to provide guardianship support to both Chetna Organic Farmers Association (COFA) and Chetna Organic Agriculture Producer Company Ltd (COAPCL) to evolve into professional and well established farmers' support organizations.

JANA VIKAS

Jana Vikas works in Kandhamal district, one of the most backward and tribal dominated districts of Odisha inhabited by dalits, tribals, and other backward communities. It aims to empower, and uplift these communities through sustainable livelihood programs, social values, peace, social justice and harmony. The vision of Jana Vikas is 'a holistic and sustainable society where people live in unity amidst diversity based on social and human values of justice and equity'. The mission is to sensitize, organize, enable, empower and develop the poor and the marginalized, especially the Adivasi, Dalit and OBCs, to respond to their issues, needs, problems, vulnerabilities and bring forth changes for common goal and interest by using their existing potential, strength and resources, through collective reflection, decision and action.

NEDSSS

North East Diocesan Social Service Society (NEDSSS) is a Church based NGO, playing the role of Facilitator. It facilitates in building capacity of the staff of partners and other NGOs of North East Region through trainings, workshops, exposures, seminars, guidance and coordination. It extends its arms to various agencies for financial support in order to provide support to its partner organizations. NEDSSS is the official organization of 15 Catholic Dioceses of North East India to support and promote development initiatives undertaken by member Diocesan Social Service Societies, partner NGOs and other CBOs (Community Based Organizations). The vision of NEDSSS is 'a society where people live in unity amid diversity based on the Gospel values of justice and love.' The mission is 'to enable member associations to empower the poor and marginalized and ethnic groups in the region for promotion of peaceful just and equitable society through a participatory and sustainable development process.' NEDSSS aims at building the capacity of the dioceses, strengthen the Human Resource system, Planning, Monitoring, Evaluation system and facilitate in developing the networks and linkages for the partners for mobilizing resources and schemes so that the poor and marginalized communities empowered and developed.

RGVN

Rastriya Gramya Vikas Nidhi (RGVN) was established and registered in 1990 with its headquarters at Guwahati (North-East India). In 1992 the operational area was extended and

RGVN regional unit Bhubaneswar was established with the aim to create sustainable livelihoods for rural poor where women are given priority. RGVN Bhubaneswar operates in the tribal dominated regions of western Odisha and Srikakulam and Vizianagaram Districts of Andhra Pradesh. At the first hand, RGVN had tried to address the credit (in the form of soft loans) and basic capacity building (in the form of grants) needs of the rural family to ensure sustainable livelihood for them. On the other hand to make this process more effective and sustainable, RGVN had tried to deliver its support (both loan and grant) through local grassroots level civil societies (CBOs/ NGOs). This process of support not only addresses the livelihood issues of poor people but also provides adequate scope for local fledging initiatives/NGOs to be nurtured and strengthened under the ambit of RGVN'S support. Graduating NGOs in to microfinance institutions program was stopped in mid-2012 due to the microfinance crisis. Then the focus was shifted to Sustainable Livelihood Enhancement and Enterprise Promotion program funded by MFS II.

SAMARTHAK SAMITI

Samarthak Samiti (The Rajasthan Forest Produce Processing Group Support Society) is registered as a society working among tribal and other marginalized communities since 1995 in six districts of Rajasthan to provide guidance and motivation to smaller organizations, cooperative societies and such other societies, which are engaged with minor forest produce collection and devoted to the cause of biodiversity conservation. Samarthak Samiti developed as an offshoot of Astha Sansthan in 1990 in Southern Rajasthan to undertake the struggle/movement to increase the wages of Tendupatta collectors which Astha Sansthan had initiated in early nineties. It aims to strengthen community based organizations (CBOs) (self-help groups (SHGs) and Cooperatives) which are engaged with minor forest produce (MFP) collection and devoted to the cause of biodiversity conservation in order to provide sustainable livelihood to the marginalized tribal communities. Also lobby for natural resource management rules, laws and policies to create a favorable condition for the marginal communities.

SDS

Shivi Development Society (SDS) is a civil society organization which works in the areas of human rights, good governance, and promotion of people's participation with gender as a cross cutting theme undertaking development initiatives to positively influence the lives and improve the quality of living of poor and marginalized sections of the society. Therefore, SDS also strives to support the policy work through lobby and advocacy strategies of the grassroots voluntary organizations by engaging them in capacity building in lobbying, undertakes direct community outreach programs and analyzing grassroots actions. SDS vision is "to foster a growth oriented, just and equitable society based on the respect for the rights of the individuals and non-discrimination among the caste, communities and gender by enabling the under-privileged and uninitiated secure their rights". Its mission is "using rights based approach to development, SDS works towards capability building of its partner communities, with a focus on marginalized women, children and youth, so that they are able to achieve their lasting well-being".

SMILE

Smile Foundation (SMILE) is a national level development organization directly benefitting over 300,000 children and their families every year, through 158 welfare projects on education, healthcare, livelihood and women empowerment, in more than 700 remote villages and slums

across 25 states of India. Their vision is, as a catalyst to bring changes in the lives of millions of children, youth and women, who are not privileged, by addressing the real need at the grassroots level and also enabling the civil society across the world to engage proactively in the change process following the philosophy of Civic Driven Change and adopting the highest standard of governance and thereby emerging as a leading knowledge and technology driven, innovative and scalable international development organization from India. Its mission is to empower underprivileged children, youth and women through relevant education, innovative healthcare and market-focused livelihood programs. Smile Foundation is to deploy best possible methodology and technology for achieving ideal SROI (social return on investment), to practice and promote good governance. To link business competitiveness of the corporate with social development initiatives; also to sensitize privileged children, youth and citizens in general to promote Civic Driven Change. Smile Foundation adopts a lifecycle approach by involving children, their families and the community. Smile Foundation extended its thematic areas of intervention by supporting family health, livelihood, and women empowerment. Children, their families and the community become the target group for Smile Foundation's activities as child education cannot be done in isolation and nothing else but education for children can bring long lasting change in the society.

VTRC

Vocational Training and Rehabilitation Centre (VTRC) works in four districts of Tamil Nadu, e.g., Madurai, Salem, Dindigul, Dharmapuri, among the poor and marginalized children and women. It aims to provide them health care, protection and support and reduce their vulnerability by creating awareness as well as, advocating the protection of children and women's rights. So that they can be empowered and get opportunities to reach their full potential. It also focuses on prevention of HIV and Sexual Reproductive Health (SRH) by increasing the importance of sex education by capacitating the change agents and tuition teachers. VTRC was registered on 31st December, 1986 under the Tamil Nadu Societies Registration Act No. 181 of 1986. The vision of VTRC is – "Little one can become a mighty nation". VTRC's mission has been to provide support to vulnerable children, being child centered and child focused.

5.2.2 Changes in partner organization's capacity and reasons for change (evaluation question 1 and 4)

This section describes the main findings for the first evaluation question: **What are the changes in partner organizations' capacity during the 2012-2014 period?** And the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

These questions are mainly addressed by reviewing standard indicators that have been developed for each of the five core capabilities, which make up the capacity of an organization (see also Appendix 3). Through a mix of methods (self-assessments – SPO staff; interviews with SPO staff and externals; document review; observation), data have been selected on whether and what changes have taken place in these indicators since the baseline in 2012. See also a description of the methodology in Appendix 2. The main findings and conclusions are described below. In addition to reviewing standard 5C indicators, the evaluation team facilitated a discussion on what the organization perceived as the key organizational capacity changes since the baseline, and how these changes have come about. Key findings are also explained below.

Changes in terms of the five core capabilities

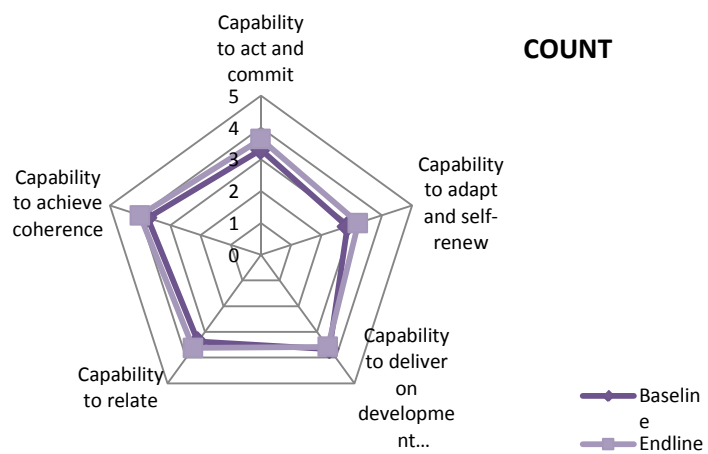

Below you can see how each of the SPOs changed since the baseline in terms of their average capability and specific indicators.

BVHA

Over the last two years BVHA has slightly improved in its capability to act and commit. The main improvements were: the director became more responsive, salaries were raised as per the government standard, staff improved skills because of trainings and exposure visits, there are better operational plans and strategies, diversification of funding and improved fundraising capacity. In the capability to adapt and self-renew BVHA also improved slightly. This was mainly due to improved M&E application in the SRHR project, strategic use of M&E, better tracking of BVHA’s operating environment and being more responsive to network members. BVHA improved slightly in the capability to deliver on development objectives. Operational plans have become more critical and realistic in budget utilisation, BVHA is working more cost-effectively and feedback mechanisms have been formalized. The organization improved very slightly in its capability to relate. BVHA now involves their partners in PME and has increased the amount and different levels of networks they are active in. The organization also works more with the government and pays more visits to target groups. Finally, there has been no change in the capability to achieve coherence.

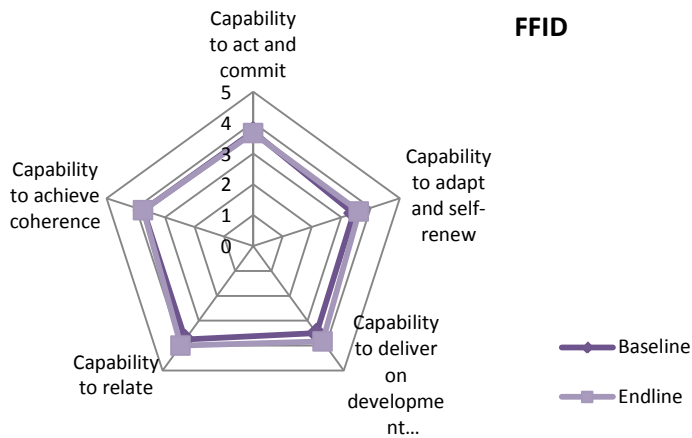

COUNT

Over the last two years COUNT has slightly improved in its capability to act and commit. Important improvements were the leader becoming more pragmatic, COUNT receiving support in developing strategic plans from the MFS II funded regional coordinator, improved staff skills, improved fundraising and fundraising procedures. In the capability to adapt and self-renew COUNT also improved slightly. This was mainly due to improved ability to collect data and to report due to methodological guidance and evaluations supported by W&D. COUNT did not change in its capability to deliver on development objectives. The organization improved slightly in its capability to relate because they increased their engagement with target groups and increased the number of networks they are active in. Finally, there was a very slight improvement in the capability to achieve coherence because strategies have been revisited and a new child protection policy is now in place.

FFID

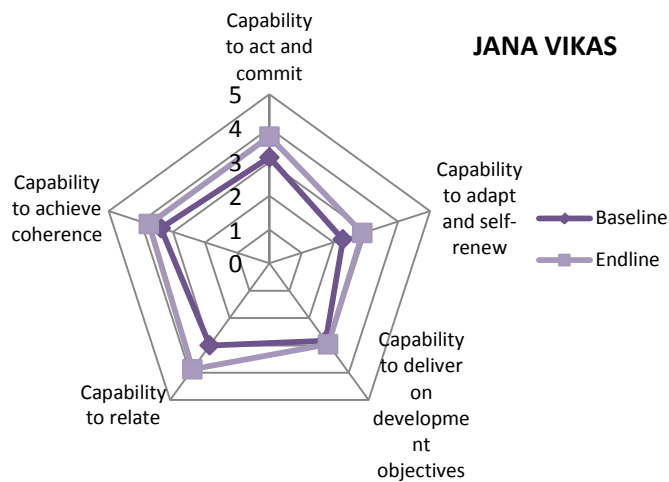

Since the baseline, two years ago, FFID has seen no change in its overall capability to act and commit, though there was deterioration in staff turnover and funding procedures improved. FFID has very slightly improved in its capability to adapt and self-renew, which was mainly due to more focused data collection and better reports after an effective communications and a financial management workshop by ICCO. The organization also very slightly improved in terms of the capability to deliver on development objectives, as operational plans are informed by better M&E, feedback mechanisms improved, and balancing quality and efficiency improved. There has been a very slight improvement in FFID’s capability to relate because they are working more with the government, are more involved in different networks, interact more with the field and there is more internal sharing of learnings from trainings. There have been no changes in the indicators under the capability to achieve coherence.

The organization also very slightly improved in terms of the capability to deliver on development objectives, as operational plans are informed by better M&E, feedback mechanisms improved, and balancing quality and efficiency improved. There has been a very slight improvement in FFID’s capability to relate because they are working more with the government, are more involved in different networks, interact more with the field and there is more internal sharing of learnings from trainings. There have been no changes in the indicators under the capability to achieve coherence.

JANA VIKAS

Over the last two years Jana Vikas has slightly improved in its capability to act and commit. The main improvements were that the director is more responsive to field staff, to target groups and involves staff more in strategic planning. Clarity on roles and responsibility, financial incentives and funding procedures also improved. In the capability to adapt and self-renew

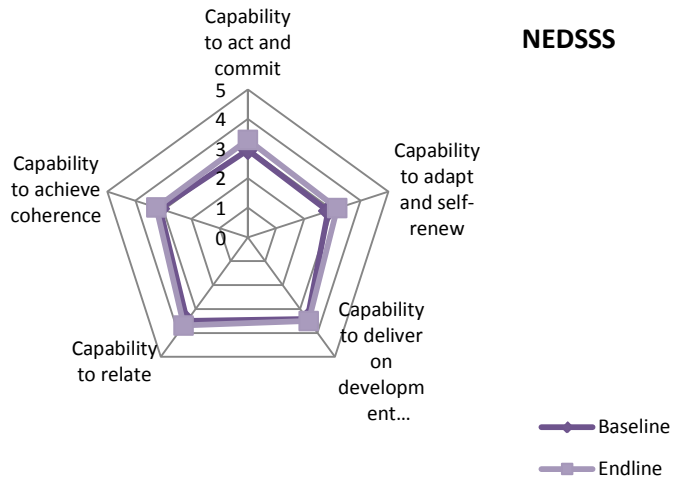

Jana Vikas improved slightly as they now have an operational PME unit (funded by Cordaid), the PME policy has been revised, staff increase Planning, Monitoring and Evaluation (PME) skills, M&E findings are used for operations, there is more critical reflection and JV is more responsive to stakeholders. In terms of the capability to deliver on development objectives, there has been a very slight improvement because JV works more cost-effectively and has a better feedback mechanism for meeting beneficiaries needs. In the capability to relate, JV showed improvement: they are more open for input from stakeholders for developing their strategies, networks for resource mobilization improved, relationship with target groups

improved and internally they are organized in a more clear and less hierarchical way. Finally, Jana Vikas slightly improved in its capability to achieve coherence because they revised their strategic plan and HR, Finance and Gender policies were approved by the board.

NEDSSS

Over the last year and four months NEDSSS has very slightly improved in its capability to act and commit. Important improvements have been that the leader is more responsive and provides more strategic guidance, financial incentives for staff increased very slightly, the funding situation improved and staff improved in their proposal writing capacity. In the capability to adapt and self-renew NEDSSS also improved very slightly. This

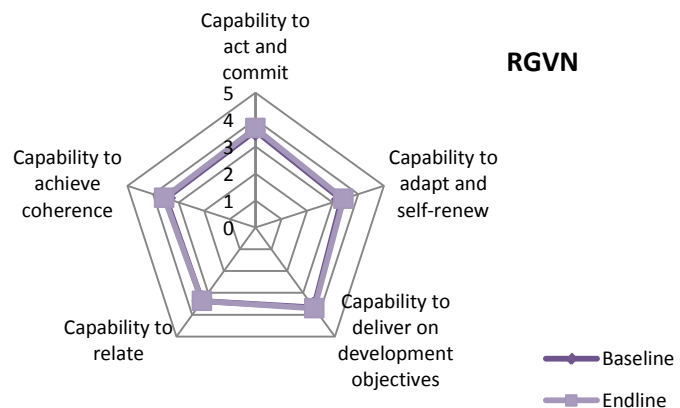

was mainly due to solid M&E application in the Cordaid project and improved M&E input from now trained partners, more critical reflection and NEDSSS being more responsive to non-church stakeholders. NEDSSS showed a very minor improvement in the capability to deliver on development objectives, as through NEDSSS' direct project implementation they know better if services meet beneficiaries' needs and balancing quality and efficiency also improved. The organization had a very minor improvement in the capability to relate because engagement with non-church stakeholders improved and NEDSSS has become more visible as an organization in its network. Finally there was a very minor improvement in the capability to achieve coherence because they introduced a HIV/AIDS work policy.

RGVN

Over the last two years, RGVN has seen no change in its overall capability to act and commit. The main improvements were the daily operations, staff skills, trainings and RGVN's proposal writing capacity. There was however a slight deterioration in staff incentives and RGVN's funding situation. In the overall capability to adapt and self-renew RGVN also showed no change, though management

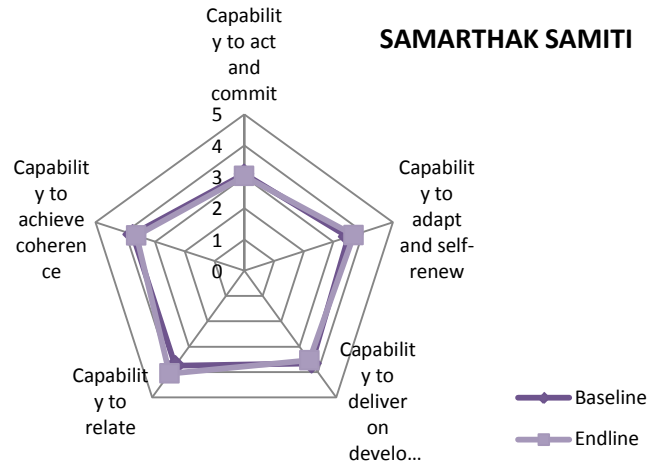

became more responsive to critical reflection and there was a very slight improvement in M&E application. In terms of the overall capability to deliver on development objectives, there has been no change. RGVN has only improved very slightly in balancing quality and efficiency. In

the overall capability to relate there was again no change. RGVN did improve very slightly its relations with government departments and the private sector. Finally, RGVN showed no change in the overall capability to achieve coherence but has revisited their strategies which are still in line with their vision and mission.

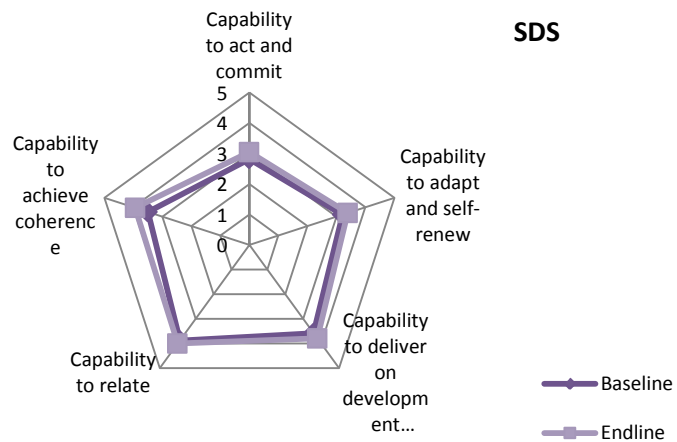

SAMARTHAK SAMITI (SS)

Over the last two years SS has seen no change in its overall capability to act and commit. While the leader became more self-reliant, there were more trainings and capacity to writing proposals for funding but due to a deteriorated funding situation key staff had to leave the organization. In the capability to adapt and self-renew SS also improved very slightly. This was mainly due to fine-tuning, but their M&E templates, internal capacity building on M&E, slightly more strategic use of M&E by SS and slight improvement in tracking its operating environment. SS showed a very slight deterioration in the capability to deliver on development objectives. While SS is working more cost-effectively, due to staff having to leave because of reduced funding, balancing quality and efficiency was negatively affected. The organization had a very slight improvement in the capability to relate because SS now receives feedback on its strategies from a more diverse set of stakeholders and has improved its networks at the national level. Finally there was a very slight deterioration in the capability to achieve coherence because SS is applying new strategies that are not yet aligned with their current vision and mission.

SDS

Over the last two years, SDS has very slightly improved in its capability to act and commit. Important improvements have been: less staff turnover at the Delhi office, a well-defined organogram in place, situational analysis is now used to articulate strategies, improved staff skills, improved funding procedures. The funding situation slightly deteriorated because SDS now has only one funder (MISEREOR). In the capability to adapt and self-renew SDS also improved very slightly. This was mainly due to taking a more community centric approach, improved communication between the head and regional offices, more

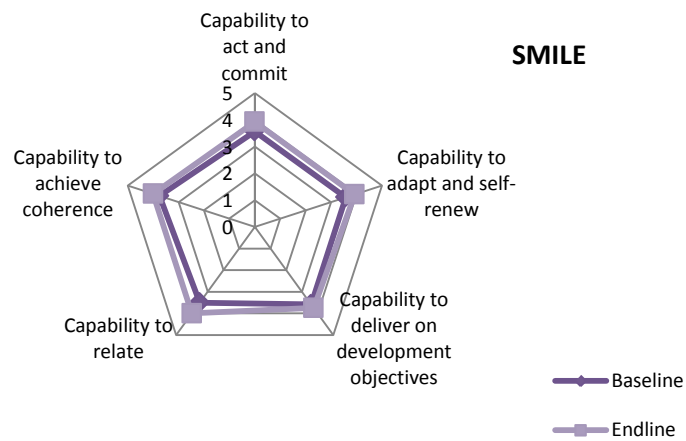

critical reflection, more freedom for ideas and more responsiveness to stakeholders. SDS showed a very slight improvement in the capability to deliver on development objectives, as SDS works more cost-effectively and is now monitoring its inputs and outputs through activity related financial reporting. While the organization overall showed no change in the capability to relate, SDS is now working with more partners in networks at different levels. Finally there was a slight improvement in the capability to achieve coherence because they now have a formulated mission, revised their vision, have better aligned projects and improved in their operational guidelines on procurement and sexual harassment.

SMILE

Over the last two years Smile has slightly improved in its capability to act and commit. Important improvements were strengthened second line leadership, more decentralized structure and improved fundraising capacity. In the capability to adapt and self-renew Smile also improved slightly. This was mainly due to improved internal cooperation and communication which led to better internal and external

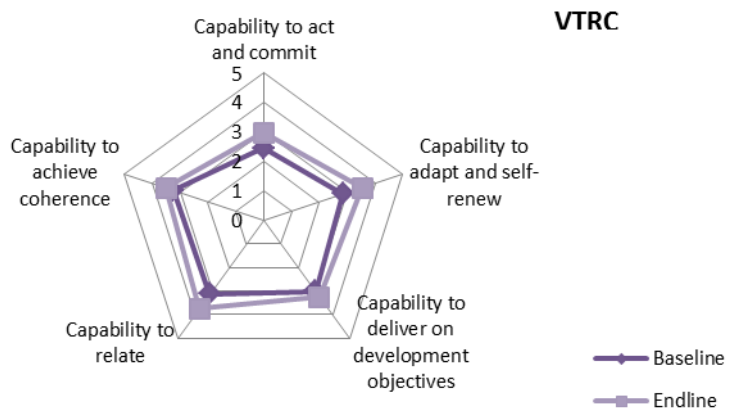

reporting, more participatory planning, better tracking of its operating environment and being more responsive to their stakeholders. Smile improved very slightly in the capability to deliver on development objectives. Smile is reaching its planned outputs better and has become more cost-effective in its resource use. The organization improved slightly in its capability to relate. There is a strong feedback mechanism in place, they have improved their networks and relations within the organization have also improved. Finally there was a very slight improvement in the capability to achieve coherence because the staff and director now share the same vision for the organization.

VTRC

Over the last two years VTRC has slightly improved in its capability to act and commit. This was due to a democratic approach of the leader, an organizational structure that is now in place, a more participatory

planning process, improved staff skills and improved procedures to look for funding opportunities. In the capability to adapt and self-renew VTRC also improved slightly. The main improvements in this capability were more critical reflection, more freedom for ideas,

improved analytical skills of staff in PME, and improved link with field staff, improved responsiveness to stakeholders and M&E findings being used more strategically. VTRC improved very slightly in the capability to deliver on development objectives as they now have in place certain efficiency monitoring systems in place that relate to their improved M&E capacity. The organization improved slightly in its capability to relate because VTRC is involving government departments and community leaders in its strategic planning increased its networks and the second line leadership is given more responsibilities. Finally, there was a very slight improvement in the capability to achieve coherence because there were some strategic changes made in the CARE network program and they improved their operational guidelines.

All in all, changes took place in all the five capabilities, for most of the SPOs, as can also be seen in the table below. Most of these changes have been slight improvements. For 2 SPOs, very minor negative changes took place: COUNT (capability to deliver on development objectives), whilst for Samarthak Samiti very minor in deteriorations took place in three capabilities (capability to act and commit; to deliver on development objectives; to achieve coherence). The capability to adapt and self-renew has slightly improved for all the SPOs. This is often related to the improvement in the way monitoring and evaluation is carried out and supported. This was also one of the two capabilities that was intended to be targeted most with MFS II capacity development interventions, as indicated during the baseline. Please also see the next section (attribution question). For the following SPOs most improvements have taken place (0.5 or more): BVHA (2 capabilities); Jana Vikas (3 capabilities); Smile Foundation (1 capability); VTRC (3 capabilities). For Samarthak Samiti the changes have been mainly negative, although very minor. RGVN and SDS hardly improved. It must be noted that within these capabilities, and related to the specific indicators, mainly improvements but also some deteriorations have taken place. This is very much specific to the organization. For specific details about each SPO, we refer to the specific 5C reports.

Table 5

Changes in terms of average capabilities	BVHA	COUNT	FFID	JANA VIKAS	NEDSSS	RGVN	SAMARTHAK SAMITI	SDS	SMILE	VTRC

Key organizational capacity changes as perceived by the SPO - general causal map

For each organization, a discussion with staff was facilitated, so as to understand what they perceived as the key organizational capacity changes in the organization since the baseline, and how these changes have come about. It was expected that this would provide a comprehensive story for the SPO on what they perceived as the most important changes as well as providing reasons for change, which were difficult to surface from the 33 standard indicators. It must be noted that this information has not been verified with other sources of information, as has been done with the process tracing as explained in the next paragraph. Below you find the results per SPO. For more details about the specific findings please see the 5C reports for the SPOs.

BVHA

During the endline workshop the key organizational capacity changes that were brought up by BVHA's staff were strengthened program monitoring and operational planning; improved capacity for Sexual and Reproductive Health Rights (SRHR) advocacy at state level and increased capacity to leverage more funds. According to the SPO, these changes happened to partly overlap with the key organizational capacity changes that were selected for process tracing because. A key organizational capacity change that was brought up by BVHA's staff but that was not selected for process tracing was: increased capacity to leverage more funds. This capacity increased because of improved visibility, due to improved SRHR advocacy at state level; improved networking, due to being a member of the SRHR Alliance (MFS II funded); and due to improved project outcomes (mostly of MFS II funded projects). For the other changes, please see the next section.

COUNT

During the endline workshop the key organizational capacity changes that were brought up by COUNT's staff were diversification of funds, reduction of program costs and improved strategic planning. These changes happened to overlap with the key changes that were selected to process tracing as they were linked to MFS II supported capacity development interventions. Please see the next section.

FFID

During the endline workshop some key organizational capacity changes were brought up by FFID's staff: improved planning, monitoring and evaluation and diversification of funding. These changes happened to overlap with the key organizational capacity changes that were selected for process tracing because they were linked to MFS II funded capacity development interventions. Please see the next section.

JANA VIKAS

The evaluators considered it important to also note down the SPO's perspectives on the most important organizational capacity changes since the baseline. During the endline workshop the key organizational capacity changes that were brought up by JV's staff were: improved networking with government, NGOs and CBOs; and improved systems of program monitoring

in place. It is expected that both these areas will contribute to improve its capacity for resource mobilization. Improved networking with government, NGOs and CBOs was because of building of a trust relationship with the government after the cyclone in October 2013, and because of JV's involvement in the REHNUMA alliance with other NGO and CBO partners. Both of these developments can be attributed to JV's improved capacity to lobby and advocate on government entitlements which was a result of trainings and exposure visits funded by MFS II and MISEREOR. The systems of program monitoring in place improved because of an accountability mechanism that is now in place, improved PME and better compliance. According to JV staff, improved PME is due to MFS II funded trainings on RBM, PME, strategic planning and SHG management. JV improved its compliance to its operational guidelines because of the revision of operational policies and the formation of thematic committees to see to the implementation of policies. The policies were revised during a Policy development workshop that was funded by MFS II. All in all, MFS II funded capacity development interventions, according to JV, had an effect on the organization's capacity to lobby and advocate on government entitlements, knowledge on RBM and PME; and revision of policies. Other underlying factors relate to restructuring of the organization, and stricter government policies on foreign funding, changing donor priorities and natural calamities.

NEDSSS

During the endline workshop the key organizational capacity changes that were brought up by NEDSSS' staff were: improved systems in place, increased visibility and diversification of funding. An MFS II supported capacity development intervention has played a role in improved systems in place. MFS II co-funded with MISEREOR a training on Society Registration and Documentation for the Governing Board and General Body, which made the board and body more proactive in improving systems. Trainings on financial management FCRA and government regulations, mostly funded by Missio München also were important to increase the knowledge of the director and governing body and led to a legal way of documentations. These trainings were triggered by changes in government rules and regulations concerning foreign funded NGOs. NEDSSS improved its visibility because the organization produced many publications and improved their networking. Of these publications the HRE Modules were funded by MFS II. The diversification of funding was triggered by a need to diversify funding because of a changing donor environment and changing government regulation on foreign funding. An organizational assessment funded by CARITAS India led also to NEDSSS focusing more on financial sustainability of the organization. Staff skills in proposal writing and diversification of intervention areas allowed NEDSSS to attract new donors. According to NEDSSS, MFS II funded capacity development interventions have played a role, particularly in terms of the governing board and general body becoming more proactive and in terms of part of the publications that helped NEDSSS become more visible since the baseline in May 2013.

RGVN

During the endline workshop the key organizational capacity changes that were brought up by RGVN's staff were: improved staff capacity to train partners on technology and other issues; and improved relationships with networks. According to RGVN their capacity in training their partners improved partly because of the field experience that they gained and trainings and exposure visits they went on that were funded by Hivos (MFS II), SIDBI and SDTT. RGVN staff got more access to trainings and visits because of gap identification and a change in the strategic plan which required staff to develop new skills. The gaps were identified as a result of fortnightly meetings and strengthened M&E because of donor (Hivos) requirements. RGVN improved its relationships with the government, market, PSUs and private sector. The relations

with the government improved because of the new programs RGVN is involved in and because of some trainings of government department that they attended. The linkages with the market improved because of new programs and trainings by Hivos, SDTT and SIDBI. The relations with PSUs and the private sector improved because of new programs and RGVN obtaining a CSR eligibility certificate. RGVN improved its network with government, market, PSUs and the private sector also because of working on new programs that fitted their new sustainable livelihood strategic focus of RGVN, which was triggered by floods, the Phailin cyclone, the microfinance crisis and the changes in donor's priorities (from microfinance to agriculture/livelihoods). According to RGVN, MFS II funded capacity development interventions have played a role in the key organizational capacity changes, particularly in terms of improving their staff capacity to train partners on technology and other issues and improved linkages with the market.

SAMARTHAK SAMITI

During the endline workshop the key organizational capacity changes that were brought up by SS' staff were: improved staff capacity to write reports, improved staff capacity to train target groups and improved capacity for financial sustainability. An MFS II supported capacity development intervention (financial management training) together with trainings by other funders like SDTT and Astha Sansthan have played a role in improving data collection and compilation skills which contributed to staff capacity to write reports. SS staff being better able to train target groups can be attributed to trainings and exposure visits funded by MFS II and other funders (SDTT, IRMA). These trainings focused on business plan development, marketing etc. furthermore staff have also taken on more responsibilities due to reduced funding as a result of shifting donor priorities. Finally, SS improved their capacity for financial sustainability because of new funding strategies, that were triggered by reduced funding, and improved interaction and networks with like-minded NGOs and government agencies. According to SS, MFS II funded capacity development interventions thus played a role mainly in terms of improving their data collection and compilation competencies and in improving their understanding of the technical aspect of their role in supporting and training their target groups, in particular in advising beneficiaries on sustainable farming etc. A general shift of the donor priorities and reduced funding have been important triggers for these changes.

SDS

During the endline workshop the key organizational capacity changes that were brought up by SDS' staff were: improved research capacity, improved documentation related to FCRA and improved focus on community outreach program and action research. SDS said it improved its research capacity because of hiring skilled new staff, training existing staff (both mentioned above) and experience they gained by doing more research. The underlying reasons for these changes were the new vision and mission of SDS and the separation of IPAC, so that SDS could focus on research. SDS improving its documentation related to FCRA was triggered by a documentation training and a changing donor environment in which the government regulations for foreign-funded NGOs became stricter and the CSR Act was implemented. SDS improved its focus on community outreach program and action research because of their new vision and mission. The vision and mission were changed because of the changing donor environment and IPAC becoming a separate entity. MFS II funded capacity development interventions were not mentioned as having played an important role in the organizational capacity changes that SDS identified as being key, during the endline workshop.

SMILE

During the endline workshop the key organizational capacity changes that were brought up by Smile's staff were improved fundraising capacity and improved capacity to organize trainings for CBOs. These changes happened to overlap with the key organizational capacity changes that were selected for process tracing as they were linked to MFS II funded capacity development interventions. Please see the next section.

VTRC

During the endline workshop the key organizational capacity changes that were brought up by VTRC's staff were: improved competency of staff in Edugate Programme, improved capacity of staff to deliver SRH and HIV/AIDS program and improved PME. These changes happened to overlap with the key changes that were selected to process tracing. Please see the next section.

On the whole, according to SPOs for which a 'general causal map' was developed based on what they perceived as key organizational capacity changes since the baseline, MFS II funded capacity development interventions were mentioned as playing a role in bringing about these changes, especially in terms of enhancing staff capacity (3 SPOs): Jana Vikas, NEDSSS, RGVN, Samarthak Samiti. This was not the case for SDS. Internal factors have also played a role but for Samarthak Samiti these were less prominent. External factors were also important, in particular changing donor priorities (all 5 SPOs) and changes in government rules and regulations concerning foreign funded NGOs (2 SPOs).

5.2.3 Attribution of changes in partner organization's capacity and reasons for change (evaluation question 2 and 4)

This section describes the main findings and conclusions for the second evaluation question: **To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?** And the fourth evaluation question: **“What factors explain the findings drawn from the questions above?”**

Key organizational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process. Furthermore, since ‘process tracing’ is used for this purpose, and this is a very intensive process, not all capabilities could be focused on. For more information about the methodology, please see Appendix 2 BVHA, COUNT, FFID, SMILE, VTRC were the five SPOs selected for process tracing. Below the key findings are discussed. But for more detailed information please see the 5C reports for the SPOs.

BVHA

The following key organizational capacity changes were identified for process tracing: strengthened program monitoring and operational planning; improved capacity for Sexual and Reproductive Health Rights (SRHR) advocacy at state level and increased capacity to leverage more funds. Strengthened program monitoring and operational planning, with specific reference to the SRHR project, can to a large extent be attributed to MFS II supported capacity development interventions, and in particular the five biannual PME meetings (also planned during the baseline) and the feedback by Simavi on progress of the SRHR project. The only non-MFS II factors that have played a minor role are the regular staff meetings and the training on project management funded by the International Union, New Delhi. Under the improved capacity for Sexual and Reproductive Health Rights (SRHR) advocacy at state level, most of the improvement in BVHA's competence to deliver SRHR services can be attributed to MFS II funded capacity development interventions. Under the same organizational capacity change improved knowledge on advocacy and lobbying on SRHR can partly be attributed to MFS II supported capacity development interventions.

COUNT

The following key organizational capacity changes were identified for process tracing: diversification of funds, reduction of program costs and improved strategic planning. Diversification of funds and reducing program costs can be only partly attributed to MFS II supported capacity development interventions, which have played a relatively important role in improving the funding situation of COUNT, particularly in terms of accountability towards and retention of existing donors. Improved strategic planning can be largely attributed to MFS II supported capacity development interventions. These interventions, which include COUNT's involvement in different MFS II funded evaluations that aimed to improve COUNT's capacities and implementation of programs, played an important role in terms of the development of a

phase-out plan, improved staff skills in data collection and reporting, and more efficient project fund allocation.

FFID

The key organizational capacity changes identified for processes tracing were: improved planning, monitoring and evaluation; diversification of funding; and improved compliances with HR and financial norms. Under improved PME, improved planning can be partly attributed to MFS II funded interventions and partly to internal factors within FFID and their improved M&E system can almost completely be attributed to MFS II funded capacity development interventions. In diversifying FFID's funding base, only one MFS II funded capacity development intervention (an effective communications workshop in 2013) has played a role and this role was minor in terms of FFID's diversification of funding. External factors like the changing climate and demand for organic cotton; internal factors like the strategic change and projects and trainings with other funders have played a more important role in stimulating the organization to diversify its FFID's funding base. Finally for FFID's improved compliances with HR and financial norms, only the compliance to financial norms can to a large extent be attributed to an MFS II funded capacity development intervention (a financial management workshop). The compliance to HR norms was because of internal developments at FFID.

SMILE

The following key organizational capacity changes were identified for process tracing: improved fundraising capacity; and improved capacity to organise trainings for CBOs. MFS II supported capacity development interventions have played an important role in improving the fundraising capacity of Smile, particularly its improved knowledge and skills on branding and fundraising and its brand development and positioning can be to a large extent attributed to MFS II funding. However, internal factors like hiring new fundraising staff and improved interdepartmental communication also have played an important role. MFS II supported capacity development interventions have also played an important role in improving the capacity of Smile to organize trainings for CBO, particularly in terms of enhancing the competencies of a now well-trained CBO team. The other change to which the dedicated and well-trained CBO team can be attributed is the "redesign and restructuring of the organization", which cannot be attributed to MFS II supported capacity development interventions and overall played a less important role.

VTRC

The following key organizational capacity changes were identified for process tracing: improved competency of staff in Edugate Programme, improved capacity of staff to deliver SRH and HIV/AIDS program and improved PME. As Red een Kind is the main funder of VTRC, their funding for trainings and support to the organization have led to most of the organizational capacity changes in VTRC. The improved competency of staff in the Edugate program was due to improved knowledge and skills of the staff on participatory approach and child rights; and improved knowledge and skills of the tuition teachers. Both these organizational capacity changes can be fully attributed to MFS II supported capacity development interventions. The improved capacity of the staff to deliver the SRH and HIV/AIDS program was due to increased awareness and knowledge on SRH and HIV/AIDS among VTRC staff and because of the development of IEC material and L&A curriculum. These organizational capacity changes can be attributed by MFS II funded capacity development interventions and by VTRC's participation in the Health Bridge Alliance (HBA) (also MFS II

funded but not a capacity development intervention). Improved PME can also be almost entirely attributed to MFS II funded capacity development interventions. Being a member of HBA and going to their meetings was also an important influence on improved PME (also funded by MFS II but not a capacity development intervention).

All in all, and also when looking at the table below, One can see that MFS II capacity development interventions have played a very important role in terms of the selected organizational capacity changes, especially for VTRC where the all the 3 identified changes can be attributed to MFS II support to capacity development, where the CFA is the main funder of the organization. Training and feedback by the CFA have played an important role in bringing about these changes. For Smile Foundation the role of MFS II funded has been relatively less compared to the others. Smile Foundation is a well-established organization, and the CFA is only one of the many funders. Improved PME was an important organizational capacity change for 4 SPOs, and these can all to a large extent be attributed to MFS II funded capacity development interventions. For 3 SPOs there has been the need to diversify its funding situation so as to deal with changes in the donor environment; MFS II funded capacity development interventions but also, even more so in some cases, internal changes and actions have proven to be important. For 3 SPOs MFS II supported capacity development interventions have assisted in the strengthening of staff competencies. Especially in the case of VTRC, this can be mainly attributed to MFS II, but for BVHA and Smile also other factors (mainly internal) have played a role.

Table 7: Attribution of selected, key organizational capacity changes to key underlying factors

SPOs:	BVHA		COUNT		FFID		SMILE		VTRC

6. Civil Society

This section represents the findings of the Civil Society component of India for which the CIVICUS framework was used and which looks at five dimensions: civic engagement, level of organization, practice of values, perception of impact and the civil society context. This last dimension influences the space – the arena - that civil society organizations and citizens have to debate, discuss, associate and to influence society with regards to the concerns or the ambitions they have that may impact upon the civil society arena itself, households, the public and/or the private sector.

6.1 The sample of NGOs in this evaluation

The sample

For the Civil Society Component the sample of the SPOs to be included in the evaluation was conducted by the evaluation team in 2012. As the ToR explicitly emphasized the focus on the relevant MDGs and themes in the selected country for the civil society evaluation, the team first identified the most relevant MDGs and themes in terms of the number of MFS II funded projects classified under the MDGs and themes that have a civil society and/or policy influencing component. The sampling procedure was the following:

1. Identify the 2 most relevant (frequent) MDGs and themes.
2. Randomly sample 7 SPOs per selected MDG/theme, from which the last 2 are reserves. Hence, the sample size is 10 SPOs in total.
3. If SPO is part of the capacity development sample, replace the SPO from the reserve list.

Only those SPOs were eligible for the civil society evaluation that had an on-going contract with a CFA on 1 January 2012 and were directly contracted by the CFA, leading to a total population of 110 SPOs.

The most frequently mentioned MDGs or themes in this population were the governance theme, excluding all those SPOs that also classified under other MDGs, in total 17 SPOs; and MDG 1: economic and agricultural development, which has a population of 30 SPOs.

The following table presents the SPOs and their Dutch partner organizations in the sample.

Table 8
Sample of SPOs and their Dutch partners in the civil society evaluation

SPO	Dutch Partner	Dutch Alliance	MDG/theme	Contract period	Contract amount MFS II
CECOEDECON	ICCO	ICCO Alliance	MDG 1	April 2012-March 2014	€ 97,314
CENDERET	Cordaid	Partners for Resilience	MDG 1	January 2011 - March 2012, extended until July 2013	€ 363,852
Centre for Sustainable Agriculture (CSA)	Hivos	People Unlimited 4.1	MDG 1	April 2011 - March 2015	€ 232, 050
Gram Vikas	ICCO	ICCO Alliance	MDG 1	April 2011 – March 2014	€ 249,243
Gene Campaign	Hivos	People Unlimited 4.1	MDG 1	October 2010 – September 2013	€ 192,500
Centre for Workers’ Management (CWM)	Hivos	People Unlimited 4.1	Governance	October 2012 – September 2014	€ 108,000
Prithvi Theatre	Hivos	People Unlimited 4.1	Governance	April 2010 – March 2012	€ 80,000
Reds Tumkur	ICCO	ICCO Alliance	Governance	April 2012 – March 2013 April 2013 – March 2014	€ 80,000
Ninasam	Hivos	People Unlimited 4.1	Governance	April 2012 – March 2015	€ 32,308
Network of Northeast Tribes (NNET)	Mensen met een Missie	Communities of Change	Governance	April 2011 - March 2012 April 2012 – March 2013 April 2013 – March 2014	€ 233,682

In 2012, nine SPOs participated in a baseline assessment as foreseen. Due to insecurity in the North Eastern India region, data collection for NNET was postponed to May 2013. At the baseline, Prithvi Theatre’s relation with Hivos had already ended.

In 2014 we have contacted all above mentioned SPOs and for the following reasons we did not conduct a civil society assessment for Prithvi Theatre and CENDERET.

As mentioned, Prithvi’s relation with Hivos had ended during the baseline study. The evaluation team did not receive an answer to a request for additional data sent to Prithvi in 2014.

CENDERET’s partner Cordaid decided to stop collaboration with the SPO in December 2013. CENDERET has not been able to implement project activities since the baseline assessment in 2012. At that moment CENDERET’s project coordinator resigned; financial transfers from Cordaid were hindered, leading to project staff being dismissed, and; a new attempt to restart the project failed in September 2013.

Short description of the NGOs in the sample for MDG 1

Centre for Development Research & Training (CENDERET) in Odisha was created in 1988. It aimed to be “a resource centre catalysing sustainable development for empowering the rural people of Orissa”. It collaborated with Cordaid since 1999. Under MFS II, CENDERET intended to implement a community based disaster risk reduction and management program between 2012 and 2015. As mentioned above, CENDERET’s partnership with Cordaid ended in July 2013 and the implementation of interventions practically stopped in the first semester of 2012: CENDERET was incapable to prepare its communities for the very severe cyclonic storm Phailin in October 2013 and that of Hudhud in 2014.

Gram Vikas is also based in Odisha state and was created in the 1970s to serve victims of a devastating cyclone. It is a partner of ICCO since 1984 and is implementing the third phase of its MANTRA program which consists of ensuring water and sanitation facilities in villages with a

higher concentration of poor and marginalized communities. One of MANTRA's core principles is that all families in a village need to adhere to the water and sanitation facilities as a strategy to overcome barriers of social inclusion. After this 100 percent coverage the SPO starts to work with communities on other development issues. Over a period of 15 years, Gram Vikas covered 62,900 households in 1,095 villages (March 2014). ICCO supports the program in the 2011 – 2014 period for 1800 households and 30 villages, which represents 25 % of the total program budget. Important aspects for the Civil Society evaluation are the Village Executive Committees that become development institutions and support social inclusion of marginalized communities. When cyclone Phailin hit Odisha state in 2013, Gram Vikas reoriented its strategy to support reconstruction activities.

CECOEDECON was founded in 1982 in Rajasthan by social workers to also provide immediate relief to the victims of devastating floods in Jaipur district in 1982. It is a partner of ICCO since 2000 and the last contract ended in March 2014 which is part of CECOEDECON's fifth Participatory Initiative for Integrated Rural Development. Its core principle is to undertake interventions that lead to community self-reliance and empowerment. Some 500 villages each have a Village Development Committee, which are represented in a democratic body at block level and ultimately in a one farmer union at state level. ICCO's contribution to the fifth program is 14 % of the budget. MFS II concentrated upon the creation of farmer clubs, awareness raising and lobbying activities on climate change at global level; the empowerment of adolescent girls; and organizational and institutional development of the above mentioned VDC, KSS and KSSM.

The *Centre for Sustainable Agriculture (CSA)* is known for having demonstrated that regenerative and resource conserving technologies and practices of agriculture can bring both environmental and economic benefits to farmers and their communities. Its model of Non Pesticide Management (NPM) agriculture has served the interests of many rural communities and has also been adopted by the government of Andhra Pradesh since 2004. Apart from NPM, CSA also promotes organic agriculture. Hivos has been supporting CSA since 2006 and the current contract (April 2011 – March 2015) aims to organize farmers into cooperatives and enhance their access to markets. Major components are the establishment of integrated farming system models; building farmer cooperatives to improve market access, and lobby and advocacy for a more supportive policy environment.

Gene Campaign was created in 1993 as a reaction to international trends regarding the monopolization of genetic resources and the threats these posed on the livelihoods of tribal communities depending upon these resources. Gene Campaign is a research and advocacy organization which works with village communities as well as at policy making level. Hivos' support to Gene campaign started in 2007 in Jharkhand. Hivos' last 2010 – 2013 contract supported the Jharkhand office with regards to weather advisory services; conservation of crop genetic diversity; community based production of quality seed; sustainable and high yielding crop production and; lobby and advocacy at national level together with the Revitalizing Rainfed Agriculture network (RRA)

Short description of the NGOs in the sample for governance

Centre for Workers' Management (CWM) is a resource center, created in 1991 to serve working people and their organizations, mainly trade unions. CWM supports trade unions to ensure 'unity among workers', as well as the 'right to association' and the 'right to collective bargaining', which would improve working conditions of people informally employed, such as domestic workers, garment sector workers, tea plantation workers. CWM's most important services consist of training and advisory, research and documentation and supporting trade

unions in their lobby and campaign activities. Hivos and CWM's 10 year collaboration ended in 2014. Hivos' last contract (2012 -2014) aimed to create a school for trade unionists; to continue research and documentation in support of trade unions in their lobby and advocacy efforts. CWM works at the national level, but it has been mostly active in Karnataka and Tamil Nadu in the garment sector and that of domestic workers.

Also based in Karnataka is ICCO's (and for some time Cordaid's) partner *Rural Education for Development Society* (REDS). REDS was created in 1984 and for the past years has built a movement of Adijan (formerly known as Dalit) people organized in 1000 Adijan Panchayats at village level in Tumkur District, as well as Panchayats at all administrative levels between village and Karnataka state level. The movement addresses caste inequality and atrocities committed; creating a new identity; claiming rights to government schemes, including land titles; develop female leadership, and; ensuring sustainable livelihoods. ICCO has been a partner of REDS since 2005 and its last contract ended in March 2014. This collaboration supported interventions to address the aforementioned issues through awareness raising, movement building, lobby and advocacy needed at different administrative levels concentrating on Tumkur district.

Ninasam is a community theatre institute with 'no gates' located in a small rural town in Karnataka. It nurtures young theatre practitioners and develops theatrical productions reaching a rural audience of at least 100,000 in Karnataka. In 1980 the Ninasam Theatre Institute was created, followed amongst others by Tirugata in 1985 as a strategy to support graduates to obtain working experiences. This travelling theatre troupe takes major theatre productions to different rural and semi-urban centers in Karnataka every year and is still expanding in terms of audience, locations and troupes participating. Hivos supports this organization since 2003 and the most recent contract covers the 2012 – 2015 period is meant to; increase Ninasam's outreach of Tirugata's theatre productions in remote areas, addressing social or political themes to raise the awareness of their audience; support the Theatre Institute, a culture course and Summer Theatre Workshop. Ninasam further plays an important role in the India Theatre Forum created by Prithvi Theatre. Ninasam is being promoted by a family which is reputed for their contribution to theatre and literary culture in India.

Prithvi Theatre is a family trust based in Mumbai, Maharashtra, which received Hivos' support since 2004. The organization tries to promote alternative performance venues and reaches out to diverse audiences. Since 1991, summer-time children's workshops are conducted using theatre-related skills, focusing on child growth, building theatre appreciation and a future audience. An annual Prithvi Festival is organized since 1983, where the best of national and international theatre is brought in for performances at venues across the city. Hivos' support already stopped in March 2012, before the baseline assessment of this evaluation was conducted. Support was meant amongst others to create a vibrant cultural hub that enhances diversity of cultural experiences and provides space for those theatre groups that cannot afford theatre space, and; to create the India Theatre Forum as an enabling network for the theatre community in India.

Network of NorthEast Tribes (NNET) was founded in 2007 when several mostly religious organizations involved with the cause of the Adivasis and tribes of Assam, Tripura and Manipur decided 'to work as a catalyst in promoting Right Based Development to the indigenous tribal communities'. After a women literacy program, NNET is currently raising the awareness of tribal people regarding their rights, trains para legal activists to support tribal people, educates tribal people and their leaders to understand their own situation. 'Mensen met een Missie', member of the Communities of Change Alliance supports NNET since 2007 with the implementation of their program.

6.2 The evaluation methodology

6.2.1 Evaluation procedures

The evaluation questions consisted of identifying changes occurred in line with the CIVICUS dimensions in the 2012 – 2014 period, the extent to which these changes are to be attributed to the Indonesian NGOs and to MFS II, the relevance of these changes and factors explaining the changes. Information about the CIVICUS framework and the evaluation methodology used can be found in the appendices.

The first evaluation question identified *changes in civil society* in the 2012 – 2014 period, with a particular focus on the relevant MDGs & themes in India. A scoring tool with 17 indicators was developed during the baseline, resulting in the description and a score (0-3) in 2012. During a workshop with the SPO in 2014, workshop participants received the description of the indicator obtained during the baseline and were asked to describe qualitative changes as well as give an indication of the importance of the change on a scale of -2 -- +2. Apart from this document analysis and follow-up interviews with the SPO provided additional information.

For the *attribution question* a theory based methodology was used for five of the ten NGOs and comprising a maximum of two outcomes achieved in the 2012 – 2014 period because of resource constraints. For this in-depth outcome explaining process tracing method was used. A quick contribution assessment was done for the remaining five NGOs. The selection of the five NGOs was based upon an estimation of the MFS II budget for that NGO that is related to CIVICUS dimensions, ensuring that both NGOs working on MDG 1 and on governance were amongst the selected and a variety of Dutch partners.

For those SPOs included for in-depth process tracing in India, priority was given towards assessing impact with regards to the creation and performance of new CSOs by the SPOs and with regards to civic engagement which addressed amongst others social inclusion and people engaged in civil society. The steps to be followed were as follows:

- With the SPO identifying outcomes achieved in the 2012 -2014 period, providing evidence for these outcomes and develop pathways that according to the SPO explains the outcome
- With external resource persons and written materials, confirm that the outcome was achieved, and develop pathways that according to these persons explain the outcome (with a particular focus on rival pathways)
- Construct a model of change that encompasses all pathways that possibly explain the outcome.
- Identify information needs to confirm or reject each of the pathways and collect relevant information be it through interviews, document search etc.
- Analyze findings and conclude about the most likely pathway that explains the outcome, the nature of the relation between the pathway and the outcome and the role of the SPO and MFS II in this.

The *relevance question* was assessed through interviews with the Indian NGOs and their Dutch partners, as well as through context information and written documents. Relevance was assessed against the Theory of Change constructed with the NGO during the baseline assessment in 2012, the context in which the NGO is operating and the civil society policies of the Dutch MFS II alliance.

The *explaining factors* question assessed organizational factors of the SPO, its external context and the relation between the Dutch and the Indian SPO that explained the civil society changes achieved or not. No additional information was collected for this question.

A last additional assessment was made with regards to the *design* of the interventions by the Indian partner.

In 2013, a decision was made with the commissioner of the study to exclude an evaluation question related to efficiency because of the resources available.

More information on the methodology can be found in the appendix.

6.2.2 Limitations

General limitations consist of the limited time between the baseline and the end line study as well as that the programs implemented by the SPOs do not have particular targets set with regards to civil society. This meant that the evaluation team had to assess what parts of the programs related to civil society or not.

Project documentation was needed as a means to link outcomes to the CIVICUS framework, to obtain an overview of outputs-outcomes achieved versus planned, and to orient the in-country evaluation team for the attribution question. In practice the most recent progress reports were hardly available, did hardly report on outcomes and no monitoring systems are in place to track the performance of CSOs created by the SPOs.

Triangulation of data with external resource persons was not always possible, given the resources available for the evaluation team. This was in particular valid for the first evaluation question regarding changes, however the evaluation team triangulated self-assessments with progress reports, reports from the CFA and other sources where possible as can be seen in the description of the individual indicators. Like during the baseline, government officials were not willing to take part in the evaluation because of the strict protocol they have to follow.

With regards to the attribution question, the most important limitations are the following:

- Although strategic orientations were given for the selection of outcomes to be explained through process tracing, there was a bias towards selecting positive outcomes, although not all positive outcomes identified by the SPO were validated by external resource persons. The design of the model of change is another critical step in the process, because at the moment of the design, still most of the information gathered has been provided by the SPO itself, and only a limited number of external resource persons were consulted to formulate rival explanations. This bias was countered by using Bayesian thinking; the more confidence the in-country evaluation team had in the SPO explaining the outcome, the harder they had to concentrate on rival pathways.
- Due to limited time and considerable traveling costs the in-country evaluation team was constrained to only once visiting the intervention zone of the SPO, leaving hardly any possibility to check and cross check information to reject and confirm pathways.
- The process tracing methodology is not a simple step to step forward methodology and therefore requires a lot of back and forth between CDI and IDF, in the first place to get the methodology right, in the second place to assess if there is sufficient information collected.

The CDI team would have gained in being more consolidated (for example sending one type of feed-back to IDF) and having more dedicated time for the evaluation (feed-back did not arrive on time).

6.3 Evaluation findings

6.3.1 Changes in Civil Society

Introduction

The CIVICUS framework has five dimensions, civic engagement, level of organisation, practice of values, perception of impact and civil society context. During data collection we observed considerable overlap in indicators and also between dimensions. For a more meaningful overview of changes that occurred in the 2012 – 2014 period we here conclude about changes and perceived impacts that occurred in the civil society arena, those at household, the public sector and the private sector level (see figure below). These relate in the following way to the CIVICUS dimensions:

Within the civil society arena all findings regarding civic engagement, level of organisation, practice of values and a number of indicators from the perception of impact dimension are regrouped together.

Perceived impacts at household level are derived from information mostly found in the civic engagement dimension and that of perception of impact.

The perceived impacts for the public and the private sector are part of the perception of impact dimension.

In line with the evaluation question, we draw conclusions for those SPOs in MDG 1 and those in the governance theme. However we have not found any information suggesting that SPOs and their interventions have mutually reinforced each other to create one civil society arena. Each SPO had and still has its own arena, with possible impacts upon households, public sector and private sector.

This overview does not include Prithvi Theatre and CENDERET who have not been operational in the field since the baseline assessment.

Changes in MDG 1

Table 9
*Perception of impact upon civil society, households, public and private sector.
 Presentation of the absolute scores in 2012 (0-3) + relative change observed in 2014 (-2---+2)*

SPO	Civil Society	Households	Public Sector	Private Sector
Gram Vikas	2+1	3+1	3+1	0+0
CECOEDECON	3+1	3+1	3+1	1+0
CSA	3+1	2+2	2+1	1+1
Gene Campaign	2+1	2+1	2+0	Not applicable

Source: Individual evaluation reports.

Perceived impact in the civil society arena of SPOs for MDG 1

All four partner organizations have supported the creation of civil society by means of creating new organizations that are capable to defend the rights of their constituents; have supported that new networks within civil society were created; have ensured that new relations were build amongst people from different tribal and caste backgrounds, stimulating social inclusion of marginalized groups. Whereas CECOEDECON continued to work with the movement it has created for the past decades where village committees are federated in structures at block level, district level and state level, Gram Vikas continued to create Village Committees in charge of the coordination of water and sanitation programs in an inclusive way. Gene Campaign created some farmer clubs and CSA organized such farmer clubs into cooperatives, including female farmers.

Apart from the Jharkhand office of Gene Campaign, whose network deteriorated since the baseline and that of CECOEDECON remaining stable, CSA and Gram Vikas expanded their collaboration with other civil society organizations.

Perceived impact at household level.

Only testimonies of livelihoods improvements were available to assess the impact at household level. Perceived impact is to be framed in terms of increased access to water and sanitation facilities (Gram Vikas), households being supported to access government schemes (CECOEDECON), diversity of livelihood strategies (CSA). The perceived impact of Gene Campaign seems limited.

Perceived impact with the public sector

Three of the four SPOs have intensified their collaboration with government schemes and also have been successful in influencing public sector policies and practices: the 100 percent water and sanitation coverage of villages as a means to ensure social inclusion became a policy (Gram Vikas); policies were influenced with regards to GM crops and Minimum Support Prices (CECOEDECON and CSA) and other policies related to agricultural and rural development issues. Only Gene Campaign in Jharkhand did not engage with the public sector.

Perceived impact with the private sector

Generally speaking the four SPOs did not engage with private sector organizations, apart from obtaining grants or linking their farmer organizations into the supply chain. For one SPO this is a principle.

Changes in Governance

Table 10

Perception of impact upon civil society, households, public and private sector.

Presentation of the absolute scores in 2012 (0-3) + relative change observed in 2014 (-2---+2)

SPO	Civil Society	Households	Public Sector	Private Sector
CWM	2+1	2+1	0+0	0+0
Ninasam	2+1	3+1	1+1	0+1
NNET	2+0	2+1	2+0	1+0
REDS	2+0	3+1	2+1	0+0

Source: Individual evaluation reports.

Perceived impact in the civil society arena of SPOs - governance theme

Two of the three SPOs (Ninasam and NNET) have contributed to the creation of new and more intense relations amongst people from different backgrounds, leading to social inclusion of marginalized groups and the third organization (CWM) supported the creation of a South Asian network of trade unions in the garment sector. REDS decreased its support to the village Adijan Panchayats in Tumkur district, partially because, according to REDS, 350 of these were capable to function autonomously already in 2010, and partially because ICCO's and Cordaid's support to the movement stopped respectively in 2012 and in 2014. Currently REDS supports 550 of these bodies in Tumkur district.

Ninasam's own network expanded because of its increasing reputation: CWM expanded its collaboration with international organizations also working with trade unions. NNET, mainly due the remoteness and isolation of its organizations, did not increase the intensity of collaboration amongst its own ten member organizations, nor that with other organizations (in particular in Tripura). REDS increased its relations with organizations operating at national and international level, but seemingly does not engage with CSOs addressing the issues of Adijan People at Karnataka state level.

Perceived impact at household level.

Impact at household level is to be perceived in terms of access to subsidies or government schemes (some 3000 families with NNET); increased income due to successful lobby and advocacy through CWM's partner trade union (400,000 garment workers); 2,2 million rural and mainly tribal people being made aware of their social and political condition and increased employment opportunities (Ninasam). REDS' Adijan Panchayat movement supported 1438 families to successfully reclaim their land, totaling 2163 acres, and helped some families (approximately 700 families in one year) to access government schemes and subsidies worth € 465,000 in four years. Apart from this Adijan people seemingly are socially more integrated into society as they were before MFS II.

Perceived impact with the public sector

Apart from Ninasam that expanded its collaboration with public academies and universities; and tries to lobby for an insurance scheme for artists; CWM does by principle not engage with the public sector, stating that this is the role of the trade unions, and; NNET is working in a very hostile public sector environment. REDS' movement is actively relating with local administrations to obtain access to land, subsidies and government schemes, and also Adijan people massively participate in meetings to address key issues with the Karnataka government. REDS' director was nominated in the national task force body for land reforms which is however currently defunct given the new government that was elected in 2014.

Perceived impact with the private sector

NNET and CWM do not engage with private sector organizations whereas Ninasam, due to its good reputation is attracting the interest of the private sector for future and actual collaboration. Apart from having created its own solar lamp company and from receiving support from companies abroad, REDS is not influencing companies.

Changes in the civil society arena, at household level, in the public and private sector.

Table 1 and 2 gave an indication of changes that occurred in the civil society arena, household level and the public and private sector. The following table presents the total scores of these changes, which should be interpreted in terms of trends rather than of quantitative data.

Table 11
Changes observed in scores between baseline and end line
Total of scores presented in table 1 and 3

	Baseline situation	Changes observed at end line
Civil society arena	8	6
Household level	10	9
Public sector	5	5
Private sector	1	2

Most changes occurred at household level, followed by those in the civil society arena and the public sector. In fact baseline scores for these three types of changes were already high during the baseline, with the private sector lagging behind. Most changes that occurred since the baseline are minor changes scored with a 1.

6.3.2 Attribution/contribution/effectiveness

Introduction

This section presents findings with regards to the attribution question. Starting with an outcome achieved, the evaluation team developed a model of change that identifies different pathways that possibly explain the outcome. Data collection was done to obtain evidence that confirms or rejects each of these pathways. Based upon this assessment, the evaluation team concluded about the most plausible explanations of the outcome after which the role of the SPO and MFS II were being discussed.

The relations between the pathways and the outcomes can differ in nature as is being explained in the following table.

Table 12
Nature of the relation between parts in the Model of Change

Nature of the relation between parts and other parts or outcome
The part is the only causal explanation for the outcome. No other interventions or factors explain it. (necessary and sufficient)
The part does not explain the outcome at all: other subcomponents explain the outcomes.
The part explains the outcome but other parts explain the outcome as well: there are multiple pathways (sufficient but not necessary)
The part is a condition for the outcome but won't make it happen without other factors (necessary but not sufficient)
The part is a contributory cause it is part of a 'package' of causal actors and factors that together are sufficient to produce the intended effect.

Sources: Mayne, 2012; Stern et al, 2012

Not all SPOs underwent the same in-depth process tracing assessment and the procedures for selecting those SPOs included for in-depth process tracing has been explained in the appendix on the evaluation methodology. The other SPOs underwent a quick assessment.

Findings with regards to in-depth process tracing

CECOEDECON

The outcome to be explained consists of policy changes achieved in collaboration with the local structures the SPO created at village, block, district and state level. Three pathways were identified: 1) the changes are to be attributed to the structures created alone, 2) CECOEDECON support is needed and 3) other actors and factors explain the outcome.

Rival pathway 3 was rejected and the first two pathways are a causal package: The structures created by CECOEDECON are able to; represent the needs of their constituencies; react upon their demands, as well as to mobilise them when action is needed, and; engage with government administrations and elected bodies when needed, also at state level. However, they are still dependent upon CECOEDECON in financial and in technical terms. None of the actors could have reached these changes independently from the other. CECOEDECON's huge network and position in Rajasthan state also creates the necessary leverage for change. These outcomes build upon 30 years of organisational and institutional development and MFS II support was a continuation of these processes.

CSA

The first outcome achieved is an increased membership of female farmers and their participation in decision making in the cooperatives created by CSA. The outcome is explained by a number of favorable conditions (*necessary but not sufficient*) that are in place such as increased market access, government programs that have adopted CSA's Non Pesticidal Management Model and are promoting the position of women in society and in agriculture, as well as the existence of the culture of self-help groups. On top of this, different actors, including CSA each explain the outcome (*sufficient but not necessary*).

The second outcome achieved is improved livelihood security of cooperative members. Also this outcome is explained by a number of favourable conditions (market demand; promotion of CSA's farming model) on the one side (*necessary but not sufficient*) and on the other side CSA's and public advisory centres' efforts to promote sustainable agricultural practices amongst the members of the cooperatives (*sufficient but not necessary*).

MFS II support explains these outcomes to a great extent.

NNET

The outcome achieved and to be explained is that tribal communities in the villages where Para Legal Persons are active avail of their legal rights and entitlements. NNET's interventions explain the outcome but other actors and factors as well explain the outcome (*they are sufficient but not necessary*). These are for instance state level factors such as the adoptions of laws and regulations conducive for Adivasi people; people's awareness in Tripura being increased by better roads and mass media; easier access to education of Adivasi people. MFS II funding is the only source of funding for NNET.

CWM

The first outcome achieved is increased membership of two trade unions in the garment and domestic workers sector. Four rival pathways were identified; 1) support by CWM since 2008; 2) other unions and resource centers having supported these unions; 3) the state of Tamil Nadu enjoying the best human development indicators of India and; 4) both trade unions having been successful before MFS II in influencing policies and practices and therefore attracting members. The third pathway was rejected and the other three explain the outcome as a causal package. CWM's most important role in this package has been the development of a template for the indexation of minimum wages over time (developed *before MFS II* but used

during MFS II) and their support to include international dimensions in the garment supply chains.

The second outcome achieved consists of one of the trade unions successfully negotiating a minimum wage hike and the effective payment of dearness allowances to garment workers by industries. Four pathways were identified, i.e.; 1) collaboration with CWM; 2) the trade union itself being able to negotiate without external support; 3) international pressure being built up by CWM and others after the collapse of an eight store garment factory in Bangladesh (Rana Plaza) and 4) mandatory revisions of wages have to be done every 3 to 5 years and the national elections taking place in 2014. Of these the third and fourth pathway were rejected. The outcome is explained by a causal package that comprises the trade union which in itself was already a very mature organization before MFS II, CWM whose support to calculate minimum wage prices was important and collaboration with other NGOs. Outcomes reached in the MFS II period build upon previous results obtained during MFS I. Until November 2012, Hivos' contribution to CWM is estimated at 29 percent and this percentage has possibly decreased as of that moment.

REDS

The first outcome achieved to some extent consists of Adijan (Dalit) people being better integrated and socially accepted in Tumkur district. Three rival pathways were identified: 1) During MFS II 76 Adijan youth were trained in install solar lamp systems in not only Adijan houses but also in non-Adijan houses who wanted to pay for these systems (4,163 families); 2) REDS has empowered the Adijan people and helped them to claim their rights and dignity in Tumkur district since 1984 and; 3) other actors and factors explain this outcome. Each of these pathways alone provides a *sufficient but not necessary explanation* for the outcome achieved. The solar lamp project is the most recent contribution of REDS, however unclarity exists with regards to the contribution of MFS II to this project, which is contested by REDS but mentioned in contracts with ICCO.. However more substantial contributions come from interventions supported *before* the MFS II period.

The second outcome consists of Adijan Panchayats and their organizations at hobli and taluk level increasingly being capable of claiming their rights, in particular with regards to reclaiming their land. Three pathways were identified, being 1) interventions by REDS to create the Adijan Panchayat movement with structures at village, hobli, taluk, district and state level; 2) lobby and advocacy activities for improved policies and regulations that provide access to land, and; 3) a conducive environment caused by the state. Whereas the second explanation was rejected, the two other pathways provide a *sufficient but not necessary* explanation of the outcome. REDS has possibly been far more effective *before MFS II* in explaining this outcome than *during MFS II*.

Findings contribution analysis for all SPOs

MDG 1

Under the MDG component we assessed six outcomes.

One outcome is to be *entirely explained by* the SPO (*necessary and sufficient*). Gram Vikas explains entirely how villages get access to water and sanitations, whilst at the same moment ensuring that all households take part as a means to ensure social inclusion.

Four outcomes can be explained by *multiple actors and factors that each are sufficient but not necessary*: the SPO provides a sufficient contribution to the outcome, but is not the only actor.

This is the case with the Village Executive Committees of Gram Vikas who increasingly are capable of defending the interests of their constituents, and the creation of the farmers clubs and self-help groups by Gene Campaign. Also CSA's performing cooperatives and their increased female membership are the result of different actors each working towards the same result. In addition favorable conditions (*necessary but not sufficient*) are in place such as increased market access, government programs that have adopted CSA's Non Pesticidal Management Model and are promoting the position of women in society and in agriculture, as well as the existence of the culture of self-help groups.

The policy changes achieved by CECOEDECON and the organizations it created are the result of joint action and none of the individual actors could have achieved the outcome on its own. CECOEDECON's reputation, past experiences and enormous network are specific features that explain the outcome. This is a *causal package*.

Governance theme

Under the Governance theme we assessed five outcomes:

Several actors and factors explain that tribal people in Assam and Tripura are able to claim their rights and NNET is one of them (sufficient but not a necessary explanation). Apart from this conditions need to be in place like favorable policies, access by road, communication and education.

Ninasam has been the driving force (*necessary and sufficient explanation*) that explains that more villages and people are made aware of political and social themes and how these affect day-to-day livelihoods. Other groups adhere to this 'movement'. The same conclusion has been drawn with regards to Ninasam's network.

The outcomes to which CWM has contributed can be explained as a causal package of the trade unions and other international actors. CWM was one of the conditions (*necessary but not sufficient*) needed to achieve the outcome.

Effectiveness

Considering the analysis of outcomes planned vs achieved, the findings of the contribution analysis, we estimate the effectiveness of the MFS II program between 50 and 70 percent, with organizations like Gene Campaign, Cenderet, REDs and CWM performing below 50 %.

6.3.3 Relevance of the changes

Generally speaking all changes achieved by the SPOs are relevant in the light of the ToC they constructed during the baseline workshop. However for some of the organizations progress towards achieving the outcomes described in these ToCs, progress is still limited, such as is the case with CECOEDECON, CWM. Other observations are that parts of the ToC have not been addressed, such as the creation of a school for worker activists for CWM; influencing policies and practices by NNET, and; for Ninasam addressing the negative trend that increasingly mass media invade rural areas and disorient people from their cultural roots and identities.

The changes achieved by Gene Campaign and REDS are not relevant in the light of their ToC: Gene's achievements still consist of agro-technological innovations, but did not address market linkages and favorable policies for organic agriculture. REDS completely changed its strategic orientation since the baseline and moved away from its ToC that put a strong emphasis on the creation of a strong Adijan Panchayat Movement, access to land and to other entitlements.

With regards to the context in which the SPOs are operating, also generally speaking all changes to which the SPOs contributed are relevant. Key issues addressed are empowerment of marginalized categories in society, social inclusion of these categories, agricultural policies in favor of small holder farming, the bureaucracy and corruption in relation to government schemes.

With regards to the MFS II alliance policies, most changes achieved are relevant, although some expectations were not met.

6.3.4 What factors explain the findings drawn from the questions above?

With regards to internal organizational factors with the SPO explaining the findings, we observe that the organizational capabilities of CECOEDCON, CSA, Gram Vikas and Ninasam had a positive influence, whereas those of the Gene Campaign Jharkhand office have a negative influence. REDS' outcomes are diluted because of a change in its strategic reorientation. NNET's findings are partially to be explained by a lack of coherence in interventions, due to routine transfers of those representing the member organizations in the network. CWM is gradually improving with the new board increasingly becoming operational.

Important external factors that hamper NNET's effectiveness consist of the insecurity in states where the organization is operating, bad road infrastructure and connectivity. Both NNET and CENDERET face the consequences of the 2011 FRCA. Cyclones urged Gram Vikas to shift its attention to reconstruction and rehabilitation works and CSA to adopt a sustainable livelihoods approach to cope with climate change. Apart from this, CSA saw Andhra Pradesh split into two states, and hence the necessity to engage with both bureaucracies, which is an extra burden. The conducive policy environment for REDS has been a positive factor.

Most CFAs and their partners had constructive relations during the evaluation period. However the Hivos office in India moved from Bangalore to Mumbai, implying in practice that new program officers became in charge of engaging with partners who nearly were at the end of their contract.

The relation between Cordaid and CENDERET significantly deteriorated when financial transfers did not arrive at destination, leading to a closure of the field offices, and; when the CENDERET program manager resigned and his successor past away.

Mensen met een Missie (Communities of Change) will end its partnership with NNET, because of unmet expectations.

When ICCO ended its financial support with REDS, the organization underwent a strategic reorientation, including a new organigram and staff, which negatively impacted upon expected outcomes formulated in the contracts with ICCO.

6.3.5 Design of the intervention

This section answers a question by the synthesis committee about the 'replicability' of the interventions. The evaluation team interpreted this in terms of innovations or approaches that can be replicated by another organization or in another context. In addition to this replicability implies a project mode and short term interventions. In this paragraph we have organized the intervention models that are replicable, those that are not replicable because they do not fit into a project mode of development and those whose design failed.

Gram Vikas, CSA and NNET have intervention designs that are replicable by other organizations, provided that these fulfil some of the conditions that need to be in place, or take into account some the evaluation findings.

CECOEDECON, NINASAM and REDS have successful intervention designs, but these are not replicable under a project mode of development. The outcomes achieved depend to a great extent to the context in which these organizations operate as well as rely upon a 'lifelong' change process.

7. Conclusion

This report presented a summary of the results of the three pillars of the evaluation. What remains is to assess whether there is a linkage between the findings of the three components. Since there is no overlap between the civil society sample on the one hand and the MDG and capacity development (CD) samples on the other hand, the focus is on the relationship between the MDG findings and the CD findings. In some of the reports of the MDG evaluation results of the CD evaluation have been taken into account (e.g. D1 – RGVN and D8 – Smile). In this concluding section, in order to examine whether results for the MDG projects are related to the capacity of the SPOs, we present a correlation matrix concerning the grading on MDG (see table 4) and end line scores on CD. The end line scores on CD are constructed by summing the baseline scores and the changes over the evaluation period. The correlation matrix obviously contains only SPOs represented in both samples and for which baseline and end line analyses have been conducted (See table below).

The table shows that there is almost no correlation between the scores on MDG and CD. There is only a significant but **negative** relationship at the 10 percent level between the Capability to relate and the question on whether the project has been well designed. In addition we find at the five percent significance level a positive correlation between Capability to relate and the observed results are relevant to the project beneficiaries. It is remarkable that pairwise correlation coefficients between the capability to deliver on development objectives and each of the MDG factors is extremely low and non-significant. However one should notice that these results are based on only seven observations and that much more in depth research is needed to link the capacity evaluation with the MDG evaluation.

Correlation Matrix

	Capability to act and commit	Capability to deliver on development objectives	Capability to adapt and self-renew	Capability to relate	Capability to achieve coherence
The project was well designed	-0.5634 0.1878	-0.0813 0.8624	0.2141 0.6448	-0.7131 0.0721	0.6459 0.1171
The project was implemented as designed	-0.3993 0.3749	0.1518 0.7453	-0.2927 0.5241	-0.204 0.6609	0.0341 0.9421
The project reached all its objectives	-0.6074 0.148	0.4219 0.3457	0.3665 0.4187	-0.3834 0.3959	0.1039 0.8246
The observed results are relevant to the project beneficiaries	0.5851 0.2225	0.0314 0.9529	-0.1305 0.8054	0.8128 0.0493	-0.6341 0.1764
The project was implemented efficiently	-0.1247 0.79	0.3874 0.3905	0.1117 0.8116	0.1047 0.8233	0.3349 0.4628
The observed results are attributable to the project interventions	0.3353 0.4622	-0.0054 0.9909	-0.2529 0.5843	0.2967 0.5182	0.2242 0.6289

The upper number denotes the correlation coefficient. The lower number is the significance level.

Appendix 2 Methodological approach & reflection

2.1 Introduction

This appendix describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around four key evaluation questions:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

Note: the methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report. At the end of this appendix a brief methodological reflection is provided.

2.2 Changes in partner organisation's capacity – evaluation question

1

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?**

This question was mainly addressed by reviewing changes in 5c indicators, but additionally a 'general causal map' based on the SPO perspective on key organisational capacity changes since the baseline has been developed. Each of these is further explained below. The development of the general causal map is integrated in the steps for the endline workshop, as mentioned below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012.¹¹ Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and

¹¹ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;

- 4) **Document review:** similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 5) **Observation:** similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Below each of these steps is further explained.

*Step 1. Provide the **description of indicators** in the relevant formats – CDI team*

- These formats were to be used when collecting data from SPO staff, CFA, partners, and consultants. For each of these respondents different formats have been developed, based on the list of 5C indicators, similar to the procedure that was used during the baseline assessment. The CDI team needed to add the 2012 baseline description of each indicator. The idea was that each respondent would be requested to review each description per indicator, and indicate whether the current situation is different from the baseline situation, how this situation has changed, and what the reasons for the changes in indicators are. At the end of each format, a more general question is added that addresses how the organisation has changed its capacity since the baseline, and what

possible reasons for change exist. Please see below the questions asked for each indicator as well as the more general questions at the end of the list of indicators.

General questions about key changes in the capacity of the SPO

What do you consider to be the key changes in terms of how the organisation/ SPO has developed its capacity since the baseline (2012)?

What do you consider to be the main explanatory reasons (interventions, actors or factors) for these changes?

List of questions to be asked for each of the 5C indicators (The entry point is the the description of each indicator as in the 2012 baseline report):

1. *How has the situation of this indicator changed compared to the situation during the baseline in 2012? Please tick one of the following scores:*
 - -2 = Considerable deterioration
 - -1 = A slight deterioration
 - 0 = No change occurred, the situation is the same as in 2012
 - +1 = Slight improvement
 - +2 = Considerable improvement
2. *Please describe what exactly has changed since the baseline in 2012*
3. *What interventions, actors and other factors explain this change compared to the baseline situation in 2012? Please tick and describe what interventions, actors or factors influenced this indicator, and how. You can tick and describe more than one choice.*
 - Intervention, actor or factor at the level of or by **SPO**:
 - Intervention, actor or factor at the level of or by the **Dutch CFA (MFS II funding)**:
 - Intervention, actor or factor at the level of or by the **other funders**:
 - **Other** interventions, actors or factors:
 - Don't know.

Step 2. **Review** the descriptions per indicator – in-country team & CDI team

Before the in-country team and the CDI team started collecting data in the field, it was important that they reviewed the description for each indicator as described in the baseline reports, and also added to the endline formats for review by respondents. These descriptions are based on document review, observation, interviews with SPO staff, CFA staff and external respondents during the baseline. It was important to explain this to respondents before they filled in the formats.

Step 3. **Send the formats** adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)

The CDI team was responsible for collecting data from the CFA:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet – CFA perspective.

The in-country team was responsible for collecting data from the SPO and from external respondents (except CFA). The following formats were sent before the fieldwork started:

- 5C Endline support to capacity sheet – SPO perspective.
- 5C Endline interview guides for externals: partners; OD consultants.

Step 4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team

The CDI team, in collaboration with the in-country team, collected the following documents from SPOs and CFAs:

- Project documents: project proposal, budget, contract (Note that for some SPOs there is a contract for the full MFS II period 2011-2015; for others there is a yearly or 2-yearly contract. All new contracts since the baseline in 2012 will need to be collected);
- Technical and financial progress reports since the baseline in 2012; .
- Mid-term evaluation reports;
- End of project-evaluation reports (by the SPO itself or by external evaluators);
- Contract intake forms (assessments of the SPO by the CFA) or organisational assessment scans made by the CFA that cover the 2011-2014 period;
- Consultant reports on specific inputs provided to the SPO in terms of organisational capacity development;
- Training reports (for the SPO; for alliance partners, including the SPO);
- Organisational scans/ assessments, carried out by the CFA or by the Alliance Assessments;
- Monitoring protocol reports, especially for the 5C study carried out by the MFS II Alliances;
- Annual progress reports of the CFA and of the Alliance in relation to capacity development of the SPOs in the particular country;
- Specific reports that are related to capacity development of SPOs in a particular country.

The following documents (since the baseline in 2012) were requested from SPO:

- Annual progress reports;
- Annual financial reports and audit reports;
- Organisational structure vision and mission since the baseline in 2012;
- Strategic plans;
- Business plans;
- Project/ programme planning documents;
- Annual work plan and budgets;
- Operational manuals;
- Organisational and policy documents: finance, human resource development, etc.;
- Monitoring and evaluation strategy and implementation plans;
- Evaluation reports;
- Staff training reports;
- Organisational capacity reports from development consultants.

The CDI team will coded these documents in NVivo (qualitative data analysis software program) against the 5C indicators.

Step 5. Prepare and organise the field visit to the SPO – in-country team

Meanwhile the in-country team prepared and organised the logistics for the field visit to the SPO:

- **General endline workshop** consisted about one day for the self-assessments (about ½ to ¾ of the day) and brainstorm (about 1 to 2 hours) on key organisational capacity changes since the baseline and underlying interventions, factors and actors ('general causal map'), see also explanation below. This was done with the five categories of key staff: managers; project/ programme staff; monitoring

and evaluation staff; admin & HRM staff; field staff. Note: for SPOs involved in process tracing an additional 1 to 1½ day workshop (managers; program/project staff; monitoring and evaluation staff) was necessary. See also step 7;

- **Interviews with SPO staff** (roughly one day);
- **Interviews with external respondents** such as partners and organisational development consultants depending on their proximity to the SPO. These interviews could be scheduled after the endline workshop and interviews with SPO staff.

General causal map

During the 5C endline process, a 'general causal map' has been developed, based on key organisational capacity changes and underlying causes for these changes, as perceived by the SPO. The general causal map describes cause-effect relationships, and is described both as a visual as well as a narrative.

As much as possible the same people that were involved in the baseline were also involved in the endline workshop and interviews.

Step 6. *Interview the CFA – CDI team*

The CDI team was responsible for sending the sheets/ formats to the CFA and for doing a follow-up interview on the basis of the information provided so as to clarify or deepen the information provided. This relates to:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet - CFA perspective.

Step 7. *Run the endline workshop with the SPO – in-country team*

This included running the endline workshop, including facilitation of the development of the general causal map, self-assessments, interviews and observations. Particularly for those SPOs that were selected for process tracing all the relevant information needed to be analysed prior to the field visit, so as to develop an initial causal map. Please see Step 6 and also the next section on process tracing (evaluation question two).

An endline workshop with the SPO was intended to:

- Explain the purpose of the fieldwork;
- Carry out in the self-assessments by SPO staff subgroups (unless these have already been filled prior to the field visits) - this may take some 3 hours.
- Facilitate a brainstorm on key organisational capacity changes since the baseline in 2012 and underlying interventions, factors and actors.

Purpose of the fieldwork: to collect data that help to provide information on what changes took place in terms of organisational capacity development of the SPO as well as reasons for these changes. The baseline that was carried out in 2012 was to be used as a point of reference.

Brainstorm on key organisational capacity changes and influencing factors: a brainstorm was facilitated on key organisational capacity changes since the baseline in 2012. In order to kick

start the discussion, staff were reminded of the key findings related to the historical time line carried out in the baseline (vision, mission, strategies, funding, staff). This was then used to generate a discussion on key changes that happened in the organisation since the baseline (on cards). Then cards were selected that were related to organisational capacity changes, and organised. Then a 'general causal map' was developed, based on these key organisational capacity changes and underlying reasons for change as experienced by the SPO staff. This was documented as a visual and narrative. This general causal map was to get the story of the SPO on what they perceived as key organisational capacity changes in the organisation since the baseline, in addition to the specific details provided per indicator.

Self-assessments: respondents worked in the respective staff function groups: management; programme/ project staff; monitoring and evaluation staff; admin and HRM staff; field staff. Staff were assisted where necessary so that they could really understand what it was they were being asked to do as well as what the descriptions under each indicator meant.

Note: for those SPOs selected for process tracing an additional endline workshop was held to facilitate the development of detailed causal maps for each of the identified organisational change/ outcome areas that fall under the capability to act and commit, and under the capability to adapt and self-renew, and that are likely related to capacity development interventions by the CFA. See also the next section on process tracing (evaluation question two). It was up to the in-country team whether this workshop was held straight after the initial endline workshop or after the workshop and the follow-up interviews. It could also be held as a separate workshop at another time.

Step 8. Interview SPO staff – in-country team

After the endline workshop (developing the general causal map and carrying out self-assessments in subgroups), interviews were held with SPO staff (subgroups) to follow up on the information that was provided in the self-assessment sheets, and to interview staff that had not yet provided any information.

Step 9. Fill-in observation sheets – in-country team

During the visit at the SPO, the in-country team had to fill in two sheets based on their observation:

- 5C Endline observation sheet;
- 5C Endline observable indicators.

Step 10. Interview externals – in-country team & CDI team

The in-country team also needed to interview the partners of the SPO as well as organisational capacity development consultants that have provided support to the SPO. The CDI team interviewed the CFA.

Step 11. Upload and auto-code all the formats collected by in-country team and CDI team – CDI team

The CDI team was responsible for uploading and auto-coding (in Nvivo) of the documents that were collected by the in-country team and by the CDI team.

*Step 12. Provide the **overview of information** per 5C indicator to in-country team – CDI team*

After the analysis in NVivo, the CDI team provided a copy of all the information generated per indicator to the in-country team for initial analysis.

*Step 13. **Analyse the data and develop a draft description** of the findings per indicator and for the general questions – in-country team*

The in-country team provided a draft description of the findings per indicator, based on the information generated per indicator. The information generated under the general questions were linked to the general causal map or detailed process tracing related causal map.

*Step 14. **Analyse the data and finalize the description** of the findings per indicator, per capability and general – CDI team*

The CDI team was responsible for checking the analysis by the in-country team with the Nvivo generated data and to make suggestions for improvement and ask questions for clarification to which the in-country team responded. The CDI team then finalised the analysis and provided final descriptions and scores per indicator and also summarize these per capability and calculated the summary capability scores based on the average of all indicators by capability.

*Step 15. **Analyse the information** in the general causal map –in-country team & CDI team*

The general causal map based on key organisational capacity changes as perceived by the SPO staff present at the workshop, was further detailed by in-country team and CDI team, and based on the notes made during the workshop and where necessary additional follow up with the SPO. The visual and narrative was finalized after feedback by the SPO. During analysis of the general causal map relationships with MFS II support for capacity development and other factors and actors were identified. All the information has been reviewed by the SPO and CFA.

2.3 Attributing changes in partner organisation’s capacity – evaluation question 2

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?***

In terms of the attribution question (2), ‘process tracing’ is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit

the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process. The box below provides some background information on process tracing.

Background information on process tracing

The essence of process tracing research is that scholars want to go beyond merely identifying correlations between independent variables (Xs) and outcomes (Ys). Process tracing in social science is commonly defined by its addition to trace causal mechanisms (Bennett, 2008a, 2008b; Checkle, 2008; George & Bennett, 2005). A causal mechanism can be defined as “a complex system which produces an outcome by the interaction of a number of parts” (Glennan, 1996, p. 52). Process tracing involves “attempts to identify the intervening causal process – the causal chain and causal mechanism – between an independent variable (or variables) and the outcome of the dependent variable” (George & Bennett, 2005, pp. 206-207).

Process tracing can be differentiated into three variants within social science: theory testing, theory building, and explaining outcome process tracing (Beach & Pedersen, 2013).

- Theory testing process tracing uses a theory from the existing literature and then tests whether evidence shows that each part of hypothesised causal mechanism is present in a given case, enabling within case inferences about whether the mechanism functioned as expected in the case and whether the mechanism as a whole was present. No claims can be made however, about whether the mechanism was the only cause of the outcome.
- Theory building process tracing seeks to build generalizable theoretical explanations from empirical evidence, inferring that a more general causal mechanism exists from the fact of a particular case.
- Finally, explaining outcome process tracing attempts to craft a minimally sufficient explanation of a puzzling outcome in a specific historical case. Here the aim is not to build or test more general theories but to craft a (minimally) sufficient explanation of the outcome of the case where the ambitions are more case centric than theory oriented.

Explaining outcome process tracing is the most suitable type of process tracing for analysing the causal mechanisms for selected key organisational capacity changes of the SPOs. This type of process tracing can be thought of as a single outcome study defined as seeking the causes of the specific outcome in a single case (Gerring, 2006; in: Beach & Pedersen, 2013). Here the ambition is to craft a minimally sufficient explanation of a particular outcome, with sufficiency defined as an explanation that accounts for all of the important aspects of an outcome with no redundant parts being present (Mackie, 1965).

Explaining outcome process tracing is an iterative research strategy that aims to trace the complex conglomerate of systematic and case specific causal mechanisms that produced the outcome in question. The explanation cannot be detached from the particular case. Explaining outcome process tracing refers to case studies whose primary ambition is to explain particular historical outcomes, although the findings of the case can also speak to other potential cases of the phenomenon. Explaining outcome process tracing is an iterative research process in which ‘theories’ are tested to see whether they can provide a minimally sufficient explanation of the outcome. Minimal sufficiency is defined as an explanation that accounts for an outcome, with no redundant parts. In most explaining outcome studies, existing theorisation cannot provide a sufficient explanation, resulting in a second stage in which existing theories are re-conceptualised in light of the evidence gathered in the preceding empirical analysis. The conceptualisation phase in explaining outcome process tracing is therefore an iterative research process, with initial mechanisms re-conceptualised and tested until the result is a theorised mechanism that provides a minimally sufficient explanation of the particular outcome.

Below a description is provided of how SPOs are selected for process tracing, and a description is provided on how this process tracing is to be carried out. Note that this description of process tracing provides not only information on the extent to which the changes in organisational development can be attributed to MFS II (evaluation question 2), but also provides information on other contributing factors and actors (evaluation question 4). Furthermore, it must be noted that the evaluation team has developed an adapted form of ‘explaining outcome process tracing’, since the data collection and analysis was an iterative process of research so as to establish the most realistic explanation for a particular outcome/ organisational capacity change. Below selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

ETHIOPIA

For Ethiopia the capabilities that are mostly targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 1

The extent to which the Dutch NGO explicitly targets the following capabilities – Ethiopia

Capability to:	AMR EF	CAR E	ECF A	FSC E	HO A- REC	HU ND EE	NVE A	OS RA	TTC A
Act and commit	5	4	5	5	5	3	4	4	3
Deliver on development objectives	2	1	1	1	2	1	1	2	1
Adapt and self-renew	4	2	3	4	2	5	3	3	3
Relate	3	1	2	2	3	2	1	3	1
Achieve coherence	2	2	1	1	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Ethiopia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: AMREF, ECFA, FSCE, HUNDEE. In fact, six SPOs would be suitable for process tracing. We just selected the first one per CFA following the criteria of not including more than one SPO per CFA for process tracing

Table 2

SPOs selected for process tracing – Ethiopia

Ethio pia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Select ed for process tracing
AMREF	Dec 2015	Yes	Yes	Yes	Yes	AMREF NL	Yes
CARE	Dec 31, 2015	Partly	Yes	Yes	Yes – slightly	CARE Netherlands	No - not fully matching
ECFA	Jan 2015	Yes	Yes	Yes	Yes	Child Helpline International	Yes
FSCE	Dec 2015	Yes	Yes	Yes	Yes	Stichting Kinderpostzegels Netherlands (SKN); Note: no info from Defence for Children – ECPAT Netherlands	Yes

INDIA

For India the capability that is mostly targeted by CFAs is the capability to act and commit. The next one in line is the capability to adapt and self-renew. See also the table below in which a higher score means that the specific capability is more intensively targeted.

Table 3

The extent to which the Dutch NGO explicitly targets the following capabilities – India¹²

Capability to:	BVHA	COUNT	DRIST I	FFID	Jana Vikas	Samar thak Samiti	SMILE	SDS	VTRC
Act and commit	5	3	4	4	4	4	4	3	5
Deliver on development objectives	1	5	1	1	1	1	1	2	1
Adapt and self-renew	2	2	1	3	1	1	4	1	4
Relate	3	1	1	1	1	1	2	1	2
Achieve coherence	1	1	1	4	1	1	1	1	2

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, India.

Below you can see a table describing when the contract with the SPO is to be ended and whether SPO and the CFA both expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BVHA, COUNT, FFID, SMILE and VTRC. Except for SMILE (capability to act and commit only), for the other SPOs the focus for process tracing can be on the capability to act and commit and on the capability to adapt and self-renew.

Table 4

SPOs selected for process tracing – India

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BVHA	2014	Yes	Yes	Yes	Yes	Simavi	Yes; both capabilities
COUNT	2015	Yes	Yes	Yes	Yes	Woor den	Yes; both capabilities

¹² RGVN, NEDSF and Women's Rights Forum (WRF) could not be reached timely during the baseline due to security reasons. WRF could not be reached at all. Therefore these SPOs are not included in Table 1.

						Daad	s

INDONESIA

For Indonesia the capabilities that are most frequently targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 5

The extent to which the Dutch NGO explicitly targets the following capabilities – Indonesia

Capability to:	ASB	Daya kologi	ECPAT	GSS	Lem baga Kita	Pt. PPMA	Rifka Annisa	WIIP	Yad upa	Yayasan Kelola	YPI	YRBI

LIBERIA

For Liberia the situation is arbitrary which capabilities are targeted most CFA's. Whilst the capability to act and commit is targeted more often than the other capabilities, this is only so for two of the SPOs. The capability to adapt and self-renew and the capability to relate are almost equally targeted for the five SPOs, be it not intensively. Since the capability to act and commit and the capability to adapt and self-renew are the most targeted capabilities in Ethiopia, India and Indonesia, we choose to focus on these two capabilities for Liberia as well. This would help the synthesis team in the further analysis of these capabilities related to process tracing. See also the table below.

Table 7

The extent to which the Dutch NGO explicitly targets the following capabilities – Liberia

Capability to:	BSC	DEN-L	NAWOCOL	REFOUND	RHRAP
Act and commit	5	1	1	1	3
Deliver on development objectives	3	1	1	1	1
Adapt and self-renew	2	2	2	2	2
Relate	1	2	2	2	2
Achieve coherence	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Liberia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Also, for two of the five SPOs capability to act and commit is targeted more intensively compared to the other capabilities. Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BSC and RHRAP.

Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ' general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

Some definitions of the terminology used for this MFS II 5c evaluation

Based upon the different interpretations and connotations the use of the term causal mechanism we use the following terminology for the remainder of this paper:

- A **detailed causal map (or model of change)** = the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change.
- A **causal mechanism** = is the combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome (Beach and Pedersen, 2013, p. 176).
- **Part or cause** = one actor with its attributes carrying out activities/ producing outputs that lead to change in other parts. The final part or cause is the change/ outcome.
- **Attributes of the actor** = specificities of the actor that increase his chance to introduce change or not such as its position in its institutional environment.

*Step 1. Identify the **planned MFS II supported capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

Chapter 4.1 and 4.2 in the baseline report were reviewed. Capacity development interventions as planned by the CFA for the capability to act and commit and for the capability to adapt and self-renew were described and details inserted in the summary format. This provided an overview of the capacity development activities that were originally planned by the CFA for these two capabilities and assisted in focusing on relevant outcomes that are possibly related to the planned interventions.

*Step 2. Identify the **implemented capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

The input from the CFA was reviewed in terms of what capacity development interventions have taken place in the MFS II period. This information was found in the 'Support to capacity

development sheet - endline - CFA perspective' for the SPO, based on details provided by the CFA and further discussed during an interview by the CDI team.

The CFA was asked to describe all the MFS II supported capacity development interventions of the SPO that took place during the period 2011 up to now. The CDI team reviewed this information, not only the interventions but also the observed changes as well as the expected long-term changes, and then linked these interventions to relevant outcomes in one of the capabilities (capability to act and commit; and capability to adapt and self-renew).

*Step 3. Identify **initial changes/ outcome areas** in these two capabilities – by CDI team & in-country team*

The CDI team was responsible for coding documents received from SPO and CFA in NVivo on the following:

- 5C Indicators: this was to identify the changes that took place between baseline and endline. This information was coded in Nvivo.
- Information related to the capacity development interventions implemented by the CFA (with MFS II funding) (see also Step 2) to strengthen the capacity of the SPO. For example, the training on financial management of the SPO staff could be related to any information on financial management of the SPO. This information was coded in Nvivo.

In addition, the response by the CFA to the changes in 5C indicators format, was auto-coded.

The in-country team was responsible for timely collection of information from the SPO (before the fieldwork starts). This set of information dealt with:

- MFS II supported capacity development interventions during the MFS II period (2011 until now).
- Overview of all trainings provided in relation to a particular outcome areas/organisational capacity change since the baseline.
- For each of the identified MFS II supported trainings, training questionnaires have been developed to assess these trainings in terms of the participants, interests, knowledge and skills gained, behaviour change and changes in the organisation (based on Kirkpatrick's model), one format for training participants and one for their managers. These training questionnaires were sent prior to the field visit.
- Changes expected by SPO on a long-term basis ('Support to capacity development sheet - endline - SPO perspective').

For the selection of change/ outcome areas the following criteria were important:

- The change/ outcome area is in one of the two capabilities selected for process tracing: capability to act and commit or the capability to adapt and self-renew. This was the first criteria to select upon.
- There was a likely link between the key organisational capacity change/ outcome area and the MFS II supported capacity development interventions. This also was an important criteria. This would need to be demonstrated through one or more of the following situations:
 - In the 2012 theory of change on organisational capacity development of the SPO a link was indicated between the outcome area and MFS II support;
 - During the baseline the CFA indicated a link between the planned MFS II support to organisational development and the expected short-term or long-term results in one of the selected capabilities;
 - During the endline the CFA indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities;

- During the endline the SPO indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities.

Reviewing the information obtained as described in Step 1, 2, and 3 provided the basis for selecting key organisational capacity change/ outcome areas to focus on for process tracing. These areas were to be formulated as broader outcome areas, such as 'improved financial management', 'improved monitoring and evaluation' or 'improved staff competencies'.

Note: the outcome areas were to be formulated as intermediates changes. For example: an improved monitoring and evaluation system, or enhanced knowledge and skills to educate the target group on climate change. Key outcome areas were also verified - based on document review as well as discussions with the SPO during the endline.

*Step 4. Construct the **detailed, initial causal map** (theoretical model of change) – CDI & in-country team*

A detailed initial causal map was developed by the CDI team, in collaboration with the in-country team. This was based on document review, including information provided by the CFA and SPO on MFS II supported capacity development interventions and their immediate and long-term objectives as well as observed changes. Also, the training questionnaires were reviewed before developing the initial causal map. This detailed initial causal map was to be provided by the CDI team with a visual and related narrative with related references. This initial causal map served as a reference point for further reflection with the SPO during the process tracing endline workshop, where relationships needed to be verified or new relationships established so that the second (workshop-based), detailed causal map could be developed, after which further verification was needed to come up with the final, concluding detailed causal map.

It's important to note that organisational change area/ outcome areas could be both positive and negative.

For each of the selected outcomes the team needed to make explicit the theoretical model of change. This meant finding out about the range of different actors, factors, actions, and events etc. that have contributed to a particular outcome in terms of organisational capacity of the SPO.

A model of change of good quality includes:

- The causal pathways that relate the intervention to the realised change/ outcome;
- Rival explanations for the same change/ outcome;
- Assumptions that clarify relations between different components or parts;
- Case specific and/or context specific factors or risks that might influence the causal pathway, such as for instance the socio-cultural-economic context, or a natural disaster;
- Specific attributes of the actors e.g. CFA and other funders.

A model of change (within the 5C study called a 'detailed causal map') is a complex system which produces intermediate and long-term outcomes by the interaction of other parts. It consists of parts or causes that often consist of one actor with its attributes that is implementing activities leading to

change in other parts (Beach & Pedersen, 2013). A helpful way of constructing the model of change is to think in terms of actors carrying out activities that lead to other actors changing their behaviour. The model of change can be explained as a range of activities carried out by different *actors* (including the CFA and SPO under evaluation) that will ultimately lead to an outcome. Besides this, there are also '*structural*' elements, which are to be interpreted as external factors (such as economic conjuncture); and *attributes* of the actor (does the actor have the legitimacy to ask for change or not, what is its position in the sector) that should be looked at (Beach & Pedersen, 2013). In fact Beach and Pedersen, make a fine point about the subjectivity of the actor in a dynamic context. This means, in qualitative methodologies, capturing the changes in the actor, acted upon area or person/organisation, in a non sequential and non temporal format. Things which were done recently could have corrected behavioural outcomes of an organisation and at the same ime there could be processes which incrementally pushed for the same change over a period of time. Beach and Pedersen espouse this methodology because it captures change in a dynamic fashion as against the methodology of logical framework. For the MFS II evaluation it was important to make a distinction between those paths in the model of change that are the result of MFS II and rival pathways. The construction of the model of change started with the identified key organisational capacity change/ outcome, followed by an inventory of all possible subcomponents that possibly have caused the change/ outcome in the MFS II period (2011-up to now, or since the baseline). The figure below presents an imaginary example of a model of change. The different colours indicate the different types of support to capacity development of the SPO by different actors, thereby indicating different pathways of change, leading to the key changes/ outcomes in terms of capacity development (which in this case indicates the ability to adapt and self-renew).

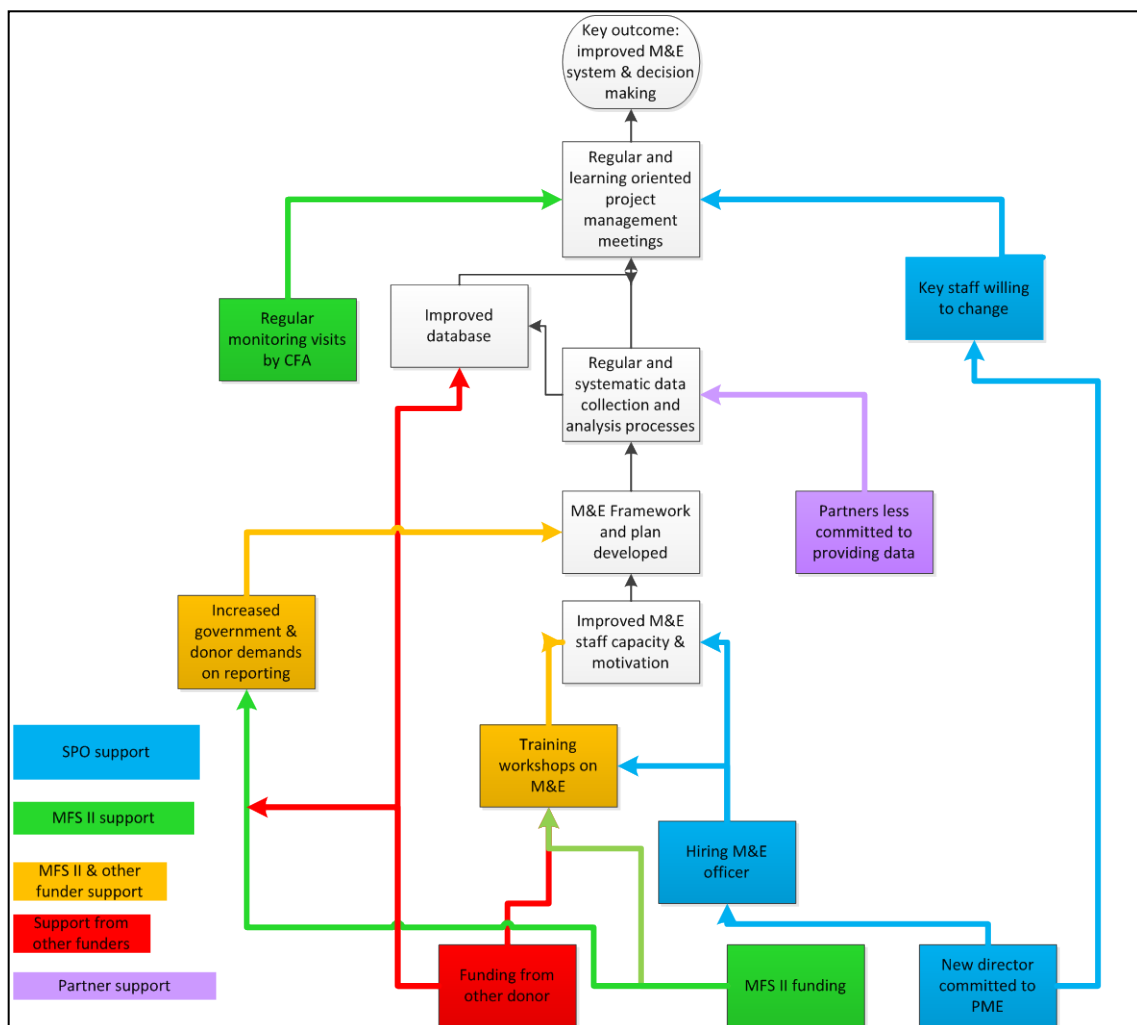

Figure 1 An imaginary example of a model of change

Step 5. Identify **types of evidence** needed to verify or discard different causal relationships in the model of change – in-country teams with support from CDI team

Once the causal mechanism at theoretical level were defined, empirical evidence was collected so as to verify or discard the different parts of this theoretical model of change, confirm or reject whether subcomponents have taken place, and to find evidence that confirm or reject the causal relations between the subcomponents.

A key question that we needed to ask ourselves was, “What information do we need in order to confirm or reject that one subcomponent leads to another, that X causes Y?”. The evaluation team needed to agree on what information was needed that provides empirical manifestations for each part of the model of change.

There are four distinguishable types of evidence that are relevant in process tracing analysis: *pattern, sequence, trace, and account*. Please see the box below for descriptions of these types of evidence.

The evaluation team needed to agree on the types of evidence that was needed to verify or discard the manifestation of a particular part of the causal mechanism. Each one or a combination of these different types of evidence could be used to confirm or reject the different parts of the model of change. This is what is meant by robustness of evidence gathering. Since causality as a concept can bend in many ways, our methodology, provides a near scientific model for accepting and rejecting a particular type of evidence, ignoring its face value.

Types of evidence to be used in process tracing

- **Pattern evidence** relates to predictions of statistical patterns in the evidence. For example, in testing a mechanism of racial discrimination in a case dealing with employment, statistical patterns of employment would be relevant for testing this part of the mechanism.
- **Sequence evidence** deals with the temporal and spatial chronology of events predicted by a hypothesised causal mechanism. For example, a test of the hypothesis could involve expectations of the timing of events where we might predict that if the hypothesis is valid, we should see that the event B took place after event A took place. However, if we found that event B took place before event A took place, the test would suggest that our confidence in the validity of this part of the mechanism should be reduced (disconfirmation/ falsification).
- **Trace evidence** is evidence whose mere existence provides proof that a part of a hypothesised mechanism exists. For example, the existence of the minutes of a meeting, if authentic ones, provide strong proof that the meeting took place.
- **Account evidence** deals with the content of empirical material, such as meeting minutes that detail what was discussed or an oral account of what took place in the meeting.

Source: Beach and Pedersen, 2013

Below you can find a table that provides guidelines on what to look for when identifying types of evidence that can confirm or reject causal relationships between different parts/

subcomponents of the model of change. It also provides one example of a part of a causal pathway and what type of information to look for.

Table 9

Format for identifying types of evidence for different causal relationships in the model of change (example included)

Part of the model of change	Key questions	Type of evidence needed	Source of information
Describe relationship between the subcomponents of the model of change	Describe questions you would like to answer so as to find out whether the components in the relationship took place, when they took place, who was involved, and whether they are related	Describe the information that we need in order to answer these questions. Which type of evidence can we use in order to reject or confirm that subcomponent X causes subcomponent Y? Can we find this information by means of : Pattern evidence; Sequence evidence; Trace evidence; Account evidence?	Describe where you can find this information
<p>Example:</p> <p>Training workshops on M&E provided by MFS II funding and other sources of funding</p>	<p>Example:</p> <p>What type of training workshops on M&E took place?</p> <p>Who was trained?</p> <p>When did the training take place?</p> <p>Who funded the training?</p> <p>Was the funding of training provided before the training took place?</p> <p>How much money was available for the training?</p>	<p>Example:</p> <p>Trace evidence: on types of training delivered, who was trained, when the training took place, budget for the training</p> <p>Sequence evidence on timing of funding and timing of training</p> <p>Content evidence: what the training was about</p>	<p>Example:</p> <p>Training report</p> <p>SPO Progress reports</p> <p>interviews with the CFA and SPO staff</p> <p>Financial reports SPO and CFA</p>

Please note that for practical reasons, the 5C evaluation team decided that it was easier to integrate the specific questions in the narrative of the initial causal map. These questions would need to be addressed by the in-country team during the process tracing workshop so as to discover, verify or discard particular causal mechanisms in the detailed, initial causal map. Different types of evidence was asked for in these questions.

*Step 6. **Collect data** to verify or discard causal mechanisms and develop workshop-based, detailed causal map – in-country team*

Once it was decided by the in-country and CDI evaluation teams what information was to be collected during the interaction with the SPO, data collection took place. The initial causal maps served as a basis for discussions during the endline workshop with a particular focus on process tracing for the identified organisational capacity changes. But it was considered to be very important to understand from the perspective of the SPO how they understood the identified key organisational capacity change/outcome area has come about. A new detailed, workshop-based causal map was developed that included the information provided by SPO staff as well as based on initial document review as described in the initial detailed causal map. This information was further analysed and verified with other relevant information so as to develop a final causal map, which is described in the next step.

*Step 7. **Assess the quality of data and analyse data**, and develop the **final detailed causal map** (model of change) – in-country team and CDI team*

Quality assurance of the data collected and the evidence it provides for rejecting or confirming parts of causal explanations are a major concern for many authors specialised in contribution analysis and process-tracing. Stern et al. (2012), Beach and Pedersen (2013), Lemire, Nielsen and Dybdal (2012), Mayne (2012) and Delahais and Toulemonde (2012) all emphasise the need to make attribution/ contribution claims that are based on pieces of evidence that are rigorous, traceable, and credible. These pieces of evidence should be as explicit as possible in proving that *subcomponent X causes subcomponent Y* and ruling out other explanations. Several tools are proposed to check the nature and the quality of data needed. One option is, Delahais and Toulemonde's Evidence Analysis Database, which we have adapted for our purpose.

Delahais and Toulemonde (2012) propose an Evidence Analysis Database that takes into consideration three criteria:

- Confirming/ rejecting a causal relation (yes/no);
- Type of causal mechanism: intended contribution/ other contribution/ condition leading to intended contribution/ intended condition to other contribution/ feedback loop;
- Strength of evidence: strong/ rather strong/ rather weak/ weak.

We have adapted their criteria to our purpose. The in-country team, in collaboration with the CDI team, used the criteria in assessing whether causal relationships in the causal map, were strong enough. This has been more of an iterative process trying to find additional evidence for the established relationships through additional document review or contacting the CFA and SPO as well as getting their feedback on the final detailed causal map that was established. Whilst the form below has not been used exactly in the manner depicted, it has been used indirectly when trying to validate the information in the detailed causal map. After that, the final

detailed causal map is established both as a visual as well as a narrative, with related references for the established causal relations.

<i>Example format for the adapted evidence analysis database (example included)</i> Description of causal relation	Confirming/ rejecting a causal relation (yes/no)	Type of information providing the background to the confirmation or rejection of the causal relation	Strength of evidence: strong/ rather strong/ rather weak/ weak	Explanation for why the evidence is (rather) strong or (rather) weak, and therefore the causal relation is confirmed/ rejected
e.g. Training staff in M&E leads to enhanced M&E knowledge, skills and practice	e.g. Confirmed	e.g. Training reports confirmed that staff are trained in M&E and that knowledge and skills increased as a result of the training		

Step 8. Analyse and conclude on findings– in-country team and CDI team

The final detailed causal map was described as a visual and narrative and this was then analysed in terms of the evaluation question two and evaluation question four: *“To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?”* and *“What factors explain the findings drawn from the questions above?”* It was analysed to what extent the identified key organisational capacity change can be attributed to MFS II supported capacity development interventions as well as to other related factors, interventions and actors.

2.4 Explaining factors – evaluation question 4

This paragraph describes the data collection and analysis methodology for answering the fourth evaluation question: **“What factors explain the findings drawn from the questions above?”**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This has been explained in the first section of this appendix. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the ‘general causal map’ has provided some ideas about some of the key underlying factors actors

and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information was procured for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the process of process tracing as described in the section above.

2.5 Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team.

Use of the 5 core capabilities framework and qualitative approach: this has proven to be very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive

and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
 - Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
 - Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors , rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome. Staff turnover may have seriously affected institutional memory, which is an important factor, next to the difficulty of recall when describing a chain of events, in qualitative information. These factors are important to take into account.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to

carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation. For future evaluation purposes, it is important to keep 'utility' in mind since this is the first and most important evaluation standard. Helping to think through how evaluation can be useful for primary intended users is crucial. Ensuring a process whereby stakeholders involved are engaged in a learning process can support utility. However, it must be noted that, with qualitative information, respondents may suffer from recall bias if they describe a chain of events. Particularly when attrition is high, learning becomes limited since it is hard to find institutional memory. For future evaluations it is important to be more utilisation focused next time with engagement of stakeholders in a learning process so that they can also take up the lessons learned for further improve upon their organisations. Now, the evaluation was too much accountability driven. Furthermore, it's important that enough time is taken into account for the evaluation process, to provide useful insights for all involved. The time period of two years was too short to see remarkable change in terms of capacity development. Process tracing has proven to be a useful exercise that provided a lot of insight into how changes in terms of capacity development have taken place. Many SPOs and CFAs valued this insightful learning process and indicated they would work with the results to further improve the organisational capacity of the SPO. Furthermore, in case of staff turnover, this may have seriously affected institutional memory,

which is an important factor, next to the difficulty of recall when describing a chain of events, in qualitative information. Organisational capacity contains many different aspects that are constantly changing and it's important to see these as part of a whole rather than a separate issues, which had to be done for this specific evaluation in terms of standard indicators. The different aspects relate to each other, a need to be seen more from a whole systems perspective. Furthermore, organisational capacity is complex, methodologies for evaluation need to be tuned to the specific situation of each organisation.

Appendix 3 Background information on the five core capabilities framework

The 5 capabilities (5C) framework was to be used as a framework for the evaluation of capacity development of Southern Partner Organisations (SPOs) of the MFS II consortia. The 5C framework is based on a five-year research program on 'Capacity, change and performance' that was carried out by the European Centre for Development Policy Management (ECDPM). The research included an extensive review of the literature and sixteen case studies. The 5C framework has also been applied in an IOB evaluation using 26 case studies in 14 countries, and in the baseline carried out per organisation by the MFS II organisations for the purpose of the monitoring protocol.

The 5C framework is structured to understand and analyse (changes in) the capacity of an organization to deliver (social) value to its constituents. This introduction briefly describes the 5C framework, mainly based on the most recent document on the 5C framework (Keijzer et al., 2011).

The 5C framework sees capacity as an **outcome** of an **open system**. An organisation or collaborative association (for instance a network) is seen as a system interacting with wider society. The most critical practical issue is to ensure that relevant stakeholders share a common way of thinking about capacity and its core constituents or capabilities. Decisive for an organisation's capacity is the context in which the organisation operates. This means that **understanding context issues** is crucial. The use of the 5C framework requires a multi-stakeholder approach because shared values and results orientation are important to facilitate the capacity development process. The 5C framework therefore needs to **accommodate the different visions** of stakeholders and conceive different strategies for raising capacity and improving performance in a given situation.

The 5C framework defines capacity as '**producing social value**' and identifies five core capabilities that together result in that overall capacity. Capacity, capabilities and competences are seen as follows:

Capacity is referred to as the overall ability of an organisation or system to create value for others;

Capabilities are the collective ability of a group or a system to do something either inside or outside the system. The collective ability involved may be technical, logistical, managerial or generative (i.e. the ability to earn legitimacy, to adapt, to create meaning, etc.);

Competencies are the energies, skills and abilities of individuals.

Fundamental to developing capacity are inputs such as human, material and financial resources, technology, and information. To the degree that they are developed and successfully integrated, capabilities contribute to the overall capacity or ability of an organisation or system to create value for others. A single capability is not sufficient to create capacity. All are needed and are strongly interrelated and overlapping. Thus, to achieve its development goals, the 5C framework says that every organisation or system must have **five basic capabilities**:

1. The capability to act and commit;

2. The capability to deliver on development objectives;
3. The capability to adapt and self-renew;
4. The capability to relate (to external stakeholders);
5. The capability to achieve coherence.

In order to have a common framework for evaluation, the five capabilities have been reformulated in outcome domains and for each outcome domain performance indicators have been developed.

There is some overlap between the five core capabilities but together the five capabilities result in a certain level of capacity. Influencing one capability may have an effect on one or more of the other capabilities. In each situation, the level of any of the five capabilities will vary. Each capability can become stronger or weaker over time.

Appendix 4 Overview of capabilities, and related outcome domains and performance indicators

Capabilities	Outcome domains	Performance indicators
Capability to act and commit	Level of Effective Leadership	1.1.Responsive leadership: 'Leadership is responsive, inspiring, and sensitive'
		1.2.Strategic guidance: 'Leaders provide appropriate strategic guidance (strategic leader and operational leader)'
		1.3.Staff turnover: 'Staff turnover is relatively low'
	Level of realistic strategic planning	1.4.Organisational structure: 'Existence of clear organisational structure reflecting the objectives of the organisation'
		1.5.Articulated strategies: 'Strategies are articulated and based on good situation analysis and adequate M&E'
	Level of translation of strategy into operations	1.6.Daily operations: 'Day-to-day operations are in line with strategic plans'
	Level of Staff Capacity and Motivation	1.7.Staff skills: 'Staff have necessary skills to do their work'
		1.8.Training opportunities: 'Appropriate training opportunities are offered to staff'
		1.9.1.Incentives: 'Appropriate incentives are in place to sustain staff motivation'
	Level of Financial Resource Security	1.9.2.Funding sources: 'Funding from multiple sources covering different time periods'
1.9.3.Funding procedures: 'Clear procedures for exploring new funding opportunities'		
Capability to adapt and self-renew	Level of effective application of M&E	2.1.M&E application: 'M&E is effectively applied to assess activities, outputs and outcomes'
		2.2.M&E competencies: 'Individual competencies for performing M&E functions are in place'
	Level of strategic use of M&E	2.3.M&E for future strategies: 'M&E is effectively applied to assess the effects of delivered products and services (outcomes) for future strategies'
	Level of openness to strategic learning	2.4.Critical reflection: 'Management stimulates frequent critical reflection meetings that also deal with learning from mistakes'
		2.5. Freedom for ideas: 'Staff feel free to come up with ideas for implementation of objectives'
	Level of context awareness	2.6.System for tracking environment: 'The organisation has a system for being in touch with general trends and developments in its operating environment'
		2.7.Stakeholder responsiveness: 'The organisation is open and responsive to their stakeholders and the general public'
Capability to deliver on development objectives	Extent to which organisation delivers on planned products and services	3.1.Clear operational plans: 'Organisation has clear operational plans for carrying out projects which all staff fully understand'
		3.2.Cost-effective resource use: 'Operations are based on cost-effective use of its resources'
		3.3.Delivering planned outputs: 'Extent to which planned outputs are delivered'

Capabilities	Outcome domains	Performance indicators
	Extent to which delivered products and services are relevant for target population in terms of the effect they have	3.4.Mechanisms for beneficiary needs: 'The organisation has mechanisms in place to verify that services meet beneficiary needs'
	Level of work efficiency	3.5.Monitoring efficiency: 'The organisation monitors its efficiency by linking outputs and related inputs (input-output ratio's)'
		3.6.Balancing quality-efficiency: 'The organisation aims at balancing efficiency requirements with the quality of its work'
Capability to relate	Level of involving external parties in internal policy/strategy development	4.1.Stakeholder engagement in policies and strategies: 'The organisation maintains relations/ collaboration/alliances with its stakeholders for the benefit of the organisation'
	Level of engagement of organisation in networks, alliances and collaborative efforts	4.2.Engagement in networks: 'Extent to which the organization has relationships with existing networks/alliances/partnerships'
	Extent to which organisation is actively engaging with target groups	4.3.Engagement with target groups: 'The organisation performs frequent visits to their target groups/ beneficiaries in their living environment'
	Level of effective relationships within the organisation	4.3.Relationships within organisation: 'Organisational structure and culture facilitates open internal contacts, communication, and decision-making'
	Capability to achieve coherence	Existence of mechanisms for coherence
5.2.Operational guidelines: 'Operational guidelines (technical, admin, HRM) are in place and used and supported by the management'		
Level of coherence of various efforts of organisation		5.3.Alignment with vision, mission: 'Projects, strategies and associated operations are in line with the vision and mission of the organisation'
		5.4.Mutually supportive efforts: 'The portfolio of project (activities) provides opportunities for mutually supportive efforts'

Appendix 4 CIVICUS and Civil Society Index Framework Title

CIVICUS, the World Alliance for Citizen Participation is an international alliance of members and partners which constitutes an influential network of organisations at the local, national, regional and international levels, and spans the spectrum of civil society. It has worked for nearly two decades to strengthen citizen action and civil society throughout the world. CIVICUS has a vision of a global community of active, engaged citizens committed to the creation of a more just and equitable world. This is based on the belief that the health of societies exists in direct proportion to the degree of balance between the state, the private sector and civil society.

One of the areas that CIVICUS works in is the Civil Society Index (CSI). Since 2000, CIVICUS has measured the state of civil society in 76 countries. In 2008, it considerably changed its CSI.

4.1 Guiding principles for measuring civil society

Action orientation: the principal aim of the CSI is to generate information that is of practical use to civil society practitioners and other primary stakeholders. Therefore, its framework had to identify aspects of civil society that can be changed, as well as generate knowledge relevant to action-oriented goals.

CSI implementation must be participatory by design: The CSI does not stop at the generation of knowledge alone. Rather, it also actively seeks to link knowledge-generation on civil society, with reflection and action by civil society stakeholders. The CSI has therefore continued to involve its beneficiaries, as well as various other actors, in this particular case, civil society stakeholders, in all stages of the process, from the design and implementation, through to the deliberation and dissemination stages.

This participatory cycle is relevant in that such a mechanism can foster the self-awareness of civil society actors as being part of something larger, namely, civil society itself. As a purely educational gain, it broadens the horizon of CSO representatives through a process of reflecting upon, and engaging with, civil society issues which may go beyond the more narrow foci of their respective organizations. A strong collective self-awareness among civil society actors can also function as an important catalyst for joint advocacy activities to defend civic space when under threat or to advance the common interests of civil society vis-à-vis external forces. These basic civil society issues, on which there is often more commonality than difference among such actors, are at the core of the CSI assessment.

CSI is change oriented: The participatory nature that lies at the core of the CSI methodology is an important step in the attempt to link research with action, creating a diffused sense of awareness and ownerships. However, the theory of change that the CSI is based on goes one step further, coupling this participatory principle with the creation of evidence in the form of a comparable and contextually valid assessment of the state of civil society. It is this evidence, once shared and disseminated, that ultimately constitutes a resource for action.

CSI is putting local partners in the driver's seat: CSI is to continue being a collaborative effort between a broad range of stakeholders, with most importance placed on the relationship between CIVICUS and its national partners.

4.2 Defining Civil Society

The 2008 CIVICUS redesign team modified the civil society definition as follows:

The arena, outside of the family, the state, and the market – which is created by individual and collective actions, organizations and institutions to advance shared interests.

Arena: In this definition the arena refers to the importance of civil society's role in creating public spaces where diverse societal values and interests interact (Fowler 1996). CSI uses the term 'arena' to describe the particular realm or space in a society where people come together to debate, discuss, associate and seek to influence broader society. CIVICUS strongly believes that this arena is distinct from other arenas in society, such as the market, state or family.

Civil society is hence defined as a political term, rather than in economic terms that resemble more the 'non-profit sector'.

Besides the spaces created by civil society, CIVICUS defines particular spaces for the family, the state and the market.

Individual and collective action, organizations and institutions: Implicit in a political understanding of civil society is the notion of agency; that civil society actors have the ability to influence decisions that affect the lives of ordinary people. The CSI embraces a broad range of actions taken by both individuals and groups. Many of these actions take place within the context of non-coercive organizations or institutions ranging from small informal groups to large professionally run associations.

Advance shared interests: The term 'interests' should be interpreted very broadly, encompassing the promotion of values, needs, identities, norms and other aspirations.

They encompass the personal and public, and can be pursued by small informal groups, large membership organizations or formal associations. The emphasis rests however on the element of 'sharing' that interest within the public sphere.

4.3 Civil Society Index- Analytical Framework

The 2008 Civil Society Index distinguishes 5 dimensions of which 4 (civic engagement, level of organization, practice of values and perception of impact), can be represented in the form of a diamond and the fifth one (external environment) as a circle that influences upon the shape of the diamond.

Civic Engagement, or 'active citizenship', is a crucial defining factor of civil society. It is the hub of civil society and therefore is one of the core components of the CSI's definition. Civic engagement describes the formal and informal activities and participation undertaken by individuals to advance shared interests at different levels. Participation within civil society is multi-faceted and encompasses socially-based and politically-based forms of engagement.

Level of Organization. This dimension assesses the organizational development, complexity and sophistication of civil society, by looking at the relationships among the actors within the civil society arena. Key sub dimensions are:

- Internal governance of Civil Society Organisations;
- Support infrastructure, that is about the existence of supporting federations or umbrella bodies;
- Self-regulation, which is about for instance the existence of shared codes of conducts amongst Civil Society Organisations and other existing self-regulatory mechanisms;
- Peer-to-peer communication and cooperation: networking, information sharing and alliance building to assess the extent of linkages and productive relations among civil society actors;
- Human resources, that is about the sustainability and adequacy of human resources available for CSOs in order to achieve their objectives:
 - Financial and technological resources available at CSOs to achieve their objectives;
 - International linkages, such as CSO's membership in international networks and participation in global events.

Practice of Values. This dimension assesses the internal practice of values within the civil society arena. CIVICUS identified some key values that are deemed crucial to gauge not only progressiveness but also the extent to which civil society's practices are coherent with their ideals. These are:

- Democratic decision-making governance: how decisions are made within CSOs and by whom;
- Labour regulations: includes the existence of policies regarding equal opportunities, staff membership in labour unions, training in labour rights for new staff and a publicly available statement on labour standards;
- Code of conduct and transparency: measures whether a code of conduct exists and is available publicly. It also measures whether the CSO's financial information is available to the public.
- Environmental standards: examines the extent to which CSOs adopt policies upholding environmental standards of operation;
- Perception of values within civil society: looks at how CSOs perceive the practice of values, such as non-violence. This includes the existence or absence of forces within civil society that use violence, aggression, hostility, brutality and/or fighting, tolerance, democracy, transparency, trustworthiness and tolerance in the civil society within which they operate.

Perception of Impact. This is about the perceived impact of civil society actors on politics and society as a whole as the consequences of collective action. In this, the perception of both civil society actors (internal) as actors outside civil society (outsiders) is taken into account. Specific sub dimensions are

- Responsiveness in terms of civil society's impact on the most important social concerns within the country. "Responsive" types of civil society are effectively taking up and voicing societal concerns.
- Social impact measures civil society's impact on society in general. An essential role of civil society is its contribution to meet pressing societal needs;
- Policy impact: covers civil society's impact on policy in general. It also looks at the impact of CSO activism on selected policy issues;
- Impact on attitudes: includes trust, public spiritedness and tolerance. The sub dimensions reflect a set of universally accepted social and political norms. These are drawn, for example, from sources such as the Universal Declaration of Human Rights, as well as CIVICUS' own core values. This dimension measures the extent to which these values are practised within civil society, compared to the extent to which they are practised in society at large.

Context Dimension: External Environment. It is crucial to give consideration to the social, political and economic environments in which it exists, as the environment both directly and indirectly affects civil society. Some features of the environment may enable the growth of civil society.

Conversely, other features of the environment hamper the development of civil society. Three elements of the external environment are captured by the CSI:

- Socio-economic context: The Social Watch's basic capabilities index and measures of corruption, inequality and macro-economic health are used to portray the socioeconomic context that can have marked consequences for civil society, and perhaps most significantly at the lower levels of social development;
- Socio-political context: This is assessed using five indicators. Three of these are adapted from the Freedom House indices of political and civil rights and freedoms, including political rights and freedoms, personal rights and freedoms within the law and associational and organisational rights and freedoms. Information about CSO experience with the country's legal framework and state effectiveness round out the picture of the socio-political context;
- Socio-cultural context: utilises interpersonal trust, which examines the level of trust that ordinary people feel for other ordinary people, as a broad measure of the social psychological climate for association and cooperation. Even though everyone experiences relationships of varying trust and distrust with different people, this measure provides a simple indication of the prevalence of a world view that can support and strengthen civil society. Similarly, the extent of tolerance and public spiritedness also offers indication of the context in which civil society unfolds.

Appendix 5 Methodology Civil Society

This appendix describes the evaluation methodology that was developed to evaluate the efforts of Dutch NGOs and their Southern Partner Organisations (SPO) to strengthen Civil Society in India, Ethiopia and Indonesia. The first paragraph introduces the terms of reference for the evaluation and the second discusses design issues, including sampling procedures and changes in the terms of reference that occurred between the 2012 and 2014 assessment. The third paragraph presents the methodologies developed to answer each of the evaluation questions. The evaluation team uses the qualitative software programme NVIVO and how this is being used is presented in paragraph 1.4.

5.1 Introduction

5.1.1 Terms of reference for the evaluation

The Netherlands has a long tradition of public support for civil bi-lateral development cooperation, going back to the 1960s. The Co-Financing System ('MFS) is its most recent expression. MFS II is the 2011-2015 grant programme which meant to achieve sustainable reduction in poverty. A total of 20 consortia of Dutch Co Financing Agencies have been awarded €1.9 billion in MFS II grants by the Dutch Ministry of Foreign Affairs (MoFA).

One component of the MFS II programme addresses the extent to which the Southern Partners of the Dutch Consortia are contributing towards strengthening civil society and this evaluation assesses this contribution for Southern Partner countries in Indonesia, India and Ethiopia. The evaluation comprised a baseline study, carried out in 2012, followed by an end line study in 2014.

The entire MFS II evaluation comprises assessments in eight countries where apart from a civil society component, also assessments towards achieving MDGs and strengthening the capacity of the southern partner organisations by the CFAs. A synthesis team is in place to aggregate findings of all eight countries. This team convened three synthesis team meetings, one in 2012, one in 2013 and one in 2014. All three meetings aimed at harmonising evaluation methodologies for each component across countries. CDI has been playing a leading role in harmonising its Civil Society and Organisational Capacity assessment with the other organisations in charge for those components in the other countries.

This appendix describes the methodology that has been developed for the evaluation of the efforts to strengthen civil society priority result area. We will first explain the purpose and scope of this evaluation and then present the overall evaluation design. We will conclude with describing methodological adaptations, limitations and implications.

5.1.2 Civil Society assessment – purpose and scope

The overall purpose of the joint MFS II evaluations is to account for results of MFS II-funded or –co-funded development interventions implemented by Dutch CFAs and/or their Southern partners and to contribute to the improvement of future development interventions.

The civil society evaluation is organised around 5 key questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?

- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- Were the development interventions of the MFS II consortia efficient?
- What factors explain the findings drawn from the questions above?

Furthermore, the evaluation methodology for efforts to strengthen civil society should:

- Describe how a representative sample of Southern partner organisations of the Dutch CFAs in the country will be taken
- Focus on five priority result areas that correspond with dimensions of the Civil Society Index (CSI) developed by CIVICUS (see paragraph 6.4 - Call for proposal). For each of those dimensions the call for proposal formulated key evaluation questions.
- Should compare results with available reference data (i.e. a CSI report or other relevant data from the country in question).

The results of this evaluation are to be used by the Dutch Ministry of Foreign Affairs, the Dutch Consortia and their partner organisations. The evaluation methodology has to be participatory in the sense that Dutch Consortia and their partner organisation would be asked to give their own perception on a range of indicators of the adjusted CIVICUS analytical framework in 2012 and in 2014.

5.2 Designing the methodology

5.2.1 Evaluation principles and standards

The overall approach selected is a participatory, theory-based evaluation through a before and after comparison. This paragraph briefly describes these principles and how these have been translated into data collection principles. It also describes how a 'representative sample' of Southern Partner Organisations was selected and how the initial terms of references were adjusted with the consent of the commissioner of the evaluation, given the nature of the evaluation component and the resources available for the evaluation.

Recognition of complexity

The issues at stake and the interventions in civil society and policy influence are complex in nature, meaning that cause and effect relations can sometimes only be understood in retrospect and cannot be repeated. The evaluation methods should therefore focus on recurring patterns of practice, using different perspectives to understand changes and to acknowledge that the evaluation means to draw conclusions about complex adaptive systems (Kurtz and Snowden, 2003)¹³.

Changes in the values of the Civil Society Indicators in the 2012-2014 period are then the result of conflict management processes, interactive learning events, new incentives (carrots and sticks) that

¹³ C. F. Kurtz, D. J. Snowden, The new dynamics of strategy: Sense-making in a complex and complicated world, in IBM Systems Journal vol 42, no 3, 2003)

mobilise or demobilise civil society, rather than the result of a change process that can be predicted from A to Z (a linear or logical framework approach)¹⁴.

A theory-based evaluation

Theory-based evaluation has the advantage of situating the evaluation findings in an analysis that includes both what happened over the life of the project as well as the how and why of what happened (Rogers 2004). It demonstrates its capacity to help understand why a program works or fails to work, going further than knowing only outcomes by trying to systematically enter the black box (Weiss 2004).

Theory-based evaluations can provide a framework to judge effectiveness in context of high levels of complexity, uncertainty, and changeability when traditional (impact) evaluation methods are not suitable: the use of control groups for the civil society evaluation is problematic since comparable organizations with comparable networks and operating in a similar external environment would be quite difficult to identify and statistical techniques of matching cannot be used because of a small n.

Because SPO's theories of change regarding their efforts to build civil society or to influence policies may alter during the 2012-2014 period, it requires us to develop a deep understanding of the change process and the dynamics that affect civil society and policies. It is important to understand what has led to specific (non-) changes and (un)-expected changes. These external factors and actors, as well as the SPO's agency need to be taken into account for the attribution question. Linear input-activities-outputs-outcomes-impact chains do not suffice for complex issues where change is both the result of SPOs' interventions as those by other actors and/or factors.

Therefore, the most reasonable counterfactual that can be used for this evaluation is that of considering alternative causal explanations of change (White and Philips, 2012). Therefore the SPOs' Theory of Change constructed in 2012 is also related to a Model of Change constructed in 2014 that tries to find the ultimate explanations of what happened in reality, including other actors and factors that might possibly explain the outcomes achieved.

Triangulation of methods and sources of information

For purposes of triangulation to improve the robustness, validity or credibility of the findings of the evaluation we used different types of data collection and analysis methods as well as different sources of information. The CIVICUS analytical framework was adjusted for this evaluation in terms of providing standard impact outcome indicators to be taken into account. Data collection methods used consisted of workshops with the SPO, interviews with key resource persons, focus group discussions, social network analysis (during the baseline), consultation of project documents; MFS II consortia documents and other documents relevant to assess general trends in civil society

¹⁴ Caluwe de, L & Vermaak H. (2003) "Learning to Change. A Guide for Organization Change Agents" Sage Publications.

Participatory evaluation

The evaluation is participatory in that both baseline and end line started with a workshop with SPO staff, decision makers and where possible board members. The baseline workshop helped SPOs to construct their own theory of change with regards to civil society. Detailed guidelines and tools have been developed by CDI for both baseline and follow-up, and these have been piloted in each of the countries CDI is involved in. Country based evaluators have had a critical input in reviewing and adapting these detailed guidelines and tools. This enhanced a rigorous data collection process. Additionally, the process of data analysis has been participatory where both CDI and in-country teams took part in the process and cross-check each other's inputs for improved quality. Rigorous analysis of the qualitative data was done with the assistance of the NVivo software program..

Using the evaluation standards as a starting point

As much as possible within the boundaries of this accountability driven evaluation, the evaluation teams tried to respect the following internationally agreed upon standards for program evaluation (Yarborough et al, 2011). These are, in order of priority: Utility; Feasibility; Propriety; Accuracy; Accountability. However, given the entire set-up of the evaluation, the evaluation team cannot fully ensure the extent to which the evaluation is utile for the SPO and their CFAs; and cannot ensure that the evaluation findings are used in a proper way and not for political reasons;

5.2.2 Sample selection

The terms of reference for this evaluation stipulate that the evaluators draw a sample of southern partner organisations to include in the assessment. Given the fact that the first evaluation questions intends to draw conclusions for the MDGs or the themes (governance or fragile states) for each countries a sample was drawn for the two or three most frequent MDGs or themes that the SPOs are working in.

The Dutch MFS II consortia were asked to provide information for each SPO regarding the MDG/theme it is working on, if it has an explicit agenda in the area of civil society strengthening and/or policy influence. The database then give an insight into the most important MDG/themes covered by the partner organisations, how many of these have an explicit agenda regarding civil society strengthening and/or policy influence. For Indonesia, 5 partner organisations were randomly selected for respectively MDG 7 (natural resources) and 5 for the governance theme. For India 5 SPOs were selected for MDG 1(economic or agricultural development) and 5 others for the theme governance. The sample in Ethiopia consists of 3 SPOs working on MDG 4,5 and 6 (Health); 3 SPOs for MDG 2 (education) and 3 SPOs for MDG 1 (economic or agricultural development).

5.2.3 Changes in the original terms of reference

Two major changes have been introduced during this evaluation and accepted by the commissioner of the MFS II evaluation. These changes were agreed upon during the 2013 and the 2014 synthesis team meetings.

The efficiency evaluation question:

During the June 2013 synthesis meeting the following decision was made with regards to measuring how efficient MFS II interventions for organisational capacity and civil society are:

[...] it was stressed that it is difficult to disentangle budgets for capacity development and civil society strengthening. SPOs usually don't keep track of these activities separately; they are included in general project budgets. Therefore, teams agreed to assess efficiency of CD [capacity development] and CS activities in terms of the outcomes and/or outputs of the MDG projects. This implies no efficiency assessment will be held for those SPOs without a sampled MDG project. Moreover, the

efficiency assessment of MDG projects needs to take into account CD and CS budgets (in case these are specified separately). Teams will evaluate efficiency in terms of outcomes if possible. If project outcomes are unlikely to be observed already in 2014, efficiency will be judged in terms of outputs or intermediate results (e-mail quotation from Gerton Rongen at February 6, 2014).

Attribution/contribution evaluation question

During the June 2013 NWO-WOTRO workshop strategies were discussed to fit the amount of evaluation work to be done with the available resources. Therefore,

1. The number of SPOs that will undergo a full-fledged analysis to answer the attribution question, were to be reduced to 50 percent of all SPOs. Therefore the evaluation team used the following selection criteria:
 - An estimation of the annual amount of MFS II funding allocated to interventions that have a more or less direct relation with the civil society component. This implies the following steps to be followed for the inventory:
 - Covering all MDGs/themes in the original sample
 - Covering a variety of Dutch alliances and CFAs
2. The focus of the attribution question will be on two impact outcome areas, those most commonly present in the SPO sample for each country. The evaluation team distinguishes four different impact outcome areas:
 - The extent to which the SPO, with MFS II funding, engages more and diverse categories of society in the 2011-2014 period (Civicus dimensions “Civic engagement” and “perception of impact”)
 - The extent to which the SPOs supports its intermediate organisations to make a valuable contribution to civil society in the 2011 -2014 period (Civicus dimension “Level of organisation” and “perception of impact”)
 - The extent to which the SPO itself engages with other civil society organisations to make a valuable contribution to civil society in the 2011-2014 period (Civicus dimension “level of organisation”)
 - The extent to which the SPO contributes to changing public and private sector policies and practices in the 2011-2014 period (Civicus dimension “perception of impact”)
3. The CS dimension ‘Practice of Values’ has been excluded, because this dimension is similar to issues dealt with for the organisational capacity assessment.

The aforementioned analysis drew the following conclusions:

Table 1

SPOs to be included for full-fledged process tracing analysis.

Country	SPO in the in-depth analysis	Strategic CS orientation to include
Indonesia	Elsam, WARSI, CRI, NTFP-EP, LPPSLH	<ol style="list-style-type: none"> 1. Strengthening intermediate organisations AND influencing policies and practices 2. If only one of the two above mentioned is applicable, then select another appropriate impact outcome area to look at.
India	NNET, CWM, CECEOEDCON, Reds Tumkur, CSA	<ol style="list-style-type: none"> 1. Enhancing civic engagement AND strengthening intermediate organisations 2. If only one of the two above mentioned is applicable then select another appropriate impact outcome area to look at.
Ethiopia	OSSA, EKHC, CCGG&SO, JeCCDO and ADAA	<ol style="list-style-type: none"> 1. Strengthening the capacities of intermediate organisations AND SPO’s engagement in the wider CS arena 2. If only one of the two above mentioned is applicable then select another appropriate impact outcome area to look at.

5.3 Answering the evaluation questions

5.3.1 Evaluation question 1 - Changes in civil society for the relevant MDGs/topics

Evaluation question 1: *What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?*

Indicators and tools used

In line with the CIVICUS Civil Society Index, a scoring tool was developed in 2012 which comprises 17 indicators. The selection was inspired by those suggested in the terms of reference of the commissioner. Each indicator was, also in line with the CIVICUS index accompanied by an open evaluation question to be used for data collection in 2012 and 2014. In 2012 the scoring tool contained four statements describing the level of achievements of the indicator and scores ranged from 0 to 3 (low score - high score).

A comparison of the scores obtained in 2012 informed the evaluation team that there was a positive bias towards high scores, mostly between 2 and 3. Therefore during the 2014 assessment, it was decided to measure relative changes for each indicator in the 2012 – 2014 period, as well as the reasons for changes or no changes and assigning a score reflecting the change between -2 (considerable deterioration of the indicator value since 2012) and +2 (considerable improvement).

In 2012 and based upon the Theory of Change constructed with the SPO, a set of *standard indicators* were identified that would ensure a relation between the standard CIVICUS indicators and the interventions of the SPO. However, these indicators were not anymore included in the 2014 assessment because of the resources available and because the methodology fine-tuned for the attribution question in 2013, made measurement of these indicators redundant.

Also in 2012, as a means to measure the 'level of organisation' dimension a *social network analysis tool* was introduced. However this tool received very little response and was discontinued during the end line study.

Key questions to be answered for this evaluation question

In 2012, SPO staff and leaders, as well as outside resource persons were asked to provide answers to 17 questions, one per standard indicator of the scoring tool developed by CDI.

In 2012, the SPO staff and leaders were given the description of each indicator as it was in 2012 and had to answer the following questions:

1. How has the situation of this indicator changed compared to its description of the 2012 situation? Did it deteriorate considerably or did it improve considerably (-2 → +2)
2. What exactly has changed since 2012 for the civil society indicator that you are looking at? Be as specific as possible in your description.
3. What interventions, actors and other factors explain this change compared to the situation in 2012? Please tick and describe what happened and to what change this led. It is possible to tick and describe more than one choice.
 - Intervention by SPO, NOT financed by any of your Dutch partners
 - Intervention SPO, financed by your Dutch partner organisation(In case you receive funding from two Dutch partners, please specify which partner is meant here)
 - Other actor NOT the SPO, please specify.....
 - Other factor, NOT actor related, please specify.....
 - A combination of actors and factors, INCLUDING the SPO, but NOT with Dutch funding, please specify...
 - A combination of actors and factors, INCLUDING the SPO, but WITH Dutch funding, please specify...
 - Don't know
4. Generally speaking, which two of the five CIVICUS dimensions (civic engagement, level of organisation, practice of values, perception of impact, environment) changed considerably between 2012 – 2014? For each of these changes, please describe:
 - Nature of the change
 - Key interventions, actors and factors (MFS II or non-MFS II related) that explain each change (entirely or partially).

Sources for data collection

During the baseline and the end line and for purposes of triangulation, several methods were used to collect data on each (standard) indicator:

- Self-assessment per category of staff within the SPO: where possible, three subgroups were made to assess the scores: field staff/programme staff, executive leadership and representatives of the board,, general assembly, and internal auditing groups if applicable completed with separate interviews;
- Interviews with external resource persons. These consisted of three categories: key actors that are knowledgeable about the MDG/theme the SPO is working on and who know the civil society arena around these topics; civil society organisations that are being affected by the programme through support or CSOs with which the SPO is collaborating on equal footing, and; representatives of public or private sector organisations with which the SPO is interacting
- Consultation and analysis of reports that relate to each of the five CIVICUS dimensions.
- Project documents, financial and narrative progress reports, as well as correspondence between the SPO and the CFA.
- Social network analysis (SNA), which was discontinued in the end line study.

During the follow-up, emphasis was put on interviewing the same staff and external persons who were involved during the baseline for purpose of continuity.

5.3.2 Evaluation question 2 – “Attribution” of changes in civil society to interventions of SPOs.

Evaluation question 2: *To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?*

Adapting the evaluation question and introduction to the methodology chosen

In line with the observation of Stern et al. (2012) that the evaluation question, the programme attributes, and the evaluation approaches all provide important elements to conclude on the evaluation design to select, the teams in charge of evaluating the civil society component concluded that given the attributes of the programmes it was impossible to answer the *attribution* question as formulated in the Terms of References of the evaluation and mentioned above. Therefore, the evaluation teams worked towards answering the extent *to which the programme contributed towards realising the outcomes*.

For this endeavour explaining outcome process-tracing¹⁵ was used. The objective of the process tracing methodology for MFS II, in particular for the civil society component is to:

- Identify what interventions, actors and factors explain selected impact outcomes for process tracing.
- Assess how the SPO with MFS II funding contributed to the changes in the selected impact outcomes and how important this contribution is given other actors and factors that possibly influence the attainment of the outcome. Ruling out rival explanations, which are other interventions, actors or factors that are not related to MFS II funding.
-

Methodology – getting prepared

As described before a limited number of SPOs were selected for process tracing and for each country strategic orientations were identified as a means to prevent a bias occurring towards only positive impact outcomes and as a means to support the in-country evaluation teams with the selection of outcomes to focus on a much as was possible, based upon the project documents available

¹⁵ Explaining outcome process tracing attempts to craft a minimally sufficient explanation of a puzzling outcome in a specific historical case. Here the aim is not to build or test more general theories but to craft a (minimally) sufficient explanation of the outcome of the case where the ambitions are more case centric than theory oriented. The aim of process tracing is not to verify if an intended process of interventions took place as planned in a particular situation, but that it aims at increasing our understanding about what works under what conditions and why (Beach & Pedersen, 2013).

at CDI. These documents were used to track realised outputs and outcomes against planned outputs and outcomes. During the workshop (see evaluation question on changes in civil society) and follow-up interviews with the SPO, two impact outcomes were selected for process tracing.

Steps in process tracing

1. Construct the theoretical model of change – by in-country evaluation team

After the two impact outcomes have been selected and information has been obtained about what has actually been achieved, the in-country evaluation team constructs a visual that shows all pathways that might possibly explain the outcomes. The inventory of those possible pathways is done with the SPO, but also with external resource persons and documents consulted. This culminated in a Model of Change. A MoC of good quality includes: The causal pathways that relate interventions/parts by any actor, including the SPO to the realised impact outcome; assumptions that clarify relations between different parts in the pathway, and; case specific and/or context specific factors or risks that might influence the causal pathway, such as for instance specific attributes of the actor or socio-cultural-economic context. The Models of Change were discussed with the SPO and validated.

2. Identify information needs to confirm or reject causal pathways as well as information sources needed.

This step aims to critically reflect upon what information is needed that helps to confirm one of causal pathways and at that same time helps to reject the other possible explanations. Reality warns that this type of evidence will hardly be available for complex development efforts. The evaluators were asked to behave as detectives of Crime Scene Investigation, ensuring that the focus of the evaluation was not only on checking if parts/interventions had taken place accordingly, but more specifically on identifying information needs that confirm or reject the relations between the parts/interventions. The key question to be answered was: "What information do we need in order to confirm or reject that one part leads to another part or, that X causes Y?". Four types of evidence were used, where appropriate:¹⁶

- *Pattern evidence* relates to predictions of statistical patterns in the evidence. This may consist of trends analysis and correlations.
- *Sequence evidence* deals with the temporal and spatial chronology of events predicted by a hypothesised causal mechanism. For example, a test of the hypothesis could involve expectations of the timing of events where we might predict that if the hypothesis is valid, we should see that the event B took place after event A. However, if we found that event B took place before event A, the test would suggest that our confidence in the validity of this part of the mechanism should be reduced (disconfirmation/ falsification).
- *Trace evidence* is evidence whose mere existence provides proof that a part of a hypothesised mechanism exists. For example, the existence of meeting minutes, if authentic, provides strong proof that the meeting took place.
- *Account evidence* deals with the content of empirical material, such as meeting minutes that detail what was discussed or an oral account of what took place in the meeting.

3. Collect information necessary to confirm or reject causal pathways

Based upon the inventory of information needs the evaluation teams make their data collection plan after which data collection takes place.

4. Analyse the data collected and assessment of their quality.

This step consists of compiling all information collected in favour or against a causal pathway in a table or in a list per pathway. For all information used, the sources of information are mentioned and an assessment of the strength of the evidence takes place, making a distinction between strong, weak and moderate evidence. For this we use the traffic light system: **green letters mean strong evidence**, **red letters mean weak evidence** and **orange letter mean moderate evidence**: The following table provides the format used to assess these issues.

¹⁶ Beach and Pederson, 2013

Table 2

Organisation of information collected per causal pathway and assessing their quality

Causal pathway	Information that confirms (parts of) this pathway	Source of information	Information that rejects (parts of) this pathway	Source of information
Pathway 1	Information 1	Source of information	Information 1	Source of information
Part 1.1	Information 2	Source of information	Information 2	Source of information
Part 1.2	Information 3	Source of information	Information 3	Source of information
Etc	etc	etc	etc	etc
Pathway 2	Information 1	Source of information	Information 1	Source of information
Part 2.1	Information 2	Source of information	Information 2	Source of information
Part 2.2	Information 3	Source of information	Information 3	Source of information
Etc.	etc	etc	etc	etc
Pathway 3				

Sources: Dieuwke Klaver

5. Assessing the nature of the relations between parts in the model of change

The classification of all information collected is being followed by the identification of the pathways that most likely explain the impact outcome achieved. For this the evaluators assess the nature of the relations between different parts in the MoC. Based upon Mayne (2012) and Stern et al (2012) the following relations between parts in the MoC are mapped and the symbols inserted into the original MoC.

Table 3

Nature of the relation between parts in the Model of Change

Nature of the relation between parts and other parts or outcome	
The part is the only causal explanation for the outcome. No other interventions or factors explain it. (necessary and sufficient)	
The part does not explain the outcome at all: other subcomponents explain the outcomes.	
The part explains the outcome but other parts explain the outcome as well: there are multiple pathways (sufficient but not necessary)	
The part is a condition for the outcome but won't make it happen without other factors (necessary but not sufficient)	
The part explains the outcome, but requires the help of other parts to explain the outcome in a sufficient and necessary way (not a sufficient cause, but necessary) → it is part of a causal package	

Sources: Mayne, 2012; Stern et al, 2012

6. Write down the contribution and assess the role of the SPO and MFS II funding

This final step consists of answering the following questions, as a final assessment of the contribution question:

- The first question to be answered is: What explains the impact outcome?
- The second question is: What is the role of the SPO in this explanation?
- The third question, if applicable is: what is the role of MFS II finding in this explanation?

Sources for data collection

Information necessary to answer this evaluation question is to be collected from:

- Interviews with resource persons inside and outside the SPO
- Project documents and documentation made available by other informants
- Websites that possibly confirm that an outcome is achieved and that the SPO is associated with this outcome
- Meeting minutes of meetings between officials
- Time lines to trace the historical relations between events
- Policy documents

- etc

5.3.3 Evaluation question 3 – Relevance of the changes

Evaluation question 3: *What is the relevance of these changes?*

The following questions are to be answered in order to assess the relevance of the changes in Civil Society.

- How do the MFS II interventions and civil society outcomes align with the Theory of Change developed during the baseline in 2012? What were reasons for changing or not changing interventions and strategies?
- What is the civil society policy of the Dutch alliance that collaborates with the SPO? And how do the MFS II interventions and civil society outcomes align with the civil society policy of the Dutch alliance that collaborates with the SPO?
- How relevant are the changes achieved in relation to the context in which the SPO is operating?
- What is the further significance of these changes for building a vibrant civil society for the particular MDG/ theme in the particular context?

Sources for data collection

For this question the following sources are to be consulted:

- Review of the information collected during interviews with the SPO and outside resource persons
- The 2012 Theory of Change
- Interview with the CFA liaison officer of the SPO;
- Review of reports, i.e: the civil society policy document of the Dutch Alliance that was submitted for MFS II funding, relevant documents describing civil society for the MDG/ theme the SPO is working on in a given context.

5.3.4 Evaluation question 4, previously 5 - Factors explaining the findings

Evaluation question 4: *What factors explain the findings drawn from the questions above?*

To answer this question we look into information available that:

- Highlight changes in the organisational capacity of the SPO
- Highlight changes in the relations between the SPO and the CFA
- Highlight changes in the context in which the SPO is operating and how this might affect positively or negatively its organisational capacity.

Sources for data collection

Sources of information to be consulted are:

- Project documents
- Communications between the CFA and the SPO
- Information already collected during the previous evaluation questions.

5.4 Analysis of findings

A qualitative software programme NVivo 10 (2010) was used to assist in organizing and making sense of all data collected. Although the software cannot take over the task of qualitative data analysis, it does 1) improve transparency by creating a record of all steps taken, 2) organize the data and allow the evaluator to conduct a systematic analysis, 3) assist in identifying important themes that might otherwise be missed, and 4) reduce the danger of bias due to human cognitive limitations, compared to “intuitive data processing” (Sadler 1981). The qualitative data in the evaluation consisted of transcripts from semi-structured interviews, focus group discussions workshops, field notes from observation, and a range of documents available at the SPO or secondary information used to collect reference data and to obtain a better understanding of the context in which the CS component evolves.

To analyse this diverse collection of data, several analytical strategies are envisioned, specifically content analysis, discourse analysis, and thematic analysis. Although each of these strategies can be understood as a different lens through which to view the data, all will require a carefully developed and executed coding plan.

Data have been coded according to: standard civil society indicator; outcome included for in-depth contribution analysis; relevance, and; explaining factors.

This qualitative analysis will be supported by a limited amount of quantitative data largely arising from the score assigned by the evaluation team to each performance indicator described in the civil society scoring tool. Other quantitative data in this study are drawn information provided in background literature and organisational documents as well as the Social Network Analysis method.

5.5 Limitations to the methodology

5.5.1 General limitations with regards to the MFS II evaluation

The MFS II programme and CIVICUS

Although the MFS II programme stated that all proposals need to contribute to civil society strengthening in the South¹⁷, mention was made of the use of the CIVICUS framework for monitoring purposes. The fact that civil society was to be integrated as one of the priority result areas next to that of organisational capacity and MDGs became only clear when the MoFA communicated its mandatory monitoring protocol. In consequence, civil society strengthening in the MFS II programmes submitted to the ministry is mainstreamed into different sub programmes, but not addressed as a separate entity.

This late introduction of the Civil Society component also implies that project documents and progress reports do not make a distinction in MDG or theme components vs those of civil society strengthening, leaving the interpretation of what is a civil society intervention our outcome and what not to the interpretation of the evaluation team.

At the same time the evaluation team observes that SPOs and CFAs have started to incorporate the organisational capacity tool that is being used in the monitoring protocol in their own organisational assessment procedures. None of the SPOs is familiar with the CIVICUS framework and how it fits into their interventions.

Differences between CIVICUS and MFS II evaluation

¹⁷ Policy Framework Dutch Cofinancing System II 2011 - 2015

CIVICUS developed a Civil Society Index that distinguishes 5 dimensions and for each of these a set of indicators has been developed. Based upon a variety of data collection methods, a validation team composed of civil society leaders provides the scores for the civil society index.

Major differences between the way the Civil Society Index is been used by CIVICUS and for this MFS II evaluation is the following:

1. CIVICUS defines its unit of analysis in terms of the civil society arena at national and/or subnational level and does not start from individual NGOs. The MFS II evaluation put the SPO in the middle of the civil society arena and then looked at organisations that receive support; organisations with which the SPO is collaborating. The civil society arena boundaries for the MFS II evaluation are the public or private sector organisations that the SPO relates to or whose policies and practices it aims to influence
2. The CIVICUS assessments are conducted by civil society members itself whereas the MFS II evaluation is by nature an external evaluation conducted by external researchers. CIVICUS assumes that its assessments, by organising them as a joint learning exercise, will introduce change that is however not planned. With the MFS II evaluation the focus was on the extent to which the interventions of the SPO impacted upon the civil society indicators.
3. CIVICUS has never used its civil society index as a tool to measure change over a number of years. Each assessment is a stand-alone exercise and no efforts are being made to compare indicators over time or to attribute changes in indicators to a number of organisations or external trends.

Dimensions and indicator choice

The CIVICUS dimensions in themselves are partially overlapping; the dimension ‘perception of impact’ for instance contains elements that relate to ‘civic engagement’ and to ‘level of organisation’. Similar overlap is occurring in the civil society scoring tool developed for this evaluation and which was highly oriented by a list of evaluation questions set by the commissioner of the evaluation.

Apart from the overlap, we observe that some of the standard indicators used for the civil society evaluation were not meaningful for the SPOs under evaluation. This applies for instance for the political engagement indicator “How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups?”.

Measuring change over a two-year period

The MFS II programme started its implementation in 2011 and it will finish in 2015, whereas its evaluation started mid-2012 and will end in the beginning of 2014. The period between the baseline and the end line measurement hardly covers 2 years in some cases. Civil society building and policy influence are considered the type of interventions that requires up to 10 years to reap significant results, especially when taking into account attitudes and behaviour. Apart from the fact that the baseline was done when MFS II was already operational in the field for some 1,5 years, some SPO interventions were a continuation of programmes designed under the MFS I programme, hence illustrating that the MFS II period is not a clear boundary. Contracts with other SPOs ended already in 2012, and practically coincided with the baseline assessment being conducted at the moment the relationship with the CFA had practically ended.

Aggregation of findings

Although working with standard indicators and assigning them scores creates expectations of findings being compared and aggregated at national and international level, this may lend itself to a quick but inaccurate assessment of change. Crude comparison between programs on the basis of findings is problematic, and risks being politically abused. The evaluation team has to guard against these abuses by ensuring the necessary modesty in extrapolating findings and drawing conclusions.

Linking the civil society component to the other components of the MFS II evaluation

The Theory of Change in the terms of reference assumes that CFAs are strengthening the organisational capacity of their partners, which is evaluated in the organisational capacity components, which then leads to impact upon MDGs or upon civil society. Because the evaluation methodology designed for both the organisational capacity and the civil society evaluation require considerable time investments of the SPOs, a deliberate choice was made not to include SPOs under the organisational capacity component in that of Civil Society. This may possibly hamper conclusions regarding the assumption of capacitated SPOs being able to impact upon civil society. However, where information is available and where it is relevant, the civil society component will address organisational capacity issues.

No such limitations were made with regards to SPOs in the MDG sample, however, apart from Indonesia; none of the SPOs in the civil society sample is also in that of MDG.

5.5.2 Limitations during baseline with regards to the methodology

A very important principle upon which this evaluation methodology is based is that of triangulation, which implies that different stakeholders and documents are consulted to obtain information about the same indicator from different perspectives. Based upon these multiple perspectives, a final score can be given on the same indicator which is more valid and credible.

For India this has not always been possible:

- For each SPO a Survey Monkey questionnaire was developed to assess the intensity of the interaction between stakeholders in the network. Out of 233 actors that were invited to fill in this 5 minute questionnaire, only 79 actors effectively filled in the questionnaire = 34 %. The online Social Network Analysis aims at having both the opinion of the SPO on the intensity of the interaction with another actor, as well as the opinion of the other for triangulation. Important reasons for not filling in this form are that actors in the network are not technology savvy, or that they have difficulties in accessing internet.
- With regards to filling in offline interview forms or answering questions during interviews a number of civil society actors did not want to score themselves because they do not benefit from the interventions of the MFS II projects. Having the scores of their own organisations will help to assess the wider environment in which the SPO operates and possibly an impact of the SPO on other civil society organisations in 2014.
- With regards to public officials the evaluation team faced difficulties to have their opinions on a certain number of indicators such as perception of impact on policy influencing and relations between public organisations and civil society. Public officials fear that they will be quoted in the assessment, which may have repercussions for their position.

India has many different ethnic groups which speak many different languages. Although the evaluation team speaks the most important languages, sometimes it was really difficult to have a deep insight into all the processes in civil society and in policy influencing. Due to these language barriers it has been difficult to map the processes – the ripple effects of efforts to build civil society and to influence policies.

5.5.3 Limitations during end line with regards to the methodology

Project documentation

The methodology assumed that project documents and progress reports would be helpful in linking project interventions to the CIVICUS framework and obtaining an overview of outputs-outcomes achieved versus planned. These overviews would then be used to orient the in-country evaluation teams for the quick or in-depth contribution analysis.

In practice the most recent progress reports were hardly available with the CFAs or were made available later in the process. These reports often were not helpful in accumulating outputs towards to the planned outputs and even outcomes. Hardly any information is available at outcome or impact level and no monitoring systems are available to do so. Key information missing and relevant for civil society impact (but also to track progress being made on effects of project interventions) is for

instance a comprehensive overview of the organisational performance of organisations supported by the SPO.

For a number of SPOs the reality was different than the progress reports reflected which meant that constant fine-tuning with the in-country evaluation team was necessary and that CDI could not always provide them with the guidance needed for the selection of impact outcomes for contribution analysis.

Country specific limitations – India

The India team observes that triangulation of data was not always possible, given the resources available for the evaluation team. This was in particular valid for the first evaluation question regarding *changes*. Like during the baseline, government officials were not willing to take part in the evaluation because of the strict protocol they have to follow.

With regards to the first evaluation question on changes:

- During the end line scores (-2 until +2) were assigned to indicate relative changes. The in-country evaluation team observes that SPOs were inclined to interpret a score 0 as the organization not being performant on the issue, whereas in terms of the evaluation methodology it only states that no change took place which can be positive or negative in itself. This could lead to a bias towards having more positive changes.
- As already mentioned, there is overlap in answers being given for different indicators. They are not discriminatory enough, which is partly due to the CIVICUS framework and the indications given in the call for proposals.

With regards to the second evaluation question regarding attribution

- A critical step was the selection of the impact outcomes to look at for contribution analysis. Although strategic orientations for selection were given for each country as a measure to prevent bias taking place at SPO level, the ultimate selection of outcomes after the workshop and with the SPO focussed in most cases on impact outcomes to which the SPO claims to have positively contributed.
- The design of the model of change that visualizes all pathways that possibly explain the outcome achieved has also proven to be a difficult step. In this phase it is critical that the evaluation team works together to brainstorm on alternative pathways. A major challenge is that in-country teams at that moment of the evaluation have obtained a lot of information from the SPO, and not from other NGOs or resource persons, which possibly might strengthen their bias in favour of attributing change to the SPO.
- The focus of the assessment has been on the contribution of the SPO, rather than that of MFS II funding. Not in all cases MFS II contribution has been clearly earmarked for specific interventions or results and some CFAs have preferred to give institutional support to their partners, making it even more difficult to assess contribution/attribution.
- The process tracing methodology was not a simple step to step straight forward methodology and has needed a lot of back and forth between CDI and IDF and even within the CDI team. Points that were challenging: defining the ultimate outcome (SMART enough) to be explained through process tracing, identifying relevant pathways and describing them properly, defining indicators to assess whether the impact outcome has been achieved or not

(look for the adequate information when it exists), dare to conclude that some pathways are less relevant than others, not wanting to include all the SPO's interventions to one outcome.

- Defining the strength of evidence came out to be quite subjective, especially when it came to assessing interviewee's inputs. How to carefully assess interview findings of the SPO with those of other actors.
- Process –Tracing requires sufficient documentation/ pieces of evidence and these were often not available at the level of the SPOs and when they were available they were often contradicting each other (different reports including different figures on the same results).
- More time was needed to get the methodology about process tracing well under control. Because of time and budget constraints, learning was made on the job. Moreover because of delayed feed-back from CDI side, errors were repeated since time did not allow for a spreading of SPO workshops.
- Because of resource constraints, coding of data collected was done once and for most but in practice it was not relevant: you first need to have an idea about the changes before you can do a good process tracing and before you can answer evaluation questions regarding relevance and explaining factors.

With regards to the general evaluation procedure

- The workshop methodology was structured for literate English speaking people, which was not always the case. As a consequence, delays and possible misunderstanding happened due to translation and more time was needed to process the data.
- Many forms were filled in after the workshop/interviews and not between the workshop and the interviews as a means to inform the interview questions and the process tracing. The methodology and overall evaluation process would have benefited from allowing more time between the different parts, for example having more time between workshop and implementing process tracing to get properly prepared
- The report format provided by the synthesis team includes lots of repetitions (for example, elements of the context are found back into standard indicators 5.1) and would have gained in being better structured.
- The ToC developed during the baseline took SPO's staff time and dedication. The participants who had been involved during that process regretted that the end line workshop did not utilize the ToC more. In fact the ToC was used as a starting point to assess relevance issues, which was discussed during interviews rather than during the workshop.

With regards to collaboration between CDI and IDF

- The CDI team would have gained in being more consolidated (for example sending one type of feed-back to IDF) and having more dedicated time for the evaluation (feed-back did not arrive on time).

Civil Society Scoring tool - baseline

Civil Society Assessment tool – Standard Indicators

Dimension	Outcome domains		Question	Statements					What are factors (strengths, weaknesses) that explain the current situation?
				0	1	2	3	x	
Civic engagement	1	Needs of marginalised groups	How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies?	Are NOT taken into account	Are POORLY taken into account	Are PARTLY taken into account	Are FULLY taken into account	Question not relevant, because	
	2	Involvement of target groups	What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities?	They are INFORMED about on-going and/or new activities that you will implement	They are CONSULTED by your organisation. You define the problems and provide the solutions.	They CARRY OUT activities and/or form groups upon your request. They provide resources (time, land, labour) in return for your assistance (material and/or immaterial)	They ANALYSE PROBLEMS AND FORMULATE IDEAS together with your organisation and/or take action independently from you.	Question not relevant, because	
	3	Political engagement	How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups?	No participation	You are occasionally CONSULTED by these bodies	You are a member of these bodies. You attend meetings as a participant	You are a member of these bodies. You are chairing these bodies or sub groups	Question not relevant, because	

level of organisation	5	Relations with other organisations	In the past 12 months what has been the most intensive interaction you had with other CSOs?	No interaction at all	Networking - Cooperation: Inform each other; roles somewhat defined; all decisions made independently	Coordination - Coalition: ideas and resources shared; roles defined and divided; all have a vote in decision making	Collaboration: organisations belong to one system; mutual trust; consensus on all decisions.	Question not relevant, because	
	5	Frequency of dialogue with closest CSO	In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with?	No interaction at all	Less than 2 times a year	Between 2 and 3 times a year	More than 4 times a year	Question not relevant, because	
	6	Defending the interests of marginalised groups:	Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs?	No interaction at all	Networking - Cooperation: Inform each other; roles somewhat defined; all decisions made independently	Coordination - Coalition: ideas and resources shared; roles defined and divided; all have a vote in decision making	Collaboration: organisations belong to one system; mutual trust; consensus on all decisions.	Question not relevant, because	
	7	Composition current financial resource base	How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendans to workshops of other CSOs; costs for organisational growth and/or networking?	Depends on 1 international donor	Depends on few financial sources: one fund cover(s) more than 75% of all costs.	Depends on a variety of financial sources; one fund cover(s) more than 50% of all costs.	Depends on a variety of sources of equal importance. Wide network of domestic funds	Question not relevant, because	
Practice of Values	8	Downward accountability	To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them?	(financial) information is made available and decisions are taken openly	They fulfil their formal obligation to explain strategic decisions and actions	They react to requests of social organs to justify/explain actions and decisions made	Social organs use their power to sanction management in case of misconduct or abuse	Question not relevant, because	
	9	Composition of social organs	What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for?	Between 0-10 % of all members of the social organs	Between 11-30 % of all members of the social organs	Between 31-65 % of all members of the social organs	More than 65% of all members of the social organs	Question not relevant, because	

	10	External financial auditing	How regularly is your organisation audited externally?	Never	Occasionally, upon request of funders	Periodically and regularly, because our external funder asks for it	Periodically and regularly, because it is part of our code of conduct	Question not relevant, because	
Perception of impact	11	Client satisfaction	What are the most important concerns of your target groups? How do your services take into account those important concerns?	Majority of target groups are NOT satisfied	Majority of target groups are POORLY satisfied	Majority of target groups are PARTLY satisfied	Majority of target groups are MOSTLY satisfied	Question not relevant, because	
	12	Civil society impact.	In the past 12 months, what impact did you have on building a strong civil society?	You have not undertaken any activities of this kind	You have undertaken activities of this kind but there is no discernible impact	You have undertaken activities of this kind but impact is limited	You have undertaken activities and examples of significant success can be detected.	Question not relevant, because	
	13	Relation with public sector organisations.	In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives?	No direct interaction	You have been invited by public sector organisations for sharing of information	You have been invited by public sector organisations for regular consultations (but public sector decides)	Formal and regular meetings as a multi-stakeholder task force.	Question not relevant, because	
	14	Relation with private sector organisations	In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective?	No direct interaction	You have been invited by private sector organisations for sharing of information	You have been invited by private sector organisations for regular consultations (but public sector decides)	Formal and regular meetings as a multi-stakeholder task force.	Question not relevant, because	
	15	Influence upon public policies, rules, regulations	How successful have you been in influencing public policies and practices in the past 2 years?	No activities developed in this area	Some activities developed but without discernible impact	Many activities developed in this area, but impact until so far has been limited	Many activities developed in this area and examples of success can be detected	Question not relevant, because	

		Influence upon private sector agencies' policies, rules, regulations.	How successful have you been in influencing private sector policies and practices in the past 2 years?	No activities developed in this area	Some activities developed but without discernible impact	Many activities developed in this area, but impact until so far has been limited	Many activities developed in this area and examples of success can be detected	Question not relevant, because	
	16								
context Environmental		Coping strategies	In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society.	No analysis of the space and role of civil society has been done.	You are collecting information of the space and role of civil society but not regularly analysing it.	You are monitoring the space and role of civil society and analysing the consequences of changes in the context for your own activities. Examples are available.	You are involved in joint action to make context more favourable. Examples are available.	Question not relevant, because	
	17								

Appendix 6 Changes in the Civil Society Context 2010-2014

6.1 Civil Society context

This section describes the civil society context in India which is not SPO specific. The socioeconomic, socio-political, and sociocultural context can have marked consequences for civil society, perhaps more significantly at the lower levels of social development. The information used is in line with the information used by CIVICUS.¹⁸

6.1.1 Socioeconomic context (corruption, inequality and macro-economic health)

Social Watch assessed India's progress being made against the Millennium Development Goals (MDG) and concludes that the country fails to meet goals set with regards to; poverty and hunger (MDG 1); gender equality (MDG 3); infant mortality (MDG 4); maternal mortality (MDG 5) and; environmental sustainability MDG 7). Three fundamental factors explain these appalling shortfalls, which are:

- Although social sector expenditures (rural development, education, health, family welfare, women and child development and water and sanitation increased in absolute terms between 1999 – 2000 and 2012-2013, in percentages of total public expenditures there was a general decline.
- The administration costs of centrally sponsored schemes such as the Mahatma Gandhi National Rural Employment (MANREGA) schemes have been increasing between 2006-2007 and 2011-2012 and only 66 % of the budget has been used for wage employment. Apart from this, misappropriation of funds explains the weak impact of such schemes.
- The government is promoting 'non-inclusive growth' and has sought to provide basic social services through subsidized institutions that all have problems of inefficiency, corruption, and so on. The formal, organized sector, which is the main source of quality employment, employs only 12% to 13% of the country's workforce and this is declining. The remaining 87% are relegated to the agriculture and informal sectors with low and uncertain earnings.

As a consequence, in the rural areas more than a quarter million farmers committed suicide in the last several years because they could not earn a living anymore in the agricultural sector¹⁹.

An additional indicator for the social and economic context in India is the Social and Economic Rights Fulfilment Index (SERF Index)²⁰. The SERF Index provides a means of determining the extent to which countries are meeting their obligations to fulfil five of the substantive human rights enumerated in The International Covenant of Economic, Social, and Cultural Rights (ICESCR): the right to food, the right to adequate shelter, the right to healthcare, the right to education, and the right to decent work.

Table 1

Social and Economic Rights Fulfilment Index (SERF) for India

India	2011	2012	2013
Core Country Right to Food Index Value	32.70	32.74	33.05
Core Country Right to Health Index Value	74.74	74.16	74.75
Core Country Right to Education Index Value	82.64	84.23	85.57
Core Country Right to Housing Index Value	62.55	62.60	66.48
Core Country Right to Work Index Value	27.57	27.69	32.71
Core Country SERF Index Value	56.06	56.28	58.51

Source: Social Watch's SERF index for 2011-2013

In 2011 and 2012 India was achieving a little over 56% of protecting its social and economic rights, feasible given its resources (table 2). Whereas relatively no changes occurred between 2011 and 2012, a slight improvement occurred in 2013, except for the right to food index (33.05) and the right to housing (27.57).

The Corruption Perception Index (CPI) ranks people's perception of corruption within the public sector of their respective countries.²¹ A low score indicates that a country is perceived as highly corrupt. India's score was 3.6 out of 10 in 2012, which is 0.1 point lower than the average for all countries (3.7) and it occupies the 76th place on the CPI rank list with a total of 174 countries. In India, 24.8% of citizens surveyed believe that the government is effective in the fight against corruption. On the Bribery Perception Index India scores 7.5 out of 10, which is 2.6% lower than the average. Of the people who participated in the survey, 54% reported having paid a bribe in 2011. Since 2002, India's perception index is slightly improving from just below a score of 3 (0 is very corrupt and 10 is not corrupt at all) in 2002 to 3.6 in 2012. Most corrupt institutions in 2012 are political parties, the police, legislature, public officials, public officials in the education sector, NGOs.

The Index of Economic Freedom measures economic freedom of 186 countries based on trade freedom, business freedom, investment freedom and property rights. The score is based on 10 freedoms in 4 pillars: rule of law, limited government, regulatory efficiency, and open markets. India's economic freedom score in 2012 is 55.7, making its economy the 120th freest in the 2014 index²². India is ranked 25th out of 41 countries in the Asia-Pacific region, and its overall score is below the regional and world averages (see figure 3). In the past 20 years, India has advanced its economic freedom score by nearly 11 points out of 100 points. It has achieved very large improvements in half of the ten economic freedoms, most notably in trade freedom. This has improved by over 65 points. As seen in figure 3, India's score continued to increase steadily over the past four years. However, it is still perceived as a 'mostly unfree' country. The main reason for this, as stated in the Index report, is the institutional shortcomings in the country. The state owned enterprises and wasteful subsidy programs result in chronically high budget deficits.

²² <http://www.heritage.org/index/pdf/2014/countries/india.pdf>

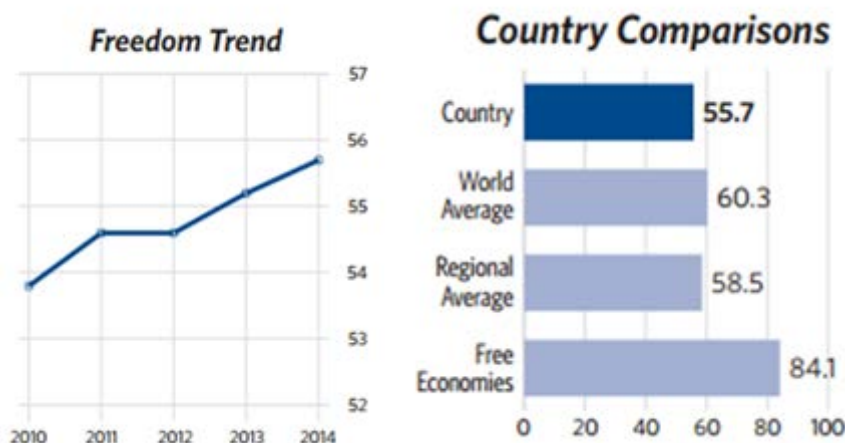

Figure 1: Freedom trend of India over time, and compared to other countries.

The Fragile States Index of FFP²³ is an index which is derived from 12 different indicators. These are social indicators, economic indicators and political and military indicators. From these, we can see trends in the overall development of a country.

Table 2 shows India's five of the twelve most problematic indicators of the past five years, as well as the average score for the twelve indicators: Low scores indicate a good situation and high scores indicate a bad situation.

Table 2

India's Fragile States Index scores of the critical indicators on a scale of 1 (good situation) to 10 (bad situation)

Year	Demographic Pressure	Group Grievance	Uneven Economic Development	Security Apparatus	Public Services	Average score 12 indicators
2014	7.7	7.8	7.8	7.0	7.9	76.9
2013	7.5	8.2	8.1	6.7	7.8	77.5
2012	7.3	7.9	8.4	6.9	7.5	78
2011	8.0	8.2	8.5	7.2	7.8	79.3
2010	8.1	7.8	8.7	7.2	7.6	79.2

Source: FFP Fragile States Index for 2010-2014²⁴

The FSI shows that India is improving its status over the past five years, but is doing so at a very slow pace. Demographic pressure, uneven economic development and the security apparatus have improved slightly since 2010, which can be seen by the decline of the scores. However, group grievance has not improved and public service has even declined (the index got higher). Out of the 178 countries in this index, India does not succeed to become more than mediocre. However, the figure 2 below shows that the development of India did have a steep improvement since 2006, but has been declining since 2011.

6.1.2 Socio-political context

Freedom House evaluates the state of freedom in 195 countries on an annual basis. Each country is assigned two numerical ratings – from 1 to 7 – for political rights and civil liberties. In this rating 1 represents the most freedom and 7 the least freedom. The two ratings are based on 25 more detailed indicators.²⁵

²³ <http://ffp.statesindex.org/2014-india>

²⁴ Idem

²⁵ <https://freedomhouse.org/report/freedom-world/2014/india-0#.VGcIRvIwtcQ>

Table 3*India's Freedom indexes over time*

Year	Freedom status	Political rights score	Civil liberties score
2011	Free	2	3
2012	Free	2	3
2013	Free	2	3
2014	Free	2	3

Source: Freedom House Freedom indexes for 2011-2014²⁶

Table 3 shows that scores have not changed over the past four years. India is considered a free country with an overall 'Freedom Status' of 2.5 (out of 7).

6.1.3 Socio – cultural context

The World Values Survey is a global network of social scientists who study changing values and their impact on social and political life²⁷. They survey different values which can give an indication of the social status of a country. People in India indicate that they are generally quite happy. In the wave of 2010-2014 a total of 38.2% of the people questioned stated that they were very happy. In comparison, in the period of 2005-2009 this number was significantly lower with 28.9%. When asked about general satisfaction with their lives respondents give different answers. The respondents were asked to rate their satisfaction from 1 to 10, 1 being completely dissatisfied and 10 being completely satisfied. In 2010-2014 a total of 16.4% indicated that they were quite dissatisfied (rating 2) and 11.9% indicated they were completely dissatisfied (rating 1). Whereas 17.7% stated that they were satisfied (rating 8). This situation is very different from the 2005-2009 results where 41% indicated to be moderately satisfied and 15.8% was satisfied. This indicates that during the past five years people have shifted from being neutral about their life satisfaction, to being either dissatisfied or satisfied.

Another index to look at for social-cultural context is the Global Peace Index. This index attempts to measure the positions of nations' peacefulness, and is developed by the Institute for Economics and Peace. The position of a country is based on 22 indicators which can be divided into three main factors. The main factors on which this index is based are 1) militarisation, 2) society and security, and 3) domestic and international conflict. The maximum score is 5, which indicates that this factor is a problem for the peacefulness of the country. The higher the score, the lower country ranks in the total Index. The current position of India is 143 out of 162 countries²⁸. The table below shows the development of India as of 2010.

Table 4*India's Global Peace Index scores over time: scores from 1 (good) to 5 (bad)*

Year	Militarisation	Society & Security	Domestic & International Conflict	Country Rank
2010	2.5	2.3	3.4	132 (of 148)
2011	2.4	2.4	3.4	142 (of 153)
2012	2.4	2.4	3.2	144 (of 158)
2013	2.4	2.4	3	141 (of 162)
2014	2.4	2.4	3	143 (of 162)

6.1.4 The Foreign Contribution Regulation Act 2010³⁰

NGOs are perceived as very important in India, as they contribute a lot in the development of the country³¹. NGOs often work with marginalized groups and try to raise their awareness on their rights vis-à-vis the state. Most local NGOs are funded by international organizations. In order to keep this funding under control, India's government installed the 'Foreign Contribution Regulation Act' in 1976.

In March 2011 an amendment of the original Foreign Contribution Regulation Act passed both Houses of Parliament. Compared to the 1976 Act, major changes comprise a list of persons and organisations that cannot receive foreign contributions anymore. These are; election candidates; correspondents, columnists, journalists; judge, government servant or employee of an entity controlled or owned by the government; members of any legislature; political party or its office bearers; organizations of a political nature as may be specified; associations engaged in the production or broadcast of audio news.

In the first place this Act seems to have no consequences for the Dutch NGOs and their Southern Partners, however a leaked report of India's International Bureau tells a different story, suggesting that protests against development projects had caused a loss of India's GDP with 2-3%. These protests were allegedly fuelled by foreign-funded NGOs, mentioning Greenpeace, Cordaid, Hivos, Oxfam, Amnesty and ActionAid³². The main allegation against these NGOs is that they are funding organizations which are working in politically sensitive sectors such as the mining sector and the agricultural sector with regards to Genetically Modified Food production. Foreign contributions to support SPOs that work on human rights issues, governance and sensitive sectors like mining, forestry and agriculture are increasingly being monitored.

Final Report MFS II Joint Evaluations

Country	India
Consortium	SRHR Alliance
Responsible Dutch NGO	SIMAVI
Project (if applicable)	Community awareness building on girl child and conscientiousness building on the pre-conception, pre-natal, diagnostic testing (PCPNDT) Act
Southern partner organisation	Bihar Voluntary Health Association

The project/partner is part of the sample for the following evaluation component(s):

Achievement of MDGs and themes	X
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

1. Introduction

This report presents the findings of a project funded and supported by SIMAVI and implemented by the Bihar Voluntary Health Association (BVHA) in rural areas of the North-Eastern state of Bihar, India. The project was motivated by the prevailing patterns of gender discrimination in the state and the aim of the project was to increase awareness of the pre-conception, pre-natal diagnostic techniques (PCPNDT) Act, to lobby for better implementation of the Act and thereby to reduce female foeticide. In addition, the project attempted to increase awareness of other legal instruments relating to women's health, such as the Prohibition of Child Marriage Act, the Domestic Violence Act and the Medical Termination of Pregnancy (MTP) Act. The report begins by setting out the context and providing a description of the project. This is followed by a discussion of the sampling strategy and the data. Estimates are presented in section 6 and the final section contains concluding remarks.

2. Context

The project under review was implemented by Bihar Voluntary Health Association (BVHA), a voluntary association of charitable hospitals and health centres which has been operating in Bihar for 38 years.

Bihar is one of India's poorest state (41.4 percent of the population lives below the poverty line) and with a population of about 100 million (Census 2011), it is the third most populous state in India. For about two decades (1985-2005) the state has been especially affected by political turmoil, and bad governance. This has affected both the agricultural and industrial sectors, and governance wise resulted in allegations of widespread corruption and law and order problems. While natural or governance factors such as periodic floods, poor infrastructure and high population density play their part, the state's backwardness also appears to be a function of its inequitable and exploitative socio-economic structure. These conditions have led to a lack of development and an environment in which large-scale poverty eradication programs have had little impact.

The state is overwhelmingly rural with 80 percent of its population living in rural areas and relying on subsistence agriculture for a livelihood. Bihar ranks among the lowest in the country on indicators related to primary healthcare infrastructure and reproductive and child health care (District Level Household Survey 2002-04). Health indicators such as the infant mortality rate (44 per 1000 live births as per Sample Registration Survey 2011),

maternal mortality ratio (261 per 100,000 live births as per Sample Registration Survey 2007-09) and total fertility rate (3.6 as per Sample Registration Survey 2011), among others, are amongst the highest in the country. Though certain health indicators such as infant mortality and child mortality are beginning to display a reduction, the continued lack of adequate medical and paramedical staff and medicines continues to afflict the state's healthcare system. Given this context, it is not surprising that Bihar is a priority state under the central government's National Rural Health Mission (NRHM).¹

Women have a relatively poor social status and are discriminated in many aspects of life, such as access to nutrition, health care and education. For instance, female literacy rates (53.3 percent in 2011) are lower than the national average (65.6 percent in 2011). Bihar has one of the highest rates of girl child marriages in the country. According to the National Family Health Survey conducted in 2005-06, the median age at first marriage for women in the 20-49 age group is 15.1. Since 1951, the state has witnessed a decline in sex ratios (female to male). As also witnessed in other parts of India, the child sex ratio has declined from 953 in 1991 to 942 in 2001 and to 933 in 2011. In birth year 2000, according to census 2001, the state recorded a sex ratio at birth (SRB) of 917 as opposed to an expected SRB of 952 (see Table A1). Based on the number of births in the state in 2000 these figures translate into an annual shortfall of 32,000 girls. A substantial proportion of this shortfall may be attributed to the differential survival rates of girls and boys due to daughter elimination in the form of female infanticide, neglect, and sex selection. In recent years, the proximate cause for the abnormal sex ratio patterns appears to be the increasing use of technology for sex selection to prevent female births, which in turn is triggered by son preference and daughter aversion for economic and cultural reasons.

An important intervention to deal with the declining sex ratios is the Pre Conception and Pre Natal Diagnostic Techniques Act (PCPNDT) 2003, which prohibits the use of these techniques for sex selection.² In practice however, the Act is not implemented and sex selection leading to female foeticide still takes place. Given this setting, effective implementation of the PCPNDT Act together with efforts at social reform including the enhancement of the value of daughters in the eyes of their families are significant steps towards the prevention of female foeticide.

¹ For additional information on health indicators see http://nrhm.gov.in/nrhm-in-state/state-wise-information/bihar.html#ret_report. Accessed on November 26, 2014.

² The Pre-Natal Diagnostic Techniques (Regulation and Prevention of Misuse) Act, 1994 (PNDT), was amended in 2003 to The Pre-Conception and Pre-Natal Diagnostic Techniques Act (PCPNDT Act).

It is against this backdrop that BVHA together with 21 “smaller” NGOs (Field Operating Partners – FOPs) implemented this project to increase awareness among rural women and men about the PCPNDT Act and to lobby for better implementation, thereby aiming to reduce female foeticide. In addition, the project attempted to increase awareness of other legal instruments relating to women’s health, such as the domestic violence Act, medical termination of pregnancy (MTP) Act.

3. Project description

a. Project duration and budget

The project started on March 1, 2009 and came to an end on March 1, 2012. It was a joint endeavour of the Dutch NGO, SIMAVI and a Southern Partner Organization (SPO) - the Bihar Voluntary Health Organization. For the three year duration the project budget was Euro 90,971 of which 47 percent or Euro 43,016 was funded through MFSII. The project records show a community contribution of Euro 1905 over three years.

b. Project objectives, activities, theory of change

The overall objective of the project was to create mass awareness about the consequences of female foeticide and thereby prevent the practice. The project also had a broader objective, that is, to promote gender justice and equity. To achieve these objectives, BVHA worked with 21 field operating partners (FOP) and implemented its activities in about 114 villages spread over 21 gram panchayats (14 districts).³ A stylized result chain, which shows the manner in which SIMAVI/BVHA expected to accomplish its objectives is provided below.

Stylized result chain

Input:

- Financial and technical support from SIMAVI through BVHA to 21 of its field operating partners (FOPs)

Activities:

- Organizing and training of Behan Raksha Dal (BRD) - Behan Raksha Dal comprises of a minimum of 10 female members and includes the village auxiliary nurse midwife, Anganwadi workers, village social health activist, self-help group leaders.⁴
- BRD members visit households (married couples in child-bearing age) and create awareness on PCPNDT Act as well as the adverse effects of sex selective abortion on society

³ A gram panchayat is the country’s lowest administrative unit.

⁴ The literal translation of *Behan Raksha Dal* is Sister Protection Brigade.

- Sensitization of media at block level; health service providers at GP level; members of the Panchayati raj institutions; religious leaders
- Stakeholder meetings with School teachers, Auxiliary Nurse Midwives (ANMs), Anganwadi workers, Accredited Social Health Activist (ASHA) and other village elites/opinion leaders. Topics deal with survival of girl child, PCPNDT Act awareness, birth, death and marriage registration, and prevention of child marriages.
- Organizing rallies at schools
- Training adolescent peer-educators - Peer-Educators (adolescent groups) comprise 6 males and 6 females who are trained to motivate and create awareness on girl child survival, PCPNDT Act and gender discrimination.
- Awareness creation amongst newlywed couples.

Output:

(Figures in parentheses indicate number of individuals who have attended meetings)

- Formation of 126 Behan Raksha Dals with 1260 members
- Provided training/knowledge/awareness to various stakeholders: Media personnel (210); NGOs/VOs (130); Parents and in-laws (2100); Service providers at panchayat level (315) and district level (630); newly-wed couples (1260)
- Provided information to village elite groups (4200), Religious leaders (210), various mixed group/stakeholders (2520), Adolescents (2100)
- Formation of peer educators group with 252 members

Impact/outcomes:

There are two sets of outcomes that the project may be expected to influence. These include outcomes that deal with greater awareness of various laws that deal with sex determination and sex selective abortion. These and related outcomes reflect the immediate impact of project activities. A second set of indicators are the expected consequences of greater awareness. **However, it should be emphasized that the project focused on and the evaluation also focuses mainly on the first set of outcomes.**

Outcomes - set 1

- Greater awareness of the PCPNDT Act
- Greater awareness of the domestic violence Act
- Greater awareness of the medical termination of pregnancy (MTP) Act
- Greater appreciation of the consequences of female foeticide
- Increased awareness of the importance of registering births, deaths, marriages
- Greater awareness of the minimum age for marriage

Outcomes - set 2

- Reduced incidence of domestic violence
- Reduced son preference
- Reduction in gender differences in infant mortality
- Sex ratios at birth (SRB)
- Child sex ratio (CSR)

4. Analytical approach and methods

The aim of the evaluation is to identify the effect of the awareness campaign launched by BVHA/SIMAVI on a range of indicators. The main focus of the evaluation is on the first set of indicators listed above. However, we also examine the impact of the project on the incidence of domestic violence and indicators of son preference. While we do provide information on indicators such as gender differences in infant mortality, SRB and CSR we do not attempt to identify the impact of the project on these indicators (see Tables A1 and A2). A credible assessment of such indicators requires a much larger volume of data than envisaged in the current evaluation and a different set of interventions.

The first point to be noted is that the project is being evaluated after it has been completed and hence it is not possible to conduct a before-after analysis or a traditional difference-in-differences analysis. The analysis focuses on comparing household-level outcomes in treatment and control villages at two points of time - that is, in 2012, soon after project completion and subsequently, two years later. The evaluation based on the 2014 data may be thought of as an assessment of the sustainability of the intervention. In the first instance we examine whether outcomes differ across households living in treated and control villages and in the second instance we examine whether these differences, if any, still persist. Since we are not dealing with households who have actually been treated but households living in villages which have been treated, the evaluation may also be thought of as an attempt to identify the intention to treat effect.

The evaluation needed to deal with two key issues – (i) purposive programme placement and (ii) spillover effects. With regard to the first issue, the project operated in 114 villages spread over 21 Gram Panchayats (GP) and spread across 14 districts. It is possible that the villages in which the intervention activities took place were selected because they had exhibited a lack of awareness of the various legal Acts pertaining to gender justice or had recorded high female infant mortality or instances of female foeticide. If this is the case then comparing outcomes between treated villages, that is, villages where the intervention was placed and villages which did not have such interventions (control villages) may be misleading and lead to an underestimate of the effect of the intervention. However, scrutiny of the project documents and discussions with project implementation staff on the manner in which the intervention villages were selected suggests that pre-existing conditions in the villages, at least with regard to the outcomes listed above, did not play a role in their selection into the intervention. Given the limited budget, BVHA and its partners did not attempt to identify villages with the lowest sex

ratios or evidence of female foeticide but decided to launch the campaign in villages where they already had an established network. Hence, it may be argued that village choice is “random” or more precisely, independent of the outcomes of interest under scrutiny and that purposive programme placement is unlikely to be a concern.

Turning to the second issue – attempting to isolate the causal effect of a mass awareness raising intervention is fraught with difficulty as it is very likely and desirable from the perspective of the project implementation team that the information imparted through the intervention should be spread as widely as possible. However, this makes it difficult to isolate the causal impact of the project as it is possible that households in control villages also exhibit an increase in awareness, thereby confounding identification of the programme’s effect. To deal with such spillover effects, while at the same time creating a control group which is as similar as possible to the treated group, two distinct control groups (C – high and C – low) were created. The first of these includes control villages which are located in the same gram panchayat as the treated villages and are more likely to be susceptible to spillover effects (C – high). The second control group consists of villages which are in the same district but not in the same gram panchayat (C – low). These villages are less likely to be susceptible to spillover effects. While spillover effects cannot be denied, after assessing the project implementation plan, noting the “thinness” of the intervention, the available infrastructure and the distance between villages located in the same district, it was felt that spillovers are unlikely to be a serious concern for the villages located in a different gram panchayat.

5. Data

a. Household survey data

Two rounds of data have been collected. The first of these was collected in 2012 and the second round of data in 2014. Since the problem/issue we are studying may be defined as a socio-cultural problem we divided the state into 4 large and distinct socio-cultural groups.⁵ Subsequently, districts were chosen to represent each of these groups and then we randomly chose villages from each district in proportion to the share of the villages in the programme. There are about 114 villages in which the program operates and of these 35 were selected. Within each of these villages, 20 currently married women in the age group 15-45 years (child-bearing age) were randomly selected from a list of all such women which was available with a

⁵ These are four language based groupings, namely, Angika, Bhojpuri, Magadhi and Maithili. We also considered the use of agro-ecological differences to stratify the state but given the nature of the project we persisted with a socio-cultural stratification.

government employee (anganwadi worker). These women and their households serve as the treated group. Having decided on the treated villages to be surveyed we developed a set of control villages located in the same gram panchayat or in a different gram panchayat, although from the same district as the treated villages. Within each of these villages, 20 currently married women in the age group 15-45 years (child-bearing age) were randomly selected from a list of all such women which was available with a government employee (anganwadi worker). These women and their households serve as the control group. Based on an expected effect of an increase in awareness of about 7 to 8 percentage points, which was deemed to be reasonable by the project implementation team, a sample size of 1,400 (700 treatment, 700 control) has a power of 0.84. A table displaying information on the different control groups and the sample sizes is provided below (see Table 1).

The survey collected a range of information designed to control for differences in socio-economic characteristics and demographic structure across households. There were no attrition problems and we were able to interview all 1,400 households in the follow-up survey.

Descriptive statistics, based on the first round survey, for the entire sample as well as for the treatment and control groups are provided in Table 2, while Table 5 provides descriptive statistics for the treatment sample and for the control group which is less likely to be affected by spillovers. The statistics presented in Table 2 tend to suggest that that the two groups are not remarkably different from each other. There are no statistically significant differences in terms of consumption and wealth indicators, demographic characteristics are also similar. While there are statistically significant differences in terms of caste (other backward classes) and one of the infrastructure indicators (open defecation) the gaps are not pronounced. The one indicator where there is a difference and which may have a bearing on outcomes is the education of the household head. In the case of the treated households, head of households are more likely to have upper primary education (11.4 versus 8.3 percent) and less likely to have completed senior secondary education (8.5 versus 12 percent). The statistics in Table 5 display some more differences. This may be expected, since the control group is drawn from a different gram panchayat. The educational differences that were observed in Table 2 tend to persist and the groups are different in terms of their access to infrastructure (primary source of energy for cooking, open defecation) and in terms of their religious composition. Notwithstanding these patterns the main message emerging from the statistics is that when we consider the two groups in their entirety, observed differences between the treatment and the control group are not remarkable, and even for the sample drawn from a different gram panchayat the differences are not large. These patterns do support the idea that allocation of the intervention to treatment

and control villages does not seem to be systematically linked to pre-existing characteristics that may have a bearing on the outcomes of interest.

b. Other sources of data/information

Prior to visiting the project site, information was gathered from SIMAVI. This information included:

- Biannual reports
- Project monitoring data
- List of field operating partners

A field visit was undertaken in June 2012 to understand the project and obtain relevant project documents. This visit included discussions with BVHA staff in Patna and field visits to several villages where the project was operating. The field visits included:

- Meetings with relevant government officials from the radiology and family welfare departments: One-on-one semi-structured interviews with government officials provided an idea of the various measures the government had put in place to tackle sex selective abortion and the ways in which they were interacting with and utilizing the BVHA network to further these activities. . This was part of the government's idea of convergence of schemes with the help of NGOs.
- Visit to village Phulwari Sahrief, Patna district: Meeting with the field operating partner, St. Anne's Dispensary and interview with staff. This was followed by a visit to a village and a discussion with the *behan raksha dal* members and girls peer educators group members on gender discrimination, problems that women faced and sex selection.
- Jhitkiya village in Vaishali block, Vaishali district: Extensive discussions with the project staff on a number of issues relevant to the project followed by a visit to one of the villages where they work. We undertook a role play with members of the *behan raksha dal*, with anganwadi and ASHA workers and a few male peer educators. The idea was to explore the manner in which the awareness programme works and to assess the capacity and knowledge of the stakeholders.
- Nava Nagar village/Bidupur Bazar, Bidupur block, Vaishali district: Interacted with *Vaishali Samaaj Kalyan Sansthan* which focuses on preventing child marriages. Field visit to Nava Nagar included a discussion with the *behan raksha dal*, a few female peer educators and unmarried youth on the impact of dowry and consequences of female foeticide.
- Neerpur village/ Silaw block/ Nalanda district: We met the chief medical officer of the district who is responsible for monitoring the scan centres to understand the situation of declining sex ratios in this district and the measures the government had taken to tackle it. This was followed by discussions

with married women and young unmarried women on a number of issues including son preference and sex selective abortion.

6. Estimates and Discussion

We estimated a number of linear probability models to identify the effect of the intervention on the outcomes of interest. These were estimated over different samples and included a comparison of treated and control households in their entirety and a comparison of treated and control households (C – low) that are less likely to be susceptible to spillovers. These models were first estimated using data collected in 2012 and subsequently using data collected in 2014. We also pooled the data and estimated models which allowed us to explicitly test whether there were differences in outcomes between 2012 and 2014. An assessment of the estimates based on different cuts of the data and different years revealed that the results were for the most part robust to the use of different control groups (except for larger estimates of some of the domestic violence indicators) and that there were very few (two outcomes) statistically significant changes in outcomes over time. While detailed estimates for both samples and for both years have been provided, the discussion below focuses on the estimates for the full sample and for the first year. However, the narrative below does highlight differences in the estimates across samples and over years. The discussion begins by examining differences in awareness of the intervention itself and then goes on to discuss awareness of issues surrounding medical termination of pregnancy, sex determination and sex-selective abortion. This is followed by an examination of intra-household relations, and finally deals with indicators of son preference.

a. Awareness of the intervention

As discussed above the intervention seeks to spread awareness of various issues within the project's ambit by directly spreading information to village elite groups, religious leaders and indirectly by setting up Behan Raksha Dals (BRD) and peer educators groups (PEG). These entities are, in turn, expected to organize various activities to raise awareness. Given the limited financial resources available to the project, the figures on the number of village elites that have been reached (4,210) and the BRDs that have been set up - 126 BRDs consisting of 1,260 members in 21 gram panchayats - seems impressive. Whether this translates into greater awareness is not clear. Hence, the first step in the evaluation was to examine the extent to which individuals in treated and control villages were aware of the existence of the BRD and PEG.

Overall, only 4% of the households in the sample were aware of the existence of a BRD. The treated group appears to have somewhat more knowledge (4.4 versus 3.3 percent) but the differences are not statistically significant. Perhaps of potentially greater concern than the lack of statistical significance is that the proportion of people (4%) who are aware of one of the key project

activities is almost negligible. Awareness of the PEG is even lower, about 3%. Finally, almost no one (96.5%) in the treated or control villages has witnessed or heard of a rally against sex determination and sex selective abortion (SSA). Estimates based on the different control group (C – low) are similar. Over time, there are some differences with a sharp increase in awareness of the BRD. Overall awareness doubles to close to 9% and households in the treated villages are about 7 percentage points more likely to have heard of the BRDs. This increase may be interpreted as evidence of BRD sustainability or could also be an outcome of the survey itself which asked about the BRD in 2012 and hence in 2014 households tended to recall that they had heard about such an entity. In any case, what is clear is that while there does seem to be an increase in awareness of project activities, overall awareness of the BRD/PEG is not overwhelming. While lack of knowledge about the existence of the BRD/PEG is perhaps a precursor of the effects on other outcomes, it is still likely that the other project activities have worked towards meeting the project's objectives.

b. Awareness of issues regarding abortion, sex determination, registration

While abortion or medical termination of pregnancy before 12 weeks is legal in India, sex-determination/detection and sex selective abortion (SSA) are both illegal under the PCPNDT Act.⁶ However, only 17% of the sample respondents were aware that abortion is legal. A smaller proportion, about 13 percent believed that SSA was legal (that is, sex detection followed by abortion) and about 12 percent believed that sex detection (SD) (that is finding out the sex of the foetus) was legal. There are no statistically significant differences across the two groups in any of these three measures. One may expect that exposure to the intervention should increase the chances of knowing that abortion is legal while SD and SSA are illegal. However, this was not the case. The only difference in this area seems to be awareness of the possibility that the sex of a baby can be determined before birth. About half the sample households were aware that this was possible with treated households enjoying a 4 to 5 percentage point knowledge advantage.

A high proportion of households indicated that it was important to register the birth of a child (94.5%) and register marriages (91.2%). In case of both the outcomes the treated households were more likely to indicate that registration was important— statistically significant and 2.2-2.5 percentage point higher in the case of birth, and statistically significant and about 3 percentage points higher in the case of marriages. Registering the death of a child was not considered as important (67 versus 64 percent) and there were no statistically significant differences across the two groups. The legal age at which women may get married in India is 18. Only 5 percent of the

⁶ Pregnancies not exceeding 12 weeks may be terminated based on the opinion of one doctor. In case of pregnancies exceeding 12 weeks but less than 20 weeks, termination needs the opinion of two doctors. Beyond that time period abortion is not permitted.

respondents think that marrying before this age is acceptable. There is a clear gap between treated and control households with the former 3 to 4 percentage points less likely to accept marriage before the age of 18. The effect persists over time and also across the two different control groups.

c. Intra-household relations – awareness and outcomes

Although illegal, dowry continues to be widely practiced in Bihar. The analysis shows that a small proportion of women (20%) consider it acceptable for a man to demand a dowry. However, a larger proportion (41%) thinks that it is acceptable for a woman's family to give a dowry. In both cases there are no differences across the treatment and control groups. The questions related to domestic violence show that knowledge of the illegality of domestic violence is widespread. About 83% of the sampled women indicate that they are aware that it is a crime, and there are no differences across the two groups. Neither group supports the idea that inflicting violence is a right and for both, emotional and physical abuse, only about 6 percent of women argue that inflicting violence is a husband's right. In terms of actual experience of domestic violence, at least in 2012 there are no differences in the incidence of violence across treated and control groups. The picture in 2014 is different with regard to one of the violence indicators. The estimates show that women living in treated village are 4 percentage points less likely to have experienced emotional violence in the last 12 months. This is a large effect as compared to the proportion of women who have experienced violence in 2014 (11%) and translates into a 36 percent (4/11) reduction in emotional violence for those exposed to the programme.

The effect of the intervention for these violence indicators does differ across control groups. We find that comparing the treated households to households in villages less likely to have been exposed to the programme leads to crisper effects of the effect of the intervention. As compared to women in these low spillover villages, women in the treated villages are 3 percentage points less likely to agree that men have a right to inflict violence and about 2.4-3.3 percentage points less likely to experience violence. These are large effects as only 4 to 5 percent of women report having experienced any violence. These effects persist in 2014 and we find that women exposed to the programme are less willing to accept that men have a right to use violence (3.5 to 4.1 percentage points) and they also report a reduced chance of having experienced violence (1.9 to 4 percentage points) in the 12 months preceding the survey. Differences across the two groups are statistically significant.

d. Son preference and differences in aspirations

About 75% of the respondents considered it imperative to have a son and about 54% have taken steps to ensure that they have son. For a majority of households (about 80%) these steps have been in the nature of praying or conducting a ceremony to ensure the birth of a son. Almost none of the respondents indicated that they had visited a scan centre. However, a larger proportion of the

women in treated villages indicated that they would like to know the sex of the foetus (13 versus 10 percent) and the differences are statistically significant. This may just indicate that such women are more curious or as is more likely, it reflects their greater knowledge of the availability of sex-detection technology. In any case, it does not seem that there are any differences in the desire to have a son across treatment and control groups. In terms of education aspirations, while 65% indicate that they would like their sons to acquire a university education only 48% feel that they would like their daughters to attend university. There are no differences in educational aspirations across the two groups. Results are not sensitive to the year of the analysis or changes in the control group.

e. Efficiency of the project

The project had a three-year budget of Euro 92,876 and its activities were spread out over 21 gram panchayats or a target population of about 228,270 individuals.⁷ Based on the activities and the output data (see above) the project reached out directly to 15,187 individuals. Based on the estimates we find that between 4 to 9 percent of the sample (treatment and control) was aware of the existence of project activities. Thus, it may be argued that about 14,837 ($0.065 \times 228,270$) individuals in addition to those who were directly targeted were reached by project activities. These figures translate into a cost of Euro 1 per person per year to spread the main messages of the project. While we do not have a benchmark against which to judge whether this is efficient or not, given the number of individuals who have heard of the project activities and those who have directly been a part of them it would seem that the project has spent its resources efficiently.

However, this efficiency has not been translated into effectiveness. The analysis presented above shows that in terms of the key project objective, that is, greater awareness of the PCPNDT Act there are no differences between treatment and control groups. From a broader perspective it is clear that the bulk of households (85%) are aware that sex determination/detection and SSA are illegal. However, this is unlikely to be due to the project. The project does appear to be more effective in terms of spreading information about the importance of registering births and avoiding early marriages. Extrapolating from the sample effects it seems that an additional 4,500 women are aware that it is important to avoid early marriages and about half of that have a greater appreciation that it is important to register births.⁸ The project also seems to have altered attitudes towards violence (based on estimates for 2014) with about an additional 4,500 women expressing the view

⁷ There are about 8,500 gram panchayats in Bihar and in 2011 the state's rural population was estimated to be 92 million.

⁸ The sample effect is 4 percentage points or 28 (0.04×700) more women express that it is important to avoid early marriages. The number of women in the treated panchayats is about half the population or $228,270/2$. Hence, $0.04 \times 228,270/2 = 4,565$.

that their husbands do not have the right to use violence. It may be argued that these effects have been achieved at a cost of Euro 20 per person. Thus, while the project has conducted its activities in a very efficient manner this approach has not been effective in terms of reaching its main goal of increased awareness of the PCPNDT Act.

7. Concluding remarks

The paper assessed the impact of a project implemented by BVHA and funded by SIMAVI. The aim of the project was to increase the level of awareness among rural women and men about the PCPNDT Act and to lobby for better implementation and thereby reduce female foeticide. In addition, the project attempted to increase awareness of other legal instruments relating to women's health, such as the Prohibition of Child Marriage Act, the Domestic Violence Act and the Medical Termination of Pregnancy (MTP) Act.

The estimates presented here are robust to variations in control group and the year of evaluation. The main findings are that there is very little awareness of the project activities and there is no noticeable difference in the level of awareness about the PCPNDT Act between treated and control villages. However, it does seem that a larger proportion (2.2-2.5 percentage points) of respondents in treated villages consider that birth registration is important, and a smaller proportion are likely to accept marriage before the age of 18 (3-4 percentage points). The largest effect of the intervention appears to be on domestic violence with women in the treated villages less likely to accept that men have a right to use violence (3.5-4.1 percentage points). We also find women living in treated villages have a reduced chance (2-4 percentage points) of experiencing violence in the 12 months preceding the survey.

Based on the statistical analysis, the field work that was conducted and the information gathered from the existing reports it does seem that, in part, the project was well-conceived.⁹ To elaborate, dealing with the deep-rooted issue of son preferences does require, among others, a

⁹ Given your findings, do you think this project was well-designed, suitable for the environment in which it was implemented? Would you advice to fund a similar project in the future (or to continue funding this one)? What changes would you recommend, if any? How could the impact evaluation itself be improved?

community-based grass roots approach. It is hard to fault the project's approach of working through women's groups and through students with an attempt to promote inter-generational change while at the same time targeting so-called elite groups. However, given the financial resources available, the project does not seem to have been particularly well-conceived as the resources were very thinly spread. Trying to reach out to households in 21 gram panchayats through 21 different partners in 14 districts is unlikely to have been very effective, as shown by the results. Thus, while the project may be deemed efficient in terms of per capita expenditure, given the zero effect of the programme on the key outcome variable (knowledge of the PCPNDT) it is hard to argue that this was an effective approach. Our field work showed that there were substantial variations across gram panchayats and BRD – with some appearing to be more knowledgeable and others less so.

Overall, while we feel that the approach is sound and suited to the context it is just too thin. This raises questions as to why this approach was followed and puts the spotlight on the design of the project. While BVHA used its credibility and extensive networks to undertake the project, the funds provided to BVHA were shared between 21 field operating partners. Attempting to cover a large number of villages in a span of three years resulted in a thin spread of the intervention. In short, the project lacked depth and resulted in too little effort (on a per capita basis) to tackle a problem as large and complex as sex selection. In its current form (the project is no longer in operation) the project did not manage even to raise awareness about the PCPNDT.

The issues that the project addressed—sex selection, domestic violence and child marriage—are of course important and it is worth directing resources to such issues. So projects with similar objectives are certainly welcome. However, additional effort needs to be put into identifying whether there is a lack of awareness (which does not seem to be the case) or whether greater dividends may be achieved by focusing on trying to implement the provisions of the PCPNDT Act. In short there needs to be a stronger link between converting the awareness into prevention. Examples of successful strategies and approaches to tackle issues of gender justice and sex-selective abortion are available from Bangladesh as well as other Indian states. A useful strategy would be to create and

strengthen communities of practice at local/ village levels which would serve as catalysts to facilitate awareness, create behavioural change and lead to prevention.¹⁰ Examples of groups that lend themselves to evolving as communities of practice include some of the active *behan raksha dals* from this project, women's self-help groups (SHGs) created by the Indian Council for Child Welfare in Tamil Nadu to prevent female infanticide and women's and men's groups created for micro-credit by socially-oriented NGOs such as Nijera Kori and Saptagram in Bangladesh.¹¹

Report CDI-15-012

Kusters, C., Mohapatra, B.P., Sethi, S., Buizer, N., Das, A., Bhatra, R. W., Sen, P., 2015. *Endline report – India, BVHA Foundation. MFS II country evaluations; Capacity of Southern Partner Organisations (5C) component*. Centre for Development Innovation, Wageningen University & Research centre. Report CDI-15-012. Wageningen.

This report presents the findings of the endline of the evaluation of the organisational capacity component of the MFS II country evaluations. The focus of this report is India, FFID. The format is based on the requirements by the synthesis team and NWO/WOTRO. The endline was carried out in 2014. The baseline was carried out in 2012.

Key words: 5C (five core capabilities); attribution; baseline; causal map; change; CFA (Co-financing Organisation) endline; organisational capacity development; SPO (Southern Partner Organisation).

Acknowledgements

We are grateful to all the people that have contributed to this report. We particularly would like to thank the Southern Partner Organisation Bihar Voluntary Health Association (BVHA) and the Co-Financing Agency Simavi for their endless patience and support during this challenging task of collecting the endline data. We hope that this endline report will provide useful insights to BVHA, Simavi, the Sexual and Reproductive Health and Rights Alliance, the synthesis team, IOB and NWO/Wotro.

The India 5C evaluation team

List of abbreviations and acronyms

5 C	Capacity development model which focuses on 5 core capabilities
ANM	Auxiliary Nurse Midwife
ANC	Ante Natal Checkup
BVHA	Bihar Voluntary Health Association
Causal map	Map with cause-effect relationships. See also 'detailed causal map'.
Causal mechanisms	The combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome
CBO	Community Based Organisation
CDI	Centre for Development Innovation
CFA	Co-Financing Agency
CHAI	Community Health and Advancement Initiative
CMAI	Christian Medical Association of India
CSE	Comprehensive Sexuality Education
CSO	Civil Society Organisation
Detailed causal map	Also 'model of change'. the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change. In the 5C evaluation identified key organisational capacity changes and underlying reasons for change (causal mechanisms) are traced through process tracing (for attribution question).
DLHS	District Level Household Survey
ED	Executive Director
General causal map	Causal map with key organisational capacity changes and underlying reasons for change (causal mechanisms), based on SPO perception.
HIV/AIDS	Human Immunodeficiency Virus infection/Acquired Immune Deficiency Syndrome
HMIS	Health Management Information System
ICDS	Integrated Child Development Services
IDD	Iodine Deficiency Disorders
IDF	India Development Foundation
IEC	Information, Education, Communication
KAP	Knowledge, Attitude, Practice
M&E	Monitoring and Evaluation
MCH	Maternal and Child Health
MDR	Maternal Death Review
MFS	Dutch co-financing system
MHM	Menstrual Hygiene Management
MIS	Management Information System
NGO	Non-Governmental Organisation
NRHM	National Rural Health Mission
OCP	Oral Contraceptive Pills
OD	Organisational Development
PCPNDT	Pre Conception and Pre Natal Diagnostic Techniques (Act)
PHC	Primary health centre
PME	Planning, Monitoring and Evaluation
PNC	Post natal care
PRI	Panchayati Raj Institution
Process tracing	Theory-based approach to trace causal mechanisms

RCH	Reproductive and Child Health

ToC	Theory of Change
VHA	Village Health Association
VHAI	Voluntary Health Association Of India
VO	Voluntary Organisation
Wageningen UR	Wageningen University & Research centre
WHO	World Health Organisation

1 Introduction & summary

1.1 Purpose and outline of the report

The Netherlands has a long tradition of public support for civil bi-lateral development cooperation, going back to the 1960s. The Co-Financing System (*Medefinancieringsstelsel*, or 'MFS') is its most recent expression. MFS II is the 2011-2015 grant framework for Co-Financing Agencies (CFAs), which is directed at achieving a sustainable reduction in poverty. A total of 20 consortia of Dutch CFAs have been awarded €1.9 billion in MFS II grants by the Dutch Ministry of Foreign Affairs (MoFA).

The overall aim of MFS II is to help strengthen civil society in the South as a building block for structural poverty reduction. CFAs receiving MFS II funding work through strategic partnerships with Southern Partner Organisations.

The MFS II framework stipulates that each consortium is required to carry out independent external evaluations to be able to make valid, evaluative statements about the effective use of the available funding. On behalf of Dutch consortia receiving MFS II funding, NWO-WOTRO has issued three calls for proposals. Call deals with joint MFS II evaluations of development interventions at country level. Evaluations must comprise a baseline assessment in 2012 and a follow-up assessment in 2014 and should be arranged according to three categories of priority result areas as defined by MoFA:

Achievement of Millennium Development Goals (MDGs) & themes;

Capacity development of Southern partner organisations (SPO) (5 c study);

Efforts to strengthen civil society.

This report focuses on the assessment of capacity development of southern partner organisations. This evaluation of the organisational capacity development of the SPOs is organised around **four key evaluation questions**:

What are the changes in partner organisations' capacity during the 2012-2014 period?

To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?

Were the efforts of the MFS II consortia efficient?

What factors explain the findings drawn from the questions above?

The purpose of this report is to provide endline information on one of the SPOs involved in the evaluation: BVHA in India. The baseline report is described in a separate document.

Chapter 2 describes general information about the Southern Partner Organisation (SPO). Here you can find general information about the SPO, the context in which the SPO operates, contracting details and background to the SPO. In chapter 3 a brief overview of the methodological approach is described. You can find a more detailed description of the methodological approach in appendix 1. Chapter 4 describes the results of the 5c endline study. It provides an overview of capacity development interventions of the SPO that have been supported by MFS II. It also describes what changes in organisational capacity have taken place since the baseline and why (evaluation question is 1 and 4). This is described as a summary of the indicators per capability as well as a general causal map that provides an overview of the key organisational capacity changes since the baseline, as experienced by the SPO. The complete overview of descriptions per indicator, and how these have changed since the baseline is described in appendix 3. The complete visual and narrative for the key organisational capacity changes that have taken place since the baseline according to the SPO staff present at the endline workshop is presented in appendix 4.

For those SPOs involved in process tracing a summary description of the causal maps for the identified organisational capacity changes in the two selected capabilities (capability to act and commit; capability to adapt and self-renew) is provided (evaluation questions 2 and 4). These causal maps describe the identified key organisational capacity changes that are possibly related to MFS II

interventions in these two capabilities, and how these changes have come about. More detailed information can be found in appendix 5.

Chapter 5 presents a discussion on the findings and methodology and a conclusion on the different evaluation questions.

The overall methodology for the endline study of capacity of southern partner organisations is coordinated between the 8 countries: Bangladesh (Centre for Development Studies, University of Bath; INTRAC); DRC (Disaster Studies, Wageningen UR); Ethiopia (CDI, Wageningen UR); India (CDI, Wageningen UR); Indonesia (CDI, Wageningen UR); Liberia (CDI, Wageningen UR); Pakistan (IDS; MetaMeta); (Uganda (ETC). Specific methodological variations to the approach carried out per country where CDI is involved are also described in this document.

This report is sent to the Co-Financing Agency (CFA) and the Southern Partner Organisation (SPO) for correcting factual errors and for final validation of the report.

1.2 Brief summary of analysis and findings

Over the last two years BVHA has slightly improved in its capability to act and commit. The main improvements were: the director became more responsive, salaries were raised to the government standard, staff improved skills because of trainings and exposure visits, there are better operational plans and strategies, diversification of funding and improved fundraising capacity. In the capability to adapt and self-renew BVHA also improved slightly. This was mainly due to improved M&E application in the SRHR project, strategic use of M&E, better tracking of BVHA's operating environment and being more responsive to network members. BVHA improved slightly in the capability to deliver on development objectives. Operational plans have become more critical and realistic in budget utilisation, BVHA is working more cost-effectively and feedback mechanisms have been formalised. The organisation improved very slightly in its capability to relate. BVHA now involves their partners in PME and has increased the amount and different levels of networks they are active in. The organisation also works more with the government and pays more visits to target groups. Finally, there has been no change in the capability to achieve coherence.

The evaluators considered it important to also note down the SPO's perspective on what they experienced as the most important changes in the organisation since the baseline. During the endline workshop the key organisational capacity changes that were brought up by BVHA's staff were strengthened programme monitoring and operational planning; improved capacity for Sexual and Reproductive Health Rights (SRHR) advocacy at state level and increased capacity to leverage more funds. According to the SPO, these changes happened to partly overlap with the key organisational capacity changes that were selected for process tracing because the first two changes were linked to MFS II supported capacity development interventions and related to the capability to adapt and self-renew, and the capability to act and commit. Strengthened programme monitoring and operational planning, with specific reference to the SRHR project, can to a large extent be attributed to MFS II supported capacity development interventions, and in particular the five biannual PME meetings (also planned during the baseline) and the feedback by Simavi on progress of the SRHR project. The only non-MFS II factors that have played a minor role are the regular staff meetings and the training on project management funded by the International Union, New Delhi. Under the improved capacity for Sexual and Reproductive Health Rights (SRHR) advocacy at state level, most of the improvement in BVHA's competence to deliver SRHR services can be attributed to MFS II funded capacity development interventions. Under the same organisational capacity change improved knowledge on advocacy and lobbying on SRHR can partly be attributed to MFS II supported capacity development interventions.

A key organisational capacity change that was brought up by BVHA's staff but that was not selected for process tracing was: increased capacity to leverage more funds. This capacity increased because of improved visibility, due to improved SRHR advocacy at state level; improved networking, due to being a member of the SRHR Alliance (MFS II funded); and due to improved project outcomes (mostly of MFS II funded projects).

2 General Information about the SPO – BVHA

2.1 General information about the Southern Partner Organisation (SPO)

Country	India
Consortium	Sexual and Reproductive Health and Rights Alliance (SRHR)
Responsible Dutch NGO	Simavi (Rutgers WPF, Lead CFA for Consortium)
Project (if applicable)	Community awareness building on girl child and conscientiousness building on PC & PNDT Act through NGO Intervention; Community empowerment on Gender Equity to Access Reproductive Health Rights in 2 districts of Bihar
Southern partner organisation	Bihar Voluntary Health Association (BVHA)

The project/partner is part of the sample for the following evaluation component(s):

Achievement of MDGs and themes	
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

2.2 The socio-economic, cultural and political context in which the partner operates

Bihar is one of India's poorest states and with a population of about 100 million (Census 2011), it is the third most populous state in India. For about two decades (1985-2005) the state has been especially affected by political turmoil, and bad governance. This has affected both the agricultural and industrial sectors, and governance wise resulted in allegations of widespread corruption and law and order problems. While natural or governance factors such as floods, poor infrastructure and high population density play their part, the state's backwardness also appears to be a function of its inequitable and exploitative socio-economic structure. These conditions have led to a lack of development and an environment in which large-scale poverty eradication programs have had little impact.

The state is overwhelmingly rural with 80 percent of its population living in rural areas and relying on subsistence agriculture for a livelihood. According to the Tendulkar Committee Report 2009¹, nearly 54.4 percent of the population lives below the poverty line, which is much higher than the national average of 37.2 percent. However, if factors beyond income are considered (Multidimensional Poverty Index), about 79.3 percent of the state's population lives below the poverty line. Migration takes place in large number as well as trafficking of children and women is on the rise due to poverty and unemployment.

¹ http://www.in.undp.org/content/india/en/home/operations/about_undp/undp-in-bihar/about-bihar/ Accessed on November 27,2014

Bihar ranks among the lowest in the country on indicators related to primary healthcare infrastructure and reproductive and child health care (District Level Household Survey 2002–04). Health indicators such as the infant mortality rate (44 per 1000 live births as per Sample Registration Survey 2011), maternal mortality ratio (261 per 100,000 live births as per Sample Registration Survey 2007-09) and total fertility rate (3.6 as per Sample Registration Survey 2011), among others, are amongst the highest in the country. Though certain health indicators such as infant mortality and child mortality are beginning to display a progressive arresting trend, the continued lack of adequate medical and paramedical staff and medicines continues to afflict the state’s healthcare system. Given this context, it is not surprising that Bihar is a priority state under the central government’s National Rural Health Mission (NRHM).²

Women have a relatively poor social status and are discriminated in many aspects of life, such as access to nutrition, health care and education. For instance, female literacy rates (53.3 percent in 2011) are lower than the national average (65.6 percent in 2011). Bihar has one of the highest rates of girl child marriages in the country. According to the National Family Health Survey conducted in 2005-06, the median age at first marriage for women in the 20-49 age group is 15.1 years thus exposing them to complications associated with teenage pregnancies. According to District Level Household Survey-3 (DLHS-3; 2007-2008) less than 40 percent of the women have heard of RTI/STI (reproductive tract infection/sexual transmitted infection) and a still lesser percentage 27 percent have heard of HIV/AIDS. Also only around 7.7 per cent of the currently married non-users have ever received counselling by health personnel to adopt family planning.

Although the government has shown willingness to improve health facilities in rural areas, health facilities are still scarce and poorly equipped. The government encourages NGOs to give support to building the capacity of health workers in the government facilities (e.g. auxiliary nurse maid as well as in the community hence BVHA’s work is complementing the efforts of the government to improving health care and in particular sexual reproductive health at individual, community, organisational and institutional level by building mass scale awareness on the sexual reproductive health rights (SRHR) issues. It is also influencing policy makers, demanding for implementation of existing policies, e.g. for better services by collaborating with other stakeholders, including the SRHR alliance³ partners (Rutgers WPF, AMREF Flying Doctors, Dance4Life and Choice).

2.3 Contracting details

When did cooperation with this partner start: 2007

What is the MFS II contracting period:

- Project: Community awareness building on girl child and conscientiousness building on PC & PNDT Act through NGO Intervention, from 1st of November 2008 till 31st March 2012 (covered by MFS II funding from 1st of January 2011 till 31st March 2012).
- Project: Community empowerment on Gender Equity to Access Reproductive Health Rights in 2 districts of Bihar, from 1st of April 2012 till 31st December 2015.

Did cooperation with this partner end? No

If yes, when did it finish? NA

² For additional information on health indicators see http://nrhm.gov.in/nrhm-in-state/state-wise-information/bihar.html#ret_report. Accessed on November 26, 2014.

³ The SRHR alliance was formed to promote the sexual and reproductive health and rights of people of 9 countries in Africa and Asia with the help of local organisations. SIMAVI which is currently funding BVHA is a part of this SRHR alliance.

What is the reason for ending the cooperation with this partner: NA

Is there expected collaboration after the 31st of December 2015? Yes. Simavi started a new 3 year programme with BVHA in 2014. This means they will be collaborating after 2015. It is funded by the National Postal Code Lottery and the English name of this new programme is 'Making Periods Normal'. It is a programme on Menstrual Hygiene Management.

2.4 Background to the Southern Partner Organisation

History

Source: Historical timeline baseline report 2012

Bihar Voluntary Health Association (BVHA) is a secular and voluntary association of charitable Hospital and Health Centres established in the year 1969 by the Medical Mission Sisters. It got registered in February 1970 under the Societies Registration Act XXI of 1860 at Patna, Bihar. The organisation aims to make Health a reality for the people of Bihar especially the weaker section/unprivileged segment of the Society through Voluntary organization/institutions, Charitable Hospitals, Public health Service, groups/professionals/individuals engaged in health sector and with the active involvement and the participation of the community. The organisation not only works as a service provider but also actively involved in capacity building programmes of voluntary organizations and developing model programmes for major health problems e.g. Reproductive Health Issues Malaria, T.B., Diarrhoea, IDD, Kala-azar, Water Born Diseases ,Tobacco related diseases, Life style disorder etc.

During the initial years BVHA was mainly involved with the hospitals and relief activities (by organising health camps and distributing medicines) during the natural calamities. Gradually, it stepped down to the grass-root level NGOs and put effort to make a network of voluntary organizations (till 2013-14 it is involved with 124 network members and more than 270 associate non-member voluntary organizations) directly associated with the mass and responding to their health needs. It started off in 1969 with 10-15 founder members and 2 staff members and had grown to 18 staff (11 core staff and 7 project staff) during baseline. In 2014 it has grown to 34 staff (consist of core staff and project staff) and 11 board members.

In 1974, BVHA got involved in capacity building activities. Two workshops were organised by the Christian Aid on drug inventory management and cold chain management. In 1980 BVHA was asked by the state government to compile immunisation status of the entire state of Bihar.

In 1984 BVHA got involved in immunisation activities as cold chain facilities were not available at the district level in Bihar. Vaccines were collected from BVHA as it had a cold chain management system and taken to far off places. During this time BVHA was also involved in advocacy efforts with the state to install cold chain systems in all district headquarters to that vaccines could be sent to distant places. BVHA compiled the vaccine demand of all the districts.

In 1985 Capacity building activities started by Christian AID from London. Capacity building was in Community Health, School health, inventory management of drugs, documentation of medical records and issue diseases. In 1989-1990 BVHA had a training team of 4 people.

In 1986, a National Health Policy workshop was organised by BVHA and the Government for the assessment of the health scenario and to understand the role of the voluntary associations. After this a Community Health Medicinal Unit was formed whose role was to procure medicines and send it to the inaccessible areas. However since BVHA was a not for profit organisation and procuring drugs involved getting a drug licence and other tax issues the unit was registered as a separate legal entity in 1995-96.

In 1992, BVHA got involved in the Maternal and Child Health Care (MCH) programs which focussed on antenatal care and promotion of institutional delivery. It was also during this time that networking became a full-fledged program and from 1994-1995 BVHA's network not only consisted of diocesan partners but was also joined by the development sector members.

In 1995 BVHA was identified by MEMISA (STICHTING MEMISA MEDICUS MUNDI) for evaluating health programs in Bihar to assess refunding opportunities.

In 1998, Bihar Government made BVHA a nodal agency for AIDS. 31 field operating partners were trained for the purpose. Two MEMISA funded training programs were held in Rajgrih and West Champaran for advertising and raising awareness on AIDS.

In 1999, BVHA was identified as the Mother NGO for 5 districts namely Patna, Vaishali, Nalanda, Munger and Bhojpur for RCH I project and for AYUSH. In the same year BVHA was asked to identify Polio Cases as the Government had declared Bihar Polio free.

In 1999, BVHA got involved in the Malaria Microscopy Program in 6 districts in Jharkhand (undivided Bihar) as there was a Malaria outbreak. The role of BVHA was to observe slides for the malaria parasites and if a slide for a patient was found, positive treatment was provided through the local partners.

During this period BVHA also started procuring IEC materials from the Government, UNICEF, & other sources and started distributing IEC materials to its partners. Since last two years BVHA also collects IEC materials from WHO, UNDP, CHAI, CMAI other state VHAs, VHAI & all other sources and started developing its own IEC materials for various programmes such as Kala-Azar, SRHR, etc.

Between 1999-2000 BVHA was working on HIV/AIDS, RCH I, Polio, distributing IEC materials and Malaria

The period between 1988 and 2000 also witnessed growth in the number of members and before the division of Bihar BVHA had 249 members. In 2012 it had 115 registered members and over 300 non-member organisations. In 2014 it has 117 registered members and more than 300 non-registered members.

Christian AID was the main funder of BVHA for the period between 1985-2003. In 2003 funding from Christian AID stopped as it started focusing on the Dalits and BVHA had to make amendments so that donors looking for specific programs could fund them. Recent amendments are inclusion of water and sanitation, women and trafficking and abortions in the objectives. While the management was worried that BVHA might collapse, the staff showed integrity by working without regular salaries. This period was marked by planning for fund raising strategies.

In 2004-2005 BVHA started implementing small programs on the ground despite the fact that program implementation was not its strength. Donor policies did not allow funds to be transferred to 3rd parties and could give funds only if BVHA implemented the project. In 2006 onwards it started on a small scale in implementing projects along with networking partners.

In 2005-2006 when the new government came in it gave health a priority and did a lot in developing health infrastructure. In 2006 BVHA got its first foreign contribution to implement the PC & PNDDT act⁴ project on reducing female foeticide. Initially SIMAVI supported this project for one year on a pilot basis. On completion of one year it was extended further for three years and again in 2009 it was further extended till 2012. The objective was to reduce female foeticide by creating community awareness on girl child survival and conscientious building on Pre Conception and Post Natal Detection Act. It was supported by SIMAVI to implement in 14 selected districts of Bihar and the project was ended in 2012. Better outcome of this project increased visibility of BVHA at the state and national level and the motivation level of the staff. As a result it could leverage funds from Ministry of Health and Family Welfare, Government of India since 2013 for this project.

In 2007 it started implementing the project "Freedom from Arsenic" with the supported from MISEREOR, Germany. The objective of the project was to improve the quality of the health of the people by making them aware of the use of arsenic free drinking water. This project got over in 2010.

During the Kosi floods in 2008 BVHA not only involved in relief operations but also involved in psychosocial counselling of women and adolescent girls.

⁴ Pre-conception Prenatal Diagnostic Techniques is used for the purpose of detecting genetic or metabolic disorders or chromosomal abnormalities or certain congenital malformations or sex linked disorders. The act was enacted and brought into operation from 1st January, 1996 for the prevention of the misuse of such techniques for the purpose of pre-natal sex determination leading to female foeticide.

In 2008 BVHA received funding from Geneva Global, USA to improve Health Service Delivery System and assured quality care service in maternal health care. It was implemented in three districts of Bihar from 2009 to 2011.

In 2011 it started implementing Social mobilization and service delivery programme along with 20 networking partners in 31 districts of Bihar for malaria control and kala-Azar elimination amongst vulnerable communities supported by Voluntary Health Association of India, New Delhi. It was identified that Bihar accounts for 80% kala-Azar cases in the world. 50% of the population in Bihar including the tribal and other marginalised communities are vulnerable to Kala-azar⁵. This project aimed at social mobilisation and service delivery through creating awareness among communities and capacity building of health workers. This project got over in 2013.

In July 2011 it implemented 'Let Girls be Born' project with financial support from Plan India with an aim to empower the community to address sex selection, sex determination and ensure girl child's right to create a gender balanced society.

In 2012 considering improvement in maternal health system and empowering community to access quality health service in Bihar it implemented the Oxfam funded project 'Initiative to improve maternal health with social determinants approach'. It was implemented in three districts of Bihar and the project was over in 2013.

Over the period while implementing several projects on the development of health in Bihar the capacity of the organization improved in community approach, influence decision makers through advocacy and knowledge on Sexual Reproductive Health Rights (SRHR). Thus, the donor (Simavi) suggested the organisation to develop proposals on the SRHR issues. In 2011-12 it developed proposal for MFS II funding on SRHR issues as suggested by Simavi. In April 2012 it received the MFS II funding from Simavi for Community Empowerment on Gender Equity to access Reproductive Rights. This programme focuses on the most socially and economically backward and unprivileged communities of two districts of Bihar and is implemented through its networking partner organisations – Duncan Hospital, Raxaul (East Champaran) and Fakirana Sisters Society, Betiah (West Champaran). The project interventions were right based which created recognition in the community as well as in government departments especially with health and Integrated Child Development Society (ICDS).

In February 2014 the Maternity Death Review (MDR) project funded by UNICEF was initiated in two districts of Bihar. This is a pilot intervention to institutionalise MDR process and provide a road map for establishing a routine system for review of all maternal deaths as per the Maternal Death Review guidelines of Government of India.

While MFS II funding is continuing for the SRHR project BVHA garnered new funds from Simavi for two new projects: child marriage programme and menstrual hygiene management. Some other new donors have extended support such as: UNFPA, the Population Foundation of India, BMZ-KKS, and the Ministry of Health and Family Welfare of the government of India. Along with diversified funding sources, BVHA could attract government agencies by increasing its visibility at various levels through their new partnership with bilateral and multilateral agencies.

Over the last two years BVHA strengthened its internal capacity, networking and visibility for e.g. it formed Advisory Committee consist of a body of intellectuals from different member organizations which provides visionary approach for the improvement of the programs activities of the organisation, SRHR Forum at state level involving government officials and development agencies, became a member of State Technical Advisory group, core group member in the Reduction of Total fertility Rate (TFR) under "Bihar Manav Vikas Mission" (a Bihar Human Resource Development Mission, Government of Bihar programme).

⁵ Kala azar also known as Visceral Leishmaniasis is caused by bites from female phlebotomine sand flies the vector (or transmitter) of the leishmania parasite.

Vision

Source: <http://www.biharvha.org/aboutus.html> 23-10-2014

BVHA assists in making community health a reality for all the people of Bihar with priority for the less privileged millions, with their involvement & participation through the voluntary health sector.

Mission

Source: <http://www.biharvha.org/aboutus.html> 23-10-2014

The mission is to reach to the un-reached through Charitable Hospitals, Dispensaries, Health Centres & Voluntary Organizations/Institutions involved in health promotion and also groups, professionals & individuals engaged & dedicated with some concern in health promotion of the people of Bihar with priority for the less privileged millions with their involvement and participation through the Voluntary Health Sector.

Strategies

1. Support to voluntary organisations (VOs) & Community Based organisations (CBOs):
 - a. Educational Programme on health & other health related programmes – through IEC, Mass Education, Exhibitions & Camps and Capacity Building through its scheduled training & also conducting On-Request trainings.
 - b. Project Consultancy:
BVHA does a lot of consultancy for voluntary organisation for project formulation, monitoring, evaluation, survey, data analysis & report writing & also does consultancy services as per T.O.R. mostly on health & related aspects for 7 international donors such as UNICEF, MEMISA etc. BVHA does play a role for pre funding evaluation, monitoring and evaluation.
 - c. Information & Documentation & Dissemination of IEC Material Support:
Knowledge is power & hence BVHA's one of the main strategy for intervention is dissemination of health information & message. It collects health information from various sources like Government, WHO, UNICEF, UNDP, CHAI, CMAI other state VHAs, VHAIs & all other sources – and disseminates them as well as it documents health information's collected from paper clipping, books, journals, magazines on health & development. This facility is open for all organisations.
 - d. Relief Work:
BVHA does help in Medical relief to NGOs working in flood, famine areas & also provides training on preparedness.
2. Networking
The main objective of Networking is to provide synergic strength to the network of VOs working in the health & related sector to act as a united pressure group for proper implementation of health programme & policies as well as to bring positive change at the local, district, regional & state level. Decentralizing the support activities of BVHA respond more to the regional needs & also focusing on major health issues of state at State Level Network Forum. It has 7 regional forums (4 in Bihar and 3 in Jharkhand) and also initiated one State level forum in which other network agencies are also involved which are working or willing to work with the grass root people for raising their health status.
3. Advocacy
BVHA does Advocacy at various level – for grass-root & field level it advocates for promotion of healthy habits for promotion, prevention & presentation of health through Health Education, IEC and other Mass Education Media. By developing the capacities on NGOs, CBOs Panchayat representatives for policy & programme advocacy for health & related development aspect & also pressurizing & influencing the media, policy makers, legislators through appropriate study & information sharing on health & related issues for pro-people policy development. This is a major activity of BVHA.

BVHA mainly works through its member and non-member organisations in Bihar to create a healthy community. It conducts programmes to build up the capacity of voluntary agencies in Programme Planning, Implementation and Management. It facilitates community health action by promoting social justice in the provision and distribution of health care encouraging voluntary health action of people

and enabling them through various support services so that it addresses their health needs by accessing the Primary Health Services and basic health services rights through community and voluntary organisation's participation. However, the advocacy and liaising with the Government is the major activity of BVHA as the ultimate responsibility of Health is of the State Government.

3 Methodological approach and reflection

3.1 Overall methodological approach and reflection

This chapter describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

Note: this methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report A detailed overview of the approach is described in appendix 1.

The first (changes in organisational capacity) and the fourth evaluation question are addressed together through:

- **Changes in the 5C indicators since the baseline:** standard indicators have been agreed upon for each of the five capabilities of the five capabilities framework (see appendix 2) and changes between the baseline, and the endline situation have been described. For data collection a mix of data collection methods has been used, including self-assessments by SPO staff; interviews with SPO staff and externals; document review; observation. For data analysis, the Nvivo software program for qualitative data analysis has been used. Final descriptions per indicator and per capability with corresponding scores have been provided.
- **Key organisational capacity changes – 'general causal map':** during the endline workshop a brainstorm has been facilitated to generate the key organisational capacity changes as perceived by the SPO since the baseline, with related underlying causes. For this purpose, a visual as well as a narrative causal map have been described.

In terms of the attribution question (2 and 4), '**process tracing**' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

At the end of this appendix a brief methodological reflection is provided.

3.2 Assessing changes in organisational capacity and reasons for change - evaluation question 1 and 4

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?** And the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This is explained below. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

The evaluators considered it important to also note down a consolidated SPO story and this would also provide more information about what the SPO considered to be important in terms of organisational capacity changes since the baseline and how they perceived these key changes to have come about. Whilst this information has not been validated with sources other than SPO staff, it was considered important to understand how the SPOs has perceived changes in the organisation since the baseline.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information is provided for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the next session on the evaluation question on attribution, as described below and in the appendix 1.

How information was collected and analysed for addressing evaluation question 1 and 4, in terms of description of changes in indicators per capability as well as in terms of the general causal map, based on key organisational capacity changes as perceived by the SPO staff, is further described below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012⁶.

Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See

⁶ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

1. **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
2. **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
3. **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
4. **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
5. **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Please see appendix 1 for a description of the detailed process and steps.

3.3 Attributing changes in organisational capacity - evaluation question 2 and 4

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*** and the fourth evaluation question: ***“What factors explain the findings drawn from the questions above?”***

In terms of the attribution question (2), ‘process tracing’ is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Below, the selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

3.3.1 Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

For the detailed results of this selection, in the four countries that CDI is involved in, please see appendix 1. The following SPOs were selected for process tracing:

- Ethiopia: AMREF, ECFA, FSCE, HUNDEE (4/9)
- India: BVHA, COUNT, FFID, SMILE, VTRC (5/10)
- Indonesia: ASB, ECPAT, PtPPMA, YPI, YRBI (5/12)
- Liberia: BSC, RHRAP (2/5).

3.3.2 Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ‘general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop

have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained. More information can be found in Appendix 1.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

3.3.3 Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team. These can also be found in appendix 1.

Use of the 5 core capabilities framework and qualitative approach: this has proven to be a very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified

organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
 - Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
 - Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

4 Results

4.1 MFS II supported capacity development interventions

Below an overview of the different MFS II supported capacity development interventions of BVHA that have taken place since 2011 are described. The information is based on the information provided by Simavi.

Table 1

Information about MFS II supported capacity development interventions since baseline

Title of the MFS II supported capacity development intervention	Objectives	Activities	Timing and duration	Budget
Strengthening advocacy capacity including evidence based lobby efforts	To develop the capacity of Partner Organisations on Policy influencing and Policy implementation with focus on SRHR, services/entitlements	Joint planning and training, having a national programme coordinator who advised on advocacy efforts, learning from other partners how they do it:		In the period 2011 till May 2014: Estimated 4500 Euro for BVHA (more than 5 occasions)
		Identifying the advocacy issue, what is advocacy by Simavi and VHAI	21-24 November 2011	
		Advocacy, continuation, what is advocacy by VHAI	18-20 April 2012	
		Advocacy, progress, joint agenda by Simavi	11-12 October 2012	
		Workshop joint advocacy (CINI) and state level visits	April, 7- 9 May and December 2013	
		3 day advocacy workshop: working on state level and national joint agendas by Simavi and Rineke van Dam	19-22 May 2014	
Planning, monitoring and evaluation sessions in workshops, multiple feedback on report, and documents. Training on HMIS; sharing examples from partners	To develop capacity of Partner Organisations on PME	Training and feedback, discussion on formats, explanations on evaluation methodologies, discussions on purpose of monitoring systems		Around 6100 Euro for BVHA (several occasions training was provided). This excludes travel/ accommodation of the facilitators.
		Training given on baseline tools and methodology by Simavi	3 days in March 2011	
		Discussing results of baseline, planning, reporting and OCA's by Simavi and external	21-24 November 2011	

		consultant		
		Planning, discussion on second baseline by Simavi	17-18 May 2012	
		PME - how to measure results; planning 2013 by Simavi	11-12 October 2012	
		PME: how to measure results, discussion on output in annual report by Simavi	4-6 March 2013	
		Preliminary discussion on results, annual planning 2014 by Simavi	8-10 October 2013	
		Analysing results, are we on track, discussion on Midterm evaluation by Simavi	11 March 2014	
Training on SRHR and Comprehensive Sexual Education (CSE) through training sessions, exposure visits, feedback on implementation	To develop capacity of partner organisations on CSE.	All activities related to this contribute to stronger capacity, having more ideas and also feeling comfortably to talk about sensitive issues.		Around 3000 Euro in total, used during several occasions, - Estimation is only for BVHA
		Training SRHR with different speakers and topics	18 -20 April 2012	
		CSE training for all SRHR alliance partners (basic) by Restless Development	24 June 2012	
		Discussion on content of joint SRHR manual (all partners and external facilitator, government staff)	4-6 March 2013	
		Refresher CSE training for all partners (Restless Development and external consultants)	4-6 April 2013	
Workshop "Accountability and Compliance in Voluntary Sector" At Hotel Dee Emprasa, Esplande, Kolkata Organized by : Credibility Alliance	To develop capacity of Partner Organisations on governance and financial management. Compliance to national regulatory system and to improve transparency in financial management and practices.	<ul style="list-style-type: none"> •Accountable Governance & processes •Effective Financial Management •Importance and integration of transparency in organisational systems and practices •Recent developments in legal framework & Compliance (New FCRA 2010 and the impending Direct Taxes Code and its implications) 	17-18 January 2013	275 Euro
Review Meet at NEEDS covering topics of advocacy, PME and SRHR	Half Yearly review, PME and joint action planning.	Field exposure and Learning- one day. Presentation by PME buddy -SIMAVI and Joint capacity building planning.	10 October 2012	200 Euro

Exchange visit to SRHR YFS clinic of VHAI	To develop capacity of partners in Jharkhand and Bihar to promote ARSH services through government system	Visits to government run ARSH clinics in Ganjam district Odisha.	19 December 2012	300 Euros
Regional meeting Indonesia, focus on SRHR-CSE delivery (Indonesia team, alliance office)	Inter Country Learning Agenda -To learn what different activities (incl. CSE materials) and what approaches are implemented in the several countries' CSE programs. To identify successful strategies and success factors in the implementation of learning materials on SRHR.	CSE Workshop facilitated by Rutgers WPF in Indonesia. Exposure to SRHR Alliance programme in Indonesia. Sharing of experience by Bangladesh, India, Indonesia and Pakistan.	21-24 October 2013	2000 Euros (RWPF funds)

4.2 Changes in capacity and reasons for change - evaluation question 1 and 4

Below you can find a description of the changes in each of the five core capabilities. This information is based on the analysis of the information per each of the indicators. This detailed information for each of the indicators describes the current situation, and how and why it has changed since the baseline. See also annex 3.

4.2.1 Changes in the five core capabilities

Capability to act and commit

The Executive Director is more responsive in his interaction with BVHA's partner organisations. This was initially triggered by a requirement of Simavi. The ED has been given more flexibility by the board to take up new projects and approach new donor agencies by getting more involvement in promotion and fundraising for the organisation. While the governing board still holds most authority for making decisions on funding of the projects and utilisation of funds, the executive director experiences less

opposition from the network members in terms of his strategic guidance to the organisation as he gains more support from the board.

There is still some staff turnover at the project level, where staff has left because of low salaries or better opportunities. The governing board is now looking more within the organisation to fill vacant senior positions and recognise the performance of existing staff by promoting them. This together with the revision of the salary structure after the baseline assessment and discussions with Simavi has improved the incentives of staff to work at BVHA. Other incentives still include freedom at work, skill development through training and the homely environment created by collaboration between staff. BVHA staff members are aware of the organisational structure in BVHA, and a written copy is available.

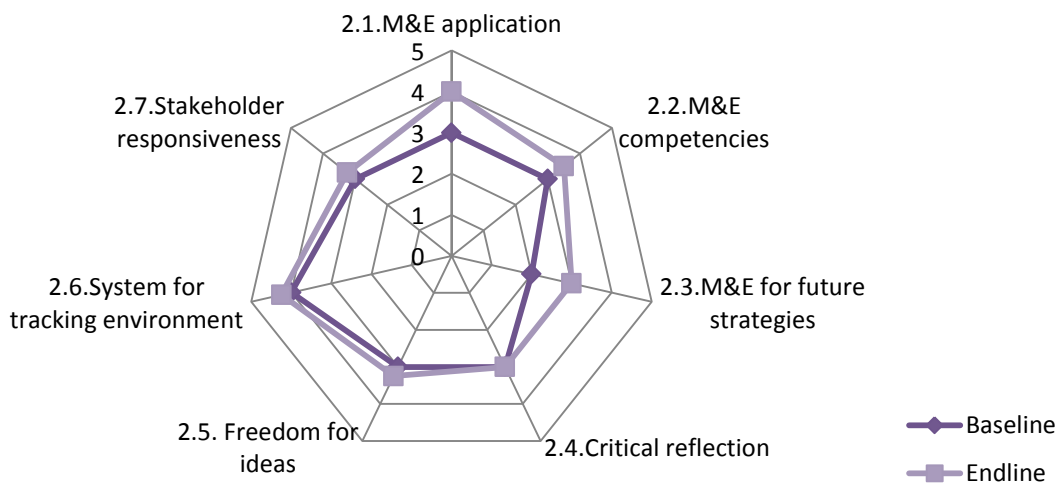

BVHA’s strategies are now more based on project outcomes from its M&E system, rather than just on outputs. They continue to involve their target groups and link with like-minded NGOs and the government when formulating strategies. The organisation continues to work with annual, quarterly and monthly work plans and BVHA’s work continues to rely on their partners’ timeliness. However, partners have improved their timeliness because of the introduction of proper progress monitoring methods in the SRHR project by Simavi, that have had its effect on other project teams as well. Some of the core skills that needed to be upgraded during the baseline, have now been developed. This includes: PME and fundraising but also more specific skills and knowledge on SRHR. The presence of the national coordinator of the SRHR alliance at BVHA has contributed to this. Also all BVHA staff had equal access to more training programmes, as per their programme’s need on the topics: SRHR, MIS, success story writing, government schemes, comprehensive sexual education, advocacy, output and outcome indicators, the PC and PNDT Act, financial compliance and communication.

BVHA has increased its visibility because of its involvement in the SRHR project and alliance. This attracted donors like UNFPA, UNICEF, the Population Foundation of India, BMZ-KKS and the government of India and Simavi approving two new projects. They also have other strategies to raise funds which include renting out their training facilities and providing training for paying participants. There are still no written funding procedures, but staff has become more motivated after the revision of the salary structure and better capable to write and send more and better proposals to new donor agencies.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

Capability to adapt and self-renew

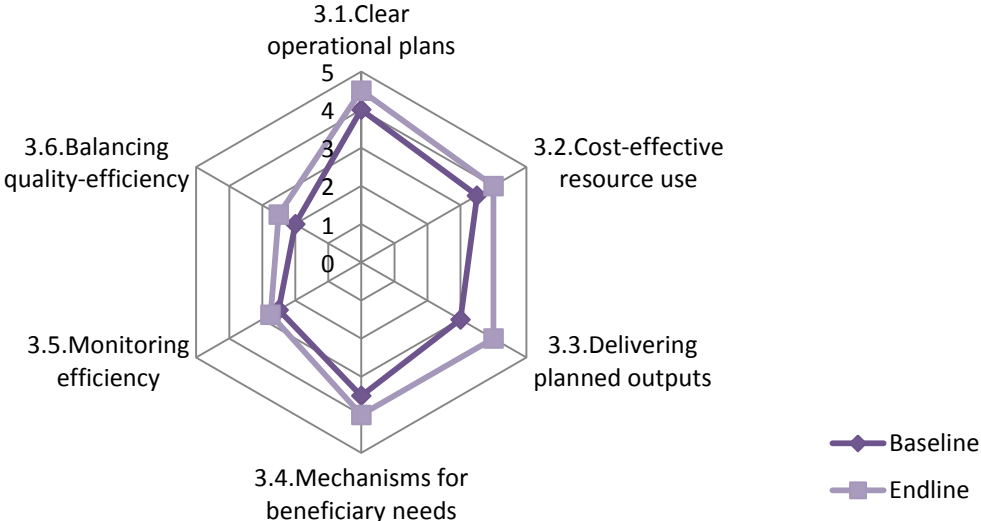

Already during the baseline evaluation, BVHA had a monitoring and evaluation system in place. The M&E is now focussing more on outcomes than during the baseline. This is evident from BVHA’s

improved understanding of how to measure outcomes through discussing this within the SRHR alliance and guidance of Simavi. There is an overview of how M&E is organised in the SRHR project which provides very clear instructions on each output and outcome indicator and how to measure it. Use of MIS has also improved since the baseline: MIS formats are in place for advocacy officers and partner organisation for monthly reporting on progress in the SRHR project. While there is still no dedicated M&E person at BVHA, staff skills in M&E have improved with support from the national programme coordinator, PME workshops, individual supervision by Simavi and through inviting M&E experts for in-house training (sometimes funded by other donors). Project officers do most the monitoring of the projects, the Executive Director is now also more pro-actively involved in monitoring. There is more room for making strategic changes based on M&E, because of the focus now also on outcomes, not just outputs. Furthermore, Simavi stimulates this and BVHA has improved its M&E capacity so that they are now better at analysing (also strategic level) data and identifying strategic moves and more effective interventions based on this. Staff can raise issues with their project heads, who are now more empowered to take decisions, during regular monthly meetings or during quarterly governing board meetings. In the monthly meetings staff give a progress update and reflect upon their performance. The Executive Director continues to have limited power which causes delays in communicating decisions to staff and acting upon them. Staff is still free to come up with ideas that are welcomed by the ED. Through encouragement and learning from other organisations BVHA has been coming up with some new ideas like integrating different programmes. Through its involvement in the SRHR alliance, BVHA has improved its networking capability and is now better informed on what is happening in other states, and at national level and can respond proactively. BVHA also gets information through its network members and other NGOs on important new NGO laws and external changes that are then discussed with staff and in board meetings. BVHA continues to be open and responsive to their stakeholders, but this has still not been institutionalised. Inputs of network partners are used to identify projects and BVHA now holds at least two Governing Board Meetings per year so that the board can meet the management and staff of the hosting network organisation and identify their need and expectations from BVHA face to face.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

Capability to deliver on development objectives

Every project of BVHA still has an operational work plan and budget. BVHA is now more critical and realistic about efficient budget utilisation, asks timely for reallocation due to contextual changes and has improved its operational plans. This led to BVHA’s budgets being more realistic now and them being able to implement the plan within the budget. The organisation is still doing its level best to use its resources effectively by keeping an inventory, reducing on mailing and paper costs by using the internet and by using its own facilities for trainings and meetings. As operational plans of BVHA improved, so did the formats to monitor their partners’ progress. These are now easier to understand

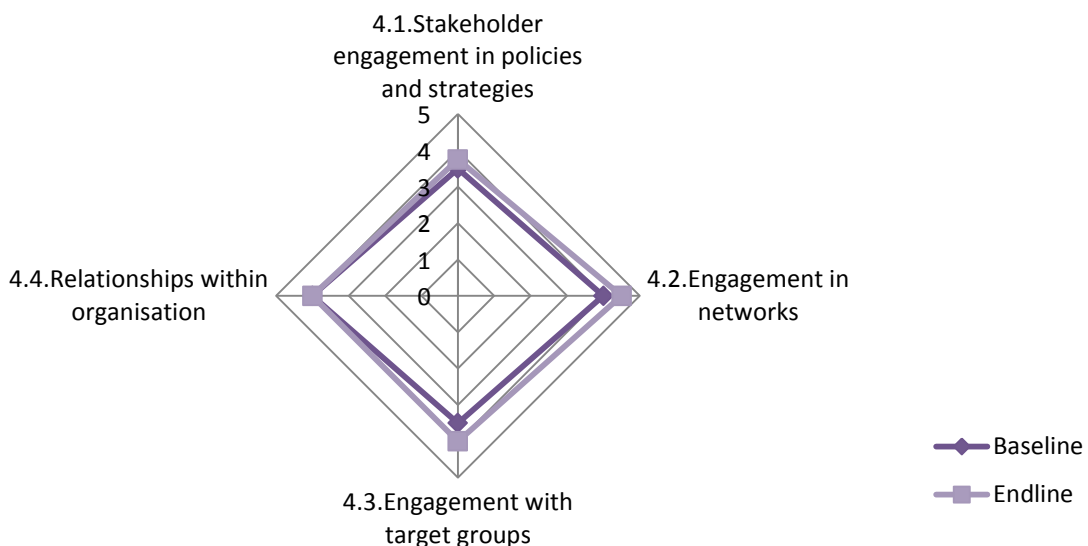

so that the information that reaches BVHA is more accurate and timely. BVHA is now reaching its output and outcome results and has monthly action plans in place through which staff report their progress and follow up on unaccomplished tasks.

In contradiction with the baseline scenario, BVHA now has a structured mechanism in place to verify that services meet beneficiary needs, as Simavi made client opinion and satisfaction surveys part of the monitoring framework for the MFS II funded project. BVHA also assesses the needs of its network partners through formats and regional meetings. There are still no formal input-output ratios calculated in BVHA. Although there are still no formal quality control mechanisms, the monitoring mechanisms of BVHA were strengthened. BVHA is now keener to discuss budget reallocations to increase the effectiveness or quality of their work. Efficiency is also discussed with Simavi through e.g. scaling up in areas where work is going well. Quality control has also been a topic of discussion during SRHR alliance meeting and review meetings with other donors. BVHA is continuously trying to upgrade its quality control.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

Capability to relate

The Board of BVHA, that is composed of network members, still has an important role in developing policies and strategies together with staff. BVHA still engage partner organisations in planning of projects, but now also involves them in developing M&E formats. A BVHA Programme Advisory Committee has been established that meets every six months to discuss strategies and give directions for effective implementation. An example of a project that was designed participatory is the SRHR initiative that was developed together with BVHA’s network partners. The organisational structure of BVHA is based on its engagement with partner organisations. BVHA continued to work in 38 districts of Bihar with 115 members and 300 associated non-members. Over the last two years the main change has been BVHA’s increased work on advocacy with different levels of government officials for better SRHR services specifically at the state, district and block level which has led to proper access of the required services for the community. With a view to be in a better position to carry out sustained lobbying and advocacy with policy targets, further capacity strengthening initiatives have been undertaken by BVHA: increased collaboration between SRHR partners; training of partner representatives of SRHR Alliance on CSE and SRHR.

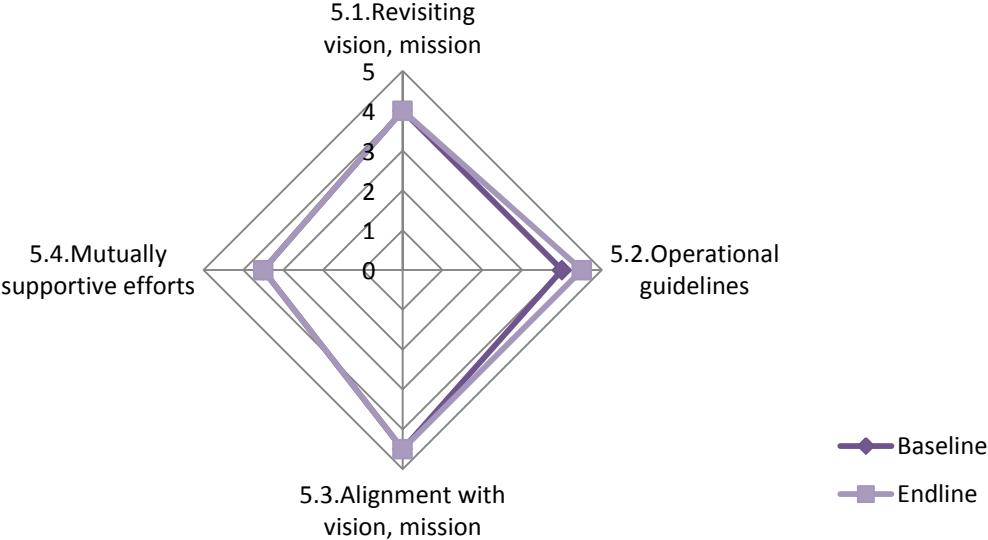

BVHA still works mostly through their network partners which they now visit more frequently (monthly) as this was in the requirements of the MFS II funded project. The Board and Executive Director also took the initiative to visit target groups themselves and make surprise visits. BVHA has also started implementing projects directly and has in that sense increased its interaction with the beneficiaries. Staff continue to be free to share their problems and opinion at any time. Staff can communicate their issues to top management during monthly and quarterly meetings. Issues or

grievances of staff are now first discussed with their immediate supervisors and if it is not solved there, then it is referred to higher level.

Score baseline: 3.75

Score endline: 4.0 (very slight improvement)

Capability to achieve coherence

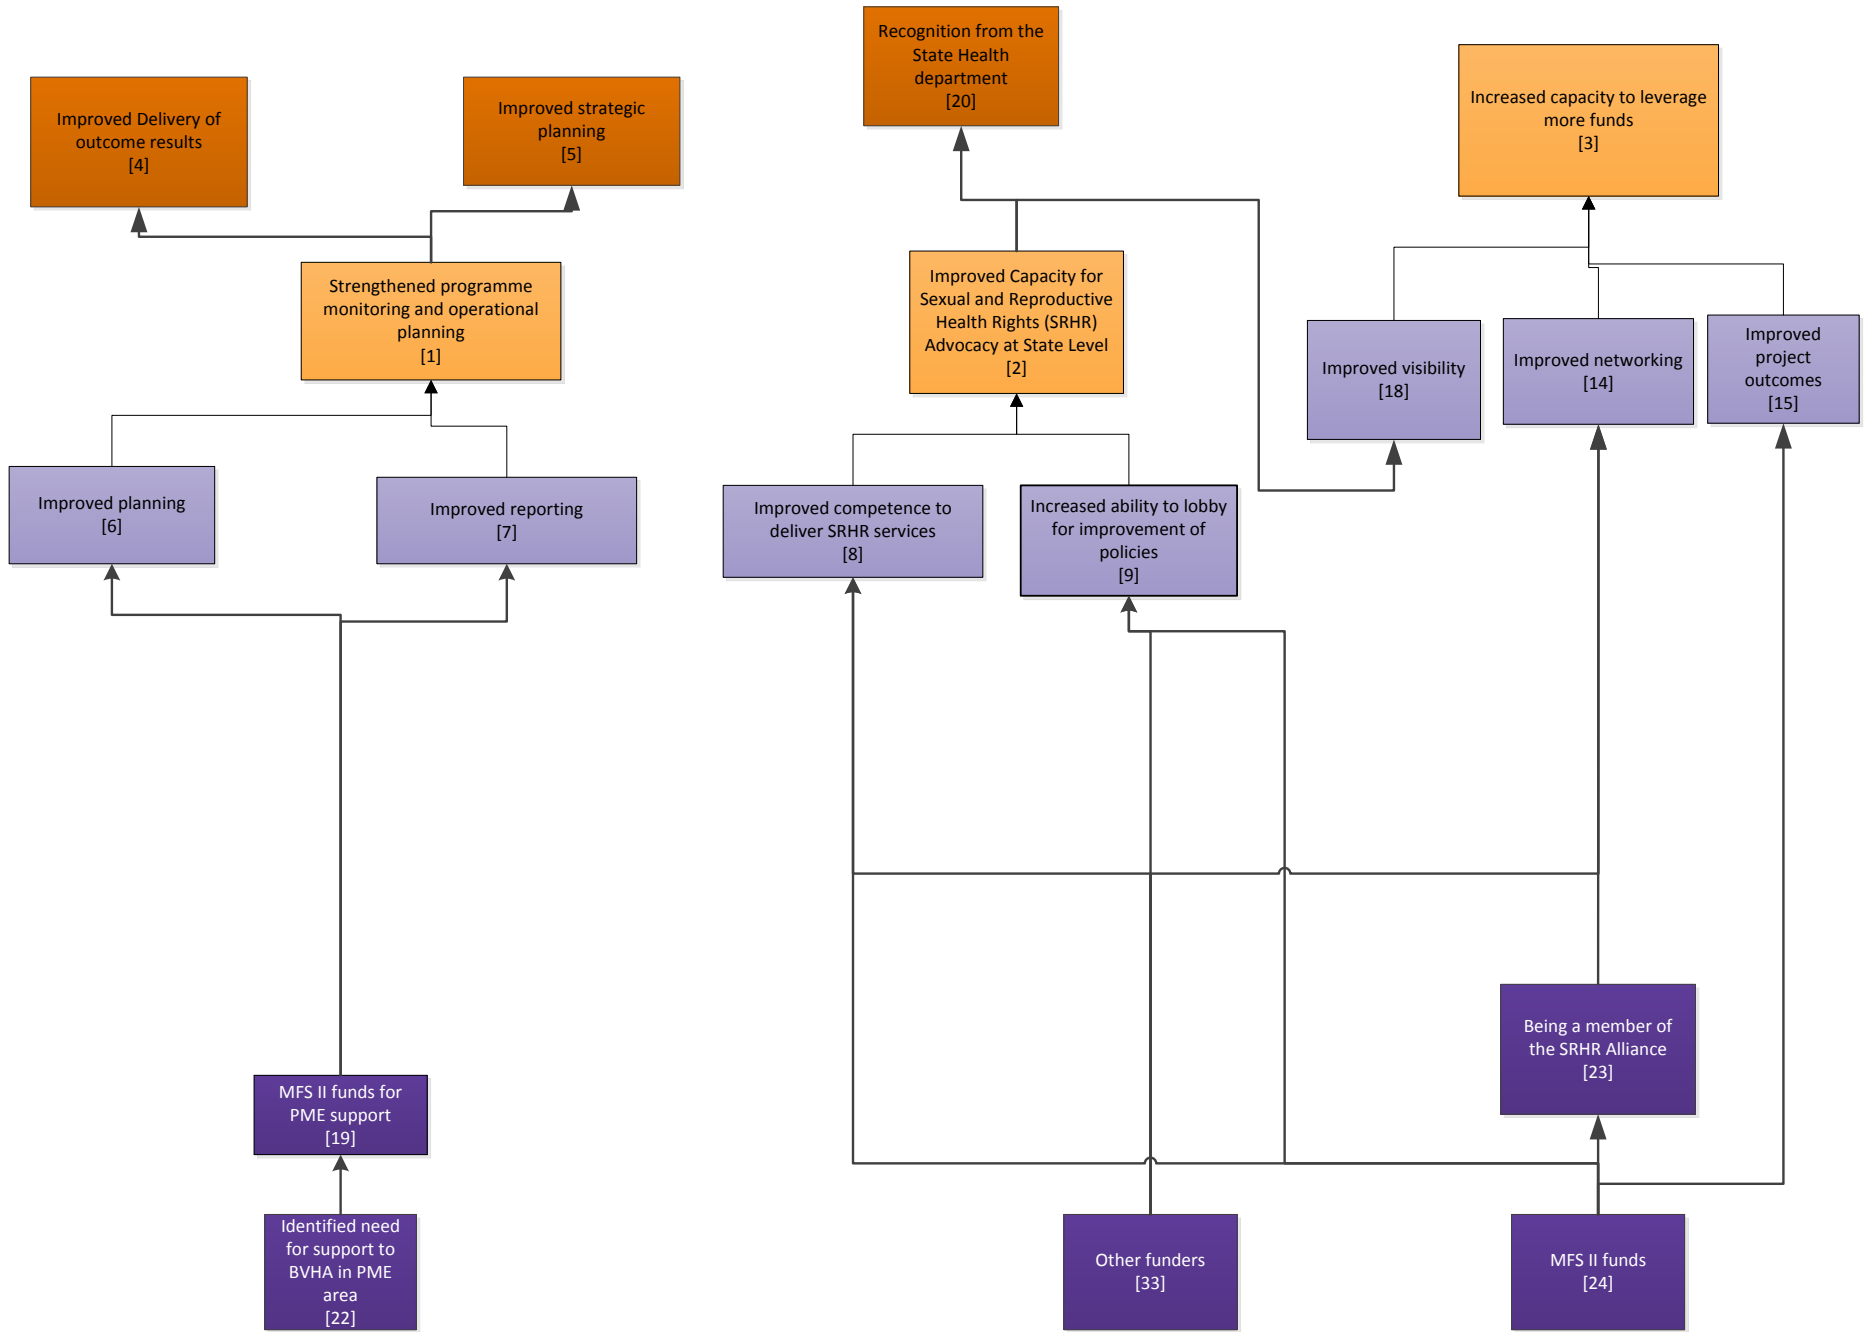

The vision and mission of BVHA have remained the same. BVHA’s projects remain to mostly focus on health related issues, where the availability of donor agencies determines the specific issue to focus on. Projects are mutually supportive. Personnel, admin, finance, gender and child protection policies remain in place. There are now detailed technical guidelines for the SRHR project, developed with the SRHR alliance since the baseline. Operations and strategies of BVHA which now include health and livelihoods remain aligned to their vision and mission.

Score baseline: 4.0

Score endline: 4.1 (no change)

4.2.2 General changes in the organisational capacity of the SPO

During the endline workshop at the SPO, a discussion was held around what were the main changes in organisational capacity since the baseline and why these changes have taken place. The discussion was visualised in a general causal map as can be seen below. The narrative for the general causal map is also described below. It gives a more general picture of what was seen as important changes in the organisation since the baseline, and how these changes have come about , and that tells the more general story about the organisational changes in the SPO. The evaluators considered it important to also note down the SPO’s story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provide by the evaluation team.

The evaluation team carried out an end line assessment at BVHA from 18 to 20 June 2014. During this workshop, the team made a recap of key features of the organisation in the baseline in 2012 (such as vision, mission, strategies, clients, partnerships). This was the basis for discussing changes that had happened to the organisation since the baseline.

There were three main changes that happened in the organisation since the baseline in 2012:

1. Strengthened programme monitoring and operational planning [1];
2. Improved Capacity for Sexual and Reproductive Health Rights (SRHR) Advocacy at State Level [2];
3. Increased capacity in to leverage more funds [3].

These changes coincided partly with the outcome areas that were chosen for process tracing, so as to get detailed information on how these changes in organisational capacity came about. Therefore the general causal map overlaps strongly with the causal maps developed for each of these outcome areas/organisational capacity changes to be analysed during the process tracing. All the details about these changes in organisational capacity as well as the underlying factors that influenced these changes are described in the narrative and visual below. There is general causal map that explains the overview of these but for the details please see the separate causal maps for improved program monitoring and planning, and the causal map for improved capacity for SRHR advocacy.

The first three main organisational capacity changes are described in the light orange boxes and some of their key consequences are noted above these cards in dark orange. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the organisation are listed at the bottom in dark purple. The numbers in the visual correspond with the numbers in the narrative.

1. Strengthened Programme Monitoring and Operational Planning [1]

Improved planning and monitoring has led to improved delivery on outcome results [4] as well as improved strategic planning [5].

According to the Executive Director, BVHA has strengthened its planning and monitoring activities in the past two years [1]. During the completion of the SRHR project and Oxfam India project, BVHA developed better M&E formats. These formats were shared with their partner organisations for systematic data collection and timely reporting. Through improved planning and monitoring The organisation was thus able to use timely information while planning for future activities. Programme monitoring and operational planning was strengthened because of:

- *Improved planning [6]:* BVHA has improved its planning over the last two years. Strategic planning has improved as "BVHA is now able to identify strategic moves, more effective interventions, such as use of multiple strategies, multi-stakeholder involvement at various levels, use of multimedia IEC strategies."
- *Improved reporting [7]:* BVHA participants that attended the endline workshop indicated that BVHA has improved reporting since the baseline. Evidence of this can be found in Simavi's response to a report submitted by the Project Manager.

2. Improved Capacity for Sexual and Reproductive Health Rights (SRHR) Advocacy at State Level [2]

Over the last two years BVHA has improved its capacity for sexual and reproductive health advocacy at the state level [2]. This has helped BVHA in getting recognition from the State Health department [20]. BVHA has brought up SRHR issues to the attention of the state government which is demonstrated by the examples described here. They wrote an advocacy paper with the objective of ensuring availability and accessibility of comprehensive Sexual and Reproductive Health services for adolescents & women at community and school level.

Improved Capacity for Sexual and Reproductive Health Rights (SRHR) Advocacy at State Level [2] is due to:

- *Improved competence to deliver SRHR services [8]:* BVHA's capacity for Sexual and Reproductive Health Rights (SRHR) Advocacy at State Level [2] occurred because BVHA as an organisation has been in the fore front in delivering SRHR services through its local partner organisations and thus is seen as one of the leading partners to take forward advocacy issues on SRHR. Over the last two years BVHA has improved its competence to deliver SRHR services through its local partner organisations
- *Increased ability to lobby for improvement of policies [9]:* BVHA is in a unique position to be working with a large variety of stakeholders. Thus, BVHA is in a very good position to create a base, generate awareness, harness the critical mass of stakeholders at all levels to carry out lobby and advocacy at the state level, mainly targeting state policies on SRHR.

3. Increased capacity to leverage more funds [3]

The capacity to leverage more funds has increased. Staff of BVHA is highly motivated and tries to go an extra mile to explore new funding opportunities especially with the corporate sector. Now, more new proposals are prepared and sent to different donor agencies the utilization of the BVHA training hall and facilities by other organisations has increased which provides a good source of income for BVHA. This increased due to:

- *Improved visibility [18]:* BVHA's visibility improved because of improved advocacy at state level [2]. Some of the advocacy interventions in the SRHR project have led to BVHA meeting the most senior officials and ministers to discuss on the SRHR issues in Bihar and it has helped for better recognition of BVHA at the state level.
- *Improved networking [14]:* Being a member of the SRHR Alliance, their credibility as SRHR alliance member, and ability to implement a comprehensive SRHR programme has attracted donors. For example UNICEF started funding the Maternal Death Review Project under the project title 'Piloting Review Maternal Death in two districts of Gaya and Purniya, Bihar' since February 2014.
- *Improved project outcomes [15]:* The project "Pre-conception and Prenatal Diagnostic Techniques (PC PNDT)" supported by Simavi since 2009 to 2012 resulted in improved perception of the community regarding female feticide. As a result BVHA could use this project results to leverage funds from the Ministry of Health and Family Welfare, Government of India since 2013 for the "Awareness Building Among communities on Girl Child Survival and PC & PNDT Act" project.

The main underlying causes for these three key organisational changes were:

- *Identified need for support to BVHA in PME area [22]* and the subsequent MFS II funds for PME support [22] have led to all the capacity changes under: strengthened programme monitoring and operational planning [1] through support of Simavi to BVHA mainly by providing feedback and holding biannual PME meetings.
- *Other funders [33]* have funded trainings and meetings that have contributed to improved competence to deliver SRHR services [8], increased ability to lobby for improvement of policies [9] and improved networking [14].
- *(General) MFS II funds [24]* for the SRHR project of BVHA, have allowed BVHA to become a member of the SRHR alliance [23] which has contributed positively to the networking [14] of BVHA.

4.3 Attributing changes in organisational capacity development - evaluation question 2 and 4

Note: for each country about 50% of the SPOs has been chosen to be involved in process tracing, which is the main approach chosen to address evaluation question 2. For more information please also see chapter 3 on methodological approach. For each of these SPOs the focus has been on the capability to act and commit and the capability to adapt and self-renew, since these were the most commonly addressed capabilities when planning MFS II supported capacity development interventions for the SPO.

For each of the MFS II supported capacity development interventions -under these two capabilities- an outcome area has been identified, describing a particular change in terms of organisational capacity of the SPO. Process tracing has been carried out for each outcome area. The following outcome areas have been identified under the capability to act and commit and the capability to adapt and self-renew. Also the MFS II capacity development interventions that could possibly be linked to these outcome areas are described in the table below.

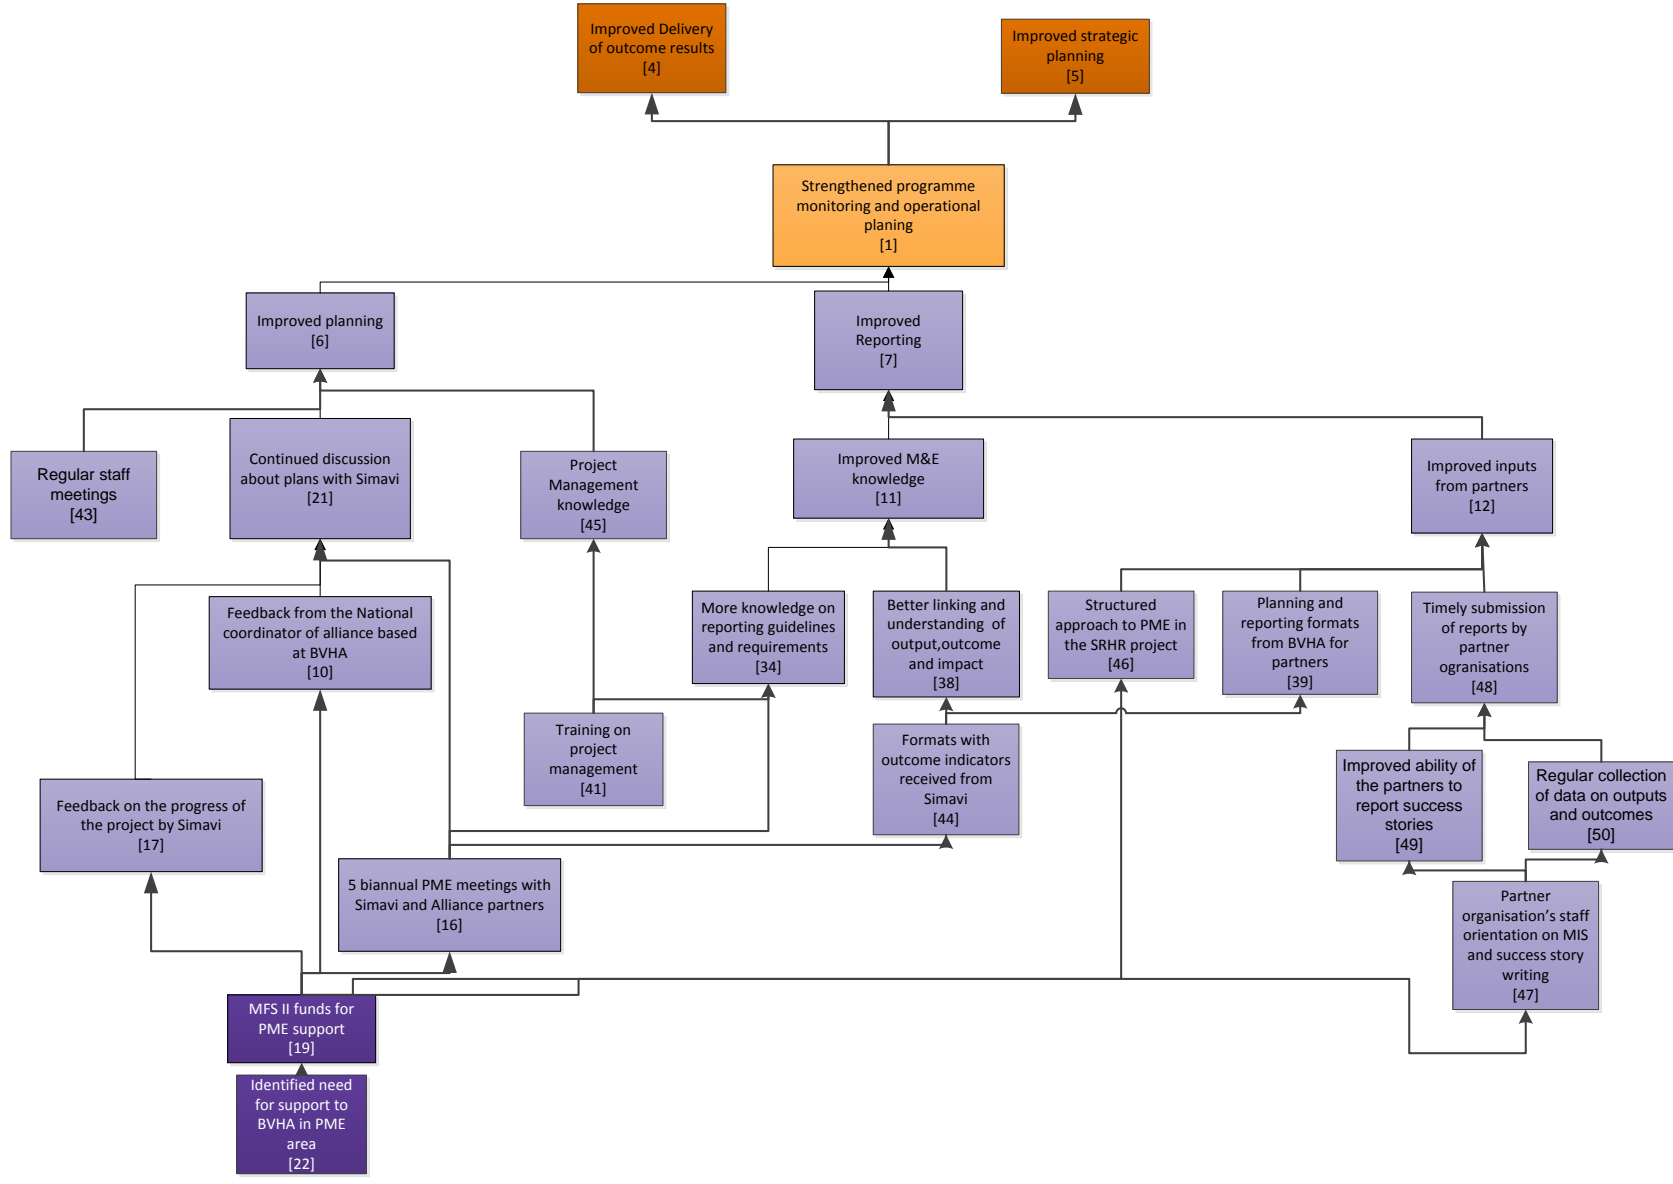

Table 2
Information on selected capabilities, outcome areas and MFS II supported capacity development interventions since the baseline

Capability	Outcome area	MFS II supported capacity development intervention(2)
Capability to act and commit	Improved Capacity for Sexual and Reproductive Health Rights (SRHR) Advocacy at State Level	Strengthening advocacy capacity including evidence based lobby efforts; Training on SRHR and Comprehensive Sexual Education (CSE) through training sessions, exposure visits, feedback on implementation; Review Meet at NEEDS covering topics of advocacy, PME and SRHR
Capability to adapt and self-renew	Strengthened Programme Monitoring and Operational Planning	Planning, monitoring and evaluation sessions in workshops, multiple feedback on report, and documents. Training on HMIS; sharing examples from partners

The next sections will describe the results of process tracing for each of the outcome areas, and will describe to what extent these outcome areas have taken place as a result of MFS II supported capacity development interventions and/or other related factors and actors.

4.3.1 Strengthened Programme Monitoring and Operational Planning

This is a summary of the final causal map of the key change: improved financial sustainability. For a detailed visual to which the numbers refer and narrative with sources please see Appendix 5.

According to the Executive Director, BVHA has strengthened its planning and monitoring activities in the past two years [1]. During the completion of the SRHR project and Oxfam India project, BVHA developed better M&E formats. These formats were shared with their partner organisations for systematic data collection and timely reporting. Through improved planning and monitoring The organisation was thus able to use timely information while planning for future activities. BVHA is now in the process of developing organisational M&E formats for tracking progress of the programs/projects as and when required.

Improved planning and monitoring has led to **improved delivery on outcome results** [4] as **well as improved strategic planning** [5]. This is evident from the fact that *"During the baseline, the current project was evaluated and they reached the outputs but not the outcomes. Now their outcome results were very good, this indicates improvement"*. The improvement in outcome results has been due to continuous and regular discussions on outputs/ outcomes and planning of achievements with the CFA and support provided through PME workshops.

Strengthened Program monitoring and planning was due to [1]: improved planning [6] and improved reporting [7]. Each of these changes are further discussed below.

Improved planning [6]:

BVHA has improved its planning over the last two years. This is due to having regular staff meetings [43], continued discussion about plans with Simavi [21], and project management knowledge [45]. Strategic planning has improved as *"BVHA is now able to identify strategic moves, more effective interventions, such as use of multiple strategies, multi-stakeholder involvement at various levels, use of multimedia IEC strategies."* And *"Simavi allows for strategic changes. In the case of BVHA, we were not encouraging working with in-school youth, but they lobbied for it, so we revised strategy together. Government was supposed to train midwives but because of insufficient quality, we asked BVHA to step into this issue and organise training"*.

- *Regular staff meetings [43]*. Every month, the staff has to present action plans stating details of activities they would be doing in the coming month and staff are also expected to explain the reasons for not fulfilling their stated objectives in the previous month.
- *Continued discussions about plans with Simavi [21]*: The support from Simavi has been in the form of feedback on project progress by Simavi [17], feedback from the National Coordinator [10] based at BVHA and through Biannual PME meetings with Simavi and the Alliance Partners [16].
 - As the National Coordinator of the SRHR alliance has been based in BVHA since February 2012 [10], there has been continued discussion about plans with Simavi [21]. This national coordinator gave constructive feedback to BVHA on plans in order to align them with Simavi's PME requirements.
 - The continued discussions [21] also took place because BVHA received support from Simavi, consisting of feedback on the progress of the project by Simavi [17] as is evident from the program appraisal form.
 - Furthermore, the biannual PME meetings of the alliance partners [16] have helped BVHA to improve its planning. These meetings provided in depth insight into the project interventions and BVHA also received feedback from the Country lead of Simavi and other Alliance members, as well as their experiences and comments to improve the project implementation and strategies. It helped them adopt best practices, strategies etc.
- *Project management knowledge [45]*.
 - Trainings such as the 5 Days Course on Project Management [41] at Goa organised and funded by the International Union against Lung Disease and Tuberculosis, New Delhi in which the Executive Director took part equipped the participants with required knowledge and skill on Project Life Cycle, situation analysis, stakeholders analysis, problem tree, cause effect relationship, means-end relationship, objective tree, strategy analysis, log frame analysis, activity detailing, Gantt Chart preparation, SWOT analysis, sustainability plan.

The national coordinator [10], biannual PME meetings [16] and feedback on project progress [17] were all PME support funded by MFS II [19]. Simavi supported the Planning, Monitoring and Evaluation capacity of BVHA in this way because they identified a need for this [22]. BVHA staff articulated their need to be trained in PME. This is evident from the minutes of the meeting of the inception workshop in November 2011.

Improved reporting [7]:

BVHA participants that attended the endline workshop indicated that BVHA has improved reporting since the baseline [7]. Evidence of this can be found in Simavi's response to a report submitted by the Project Manager. The improved reporting is due to improved PME knowledge [11] and improved inputs from partners through reports [12].

- *M&E knowledge improved [11]:* According to the National SRHR Coordinator, BVHA now has got the capacity to develop the M&E System for the SRHR Alliance which other alliance members can adopt. PME knowledge improved because of:
 - More knowledge on reporting guidelines and requirements [34]. Over the period as BVHA gained more knowledge on reporting guidelines and requirements it was capacitated in developing formats that are easy to understand for their network and partner organisations to collect systematic data. It fine-tuned the indicators which resulted in getting information as per the requirements. The staff linked the output, outcome and impact to assess the achievement. Knowledge on reporting guidelines and requirements improved because of a training on project management [41] and feedback, discussion on formats, explanations on evaluation methodologies and discussions on purpose of monitoring during the biannual PME meetings [16]:
 - Training on project management [41]: This training helped BVHA gain more knowledge on reporting guidelines and requirements. For example, they fine tune the indicators to better assess the progress and collect the data as required, the activities and the achievements are better linked to assess the impact.
 - Sharing and reflecting during the biannual PME meetings [16]: In these meetings the alliance members shared and reflected on various issues related to PME such as, reporting requirements of the PME group of the SRHR alliance, monitoring and evaluation requirements, detailed discussion on the field visits in terms of strengths and weaknesses of the project, partners reported on their project highlights, progress, successes and main bottlenecks, etc.
 - Better linking and understanding of output, outcome and impact [38] mainly by BVHA project officer, because of:
 - Formats with outcome indicators were given by Simavi [44] so that BVHA could assess the outcome and impact of the activities of their partners on the ground. Also during the Biannual PME meetings [16] there was detail discussion on how to select outcome indicators, Identifying sources of verification and tools for outcome indicator measurement, monitoring output indicators, etc. It helped the project staff of BVHA to link and better understand outcome and impact.
 - Sharing and reflecting during the biannual PME meetings [16]. During the Biannual PME meeting there is extensive discussion/sharing on monitoring output and outcome indicators, frame work for the outcome and output indicator, identifying sources of verification and tools for outcome indicator measurement, setting up of target indicator for 2015 etc. helped BVHA better linking output, outcome and impact.
- *Improved inputs from partners through reports [12].* BVHA has been implementing the project "Community empowerment on Gender Equity to access Reproductive Health Rights in 2 districts of Bihar" through its partner organizations – Duncan Hospital, Raxaul (East Champaran) and Fakirana Sisters Society, Bettiah (West Champaran).
 - The SRHR project follows a structured approach to PME [46]. There is dedicated staff for M&E: the district coordinator at the field level; the project manager and ED at BVHA are responsible for monitoring and evaluation. Simavi has provided planning and reporting formats that enable BVHA to track all the proposed activities, find reasons for the success or failure of completion of those activities and plan for the next quarter.
 - The partner organisations of BVHA involved in the programme implementation of BVHA were given formats for data collection and reporting [39] which they had received from Simavi [44]. This

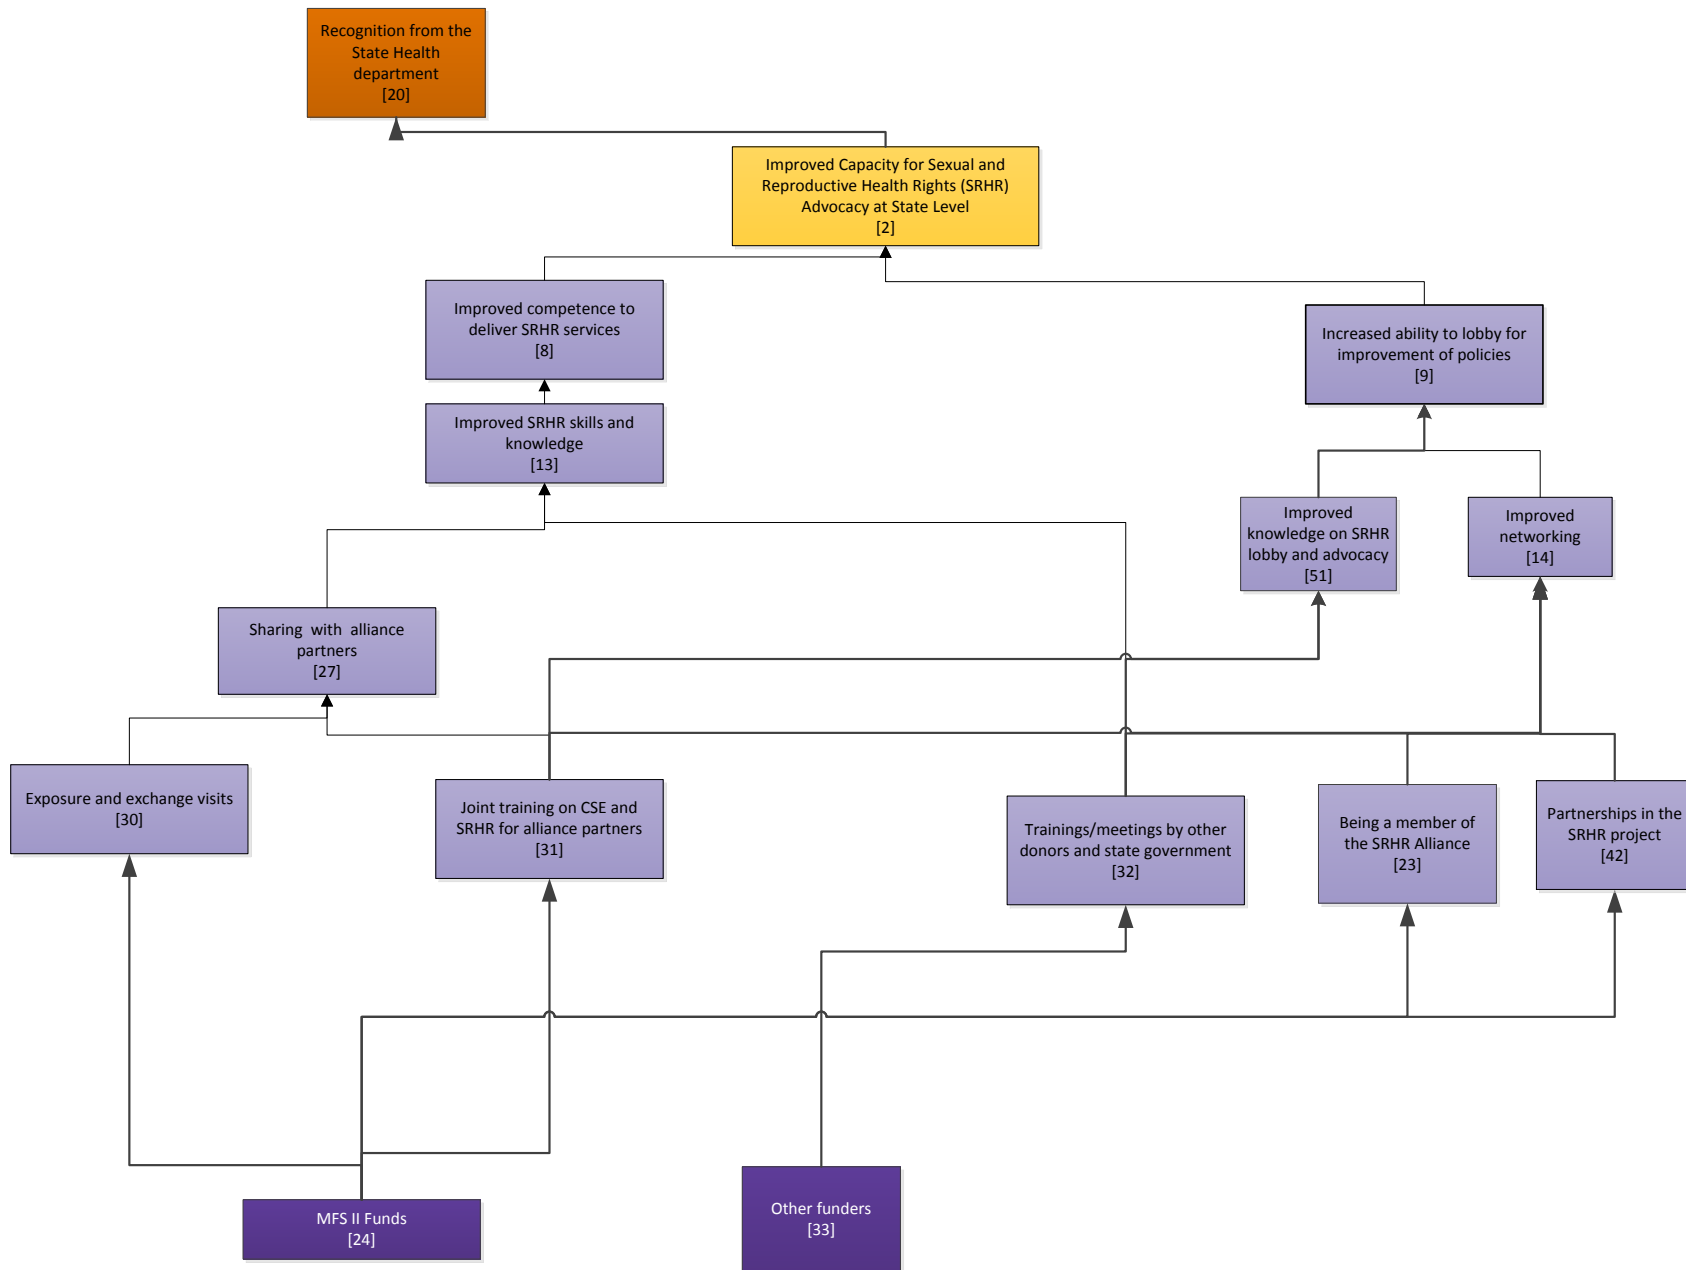

helped the partners not only improve the quality of their data collection but also ensured their timely input.

- There was timely submission of reports [48] with qualitative and quantitative inputs because:
 - The ability of the partners to report success stories improved [49] and
 - There was regular collection of data on outputs and outcomes [50].

Both [49] and [50] were a result of: *Two days orientation of the staff on MIS and success story writing was given to the partner organisations [47]* in September 2012 which further helped the staff of the partner organisation to fill the MIS formats with ease and regularly collect data on output and outcome indicator. This was funded by MFS II as PME support [19].

4.3.2 Improved Capacity for Sexual and Reproductive Health Rights (SRHR) Advocacy at State Level

This is a summary of the final causal map of the key change: improved financial sustainability. For a detailed visual to which the numbers refer and narrative with sources please see Appendix 5.

Improved Capacity for Sexual and Reproductive Health Rights (SRHR) Advocacy at State Level [2]

Over the last two years BVHA has improved its capacity for sexual and reproductive health advocacy at the state level [2]. This has helped BVHA in getting recognition from the State Health department [20]. BVHA has brought up SRHR issues to the attention of the state government which is demonstrated by the examples described here. They wrote an advocacy paper with the objective of ensuring availability and accessibility of comprehensive Sexual and Reproductive Health services for adolescents & women at community and school level.

Improved Capacity for Sexual and Reproductive Health Rights (SRHR) Advocacy at State Level [2] is due to: improved competence to deliver SRHR services [8] and increased ability to lobby for improvement of policies [9]. Each of these organisational capacity changes and how they have come about is described below.

Improved competence to deliver SRHR services [8]

BVHA's capacity for Sexual and Reproductive Health Rights (SRHR) Advocacy at State Level [2] occurred because BVHA as an organisation has been in the fore front in delivering SRHR services through its local partner organisations and thus is seen as one of the leading partners to take forward advocacy issues on SRHR. Over the last two years BVHA has improved its competence to deliver SRHR services through its local partner organisations [8].

BVHA's competences to deliver SRHR services improved [8] because of **improved SRHR skills and knowledge [13]**. The improved SRHR skills and knowledge are reflected in the special curriculum on Comprehensive Sexuality Education (CSE) which was developed by BVHA in consultation with the Government. BVHA developed a special curriculum for young people on CSE which they used through trained staff for educating young boys and girls and empower them to make their own choices around sexuality and reproduction and claim their rights. SRHR skills and knowledge have improved since the baseline [13] because of sharing with alliance partners [27], trainings and meetings by other donors and state government [32]:

- *Sharing with alliance partners [27]*. The continuous interaction and sharing of experiences of BVHA with the alliance partners through exposure visits and trainings in their respective target areas helped BVHA improve their SRHR knowledge and skills. These learnings were then shared with their partner organisations to improve programme implementation. Some details of the interactions with the alliance partners are given below:
 - Exchange and exposure visits [30]:
 - Exchange visit to NEEDS covering SRHR 10 October 2012. The aim of the visit to NEEDS- SRHR project was to share experiences, to understand the different project strategies; to give recommendations to the project, to identify strengths that can be replicated. NEEDS showed their community approach in SRHR, and innovations through mobile phone for SRHR. This visit helped in better program implementation and desired outcomes. They identified SRHR issues for advocacy, and program strengths that could be used by them for program implementation. This was funded by MFS II [24].
 - Exposure visit to SRHR-YFS/ARSHC clinic of VHAI 19 December 2012. The objective was to use the learning from the ARSH clinic visit to replicate it in developing adolescent reproductive health clinic services in the government system as well as bringing about improvement in the quality of the clinic. The Executive Director of BVHA could get a basic understanding of adolescent health problems, counselling techniques, how to establish and run such clinics, how to convince the government to take up such an initiative, and how to link with HIV testing and counselling centres and its linkages with the project at community level. This was funded by MFS II [24].
 - Joint training on CSE and SRHR for alliance partners [31]:
 - Meeting for Capacity Building of SRHR Alliance Partners' staff on 18-20 April 2012 in Delhi funded by MFS II. The aim was to improve the capacities of the alliance partners on SRHR by providing them technical information to be used later for training their field partners:

understanding the concept of "Sex and Sexuality," female reproductive system and the various methods of contraception. This was funded by MFS II [24].

- Regional meeting Indonesia, focus on SRHR-CSE delivery (Indonesia team, alliance office) in November 2013. The Executive Director of BVHA and the program manager went to Indonesia to see how their alliance partners worked with authorities on creating an enabling environment for Comprehensive Sexuality Education (CSE) activities and how the CSE curriculum was being implemented and benefiting a Muslim setting. This was funded by MFS II [24].
- Training on Comprehensive Sexuality Education (CSE): 3 days for project staff in April 2013. A refresher training of partners' staff in the SRHR alliance of India was facilitated by Restless Development India on Sexual and Reproductive Health Rights and on Adolescence Health care in Bihar Voluntary Health Association (BVHA), Patna. This was funded by MFS II [24].
- Discussion on content of joint SRHR manual (all partners and external facilitator, government staff) 5th March 2013. The objective of this meeting was to finalise the SRHR manual, initiated by VHA and reviewed by a consultant. BVHA has contributed in developing the SRHR Guidelines which has now been turned into a Manual. This manual is used by all alliance partners. This was funded by MFS II [24].
- Comprehensive Sexuality Education (CSE) training for all partners (basic) by Restless Development in 25-29 June 2012. This training involved introduction to SRHR and 10 life skills through discussion, case study (field level), sharing and learning, physical, psychological and social changes during adolescence, male & female reproductive system, menstrual hygiene STI, HIV, gender, sex and sexuality; sexual abuse; pregnancy, miscarriage, unwanted pregnancy; ANC, PNC; preparation for delivery. This was funded by MFS II [24].
- Participation in trainings and meetings funded and organised by other donors and state government [32].

BVHA staff participated in various workshops, seminars, training programs related to SRHR organized by Government of Bihar (department of health) and other development agencies such as Population Foundation of India [33]:

- Meeting on Repositioning of Family Planning by Population Foundation of India (PFI), New Delhi on Dec. 2012. A half day workshop was organized by PFI. Here discussions were held around repositioning of family planning within a woman's empowerment and human rights framework so that every family is a planned family and every child is a wanted, healthy child. The staff of BVHA (Executive Director and Advocacy Officer, SRHR Project) learned about improving the quality of care of family planning and reproductive health, preventing sex selection, family planning and reproductive health services, spacing between births etc.

Increased ability to lobby for improvement of policies [9]

BVHA is in a unique position to be working with a large variety of stakeholders. These include NGOs and their workers, network organizations, state level SRHR Alliance members, frontline health service providers, Village Health and Sanitation Committee at Panchayat level, target population in need for SRHR services adolescents both male and female, newlywed couples, eligible couples⁷, District and Block level, PRI representatives at Panchayat level, mixed stake holders (religious leaders, opinion leaders, School teacher and other local identified reputed people), Self Help Groups for Dalit Women. Thus, BVHA is in a very good position to create a base, generate awareness, harness the critical mass of stakeholders at all levels to carry out lobby and advocacy at the state level, mainly targeting state policies on SRHR.

The increased ability to lobby is due to **improved knowledge on SRHR lobby and advocacy [51]** and **improved networking [14]**.

⁷ An eligible couple in India is a currently married couple wherein the wife is in the reproductive age, which is generally assumed to lie between the ages of 15-45 years. Such couples are target groups for family planning services.

- *Improved knowledge on SRHR lobbying and advocacy [51]* was mainly the result of joint training on CSE and SRHR for Alliance partners [31] and trainings/meetings from other donors and state government [32]:
 - The joint trainings on CSE and SRHR for Alliance partners [31] included capacity development of the alliance partners on the following issues: to identify and analyse advocacy issues, key strategies, building advocacy skills and for developing a work plan, to understand how a joint advocacy agenda defines a shared ambition which gives greater opportunities for reaching different stakeholders. The importance of identifying active key players and how to engage them in advocacy. This was funded by MFS II [24].
 - The trainings/meetings from other donors and state government [32] included:
 - Workshop on WASH was organized by Wada Na Todo Abhiyan at A.N.Sinha Institute, Patna on 12th December, 2012. The aim was to develop effective and communicative tools for awareness building program to mobilise, sensitize and motivate people to lobby for their rights as well as the discussions on various food security issues, nutrition for pregnant and lactating women etc., led to a common understanding to create a civil society force for advocacy with government to develop policy and plans in the interest of common people.
 - Workshop on Bitiya Bachao –Manavta Bachao Aandolan was organized by Action Aid, Patna on 26th December, 2012. This training enabled the staff to organize a meeting in January 2013 with the Minister of Health of the Government of Bihar to discuss on infant mortality rates, maternal mortality rates, sex selective abortion including Save the Girl Child. Thus networking with the government improved considerably and improved BVHA’s ability to lobby.
 - The improved networking [14] occurred also, as a result of training by other donors [32], BVHA being a member of the SRHR Alliance [23] and partnerships in the SRHR project [42]. These are further explained below:
 - Being a member of the SRHR Alliance [23] (through the Simavi supported projects under MFS II [24]). BVHA is an active part of the India SRHR Alliance which is continuously working on the SRHR related issues to advocate at national, state and district level. Several issues are jointly identified which are common in the three states involved in the alliance and strategies have been developed to address them. Besides that, BVHA is an active member of the Wada Na Toda Abhiyan⁸ Bihar and India Chapter. Many health issues were discussed with the community people in 16 MP (Member of Parliament) constituencies of Bihar and accordingly these issues were compiled and submitted to concerned Political Parties for inclusion in their Political Manifesto. Many of the issues are now included.
 - Partnerships in the SRHR project [42], which is MFS II funded [24], is another reason for improved networking. At the state level, BVHA formed the State level SRHR forum under the chairmanship of the Government authority and other international agencies such as Pathfinder International, Care-India, Population Foundation of India, two network partners, two SRHR Alliance partners and renowned NGOs at Patna. The government of Bihar recognizes BVHA as a member of the State Technical Advisory group in Bihar. Further BVHA is the member of the state level thematic sub groups on Total Fertility Rates (TFR), Maternal Mortality Rates (MMR) and Infant Mortality Rates (IMR) for policy level changes. At the district level too an SRHR forum was formed that liaised with District level authorities on SRHR issues such as Maternal Death Review, Rogi Kalyan Samitis (RKS, i.e. health facility management committees) orientation, Gaps in service delivery
 - Participation in trainings and meetings funded and organised by other donors and state government [32].
 - BVHA staff participated in various workshops, seminars, training programs related to SRHR organized by Government of Bihar (department of health) and other development agencies such as Population Foundation of India, Magic Bus India, World vision, Oxfam India, Future groups etc. [33]:
 - Meeting on Repositioning of Family Planning by Population Foundation of India (PFI), New Delhi in Dec. 2012.

⁸ Wada Na Todo ABHIYAN (WNTA) is a national campaign to hold the government accountable to its promise to end poverty and social exclusion

-
- Workshop on WASH was organized by Wada Na Todo Abhiyan at A.N.Sinha Institute, Patna on 12th December, 2012. The aim was to develop effective and communicative tools for awareness building program as well as multi-departmental coordination approaches. This created a platform for various civil society organisations to come together and form a task force to lobby and advocacy with government and other policy makers for various health related policies.
 - Workshop on Bitiya Bachao –Manavta Bachao Aandolan was organized by Action Aid, Patna on 26th December, 2012. This training enabled the staff to organize meeting on January 2013 with health minister, Government of Bihar to discuss on IMR, MMR, sex selective abortion including Save the Girl Child. This also served as a preparatory meeting to organize 3day events to sensitize the people on the above mentioned issues. Due to this workshop, networking with the government improved considerably for BVHA to participate in the strategic planning for health development in Bihar.

5 Discussion and conclusion

5.1 Methodological issues

In order to get detailed information on the capacity development of the staff, self-assessment forms were filled in by the management (Executive Director), programme staff (Project Manager SRHR Project, Project Manager KKS Project, Project Manager MDR Project, Advocacy Officer SRHR Project) and HR/Admin staff (Administrator, Assistant Accountant). The agreed questionnaire was aimed at teasing out information from various levels of staff without putting them in any awkward situation. The modified and nuanced repetition of questions when translated to an audience not properly exposed to the English language, created a sense of repetitiveness. Evaluators tried to resolve this, by clarifying the responses by a follow-up interview.

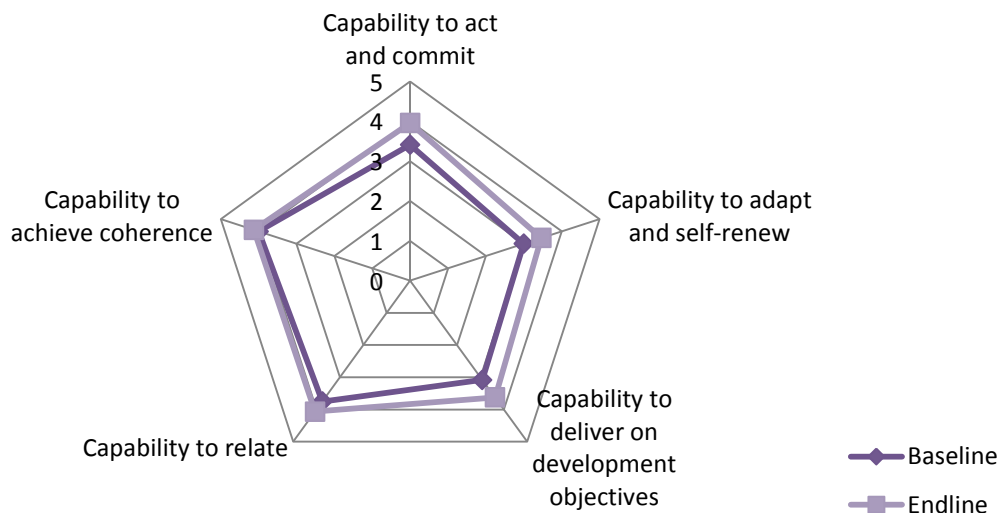

In the endline workshop, staff of BVHA who participated in the baseline workshop in 2012 was present, except for Project Manager KKS project and Assistant Accountant. As a result, the staff faced no difficulty in identifying the key organisational capacity changes in developing a general causal map. Two Organisational Development (OD) consultants were interviewed which provided deeper insight into the organisation with regard to its structure, MIS system, documentation, leadership, financial management, reputation and ability to deliver etc. The chairman of the State Level SRHR forum could not outline the details regarding the changes in the organisation over the period as he was only involved in giving technical and analytical inputs in the SRHR project. The national coordinator for the SRHR alliance highlighted BVHA's improved knowledge and skill in M&E system and improved leadership which led to better networking and funding opportunities. Two of BVHA's implementing partners were interviewed, who gave a deeper insight into the improved capacity of the organisation (BVHA) and its relationship with the partners/government.

In relation to process tracing, training questionnaires were filled in for the relevant trainings under MFS II supported funding. However, for the staff it was sometimes difficult to recall what they learnt during a specific training as they were exposed to various training programmes and exposure visits (both under MFSII programme and others) which at times were overlapping in themes and it was difficult for staff at all levels to know which training was sponsored by which donor. Therefore, the observed changes are attributed to various factors beyond a specific training programme. The training questionnaires provided details such as: knowledge acquired and skill developed by the staff and its impact on the organisational capacity. Training questionnaires were filled in for most of the trainings under MFS II interventions for BVHA such as: 1) Exchange visit to NEEDS covering PME, Advocacy and SRHR in Deoghar; 2) Exposure visit to Adolescent Reproductive & Sexual Health Clinic in Ganjam, Odissa; 3) Regional meeting Indonesia, focus on SRHR-CSE delivery (Indonesia team, alliance office); 4) Comprehensive Sexual Education (CSE) training all partners (basic) by Restless Development; 5) 2 day Orientation of the staff on MIS and success story writing; 6) Workshop joint advocacy and state level visit (CINI).

5.2 Changes in organisational capacity

This section aims to provide an answer to the first and fourth evaluation questions:

1. *What are the changes in partner organisations' capacity during the 2012-2014 period?*
4. *What factors explain the findings drawn from the questions above?*

Whilst changes took place in four of the five core capabilities, in some indicators the improvements were more pronounced than in others. Below the changes in each of the capabilities are further explained, by referring to the specific indicators that changed.

Over the last two years most improvements took place in the indicators under the capability to act and commit. Many of these were said to be triggered by donor requirements in general and for the SRHR project by Simavi in specific. The Executive Director became more responsive to BVHA's partner organisations. This was something that was triggered by discussions with Simavi. The ED is now experiencing that by being more responsive and cooperative he is also facing less opposition from the network members in the board. BVHA has taken the step to look to promote existing staff when a vacancy for a higher level position needs to be filled. This has helped in the motivation of staff. With regards to financial incentives, Simavi has had discussions with BVHA so that now they adhere to the government standard for salaries. The strategies that BVHA articulates are now not only based on M&E findings on the output level but also on the outcome level. Their operation plans have become more professional, because BVHA now has formats in place that are easier to understand for their partner organisations and has also trained their partners in this. Getting better inputs from their partners facilitates making better operational plans. This is the case for the SRHR project, but it has also influenced how BVHA works in its other projects. Staff have improved their skills in SRHRs, advocacy, record keeping in PME and in finance matters. The national coordinator of the SRHR alliance, who is based at BVHA and funded by MFSII has played a vital role in this by providing continuous discussions and feedback on these topics. In the SRHR project staff have been able to partake in many exposure visits, meeting and trainings, also funded by the government and other donors. Regarding its funding situation, BVHA has a pretty diversified resource base, as they receive funding from six different donors and are looking into possibilities of getting funding through the CSR Act and the government. Staff has become more motivated to explore these new funding opportunities and has also gotten better at writing proposals and looking at innovative funding strategies.

In the capability to adapt and self-renew BVHA has also improved slightly in various indicators. Through the MFSII funded biannual PME meetings, specific workshops and feedback from the national coordinator and Simavi, BVHA learned about a variety of monitoring tools to measure outcomes. The M&E in the SRHR project is organised in a very structured way and has been discussed through during the biannual PME meetings. BVHA now has MIS formats in place that are easy to understand for their partners at different levels in the project. Because of all this BVHA staff has become more expert in PME, they are better in designing formats and analysing the data that is collected. Through this improved PME system BVHA is better able to base its strategic moves on the M&E findings. Through the meetings with other SHRS alliance partners, BVHA has got some new ideas, including on M&E by learning from others. In the SRHR alliance and its other networks BVHA is better connected to stay abreast of the development in their operating environment of which they also inform their network

members. BVHA tries to be more responsive to their network member by holding at least two Governing Board meetings per year in the location of the members.

In terms of the capability to deliver on development objectives, there has been some improvements. Because of Simavi's requirements and feedback on the annual plans of BVHA, they have become more critical and realistic in their budget utilisation which has also led to better operational plans. BVHA is working more cost-effectively as they cut costs through using their own facilities for trainings and using technology to avoid printing costs. BVHA has also improved in formalising its mechanisms through which they make sure that their services meet their beneficiaries needs. They have feedback questionnaires in place for this. Through improved monitoring formats BVHA can now better see what has been achieved and is also reaching more of their planned outputs and now also outcomes. Finally, staff have gained a better understanding of the log frames that are used in its projects.

In the capability to relate BVHA has somewhat improved. They now involve their partners in the planning, implementation and M&E design phases of their projects. BVHA has improved on their networks as they are part of at least 10 networks at national, state and district levels. They are working more with the government on different levels, e.g. through their State level SRHR forum and are very active in the SRHR alliance. On Simavi's request, BVHA's Executive Director and Board members are now paying more visits to the target groups.

Finally, BVHA has slightly improved in one of the indicators in the capability to achieve coherence as they now have detailed guidelines on SRHR which was much needed in the SRHR project.

During the endline workshop some key organisational capacity changes were brought up by BVHA's staff: strengthened programme monitoring and operational planning, improved capacity for Sexual and Reproductive Health Rights (SRHR) advocacy at state level and increased capacity in to leverage more funds. The evaluators considered it important to also note down the SPO's story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provide by the evaluation team. These changes happened to partly overlap with the key changes that were selected for process tracing. The increased capacity to leverage funding was not linked to a MFS II supported capacity development intervention and thus not selected for process tracing. This capacity increased because of improved visibility, due to improved SRHR advocacy at state level; improved networking, due to being a member of the SRHR Alliance (MFS II funded); and due to improved project outcomes (mostly of MFS II funded projects).

The funding of Simavi, especially the funding for PME support, has led to many of the changes mentioned above and also to the first key organisational capacity change. The active involvement of BVHA in the SRHR alliance, through their MFS II funded SRHR project, has also been very important for both key organisational capacity changes and comes back in many of the other changes mentioned above. This will further be explained below in 5.3.

5.3 Attributing changes in organisational capacity to MFS II

This section aims to provide an answer to the second and fourth evaluation questions:

2. *To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*
4. *What factors explain the findings drawn from the questions above?*

To address the question of attribution it was agreed that for all the countries in the 5C study, the focus would be on the capability to act and commit and the capability to adapt and self-renew, with a focus on MFS II supported organisational capacity development interventions that were possibly related to these capabilities. 'Process tracing' was used to get more detailed information about the changes in these capabilities that were possibly related to the specific MFS II capacity development interventions. The organisational capacity changes that were focused on were:

-
- Strengthened programme monitoring and operational planning;
 - Improved capacity for Sexual and Reproductive Health and Rights (SRHR) Advocacy at state level.

The first organisational change area falls under the capability to adapt and self-renew, while the second one falls under the capability to act and commit. The organisational capacity change areas that were chosen are based on document review as well as discussions with the SPO and CFA.

Each of these organisational capacity changes is further discussed below.

The following issues are discussed for the MFS II funded activities that are related to the above mentioned organisational capacity changes:

- a. Design: the extent to which the MFS II supported capacity development intervention was well-designed. (Key criteria: relevance to the SPO; SMART objectives)
- b. Implementation: the extent to which the MFS II supported capacity development was implemented as designed (key criteria: design, according to plans during the baseline);
- c. Reaching objectives: the extent to which the MFS II capacity development intervention reached all its objectives (key criteria: immediate and long-term objectives, as formulated during the baseline);
- d. the extent to which the observed results are attributable to the identified MFS II supported capacity development intervention (reference made to detailed causal map, based on 'process tracing').

Please note that whilst (d) addresses the evaluation question related to attribution (evaluation question 2), the other three issues (a, b and c) have been added by the synthesis team as additional reporting requirements. This was done when fieldwork for the endline process had already started.

Strengthened programme monitoring and operational planning

The following MFS II capacity development interventions were linked to the key organisational capacity, change "strengthened programme monitoring and operational planning":

1. Biannual PME meetings of the alliance partners (planned during the baseline and details provided during the endline); and
2. Feedback by Simavi on progress of the SRHR project (not specifically planned during the baseline and no details provided during the endline).

Below the intervention will be discussed that was planned during the baseline and for which details were provided during the endline. The capacity development interventions for which no objectives have been provided during baseline or endline will only be discussed when addressing the attribution question (here: feedback by Simavi).

5 Biannual PME meetings of the alliance partners;

Design

During the baseline it was planned to have "continued capacity development in planning and monitoring for two staff members two times in 2012." The immediate objectives of these interventions were to ensure that "key staff is able to provide detailed and consistent project related plans and to understand monitoring on outputs and outcomes." The long term objective the CFA formulated was: "better project design and implementation to be able to achieve and demonstrate results." The agenda and minutes of the 5 biannual meetings that took place during 2012 and 2014 were shared. The PME meetings seemed to be designed well for achieving their objectives.

These objectives were relevant for BVHA. During the baseline workshop they formulated five conditions that needed to be in place in order for them to strengthen their position as a "State Health Resource Centre" in Bihar. One of these conditions was "Strengthened program monitoring and evaluation." The understanding of monitoring on outputs and outcomes is very much related to this condition that BVHA formulated.

These objectives were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically,

but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

This intervention was partly planned during the baseline in 2012. By then it was planned to have continued capacity development in planning and monitoring for two staff members, two times in 2012. The capacity development plans by the CFA for the SPO for 2013 were still in the making. The PME meetings took place two times a year: 17-18 May 2012, 11-12 October 2012, 4-6 March 2013, 8-10 October 2013 and on 11 March 2014. No judgement can be made on whether this intervention was implemented as designed, since the design was not completely known during baseline, and its objectives were not described in a SMART way. Looking at the agendas and minutes for the meetings, what happened during the meetings seems to match what has been planned in the meetings' agendas.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified. The 5 biannual PME meetings came up in the map and narrative on the organisational capacity change: strengthened programme monitoring and operational planning. In this regard we can conclude that these meetings led to continued discussions about plans with Simavi (which led to improved planning), receiving formats with outcome indicators (which further improved BVHA's M&E knowledge) and to more knowledge on reporting guidelines and requirements.

Though not the focus of this evaluation, we can conclude to some extent whether the expected immediate and long-term objectives of this intervention as formulated during the baseline have been achieved. The immediate objectives: "key staff is able to provide detailed and consistent project related plans and to understand monitoring on outputs and outcomes, " were achieved. The CFA observed that development of monitoring tools, documentation of results, case studies and the ability to do baseline and compare to midterm, improved. The long term objective: "better project design and implementation to be able to achieve and demonstrate results" has been achieved to some extent as BVHA has improved its reports (demonstrating results), according to Simavi. Achieving results has also improved, at least for the SRHR project. BVHA is reaching or even surpassing the targets that are set for output indicators in the different result areas, such as civil society strengthening, MDGs and increased capacity of partner organisations.

Attribution of observed results to MFS II capacity development interventions

The strengthening of BVHA's programme monitoring and operational planning in the SRHR project was due to improved planning and improved reporting (also see section 4.3).

The improved planning can be partly attributed to MFS II as improved planning was due to regular staff meetings (in which MFS II funding had no direct role), continued discussions about plans with Simavi (in the MFS II funded project) and project management knowledge (no direct role for MFS II). The continued discussions about plans with Simavi can be fully attributed to MFS II as these continued discussions consisted of feedback from Simavi on the MFS II funded project progress, feedback from the national coordinator of the SRHR alliance (of which BVHA was part because of the MFS II funded SRHR project) and finally the biannual PME meetings with Simavi and Alliance partners. These biannual meetings have been discussed in detail above. One of the non-MFS II factors that improved planning can be attributed to were the regular staff meetings. This was an internal organisational development through which reporting on staff's plans and activities became more streamlined. There was also one training the "5 Day Course on Project Management" that was not funded by MFS II but by The International Union against Lung Disease and Tuberculosis in New Delhi, to which the improved project management knowledge can be attributed. All in all, MFS II supported capacity building interventions played a considerable role in BVHA's improved planning.

The improved reporting of BVHA was due to improved M&E knowledge and improved inputs from partners. Improved M&E knowledge can almost completely be attributed to MFS II supported capacity building interventions. BVHA staff improved their M&E knowledge because of more knowledge on reporting guidelines and requirements, which can be attributed to the 5 biannual PME meetings

(funded by MFS II) and the training on project management that was mentioned before (not funded by MFS II). M&E knowledge also improved because of better linking and understanding of output, outcome and impact, which can be fully attributed to MFS II supported capacity development interventions as during the biannual PME meeting formats with indicators for the different levels were distributed and discussed with BVHA, Simavi and the other SRHR alliance partners.

Improved inputs from partners can be completely attributed to MFS II supported capacity building interventions because improved inputs from partners were due to a structured approach to PME in the SRHR project, planning and reporting formats from BVHA for partners, and all of these can be attributed to MFS support to capacity development of the organisation. Timely submission of reports by partner organisations can be attributed to a MFS II funded orientation for BVHA partner organisation's staff on MIS and success story writing in September 2012. Furthermore, the planning and reporting formats from BVHA for its partners led to the improved inputs from partners, and these formats were based on the formats that BVHA received from Simavi and were discussed during the biannual PME meetings. Finally the improved inputs from partners were also due to a structured approach to PME in the MFS II funded SRHR project. While this last factor is not directly linked to an intervention it can be attributed to the overall guidance and requirements of Simavi in the MFS II funded project.

All in all, strengthened programme monitoring and operational planning, with specific reference to the SRHR project, can almost completely be attributed to MFS II supported capacity development interventions, and in particular the five biannual PME meetings (also planned during the baseline) and the feedback by Simavi on progress of the SRHR project. The only non-MFS II factors that have played a minor role are the regular staff meetings and the training on project management funded by the International Union, New Delhi.

Improved capacity for Sexual and Reproductive Health and Rights (SRHR) Advocacy at state level.

The following MFS II capacity development interventions supported by Simavi are linked to the key organisational capacity change "improved capacity for Sexual and Reproductive Health and Rights (SRHR) Advocacy at state level." (please also see section 4.3):

1. Strengthening advocacy capacity including evidence based lobby efforts (planned during the baseline and details provided during the endline);
2. Training on SRHR and Comprehensive Sexual Education and (CSE) through training sessions, exposure visits, feedback on implementation (planned during the baseline and details provided during the endline);
3. Review Meet at NEEDS covering topics of advocacy, PME and SRHR (not planned during the baseline but details provided during the endline);
4. Exchange visit to SRHR YFS clinic of VHAI (not planned during the baseline but details provided during the endline); and
5. Regional meeting Indonesia, focus on SRHR-CSE delivery (Indonesia team, alliance office) (not planned during the baseline but details provided during the endline).

Strengthening advocacy capacity including evidence based lobby efforts

Design

During the baseline the following was planned for 2012: "Capacity development in advocacy on various occasions for one staff member and 2 partner staff members." It was not further specified which activities would fall under this capacity development in advocacy. The immediate objective of this (set of) interventions was that "key staff should be able to improve their advocacy plans in all aspects through a systematic approach and is keen to know the results of their advocacy efforts." The long term objective was "better organisational advocacy capacity."

These objectives were relevant for BVHA because during the baseline the staff felt a need for training in lobbying and advocacy. They wanted to focus on formation and strengthening of regional forums and have a focussed advocacy agenda. Both the short term and long term objectives that were formulated by Simavi are very much related to these goals of BVHA.

These expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically during the baseline, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

During the baseline, capacity development in advocacy, on various occasions for one staff member and two partner staff members, was planned for 2012, but no specific activities were mentioned, and therefore it cannot be indicated with the planned activities took place. However, from Simavi's and BVHA's documents it can be seen that the following activities took place under the title of "strengthening advocacy capacity including evidence based lobbying": "Advocacy, continuation, what is advocacy" by VHAI (18-20 April 2012), "Advocacy, progress, joint agenda" by Simavi (11-12 October 2012), "Workshop joint advocacy" (CINI) and state level visits (April, 7-9 May and December 2013) and a "3 day advocacy workshop: "working on state level and national joint agendas" by Simavi and Rineke van Dam (19-22 May 2014).

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified. Especially the activity on 18-20 April 2012 came up in the map and narrative on the organisational capacity change: improved capacity for Sexual and Reproductive Health and Rights (SRHR) Advocacy at state level. This activity has led (together with other interventions) to improved knowledge on SRHR lobby and advocacy.

Though not the focus of this evaluation, we can conclude to some extent whether the expected immediate and long-term objectives of this intervention as formulated during the baseline have been achieved. Simavi has observed some immediate effects of these interventions: there is an initiating SRHR forum at state level, BVHA brings in SRHR issues under the attention of the government and there is a stronger capacity to describe case-studies for lobby purposes. BVHA is on the way to achieving the long term objective. The immediate objective "key staff should be able to improve their advocacy plans in all aspects through a systematic approach and is keen to know the results of their advocacy efforts," is not directly reflected in these observed effects but these effects seem to indicate that BVHA is now having "better organisational advocacy capacity."

Training on SRHR and Comprehensive Sexual Education (CSE) through training sessions, exposure visits, feedback on implementation

Design

During the baseline the following was planned for 2012: "Capacity development in SRHR (general and specifically sex education for young people) (6 staff – including partners)." The immediate objective of this intervention was "Project staff is able to provide more comprehensive SRHR package." The long term objective was: "Strengthened organisation to support SRHR project run by partners." Details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

These objectives do not directly relate to the goals and conditions that BVHA set out for themselves during the baseline. Indirectly these objectives are relevant for BVHA as they identified during the baseline that they wanted to strengthen their network of partners. Being able to offer a more comprehensive SRHR package can contribute to this goal.

These objectives were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically during the baseline, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

During the baseline "Capacity development in SRHR (general and specifically sex education for young people) (6 staff – including partners)" was planned for 2012. The planning for 2013 was still in the

making at the time of the baseline. What actually took place was: Training SRHR with different speakers and topics (18-20 April 2012), CSE training for all SRHR alliance partners (basic) by Restless Development (24 June 2012), Discussion on content of joint SRHR manual (all partners and external facilitator, government staff) (4-6 March 2013) and Refresher CSE training for all partners (Restless Development and external consultants) (4-6 April 2013).

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified. The trainings on SRHR and Comprehensive Sexual Education (CSE) came up in the map and narrative on the organisational capacity change: improved capacity for Sexual and Reproductive Health and Rights (SRHR) Advocacy at state level. These trainings led to sharing with alliance partners which resulted in improved SRHR skills and knowledge and improved knowledge on SRHR lobby and advocacy, as this was often a topic that was discussed.

Though not the focus of this evaluation, we can conclude to some extent whether the expected immediate and long-term objectives of this intervention as formulated during the baseline have been achieved. The short term objective has been achieved, as Simavi observed that BVHA now has strong project implementation in more aspects of SRHR and provides advice to government technical SRHR committees. Simavi also observed that BVHA now has the confidence to talk about sensitive SRHR issues and has increased knowledge on youth SRHR issues. Additionally, BVHA developed special curriculum for young people on CSE which they used through trained staff for boys and girls. The long term objective (a strengthened organisation that can support SRHR projects runs by partners) is therefore on the way to achievement.

Review Meet at NEEDS covering topics of advocacy, PME and SRHR

Design

This specific intervention was not planned for during the baseline by the CFA. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. According to a report of this meet, the aim of this visit was to share experiences, to understand the different project strategies, to give recommendations to the project and to identify strengths that can be replicated. No long term objective has been formulated.

These aims were relevant for BVHA as they identified during the baseline that they want to strengthen their network of partners in health to share information. This Review Meet at one of the partners within the SRHR alliance is therefore relevant for BVHA.

These expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

This intervention was not planned for during the baseline and details about the specific design cannot be provided, since this wasn't the focus of the evaluation. Therefore, no judgement can be made on whether this intervention was implemented as designed. However, it can be said that the Review Meet at NEEDS took place on October 10, 2014.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified. The NEEDS visit came up in the map and narrative on the organisational capacity change: improved capacity for Sexual and Reproductive Health and Rights (SRHR) Advocacy at state level. This visit led to sharing with alliance partners which resulted in improved SRHR skills and knowledge.

Though not the focus of this evaluation, we can conclude to some extent whether the expected immediate and long-term objectives of this intervention as formulated during the endline have been

achieved. The objective of this meet was mainly to share experiences. NEEDS showed their community approach in SRHR and innovations through mobiles phones for SRHR. This visit helped BVHA in better programme implementation. During the meeting SRHR issues for advocacy were identified and programme strengths of NEEDS that could be used by BVHA for their programme implementation were identified. To some extent these aims have thus been reached.

Exchange visit to SRHR YFS/ARSHC of VHAI

Design

This specific intervention was not planned for during the baseline by the CFA. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. From a report of the visit it can be concluded that the objective was to use the learning from the Youth Friendly Service/Adolescent Reproductive and Sexual Health clinic (YFS/ARSHC) visit to replicate it in developing ARSHCs in the government system as well as bringing about improvement in the quality of the clinic. These were the only objectives that were formulated.

These objectives do not seem to be directly relevant for BVHA, but they could learn from how such a clinic is run and see if some of this can be applied in their SRHR work with youth.

These expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

This intervention was not planned for during the baseline and details about the specific design cannot be provided, since this wasn't the focus of the evaluation. Therefore, no judgement can be made on whether this intervention was implemented as designed. However, it can be said that the visit to the clinic took place on 19 December 2012 and that the Executive Director of BVHA went on this visit.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified. The exchange visit came up in the map and narrative on the organisational capacity change: improved capacity for Sexual and Reproductive Health and Rights (SRHR) Advocacy at state level. This visit led to sharing with alliance partners which resulted in improved SRHR skills and knowledge.

Though not the focus of this evaluation and there is no information available on whether these specific objectives were reached, we cannot conclude whether the objectives of this visit, as formulated during the endline, have been achieved. From a report of the visit it can be concluded that the executive director of BVHA obtained a basic understanding of health problems, counselling techniques, how to run such a clinic, how to convince the government to take up such an initiative and how to link with projects at the community level.

Regional meeting Indonesia, focus on SRHR-CSE delivery (Indonesia team, alliance office)

Design

This specific intervention was not planned for during the baseline by the CFA. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. The objective of going to this meeting has been formulated by Simavi during the endline. The objective of this meeting was to see how their alliance partners worked with authorities on creating an enabling environment for CSE activities.

Within the SRHR project this objective became relevant for BVHA but it is only indirectly related to one of the goals that they formulated during the baseline which was to strengthen their networks with partners in health for sharing information.

These expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

This intervention was not planned for during the baseline and details about the specific design cannot be provided, since this wasn't the focus of the evaluation. Therefore, no judgement can be made on whether this intervention was implemented as designed. However, it can be said that the Executive Director and programme manager went to this meeting in November 2013.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified. The Regional meeting Indonesia came up in the map and narrative on the organisational capacity change: improved capacity for Sexual and Reproductive Health and Rights (SRHR) Advocacy at state level. This visit led to sharing with alliance partners which resulted in improved SRHR skills and knowledge and improved knowledge on SRHR lobby and advocacy.

Though not the focus of this evaluation, we can say something about to what extent the objective, as formulated by Simavi during the endline, of this meeting has been achieved. The objective was "to see how their alliance partners worked with authorities on creating an enabling environment for CSE activities." This objective seems to have been achieved to a certain extent, as the group presentations on the strategies and activities on CSE enabled the Executive Director to get knowledge on CSE and update it in Bihar.

Attribution of observed results to MFS II capacity development interventions

BVHA has improved its capacity for SRHR Advocacy at State Level because of increased competence to deliver SRHR services and because of increased ability to lobby for improvement of policies (see also section 4.3.2). MFS II funded capacity development interventions have played a significant role in both of these changes.

Improved competence to deliver SRHR services was due to improved SRHR skills and knowledge which can partly be attributed to MFS II funded interventions and partly to trainings and meetings funded by other donors and state government. BVHA staff improved their skills and knowledge on SRHR first of all because of sharing with alliance partners. This part can be completely attributed to MFS II funded interventions. Sharing with SRHR alliance partners took place during exposure and exchange visits, that is the Review Meet at NEEDS and the exposure visit to YFS/ASRHC of VHAI, which are described above (both MFS II funded). Sharing with alliance partners also took place during joint MFS II funded training on CSE and SRHR. These trainings have been further specified above.

Secondly, BVHA staff improved their skills and knowledge on SRHR because of trainings and meetings organised and funded by other donors and the state government. This includes seminars and trainings organised by the state government of Bihar and a meeting on repositioning of family planning, organised and funded by the Population Foundation of India, where BVHA staff learned about improving quality of family planning and reproductive health care, preventing sex selection etc. As the sharing with SRHR alliance partners took place on many occasions and during many trainings and visits that seem to have had an important effect on improving the skills of BVHA staff (especially of those involved in the SRHR project), and the trainings by others where less frequent and important, most of the improvement in BVHA's improved competence to deliver SRHR services can be attributed to MFS II funded capacity development interventions.

Improved ability to lobby for improvement of policies was due to improved knowledge on SRHR lobby and advocacy and improved networking. BVHA improved its knowledge on SRHR lobby and advocacy mainly because of the joint MFS II funded trainings on CSE and SRHR for the alliance partners. These trainings partly overlapped with the activities that were discussed under the MFS II interventions on strengthening advocacy capacity. For example a session and discussion on what is advocacy by VHAI was held during the training SRHR with different speakers and topics on 18-20 April 2012. BVHA's knowledge on this topic also increased because of two trainings by other funders. A workshop on WASH was organised by Wada Na Todo Abhiyan on the 12th of December 2012, where staff developed effective and communicative tools for awareness building and reached a common understanding to

create a civil society force for advocacy with government on various issues including nutrition for pregnant and lactating women. The second workshop was organised and funded by Action Aid on the 26th of December. This meeting enabled BVHA staff to organise a meeting with the Minister of Health in January 2013 to discuss among other things infant and maternal mortality rates and sex selective abortion. This improved knowledge on advocacy and lobbying on SRHR can therefore partly be attributed to MFS II supported capacity development interventions. It seems like both the trainings by other funders and the MFS II supported interventions have been of equal importance to improving BVHA's knowledge on SRHR advocacy and lobbying. BVHA's improved networking can be partly attributed to BVHA's involvement in the MFS II funded SRHR project and partly to the trainings funded by other funders and government. Through BVHA's involvement in the SRHR project, they became part of the SRHR alliance, which connected them to many new partners. Also through this project BVHA formed a state level SRHR forum under the chairmanship of the government of Bihar and many other agencies. On the other hand, trainings funded and organised by government departments and the Population Foundation for India, Wada Na todo Abhiyan and Action Aid, also allowed BVHA staff to improve on their networking. Although it is not directly an MFS II intervention, BVHA involvement in the MFS II funded SRHR project has had a slightly more important role on improving their networks than the trainings funded by other funders and government.

Loan Liem, Sr Programme Officer/ interim SRHR team manager at Simavi. Interviewed on April 3, 2014.

Appendix 1 Methodological approach & reflection

Introduction

This appendix describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around four key evaluation questions:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

Note: the methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report. At the end of this appendix a brief methodological reflection is provided.

Changes in partner organisation's capacity – evaluation question 1

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?**

This question was mainly addressed by reviewing changes in 5c indicators, but additionally a 'general causal map' based on the SPO perspective on key organisational capacity changes since the baseline

has been developed. Each of these is further explained below. The development of the general causal map is integrated in the steps for the endline workshop, as mentioned below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012.⁹ Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

1. **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
2. **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
3. **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
4. **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
5. **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

⁹ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Below each of these steps is further explained.

*Step 1. Provide the **description of indicators** in the relevant formats – CDI team*

- These formats were to be used when collecting data from SPO staff, CFA, partners, and consultants. For each of these respondents different formats have been developed, based on the list of 5C indicators, similar to the procedure that was used during the baseline assessment. The CDI team needed to add the 2012 baseline description of each indicator. The idea was that each respondent would be requested to review each description per indicator, and indicate whether the current situation is different from the baseline situation, how this situation has changed, and what the reasons for the changes in indicators are. At the end of each format, a more general question is added that addresses how the organisation has changed its capacity since the baseline, and what possible reasons for change exist. Please see below the questions asked for each indicator as well as the more general questions at the end of the list of indicators.

General questions about key changes in the capacity of the SPO

What do you consider to be the key changes in terms of how the organisation/ SPO has developed its capacity since the baseline (2012)?

What do you consider to be the main explanatory reasons (interventions, actors or factors) for these changes?

List of questions to be asked for each of the 5C indicators (The entry point is the the description of each indicator as in the 2012 baseline report):

1. *How has the situation of this indicator changed compared to the situation during the baseline in 2012? Please tick one of the following scores:*
 - -2 = Considerable deterioration
 - -1 = A slight deterioration
 - 0 = No change occurred, the situation is the same as in 2012
 - +1 = Slight improvement
 - +2 = Considerable improvement
2. *Please describe what exactly has changed since the baseline in 2012*

3. *What interventions, actors and other factors explain this change compared to the baseline situation in 2012? Please tick and describe what interventions, actors or factors influenced this indicator, and how. You can tick and describe more than one choice.*
- Intervention, actor or factor at the level of or by **SPO**:
 - Intervention, actor or factor at the level of or by the **Dutch CFA (MFS II funding)**:
 - Intervention, actor or factor at the level of or by the **other funders**:
 - **Other** interventions, actors or factors:
 - Don't know.

Step 2. Review the descriptions per indicator – in-country team & CDI team

Before the in-country team and the CDI team started collecting data in the field, it was important that they reviewed the description for each indicator as described in the baseline reports, and also added to the endline formats for review by respondents. These descriptions are based on document review, observation, interviews with SPO staff, CFA staff and external respondents during the baseline. It was important to explain this to respondents before they filled in the formats.

Step 3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)

The CDI team was responsible for collecting data from the CFA:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet – CFA perspective.

The in-country team was responsible for collecting data from the SPO and from external respondents (except CFA). The following formats were sent before the fieldwork started:

- 5C Endline support to capacity sheet – SPO perspective.
- 5C Endline interview guides for externals: partners; OD consultants.

Step 4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team

The CDI team, in collaboration with the in-country team, collected the following documents from SPOs and CFAs:

- Project documents: project proposal, budget, contract (Note that for some SPOs there is a contract for the full MFS II period 2011-2015; for others there is a yearly or 2-yearly contract. All new contracts since the baseline in 2012 will need to be collected);
- Technical and financial progress reports since the baseline in 2012;.
- Mid-term evaluation reports;
- End of project-evaluation reports (by the SPO itself or by external evaluators);
- Contract intake forms (assessments of the SPO by the CFA) or organisational assessment scans made by the CFA that cover the 2011-2014 period;
- Consultant reports on specific inputs provided to the SPO in terms of organisational capacity development;
- Training reports (for the SPO; for alliance partners, including the SPO);
- Organisational scans/ assessments, carried out by the CFA or by the Alliance Assessments;
- Monitoring protocol reports, especially for the 5C study carried out by the MFS II Alliances;
- Annual progress reports of the CFA and of the Alliance in relation to capacity development of the SPOs in the particular country;
- Specific reports that are related to capacity development of SPOs in a particular country.

The following documents (since the baseline in 2012) were requested from SPO:

- Annual progress reports;
- Annual financial reports and audit reports;
- Organisational structure vision and mission since the baseline in 2012;
- Strategic plans;

- Business plans;
- Project/ programme planning documents;
- Annual work plan and budgets;
- Operational manuals;
- Organisational and policy documents: finance, human resource development, etc.;
- Monitoring and evaluation strategy and implementation plans;
- Evaluation reports;
- Staff training reports;
- Organisational capacity reports from development consultants.

The CDI team will coded these documents in NVivo (qualitative data analysis software program) against the 5C indicators.

Step 5. Prepare and organise the field visit to the SPO – in-country team

Meanwhile the in-country team prepared and organised the logistics for the field visit to the SPO:

- **General endline workshop** consisted about one day for the self-assessments (about ½ to ¾ of the day) and brainstorm (about 1 to 2 hours) on key organisational capacity changes since the baseline and underlying interventions, factors and actors ('general causal map'), see also explanation below. This was done with the five categories of key staff: managers; project/ programme staff; monitoring and evaluation staff; admin & HRM staff; field staff. Note: for SPOs involved in process tracing an additional 1 to 1½ day workshop (managers; program/project staff; monitoring and evaluation staff) was necessary. See also step 7;
- **Interviews with SPO staff** (roughly one day);
- **Interviews with external respondents** such as partners and organisational development consultants depending on their proximity to the SPO. These interviews could be scheduled after the endline workshop and interviews with SPO staff.

General causal map

During the 5C endline process, a 'general causal map' has been developed, based on key organisational capacity changes and underlying causes for these changes, as perceived by the SPO. The general causal map describes cause-effect relationships, and is described both as a visual as well as a narrative.

As much as possible the same people that were involved in the baseline were also involved in the endline workshop and interviews.

Step 6. Interview the CFA – CDI team

The CDI team was responsible for sending the sheets/ formats to the CFA and for doing a follow-up interview on the basis of the information provided so as to clarify or deepen the information provided. This relates to:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet - CFA perspective.

Step 7. Run the endline workshop with the SPO – in-country team

This included running the endline workshop, including facilitation of the development of the general causal map, self-assessments, interviews and observations. Particularly for those SPOs that were selected for process tracing all the relevant information needed to be analysed prior to the field visit, so as to develop an initial causal map. Please see Step 6 and also the next section on process tracing (evaluation question two).

An endline workshop with the SPO was intended to:

- Explain the purpose of the fieldwork;
- Carry out in the self-assessments by SPO staff subgroups (unless these have already been filled prior to the field visits) - this may take some 3 hours.
- Facilitate a brainstorm on key organisational capacity changes since the baseline in 2012 and underlying interventions, factors and actors.

Purpose of the fieldwork: to collect data that help to provide information on what changes took place in terms of organisational capacity development of the SPO as well as reasons for these changes. The baseline that was carried out in 2012 was to be used as a point of reference.

Brainstorm on key organisational capacity changes and influencing factors: a brainstorm was facilitated on key organisational capacity changes since the baseline in 2012. In order to kick start the discussion, staff were reminded of the key findings related to the historical time line carried out in the baseline (vision, mission, strategies, funding, staff). This was then used to generate a discussion on key changes that happened in the organisation since the baseline (on cards). Then cards were selected that were related to organisational capacity changes, and organised. Then a 'general causal map' was developed, based on these key organisational capacity changes and underlying reasons for change as experienced by the SPO staff. This was documented as a visual and narrative. This general causal map was to get the story of the SPO on what they perceived as key organisational capacity changes in the organisation since the baseline, in addition to the specific details provided per indicator.

Self-assessments: respondents worked in the respective staff function groups: management; programme/ project staff; monitoring and evaluation staff; admin and HRM staff; field staff. Staff were assisted where necessary so that they could really understand what it was they were being asked to do as well as what the descriptions under each indicator meant.

Note: for those SPOs selected for process tracing an additional endline workshop was held to facilitate the development of detailed causal maps for each of the identified organisational change/ outcome areas that fall under the capability to act and commit, and under the capability to adapt and self-renew, and that are likely related to capacity development interventions by the CFA. See also the next section on process tracing (evaluation question two). It was up to the in-country team whether this workshop was held straight after the initial endline workshop or after the workshop and the follow-up interviews. It could also be held as a separate workshop at another time.

Step 8. Interview SPO staff – in-country team

After the endline workshop (developing the general causal map and carrying out self-assessments in subgroups), interviews were held with SPO staff (subgroups) to follow up on the information that was provided in the self-assessment sheets, and to interview staff that had not yet provided any information.

Step 9. Fill-in observation sheets – in-country team

During the visit at the SPO, the in-country team had to fill in two sheets based on their observation:

- 5C Endline observation sheet;
- 5C Endline observable indicators.

Step 10. Interview externals – in-country team & CDI team

The in-country team also needed to interview the partners of the SPO as well as organisational capacity development consultants that have provided support to the SPO. The CDI team interviewed the CFA.

Step 11. Upload and auto-code all the formats collected by in-country team and CDI team – CDI team

The CDI team was responsible for uploading and auto-coding (in Nvivo) of the documents that were collected by the in-country team and by the CDI team.

*Step 12. Provide the **overview of information** per 5C indicator to in-country team – CDI team*

After the analysis in NVivo, the CDI team provided a copy of all the information generated per indicator to the in-country team for initial analysis.

*Step 13. **Analyse the data and develop a draft description** of the findings per indicator and for the general questions – in-country team*

The in-country team provided a draft description of the findings per indicator, based on the information generated per indicator. The information generated under the general questions were linked to the general causal map or detailed process tracing related causal map.

*Step 14. **Analyse the data and finalize the description** of the findings per indicator, per capability and general – CDI team*

The CDI team was responsible for checking the analysis by the in-country team with the Nvivo generated data and to make suggestions for improvement and ask questions for clarification to which the in-country team responded. The CDI team then finalised the analysis and provided final descriptions and scores per indicator and also summarize these per capability and calculated the summary capability scores based on the average of all indicators by capability.

*Step 15. **Analyse the information** in the general causal map –in-country team & CDI team*

The general causal map based on key organisational capacity changes as perceived by the SPO staff present at the workshop, was further detailed by in-country team and CDI team, and based on the notes made during the workshop and where necessary additional follow up with the SPO. The visual and narrative was finalized after feedback by the SPO. During analysis of the general causal map relationships with MFS II support for capacity development and other factors and actors were identified. All the information has been reviewed by the SPO and CFA.

Attributing changes in partner organisation's capacity – evaluation question 2

This section describes the data collection and analysis methodology for answering the second evaluation question: **To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?**

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process. The box below provides some background information on process tracing.

Background information on process tracing

The essence of process tracing research is that scholars want to go beyond merely identifying correlations between independent variables (Xs) and outcomes (Ys). Process tracing in social science is commonly defined by its addition to trace causal mechanisms (Bennett, 2008a, 2008b; Checkle, 2008; George & Bennett, 2005). A causal mechanism can be defined as "a complex system which produces an outcome by the interaction of a number of parts" (Glennan, 1996, p. 52). Process tracing involves "attempts to identify the intervening causal process – the causal chain and causal mechanism – between an independent variable (or variables) and the outcome of the dependent variable" (George & Bennett, 2005, pp. 206-207).

Process tracing can be differentiated into three variants within social science: theory testing, theory building, and explaining outcome process tracing (Beach & Pedersen, 2013).

Theory testing process tracing uses a theory from the existing literature and then tests whether evidence shows that each part of hypothesised causal mechanism is present in a given case, enabling within case inferences about whether the mechanism functioned as expected in the case and whether the mechanism as a whole was present. No claims can be made however, about whether the mechanism was the only cause of the outcome.

Theory building process tracing seeks to build generalizable theoretical explanations from empirical evidence, inferring that a more general causal mechanism exists from the fact of a particular case.

Finally, explaining outcome process tracing attempts to craft a minimally sufficient explanation of a puzzling outcome in a specific historical case. Here the aim is not to build or test more general theories but to craft a (minimally) sufficient explanation of the outcome of the case where the ambitions are more case centric than theory oriented.

Explaining outcome process tracing is the most suitable type of process tracing for analysing the causal mechanisms for selected key organisational capacity changes of the SPOs. This type of process tracing can be thought of as a single outcome study defined as seeking the causes of the specific outcome in a single case (Gerring, 2006; in: Beach & Pedersen, 2013). Here the ambition is to craft a minimally sufficient explanation of a particular outcome, with sufficiency defined as an explanation that accounts for all of the important aspects of an outcome with no redundant parts being present (Mackie, 1965).

Explaining outcome process tracing is an iterative research strategy that aims to trace the complex conglomerate of systematic and case specific causal mechanisms that produced the outcome in question. The explanation cannot be detached from the particular case. Explaining outcome process tracing refers to case studies whose primary ambition is to explain particular historical outcomes, although the findings of the case can also speak to other potential cases of the phenomenon. Explaining outcome process tracing is an iterative research process in which 'theories' are tested to see whether they can provide a minimally sufficient explanation of the outcome. Minimal sufficiency is defined as an explanation that accounts for an outcome, with no redundant parts. In most explaining outcome studies, existing theorisation cannot provide a sufficient explanation, resulting in a second stage in which existing theories are re-conceptualised in light of the evidence gathered in the preceding empirical analysis. The conceptualisation phase in explaining outcome process tracing is therefore an iterative research process, with initial mechanisms re-conceptualised and tested until the result is a theorised mechanism that provides a minimally sufficient explanation of the particular outcome.

Below a description is provided of how SPOs are selected for process tracing, and a description is provided on how this process tracing is to be carried out. Note that this description of process tracing provides not only information on the extent to which the changes in organisational development can be attributed to MFS II (evaluation question 2), but also provides information on other contributing factors and actors (evaluation question 4). Furthermore, it must be noted that the evaluation team has developed an adapted form of 'explaining outcome process tracing', since the data collection and analysis was an iterative process of research so as to establish the most realistic explanation for a particular outcome/ organisational capacity change. Below selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

ETHIOPIA

For Ethiopia the capabilities that are mostly targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 1

The extent to which the Dutch NGO explicitly targets the following capabilities – Ethiopia

Capability to:	AMREF	CARE	ECFA	FSCE	HOA- REC	HUND EE	NVEA	OSRA	TTCA
Act and commit	5	4	5	5	5	3	4	4	3
Deliver on development objectives	2	1	1	1	2	1	1	2	1
Adapt and self-renew	4	2	3	4	2	5	3	3	3
Relate	3	1	2	2	3	2	1	3	1
Achieve coherence	2	2	1	1	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Ethiopia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: AMREF, ECFA, FSCE, HUNDEE. In fact, six SPOs would be suitable for process tracing. We just selected the first one per CFA following the criteria of not including more than one SPO per CFA for process tracing

Table 2

SPOs selected for process tracing – Ethiopia

Ethiopia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
AMREF	Dec 2015	Yes	Yes	Yes	Yes	AMREF NL	Yes
CARE	Dec 31, 2015	Partly	Yes	Yes	Yes – slightly	CARE Netherlands	No - not fully matching
ECFA	Jan 2015	Yes	Yes	Yes	Yes	Child Helpline International	Yes
FSCE	Dec 2015	Yes	Yes	Yes	Yes	Stichting Kinderpostzegels Netherlands (SKN); Note: no info from Defence for Children – ECPAT Netherlands	Yes
HOA-REC	Sustainable Energy project (ICCO Alliance): 2014 Innovative WASH (WASH Alliance): Dec 2015	Yes	Yes	Yes	Yes - slightly	ICCO	No - not fully matching
HUNDEE	Dec 2014	Yes	Yes	Yes	Yes	ICCO & IICD	Yes
NVEA	Dec 2015 (both)	Yes	Yes	Yes	Yes	Edukans Foundation (under two consortia); Stichting Kinderpostzegels Netherlands (SKN)	Suitable but SKN already involved for process tracing FSCE
OSRA	C4C Alliance project (farmers marketing): December 2014 ICCO Alliance project (zero grazing): 2014 (2 nd phase)	Yes	Yes	Yes	Yes	ICCO & IICD	Suitable but ICCO & IICD already involved for process tracing - HUNDEE
TTCA	June 2015	Partly	Yes	No	Yes	Edukans Foundation	No - not fully matching

INDIA

For India the capability that is mostly targeted by CFAs is the capability to act and commit. The next one in line is the capability to adapt and self-renew. See also the table below in which a higher score means that the specific capability is more intensively targeted.

Table 3

The extent to which the Dutch NGO explicitly targets the following capabilities – India¹⁰

Capability to:	BVHA	COUNT	DRISTI	FFID	Jana Vikas	Samar thak Samiti	SMILE	SDS	VTRC
Act and commit	5	3	4	4	4	4	4	3	5
Deliver on development objectives	1	5	1	1	1	1	1	2	1
Adapt and self-renew	2	2	1	3	1	1	4	1	4
Relate	3	1	1	1	1	1	2	1	2
Achieve coherence	1	1	1	4	1	1	1	1	2

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, India.

Below you can see a table describing when the contract with the SPO is to be ended and whether SPO and the CFA both expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BVHA, COUNT, FFID, SMILE and VTRC. Except for SMILE (capability to act and commit only), for the other SPOs the focus for process tracing can be on the capability to act and commit and on the capability to adapt and self-renew.

Table 4

SPOs selected for process tracing – India

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BVHA	2014	Yes	Yes	Yes	Yes	Simavi	Yes; both capabilities
COUNT	2015	Yes	Yes	Yes	Yes	Woorden Daad	Yes; both capabilities
DRISTI	31-03-2012	Yes	Yes	No	no	Hivos	No - closed in 2012
FFID	30-09-2014	Yes	Yes	Yes	Yes	ICCO	Yes

¹⁰ RGVN, NEDSF and Women's Rights Forum (WRF) could not be reached timely during the baseline due to security reasons. WRF could not be reached at all. Therefore these SPOs are not included in Table 1.

\	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew –by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Jana Vikas	2013	Yes	Yes	Yes	No	Cordaid	No - contract is and the by now; not fully matching focus
NEDSF							No – delayed baseline
RGVN							No - delayed baseline
Samarthak Samiti (SDS)	2013 possibly longer	Yes	Yes	Yes	No	Hivos	No - not certain of end date and not fully matching focus
Shivi Development Society (SDS)	Dec 2013 intention 2014	Yes	Yes	Yes	No	Cordaid	No - not fully matching focus
Smile	2015	Yes	Yes	Yes	Yes	Wilde Ganzen	Yes; first capability only
VTRC	2015	Yes	Yes	Yes	Yes	Stichting Red een Kind	Yes; both capabilities

INDONESIA

For Indonesia the capabilities that are most frequently targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 5

The extent to which the Dutch NGO explicitly targets the following capabilities – Indonesia

Capability to:	ASB	Daya ikologi	ECPAT	GSS	Lem bage Kita	Pt. PPMA	Rifka Annisa	WIIP	Yad upa	Yayasan Kelola	YPI	YRBI
Act and commit	4	4	4	5	4	4	5	3	3	2	5	4
Deliver on development objectives	1	1	1	2	2	1	2	1	1	1	1	1
Adapt and self-renew	3	1	2	4	2	3	4	4	1	1	4	3
Relate	1	1	2	3	3	2	1	2	2	2	3	2
Achieve coherence	1	1	1	2	1	1	2	2	1	1	2	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Indonesia.

The table below describes when the contract with the SPO is to be ended and whether both SPO and the CFA expect to focus on these two selected capabilities (MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: ASB, ECPAT, Pt.PPMA, YPI, YRBI.

Table 6

SPOs selected for process tracing – Indonesia

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
ASB	February 2012; extension Feb,1, 2013 – June,30, 2016	Yes	Yes	Yes	Yes	Hivos	Yes
Dayakologi	2013; no extension	Yes	Yes	Yes	No	Cordaid	No: contract ended early and not matching enough
ECPAT	August 2013; Extension Dec 2014	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	Yes
GSS	31 December 2012; no extension	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	No: contract ended early
Lembaga Kita	31 December 2012; no extension	Yes	Yes	No	Yes	Free Press Unlimited - Mensen met een Missie	No - contract ended early
Pt.PPMA	May 2015	Yes	Yes	No	Yes	IUCN	Yes, capability to act and commit only
Rifka Annisa	Dec, 31 2015	No	Yes	No	Yes	Rutgers WPF	No - no match between expectations CFA and SPO
WIIP	Dec 2015	Yes	Not MFS II	Yes	Not MFS II	Red Cross	No - Capacity development interventions are not MFS II financed. Only some overhead is MFS II

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Yayasan Kelola	Dec 30, 2013; extension of contract being processed for two years (2014-2015)	Yes	Not really	Yes	Not really	Hivos	No - no specific capacity development interventions planned by Hivos
YPI	Dec 31, 2015	Yes	Yes	Yes	Yes	Rutgers WPF	Yes
YRBI	Oct, 30, 2013; YRBI end of contract from 31st Oct 2013 to 31st Dec 2013. Contract extension proposal is being proposed to MFS II, no decision yet.	Yes	Yes	Yes	Yes	ICCO	Yes
Yadupa	Under negotiation during baseline; new contract 2013 until now	Yes	Nothing committed	Yes	Nothing committed	IUCN	No, since nothing was committed by CFA

LIBERIA

For Liberia the situation is arbitrary which capabilities are targeted most CFA's. Whilst the capability to act and commit is targeted more often than the other capabilities, this is only so for two of the SPOs. The capability to adapt and self-renew and the capability to relate are almost equally targeted for the five SPOs, be it not intensively. Since the capability to act and commit and the capability to adapt and self-renew are the most targeted capabilities in Ethiopia, India and Indonesia, we choose to focus on these two capabilities for Liberia as well. This would help the synthesis team in the further analysis of these capabilities related to process tracing. See also the table below.

Table 7

The extent to which the Dutch NGO explicitly targets the following capabilities – Liberia

Capability to:	BSC	DEN-L	NAWOCOL	REFOUND	RHRAP
Act and commit	5	1	1	1	3
Deliver on development objectives	3	1	1	1	1
Adapt and self-renew	2	2	2	2	2
Relate	1	2	2	2	2
Achieve coherence	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Liberia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Also, for two of the five SPOs capability to act and commit is targeted more intensively compared to the other capabilities. Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BSC and RHRAP.

Table 8

SPOs selected for process tracing – Liberia

Liberia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BSC	Dec 31, 2015	Yes	Yes	Yes	Yes	SPARK	Yes
DEN-L	2014	No	No	Unknown	A little	ICCO	No – not matching enough
NAWOCOL	2014	Yes	No	No	A little	ICCO	No – not matching enough
REFOUND	At least until 2013 (2015?)	Yes	No	Yes	A little	ICCO	No – not matching enough
RHRAP	At least until 2013 (2014?)	Yes	Yes	Yes	Yes	ICCO	Yes

Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ' general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

Some definitions of the terminology used for this MFS II 5c evaluation

Based upon the different interpretations and connotations the use of the term causal mechanism we use the following terminology for the remainder of this paper:

A **detailed causal map (or model of change)** = the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change.

A **causal mechanism** = is the combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome (Beach and Pedersen, 2013, p. 176).

Part or cause = one actor with its attributes carrying out activities/ producing outputs that lead to change in other parts. The final part or cause is the change/ outcome.

Attributes of the actor = specificities of the actor that increase his chance to introduce change or not such as its position in its institutional environment.

*Step 1. Identify the **planned MFS II supported capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

Chapter 4.1 and 4.2 in the baseline report were reviewed. Capacity development interventions as planned by the CFA for the capability to act and commit and for the capability to adapt and self-renew were described and details inserted in the summary format. This provided an overview of the capacity development activities that were originally planned by the CFA for these two capabilities and assisted in focusing on relevant outcomes that are possibly related to the planned interventions.

*Step 2. Identify the **implemented capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

The input from the CFA was reviewed in terms of what capacity development interventions have taken place in the MFS II period. This information was be found in the 'Support to capacity development sheet - endline - CFA perspective' for the SPO, based on details provided by the CFA and further discussed during an interview by the CDI team.

The CFA was asked to describe all the MFS II supported capacity development interventions of the SPO that took place during the period 2011 up to now. The CDI team reviewed this information, not only the interventions but also the observed changes as well as the expected long-term changes, and

then linked these interventions to relevant outcomes in one of the capabilities (capability to act and commit; and capability to adapt and self-renew).

*Step 3. Identify **initial changes/ outcome areas** in these two capabilities – by CDI team & in-country team*

The CDI team was responsible for coding documents received from SPO and CFA in NVivo on the following:

- 5C Indicators: this was to identify the changes that took place between baseline and endline. This information was coded in Nvivo.
- Information related to the capacity development interventions implemented by the CFA (with MFS II funding) (see also Step 2) to strengthen the capacity of the SPO. For example, the training on financial management of the SPO staff could be related to any information on financial management of the SPO. This information was coded in Nvivo.

In addition, the response by the CFA to the changes in 5C indicators format, was auto-coded.

The in-country team was responsible for timely collection of information from the SPO (before the fieldwork starts). This set of information dealt with:

- MFS II supported capacity development interventions during the MFS II period (2011 until now).
- Overview of all trainings provided in relation to a particular outcome areas/organisational capacity change since the baseline.
- For each of the identified MFS II supported trainings, training questionnaires have been developed to assess these trainings in terms of the participants, interests, knowledge and skills gained, behaviour change and changes in the organisation (based on Kirkpatrick's model), one format for training participants and one for their managers. These training questionnaires were sent prior to the field visit.
- Changes expected by SPO on a long-term basis ('Support to capacity development sheet - endline - SPO perspective').

For the selection of change/ outcome areas the following criteria were important:

- The change/ outcome area is in one of the two capabilities selected for process tracing: capability to act and commit or the capability to adapt and self-renew. This was the first criteria to select upon.
- There was a likely link between the key organisational capacity change/ outcome area and the MFS II supported capacity development interventions. This also was an important criteria. This would need to be demonstrated through one or more of the following situations:
 - In the 2012 theory of change on organisational capacity development of the SPO a link was indicated between the outcome area and MFS II support;
 - During the baseline the CFA indicated a link between the planned MFS II support to organisational development and the expected short-term or long-term results in one of the selected capabilities;
 - During the endline the CFA indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities;
 - During the endline the SPO indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities.

Reviewing the information obtained as described in Step 1, 2, and 3 provided the basis for selecting key organisational capacity change/ outcome areas to focus on for process tracing. These areas were to be formulated as broader outcome areas, such as 'improved financial management', 'improved monitoring and evaluation' or 'improved staff competencies'.

Note: the outcome areas were to be formulated as intermediates changes. For example: an improved monitoring and evaluation system, or enhanced knowledge and skills to educate the target group on

climate change. Key outcome areas were also verified - based on document review as well as discussions with the SPO during the endline.

*Step 4. Construct the **detailed, initial causal map** (theoretical model of change) – CDI & in-country team*

A detailed initial causal map was developed by the CDI team, in collaboration with the in-country team. This was based on document review, including information provided by the CFA and SPO on MFS II supported capacity development interventions and their immediate and long-term objectives as well as observed changes. Also, the training questionnaires were reviewed before developing the initial causal map. This detailed initial causal map was to be provided by the CDI team with a visual and related narrative with related references. This initial causal map served as a reference point for further reflection with the SPO during the process tracing endline workshop, where relationships needed to be verified or new relationships established so that the second (workshop-based), detailed causal map could be developed, after which further verification was needed to come up with the final, concluding detailed causal map.

It's important to note that organisational change area/ outcome areas could be both positive and negative.

For each of the selected outcomes the team needed to make explicit the theoretical model of change. This meant finding out about the range of different actors, factors, actions, and events etc. that have contributed to a particular outcome in terms of organisational capacity of the SPO.

A model of change of good quality includes:

- The causal pathways that relate the intervention to the realised change/ outcome;
- Rival explanations for the same change/ outcome;
- Assumptions that clarify relations between different components or parts;
- Case specific and/or context specific factors or risks that might influence the causal pathway, such as for instance the socio-cultural-economic context, or a natural disaster;
- Specific attributes of the actors e.g. CFA and other funders.

A model of change (within the 5C study called a 'detailed causal map') is a complex system which produces intermediate and long-term outcomes by the interaction of other parts. It consists of parts or causes that often consist of one actor with its attributes that is implementing activities leading to change in other parts (Beach & Pedersen, 2013). A helpful way of constructing the model of change is to think in terms of actors carrying out activities that lead to other actors changing their behaviour. The model of change can be explained as a range of activities carried out by different *actors* (including the CFA and SPO under evaluation) that will ultimately lead to an outcome. Besides this, there are also '*structural*' elements, which are to be interpreted as external factors (such as economic conjuncture); and *attributes* of the actor (does the actor have the legitimacy to ask for change or not, what is its position in the sector) that should be looked at (Beach & Pedersen, 2013). In fact Beach and Pedersen, make a fine point about the subjectivity of the actor in a dynamic context. This means, in qualitative methodologies, capturing the changes in the actor, acted upon area or person/organisation, in a non sequential and non temporal format. Things which were done recently could have corrected behavioural outcomes of an organisation and at the same time there could be processes which incrementally pushed for the same change over a period of time. Beach and Pedersen espouse this methodology because it captures change in a dynamic fashion as against the methodology of logical framework. For the MFS II evaluation it was important to make a distinction between those paths in the model of change that are the result of MFS II and rival pathways.

The construction of the model of change started with the identified key organisational capacity change/ outcome, followed by an inventory of all possible subcomponents that possibly have caused the change/ outcome in the MFS II period (2011-up to now, or since the baseline). The figure below presents an imaginary example of a model of change. The different colours indicate the different types of support to capacity development of the SPO by different actors, thereby indicating different pathways of change, leading to the key changes/ outcomes in terms of capacity development (which in this case indicates the ability to adapt and self-renew).

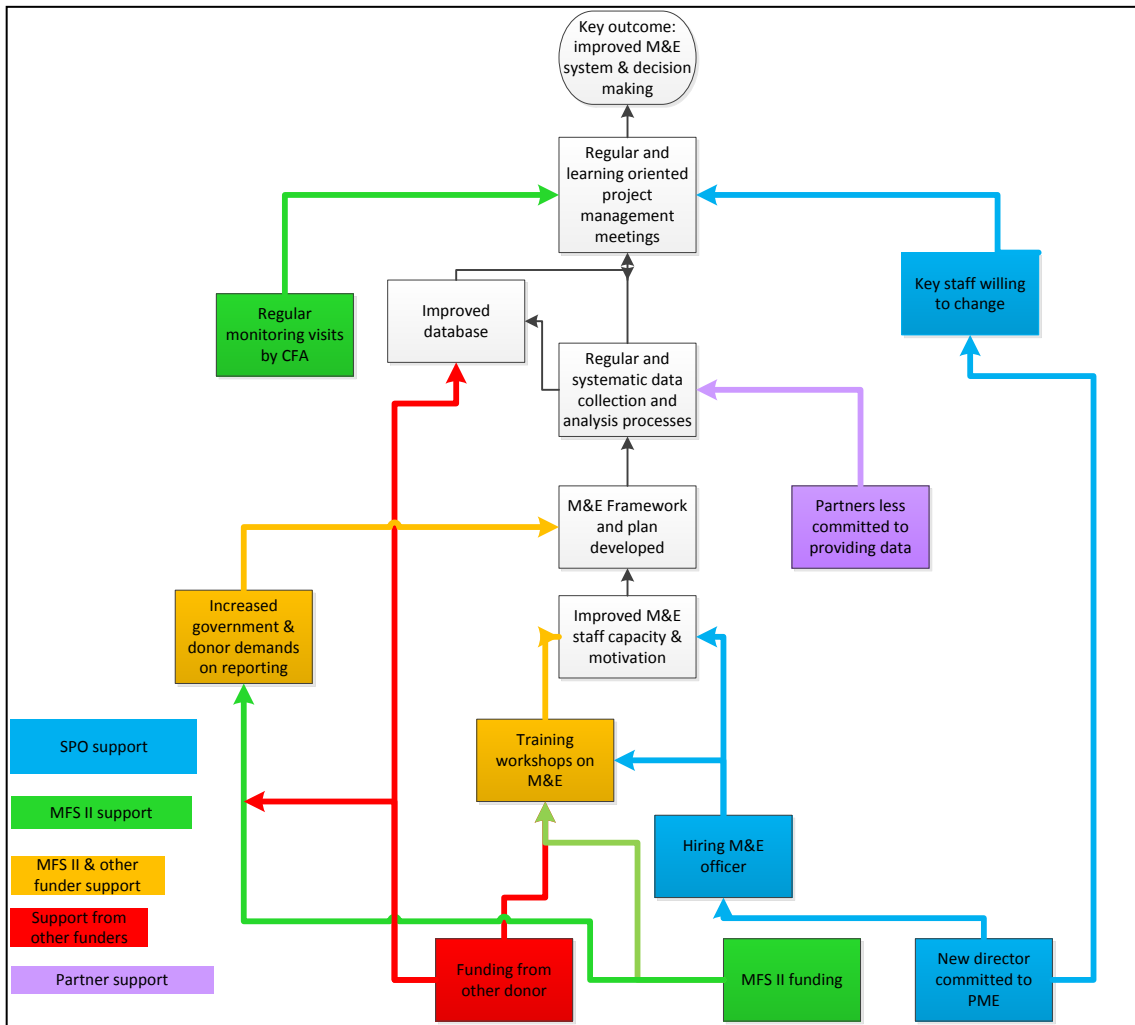

Figure 1 An imaginary example of a model of change

Step 5. Identify **types of evidence** needed to verify or discard different causal relationships in the model of change – in-country teams with support from CDI team

Once the causal mechanism at theoretical level were defined, empirical evidence was collected so as to verify or discard the different parts of this theoretical model of change, confirm or reject whether subcomponents have taken place, and to find evidence that confirm or reject the causal relations between the subcomponents.

A key question that we needed to ask ourselves was, "What information do we need in order to confirm or reject that one subcomponent leads to another, that X causes Y?". The evaluation team needed to agree on what information was needed that provides empirical manifestations for each part of the model of change.

There are four distinguishable types of evidence that are relevant in process tracing analysis: *pattern*, *sequence*, *trace*, and *account*. Please see the box below for descriptions of these types of evidence.

The evaluation team needed to agree on the types of evidence that was needed to verify or discard the manifestation of a particular part of the causal mechanism. Each one or a combination of these different types of evidence could be used to confirm or reject the different parts of the model of change. This is what is meant by robustness of evidence gathering. Since causality as a concept can bend in many ways, our methodology, provides a near scientific model for accepting and rejecting a particular type of evidence, ignoring its face value.

Types of evidence to be used in process tracing

Pattern evidence relates to predictions of statistical patterns in the evidence. For example, in testing a mechanism of racial discrimination in a case dealing with employment, statistical patterns of employment would be relevant for testing this part of the mechanism.

Sequence evidence deals with the temporal and spatial chronology of events predicted by a hypothesised causal mechanism. For example, a test of the hypothesis could involve expectations of the timing of events where we might predict that if the hypothesis is valid, we should see that the event B took place after event A took place. However, if we found that event B took place before event A took place, the test would suggest that our confidence in the validity of this part of the mechanism should be reduced (disconfirmation/ falsification).

Trace evidence is evidence whose mere existence provides proof that a part of a hypothesised mechanism exists. For example, the existence of the minutes of a meeting, if authentic ones, provide strong proof that the meeting took place.

Account evidence deals with the content of empirical material, such as meeting minutes that detail what was discussed or an oral account of what took place in the meeting.

Source: Beach and Pedersen, 2013

Below you can find a table that provides guidelines on what to look for when identifying types of evidence that can confirm or reject causal relationships between different parts/ subcomponents of the model of change. It also provides one example of a part of a causal pathway and what type of information to look for.

Table 9

Format for identifying types of evidence for different causal relationships in the model of change (example included)

Part of the model of change	Key questions	Type of evidence needed	Source of information
Describe relationship between the subcomponents of the model of change	Describe questions you would like to answer a so as to find out whether the components in the relationship took place, when they took place, who was involved, and whether they are related	Describe the information that we need in order to answer these questions. Which type of evidence can we use in order to reject or confirm that subcomponent X causes subcomponent Y? Can we find this information by means of : Pattern evidence; Sequence evidence; Trace evidence; Account evidence?	Describe where you can find this information
Example: Training workshops on M&E provided by MFS II funding and other sources of funding	Example: What type of training workshops on M&E took place? Who was trained? When did the training take place? Who funded the training? Was the funding of training provided before the training took place? How much money was available for the training?	Example: Trace evidence: on types of training delivered, who was trained, when the training took place, budget for the training Sequence evidence on timing of funding and timing of training Content evidence: what the training was about	Example: Training report SPO Progress reports Interviews with the CFA and SPO staff Financial reports SPO and CFA

Please note that for practical reasons, the 5C evaluation team decided that it was easier to integrate the specific questions in the narrative of the initial causal map. These questions would need to be addressed by the in country team during the process tracing workshop so as to discover, verify or discard particular causal mechanisms in the detailed, initial causal map. Different types of evidence was asked for in these questions.

*Step 6. **Collect data** to verify or discard causal mechanisms and develop workshop-based, detailed causal map – in-country team*

Once it was decided by the in-country and CDI evaluation teams what information was to be collected during the interaction with the SPO, data collection took place. The initial causal maps served as a basis for discussions during the endline workshop with a particular focus on process tracing for the identified organisational capacity changes. But it was considered to be very important to understand from the perspective of the SPO how they understood the identified key organisational capacity change/outcome area has come about. A new detailed, workshop-based causal map was developed that included the information provided by SPO staff as well as based on initial document review as described in the initial detailed causal map. This information was further analysed and verified with other relevant information so as to develop a final causal map, which is described in the next step.

*Step 7. **Assess the quality** of data and **analyse data**, and develop the **final detailed causal map** (model of change) – in-country team and CDI team*

Quality assurance of the data collected and the evidence it provides for rejecting or confirming parts of causal explanations are a major concern for many authors specialised in contribution analysis and process-tracing. Stern et al. (2012), Beach and Pedersen (2013), Lemire, Nielsen and Dybdal (2012), Mayne (2012) and Delahais and Toulemonde (2012) all emphasise the need to make attribution/contribution claims that are based on pieces of evidence that are rigorous, traceable, and credible. These pieces of evidence should be as explicit as possible in proving that *subcomponent X causes subcomponent Y* and ruling out other explanations. Several tools are proposed to check the nature and the quality of data needed. One option is, Delahais and Toulemonde's Evidence Analysis Database, which we have adapted for our purpose.

Delahais and Toulemonde (2012) propose an Evidence Analysis Database that takes into consideration three criteria:

Confirming/ rejecting a causal relation (yes/no);

Type of causal mechanism: intended contribution/ other contribution/ condition leading to intended contribution/ intended condition to other contribution/ feedback loop;

Strength of evidence: strong/ rather strong/ rather weak/ weak.

We have adapted their criteria to our purpose. The in-country team, in collaboration with the CDI team, used the criteria in assessing whether causal relationships in the causal map, were strong enough. This has been more of an iterative process trying to find additional evidence for the established relationships through additional document review or contacting the CFA and SPO as well as getting their feedback on the final detailed causal map that was established. Whilst the form below has not been used exactly in the manner depicted, it has been used indirectly when trying to validate the information in the detailed causal map. After that, the final detailed causal map is established both as a visual as well as a narrative, with related references for the established causal relations.

<i>Example format for the adapted evidence analysis database (example included)</i>	<i>Confirming/ rejecting a causal relation (yes/no)</i>	<i>Type of information providing the background to the confirmation or rejection of the causal relation</i>	<i>Strength of evidence: strong/ rather strong/ rather weak/ weak</i>	<i>Explanation for why the evidence is (rather) strong or (rather) weak, and therefore the causal relation is confirmed/ rejected</i>
<i>Description of causal relation</i>				
e.g. Training staff in M&E leads to enhanced M&E knowledge, skills and practice	e.g. Confirmed	e.g. Training reports confirmed that staff are trained in M&E and that knowledge and skills increased as a result of the training		

Step 8. Analyse and conclude on findings– in-country team and CDI team

The final detailed causal map was described as a visual and narrative and this was then analysed in terms of the evaluation question two and evaluation question four: *"To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?"* and *"What factors explain the findings drawn from the questions above?"* It was analysed to what extent the identified key organisational capacity change can be attributed to MFS II supported capacity development interventions as well as to other related factors, interventions and actors.

Explaining factors – evaluation question 4

This paragraph describes the data collection and analysis methodology for answering the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This has been explained in the first section of this appendix. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information was procured for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the process of process tracing as described in the section above.

Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team.

Use of the 5 core capabilities framework and qualitative approach: this has proven to a be very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation

and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
- Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
- Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people

change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

Appendix 2 Background information on the five core capabilities framework

The 5 capabilities (5C) framework was to be used as a framework for the evaluation of capacity development of Southern Partner Organisations (SPOs) of the MFS II consortia. The 5C framework is based on a five-year research program on 'Capacity, change and performance' that was carried out by the European Centre for Development Policy Management (ECDPM). The research included an extensive review of the literature and sixteen case studies. The 5C framework has also been applied in an IOB evaluation using 26 case studies in 14 countries, and in the baseline carried out per organisation by the MFS II organisations for the purpose of the monitoring protocol.

The 5C framework is structured to understand and analyse (changes in) the capacity of an organization to deliver (social) value to its constituents. This introduction briefly describes the 5C framework, mainly based on the most recent document on the 5C framework (Keijzer et al., 2011).

The 5C framework sees capacity as an **outcome** of an **open system**. An organisation or collaborative association (for instance a network) is seen as a system interacting with wider society. The most critical practical issue is to ensure that relevant stakeholders share a common way of thinking about capacity and its core constituents or capabilities. Decisive for an organisation's capacity is the context in which the organisation operates. This means that **understanding context issues** is crucial. The use of the 5C framework requires a multi-stakeholder approach because shared values and results orientation are important to facilitate the capacity development process. The 5C framework therefore needs to **accommodate the different visions** of stakeholders and conceive different strategies for raising capacity and improving performance in a given situation.

The 5C framework defines capacity as '**producing social value**' and identifies five core capabilities that together result in that overall capacity. Capacity, capabilities and competences are seen as follows:

Capacity is referred to as the overall ability of an organisation or system to create value for others;

Capabilities are the collective ability of a group or a system to do something either inside or outside the system. The collective ability involved may be technical, logistical, managerial or generative (i.e. the ability to earn legitimacy, to adapt, to create meaning, etc.);

Competencies are the energies, skills and abilities of individuals.

Fundamental to developing capacity are inputs such as human, material and financial resources, technology, and information. To the degree that they are developed and successfully integrated, capabilities contribute to the overall capacity or ability of an organisation or system to create value for others. A single capability is not sufficient to create capacity. All are needed and are strongly interrelated and overlapping. Thus, to achieve its development goals, the 5C framework says that every organisation or system must have **five basic capabilities**:

- The capability to act and commit;
- The capability to deliver on development objectives;
- The capability to adapt and self-renew;
- The capability to relate (to external stakeholders);
- The capability to achieve coherence.

In order to have a common framework for evaluation, the five capabilities have been reformulated in outcome domains and for each outcome domain performance indicators have been developed.

There is some overlap between the five core capabilities but together the five capabilities result in a certain level of capacity. Influencing one capability may have an effect on one or more of the other capabilities. In each situation, the level of any of the five capabilities will vary. Each capability can become stronger or weaker over time.

Appendix 3 Changes in organisational capacity of the SPO - 5C indicators

Below you will find a description for each of the indicators under each of the capabilities, what the situation is as assessed during the endline, how this has changed since the baseline and what are the reasons for change.

Capability to act and commit

Level of Effective Leadership

1.1.Responsive leadership: 'Leadership is responsive, inspiring, and sensitive'

This is about leadership within the organisation (operational, strategic). If there is a larger body then you may also want to refer to leadership at a higher level but not located at the local organisation.

The Executive Director (ED) of BVHA continues to be responsive, democratic and gives space for decentralized decision-making. The present leadership has also shown increased interaction with the partner organisations which in turn led to partners becoming more responsive towards their work, which is said to be visible through the feedbacks received by the ED. While this change was triggered by the demand of Simavi, nevertheless it brought about overhauling in the working of the present leadership. The ED has also engaged more proactively in promotion, networking, fundraising and management. However, the division of authority between the board and Executive Director continues to be imbalanced with the former taking major decisions, especially decisions on funding of the projects and utilization of the funds received.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

1.2.Strategic guidance: 'Leaders provide appropriate strategic guidance (strategic leader and operational leader)'

This is about the extent to which the leader(s) provide strategic directions

There could be no denying of the fact that the Executive Director's ability to single-handedly take major decisions is tied to the governing board that is composed of the network members. Due to this, the decision of the leadership has to be in tune with the larger mandate of the governing board members. The composition of the governing board itself poses difficulty in the ED's independent decision-making. With overlapping and conflict views of network members, the ED's work sometimes gets hampered.

However, in the last two years there has been a slight improvement in the leadership position. The network members offer less opposition to the ED, because over the period he is has become more approachable, cooperative and responsive and as a result of which he is able to get support for his decisions from the board members. He is thus able to implement his decisions and guide his staff better.

The Executive Director has now more flexibility to take up new projects as per the need and demand and can send it to different donor agencies. This has resulted in getting projects from UNICEF on MDR

(maternal child death review)¹¹ and from Simavi on MHM (menstrual hygiene management) and Child Marriage. This in turn has led to increased financial and other resources not only for BVHA but also for its partners as well as increased job satisfaction for the senior and junior management staff. BVHA has also formed Advisory Committees comprising 15 visionary intellectuals who contribute/assist ideas/suggestions in the strategic planning process.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

1.3. Staff turnover: 'Staff turnover is relatively low'

This is about staff turnover.

BVHA's staff turnover is not uniform. While the top leadership continued to remain in the same position for the last two decades, over the last two years some project staff have left the organisation. The main reason for this is linked to the amount of salaries (salaries cannot be more than 15 % of the budget as a donor requirement) received by them in comparison to the work done; better opportunities found in other places and absence of any scope of promotion within the organisation. To deal with the high programme staff turnover, Simavi demanded a clause in the contracts of recruits and the ED has brought in a new policy with the approval of the Board that when project staff join the organisation they cannot leave a project before completion.

Earlier the Governing Board members were not very interested in giving promotions to staff who were working in BVHA for many years as they were more interested in conducting interviews with people from outside for vacant posts at senior positions. But now, the Governing Board has taken a positive step to promote the existing staff to higher levels based on their dedication, performance and years of service at BVHA. This is a major motivating factor at the staff level.

Score baseline: 3.5

Score endline: 3.75 (very slight improvement)

Level of realistic strategic planning

1.4. Organisational structure: 'Existence of clear organisational structure reflecting the objectives of the organisation'

Observable indicator: Staff have copy of org structure and understand this

BVHA staff members are aware of the organisational structure in BVHA, and a written copy is available.

Score baseline: 4.0

Score endline: 4.0 (no change)

1.5. Articulated strategies: 'Strategies are articulated and based on good situation analysis and adequate M&E'

Observable indicator: strategies are well articulated. Situation analysis and monitoring and evaluation are used to inform strategies.

For all the programmes BVHA's strategies are now based more on situational analysis and project outcomes rather than just outputs. There are now continuous and regular discussions on outputs/outcomes, planning of achievements, use of multimedia IEC strategies and multi-stakeholder

¹¹ A project funded by UNICEF was initiated in two districts of Bihar. This is a pilot intervention to institutionalise MDR process and provide a road map for establishing a routine system for review of all maternal deaths as per the Maternal Death Review guidelines of Government Of India.

involvement at various levels which facilitates strategic planning. For example: training and support is given to Civil Society Organisations (CSOs) and target groups on SRHR issues which increases the meaningful participation of target groups in monitoring the health delivery services/system. For example, in implementing the project 'Initiative to improve maternal health with social determinants approach' they formed Village Health Sanitation and Nutrition Committees (VHSNCs) as taskforces to monitor the maternal health services in the villages. This facilitated the organisation to analyse the situation on how maternal deaths are not reported properly though it is mandatory under NRHM. Moreover, the actual reason for death (e.g. socio-economic, health facility and other) are neither analysed nor addressed. It is very much necessary for the service providers and policy makers to identify the root cause for to create healthy maternity in Bihar. In the light of this situational analysis BVHA initiated a pilot intervention project 'Maternal Death Review' funded by Oxfam to institutionalise MDR process, documentation of the reports and provide a road map for establishing a routine system for review of all maternal death. On another instance, discussions with the local partners especially those working in the bordering districts (adjacent to Nepal) identified the big problem regarding the sexual reproductive health issues. Being bordering districts there is high prevalence of trafficking especially for women/adolescent girls leading to SRHR problems, which make the situation more critical. This situational analysis helped BVHA to initiate the "Community empowerment on Gender Equity to access Reproductive Health Rights" project in these regions. BVHA has also been working on establishing linkages and collaboration with likeminded NGOs and government for sharing and learning SRHR issues. It conducts monthly meeting with Integrated Child Development Service (ICDS) staff, medical officers, ANM etc., where the status of the immunisation, ANC, PNC etc. are discussed and monitored. This further facilitates the organisation to develop strategies for its programmes.

Score baseline: 3.5

Score endline: 3.75 (very slight improvement)

Level of translation of strategy into operations

1.6. Daily operations: 'Day-to-day operations are in line with strategic plans'

This is about the extent to which day-to-day operations are aligned with strategic plans.

In the baseline assessment it was pointed out that the overall operational plan of BVHA was not prepared professionally. BVHA still makes annual plans that are broken down to quarterly and monthly plans that are in line with its strategic goals. However, the implementation of the project continues to depend upon partner/network organisations. Since the baseline BVHA has improved its capability with regard to operational plans by developing formats that are easy to understand for their network and partner organisations, which resulted systematic data collection and timely reporting. The data is further analysed by the project staff to monitor the output and outcome of the project. Proper methods for monitoring progress are now in place, and training of the partners on M&E helped the partners to articulate the work done by them to BVHA by aligning their daily operations with the larger plans. This was a requirement of Simavi for the SRHR project, but its progress in this project has become a motivating factor for other team members to follow such PME methods and as result now reports (qualitative and quantitative) are sent to concerned donors. The district project coordinators conduct monthly review meeting at the field level; the project manager and ED at BVHA are taking more responsibility for monitoring and evaluation of the projects and Simavi has provided planning and reporting formats that enable BVHA to track all the proposed activities, feedback from the donor. All these systems and processes contribute in tracking whether the day to day operations are in line with the strategic plan.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

Level of staff capacity and motivation

1.7. Staff skills: 'Staff have necessary skills to do their work'

This is about whether staff have the skills necessary to do their work and what skills they might they need.

BVHA's success in the SRHR programme was an outcome of various processes including developing the skills of the members of the project. Enhanced skill sets of BVHA staff members (as an outcome of ARSH clinic visit) led them to replicate it in developing adolescent reproductive health clinic services in the government system as well as bringing about improvement in the quality of the clinic. For instance, the Adolescent Friendly Health Clinics is a case in point. The Executive Director of BVHA could get a basic understanding of adolescent health problems, counselling techniques, how to establish and run such clinics, how to convince the government to take up such an initiative and its linkages with the project at community level. As a result BVHA convinced the Government of Bihar to take up the East Champaran District in the first phase for setting up the ARSH (Adolescence Reproductive Sexual Health) clinics. Staff skills have also been developed with regard to improving their results-oriented activity, inter-staff coordination, cooperation between BVHA personnel and their project partners. Broadly, skill development of the staff has taken place in three broad areas: advocacy, record keeping of PME and financial training.

A new national coordinator of the SRHR alliance has been appointed by the Dutch organisation Rutgers WPF. He plays a vital role in strengthening the SRHR alliance partners through capacity building workshops, review meetings and by providing technical support in the areas of strategy development. He has triggered various discussions on SRHR issues and has been working closely with the BVHA programme manager. He gives constructive feedback to BVHA on plans in order to align them with Simavi's PME requirements. As a result the staff of BVHA has improved, compared to the baseline, its knowledge on SRHR and its 'core skills' such as planning, monitoring and evaluation; data collection; report writing and giving training to its partners. The organisation has also worked on the 'core skill' fundraising: a core committee has been formed at BVHA level for new project proposal development, liaising with new donors and meeting with senior level officials and policy makers for advocacy.

Score baseline: 3.5

Score endline: 4.5 (improvement)

1.8. Training opportunities: 'Appropriate training opportunities are offered to staff'

This is about whether staff at the SPO are offered appropriate training opportunities

The Executive Director provides equal opportunity to all his staff to participate in various workshops and training programmes so that each and everybody is able to enhance his or her skills. For example, the third category level staff (assistants) is given opportunities to participate in the BVHA organised capacity building programmes and also in the programmes organised by other agencies. The number of training programmes for the staff has increased since the baseline. This includes trainings on SRHR, MIS, success story writing, government schemes, comprehensive sexual education, advocacy, output and outcome indicators, the PC and PNDD (Preconception and Prenatal Diagnostic Treatment) Act, financial compliance and communication. All the programme level staff is participating in the capacity building programmes; this is as per the need of the project. In the SRHR project that is funded under MFS II, BVHA staff participated in all workshops and training that were offered via the SRHR alliance. The training topics were identified with BVHA's input and in some cases detailed assessment took place to tailor the training to the participants. Staff also felt strong to give advice to other alliance partners (e.g. on HMIS) and to showcase their project, as best practises so that others could learn from them. BVHA developed a structured capacity building programme for its partner organizations. The capacity building programmes were divided into 2 components – one is to enhance the knowledge of the project staff on the issues related to SRHR and the other is to increase capacity of the staff to conduct sessions in the villages with effective communication skills. This was possible only after the programme staff of BVHA was trained through exposure visits, six monthly regional meetings with alliance partners and training by other donors and state government.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

1.9.1.Incentives: 'Appropriate incentives are in place to sustain staff motivation'

This is about what makes people want to work here. Incentives could be financial, freedom at work, training opportunities, etc.

In the baseline assessment BVHA's staff indicated that they were not receiving adequate financial incentives. Especially the payments of the programme staffs were not enough, which in turn led to employees leaving the organisation for a better salary. This triggered a major change after the 2012 baseline leading to revision of the salary structure of the BVHA staff members. This was after Simavi asked BVHA to adhere to government standards and agreed to increase their salaries (minimum wage plus 10% provision fund). This was made possible through the accumulation of a corpus fund.

Apart from the changes in the salary structure, additional incentives have been provided through: freedom at work without interference of ED and the board; skill building through training programmes; homely environment as a result of cooperation amongst staff members.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

Level of Financial Resource Security

1.9.2.Funding sources: 'Funding from multiple sources covering different time periods'

This is about how diversified the SPOs funding sources are over time, and how the level of funding is changing over time.

BVHA has diverse funding sources, following a detailed budget structure. The utilization of money is done accordingly. BVHA receives 100 percent funding from SIMAVI for the MFS II programme on Sexual Reproductive Health Rights. BVHA has also been able to garner funds from Simavi for two new projects: child marriage programme and menstrual hygiene management. Other donors include: UNFPA, UNICEF, the Population Foundation of India, BMZ-KKS, and the Ministry of Health and Family Welfare of the government of India.

Along with diversified funding sources, BVHA could attract government agencies by increasing its visibility at various levels through their new partnership with bilateral and multilateral agencies. This in turn has helped them to attract new funding from different sources. They have also partnered with the alliances formed during the SRHR programme. The SRHR programme of BVHA also became a reference for them to draw the attention of the funding agencies. After the introduction of the CSR Act, BVHA is also exploring funding opportunities with the corporate sector.

The staff is highly motivated and they try to go an extra mile to explore new funding opportunities especially with the corporate sector. Now, more new proposals are prepared and sent to different donor agencies. There is also a tight booking plan for BVHA's training halls and facilities which they rent out to raise funds and they have also planned to conduct various capacity building training programmes and charge the participants to raise money. BVHA has started taking one year to five years subscription fee by making members of its Quarterly NEWS letter to meet the NEWS letter printing costs.

Score baseline: 4.0

Score endline: 4.5 (slight improvement)

1.9.3.Funding procedures: 'Clear procedures for exploring new funding opportunities'

This is about whether there are clear procedures for getting new funding and staff are aware of these procedures.

In BVHA, there are no written, official fund raising procedures but exploring of funding opportunities is done on a regular basis as per the direction and suggestion of the Governing board of BVHA. With the revision of the salary structure there is a new lease of energy amongst the staff. The staff is highly motivated and they try to go an extra mile to explore new funding opportunities especially with the corporate sector. Now, more and better proposals are prepared and sent to different donor agencies.

Other strategies for raising funds including on request training (where participants pay), selling of books, membership fees, renting out its training facilities, and exploring funding possibilities under the CSR act, are being implemented.

Score baseline: 2.5

Score endline: 3.0 (slight improvement)

Summary of capability to act and commit

The Executive Director is more responsive in his interaction with BVHA's partner organisations. This was initially triggered by a requirement of Simavi. The ED has been given more flexibility by the board to take up new projects and approach new donor agencies by getting more involvement in promotion and fundraising for the organisation. While the governing board still holds most authority for making decisions on funding of the projects and utilisation of funds, the executive director experiences less opposition from the network members in terms of his strategic guidance to the organisation as he gains more support from the board.

There is still some staff turnover at the project level, where staff has left because of low salaries or better opportunities. The governing board is now looking more within the organisation to fill vacant senior positions and recognise the performance of existing staff by promoting them. This together with the revision of the salary structure after the baseline assessment and discussions with Simavi has improved the incentives of staff to work at BVHA. Other incentives still include freedom at work, skill development through training and the homely environment created by collaboration between staff. BVHA staff members are aware of the organisational structure in BVHA, and a written copy is available.

BVHA's strategies are now more based on project outcomes from its M&E system, rather than just on outputs. They continue to involve their target groups and link with like-minded NGOs and the government when formulating strategies. The organisation continues to work with annual, quarterly and monthly work plans and BVHA's work continues to rely on their partners' timeliness. However, partners have improved their timeliness because of the introduction of proper progress monitoring methods in the SRHR project by Simavi, that have had its effect on other project teams as well. Some of the core skills that needed to be upgraded during the baseline, have now been developed. This includes: PME and fundraising but also more specific skills and knowledge on SRHR. The presence of the national coordinator of the SRHR alliance at BVHA has contributed to this. Also all BVHA staff had equal access to more training programmes, as per their programme's need on the topics: SRHR, MIS, success story writing, government schemes, comprehensive sexual education, advocacy, output and outcome indicators, the PC and PNDT Act, financial compliance and communication.

BVHA has increased its visibility because of its involvement in the SRHR project and alliance. This attracted donors like UNFPA, UNICEF, the Population Foundation of India, BMZ-KKS and the government of India and Simavi approving two new projects. They also have other strategies to raise funds which include renting out their training facilities and providing training for paying participants. There are still no written funding procedures, but staff has become more motivated after the revision of the salary structure and better capable to write and send more and better proposals to new donor agencies.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

Capability to adapt and self-renew

Level of effective application of M&E

2.1.M&E application: 'M&E is effectively applied to assess activities, outputs and outcomes'

This is about what the monitoring and evaluation of the SPO looks at, what type of information they get at and at what level (individual, project, organisational).

Already during the baseline evaluation, BVHA had a monitoring and evaluation system in place. The M&E is now focussing more on outcomes than during the baseline. The project officer of BVHA for the SRHR project took part in the M&E activities and is now better equipped to understand outcomes and impacts. BVHA has learned to understand better how outcomes are measured through frequent interactions with Simavi, workshops on PME, biannual PME meetings with other SRHR alliance partners in which BVHA compared strategies, learned from best monitoring examples and did peer-reviewed organisational assessment exercises.

Various tools for monitoring outcomes in the SRHR project were discussed during these SRHR alliance meetings and interaction with Simavi, for example:

- List of questions measuring Knowledge, Attitude and Practice (KAP) on SRHR issues linked to the different outcomes. A list of essential KAP questions and possible answers is given in the template.
- Use of an exit satisfaction questionnaire for the outcome: 40% of maternal health facilities show an increase in satisfaction by women. This allows project managers to analyse surveys per 3 months and compare the level of satisfaction in the first 3 months with the last 3 months.

In the overview on how the M&E is organised in India for the SRHR alliance it can be seen that for the BVHA SRHR project:

- Planned outputs are monitored and reported on;
- There is an outcome plan for 2013, with per outcome indicator: a definition, notes of the discussion that has taken place on the indicator during the PME meetings with Simavi and other alliance partners, source of verification (what is planned on how to measure it) and frequency of measurement;
- For each indicator on both outcome and output level agreements on the definition and how to measure it, were made during the alliance meetings in May and October 2012;
- In this overview BVHA filled in for each indicator which method for data collection they intend to use, which sample and the period for when this is planned. Simavi gives her feedback on this and makes suggestions for improvement.

BVHA visits the partner organisations for a monthly review and invites them for a quarterly review in the BVHA office. The Executive Director also does independent and regular monitoring of the projects through personal visits, phone calls and monthly review meetings. There are also surprise visits by the board members. Community based monitoring is done by filling up monitoring sheets. In the SRHR project BVHA has MIS formats in place for the advocacy officer of BVHA to create monthly reports, for district coordinator of the partner NGO to produce monthly NGO District consolidation reports based on the monthly MIS formats of the Panchayat level motivator of partner NGOs and the project manager of BVHA to produce monthly state reports of the SRHR project.

Score baseline: 3.0

Score endline: 4.0 (improvement)

2.2.M&E competencies: 'Individual competencies for performing M&E functions are in place'

This is about whether the SPO has a trained M&E person; whether other staff have basic understanding of M&E; and whether they know what information to collect, how to process the information, how to make use of the information so as to improve activities etc.

While there is still no dedicated M&E person at BVHA, at least one staff member has become much more expert in M&E through support from the national programme coordinator, PME workshops and individual supervision by Simavi. Other staff have also improved their skills to design formats for data

collection and analyse data through participating in various training programmes organized by development agencies on M&E and through inviting M&E experts themselves for in-house training.

Project officers do the monitoring of the projects. In the SRHR project, M&E is very structured with formats for monitoring and report writing and the project manager makes monthly monitoring visits.

The Executive Director is also involved in monitoring by taking pro-active measures in the form of surprise visits to the partners, and being on call in case there is a need. This has also inspired the Board members to do the same. Every month the project officers send project progress reports and plans to the ED through e-mail.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

Level of strategic use of M&E

2.3.M&E for future strategies: 'M&E is effectively applied to assess the effects of delivered products and services (outcomes) for future strategies'

This is about what type of information is used by the SPO to make decisions; whether the information comes from the monitoring and evaluation; and whether M&E info influences strategic planning.

BVHA has since the baseline improved its M&E capacity and is better able to analyse collected data, now also at outcome level, not only output level, which helps them to inform future strategies. This enables them to identify strategic moves, develop more effective interventions, such as multiple strategies. BVHA was able to develop this because of learning from others, workshops on strategies and joint analysis of project results within the SRHR alliance. Simavi (as a funder) allows for strategic changes in the programme and budget. An example of this is that BVHA lobbied for working with in-school youth, while Simavi was not encouraging this, but together they revised the strategy to include this group. There is thus more room for making strategic changes based on M&E, particularly because the results of a focus on outcomes and not only outputs and engagement of stakeholders in strategic development.

Score baseline: 2.0

Score endline: 3.0 (improvement)

Level of openness to strategic learning

2.4.Critical reflection: 'Management stimulates frequent critical reflection meetings that also deal with learning from mistakes'

This is about whether staff talk formally about what is happening in their programs; and, if so, how regular these meetings are; and whether staff are comfortable raising issues that are problematic.

Regular monthly meetings, quarterly governing board meetings, submission of reports and discussion of programmes where staff feel comfortable to raise issues, continue to be the norm. The project heads are now empowered to take decisions related to their projects when issues arrive and only need to follow administrative formalities and accounting principles when this happens. In the monthly meetings that are held each staff member has to give an update on the work done in the previous month and give reasons if they have not been able to deliver an output. While this is a stock taking exercise it also allows the staff to critically reflect upon the reasons for their under/non-performance. The Executive Director continues to have limited power and still has to consult the board often which causes delays in communicating decisions to staff and acting upon them.

Score baseline: 3.0

Score endline: 3.0 (no change)

2.5. Freedom for ideas: 'Staff feel free to come up with ideas for implementation of objectives

This is about whether staff feel that ideas they bring for implementation of the program are welcomed and used.

The Executive Director is very friendly, approachable and open to ideas of his staff members. There has been some improvement in that BVHA staff has now been able to come up with some new ideas, albeit donor driven, through learning from other organisations and encouragement by Simavi to look for innovations or new strategies. For example, the idea of integrating different programmes has now been taken on board. Staff ideas are still welcomed and supported.

Score baseline: 3.0

Score endline: 3.25 (very slight improvement)

Level of context awareness

2.6. System for tracking environment: 'The organisation has a system for being in touch with general trends and developments in its operating environment'

This is about whether the SPO knows what is happening in its environment and whether it will affect the organization.

Over the last two years BVHA has improved its networking capability. By virtue of its involvement in the SRHR forum, BVHA interacts with many organisations and the government. This has enabled BVHA to continue to follow trends and developments by getting information through its network members, board members, government officials, UN agencies, donors and media at various forums such as meetings, seminars, training sessions and workshops. BVHA asks VANI (Voluntary Action Network India), New Delhi or VHAI for any new laws related to NGOs and also shares it with its network organisations. Besides this, BVHA meets the different concerned stakeholders to find out the actual situation which is then discussed in staff meetings, Governing Board Meetings and also in the General Body Meetings if an imported external change is noted or a new NGO law is implemented.

Also through BVHA increased involvement in the SRHR alliance, there is an exchange of information so that they are better informed of what is happening in other states or at national level to pro-actively explore what is happening in their own environment.

Score baseline: 4.0

Score endline: 4.25 (very slight improvement)

2.7. Stakeholder responsiveness: 'The organisation is open and responsive to their stakeholders and the general public'

This is about what mechanisms the SPO has to get input from its stakeholders, and what they do with that input.

BVHA continues to be open and responsive to their stakeholders, but this has still not been institutionalised. Inputs of network partners during network meetings are used to identify projects for proposals. BVHA has started to hold at least two Governing Board Meetings in the area of any network member organisation and also invite them to BVHA's office twice a year. In this way, the Governing Board has the opportunity to meet the management and staff of the hosting network organisation and at the same time BVHA can meet other network partner organisations to discuss and identify their need and expectations from BVHA face to face.

Score baseline: 3.0

Score endline: 3.25 (very slight improvement)

Summary of capability to adapt and self-renew

Already during the baseline evaluation, BVHA had a monitoring and evaluation system in place. The M&E is now focussing more on outcomes than during the baseline. This is evident from BVHA's improved understanding of how to measure outcomes through discussing this within the SRHR alliance and guidance of Simavi. There is an overview of how M&E is organised in the SRHR project which provides very clear instructions on each output and outcome indicator and how to measure it. Use of MIS has also improved since the baseline: MIS formats are in place for advocacy officers and partner organisation for monthly reporting on progress in the SRHR project. While there is still no dedicated M&E person at BVHA, staff skills in M&E have improved with support from the national programme coordinator, PME workshops, individual supervision by Simavi and through inviting M&E experts for in-house training (sometimes funded by other donors). Project officers do most the monitoring of the projects, the Executive Director is now also more pro-actively involved in monitoring. There is more room for making strategic changes based on M&E, because of the focus now also on outcomes, not just outputs. Furthermore, Simavi stimulates this and BVHA has improved its M&E capacity so that they are now better at analysing (also strategic level) data and identifying strategic moves and more effective interventions based on this. Staff can raise issues with their project heads, who are now more empowered to take decisions, during regular monthly meetings or during quarterly governing board meetings. In the monthly meetings staff give a progress update and reflect upon their performance. The Executive Director continues to have limited power which causes delays in communicating decisions to staff and acting upon them. Staff is still free to come up with ideas that are welcomed by the ED. Through encouragement and learning from other organisations BVHA has been coming up with some new ideas like integrating different programmes. Through its involvement in the SRHR alliance, BVHA has improved its networking capability and is now better informed on what is happening in other states, and at national level and can respond proactively. BVHA also gets information through its network members and other NGOs on important new NGO laws and external changes that are then discussed with staff and in board meetings. BVHA continues to be open and responsive to their stakeholders, but this has still not been institutionalised. Inputs of network partners are used to identify projects and BVHA now holds at least two Governing Board Meetings per year so that the board can meet the management and staff of the hosting network organisation and identify their need and expectations from BVHA face to face.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

Capability to deliver on development objectives

Extent to which organisation delivers on planned products and services

3.1. Clear operational plans: 'Organisation has clear operational plans for carrying out projects which all staff fully understand'

This is about whether each project has an operational work plan and budget, and whether staff use it in their day-to-day operations.

Every project of BVHA still has an operational work plan and budget. The concerned programme staff has full knowledge of the implementation plan and budget of their respective budgets. BVHA is now more critical and realistic about efficient budget utilisation, asks timely for reallocation due to contextual changes and has improved its operational plans. There is now a core group that sits together to discuss certain issues and prepare the budget for proper project implementation. BVHA is consulting its partners in the preparation of formats that guide the project implementation in the SRHR project, but is now also applying this in other programmes. The improvement of operational plans and corresponding budgets is because of stronger requirements from Simavi and the support and feedback BVHA receives from them in planning and using the budget.

Score baseline: 4.0

Score endline: 4.5 (slight improvement)

3.2. Cost-effective resource use: 'Operations are based on cost-effective use of its resources'

This is about whether the SPO has the resources to do the work, and whether resources are used cost-effectively.

BVHA's budgets are now more realistic. They are able to implement the plan within the budget and ask timely for reallocation due to contextual changes. For the SRHR project the budget per year per beneficiary (block population) is 0,67 Euro.

To cut costs BVHA conducts most of their meetings in their own facilities, uses the internet to cut the costs of mailing and paper, uses PowerPoint during meetings to save paper costs and schedules visits to network member organisations when they are on the way during visits to ongoing projects. Furthermore, BVHA has started to enrol participants of its member organisations in the capacity building programmes of any ongoing projects based on the theme. This way they reduce travel costs and save on organising separate capacity building events. BVHA is maintaining a proper inventory and stock register, which has helped in the proper use of the resources. Some costs are still there in sending annual general body meetings letters and a few important letters through post to some of the partners that do not have access to internet services.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

3.3. Delivering planned outputs: 'Extent to which planned outputs are delivered'

This is about whether the SPO is able to carry out the operational plans.

In the baseline assessment it was pointed out that the overall operational plan of BVHA was not prepared professionally. Since the baseline BVHA has improved its capability with regard to operational plans by developing formats that are easy to understand for their network and partner organisations. Information from its partners is now reaching BVHA on time and according to the requirements. It has therefore become easier to monitor what has been achieved and done by the partner organisations. These changes in BVHA are attributed to the donor driven requirements of Simavi, NPC and Alliance partners. While during the baseline BVHA only reached their outputs, they are now reaching outcome results, which indicates improvement. For example in the annual report for the SRHR project it can be seen that BVHA is reaching or even surpassing the targets that are set for output indicators in the different result areas, such as civil society strengthening, MDGs and increased capacity of partner organisations. Monthly action plans help staff to carry out the operational plans, report on their progress and in case of not accomplishing a particular task, give reasons for it and complete it in the next month.

Score baseline: 3.0

Score endline: 4.0 (improvement)

Extent to which delivered products and services are relevant for target population in terms of the effect they have

3.4. Mechanisms for beneficiary needs: 'The organisation has mechanisms in place to verify that services meet beneficiary needs'

This is about how the SPO knows that their services are meeting beneficiary needs

Despite working through network partners, who in turn are directly involved with the beneficiaries, BVHA is still aware of the needs of the beneficiaries by sending their staff on household visits in the target area and through close interaction with partners. In addition to this, BVHA is now monitoring its programmes through feedback questionnaires to stay informed about the actual situation in beneficiary areas. With the help of Simavi, client opinion and satisfaction surveys are now included in the monitoring framework, as a way for clients to provide feedback on the project. Contrary to the baseline situation, now structured mechanisms to verify whether services meet beneficiary needs are in place, at least for the MFS II funded project. BVHA has also developed formats to assess the needs

of its network partner organisations and it has sent this to its member network organisations. Furthermore, management has started to conduct regional meetings with its partner organisations to find out their needs and what they expect from BVHA.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

Level of work efficiency

3.5. Monitoring efficiency: 'The organisation monitors its efficiency by linking outputs and related inputs (input-output ratios)'

This is about how the SPO knows they are efficient or not in their work.

There are still no formal input-output ratios calculated in BVHA, even though monitoring and evaluation generally has improved. Staff is monitored through monthly action plans and progress reports. Periodical staff appraisal has been initiated to monitor efficiency. Most projects have a log frame matrix in which activities are linked to outputs and outcomes, as per demand of the donor. Regular meetings with the SRHR alliance partners and periodic guidance from Simavi and the national coordinator of the SRHR alliance who is based at BVHA have led to a better understanding of these log frames. An advanced monitoring training and sharing in meetings with other project donors have further enhanced BVHA's skills in this.

Score baseline: 2.5

Score endline: 2.75 (very slight improvement)

3.6. Balancing quality-efficiency: 'The organisation aims at balancing efficiency requirements with the quality of its work'

This is about how the SPO ensures quality work with the resources available

There are still no formal quality control mechanisms. The monitoring mechanism at BVHA has been strengthened. Close monitoring has increased and is now done by the concerned project head as well as by management. In the last financial year BVHA's Governing Board took the decision to hold its quarterly meetings at the site of the projects that are either directly implemented by BVHA or that are implemented by its network organisations to see the progress, gaps and challenges.

The accounting system of BVHA has been upgraded as per the standard norms. BVHA is now keener to discuss budget reallocations to increase the effectiveness or quality of their work. Efficiency is then also discussed with the donor, for example through scaling up in areas where the work is going well. Quality control was a topic of discussion during the SRHR alliance meetings, joint capacity building programmes and in ongoing review meetings with other donors. Accordingly corrections were made and BVHA is continuously trying to upgrade its quality control mechanisms.

Score baseline: 2.0

Score endline: 2.5 (slight improvement)

Summary of capability to deliver on development objectives

Every project of BVHA still has an operational work plan and budget. BVHA is now more critical and realistic about efficient budget utilisation, asks timely for reallocation due to contextual changes and has improved its operational plans. This led to BVHA's budgets being more realistic now and them being able to implement the plan within the budget. The organisation is still doing its level best to use its resources effectively by keeping an inventory, reducing on mailing and paper costs by using the internet and by using its own facilities for trainings and meetings. As operational plans of BVHA improved, so did the formats to monitor their partners' progress. These are now easier to understand so that the information that reaches BVHA is more accurate and timely. BVHA is now reaching its

output and outcome results and has monthly action plans in place through which staff report their progress and follow up on unaccomplished tasks.

In contradiction with the baseline scenario, BVHA now has a structured mechanism in place to verify that services meet beneficiary needs, as Simavi made client opinion and satisfaction surveys part of the monitoring framework for the MFS II funded project. BVHA also assesses the needs of its network partners through formats and regional meetings. There are still no formal input-output ratios calculated in BVHA. Although there are still no formal quality control mechanisms, the monitoring mechanisms of BVHA were strengthened. BVHA is now keener to discuss budget reallocations to increase the effectiveness or quality of their work. Efficiency is also discussed with Simavi through e.g. scaling up in areas where work is going well. Quality control has also been a topic of discussion during SRHR alliance meeting and review meetings with other donors. BVHA is continuously trying to upgrade its quality control.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

Capability to relate

Level of involving external parties in internal policy/strategy development

4.1. Stakeholder engagement in policies and strategies: 'The organisation maintains relations/ collaboration/alliances with its stakeholders for the benefit of the organisation'

This is about whether the SPO engages external groups in developing their policies and strategies, and how.

The Governing Board of members continues to play a very important role to the extent of sometimes being authoritative. It is the responsibility of the executive director of BVHA to arrange meetings with the Board and keep them updated on all important issues. The board members, trained staff of BVHA and consultants take part in developing policies and strategies for BVHA. BVHA has formed a BVHA Programme Advisory Committee which sits after every six months to help BVHA in developing and setting strategies, quality programmes and direction for effective implementation. Besides direction of the Governing Board of BVHA, now BVHA is engaging its partner organisations in planning the programme, designing the implementation plan as well as also in developing the M&E and data collection formats.

BVHA has been able to play a pivotal role in the SRHR Alliance. BVHA's SRHR initiative aims at Community empowerment on Gender Equity to access Reproductive Health Rights in 2 districts of Bihar. This initiative was identified through discussion with the network partners especially those working in the bordering districts who experience problems due to sexual reproductive health issues.

Score baseline: 3.5

Score endline: 3.75 (very slight improvement)

Level of engagement of organisation in networks, alliances and collaborative efforts

4.2. Engagement in networks: 'Extent to which the organization has relationships with existing networks/alliances/partnerships'

This is about what networks/alliances/partnerships the SPO engages with and why; with they are local or international; and what they do together, and how do they do it.

The organisational structure of BVHA is based on its engagement with partner organisations. Their networks can be broadly divided into (1) SRHR or NGO network; (2) National or local level and (3) formal or informal. Some of the organisations with which they have networked are as follows:

Network	Level
Jan Adhikar Manch	State Level, formal, (only NGOs)
Public Health Resource Network (PHRN)	National level, formal, only NGOs, lawyers, activists
Health Watch Forum Bihar	State Level, formal, only NGOs, Activists
Vada Na todo Abhiyan	National Level, formal, only NGOs, Activists
Christian Health Association of Bihar & Jharkhand	State Level (Bihar & Jharkhand), formal, only health clinics and NGOs
Jan Swasthya Abhiyan	National level, formal,
VHAI – New Delhi	National Level, State voluntary Health Associations
VANI (Voluntary Action Network of India)	National Level, formal, NGOs
State Level SRHR forum at Patna	State Level, Formal, NGOs, Govt. and networks.
District level SRHR Forum at West Champaran	District Level, Formal, NGOs, development partners

BVHA has networked with government, Panchayati Raj Institutions (PRIs), the education and health department and NGOs to improve health conditions for individuals, especially sexual and reproductive health for women as well as the promotion of preventive and curative measures. Engagement with these networks has been mainly through workshops. Some of the examples of these workshops are: training on advocacy, progress, joint agenda; three day advocacy workshop: working on state level and national joint agendas; state level visit; three day capacity building workshop for SRHR Alliance by CINI on policy and advocacy.

BVHA continued to work in 38 districts of Bihar with 115 members and 300 associated non-members. Over the last two years the main change has been BVHA's increased work on advocacy with different levels of government officials for better SRHR services specifically at the state, district and block level which has led to proper access of the required services for the community. This has been a component of the SRHR project with the aim for BVHA to serve as a link between the government and the beneficiaries so that the beneficiaries get quality services. In networking with various agencies BVHA has been initiated as a state level network for SRHR issues that led to enhanced recognition and rapport with government officials and development agencies. With a view to be in a better position to carry out sustained lobbying and advocacy with policy targets, further capacity strengthening initiatives have been undertaken by BVHA: increased collaboration between SRHR partners; training of partner representatives of SRHR Alliance on CSE and SRHR.

BVHA is now an active part of the India SRHR Alliance which is continuously working on the SRHR related issues to advocate at national, state and district level. Several issues are jointly identified which are common in the three states and strategies to address them by for example developing the SRHR manual. Besides that, BVHA is an active member of the Wada Na Toda Abhiyan-Bihar and the India Chapter. BVHA has also discussed many health issues with the community people in 16 Member of Parliament constituencies of Bihar and accordingly these issues were compiled and submitted to the concerned political parties for inclusion in their political manifesto and many of the issues are now included. BVHA is in collaboration with the Health Watch Forum Bihar and Centre for Health and Social Justice, New Delhi, addressing the quality of family planning issues in Bihar. Besides that, BVHA is raising health issues in different other forums and is making regular correspondences with its network partners to visit and meet the Civil Surgeon and District Magistrate to make the District Health Society and other government formed Committees functional.

A last example of BVHA's network at work is when they were able to help their sister organisation in Bettiah by getting permission from the district collector for the civil surgeon and the medical officer in charge of the community health centre to implement their SRHR in the sister's organisation hospital without any resistance. This has led to improving their quality of work and strengthening of their relationship with BVHA.

Score baseline: 4.0

Score endline: 4.5 (slight improvement)

Extent to which organisation is actively engaging with target groups

4.3.Engagement with target groups: 'The organisation performs frequent visits to their target groups/beneficiaries in their living environment'

This is about how and when the SPO meets with target groups.

The organisational structure of BVHA is still such that their direct target groups are their network partners, who in turn interact with the beneficiaries. It is only during the Annual General Body meetings and workshops organised by BVHA that there is an opportunity for direct interaction with the beneficiaries. Over the last two years, board members and the Executive Director of BVHA have taken the initiative to visit the target groups when invited by the partners, and surprise visits are also made. This change has been attributed to the demands made by the donor. When the concerned project head goes to their concerned project operational areas, they also visit the other network partners who are close by or on the way. The BVHA Governing Board also took the decision to hold at least two Governing Board Meetings in the project network partner's place so as to meet and interact with them and other network organisations located nearby. BVHA has also started implementing some projects directly in the community where they are continuously interacting with the target beneficiaries in the Maner and Phulwarisharif blocks of the Patna district and in the Bidupur block of the Vaishali district. Regular engagement with the partner organisations is also in the mandate of the MFS II funded project on SRHR. Within this project BVHA visits the partner projects on a monthly basis and reviews the activities and progress on quarterly basis. Partners received frequent supervision from BVHA and got new exposures through the SRHR alliance.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

Level of effective relationships within the organisation

4.4.Relationships within organisation: 'Organisational structure and culture facilitates open internal contacts, communication, and decision-making'

How do staff at the SPO communicate internally? Are people free to talk to whomever they need to talk to? When and at what forum? What are the internal mechanisms for sharing information and building relationships?

Staff continue to be free to share their problems and opinions at any time. Some of the forums where staffs can communicate their issues to top management are: monthly staff meetings, quarterly financial meetings, quarterly meetings with board members and meetings with the core group and project coordinators. For issues or grievances staff now first discuss this with their immediate supervisors and if it is not solved there, then it is referred to higher level. Many such issues are also discussed in the one to one meetings and sometimes jointly in the monthly staff meetings. Sometimes, if the matter is very serious, then it is referred to the Governing Board. If staff members want to discuss an issue on the programme part, then they first discuss the matter with the programme manager and if it is required to discuss it at the higher level, then, the concerned project head on an individual basis or along with the programme manager comes to the Executive Director to sort out the matter.

Score baseline: 4.0

Score endline: 4.0 (no change)

Summary of capability to relate

The Board of BVHA, that is composed of network members, still has an important role in developing policies and strategies together with staff. BVHA still engage partner organisations in planning of projects, but now also involves them in developing M&E formats. A BVHA Programme Advisory Committee has been established that meets every six months to discuss strategies and give directions

for effective implementation. An example of a project that was designed participatory is the SRHR initiative that was developed together with BVHA's network partners. The organisational structure of BVHA is based on its engagement with partner organisations. BVHA continued to work in 38 districts of Bihar with 115 members and 300 associated non-members. Over the last two years the main change has been BVHA's increased work on advocacy with different levels of government officials for better SRHR services specifically at the state, district and block level which has led to proper access of the required services for the community. With a view to be in a better position to carry out sustained lobbying and advocacy with policy targets, further capacity strengthening initiatives have been undertaken by BVHA: increased collaboration between SRHR partners; training of partner representatives of SRHR Alliance on CSE and SRHR.

BVHA still works mostly through their network partners which they now visit more frequently (monthly) as this was in the requirements of the MFS II funded project. The Board and Executive Director also took the initiative to visit target groups themselves and make surprise visits. BVHA has also started implementing projects directly and has in that sense increased its interaction with the beneficiaries. Staff continue to be free to share their problems and opinion at any time. Staff can communicate their issues to top management during monthly and quarterly meetings. Issues or grievances of staff are now first discussed with their immediate supervisors and if it is not solved there, then it is referred to higher level.

Score baseline: 3.75

Score endline: 4.0 (very slight improvement)

Capability to achieve coherence

Existence of mechanisms for coherence

5.1.Revisiting vision, mission: 'Vision, mission and strategies regularly discussed in the organisation'

This is about whether there is a vision, mission and strategies; how often staff discuss/revise vision, mission and strategies; and who is involved in this.

Vision and mission of BVHA remain unchanged. There continues to be discussion on the vision and mission of the organisation once a year in the Annual General Body Meeting. Members, programme officials and management are involved in the discussion. A Programme Advisory Committee that has been formed for effective programme management and future strategy development. Strategy related changes that were adopted by BVHA as a result of donor's demands only led to strengthening of the organisation's mission.

Score baseline: 4.0

Score endline: 4.0 (no change)

5.2.Operational guidelines: 'Operational guidelines (technical, admin, HRM) are in place and used and supported by the management'

This is about whether there are operational guidelines, which operational guidelines exist; and how they are used.

BVHA has a personnel, admin, finance, gender and child protection policy which remain unchanged. The detailed technical guidelines for the SRHR project that were missing during baseline are now in place. BVHA developed with the SRHR alliance a detailed SRHR manual with guidelines for better implementation of the SRHS project.

Score baseline: 4.0

Score endline: 4.5 (slight improvement)

Level of coherence of various efforts of organisation

5.3. Alignment with vision, mission: 'Projects, strategies and associated operations are in line with the vision and mission of the organisation'

This is about whether the operations and strategies are in line with the vision/mission of the SPO.

BVHA continues to keep its projects; strategies and operations in line with the vision and mission of the organisation.

Score baseline: 4.5

Score endline: 4.5 (no change)

5.4. Mutually supportive efforts: 'The portfolio of project (activities) provides opportunities for mutually supportive efforts'

This is about whether the efforts in one project complement/support efforts in other projects.

Health remains the focus area for BVHA and projects are chosen in consonance with it and are mutually supportive. While health remains a focus area, availability of donor agencies determines the particular area under health issues to be focussed on.

Score baseline: 3.5

Score endline: 3.5 (no change)

Summary of capability to achieve coherence

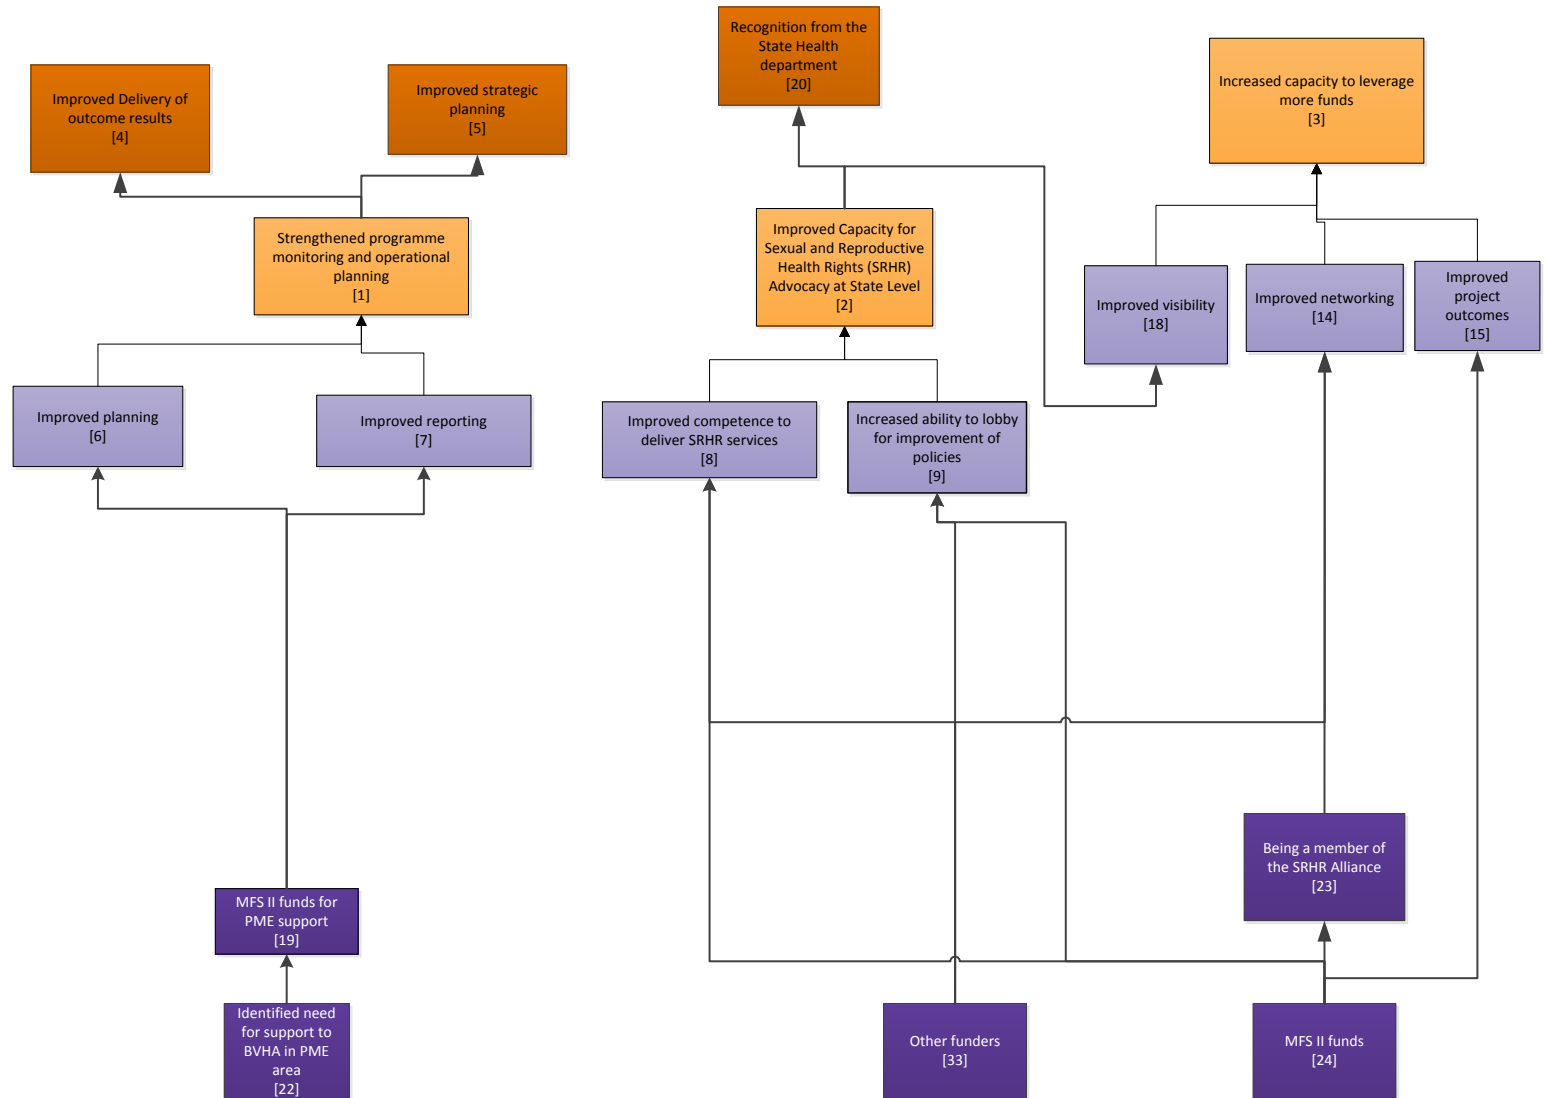

The vision and mission of BVHA have remained the same. BVHA's projects remain to mostly focus on health related issues, where the availability of donor agencies determines the specific issue to focus on. Projects are mutually supportive. Personnel, admin, finance, gender and child protection policies remain in place. There are now detailed technical guidelines for the SRHR project, developed with the SRHR alliance since the baseline. Operations and strategies of BVHA which now include health and livelihoods remain aligned to their vision and mission.

Score baseline: 4.0

Score endline: 4.1 (no change)

Appendix 4 Results - key changes in organisational capacity - general causal map

As the changes in organisational capacity in the general causal map and the detailed causal maps partly overlap, you will find the detailed causal map of increased capacity to leverage more funds here, for the other two key outcome changes, please refer to Appendix 5 for the details.

Increased capacity to leverage more funds [3]

This was another key organisational change that was mentioned by the staff present at the endline workshop. This increased due to: improved networking [14]; improved project outcomes [15] and improved visibility [18].

The capacity to leverage more funds [3] has increased. Staff of BVHA is highly motivated and tries to go an extra mile to explore new funding opportunities especially with the corporate sector. Now, more new proposals are prepared and sent to different donor agencies the utilization of the BVHA training hall and facilities by other organisations has increased which provides a good source of income for BVHA. Besides this, BVHA has planned to conduct various capacity building training programmes and charge the participants to raise money. BVHA has also started collecting a subscription fee for its Quarterly NEWS letter to meet the costs of producing NEWS [Source: 5c endline self-assessment sheet_management_India_BVHA].

- Improved visibility [18] was another reason for improved capacity to leverage funds.
 - BVHA's visibility improved because of *improved advocacy at state level* [2]. Some of the advocacy interventions in the SRHR project have led to BVHA meeting the most senior officials and ministers to discuss on the SRHR issues in Bihar and it has helped for better recognition of BVHA at the state level. This evident from the fact that BVHA could get the approval of the state government to undertake East Champaran district (one of the SRHR project districts) and set up Adolescent Friendly Health Clinics. Further, the Government of Bihar recognizes BVHA as a member of the State Technical Advisory group in Bihar and invites BVHA for consultation whenever there is a meeting related to SRHR issues. Also BVHA is the member of state level thematic sub groups on TFR, MMR and IMR for policy level changes. Improved capacity and visibility facilitated BVHA to leverage funds from government and other sources. For example, as a result BVHA leveraged funds from the Ministry of Health and Family Welfare of the Government of India since 2013 for the "Awareness Building Among communities on Girl Child Survival and PC & PNDT Act" project [Source: 5c endline self-assessment sheet_management_India_BVHA, discussion during endline evaluation, thematic group 11, stag meeting-PFI].
- Improved networking [14] is one of the reasons for this improved capacity to leverage more funds. BVHA's networking improved because of:
 - *Being a member of the SRHR Alliance* [23] (through the Simavi supported projects under MFS II [24] [Source: 5c endline self-assessment sheet_management_India_BVHA]. Their credibility as SRHR alliance member, and ability to implement a comprehensive SRHR programme has attracted donors . For example UNICEF started funding the Maternal Death Review Project under the project title 'Piloting Review Maternal Death in two districts of Gaya and Purniya, Bihar' since February 2014 [Source: discussion during endline workshop, BVHA Annual Report 2013-14].
- Improved project outcomes [15]. The project "Pre-conception and Prenatal Diagnostic Techniques (PC PNDT)" supported by Simavi since 2009 to 2012 resulted in improved perception of the community regarding female feticide. For example BVHA Annual Report 2011-12 indicates that over the three year period (2009-12) due to this project there is gender balance in child care, improvement in social and educational status of girls, decline of child marriage and violence against women, pre-sex detection for girl feticide stopped etc. It not only increased visibility and capacity of BVHA at the state and national level but also motivated the staff to approach new funders. As a result BVHA could use this project results to leverage funds from the Ministry of Health and Family Welfare, Government of India since 2013 for the "Awareness Building Among communities on Girl Child Survival and PC & PNDT Act" project [Source: discussion during endline workshop]. This project was funded under MFS II [24].

Appendix 5 Results - attribution of changes in organisational capacity - detailed causal maps

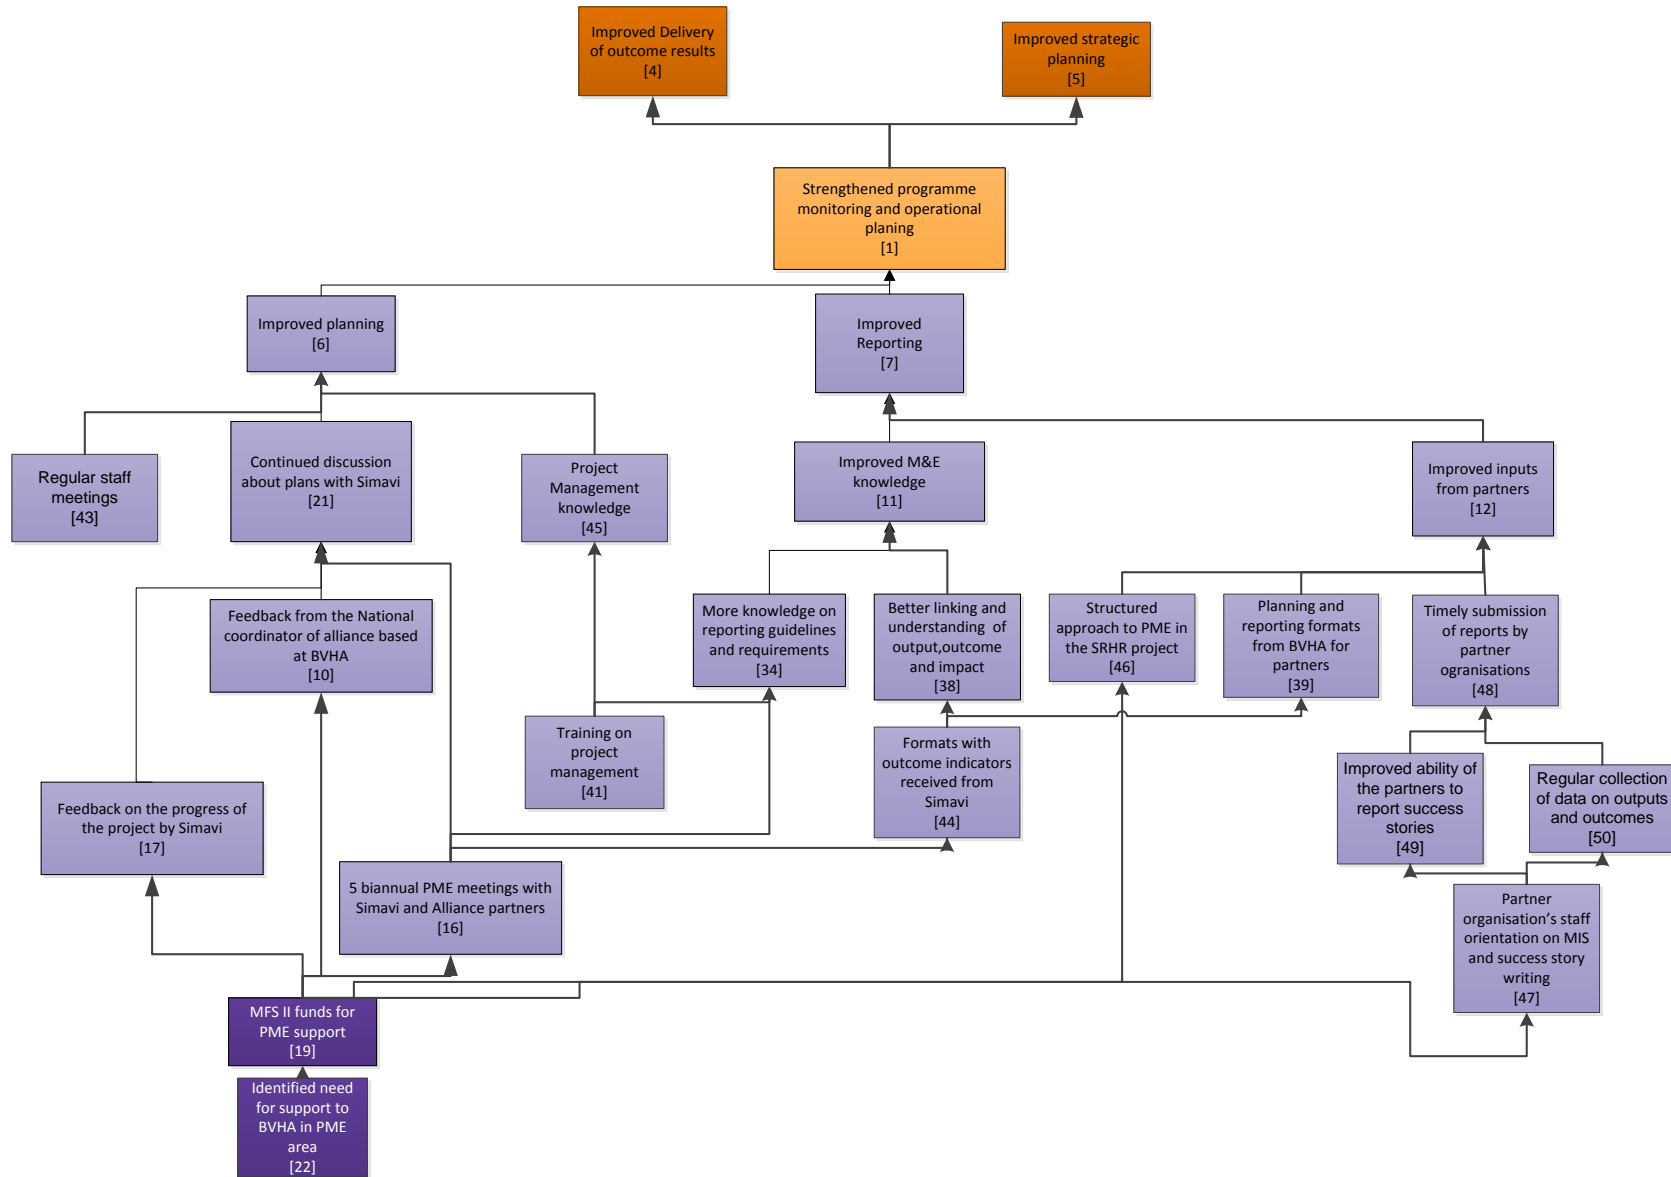

The evaluation team carried out an end line assessment at BVHA from 18 to 20 June 2014. During this workshop, the team made a recap of key features of the organisation in the baseline in 2012 (such as vision, mission, strategies, clients, partnerships). This was the basis for discussing changes that had happened to the organisation since the baseline.

There were three main changes that happened in the organisation since the baseline in 2012:

1. Strengthened programme monitoring and operational planning;
2. Improved Capacity for Sexual and Reproductive Health Rights (SRHR) Advocacy at State Level;
3. Increased capacity in to leverage more funds.

These changes coincided partly with the outcome areas that were chosen for process tracing, so as to get detailed information on how these changes in organisational capacity came about. Therefore the general causal map overlaps strongly with the causal maps developed for each of these outcome areas/organisational capacity changes to be analysed during the process tracing. All the details about these changes in organisational capacity as well as the underlying factors that influenced these changes are described in the narrative and visual below. There is general causal map that explains the overview of these but for the details please see the separate causal maps for improved program monitoring and planning, and the causal map for improved capacity for SRHR advocacy.

The first two main organisational capacity changes are described in the light orange boxes and some of their key consequences are noted above these cards in dark orange. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the organisation are listed at the bottom in dark purple. The numbers in the visual correspond with the numbers in the narrative.

Strengthened Programme Monitoring and Operational Planning [1]

According to the Executive Director, BVHA has strengthened its planning and monitoring activities in the past two years [1] [Source: 5c_endline assessment_sheet _ India_BVHA _ Simavi_NB]. During the completion of the SRHR project and Oxfam India project, BVHA developed better M&E formats. These formats were shared with their partner organisations for systematic data collection and timely reporting. Through improved planning and monitoring The organisation was thus able to use timely information while planning for future activities. BVHA is now in the process of developing organisational M&E formats for tracking progress of the programs/projects as and when required [Source: 5c_endline self-assessment sheet_management_India_BVHA].

Improved planning and monitoring has led to **improved delivery on outcome results** [4] as well as **improved strategic planning** [5]. This is evident from the fact that *"During the baseline, the current project was evaluated and they reached the outputs but not the outcomes. Now their outcome results were very good, this indicates improvement"* [Source: 5c_endline assessment_sheet _ India_BVHA _ Simavi_NB]. The improvement in outcome results has been due to continuous and regular discussions on outputs/ outcomes and planning of achievements with the CFA and support provided through PME workshops [Source: 5c_endline assessment_sheet _ India_BVHA _ Simavi_NB].

Strengthened Program monitoring and planning was due to [1]: improved planning [6] and improved reporting [7]. Each of these changes are further discussed below.

Improved planning [6]:

BVHA has improved its planning over the last two years [Source: 5c_endline self-assessment sheet_management_India_BVHA]. This is due to having regular staff meetings [43], continued discussion about plans with Simavi [21], and project management knowledge [45]. Strategic planning has improved as *"BVHA is now able to identify strategic moves, more effective interventions, such as use of multiple strategies, multi-stakeholder involvement at various levels, use of multimedia IEC strategies."* And *"Simavi allows for strategic changes. In the case of BVHA, we were not encouraging working with in-school youth, but they lobbied for it, so we revised strategy together. Government was supposed to train midwives but because of insufficient quality, we asked BVHA to step into this issue and organise training"* [Source: 5c_endline assessment_sheet _ India_BVHA _ Simavi_NB].

- Regular staff meetings [43]. Every month, the staff has to present action plans stating details of activities they would be doing in the coming month and staff are also expected to explain the reasons for not fulfilling their stated objectives in the previous month. There are pre-designed formats in which the staff has to report on their plans in the meetings [Source: Action plan]. This exercise has helped the staff individually to improve their capacities in making plans as well as keeping their commitments. This in turn has improved the planning process of the organization.
- Continued discussions about plans with Simavi [21]: The support from Simavi has been in the form of feedback on project progress by Simavi [17], feedback from the National Coordinator [10] based at BVHA and through Biannual PME meetings with Simavi and the Alliance Partners [16].
 - *As the National Coordinator of the SRHR alliance has been based in BVHA since February 2012 [10], there has been continued discussion about plans with Simavi [21]. This national coordinator gave constructive feedback to BVHA on plans in order to align them with Simavi's PME requirements [Source: interview with National coordinator, discussion during workshop; 20130923-SRHR Programme and NGB meeting TT(oct)].*
 - The continued discussions [21] also took place because BVHA received support from Simavi, consisting of *feedback on the progress of the project by Simavi [17]* as is evident from the program appraisal form [Source: 2014-01-09_PAF BVHA UFBR ct 2014-2015].
 - Furthermore, *the biannual PME meetings of the alliance partners [16]* have helped BVHA to improve its planning [Source: Dates May 2012, October 2012, March 2013, October 2013; 5c_endline self-assessment sheet_management_India_BVHA; 20120501-SRHR review meeting plan; 20121002-SRHR review and planning meeting; 20130211-SRHR program and NGB meeting TT(Oct)]. These biannual meetings with alliance partners included the following activities:

- There was organised sharing of and reflection on results with alliance partners;
 - A field visit to the area of intervention of one of the partners;
 - Detailed discussion on learnings from the visit in terms of strengths and weaknesses of the project ;
 - Presentation by partners on their project highlights, progress, successes and main bottlenecks.
 - These meetings provided in depth insight into the project interventions and BVHA also received feedback from the Country lead of Simavi and other Alliance members, as well as their experiences and comments to improve the project implementation and strategies. It helped them adopt best practices, strategies etc. [Source: Annex C_5C endline_support to capacity development sheet_BVHA].
- Project management knowledge [45]
 - Trainings such as the *5 Days Course on Project Management [41]* at Goa funded and organized by the International Union against Lung Disease and Tuberculosis, New Delhi in which the Executive Director took part equipped the participants with required knowledge and skill of proposal development on Tobacco Control and other social development issues. The major topics covered under the five days course were: Project Life Cycle, situation analysis, stakeholders analysis, problem tree, cause effect relationship, means-end relationship, objective tree, strategy analysis, log frame analysis, activity detailing, Gantt Chart preparation, SWOT analysis, sustainability plan [Source: BVHA Annual Report_2012-2013]

The national coordinator [10], biannual PME meetings [16] and feedback on project progress [17] were all PME support funded by MFS II [19]. Simavi supported the Planning, Monitoring and Evaluation capacity of BVHA in this way because they identified a need for this [22]. BVHA staff articulated their need to be trained in PME. This is evident from the minutes of the meeting of the inception workshop in November 2011. In this workshop there was a “marketplace” exercise, where partners put forward the capacities they could offer, and the capacities they required for the SRHR project. Skills (both offered and required) were grouped by topic, and those relevant to the SRHR issues were taken up in the Joint Capacity Building Plan. Thus building capacities of BVHA in PME were incorporated in the plan [Source: 9jan2012_Minute of India Workshop 21-24 November 2011].

Improved reporting [7]:

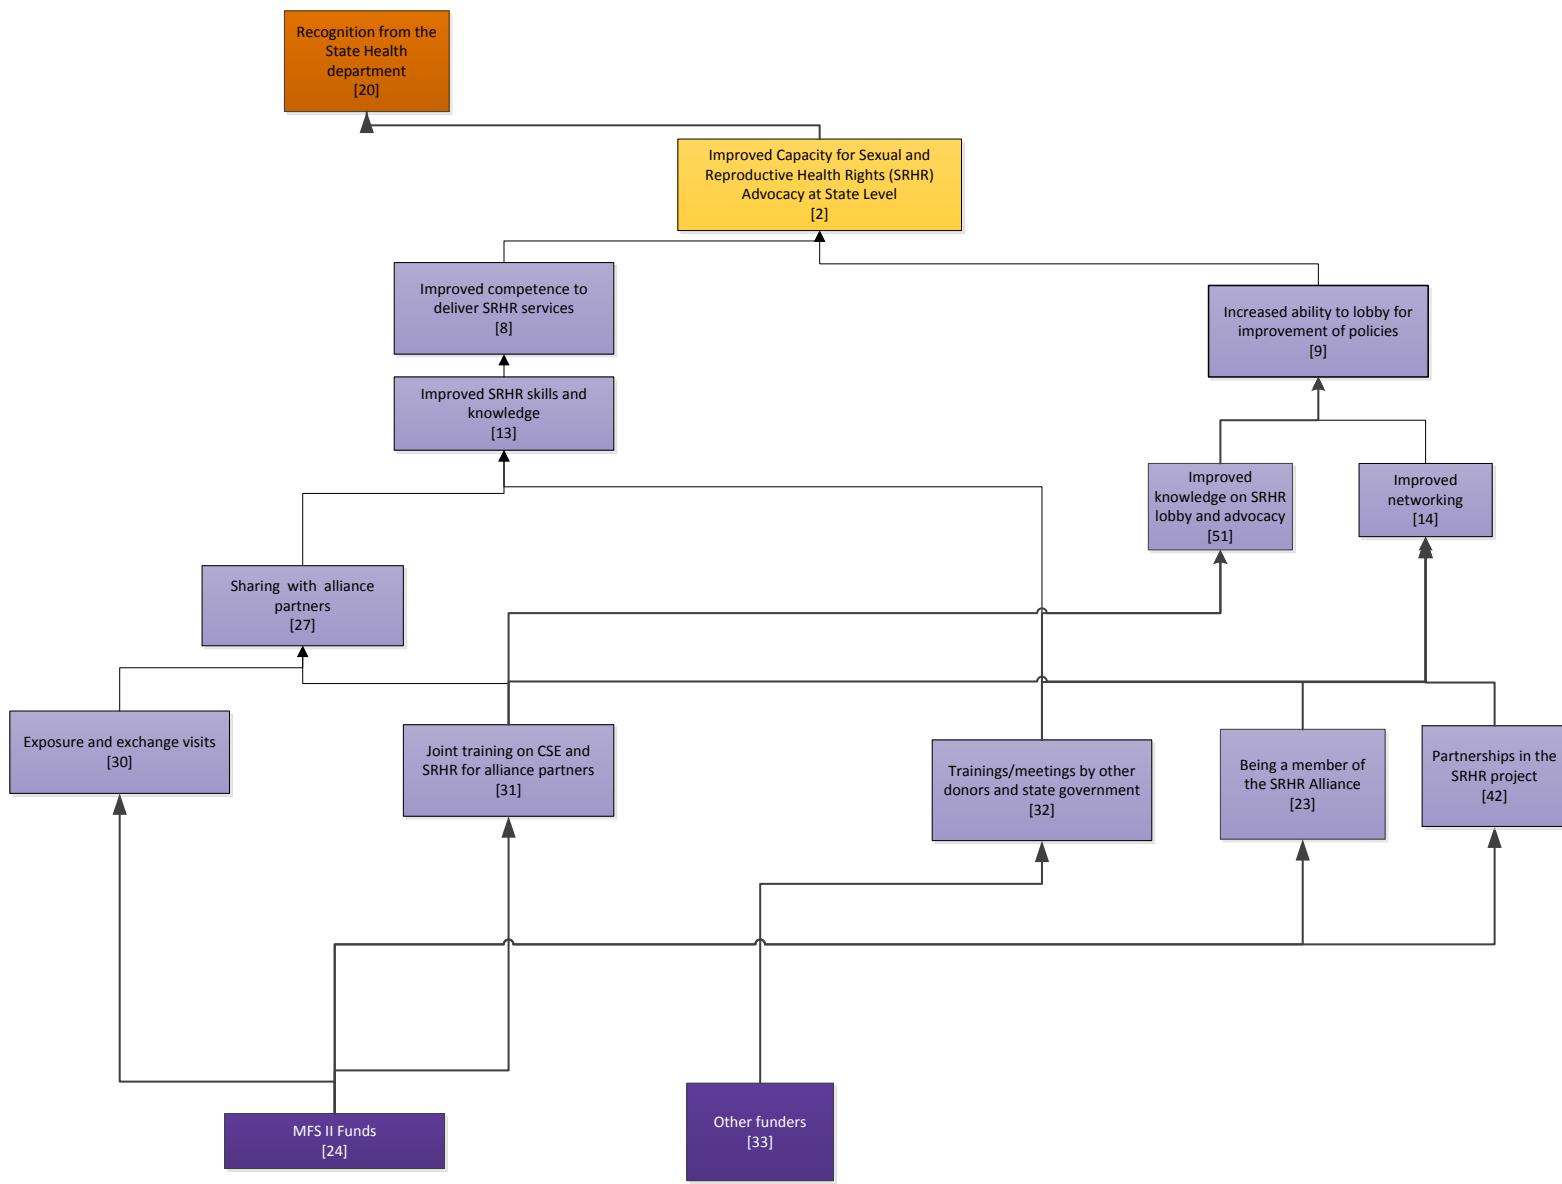

BVHA participants that attended the endline workshop indicated that BVHA has improved reporting since the baseline [7]. Evidence of this can be found in Simavi’s response to a report submitted by the Project Manager [Source: Approval of revised Annual Report and Financial report 2012]. The improved reporting is due to improved PME knowledge [11] and improved inputs from partners through reports [12].

- M&E knowledge improved [11][Source: CFA endline assessment, and support to capacity development sheet – CFA]. According to the National SRHR Coordinator, BVHA now has got the capacity to develop the M&E System for the SRHR Alliance which other alliance members can adopt [Source: 5c endline interview guide_OD consultants_selected indicators_(BVHA-Jose T)]. PME knowledge improved because of:
 - More knowledge on reporting guidelines and requirements [34] [Source: 2014-04-04_RA1-CSS (f1) India country paragraph]. Over the period as BVHA gained more knowledge on reporting guidelines and requirements it was capacitated in developing formats that are easy to understand for their network and partner organisations to collect systematic data. It fine-tuned the indicators which resulted in getting information as per the requirements. The staff linked the output, outcome and impact to assess the achievement. Proper methods for monitoring progress are now in place and the partners are trained on this which resulted in the partners to better articulate their work to BVHA. Project staff analyse and monitor the data to identify practical gaps for further planning [Source: 2014-04-04_RA1-CSS (f1) India country paragraph, 2014-03-03_v3 BVHA SRHR Annual Report 2013, 2014-04-18 vs4 (FINAL for distribution India 2013 UFBR AReport, 20120501-SRHRreview meeting-plan)]. Knowledge on reporting guidelines and requirements improved because of a training on project management [41] and feedback, discussion on formats, explanations on evaluation methodologies and discussions on purpose of monitoring during the biannual PME meetings [16] [Source: 2014-05-07_(LL2)]

5C_endline_support_to_capacity_development_sheet_CFA_perspective_India_BVHA_Simavi_NB (2)]

- Training on project management [41]: 5 Days Course on Project Management at Goa by the International Union against Lung Disease and Tuberculosis, New Delhi. The major topics covered under the five days course was- Project Life Cycle, situation analysis, stakeholders analysis, problem tree, cause effect relationship, means-end relationship, objective tree, strategy analysis, log-frame analysis, activity detailing, Gantt Chart preparation, SWOT analysis, sustainability plan. This resulted BVHA to learn various evaluation methodologies and monitoring process to improve its planning and monitoring process. This training helped BVHA gain more knowledge on reporting guidelines and requirements. For example, they fine tune the indicators to better assess the progress and collect the data as required, the activities and the achievements are better linked to assess the impact [Source: BVHA Annual Report_2012-2013].
- Sharing and reflecting during the biannual PME meetings [16]: In these meetings the alliance members shared and reflected on various issues related to PME such as, reporting requirements of the PME group of the SRHR alliance, monitoring and evaluation requirements, detailed discussion on the field visits in terms of strengths and weaknesses of the project, partners reported on their project highlights, progress, successes and main bottlenecks, etc. As a result BVHA received feedback from Country lead of Simavi and other Alliance members, their experiences, comments to improve the reporting structure, setting up formats as per requirement, linking up the activities, outcome and impact etc. It also helped them adopt best practices, strategies etc., to improve their planning and monitoring process [Source: Annex C_5C_endline_support to capacity development sheet_BVHA,p5, 20121002-SRHR review and planning meeting TT(2), 20120501-SRHRreview meeting-plan].
- Better linking and understanding of output, outcome and impact [38] mainly by BVHA project officer [Source: (LL2)5c_endline_assessment_sheet_India_BVHA_Simavi_NB; reports of biannual PME meetings and document;2014-04-01_(f1) LINKING OUTPUTS TO OUTCOMES India].
 - Formats with outcome indicators were given by Simavi [44] so that BVHA could assess the outcome and impact of the activities of their partners on the ground. Also during the Biannual PME meetings [16] there was detail discussion on how to select outcome indicators, Identifying sources of verification and tools for outcome indicator measurement, monitoring output indicators, etc. It helped the project staff of BVHA to link and better understand outcome and impact. This is evident by the fact that BVHA assessed the satisfaction level of beneficiaries in their partner organisation project area i.e. in Raxaul and Majhulia. Also an assessment of the involvement of Community Leaders and their awareness levels with respect to SRHR was made by the BVHA project staff as per a given set of indicators in the M&E format [Source: Assessment of involvement of community leaders – Report]. During the completion of the SRHR project and Oxfam India project, BVHA developed better M&E formats. These formats were shared with their partner organisations for systematic data collection and timely reporting. Through improved planning and monitoring. The organisation was thus able to use timely information while planning for future activities. BVHA is now in the process of developing organisational M&E formats for tracking progress of the programs/projects as and when required [Source: 5c_endline_self-assessment sheet_management_India_BVHA].
- Sharing and reflecting during the biannual PME meetings [16]. During the Biannual PME meeting there is extensive discussion/sharing on monitoring output and outcome indicators, frame work for the outcome and output indicator, identifying sources of verification and tools for outcome indicator measurement, setting up of target indicator for 2015 etc. helped BVHA better linking output, outcome and impact. For example, as indicated in the Linking Output and Outcome report for 2014 reveals that because of improved ability to link output and outcome BVHA could identify the impact of the SRHR project and the gaps in between plan and implementation of government programmes [Source: 20121002-SRHR review and planning meeting TT(2), 20120501-SRHRreview meeting-plan]
- Improved inputs from partners through reports [12]. BVHA has been implementing the project “Community empowerment on Gender Equity to access Reproductive Health Rights in 2 districts of Bihar” through its partner organizations – Duncan Hospital, Raxaul (East Champaran) and Fakirana Sisters Society, Bettiah (West Champaran).

-
- *The SRHR project follows a structured approach to PME [46]. There is dedicated staff for M&E: the district coordinator at the field level; the project manager and ED at BVHA are responsible for monitoring and evaluation. Simavi has provided planning and reporting formats that enable BVHA to track all the proposed activities, find reasons for the success or failure of completion of those activities and plan for the next quarter. On the basis of the results based monitoring concept there are quarterly monitoring formats and BVHA compiles the collected data from the partners. Reports are sent to Simavi biannually. Simavi sends feedback on the data [Source: 19Jan12_Final Application Form (BVHA) Simavi-UFBR alliance, 5c endline_questionnaire_training_participant_perspective_India_orientation for the CSO staff and 5c_endline assessment_sheet _ India_BVHA _ Simavi_NB].*
 - *The partner organisations of BVHA involved in the programme implementation of BVHA were given formats for data collection and reporting [39] which they had received from Simavi [44] [Source: Outcome monitoring templates]. This helped the partners not only improve the quality of their data collection but also ensured their timely input.*
 - *There was timely submission of reports [48] with qualitative and quantitative inputs because:*
 - *The ability of the partners to report success stories improved [49] and*
 - *There was regular collection of data on outputs and outcomes [50] [Source: Annex C_5C endline_support to capacity development sheet_BVHA].*
 - *Both [49] and [50] were a result of: Two days orientation of the staff on MIS and success story writing was given to the partner organisations [47] in September 2012 which further helped the staff of the partner organisation to fill the MIS formats with ease and regularly collect data on output and outcome indicator. This was funded by MFS II as PME support [19] [Source: Annex C_5C endline_support to capacity development sheet_BVHA].*

Improved Capacity for Sexual and Reproductive Health Rights (SRHR) Advocacy at State Level [2]

Over the last two years BVHA has improved its capacity for sexual and reproductive health advocacy at the state level [2] [Source:

5c_endline_support_to_capacity_development_sheet_CFA_perspective_India_BVHA_Simavi_NB; discussion during the endline workshop]. This has helped BVHA in getting recognition from the State Health department [20] [Source: 5c endline self-assessment sheet_management_India_BVHA, Letter of ED SHS Bihar for SRHR Project, stag meeting-PFI] BVHA has brought up SRHR issues to the attention of the state government which is demonstrated by the examples described here. They wrote an advocacy paper with the objective of ensuring availability and accessibility of comprehensive Sexual and Reproductive Health services for adolescents & women at community and school level [Source: Bihar advocacy paper _ 4 pager].

BVHA has brought about and showcased successful models and approaches that have either been mainstreamed or promoted by the government as 'replicable models.' An example to substantiate the above claim is the newly launched 'Dus kadam Ka Dum' which translated into English means 'The power of 10 steps'. This is a campaign initiated by the Government of Bihar that promotes a package of practices for better maternal and child health seeking behaviour of communities. BVHA as a partner of the Government of Bihar on health issues, contributed significantly to this process, especially on matters pertaining to use of contraceptives [Source: Interactions_with_CSO_and_others-22_2_20141].

Another example of translation of advocacy efforts into success has been the way, the SRHR Alliance got the government health service delivery mechanism to upgrade the infrastructure in the rural health centres (RHC) and district maternity homes (DMH). Lack of privacy for pregnant women especially during the delivery process was a major deterrent for women to visit these RHCs and DMHs. As a result of constant advocacy by BVHA, the district maternity homes have been provided with curtains and better amenities to ensure privacy during delivery. Presence of a qualified medical practitioner has also been made mandatory for all institutional deliveries [Source: Interactions_with_CSO_and_others-22_2_20141].

BVHA was closely involved in the core group of – Reduction of Total fertility Rate (TFR) under "Bihar Manav Vikas Mission (Bihar Human Resource Development Mission)" [Source: 2014-03-03_v3 BVHA SRHR Annual Report 2013]. BVHA has also been able to convince the Government of Bihar to take up the East Champaran District in the first phase for setting up the ARSH (Adolescence Reproductive Sexual Health) clinics [Source:

5cendline_questionnaire_training_participant_perspective_India_BVHA_Exposure visit Adolescent RSH clinic dec 2012_Swapan Mazumder].

Improved Capacity for Sexual and Reproductive Health Rights (SRHR) Advocacy at State Level [2] is due to: improved competence to deliver SRHR services [8] and increased ability to lobby for improvement of policies [9]. Each of these organisational capacity changes and how they have come about is described below.

Improved competence to deliver SRHR services [8]

BVHA's capacity for Sexual and Reproductive Health Rights (SRHR) Advocacy at State Level [2] occurred because BVHA as an organisation has been in the fore front in delivering SRHR services through its local partner organisations and thus is seen as one of the leading partners to take forward advocacy issues on SRHR. Over the last two years BVHA has improved its competence to deliver SRHR services through its local partner organisations [8] [Source: Interactions_with_CSO_and_others-22_2_20141, 2014-01-09_PAF BVHA UFBR ct 2014-2015, 5c endline self-assessment sheet_management_India_BVHA]. The SRHR program supported by Dutch Alliance is working through its local partner organizations namely NEEDS, VHAI, SEWA, BVHA, CINI and Restless Development in the states of Jharkhand, Odisha and Bihar for a period of five years: 2011 - 2015. The programme covers five districts in Bihar, three districts in Jharkhand and two districts in Odisha [Source: ARSH clinic visit, SRHR Training Manual & Resource book hindi].

BVHA's SRHR initiative aims at "Community empowerment on Gender Equity to access Reproductive Health Rights in 2 districts of Bihar". This initiative was identified through discussion with the local partners especially those working in the bordering districts since they have experienced a big problem regarding the sexual reproductive health issues. These districts are adjacent to NEPAL and there is high prevalence of trafficking especially for women/adolescent girls as well as the above mentioned problems, which make the situation more critical [Source: 2012Jan19_PDF_BVHA 3312001]. BVHA's improved competence to deliver SRHR services [8] is evident from the fact that the Government of Bihar recognizes BVHA as a member of State Technical Advisory group in Bihar and invites BVHA for consultation whenever there is a meeting related to SRHR issues. Further, BVHA is the member of state level thematic sub groups on TFR, MMR and IMR for policy level changes [Source: thematic group 11; BVHA Annual Report 2012-2013]. Also, Magic bus organized a two day state consultation on Adolescent Reproductive and Sexual health with the government of Bihar and development Partners at Patna and the BVHA staff were invited to participate in this event [Source: BVHA Annual Report 2013-2014].

BVHA's competences to deliver SRHR services improved [8] because of **improved SRHR skills and knowledge [13]** [Source: (LL2)5c_endline_assessment_sheet_India_BVHA_Simavi_NB; 2014-05-07_(LL2)

5C_endline_support_to_capacity_development_sheet_CFA_perspective_India_BVHA_Simavi_NB (2)].

The improved SRHR skills and knowledge are reflected in the special curriculum on Comprehensive Sexuality Education (CSE) which was developed by BVHA in consultation with the Government. BVHA developed a special curriculum for young people on CSE which they used through trained staff for educating young boys and girls and empower them to make their own choices around sexuality and reproduction and claim their rights. This is modelled on the Compendium on Young People's SRHR Policies in Europe, which was developed as part of SAFE II Project (Sexual Awareness for Europe). BVHA also organised Refresher Trainings on CSE in April 2013. BVHA conducted sessions for young people to provide proper SRHR education. Newly wed young couples were given education on family planning, delaying early pregnancy, sex selective abortions, mutual understanding and faithfulness with their counter parts etc. They also held sessions with the adolescent boys and girls to discuss topics like life skill education, gender, changes during adolescence, reproduction system, sexual violence, HIV/AIDS, RTI/STI, early marriage, early pregnancy, restart of school education, etc.

[Source: CSE definition SRHR Alliances Asian Countries; SRHR Training Manual & Resource book hindi, 2014-03-03_v3 BVHA SRHR Annual Report 2013]. SRHR skills and knowledge have improved since the baseline [13] because of sharing with alliance partners [27], trainings and meetings by other donors and state government [32]:

- Sharing with alliance partners [27]. The continuous interaction and sharing of experiences of BVHA with the alliance partners through exposure visits and trainings in their respective target areas helped BVHA improve their SRHR knowledge and skills [Source: 2014-04-18 vs4 (FINAL for distribution India 2013 UFBR A Report)]. These learnings were then shared with their partner organisations to improve programme implementation. Some details of the interactions with the alliance partners are given below:
 - *Exchange and exposure visits [30]:*
 - Exchange visit to NEEDS covering SRHR 10 October 2012. The aim of the visit to NEEDS- SRHR project was to share experiences, to understand the different project strategies; to give recommendations to the project, to identify strengths that can be replicated. NEEDS showed their community approach in SRHR, and innovations through mobile phone for SRHR. This visit helped in better program implementation and desired outcomes. They identified SRHR issues for advocacy, and program strengths that could be used by them for program implementation[Source: 5C_endline_support_to_capacity_development_sheet_CFA_perspective_India_BVHA_Simavi_NB,p. 37; discussion during the endline workshop; 20121002-SRHR review and planning meeting TT(2);5c endline_questionnaire_training_participant_perspective_India_BVHA_Exchange visit NEEDS Oct 2012_Project Manager].This was funded by MFS II [24].
 - Exposure visit to SRHR-YFS/ARSHC clinic of VHAI 19 December 2012 [Source: 5C_endline_support_to_capacity_development_sheet_CFA_perspective_India_BVHA_Simavi_NB; ARSH clinic visit]. The objective was to use the learning from the ARSH clinic visit to replicate it in developing adolescent reproductive health clinic services in the government system as well as bringing about improvement in the quality of the

clinic. The Executive Director of BVHA could get a basic understanding of adolescent health problems, counselling techniques, how to establish and run such clinics, how to convince the government to take up such an initiative, and how to link with HIV testing and counselling centres and its linkages with the project at community level [Source: Training questionnaires: 5c
endline_questionnaire_training_participant_perspective_India_BVHA_Exposure visit Adolescent RSH clinic dec 2012_Executive Director & management; ARSH clinic visit]. This was funded by MFS II [24].

- *Joint training on CSE and SRHR for alliance partners [31]:*
 - Meeting for Capacity Building of SRHR Alliance Partners' staff on 18-20 April 2012 in Delhi funded by MFS II [Source: Minutes of the Meeting (April SRHR 2012) revised]. The aim was to improve the capacities of the alliance partners on SRHR by providing them technical information to be used later for training their field partners: understanding the concept of "Sex and Sexuality," female reproductive system and the various methods of contraception. Various apprehensions were faced on the field while providing sex education or counselling on Reproductive and Child Health (RCH) issues. This was funded by MFS II [24].
 - Regional meeting Indonesia focus on SRHR-CSE delivery (Indonesia team, alliance office) in November 2013. The Executive Director of BVHA and the program manager went to Indonesia to see how their alliance partners worked with authorities on creating an enabling environment for Comprehensive Sexuality Education (CSE) activities and how the CSE curriculum was being implemented and benefiting a Muslim setting. Group presentations on the strategies and activities on CSE enabled the Executive Director to get knowledge to update CSE in Bihar [Source: 5c_endline_support_to_capacity_development_sheet_CFA_perspective_India_BVHA_Simavi_NB, Facilitation Guide Regional Learning Event_IDN version]. The program manager learnt to implement the adolescent awareness program more smoothly in their project area [Source: Training questionnaires: 5c
endline_questionnaire_training_participant_perspective_India_BVHA_Regional meeting Indonesia SRHR-CSE delivery Nov 2013_Malay Kumar.docx & participants]. This was funded by MFS II [24].
 - Training on Comprehensive Sexuality Education (CSE): 3 days for project staff in April 2013 [Source: Training for SRHR partners on Comprehensive Sexual Reproductive Health Rights ;CSE Refresher Training Report]. A refresher training of partners' staff in the SRHR alliance of India was facilitated by Restless Development India on Sexual and Reproductive Health Rights and on Adolescence Health care in Bihar Voluntary Health Association (BVHA), Patna. The consultant from Restless Development Odisha facilitated the session on adolescence and the social, physical and emotional changes that take place during that period, gender, sex and sexuality, abortion, HIV/AIDS. This resulted in the staff of BVHA to improve in SRHR communication skills, coordination and awareness generation with stakeholders. It further resulted in the target groups becoming aware of their rights and they started demanding health services by putting pressure on the government. Also stakeholders had meetings with UNICEF Officials and Principal Secretary Health, Bihar to discuss on various health issues like, Infant Mortality Rate (IMR), Maternal Mortality Rate (MMR), Malnutrition, Anaemia and prepare a strategy document to submit to the state government [Source: thematic group 11, discussion during workshop]. This was funded by MFS II [24].
 - Discussion on content of joint SRHR manual (all partners and external facilitator, government staff) 5th March 2013 [Source: 20130211-SRHR Programme and NGB meeting TT(2); 5c endline interview guide_OD consultants_selected indicators_BVHA_Dr. JM Dewan]. The objective of this meeting was to finalise the SRHR manual, initiated by VHA and reviewed by a consultant. BVHA has contributed in developing the SRHR Guidelines which has now been turned into a Manual (SRHR Training Manual & Resource book hindi). This manual is used by all alliance partners (Evaluation Workshop, SRHR Manual). This was funded by MFS II [24].
 - Comprehensive Sexuality Education (CSE) training for all partners (basic) by Restless Development in 25-29 June 2012. This training involved introduction to SRHR and 10 life skills through discussion, case study (field level), sharing and learning, physical, psychological and social changes during adolescence, male & female reproductive system, menstrual hygiene STI, HIV, gender, sex and sexuality; sexual abuse; pregnancy, miscarriage, unwanted pregnancy; ANC, PNC; preparation for delivery. Team Building exercises were carried out in order to strengthen the participant's

important skills such as leadership, communication, decision making, critical thinking etc. This training helped the partners to become efficient in their work and achieve program outputs easily[Source:

5cendline_questionnaire_training_participant_perspective_India_BVHA_Workshop_5day CSE training June 25-29_Ram Krishna, SRHR PRTNER TRAINING AT PATNA FROM]. This was funded by MFS II [24].

- *Participation in trainings and meetings funded and organised by other donors and state government [32].*

BVHA staff participated in various workshops, seminars, training programs related to SRHR organized by Government of Bihar (department of health) and other development agencies such as Population Foundation of India, Magic Bus India, World vision, Oxfam India, Future groups etc. [33]. By participating in these events, the capacity of the staff, especially SRHR project staff, enhanced and by sharing their field experience they are able to give input on health budget and strategic plan for health (related to SRHR, HIV/AIDS, etc.) to the Ministry of Health Bihar and on urban health issues to Plan India, New Delhi [Source: 2014-03-03_v3 BVHA SRHR Annual Report 2013]:

- Meeting on Repositioning of Family Planning by Population Foundation of India (PFI), New Delhi on Dec. 2012. A half day workshop was organized by PFI. Here discussions were held around repositioning of family planning within a woman's empowerment and human rights framework so that every family is a planned family and every child is a wanted, healthy child. The staff of BVHA (Executive Director and Advocacy Officer, SRHR Project) learned about improving the quality of care of family planning and reproductive health, preventing sex selection, family planning and reproductive health services, spacing between births etc. [Source: BVHA Annual Report- 2012-13, p. 48, discussion during endline evaluation].

Increased ability to lobby for improvement of policies [9]

BVHA is in a unique position to be working with a large variety of stakeholders. These include NGOs and their workers, network organizations, state level SRHR Alliance members, frontline health service providers, Village Health and Sanitation Committee at Panchayat level, target population in need for SRHR services adolescents both male and female, newlywed couples, eligible couples¹², District and Block level, PRI representatives at Panchayat level, mixed stake holders (religious leaders, opinion leaders, School teacher and other local identified reputed people), Self Help Groups for Dalit Women. Thus, BVHA is in a very good position to create a base, generate awareness, harness the critical mass of stakeholders at all levels to carry out lobby and advocacy at the state level, mainly targeting state policies on SRHR [Source: SIMAVI-Support to capacity sheet – CFA, 5C_endline_support_to_capacity_development_sheet_CFA_perspective_India_BVHA].

The increased ability to lobby is due to **improved knowledge on SRHR lobby and advocacy [51]** and **improved networking [14]**.

- Improved knowledge on SRHR lobbying and advocacy [51] was mainly the result of joint training on CSE and SRHR for Alliance partners [31] and trainings/meetings from other donors and state government [32]:
 - *The joint trainings on CSE and SRHR for Alliance partners [31]* included capacity development of the alliance partners on the following issues: to identify and analyse advocacy issues, key strategies, building advocacy skills and for developing a work plan, to understand how a joint advocacy agenda defines a shared ambition which gives greater opportunities for reaching different stakeholders. The importance of identifying active key players and how to engage them in advocacy. This was funded by MFS II [24].
 - *The trainings/meetings from other donors and state government [32]* included:
 - Workshop on WASH was organized by Wada Na Todo Abhiyan at A.N.Sinha Institute, Patna on 12th December, 2012 [Source: BVHA Annual Report- 2012-13, p. 48]. The aim was to develop effective and communicative tools for

¹² An eligible couple in India is a currently married couple wherein the wife is in the reproductive age, which is generally assumed to lie between the ages of 15-45 years. Such couples are target groups for family planning services.

-
- awareness building program to mobilise, sensitize and motivate people to lobby for their rights as well as the discussions on various food security issues, nutrition for pregnant and lactating women etc., led to a common understanding to create a civil society force for advocacy with government to develop policy and plans in the interest of common people.
- Workshop on Bitiya Bachao –Manavta Bachao Aandolan was organized by Action Aid, Patna on 26th December, 2012 [Source: BVHA Annual Report- 2012-13, p. 48]. This training enabled the staff to organize a meeting in January 2013 with the Minister of Health of the Government of Bihar to discuss on infant mortality rates, maternal mortality rates, sex selective abortion including Save the Girl Child. Thus networking with the government improved considerably and improved BVHA’s ability to lobby.
- The improved networking [14] occurred also, as a result of training by other donors [32], BVHA being a member of the SRHR Alliance [23] and partnerships in the SRHR project [42]. These are further explained below.
 - *Being a member of the SRHR Alliance [23]* (through the Simavi supported projects under MFS II [24]). BVHA is an active part of the India SRHR Alliance which is continuously working on the SRHR related issues to advocate at national, state and district level. Several issues are jointly identified which are common in the three states involved in the alliance and strategies have been developed to address them. Besides that, BVHA is an active member of the Wada Na Toda Abhiyan¹³ Bihar and India Chapter. Many health issues were discussed with the community people in 16 MP (Member of Parliament) constituencies of Bihar and accordingly these issues were compiled and submitted to concerned Political Parties for inclusion in their Political Manifesto. Many of the issues are now included. BVHA in collaboration with Health Watch Forum Bihar and Centre for Health and Social Justice, New Delhi is addressing the quality of family planning issues in Bihar. Besides that, BVHA is raising health issues in different other forums and makes regular correspondences with its network partners to visit and meet the civil surgeon and district magistrate to make the District Health Society and other government formed committees functional [14] [Source: 5c endline self-assessment sheet_management_India_BVHA].
 - *Partnerships in the SRHR project [42]*, which is MFS II funded [24], is another reason for improved networking. At the state level, BVHA formed the State level SRHR forum under the chairmanship of the Government authority and other international agencies such as Pathfinder International, Care-India, Population Foundation of India, two network partners, two SRHR Alliance partners and renowned NGOs at Patna. The government of Bihar recognizes BVHA as a member of the State Technical Advisory group in Bihar. Further BVHA is the member of the state level thematic sub groups on Total Fertility Rates (TFR), Maternal Mortality Rates (MMR) and Infant Mortality Rates (IMR) for policy level changes. At the district level too an SRHR forum was formed that liaised with District level authorities on SRHR issues such as Maternal Death Review, Rogi Kalyan Samitis (RKS, i.e. health facility management committees) orientation, Gaps in service delivery [Source: 2014-03-03_v3 BVHA SRHR Annual Report 2013]. It is through discussions at the State level SRHR forum that BVHA identified 5 points for joint advocacy – Gender; Adolescence Reproductive Sexual Health (ARSH); Ante Natal Checkups (ANC); early marriage; Sexually Transmitted Infections (STI)/ Reproductive Tract Infection (RTI) [Source: BVHA Annual Progress Report, SRHR Project 2012]. Furthermore, BVHA as an organisation has been in the fore front in delivering SRHR services in its SRHR project through its local partner organisations and thus is seen as one of the leading partners to take forward advocacy issues on SRHR [Source: Interactions_with_CS0_and_others-22_2_20141, 2014-01-09_PAF BVHA UFBR ct 2014-2015, 5c endline self-assessment sheet_management_India_BVHA].
 - *Participation in trainings and meetings funded and organised by other donors and state government [32]*.
BVHA staff participated in various workshops, seminars, training programs related to SRHR organized by Government of Bihar (department of health) and other development

¹³ Wada Na Todo ABHIYAN (WNTA) is a national campaign to hold the government accountable to its promise to end poverty and social exclusion

agencies such as Population Foundation of India, Magic Bus India, World vision, Oxfam India, Future groups etc. [33] [Source: 2014-03-03_v3 BVHA SRHR Annual Report 2013]:

- Meeting on Repositioning of Family Planning by Population Foundation of India (PFI), New Delhi on Dec. 2012. A half day workshop was organized by PFI. Here discussions were held around repositioning of family planning within a woman's empowerment and human rights framework so that every family is a planned family and every child is a wanted, healthy child. This meeting facilitated BVHA to discuss on various health problems in Bihar and strengthen its relationship with PFI. For example, Population Foundation of India is the state nodal NGO and technical agency for the Community Based Planning and Monitoring Programme (CBPM) in Bihar. BVHA being the member of State Technical Advisory Group (STAG) and vast experience in community empowerment was invited to May 2014 CTAG meeting to give input to strengthen the CBPM project. As a result of better networking BVHA could advocate with the government for people friendly policies [Source: BVHA Annual Report- 2012-13, p. 48].
- Workshop on WASH was organized by Wada Na Todo Abhiyan at A.N.Sinha Institute, Patna on 12th December, 2012 [Source: BVHA Annual Report- 2012-13, p. 48]. The aim was to develop effective and communicative tools for awareness building program as well as multi-departmental coordination approaches. This created a platform for various civil society organisations to come together and form a task force to lobby and advocacy with government and other policy makers for various health related policies [Source: discussed during endline evaluation].
- Workshop on Bitiya Bachao –Manavta Bachao Aandolan was organized by Action Aid, Patna on 26th December, 2012 [Source: BVHA Annual Report- 2012-13, p. 48]. This training enabled the staff to organize meeting on January 2013 with health minister, Government of Bihar to discuss on IMR, MMR, sex selective abortion including Save the Girl Child. This also served as a preparatory meeting to organize 3day events to sensitize the people on the above mentioned issues. Due to this workshop, networking with the government improved considerably for BVHA to participate in the strategic planning for health development in Bihar.

Centre for Development Innovation
Wageningen UR
P.O. Box 88
6700 AB Wageningen
The Netherlands
T +31 (0)317 48 68 00
www.wageningenUR.nl/cdi

Report CDI-15-012

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Final Report MFS II Joint Evaluations

Country	India
Consortium	Red een Kind/Woord en Daad
Responsible Dutch NGO	Woord en Daad
Project (if applicable)	Education Program / Program for Financial Sponsorship and Scholarships "Agape Homes and Bethlehem Day Care Centre"
Southern partner organisation	Christian Outreach Uplifting New Tribes (COUNT)

The project/partner is part of the sample for the following evaluation component(s):

	X
Achievement of MDGs and themes	X
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

1. Introduction

This report presents the findings of a project funded and supported by Woord en Daad and implemented by a church-based NGO - COUNT (Christian Outreach Uplifting New Tribes).¹ The project under review was motivated by a desire to provide quality education to children of tribal communities living in remote villages with limited access to formal education. The project involves placing children from needy households in residential (Agape) homes with foster parents and ensuring that such children have access to education either in government schools or in schools run by COUNT and ensuring their all-round development. To quote from a COUNT project document – “The education program, works towards developing the child holistically. The program focuses on improving the abilities of the child, to build leadership skills and to make the child grow up to become a responsible citizen of our nation” (Dexter, 2010).² The aim of this report is to examine the effect of residing in these foster homes on the cognitive and non-cognitive development of children. Given the broad scope of the intervention, cognitive and non-cognitive development is broadly construed and includes outcomes such as educational aspirations, ethical values and habits.

The report begins by setting out the context (Section 2) and providing a description of the project (Section 3). This is followed by a discussion of the sampling strategy (Section 4) and the data (Section 5). Estimates are presented in Section 6 and the final section contains concluding remarks.

2. Context

Located in South-eastern India, Andhra Pradesh (AP) accounts for 8.4 percent of India’s geographical area and 7.1 percent of its population. Scheduled Castes and Scheduled Tribes account respectively for 16.2 percent and 6 to 9 percent of the total population of the state. The state has 33 major tribes with a population of about 3.2 million tribals.

In the last ten years the state has experienced rapid growth and has recorded a sharp drop in poverty. In 2011-12 the poverty rate stood at 9.2 percent, a figure, which places the state amongst the least-poor states in the country.³ Despite impressive economic achievements, certain population

¹ COUNT also works in Orissa, Chattisgarh, Maharashtra and Gujarat, although the majority of its work is with tribal communities in the Southern Indian state of Andhra Pradesh (AP).

² Smap education 2011 to 15.doc, provided by Woord en Daad.

³ Goa has the least percentage of people living below the poverty line (5.09 per cent) followed by Kerala (7.05%), Himachal Pradesh (8.06%), Sikkim (8.19%), Punjab (8.26%) and Andhra Pradesh (9.20%). In 2011-12 the Indian poverty line was set at an expenditure of Rs. 27.2 per person per day or annual consumption expenditure of Rs.48,960 for a family of five. For details, see http://articles.economictimes.indiatimes.com/2013-07-23/news/40749596_1_poverty-ratio-poverty-line-tendulkar-committee.

groups, especially those residing in isolated mountain communities (tribals) are less likely to have experienced the benefits of this growth. For instance, in the areas where the current project operates access to piped water and electricity is limited. There is better access to educational facilities – available educational infrastructure includes pre-primary schooling and almost all villages in the project catchment area have a primary school (up to class five). In terms of health, access to publicly financed health centres is nominally available although the most common health care providers are rural medical practitioners who are unlicensed and provide allopathic care. Most births take place at home with the help of midwives.

In recent years, to ensure better access to services the government has begun to operate several programs such as the Integrated Tribal Development Program for tribal families residing in these isolated areas. These efforts are complemented by the efforts of NGOs who are also engaged in improving tribal welfare. Such program include free education, hostel facilities for children from remote areas, development of cottage industries, housing societies, agricultural facilities, bank loans and cooperative operations for the marketing of forest produce like honey and herbs. However, it has been difficult for the government to reach a number of communities due to lack of infrastructure. In addition, large parts of Andhra Pradesh, especially the forested tribal areas face the threat of armed rebellion by Maoist groups which has further reduced the accessibility of the government and NGOs in the region.

In economic terms, tribal communities are mainly engaged in subsistence rain-fed agriculture and gathering and selling of minor forest produce. Cultivated crops include tobacco, pulses, cotton and rice and forest products such as wood, honey, gum, herbs, tobacco leaves. In terms of socio-political organization, most of the tribes have their own tribal heads. At the same time while their villages are embedded in the formal governing structures of the country (Gram Panchayat with a head) in a number of the project areas, while present these structures do not function effectively as they are controlled by armed Maoist groups who resist government intervention and control. Culturally, socially and economically women and men are considered equal. Women engage in economic activities. They also have the right to divorce and remarry.

3. Project Description

a. Project duration and budget

The project under scrutiny has been operating for a number of years. Woord en Daad has been financing this project/organization (COUNT) since 1993 and it is expected that project funding will continue till 2020. However, since Woord en Daad has indicated that financing will stop in 2020, the Southern Partner Organization (SPO) has been actively moving to shut down the homes and transfer

children to alternative facilities. At the time of the first survey in 2012 there were 722 children in 18 Agape homes (excluding a day care centre). For 290 of these 722 children alternative homes had already been identified.

The annual project budget for April 2012-March 2013 for all COUNT activities supported by Woord en Daad was Rs. 19,022,400 (about Euro 280,000).⁴ Of this Rs. 15,361,166 (about Euro 226,000) or 80 percent was allocated to support the needs of about 935 children residing in 18 Agape homes and enrolled in the Bethlehem day care centre (see Table A1).

b. Project objectives, activities, theory of change

The main objective of the project under review is to provide shelter, care and quality education to children and youngsters (aged 4 to 18) from poor ST/SC families to help open new educational and career prospects. Children from the project's target group are selected on the basis of recommendations made by local church pastors or village leaders. These local leaders inform COUNT about destitute families whose children could benefit from being in an Agape (love of God) home. Such children are then provided a place in one of the 18 Agape homes operated by COUNT.

Typically, each home has 30 children (except for the central Agape home which is larger) and is managed by foster parents. In these homes children are provided food, shelter and clothing. The foster parents are also responsible for teaching the bible and imparting moral values. Children in these homes attend either a school operated by COUNT or government schools. The overall idea is to meet the physical, educational and spiritual needs of children. In addition COUNT operates a training and vocational education component for a small number of participants. The overall aim of the vocational educational component is to empower the target group through improved skills training and through generating (self) employment opportunities.

The manner in which the intervention operates and hopes to achieve its objectives is laid out in the figure below. Since the project hopes to exert an influence on several aspects of a child's development the outcomes that are analysed reflect this broad scope and have been developed on the basis of reading a number of project documents and conversations with individuals responsible for implementing the project.

⁴ At the end of September 2012 the exchange rate was Rs. 68 per Euro.

Stylized result chain

Input

Financial and technical resources. Technical help includes - assessment of activities and providing advice, coaching in writing proposals

Activities

Vocational training; capacity building of teachers; provision of pre-primary, primary, secondary education, setting up foster homes which provide food, shelter, clothing, provision of extra-curricular activities; teaching moral values, tolerance, bible teaching

Output

Youngsters in vocational centres are trained; children in foster homes receive quality education; children learn in a conducive environment; Children's physical needs and spiritual development has taken place

Attribution gap

Impact

Objective 1/Indicators:

Impact on education related outcomes: Mathematics test scores, interest in schooling, doing homework regularly, educational aspirations, attitudes towards cheating in school

Objective 2/Indicators:

Impact on non-education related outcomes: Well organized, attitudes towards wasting food, stealing, engaging in cruel behaviour, using foul language; teacher's evaluation of students' emotional development, conduct problems, hyperactivity, peer relationships, pro-social behaviour

4. Analytical approach and methods

The project consists of a foster home and educational component (about 722 students) which provides for children living in foster homes and supports two schools; Woord en Daad scholarships (112 scholarships in 2012-2013); and additional scholarships for 35 students. There are several elements of the project to which the evaluation needed to respond and these issues are discussed below.

The first issue was the scope of the evaluation. Given (i) the small number of participants in a number of the project components⁵ (ii) the overlap between programme components - for example, the additional Woord en Daad scholarships are for students living in the foster homes and a large proportion of the children in the foster homes attend COUNT schools and (iii) the large share of the budget (about 81 percent) spent on the foster homes, the project team decided to focus on the foster home component. Hence, the primary objective of the evaluation is to identify the impact of living in a foster home on the various education and non-education related indicators listed in the previous section. While the focus of the evaluation is on identifying the effect of residing in an Agape home we also examine the effect of studying in a COUNT school and the effect of living in an Agape home **and** studying in a COUNT school.

A second challenge for the evaluation was identification of an appropriate control group. The challenge stems from the fact that the intervention groups consists of children who are not living with their parents. There were two possibilities. One option was to create a control group based on children who live in and go to school in the village of origin of the students residing in Agape homes. A second option was to create a control group based on children who live in the village where the Agape homes are located and attend the same schools as the students residing in the Agape homes. The research team discovered from the field visits that after completing primary school almost all children in the village of origin (typically remote mountain villages) attend boarding schools. Hence using children who live in the village of origin as a control group was not viable. Thus, the control group consists of children who live in the same village and attend the same school as those who reside in Agape homes. Despite living in the same village and attending the same school it is likely that the background of children who are in the Agape homes is quite different from their peers. While data details and comparability of the two groups is discussed in the next section, it does highlight the importance of providing estimates after controlling for differences in the backgrounds of the two groups of children.

⁵ Given the small number of children in the vocational training component of the project it is difficult to provide a credible quantitative impact evaluation.

A third issue confronting the evaluation was that due to the end of funding in 2020 the SPO was already in the process of moving children to other homes. During the first round of data collection in 2012 there were 722 children in 18 Agape homes and it was expected that in a short period of time after the first-round survey, 290 of these children would be placed in different homes. One option would have been to follow the children who had been placed elsewhere after the first round of data collection and examine whether changes in their treatment status has a bearing on outcomes. However, due to logistical and financial reasons this was ruled out. Also, we could not gather data on children who were about to join the Agape homes but had not yet joined as the SPO was in the process of relocating children and no additional intake was planned.

Keeping these constraints in mind the evaluation is mainly based on comparing children who reside in Agape homes with those who do not reside in Agape homes in 2012. To enhance comparability we provide Ordinary Least Squares (OLS) estimates after controlling for various socio-economic and demographic characteristics. In addition, we also provide non-parametric estimates after using propensity score matching to obtain comparable treatment and control groups. While we do have access to a second round of data which was gathered in 2014, we use this sparingly. The main reason is that about 140 children who were included in the first round could not be traced. This includes children from Agape homes who have been placed elsewhere and children who did not live in such homes but have migrated. The reduction in the sample size makes it hard to detect differences between treatment and control and the large non-random attrition rate further hinders comparability of the treatment and control groups.⁶

Overall, while we attempt to create comparable treatment and control groups by using propensity score matching and controlling for a range of confounding variables which may determine program entry and the outcome of interest, the limitations of the evaluation need to be highlighted. First, we do not have baseline data as the evaluation is being conducted after the project has been launched and this makes it difficult to identify a causal project effect. Second, since the project is being phased out a number of children who were interviewed in the first round do not appear in the second round of the survey. This makes it difficult to estimate whether there have been changes in outcomes over time which may be attributed to the project.

5. Data

a. Household survey data

⁶ Soon after the first round of data collection the research team had pointed out that gathering a second round of data may not be very meaningful due to the relocation of children. However, this was not accepted by NWO-WOTRO.

Two rounds of data have been collected. The first round was conducted in 2012 and the second in 2014. Based on power calculations and financial constraints a sample size of 600 children - 300 treated and 300 controls was targeted.⁷ Several survey instruments were developed. These included a household questionnaire, designed to gather information on the socio-economic background of children and their households. This questionnaire also included modules to capture educational aspirations, and scenario-based questions to capture attitudes towards cheating, stealing, tolerance; a school and teacher questionnaire to gather information on school facilities, school attendance of children and their grades; a maths test for grades 1 to 8 in 2012 and for grades 3 to 10 in 2014. These tests were administered by the evaluating team.⁸ To capture the non-cognitive development of children we used the teacher response version of a well-known instrument called the strengths and difficulties questionnaire.⁹

To select the sample of children in Agape homes a list was obtained from COUNT. From this list of 18 Agape homes with 432 children, 12 were selected.¹⁰ This left us with a list of 318 children in grades 1 to 10 and the aim was to survey all these children. The control group consisted of children in the same grade and the same school as the treated group but not residing in Agape homes, and after identifying these children they were traced to their homes and data were gathered through the household survey instrument. The first survey round covered 568 children, 289 treatment and 279 control. Due to the exit plan designed to place children in other facilities there was a high attrition rate (25 percent) between the two survey rounds. As indicated earlier, the attrition rate was higher (47 percent) for those who resided in Agape homes and substantially lower (12.5 percent) for non-Agape residents. The follow-up survey covered 428 children, 184 treatment and 244 control.

Descriptive statistics, based on the first round survey, for the entire sample as well as for the treatment and control groups are provided in Table 1. In terms of the various socio-economic characteristics there are some clear differences between the treatment and control groups. Children living in Agape homes are more likely to have come from a household where the head is illiterate (74 versus 66 percent) and more likely to be employed as agricultural labourers (63 vs 51 percent). They are also less likely to have lived in dwellings where the floors, roofs and walls are *pucca*. The two groups are quite similar in terms of demographic characteristics. There are clear differences in terms

⁷ Power calculations based on a small effect size suggested that this sample has adequate power (0.8).

⁸ To develop the tests we drew upon Mathematics text books for classes 1 to 10 covering syllabus typical in government schools across India, see for example <http://www.textbooksonline.tn.nic.in/>

⁹ The instrument was developed by a psychologist, Dr. Robert Goodman and has been widely applied. For details see <http://www.sdqinfo.com/a0.html>.

¹⁰ Six Agape homes with seven children or less in grades 1 to 10 were excluded. Of the 722 children in these 18 Agape homes, 290 were already in the exit program.

of religion and caste and children living in Agape homes are more likely to be Christians (77 vs 29 percent) and are also more likely to belong to scheduled tribes (56.6 vs 29.4). The children are similar in terms of age and prior attendance of a pre-primary school. However, about 65 percent of children residing in Agape homes are male as compared to 51 percent in the case of non-Agape residents. Given the target group that COUNT attempts to reach out differences in terms of socio-economic status, caste and religion are not unexpected. It does, however, highlight the need to control for these attributes in comparisons of the effects of living in an Agape home on outcomes.

b. Other sources of data/information

Prior to visiting the project site, information was gathered from Woord en Daad. This information included:

- Project progress documents/half-yearly activity reports
- Financial information on the project
- Project plans – yearly and long-term.

A field visit was undertaken in July-August 2012 when the evaluation team met with several staff members of the SPO/COUNT and gathered relevant documents to understand the intervention.¹¹The field visits included:

Discussion at Onyx Agape Home in Rampachodavaram in East Godavri district of Andhra Pradesh: At the home semi-structured interviews were conducted with the house parents, and with several children residing in the home. Some of the questions were addressed to the group of 30 children (17 girls and 13 boys) and four children were interviewed individually.

Discussion at Immanuel Agape home, Arku Valley, Vishakapatnam district of Andhra Pradesh: At the home semi-structured interviews were conducted with the house parents, and with several children residing in the home. Some of the questions were addressed to the group of about 40 children (17 girls) and eight respondents children were interviewed individually.

Visit to Zandagarh village, Vishakapatnam district: A number of children from this village live in Agape homes. During the village visit we met with the church pastor and parents whose children live in an Agape home.

In addition to the discussions at the homes and the villages we examined the records maintained by each of the homes (each home maintains 12 records) and also collected several documents from COUNT. These documents included:

- Account statements for various periods
- Documents containing information on how the Agape homes are organized and administered

¹¹ Mr. Dexter Gollapalli, Director, COUNT; Mr. S. Williams (Human resources); Mr. John (in-charge of the vocational training component); Mr. Vijay (in-charge of adoption); Mr. Prabhakar (in-charge of HIV/AIDS awareness programs), Mr. Samuel (Co-ordinator and Account department).

- COUNT – Administrative Manuals
- Organizational capacity assessments
- Development strategy for the period 2010-2014
- COUNT Programs internal evaluations¹²

6. Estimates and Discussion

Tables 2a and 2b contains estimates of the effect of residing in an Agape home on education and non-education related outcomes, respectively. These estimates are based on the first-round of data collection. The last three columns of the tables contain three different sets of estimates. Column 4 contains OLS estimates without any control variables, column 5 contains OLS estimates after controlling for a range of traits including child age, gender and pre-primary school attendance, socio-economic and demographic characteristics including religion and caste. A set of district-fixed effects is also included.¹³ Column 6 provides estimates based on propensity score matching (PSM). Tables 3a and 3b provide OLS and PSM estimates of studying in a COUNT school and Tables 4a and 4b provide OLS and PSM estimates of studying in a COUNT school **and** residing in an Agape home. There are some differences across the OLS and PSM estimates and while these are pointed out below, for the most part the discussion focuses on the OLS estimates as these are based on controlling for a much larger range of traits as compared to the PSM estimates.¹⁴ We also provide estimates for the effect of residing in an Agape home using data collect in 2014 (see Tables 5a and 5b). However, as discussed above, due to sample attrition these estimates do not yield much additional information.

a. Effect of residing in Agape homes - education related outcomes

The first 4 rows of Table 2a provide estimates of the effect of residing in an Agape home on cognitive achievement in Mathematics. The estimates show that in grades 1 and 2 children residing in an Agape home tend to score less as compared to the control group. In grades 1 and 2 Agape residents score about 7 percent less while in grades 3 and 4 it is about 9 percent less. However, in the higher

¹² These evaluations include reports by AC Nielsen conducted in May 2011. The evaluators visited five villages in Rampachodavaram and conducted a household survey of 150 households. An evaluation report of COUNT's activities produced by ASK (Association for Stimulating Know-how) and a report titled, *Balancing provision, protection and participation: Good practices with regard to supplementary education for children in India*, submitted on July 07, 2011 by Esteves, Goswami and Fons van der Velden.

¹³ In most cases, in our sample, there is only one school per district and so we are unable to control for both school and district fixed-effects.

¹⁴ PSM requires knowledge of factors that determine entry into Agape homes – that is, information on the economic conditions of the child's household at the time that the child entered the Agape homes. However, we only have information on the current situation. This limitation suggests that it is prudent to focus on the OLS estimates as we can control for a number of variables that may have a bearing on the outcomes.

grades, that is class 5 to 8 there does not seem to be any difference between the two sets of children. A literal interpretation of these estimates is that being an Agape resident has a negative effect on achievement for children in grades 1 to 4 and no negative effect beyond that level. An alternative interpretation given the background of children staying in Agape homes and the inability to control for unobserved traits of children is that children from a weaker socio-economic background join Agape homes and while they tend to perform worse than non-Agape residents in the first four years of primary school, by grade 5 they have caught up. This interpretation is also supported by the patterns that we observe in estimates based on the 2014 data. In 2012, children in grades 3 and 4 scored 9 percent less on the mathematics test as compared to their non-Agape counterparts. However, in 2014 when they were in grades 5 and 6 their test scores are 12 percentage points higher than the control group. Similarly, for those who were in grades 5 and 6 in 2012 we found no difference between treatment and control group in 2014 (grades 7 and 8); in fact they tend to perform far better than their non-Agape counterparts (26 percent higher). At the very least the estimates suggest that even if children who join Agape homes display lower levels of cognitive achievement when they first join the homes by the time they are in Grades 5 and 6 (aged 10-11) they are performing as well as their non-Agape colleagues.

The remainder of Table 2a examines differences on a range of education related outcomes including interest in studies, whether they do homework regularly, educational aspirations and attitudes towards cheating in examinations. There are no statistically significant differences in terms of educational aspirations across the two groups. About 45 percent of both groups of children are interested in engineering and medicine while the rest aspire to earn BA/MA degrees. Attitudes towards cheating are also not statistically different across groups and about 78 percent of children indicate that they do not consider it appropriate to cheat on an exam in order to pass. The differences that do emerge relate to the regularity with which homework is done and interest in studies. According to their foster parents, children living in Agape homes are 14 percentage points more likely to do their homework regularly. Consistent with this finding we find that children living in Agape home are 10 percentage points more likely to be interested in their studies.

b. Effect of residing in Agape homes – non-education related outcomes

According to their (foster) parents, the estimates reported in column 5 of Table 2b show that children residing in Agape homes are 10 percentage points more likely to be ranked as well-organized as compared to their counterparts. There are no statistically significant differences between the two groups with regard to habits such as wasting food or using foul language. The survey included two vignettes designed to capture attitudes and responses to stealing and humane/cruel behaviour. In both cases there are no statistically significant differences in responses between the two sets of children. Based on the estimates in Column 4, it seems that children residing

in Agape homes are more likely to intervene when they see a cruel act being committed. A substantially larger share indicated that they would stop an individual from stoning animals - 37 versus 12 percent. However, these differences do not persist once various controls are included. The gap remains at but 7 percentage points but it is no longer statistically significant.

The teacher version of the strengths and difficulties instrument was used to assess differences between Agape and non-Agape residents with regard to five non-cognitive aspects. Based on the estimates in Column 4 of Table 2b it seems that on all five dimensions children residing in Agape homes are rated by teachers as having more problems than their non-Agape counterparts. The PSM estimates (Column 6) also suggest that children in Agape homes experience greater emotional and conduct problems and are more likely to be hyperactive and have problems with their peers although the estimates are not precise. However, OLS estimates including controls paint a very different picture. Estimates of the effect of residing in an Agape home, after controlling for differences in socio-economic status, religion, and caste reveal that living in a home is not associated with notably higher non-cognitive development. The picture emerging from a comparison of the three sets of estimates is that children who reside in Agape homes are viewed by their teachers as being less social and having greater emotional and conduct problems, however, this has nothing to do with the Agape home and is a function of their backgrounds. The sharp differences across estimates also highlight the importance of controlling for background traits that are likely to influence entry into Agape homes and the outcomes being scrutinised.

*c. Effect of residing in an Agape home **and** attending a COUNT School*

The effects of simultaneously experiencing two interventions, that is, residing in an Agape home and attending a COUNT school as compared to not attending either are provided in Tables 4a and 4b. About 56 percent of the children living in an Agape home also attend a COUNT school (156 of 279).¹⁵ With regard to the education related outcomes, the estimates display roughly the same pattern as seen in the case of those who only attend Agape homes. Initially, that is in classes 1 to 4 children residing in Agape homes seem to be at a disadvantage. However, by the time they reach classes 5 through 8 the deficit seems to have been erased and, for those attending classes 7 and 8 there seems to be a 17 percent Agape-resident advantage, although the estimates are statistically significant at only the 11 percent level. For all the other education related outcomes there seems to be no differences between those who have received both interventions and those who have not experienced any such intervention. There is a clearer effect of both interventions on some of the habit and value outcomes. Children who live in an Agape home and attend a COUNT school are thought to be substantially better organized (17.4 percentage points) and they also seem to be less

¹⁵ The distribution of the sample in the different categories is provided in Table A2.

inclined to ignore inhumane behaviour. However, the clearest difference between those who experience one intervention and those who experience both interventions comes from the set of five variables that capture non-cognitive attributes. Estimates that do not control for differences continue to show that those who experience such interventions have greater problems on all five dimensions. However, once we control for various attributes we see that those who experience both interventions are less likely to experience emotional and conduct problems. In fact, in the case of problems with peers and pro-social behaviour those experiencing both interventions have a higher and statistically significant score on both outcomes. A comparison of the estimates between those who experience only one intervention and those who experience both suggests that the two interventions complement each other and work towards reducing the deficit in non-cognitive skills that may afflict children who are the target of COUNT's interventions.

d. Efficiency of the project

In 2012-2013 the project had a total budget of Rs. 19,022,400 of which Rs. 15,361,166 was allocated to the Agape homes. This translates into an annual budget of Rs. 16,430 per child or Rs. 1369 per month per child. These funds are intended to meet among other costs, the current costs of housing and feeding children in the Agape homes. From the available information it is not clear whether these funds are also expected to finance the educational costs of children residing in the Agape homes. Clarity is still needed on the scope of these expenditures. Notwithstanding this lack of clarity, available information from the Government of India reveals that a sum of Rs. 42,000 per child is allocated to meet current expenditures in Ekalavya Residential Schools (ERS).¹⁶ These schools have been set up by the Government to provide education to children from tribal families. The funds per child are expected to cover the costs of feeding, housing and educating children who attend such schools. A breakdown of costs by component is not available. While we still need to ensure that the figures are comparable, *prima facie*, it does seem that the Agape homes are able to support children in a more efficient manner than government run schools which focus on the same target group as COUNT.

Not only does the project seem to have been executed efficiently, based on the estimates provided it seems that as children spend more time in these Agape homes their educational performance as judged by their performance in Maths test is no worse—there is some evidence that it is better— compared to their non-Agape counterparts. There is also evidence that children residing in Agape homes are more dedicated to their studies and are more conscientiousness (doing homework regularly) and better organized. Changes in the estimates in terms of performance by grade and over time, and estimates with and without controls suggests that the Agape homes are

¹⁶ Ekalavya Residential Schools have been set up by the Government of India as model residential schools for tribal families. See <http://tribal.nic.in/Content/EkalavyaModelResidentialSchool.aspx>.

successful at bridging the gap in cognitive and non-cognitive attributes between children from relatively weaker socio-economic backgrounds.

7. Concluding remarks

The paper assessed the impact of a project implemented by COUNT (Christian Outreach Uplifting New Tribes) and funded by Woord en Daad. The project aims to provide quality education to children of tribal communities living in remote villages with limited access to formal education by placing children from needy households in residential (Agape) homes with foster parents and ensuring that such children have access to education either in government schools or in schools run by COUNT and ensuring their all-round development. The primary objective of the evaluation was to identify the impact of living in a foster home on the various education and non-education related indicators. The paper presented the findings of the evaluation of the effects of residing in foster homes on the cognitive and non-cognitive development of children which included outcomes such as educational aspirations, ethical values and habits.

The main findings are that residing in an Agape home for a longer period contributes to the improvement of cognitive and non-cognitive skills compared to children in regular schools and in non-Agape homes. The estimates presented in the paper indicate that while in the initial years Agape children do not fare well in school compared to non-Agape children, their performance improves with the length of time and is as good as their non-Agape counterparts. Children residing in Agape homes are also likely to be more organised, do their homework more regularly and show more interest in studies than non-Agape children. The gains are particularly substantial for children who reside in an Agape home and attend a COUNT school with the two interventions complementing each other to benefit the child's cognitive and non-cognitive development. While these findings are promising the extent to which one can imbue them with a causal interpretation is circumscribed by the lack of baseline data. To enhance the credibility of the impact evaluation, baseline data and several rounds of follow-up data on the same children needs to be collected. Furthermore, a more compelling efficiency and effectiveness analysis requires not just an evaluation of COUNT's programs but an assessment of alternative programs run by the government.

Notwithstanding these remarks, based on the statistical analysis, the field work that was conducted and the information gathered from the existing reports it does seem that the project has been efficiently executed. It also seems to be well-conceived and suitable for the environment in which it is located. To elaborate, COUNT works to provide quality education to some of the most vulnerable and historically marginalised groups, namely children from Scheduled Tribes (ST). Mainstream development including the provision of schools may often bypass these groups who are located in inaccessible areas. While there are government programs that are designed to cater to

these groups, the popular press often argues that these suffer from poor implementation.¹⁷ Hence, there continues to be a need for interventions such as that run by COUNT.

¹⁷ We have not been able to locate any evaluations of the Ekalavya Residential School programme.

Table 1
Descriptive Statistics – Means and testing for differences in means (2012)

Variable	Total	Treatment	Control	$\bar{X}_t = \bar{X}_c$ p-values

Report CDI-15-003

Kusters, C., Mohapatra B.P., Sethi, S., Buizer, N., Das, A., Bhatra R.W., Sen P., 2015. *Endline report – India, COUNT. MFS II country evaluations; Capacity of Southern Partner Organisations (5C) component*. Centre for Development Innovation, Wageningen UR (University & Research centre). Report CDI-15-003. Wageningen.

This report presents the findings of the endline of the evaluation of the organisational capacity component of the MFS II country evaluations. The focus of this report is India , COUNT. The format is based on the requirements by the synthesis team and NWO/WOTRO. The endline was carried out in 2014. The baseline was carried out in 2012.

Key words: 5C (five core capabilities); attribution; baseline; causal map; change; CFA (Co-financing Organisation) endline; organisational capacity development; SPO (Southern Partner Organisation).

Acknowledgements

We are grateful to all the people that have contributed to this report. We particularly would like to thank the Southern Partner Organisation Christian Outreach Uplifting New Tribes (COUNT) and the Co-Financing Agency Woord en Daad for their endless patience and support during this challenging task of collecting the endline data. We hope that this endline report will provide useful insights to COUNT and Woord en Daad, the synthesis team, IOB and NWO/Wotro.

WDCAP Programme	WDCAP is an online programme developed by W&D, Netherland to connect all its partners in a central server to store documents, generate and save reports. Each partner has been given independent user ID and password. They have to follow the browser link (www.wdcap.woordendaad.nl) and login on the given ID and password to access and upload documents. This can facilitate the partners to avoid loss of data.

1 Introduction & summary

1.1 Purpose and outline of the report

The Netherlands has a long tradition of public support for civil bi-lateral development cooperation, going back to the 1960s. The Co-Financing System (*Medefinancieringsstelsel*, or 'MFS') is its most recent expression. MFS II is the 2011-2015 grant framework for Co-Financing Agencies (CFAs), which is directed at achieving a sustainable reduction in poverty. A total of 20 consortia of Dutch CFAs have been awarded €1.9 billion in MFS II grants by the Dutch Ministry of Foreign Affairs (MoFA).

The overall aim of MFS II is to help strengthen civil society in the South as a building block for structural poverty reduction. CFAs receiving MFS II funding work through strategic partnerships with Southern Partner Organisations.

The MFS II framework stipulates that each consortium is required to carry out independent external evaluations to be able to make valid, evaluative statements about the effective use of the available funding. On behalf of Dutch consortia receiving MFS II funding, NWO-WOTRO has issued three calls for proposals. Call deals with joint MFS II evaluations of development interventions at country level. Evaluations must comprise a baseline assessment in 2012 and a follow-up assessment in 2014 and should be arranged according to three categories of priority result areas as defined by MoFA:

Achievement of Millennium Development Goals (MDGs) & themes;

Capacity development of Southern partner organisations (SPO) (5 c study);

Efforts to strengthen civil society.

This report focuses on the assessment of capacity development of southern partner organisations. This evaluation of the organisational capacity development of the SPOs is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

The purpose of this report is to provide endline information on one of the SPOs involved in the evaluation: COUNT in India. The baseline report is described in a separate document.

Chapter 2 describes general information about the Southern Partner Organisation (SPO). Here you can find general information about the SPO, the context in which the SPO operates, contracting details and background to the SPO. In chapter 3 a brief overview of the methodological approach is described. You can find a more detailed description of the methodological approach in appendix 1. Chapter 4 describes the results of the 5c endline study. It provides an overview of capacity development interventions of the SPO that have been supported by MFS II. It also describes what changes in organisational capacity have taken place since the baseline and why (evaluation question is 1 and 4). This is described as a summary of the indicators per capability as well as a general causal map that provides an overview of the key organisational capacity changes since the baseline, as experienced by the SPO. The complete overview of descriptions per indicator, and how these have changed since the baseline is described in appendix 3. The complete visual and narrative for the key organisational capacity changes that have taken place since the baseline according to the SPO staff present at the endline workshop is presented in appendix 4.

For those SPOs involved in process tracing a summary description of the causal maps for the identified organisational capacity changes in the two selected capabilities (capability to act and commit; capability to adapt and self-renew) is provided (evaluation questions 2 and 4). These causal maps describe the identified key organisational capacity changes that are possibly related to MFS II

interventions in these two capabilities, and how these changes have come about. More detailed information can be found in appendix 5.

Chapter 5 presents a discussion on the findings and methodology and a conclusion on the different evaluation questions.

The overall methodology for the endline study of capacity of southern partner organisations is coordinated between the 8 countries: Bangladesh (Centre for Development Studies, University of Bath; INTRAC); DRC (Disaster Studies, Wageningen UR); Ethiopia (CDI, Wageningen UR); India (CDI, Wageningen UR; Indonesia (CDI, Wageningen UR); Liberia (CDI, Wageningen UR); Pakistan (IDS; MetaMeta); (Uganda (ETC). Specific methodological variations to the approach carried out per country where CDI is involved are also described in this document.

This report is sent to the Co-Financing Agency (CFA) and the Southern Partner Organisation (SPO) for correcting factual errors and for final validation of the report.

1.2 Brief summary of analysis and findings

Over the last two years COUNT has slightly improved in its capability to act and commit. Important improvements were the leader becoming more pragmatic, COUNT receiving support in developing strategic plans from the MFS II funded regional coordinator, improved staff skills, improved fundraising and fundraising procedures. In the capability to adapt and self-renew COUNT also improved slightly. This was mainly due to improved ability to collect data and to report due to methodological guidance and evaluations supported by W&D. COUNT did not change in its capability to deliver on development objectives. The organisation improved slightly in its capability to relate because they increased their engagement with target groups and increased the number of networks they are active in. Finally there was a very slight improvement in the capability to achieve coherence because strategies have been revisited and a new child protection policy is now in place.

The evaluators considered it important to also note down the SPO's perspective on the most important changes in the organisation since the baseline . During the endline workshop the key organisational capacity changes that were brought up by COUNT's staff were diversification of funds, reduction of programme costs and improved strategic planning. These changes happened to overlap with the key changes that were selected to process tracing as they were linked to MFS II supported capacity development interventions. Diversification of funds and reducing programme costs can be only partly attributed to MFS II supported capacity development interventions, which have played a relatively important role in improving the funding situation of COUNT, particularly in terms of accountability towards and retention of existing donors. Improved strategic planning can be largely attributed to MFS II supported capacity development interventions. These interventions, which include COUNT's involvement in different MFS II funded evaluations that aimed to improve COUNT's capacities and implementation of programmes, played an important role in terms of the development of a phase-out plan, improved staff skills in data collection and reporting, and more efficient project fund allocation.

2 General Information about the SPO – COUNT

Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

2.2 The socio-economic, cultural and political context in which the partner operates

COUNT is an organisation which works amongst the remote tribal population of undivided Andhra Pradesh, Odisha and Chhattisgarh. It works as the social and developmental organ of Agape Fellowship (AF), which is a faith based organisation, focusing on social, cultural, educational and developmental opportunities for the tribals. In June 2014, after a protracted struggle, the state of Andhra Pradesh was divided into Seemandhra and Telangana.¹ Telangana region is the part of the erstwhile state which was under the princely rule of Nizam of Hyderabad, while Seemandhra region was part of British India, Madras Province. The region is mostly forested and rich with cultural, social and geological wealth. Yet it remained as one of the most backward regions of the state, reflecting the skewed development strategy of the post independent India. It has the rare glory of having the first peasant rebellion against landlords, led by the Communist Party of India (CPI), from 1946 to 1951, when the Government of India quelled it through operation Polo, an army operation. According to a study by Planning Commission, nine out of the ten districts in the Telangana state fall under the Backward Regions Grant Fund (BRGF)². Telangana with a population of 35 million (2011 Census) is the

¹On 2nd June 2014 Telangana emerged out of the existing state of Andhra Pradesh and became a new state of India. Due to the bifurcation of Andhra Pradesh, most of the areas under Count's operation now fall under Telangana, though a few homes do exist in Andhra, Odisha and Chhattisgarh.

²The Backward Regions Grant Fund is designed to redress regional imbalances in development. The fund provides financial resources for supplementing and converging existing developmental inflows into 250 identified districts, so as to: bridge critical gaps in local infrastructure and other development requirements that are not being adequately met through existing inflows and empower the local government through capacity building exercises. These districts also have been selected on the basis of a higher concentration of STs and SCs and primitive tribes.

12th most populous state of India. About 39% (by 2011) of the state population is Urban. The literacy rate of the State is 66.46 per cent (72.99 per cent in India) and that in the rural and urban areas are 57.25 per cent and 81.08 percent respectively. It is higher for males (74.95 per cent) than females (57.92). In 2013-14, the dropout rates from class's I-V, I-VII, and I-X are 22.32 per cent, 32.56 per cent and 38.21 per cent respectively.³

The Scheduled Castes and Scheduled Tribes account respectively for 15.4% and 9.3% (2011 census) of the total population in the state.⁴ The target group of COUNT is the tribal community who are living in geographically inaccessible areas. Count provides homes for poor and orphan children in a locality accessible to school. These homes are under supervision of House parents, where all their educational, health and other needs are taken care of without any expense to the parents. Apart from these activities Count works for access to services for remote communities, entitlements and facilitating skill development of these communities for better livelihood.

Poverty

Unlike the Coastal Andhra, the Telangana region receives less rainfall and is hardly irrigated. Most of the agriculture is rain fed and the extraction of natural wealth goes to the development of urban centres rather than the remote areas. The majority of the tribal population live below the poverty line, without access to basic amenities.

Health and Nutrition

The tribal population mostly suffers from chronic infections, deficiency diseases and water borne diseases which are life threatening. Tuberculosis is common among them. Infant mortality is high among many tribes. Children are malnourished. According to the Social Assessment Study commissioned for National AIDS Control Programme 3 (NACP 3) the tribes are vulnerable to HIV/AIDS due to various factors, such as migration, inaccessibility to resources and lack of awareness. Further, NACP 3 State Fact Sheet has categorized all the districts of Andhra Pradesh in 'category A' (districts with high prevalence of HIV / AIDS). Existence of stigma and poor health care facilities in the community demands for more awareness on prevention and transmission of HIV/AIDS and the COUNT HIV/AIDS program thus stands relevant.

Education

Despite various efforts by the government to improve literacy, formal education has made very little impact on the tribal groups. This was primarily due to lack of qualified teachers, teacher absenteeism, poor infrastructure, poor quality of education, inaccessibility and scattered habitations, the need for the children to work for a living and distant schools.

The government has made relevant policies to develop the tribal communities. But accessing these entitlements and delivery of services are the need of the hour. This governance deficit could only be bridged through dedicated and focused non-governmental organisations who concentrate on the vulnerable population. Another crucial hindrance to the development of the region is the existence of Maoist groups who have looked at any governmental attempts to intervene in the region with suspicion. The operations of COUNT focus on empowering the tribal groups, as earlier and until the recent past, who were unable to access social benefits from government schemes they are entitled to. However, now in most areas the tribal groups are able to assert their entitlements. In case of the remotely located tribal groups, most of whom have been declared as Particularly Vulnerable Tribal Groups (PVTGs) by the government, they hardly have any access to schemes and programmes run for their benefit. COUNT operates amongst such groups and directly takes care of their children's education, nutrition, health care etc. These activities in themselves have become a pathway to

³ Source: <http://www.telangana.gov.in/Other%20Docs/Socio-Economic-outlook-2014.pdf>.

⁴ <http://www.telangana.gov.in/Other%20Docs/Socio-Economic-outlook-2014.pdf>

organise these communities in learning about their rights to safe drinking water, inoculation, maternal health care, MGNREGA etc. These groups rely on the COUNT contact persons who disseminate information and help them fill in forms etc.

2.3 Contracting details

When did cooperation with this partner start: 1991

What is the MFS II contracting period: 1 January 2011-31 December 2015

Did cooperation with this partner end? No.

If yes, when did it finish? N/A

What is the reason for ending the cooperation with this partner: N/A

If not, is there an expected end date for the collaboration? The phase-out of the financial support of Woord en Daad to COUNT will be completed by 2020. Until then, Woord en Daad will continue to support COUNT on the basis of yearly contracts following the Indian fiscal year: starting on the first of April and ending on the 31st of March.

2.4 Background to the Southern Partner Organisation

History

Christian Outreach for Uplifting New Tribes (COUNT) is a faith based NGO. It works mostly with tribals and the socially and economically downtrodden people groups. It was founded by Rev. John Gollapalli in 1978 with a vision to reach out to the unreached, backward and underprivileged tribal communities of India to uplift and bring development among them by providing child care, medical attention, education, economic opportunities, health care awareness etc. However, the concern to uplift these poorest of the poor people goes back to the early sixties when the social, economic and educational situation was much different from what it is now. These groups were backward, suffered from malnutrition, lived under the burden of superstitions and fear of the spirits they worshipped. COUNT realised the need to uplift these people and began its work in the tribal regions of Andhra Pradesh, and Madhya Pradesh (now Chhattisgarh) with the Koya, Gondu, Yerukala and Lambada tribes. COUNT began its development work through its church ministry of Agape Fellowship which is the sister organization of COUNT. It began with adopting one child from the Yerukala tribe and was cared in the founder's home. Within a short span of one year another 12 children were added to the first agape home (presently called "The Children Homes") (Source: Count Programs- updated version 11-12-13). The children were cared by providing food, shelter, medical care, clothing and education. To support his ministry the Founder began to mobilize funds by sharing his concerns with friends and relatives. The initial activities of the organisation were under an un-registered society called "Christ for Indian Tribes" and in 1978 it was registered as a society under the name "Christian Outreach for Uplifting New Tribes (COUNT)". In the same year, the Founder was introduced to a Dutch Businessman named Jacob van Rijswijk (JvR) who gave him INR 80,000 to build a Church building for a congregation which he was pastoring in Lallaguda, Secunderabad.

Since inception the strategy of the Founder was to make COUNT self-supportive by raising their own income through self-help projects. The strategy was further strengthened when COUNT got financial support from Jacob van Rijswijk for buying agricultural land at Chengicherla, Hyderabad in between 1978 to 1980. Meanwhile, local support increased as hundreds of well-wishers joined COUNT's ministries. Individuals, families and churches started supporting the mission of COUNT. Thus, the number of children and staff increased. Gradually various developmental projects were added such as education/sponsorship, higher education, vocational training, basic needs and medical care.

In 1982, the vocational training for young tribal youths who never went to school or were dropouts was introduced so that through skills training, (self) employment opportunities and through positive values and attitudes building their self-esteem, leading to sustainable income and a better position in

the labour market. The Vocational training centre (VTC) which is also called Antonia Vocational Training Institute (AVTI) offered vocational trainings and skills such as carpentry, tailoring, electrical Training, automobile repairing and most recently (2014) printing (outside the Agape Centre). After the completion of these courses, most candidates are also encouraged to appear in Andhra Pradesh government accredited SETWIN⁵ exam which gives validation and accreditation to their vocational training degree. Since 2013 COUNT transferred/outsourced the responsibility of getting job placements for the trained students under the MFS II funded TVET/JBS program to Word and Deed India, as they have more staff and hence more expertise in the field. Such an accreditation makes it easier for the participants and youth who undergo the COUNT training to get jobs. There was also focus on agriculture based livelihoods, such as paddy, fruits, vegetables, flowers, poultry and a dairy farm. Since 2013 planting tamarind, drumstick and hybrid coconut saplings were also added to the agriculture based livelihood. The (edible) yield from the self-help projects is used for children in the Agape Hostels and the rest is sold either to the staff or to people in COUNT's networks.

On 20th April 1983, Theeba and Rev. John's third child died of measles. They decided to make April 20 as a day of rededication and turned their attention afresh towards the orphan tribal children. In 1984, with 107 children, they moved to the village Chengicherla, 15 km away from Hyderabad. They lived there and cleared the bushes and put up thatched huts for their housing. It took six years before they had electricity. Due to distance from the city, the necessity demanded to start their own school called St. John's High school at Chengicherla village. It offers education up to 10th grade, in both English and Telugu medium of instruction and has Andhra Pradesh government recognition. COUNT has another school name St. Zechariah's High School at Jala, Nalgonda district, where there is an Agape Home and 315 children from the surrounding villages attend the school as day scholars with the support of a mid-day meal. This is an English medium school and is also recognised by the Andhra Pradesh government. The Christian values and principles are eminent and upheld by all the educational institutes of COUNT. In 1984, Jimmy Memorial Home took 25 orphan children from COUNT.

In 1988, COUNT received its first foreign contribution for children from Missionary World Service and Evangelism (MWSE). The fund flow was mostly irregular, once in four or six months. They provided support for 80-90 children, but by this time they had nearly 200 children. Yet, due to change in leadership, MWSE stopped funding in 2006.

In 1991 Woord en Daad started funding the first Agape Children Home for 30 girls. The most needy tribal children after being selected are placed in the Agape Homes (at present The Children Home). These tribal children are chosen from the orphan's first, semi orphans secondly and from the poorest of the poor thirdly. A committed personnel or a family called House Parents (Wardens) is specially trained for to look after these tribal children. These Agape children are sent to schools and are given every possible care, such as free boarding, lodging, clothing, medical care and spiritual nurture, under the guidance and supervision of the House Parents. There are two types of Agape Homes: one is Central Agape Home which is a cluster of homes at Agape centre at Chengicherla. The other one Satellite Homes which are homes in various strategic areas covering a group of tribal areas to provide "Agape Home" facilities to the needy children around that area. Some of the children attend the agape schools as in central home in Secunderabad and Jala while others go to the nearby government schools. Every Agape Children Home has about 25-30 children. During baseline there were nineteen such Children Homes in Andhra Pradesh with 970 children supported by Woord en Daad. At present there are eighteen children homes with 604 children of whom 544 children are supported by Woord en Daad and since 2014 another 60 children are supported by Free Methodist Churches (FMC), USA.

In 1994, the activities of the organization were divided between COUNT, the social and educational unit and Agape Fellowship (AF) the worship groups which developed as regular Churches. COUNT and AF are now working together as partner agencies.

In 2005-2006, due to rising incidence of HIV/AIDS, COUNT started creating awareness programs on HIV/AIDS in all the five States, in the areas where it is working. The awareness program addressed the issue of HIV/AIDS thrice a year, through three days seminars conducted by doctors, government

⁵SETWIN was established in the year 1978 by the Government of Andhra Pradesh with a view to impart training in skill development short term, need based and job oriented training programmes for the educated and unemployed youth so that they can live on to make them Self-Reliant.

officials and experts from Voluntary tests and Counselling Centres. Since 2011 COUNT's HIV program has been part of the ICCO/Prisma Health Bridge Alliance which further strengthened the programme.

In 2006, MWSE stopped funding and COUNT had to sell 18 acres of land in order to be sustainable. The funds from the sale were used for setting up colleges providing MBA, MCA and B.Ed. courses. Two new colleges have been set-up: (a) a teachers' training college and, (b) a Master's programme in Business Administration and Master in Computer Application. These colleges are registered in the name of St. John's Educational Trust (SJET) a sister organisation of COUNT. Both programmes have been initiated by the church and income raised from these colleges will mostly benefit the church/mission and their related activities mostly in the area of social and developmental issues. The set up was financed with a loan from the bank [Source: Report Visit India May 2013.1st].

Over the decades, COUNT has grown from 4 staff in 1978 to 50 during baseline and in 2014 there is 70 staff on the pay roll of COUNT. The budget went from under 1,000 EUR in 1978 to more than 400,000 EUR in 2012 and in 2013 it is more than 500,000 EUR.

COUNT is presently working with 67(new tribe Porja is added) tribes and scheduled caste groups in six states of India such as Telangana, Andhra Pradesh, Orissa, Chhattisgarh, Maharashtra and Gujarat. COUNT has had a sound and sustained financial relationship with Woord en Daad (W&D) for over a decade and W&D continues to be one of the major donor partners of COUNT. Almost 80% of the total programme funding for COUNT activities has been mobilized through Woord en Daad support. Since 2013-14 COUNT has mobilised new funders like Free Methodist Churches (FMC) and Word and Deed Canada. The phase out plan of Woord en Daad (W&D) began in the year 2010 June and it is being implemented since 2012. According to this plan W&D would gradually decrease 10% in budget and will stop funding COUNT after 2020. Over the period COUNT has been trying to develop and implement plans to become more self-sufficient and not be completely dependent on W&D. W&D continue to support in the capacity building of COUNT through trainings.

Vision

COUNT is a holistic ministry uplifting the underprivileged, the rural, tribal and slum dwellers – educationally, economically, socially and spiritually.

Mission

In Christ-like spirit, sharing Agape love, building individuals and developing new societies. Motto: In three words – love, wisdom and growth – expresses the main objective of the organization.

Strategies

[Source: Overview WD NL-India sustainability strategies-COUNT]

COUNT runs various developmental programmes such as the education programme, HIV/AIDS awareness programme and vocational training programme for its target. For the education programme children identified from poor and vulnerable families with the help of Agape Fellowship, its sister concern, are cared for in the agape homes by a committed family called house parents, and the children are provided access to free education, boarding, lodging and medical care. They are educated in either private, government or the two schools owned by COUNT at Secunderabad and Jala, in Nalgonda district. The HIV/AIDS awareness is mainstreamed into the education program. The program aims to develop the child holistically catering to their spiritual, social, physical, and academic needs. The program runs through primary, secondary, high school and college education, focusing on developing the community and providing a decent settlement to the target groups through education. COUNT has also integrated the school dropouts and vulnerable youth from these areas into its technical and vocational education training program(TVET program). Young men and women are encouraged to acquire vocational skills and are guided to seek employment and earn a sustainable income after the training. COUNT provided training to students in electrical, tailoring, printing and automobile courses. The TVET program has also enrolled its students in the SETWIN institute which is government institute that conducts exams for the students and certifies them and adds value for job placements.

In addition to the programs COUNT has developed agricultural projects and dairy farming, by growing and selling crops such as rice, vegetables, guava, lemon, mango, milk, Ghee, etc. with an aim of earning some income in order to be self-sustaining.

3 Methodological approach and reflection

3.1 Overall methodological approach and reflection

This chapter describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

Note: this methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report A detailed overview of the approach is described in appendix 1.

The first (changes in organisational capacity) and the fourth evaluation question are addressed together through:

- **Changes in the 5C indicators since the baseline:** standard indicators have been agreed upon for each of the five capabilities of the five capabilities framework (see appendix 2) and changes between the baseline, and the endline situation have been described. For data collection a mix of data collection methods has been used, including self-assessments by SPO staff; interviews with SPO staff and externals; document review; observation. For data analysis, the Nvivo software program for qualitative data analysis has been used. Final descriptions per indicator and per capability with corresponding scores have been provided.
- **Key organisational capacity changes – 'general causal map':** during the endline workshop a brainstorm has been facilitated to generate the key organisational capacity changes as perceived by the SPO since the baseline, with related underlying causes. For this purpose, a visual as well as a narrative causal map have been described.

In terms of the attribution question (2 and 4), '**process tracing**' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to

focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

At the end of this appendix a brief methodological reflection is provided.

3.2 Assessing changes in organisational capacity and reasons for change - evaluation question 1 and 4

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?** And the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This is explained below. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

The evaluators considered it important to also note down a consolidated SPO story and this would also provide more information about what the SPO considered to be important in terms of organisational capacity changes since the baseline and how they perceived these key changes to have come about. Whilst this information has not been validated with sources other than SPO staff, it was considered important to understand how the SPOs has perceived changes in the organisation since the baseline.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information is provided for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the next session on the evaluation question on attribution, as described below and in the appendix 1.

How information was collected and analysed for addressing evaluation question 1 and 4, in terms of description of changes in indicators per capability as well as in terms of the general causal map, based on key organisational capacity changes as perceived by the SPO staff, is further described below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012⁶.

⁶ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 4) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 5) **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Please see appendix 1 for a description of the detailed process and steps.

3.3 Attributing changes in organisational capacity - evaluation question 2 and 4

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*** and the fourth evaluation question: ***“What factors explain the findings drawn from the questions above?”***

In terms of the attribution question (2), ‘process tracing’ is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Below, the selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

3.3.1 Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

For the detailed results of this selection, in the four countries that CDI is involved in, please see appendix 1. The following SPOs were selected for process tracing:

Ethiopia: AMREF, ECFA, FSCE, HUNDEE (4/9)

India: BVHA, COUNT, FFID, SMILE, VTRC (5/10)

Indonesia: ASB, ECPAT, PtPPMA, YPI, YRBI (5/12)

Liberia: BSC, RHRAP (2/5).

3.3.2 Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ‘ general endline workshop. This workshop was carried out after the initial endline workshop and the interviews

during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained. More information can be found in Appendix 1.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

3.3.3 Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team. These can also be found in appendix 1.

Use of the 5 core capabilities framework and qualitative approach: this has proven to be a very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be a perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in

the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
 - Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
 - Difficulty of assessing changes in knowledge and behaviour: training questionnaire has been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh,

Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

4 Results

4.1 MFS II supported capacity development interventions

Below an overview of the different MFS II supported capacity development interventions of COUNT that have taken place since 2011 are described. The information is based on the information provided by Woord en Daad.

Table 1

Information about MFS II supported capacity development interventions since baseline

Title of the MFS II supported capacity development intervention	Objectives	Activities	Timing and duration	Budget
TVET Quality Score Assessment and Phase out Strategy facilitated by Cees Van Breugel, Programme Manager TVET/JBS of Woord en Daad	To ensure continuation of this programme after phasing out of Woord en Daad and assessment was required by Woord en Daad to know the progress in this programme	Application of scorecard assessment stimulated a systematic review of the TVET programme; critical facilitation by W&D staff later led to the learning being turned into an action plan/strategy was developed to continue working: includes fundraising locally and nationally, involve corporate sector (fund students and employ them when graduating)	8 March 2013	Staff time and travel expenses paid from Strengthening Partner Network (SPN)-budget, estimation: € 2500
External evaluation of the HIV/Aids project of COUNT by ASK	It follows the evaluation policy of Woord en Daad which stipulates that all programmes are evaluated once every 4-5 years to provide insight in effects of this programme.	Joint external midterm evaluation of two partners of Woord en Daad: COUNT and Word and Deed India by the Delhi based organisation ASK ASK finalised the scope and process of evaluation together with COUNT, visited team and community members in the field to gather information, facilitated a final de-briefing to share collected data and findings to make decisions to strengthen the project, draft report was shared with COUNT for feedback. Evaluation methods included: Desk review documents, Focused Group Discussions, Semi-structured interviews and SWOT Analysis	24 June - 2 July 2013	€ 3.600 (for COUNT only)

Outcome studies conducted on Quality of Education by Woord en Daad, with the assistance of Help A Child of India	to measure the progress of the programme for a number of outcome indicators and also to see whether the alliance (with Red een Kind and Woord en Daad) worked well.	Help a Child India (HACI) is a partner of Red een Kind (an alliance partner of Woord en Daad) that was hired to support the outcome studies on quality of education in the education programme of COUNT. The consultants visited two schools in the education programme of COUNT. Results and the proposed action plan were shared and discussed with COUNT project officers.	26-28 October 2013	€ 3.000
Sustainability Strategy workshop facilitated by Leen Stok and Samuel Nirmal	For COUNT to continue after phase-out of Woord en Daad in 2020.	The organisational capacity of COUNT was reviewed, cross-section of the staff was present (15-20 people). A written strategic plan document was the result of objectively looking at goals, constraints, options and the way forward.	29-30May 2013	€ 3.500
5C workshop, facilitated by Samuel Nirmal, Regional Coordinator.	Requirement of Woord en Daad: done for all partners as part of its commitment to the Dutch government	COUNT assessed their own capacity: first talk about strengths, weaknesses, experiences, challenges areas for improvement and contributing factors to this in small groups, then the 5c concept was introduced. Cross section of staff was present from director to driver (21 people). COUNT reviewed their skill gaps and capacity building possibilities.	2-3 December 2013	€ 500

4.2 Changes in capacity and reasons for change - evaluation question 1 and 4

Below you can find a description of the changes in each of the five core capabilities. This information is based on the analysis of the information per each of the indicators. This detailed information for each of the indicators describes the current situation, and how and why it has changed since the baseline. See also Appendix 3.

4.2.1 Changes in the five core capabilities

Capability to act and commit

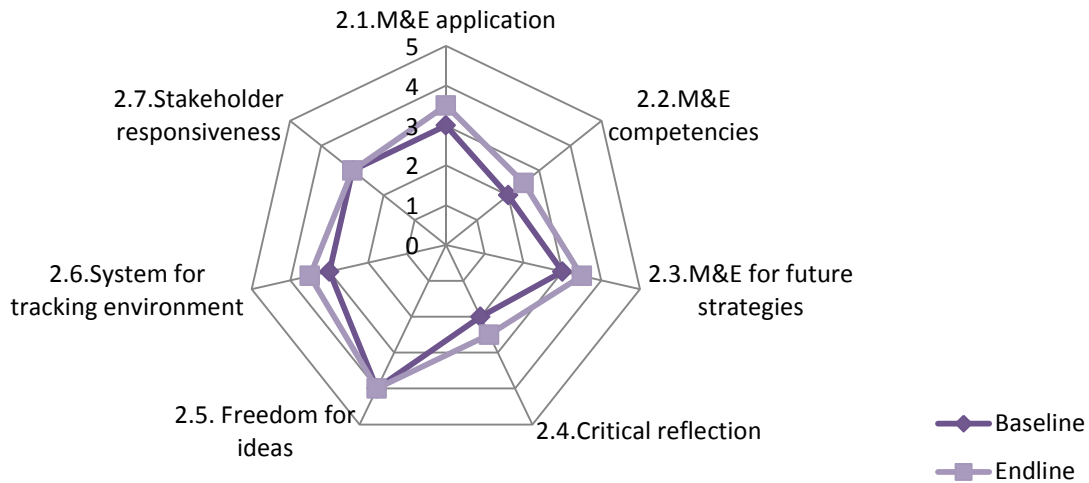

The phasing-out of funding by Woord en Daad (W&D) by 2020 has led to a variety of changes in COUNT's capability to act and commit. First of all, the leader has become more pragmatic and proactive in terms of strengthening COUNT's resource base: he is approaching new donors, strengthening networks and takes initiative to develop new income generating projects. Board members are now more involved in helping the leader make important strategic directions. Secondly, the phasing-out plan has led to more articulated strategies directed towards the sustainability of the different programmes of COUNT after W&D funding ends. Thirdly, there has been a slight improvement in ensuring funding from multiple sources. COUNT started receiving funds from the Free Methodist Church, USA, through the Director's and Founder Member's contacts with this church. COUNT also continues to receive funding from Word and Deed Canada and has started to focus more on generating income from self-help projects. There are still no written funding procedures in place and most of it is in the hands of senior management.

Staff turnover remains low as staff of COUNT is still dedicated and loyal to the organisation, whilst monetary incentives have increased (annual increments, recognition of hard working staff, mobile phones, and medical allowances). Furthermore, some of the gaps (e.g. language barrier) in training opportunities have been addressed. For most positions capable and skilled staff is available. However, there remains to be a slight gap in communication skills in English and technological skills needed to train the students. The organisational structure of COUNT has not changed, except for the fact that the leader has formed a management core group to assist him in planning and decision making in absence of mentoring support from W&D. There is now support from the regional coordinator, appointed by W&D, to develop annual plans with a strategic focus on sustainability. Also the internal reporting system has improved which leads to better alignment between day-to-day operations and strategic plans.

Score baseline: 3

Score endline: 3.5 (slight improvement)

Capability to adapt and self-renew

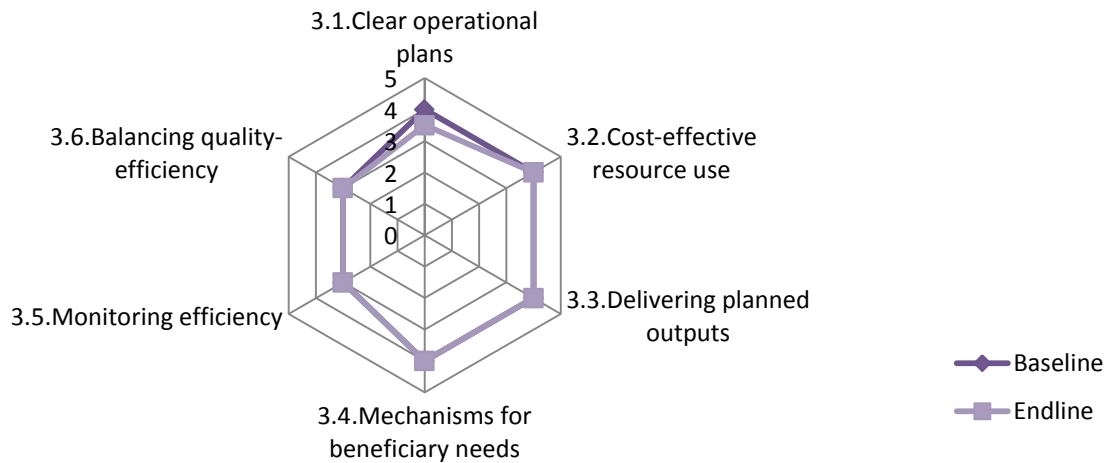

Though there has been some learning on collecting information on output and outcome level from being involved in outcome studies for the Education and TVET programme, the monitoring and evaluation of COUNT remains to be focussed on the activity level. Intentions to hire a PMEL expert jointly with Word and Deed India did not materialise. COUNT now receives methodological guidance from the regional coordinator, appointed by W&D, and is still willing to collaborate with local consultants. While COUNT has discussions about results of evaluations to inform future phases of the programme and receives support in this from the regional coordinator, lack of proper monitoring mechanisms and community engagement at the field level lead to gaps in understanding of the actual accomplishments of the programme and thus scope for M&E informing future strategies is limited. COUNT tries to be more open to its stakeholders for example through involving parents and teachers in quality assessment of the education programme. However, an evaluation of its health programme found that community participation has been found to be low in the planning and monitoring of the programme.

Though staff has access to management at all time to informally discuss ideas, problems and be heard, there are now also regular department-wise staff meetings which are documented formally to inform the Director. The changing donor environment has triggered a need to keep abreast about the latest developments in the society, at state level and in the international community, which COUNT does through its networks and through its main funder: W&D.

Score baseline: 3

Score endline: 3.5 (slight improvement)

Capability to deliver on development objectives

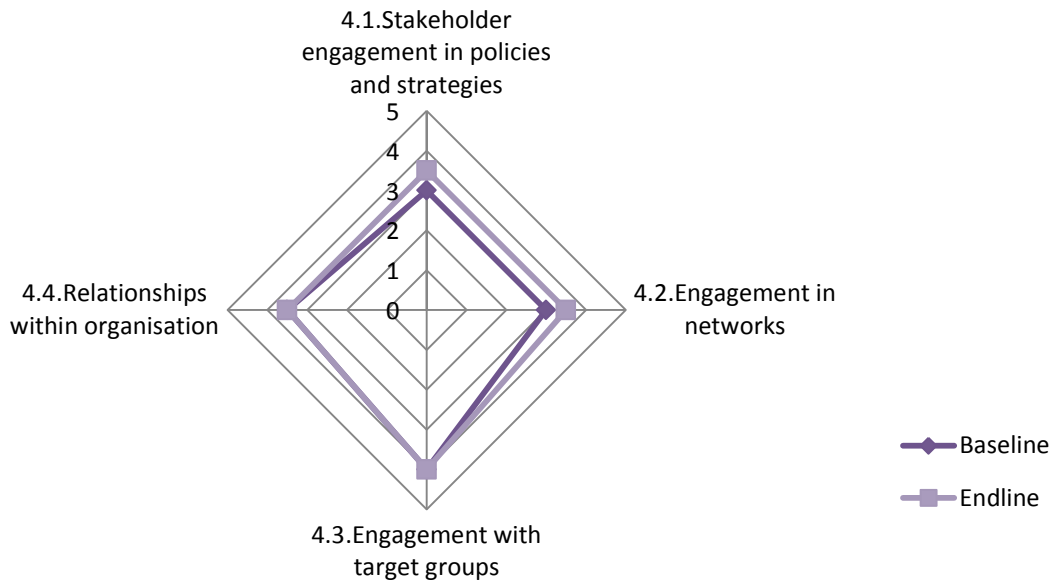

COUNT still has operational plans per project. All the activity level, plans are worked out with the staff so that they fully know what needs to be done. However, in the Basic Needs programme there exists some confusion among volunteer Change Agents about their responsibilities as there is no action plan developed for them. Staff still has access to the technological and material resources they need to carry out their work. Resources are used cost effectively, for example by using technology to cut down on travel and postal expenses. Sometimes inflation leads to minor overspending. All programmes now have a coordinator that is responsible for monitoring and reporting back to the project manager. Generally planned outputs are being delivered and COUNT works on implementing recommendations after the score card outcome studies for the TVET and Education programmes. Programme staff study progress report results to check whether their work benefits the beneficiaries. Quality checks that link input to outputs are not carried out in a structured way nor is there a formal system of balancing quality with efficiency, but COUNT is a learning organisation that uses recommendations from outcome studies in their strategic annual plans.

There continues to be a strong link between COUNT and its beneficiaries because of the Church and programmes seem to be relevant for the community COUNT serves. The organisation is working on formalising feedback from students and parents through satisfaction forms.

Score baseline: 3.5

Score endline: 3.5 (no change)

Capability to relate

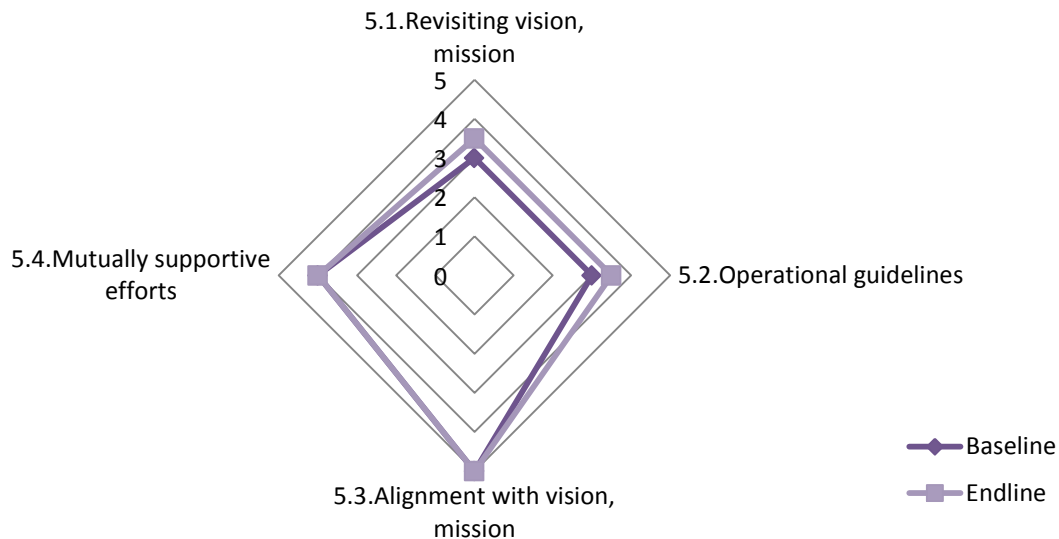

Since the baseline COUNT has focussed more on strengthening its networks. At the community level COUNT is improving stakeholder engagement through the appointment of nine regional coordinators to address the needs of the people in the interior tribal regions. For any new project inputs are taken from stakeholders like parents, local leaders and elders. On the local level COUNT engages with the Integrated Tribal Development Agency (ITDA) and looks at partners that adopt good policies and practices. The organisation is engaged in more national and international networks including Blossoms Network and the Health Bridge Alliance. COUNT received a quality award from the VIVA network and is reaching out to a government institute for the benefit of the students in the TVET programme. While in general the organisation continues to stay in close contact with its target group, mainly through the church, sometimes geographic spread and limited budget make regular visits difficult. High level of dependence on Change Agents in the Basic Needs programme lead to poor follow up by COUNT.

While COUNT offers an enabling environment to its staff in practice and also practices a horizontal working culture, there is predominantly a vertical top-down culture. The only change that has occurred since baseline is that the minutes of the regular staff meetings are being documented now and there is a follow up on those meetings.

Score baseline: 3

Score endline: 3.25 (very slight improvement)

Capability to achieve coherence

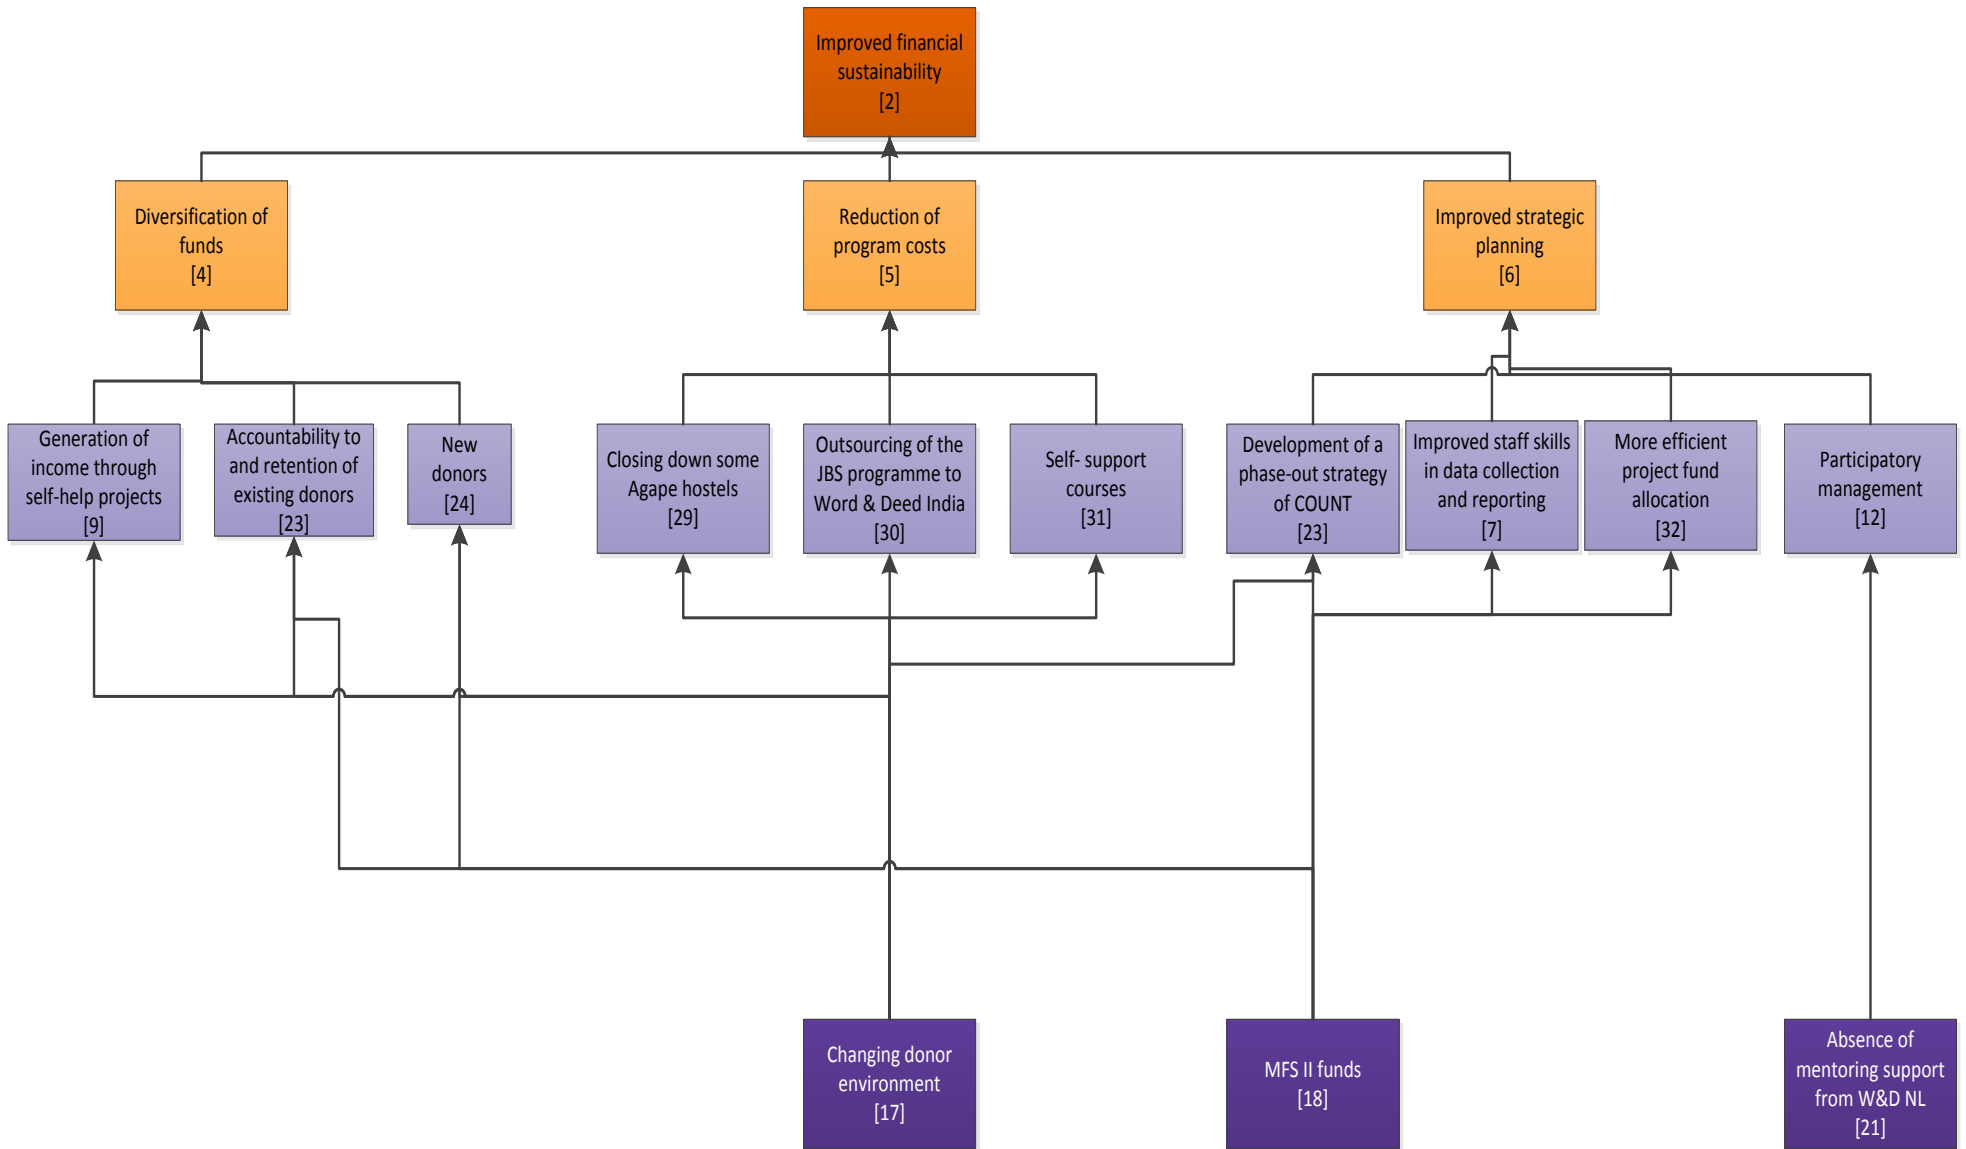

COUNT has organised a vision casting seminar for staff, pastors and leaders, where they revisited their vision. While the vision and mission of COUNT continue to be the same, a new strategy for the period 2014-2020 was developed in face of the phase-out plan of W&D NL with the help of a W&D supported strategy development workshop. A cross section of the staff was involved in this process. Since the baseline a child protection policy has been introduced in COUNT which all staff that work directly or indirectly with children is made aware of. All operations of COUNT continue to be completely aligned with its vision and mission. All the programmes and activities within the organisation are well linked and mutually supportive.

Score baseline: 3.5

Score endline: 3.75 (very slight improvement)

4.2.2 General changes in the organisational capacity of the SPO

During the endline workshop at the SPO, a discussion was held around what were the main changes in organisational capacity since the baseline and why these changes have taken place. The discussion was visualised in a general causal map as can be seen below. The narrative for the general causal map is also described below. It gives a more general picture of what was seen as important changes in the organisation since the baseline, and how these changes have come about, and that tells the more general story about the organisational changes in the SPO. The evaluators considered it important to also note down the SPO's story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provide by the evaluation team.

The evaluation team carried out an end line assessment at COUNT from 2 to 4 June 2014. During this workshop, the team made a recap of key features of the organisation in the baseline in 2012 (such as vision, mission, strategies, clients, partnerships). This was the basis for discussing changes that had happened to the organisation since the baseline. The three main changes that happened in the organisation since the baseline were:

- Diversification of funds [4];
- Reduction of program costs [5];
- Improved strategic planning [6]

These three changes are expected to lead to COUNT being more financially sustainable as an organisation [2]. They happened to coincide with the outcome areas that were chosen for process tracing, so as to get detailed information on how these changes in organisational capacity came about. Therefore the general causal map overlaps strongly with the causal maps developed for each of these outcome areas/organisational capacity changes to be analysed to during the process tracing. All the details about these changes in organisational capacity as well as the underlying factors that influenced these changes are described in the narrative and visual below. These three key organisational capacity changes will be discussed in more detail in the related detailed causal maps, which were a result of process tracing.

The three main organisational capacity changes are described in the light orange boxes and the key expected consequence (improved financial sustainability of COUNT) is noted above these cards in dark orange. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the organisation are listed at the bottom in dark purple. The narrative below describes per key organisational capacity change, the contributing factors as described from the top down. The numbers in the visual correspond with the numbers in the narrative.

1. Diversification of funds [4]

The phase out plan of W&D began in June 2010, and since then COUNT has been trying to develop and implement plans to become more self-sufficient and not be completely dependent on W&D, since W&D will stop funding COUNT after 2020. Over the last two years, COUNT has diversified its funding sources by:

- *Generation of income through self-help projects [9]:* The Founders of COUNT have focused on being self-reliant ever since its inception and there have been consistent efforts by them towards raising their own income through self-help projects. In the last two years a variety of self-help projects was started to increase COUNT's income. This includes e.g. expanding the area of paddy cultivation.
- *Accountability to and retention of existing donors [23]:* This was because staff improved their skills to report and communicate to donors. Staff improved their skills in this area because of trainings, methodological guidance and experience gained through MFS II evaluations.
- *New donors were attracted [24]:* The fact that COUNT is now attracting funds from other funders like Free Methodist Churches (FMC) and Word and Deed Canada, is a consequence of COUNT strengthening its networks.

2. Reduction of programme costs [5]

- *Closing down some Agape hostels [29]*: Closing down some of the smaller Agape hostels and focusing only on Agape hostels in their headquarters in Chengicherla.
- *Outsourcing of the JBS programme to Word & Deed India [30]*: Another way of reducing programme costs has been the outsourcing of the JBS part of the TVET programme to Word & Deed India in 2013.
- *Self-support courses [31]*: In the tribal areas, there is a pilot programme in which self-support courses are run by graduate students and the trainees are required to pay a small fee to sustain this course. The aim is to reduce the expenses of board and lodging which would have been there had the students been trained at the headquarters.

3. Improved strategic planning [6]

Improved strategic planning was the third key change in the organisation, which is expected to contribute to financial sustainability of COUNT. Improved strategic planning is important to contribute to financial sustainability of the organisation because COUNT developed the strategies to reduce costs and generate income. There are four main reasons why strategic planning has improved:

- *Development of a phase-out strategy of COUNT [23]*: COUNT is aware that W&D will phase out their funding of the TVET and education programme of COUNT in 2020, and therefore, since 2010, together they have been working on the development of a phase-out strategy. COUNT has been trying to develop and implement plans to become more self-sufficient and not be completely dependent on W&D. The phase-out strategies were thought out for different programmes which further helped in the strategic planning.
- *Improved staff skills in data collection and reporting [7]*: This improved skill was mainly a result of W&D's methodological guidance, trainings on reporting and staff's involvement in MFS II funded evaluations.
- *More efficient project fund allocation [32]*: The finance manager's financial skills improved as a result of the external evaluation of the HIV/AIDS program by ASK (funded by W&D) in June-July 2013. He was able to plan better and allocate funds more efficiently towards the project.
- *Participatory management [12]*: In 2013, the leader of COUNT formed a core group, comprising of experienced members of the staff for participatory planning and decision making.

The main underlying causes for these three key organisational changes were:

- *Changing donor environment [17]* which led to a need to diversify funds which influenced all the factors under reduction of programme costs [5], diversification of funds [4], and also led to the development of a phase out strategy for COUNT [23].
- *MFS II funds [18]* have had an effect on: The development of a phase-out strategy of COUNT [23] (through funding some workshops on it and funding the regional coordinator), more efficient project fund allocation through involvement of the financial manager in an evaluation [32], improved staff skills in data collection and reporting through trainings and guidance [7], the accountability and retention of existing donors [23] and attracting new donors [24] through trainings on communicating to donors.
- *Absence of monitoring support by Woord en Daad [21]* led to the director of COUNT adopting a more participatory form of management [12].

4.3 Attributing changes in organisational capacity - evaluation question 2 and 4

Note: for each country about 50% of the SPOs has been chosen to be involved in process tracing, which is the main approach chosen to address evaluation question 2. For more information please also see chapter 3 on methodological approach. For each of these SPOs the focus has been on the capability to act and commit and the capability to adapt and self-renew, since these were the most commonly addressed capabilities when planning MFS II supported capacity development interventions for the SPO.

For each of the MFS II supported capacity development interventions -under these two capabilities- an organisational capacity change has been identified, describing a particular change in terms of organisational capacity of the SPO. Process tracing has been carried out for each organisational capacity, change. The following outcome areas have been identified under the capability to act and commit and the capability to adapt and self-renew. Also the MFS II capacity development interventions that could possibly be linked to these outcome areas are described in the table below.

Table 2

Information on selected capabilities, outcome areas and MFS II supported capacity development interventions since the baseline

Capability	Organisational capacity change	MFS II supported capacity development intervention
Capability to act and commit	Diversification of funds and Reduction of Programme costs	5c workshop December 2013; External Evaluation HIV/Aids programme by ASK June-July 2013
Capability to adapt and self-renew	Improved Strategic Planning	External Evaluation HIV/Aids programme by ASK June-July 2013; Outcome study on Quality of Education October 2013; TVET Score Card Assessment March 2013; Phase-out strategy workshop March 2013; Sustainability strategy workshop May 2013;

The next sections will describe the results of process tracing for each of the outcome areas, and will describe to what extent these outcome areas have taken place as a result of MFS II supported capacity development interventions and/or other related factors and actors.

4.3.1 Diversification of funds and Reduction of Programme costs

This is a summary of the final causal map of the key change: improved financial sustainability. For a detailed visual to which the numbers refer and narrative with sources please see Appendix 5.

COUNT has been funded by W&D since 1991. The phase out plan of W&D began in June 2010, and since then COUNT has been trying to develop and implement plans to become more self-sufficient and not be completely dependent on W&D, since W&D will stop funding COUNT after 2020. **Over the last two years, COUNT has diversified its funding sources [4] by:**

- *Generation of income through self-help projects [9]:* The Founders of COUNT have focused on being self-reliant ever since its inception and there have been consistent efforts by them towards raising their own income through self-help projects. In the period from 1978 to 1980, the Founder bought agricultural land at Chengicherla, Hyderabad with the financial support from a Dutch Businessman named Jacob van Rijswijk to make COUNT self-supportive.
- *Accountability to and retention of existing donors [23]:* This was because staff improved their skills to report and communicate to donors. Staff improved their skills in this area because of trainings methodological guidance and experience gained through MFS II evaluations. These are further explained below:

- Methodological guidance [27] received by COUNT from Woord en Daad and the Regional Coordinator [14]. Both funded by MFS II [22]. Methodological guidance was provided on the data collection process for each outcome indicator.
- Experience gained through MFS II evaluations [19]: ASK (Association for Stimulating Know How, based in Gurgaon, India) evaluated COUNT HIV / AIDS awareness program that addresses the needs of the tribal community in Andhra Pradesh. The finance manager's financial skills improved as a result of this evaluation. He was able to plan better and allocate funds more efficiently towards the project. Help a child of India (funded by Woord en Daad) evaluated COUNT with an aim to measure the progress of the programs for a number of outcome indicators. The staff members learnt about teaching methodologies, to monitor the outcomes of student performance, day to day administration of the school, impact of supervision on teachers and students, to improve quality of their work and in turn bring about improvement in quality of education. These evaluations were funded by MFS II [18].
- The following capacity building activities [22] were conducted in the past two years to strengthen staff's skills for communicating with donors [10], all these trainings were funded by MFS II [18]:
 - Basic spoken English training. Funded by MFS II.
 - Participation in the Sponsorship programme conference in May 2013 in the Netherlands by Woord en Daad. This conference was organised by COUNT and funded by Woord en Daad, under MFS II.
 - Training of the house parents by adoption/sponsorship department to assist the children in writing innovative greeting letters, providing interesting information and taking pictures for a regular update of the children to the donors and for improving accountability. Funded by MFS II.
 - Training on WDCAP programme in October, 2013 by Woord en Daad. WDCAP is a software for tracking children's information and enables COUNT to provide regular updates to the donor. This training was also funded by MFS II.
- *A third reason for diversification of funds is that new donors were attracted [24]:* The fact that COUNT is now attracting funds from other funders like Free Methodist Churches (FMC) and Word and Deed Canada, is a consequence of COUNT strengthening its networks [11].

The trainings, the income generation self-help projects and the strengthening of networks were undertaken because of an increasing need to diversify funds, coming from a changing donor environment, where Woord en Daad is phasing out its support.

COUNT is furthermore contributing to financial sustainability of the organisation by reducing programme costs [5], which is done through closing down some of the Agape hostels [29], outsourcing JBS to Word and Deed India [30] and the self-support courses [31]. These changes were also triggered by a need to diversify funds [16] because of the changing donor environment [17]. Word and Deed India is a partner of Woord en Daad NL, just like COUNT. COUNT was able to outsource the JBS part of the TVET programme to Word and Deed India because W&D NL linked them up to them [33] in the TVET programme that is funded under MFS II [18].

4.3.2 Improved Strategic Planning

This is a summary of the detailed causal map of the key organisational capacity change: improved strategic planning. For a detailed visual to which the numbers refer and narrative with sources see Appendix 4.

Improved strategic planning [4] also contributed to financial sustainability of the organisation [2] because COUNT developed the strategies to reduce costs and generate income.

There are four main reasons why strategic planning has improved: development of a phase-out strategy of COUNT [23]; improved staff skills in data collection and reporting [7]; more efficient project fund allocation [32]; and participatory management [12]. These changes are further described below.

Development of a phase-out strategy of COUNT [23]: COUNT is aware that W&D will phase out the funding the TVET and education programme of COUNT in 2020 and therefore, since 2010, together they have been working on the development of a phase-out strategy. The development of this phase-out strategy was mainly a result of:

- *The leader becoming more pragmatic in his thinking [15].* He now strategizes more in the long term and thinks about how to obtain alternative funds. The change in the leader's thinking can be explained by:
 - The overall need to plan strategically and diversify funds that arises from the changing donor environment
 - The 5c workshop in December 2013. This workshop gave COUNT another opportunity to review its strengths, weaknesses, skill gaps and capacity building opportunities. This was used in drawing up the annual plan and the budgeting activity plan for the next year. This workshop was funded by Woord en Daad under MFS II.
- *The Phase-out strategy workshop March 2013 [25]:* This workshop was funded by MFS II [18]. This workshop was organised in light of the need for diversifying funds [16] because of the changing donor environment [17], which includes the phasing out of the Woord en Daad support by 2020. This workshop influenced both the leader and the functional staff and helped them to understand the importance of making TVET as a sustainable programme of the phase-out plan.
- *Sustainability strategy workshop May 2013 [26]:* This workshop funded by MFS II [18]. The objective of the workshop was to discuss on strategies for education programme and TVET/JBS programme, in light of the need for diversifying funds [16] because of the changing donor environment [17].
- *Appointment of a Regional Coordinator [14]* to serve as a link between India partners and W&D, to help with monitoring without the need for frequent visits from Woord en Daad people and to act as an advisor and help whenever required to do so. He has also been involved in the sustainability strategy workshop and in that way is contributing to the development of the sustainability plan of COUNT [23].

The second reason for improved strategic planning for financial sustainability is based **on improved staff skills in data collection and reporting [7]**. The development of this skill was mainly a result of:

- *Methodological guidance [27]* received by COUNT from Woord en Daad (funded by MFS II [18]) and the Regional Coordinator [14].
- *Trainings on reporting [22]*
 - Basic spoken English training. Funded by MFS II [18].
 - Participation in the Sponsorship programme conference in May 2013 in the Netherlands by Woord en Daad. This conference was organised and funded by Woord en Daad, under MFS II [18].
 - Training on WDCAP programme in October, 2013 by Woord en Daad. WDCAP is a software for tracking children's information and enables COUNT to provide regular updates to the donor. This training was given by Woord en Daad and also funded by MFS II [18].
- *COUNT staff gained useful PME experiences in collecting data through MFS II funded evaluations [19].*
 - External Evaluation HIV/AIDS program by ASK June-July 2013
 - Outcome study on Quality of Education October 2013
 - TVET Score Card Assessment March 2013

The third reason for improved strategic planning is more efficient project fund allocation [32]. The finance manager's financial skills improved as a result of the external evaluation of the HIV/AIDS program by ASK in June-July 2013 [19]. He was able to plan better and allocate funds more efficiently towards the project.

The fourth reason for improved strategic planning is participatory management [12]. In 2013, the leader of COUNT formed a core group [20] comprising of experienced members of the staff for participatory planning and decision making. This core group was formed because the leader realised that in absence of mentoring support from W&D [21] he would have to look for help and guidance within COUNT.

5 Discussion and conclusion

5.1 Methodological issues

In order to get detailed information on the capacity development of the staff, self-assessment forms were being filled in by the management (CEO and Manager of Projects and Programme), Programme Staff (Coordinator of schools, Principal St. John's High School, Coordinator Homes, Teacher St. John's High School and House Parents), HR/Admin staff (Finance Manager, Co-ordinator, TVET Co-ordinator, HR, Co-ordinator-Basic Needs), and field staff (Inter State leader cum House parent Gujrat, Area Superintendent cum House parent, Area supervisor cum Principal of School). Except for one field staff (inter-state leader cum house parents Gujrat) the rest were present in the baseline workshop. The agreed questionnaire was aimed at getting information from various levels of staff without putting them in any awkward situation. The modified and nuanced repetition of questions when translated to an audience not properly exposed to the English language, created a sense of repetitiveness. Evaluators tried to resolve this, by clarifying the responses by a follow-up interview. For example the supervisor of the self-help projects and house parent was interviewed specifically related to the self-help projects and challenges facing the running of the house from the management's perspective.

After going through the self-assessment forms, the evaluators came to know that COUNT is closing down its Agape homes, resulting in the decrease of house parents and teachers and consequently the number of children served by these homes in the remote tribal areas. Taking this into account, the house parents and teachers, who were present on the first day of the workshop, were not invited for the second and third day for process tracing. The reason behind focusing on core staff members was to get detailed response in the process tracing part of the endline workshop. However, one house parent was invited for the development of the detailed causal map in the process tracing endline workshop because he held dual responsibilities as house parent and as the supervisor of self-help projects. He was also the parent who had attended the baseline workshop and the evaluators had visited his home near Vishakhapatnam to get an idea of how the Agape homes ran during the baseline in 2012.

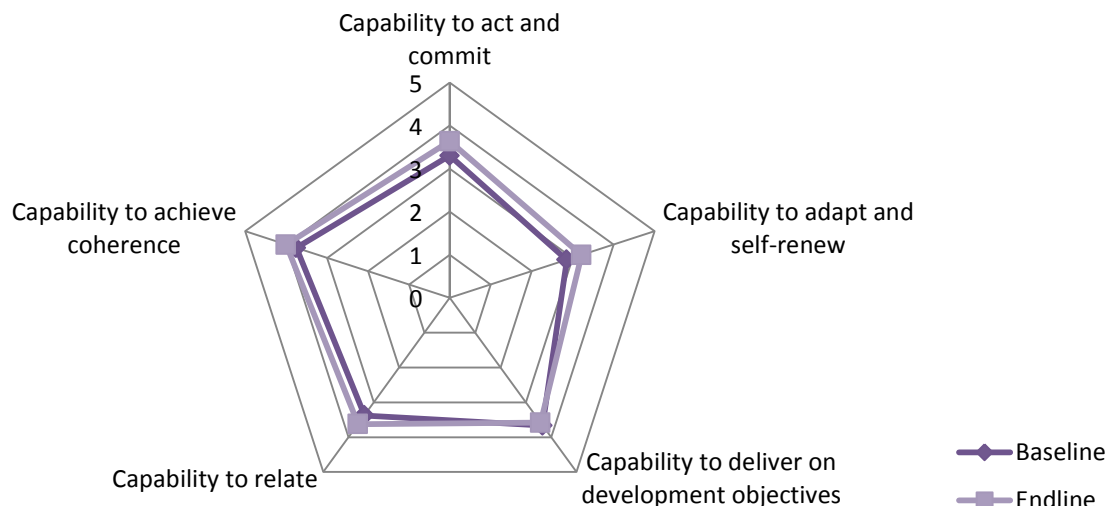

The Organisation Development Consultant was the regional coordinator who is hired by Woord en Daad to provide strategic guidance to COUNT. In order to get a free-flowing and insightful perspective of the organisation, the organisation development consultant was interviewed by the evaluators over and above the CFA interview separately. No partners were interviewed as COUNT had already requested during the baseline workshop not to name the network partners they work with. This was a conscious decision by COUNT. In the fast changing political scenario in their work area, the government policies are still evolving and they are certainly not very favourable to certain type of activities. As evaluators, it was our responsibility to respect the wishes of the organisation as long as they are fulfilling the mandate for which they received funding.

In relation to process tracing, training questionnaires were filled in for all the trainings under MFS II supported funding. However, for the staff it was sometimes difficult to recall what they learnt during a specific training as they are exposed to various training programme and exposure visits (both under MFS II programme and others). Therefore, the observed changes could be attributed to various factors beyond a specific training programme. However, the training questionnaires formed the basis of distinguishing the changes which resulted from a particular training over others. The training questionnaires provided details such as: knowledge acquired and skills developed by the staff and its impact on the organisational capacity. Training questionnaires were filled in for most of the MFS II supported trainings for COUNT such as: 1) 5c workshop facilitated by Samuel Nirmal; 2) External Evaluation of the HIV/AIDS Project; 3) Outcome studies by Woord & Daad with assistance of Help a Child of India; 4) Sustainability strategy workshop facilitated by Leen Stok and Samuel Nirmal; 5) TVET Quality Score Assessment workshop facilitated by Cees van Breugel (Woord & Daad).

5.2 Changes in organisational capacity

This section aims to provide an answer to the first and fourth evaluation questions:

1. *What are the changes in partner organisations' capacity during the 2012-2014 period?*
4. *What factors explain the findings drawn from the questions above?*

Whilst changes took place in all five core capabilities, the improvements were only minor. Below the changes in each of the capabilities are further explained, by referring to the specific indicators that changed.

Over the last two years most improvements took place in the indicators under the capability to act and commit. Due to the phasing out of Woord en Daad by 2020, the leader became more pragmatic and proactive in working on expanding COUNT's resource base. The Board members also became more involved in helping the leader to make strategic decisions and move more towards self-support. While in the baseline there was no information on how strategies were articulated, now they are based on situational analysis and the M&E findings of for example the MFS II funded outcome studies. The support from the Regional Coordinator, supported by MFS II, was new during the endline and helped COUNT in developing their strategic and operational plans. Also the outcome studies and quality assessments led to better programme implementation. COUNT staff improved their communication skills slightly and the tuition teachers became more skilled in a variety of topics including child psychology. There was a training on basic spoken English to try to bridge the communication gap as many staff don't speak English and all trainings are in English. All these trainings were funded by Woord en Daad under MFS II. The monetary incentives for staff increased in the form of e.g. annual increments, mobile phones, medical expenses covered. Regarding the funding situation, COUNT has improved slightly in diversifying its funding base through approaching new donors, having self-help projects that generate income and by asking for a small fee for the courses they offer. They also improved somewhat in their funding procedures as their communication with and showcasing their work to donors improved and they started with donor mapping.

In the capability to adapt and self-renew COUNT also improved slightly in various indicators. Their ability to collect information and reflect on these has increased due to methodological guidance they receive and being involved in several outcomes studies funded by MFS II (Woord en Daad). They are now making more use of M&E findings in their annual plans. The Regional Coordinator who was installed after the baseline assures that this is done. There are now regular departmental meetings for critical reflection and the leader has set up new networks for learning and sharing with likeminded organisations.

In terms of the capability to deliver on development objectives, there has been a minor deterioration in the area of clear operational plans. An external evaluation of COUNT's HIV/AIDS programme found that the Change Agent (field level volunteers) have no action plans to work with and that this causes confusion.

In the capability to relate, COUNT has somewhat improved. They now have nine regional coordinators in the field, compared to no regional coordinators during the baseline, and this helps to ensure that the voices of COUNT's target groups in the tribal regions are being heard and taken into account in their policies and strategies. COUNT has increased the number of networks it is active in. Since the baseline they have joined the VIVA and Blossoms network, and for their health related projects they are part of the HBA, GGM and REACH. For TVET they work with SETWIN and ITI, to mention a few.

Finally, COUNT has slightly improved in its capability to achieve coherence as a vision casting workshop funded by Woord en Daad was organised for all staff in February 2014 and strategies have been revisited and included in the phase out strategy. They also now have a child protection policy in place, which is very relevant in their line of work.

During the endline workshop some key organisational capacity changes were brought up by COUNT's staff: diversification of funds, reduction of programme costs and improved strategic planning. The evaluators considered it important to also note down the SPO's story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provided by the evaluation team. These changes happened to overlap with the key changes that were selected to process tracing. The phasing-out of funding by Woord en Daad (W&D) by 2020 has led to most of the changes in COUNT's organisational capacity. Woord en Daad had announced this to COUNT in 2010, but in 2013 they really started working together on a strategic phase out plan in which strategies were included on how to generate more income and reduce programme costs especially in the TVET and Education programmes that are supported by W&D. The MFS II funding of Woord en Daad also played an important role in all the key changes. This will further be explained below in 5.3.

5.3 Attributing changes in organisational capacity to MFS II

Attributing changes in organisational capacity development to MFS II

This section aims to provide an answer to the second and fourth evaluation questions:

2. *To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*
4. *What factors explain the findings drawn from the questions above?*

To address the question of attribution it was agreed that for all the countries in the 5C study, the focus would be on the capability to act and commit and the capability to adapt and self-renew, with a focus on MFS II supported organisational capacity development interventions that were possibly related to these capabilities. 'Process tracing' was used to get more detailed information about the changes in these capabilities that were possibly related to the specific MFS II capacity development interventions. The organisational capacity changes that were focused on were:

- Diversification of funds and reduction of programme costs;
- Improved Strategic Planning.

Diversification of funds and reduction of programme costs falls in the capability to act and commit. Improved strategic planning falls partly in the capability to act and commit and partly in the capability to adapt and self-renew. The organisational capacity change areas that were chosen are based on document review as well as discussions with the SPO and CFA. Each of these organisational capacity changes is further discussed below.

The following issues are discussed for the MFS II funded activities that are related to the above mentioned organisational capacity changes:

- a. Design: the extent to which the MFS II supported capacity development intervention was well-designed. (Key criteria: relevance to the SPO; SMART objectives);

- b. Implementation: the extent to which the MFS II supported capacity development was implemented as designed (key criteria: design, according to plans during the baseline);
- c. Reaching objectives: the extent to which the MFS II capacity development intervention reached all its objectives (key criteria: immediate and long-term objectives, as formulated during the baseline);
- d. the extent to which the observed results are attributable to the identified MFS II supported capacity development intervention (reference made to detailed causal map, based on 'process tracing').

Please note that whilst (d) addresses the evaluation question related to attribution (evaluation question 2), the other three issues (a, b and c) have been added by the synthesis team as additional reporting requirements. This was done when fieldwork for the endline process had already started, and therefore inadequate information is available on this. Then again, this wasn't the purpose of this 5c evaluation.

Diversification of funds and reduction of programme costs

The following MFS II capacity development interventions that were mentioned by Woord en Daad were linked to the key organisational capacity, change "diversification of funds and reduction of programme costs":

1. External evaluation of the HIV/Aids project of COUNT by ASK, from 24 June till 2 July 2013 (not planned during the baseline, but mentioned as a capacity development intervention by the CFA during the endline);
2. Outcome studies conducted on Quality of Education by Woord en Daad, with the assistance of Help A Child of India, from 26 till 28 October 2013 (planned during the baseline and mentioned as a capacity development intervention by the CFA during the baseline and endline);
3. 5c workshop December 2013 facilitated by the Regional Coordinator (not planned during the baseline, but details provided during the endline);
4. Methodological guidance by Woord en Daad and the Regional Coordinator (both funded by MFS II) to COUNT (not planned during the baseline, no details provided during the endline);
5. Basic spoken English training in March 2013 (not planned during the baseline and no details provided during the endline);
6. Sponsorship programme conference in May 2013 (not planned during the baseline and no details provided during the endline);
7. Training on WDCAP (a software to track children's information to give regular updates to donors) in October 2013 (not planned during the baseline and no details provided during the endline).

Below the capacity development interventions will be discussed that were either planned during the baseline or not planned during the baseline, but details on the interventions were provided during the endline. The capacity development interventions for which no objectives have been provided during baseline or endline will only be discussed when addressing the attribution question (here: methodological guidance, basic spoken English training, sponsorship programme conference and training on WDCAP).

External evaluation of the HIV/Aids project of COUNT by ASK

Design

The CFA indicated this evaluation as a capacity development intervention as the CFA envisioned that COUNT would learn from and use the results of the evaluation. This specific intervention was not planned for during the baseline by the CFA. Details about the specific design cannot be provided, since this wasn't the focus of this 5c evaluation. The immediate effect of this workshop that the CFA observed was "insight in effects of this programme." The long term effect the CFA expects is: 'improved networking relevant for the programme' as it was one of the recommendations of the evaluation to improve COUNT's network with other NGOs on topic of HIV/AIDS.

These objectives were very relevant for COUNT. During the baseline workshop they formulated three conditions that needed to be in place in order for them to become the leading organization in holistic

development of the tribal belt in India. One of these conditions was to have a strengthened M&E system. Learning from how this evaluation was done and insights into the effects of the HIV/AIDS contribute to this. The long term objective is also very relevant as COUNT formulated a similar goal for itself during the baseline “strengthened networking with like-minded organizations.”

These expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

While the CFA indicates that the terms of reference of this evaluation and an evaluation report are available for this intervention, judging whether the intervention was implemented as it was specifically designed was not the focus of this evaluation. This intervention was implemented and the evaluation took place in June-July 2013.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified. The external evaluation of the HIV/AIDS programme came up in the map and narrative on the organisational capacity change: diversification of funds and improved strategic planning. In this regard we can conclude that the experience that staff gained through this evaluation contributed to better accountability to and retention of existing donors which contributed to diversification of funds. The experience the finance manager gained during this evaluation contributed to more efficient fund allocation improved COUNT's strategic planning.

Though not the focus of this evaluation, we can conclude to some extent whether the expected immediate and long-term objectives of this intervention as formulated during the endline have been achieved. The immediate objective: “insight in effects of this programme,” has been achieved according to the CFA as the evaluation generated insight into the quality of the programme and yielded concrete and relevant recommendations for further strengthening of the programme by COUNT. COUNT has formulated a response to the recommendations that shows that all recommendations have received meaningful follow-up. The long term objective does not seem to be reached yet as COUNT will need to link with more NGOs in its HIV/AIDS programme.

Outcome studies conducted on Quality of Education by Woord en Daad, with the assistance of Help A Child of India

Design

The CFA indicated that these outcome studies can be seen as capacity development interventions as they envisioned that COUNT would learn from and use the results of the outcome studies. This intervention was planned by the CFA during the baseline. The immediate expected effect that was formulated was: “Awareness of quality issues among Education staff and management of COUNT.” The long term objective was articulated as: “upgrade of quality in the Education programme in a lot of aspects.” The CFA has clarified that “upgrade of quality” means to raise the overall mean score for the Education score cards with at least 0.5 point between 2011 and 2015.

Being involved in the outcome studies was relevant for COUNT as they wanted to strengthen their own M&E system and they could learn from the experience. Getting insights into quality issues in the education programme seems very relevant for staff working in that programme as well as for management. The longer term objective to upgrade the quality also seems very relevant as COUNT sees itself as a learning organisation that wants to provide quality services.

The immediate expected effect was not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). The long term objective, however, is formulated in a specific, measurable and time-bound way. The evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

During the baseline this outcome study was planned. It has been carried out in 2011 and in October 2013, it is planned for 2015. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified as explained in the detailed causal map. The outcome studies for the education programme came up in the map and narrative on the organisational capacity change: diversification of funds. In this regard we can conclude that the experience that staff gained through these outcome studies contributed to better accountability to and retention of existing donors which contributed to diversification of funds.

Though not the focus of this evaluation, we can conclude to some extent whether the expected immediate and long-term objectives of this intervention as formulated during the endline have been achieved. The immediate objective "awareness of quality issues among Education staff and management of COUNT," has been achieved as awareness is raised about the importance of educational quality and concrete insight is provided into the various elements of a school's quality. The CFA regards the follow-up on scorecards by COUNT as sufficient. COUNT is using the quality score card for the education program as a benchmark to reach its annual goals and to upgrade the quality of the schools. The next outcome study in 2015 will have to show if the longer term objective has been reached and whether the education programme's quality has improved by at least 0.5 in various aspects between 2011 and 2015.

5c workshop December 2013 facilitated by the Regional Coordinator

Design

This specific intervention was not planned for during the baseline by the CFA. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. The immediate effect of this workshop that the CFA observed was "COUNT had yet another opportunity to review its strengths, weaknesses, skill gaps, capacity building possibilities etc." The long term effect the CFA expects is: "this also contributes to strengthening the strategic thinking of the organization."

These effects were relevant for COUNT, as during the baseline workshop discussions the organisation formulated the condition "strengthened resource base for sustainability" in order to become the leading organization on holistic development of the tribal belt in India in the next few years. Reviewing their strengths and weaknesses and thinking more strategically about their sustainability was therefore very relevant for COUNT.

These expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

This intervention was not planned for during the baseline and details about the specific design cannot be provided, since this wasn't the focus of the evaluation. Therefore, no judgement can be made on whether this intervention was implemented as designed. However, in the 5C workshop has been implemented in December 2013. No further details can be provided whether this was implemented according to design.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, as explained in the detailed causal map. The 5c workshop came up in the maps and narratives on the organisational capacity changes: diversification of funds and improved strategic planning. In this regard we can conclude that this workshop has contributed to the leader of COUNT becoming more pragmatic which strengthened

COUNT's networks and contributed to attracting new donors. With regard to improved strategic planning, the 5c workshop also contributed to the leader becoming more pragmatic which helped in the development of a strategic phase-out plan for COUNT.

Though not the focus of this evaluation, we can conclude to some extent whether the expected immediate and long-term objectives of this intervention as formulated during the endline have been achieved. The immediate objective: "COUNT had yet another opportunity to review its strengths, weaknesses, skill gaps, capacity building possibilities etc." has been achieved, as the 5c workshop offered an opportunity to reflect on and review strategic organisational capacities in light of COUNT's current context and expected changes in this context. It was a good exercise for programme and management staff to review the strengths and weakness of the organisation. The long term objective, "this also contributes to strengthening the strategic thinking of the organization" has also already been achieved to some extent, as the leader of COUNT became more pragmatic and started thinking more strategically about COUNT's funding base.

Attribution of observed results to MFS II capacity development interventions

The diversification of funding and reduction of programme costs are taken together as a key organisational capacity change as both of them directly concern the funding situation of COUNT.

The diversification of funding of COUNT was due to generation of income through self-help projects, accountability to and retention of existing donors, and attraction of new donors (please also see section 4.3). The improved accountability to and retention of existing donors can be mostly attributed to MFS II, because Woord en Daad and the Regional Coordinator (both funded by MFS II) provided methodological guidance to COUNT which helped them in improving the quality of their data and data collection process. Through MFS II sponsored evaluations, such as the external evaluation of the HIV/Aids project and the outcome studies for the education programme, helped COUNT to gain experience in being accountable to existing donors. This can be seen in the detailed causal map and narrative on COUNT's diversification of funding and reduction of programme costs in 4.3.1. Staff skills in communicating with and reporting to donors also increased because trainings that were planned for during the baseline and that were funded by MFS II: basic spoken English training in March 2013, Sponsorship programme conference in May 2013 and a training on WDCAP (a software to track children's information to give regular updates to donors) in October 2013. In terms of attracting new donors, this can only partly be attributed to MFS II, as improved staff skills to report and communicate to donors due to the previously mentioned trainings led to attracting new donors, but strengthening their networks played a more important role. While COUNT's involvement in their networks is not directly funded by MFS II, working with Woord en Daad has given them the opportunity to network with other Woord en Daad partners and through their HIV/AIDS programme become part of the Health Bridge Alliance Network. The Viva and Blossoms networks are two other important networks for COUNT that do not seem to be directly based on the work they do with Woord en Daad. There was one other training funded by the Blossoms network together with VIVA in April 2014 called "Quality Improvement Systems" to strengthen COUNT's networks with other organisations. Improved networks can also be attributed to the leader becoming more pragmatic in looking for new funding sources. The leader became more pragmatic and proactive because of the changing funding situation in which Woord en Daad is phasing out and the gaps that were identified during the 5c Workshop, funded by MFS II, in December 2013. All in all, MFS II played a large role in COUNT's accountability to and retention of existing donors, but they played a lesser role in attracting new donors as explained above. In income generation through self-help projects there was no direct link to MFS II funding, except for the phasing out of Woord en Daad by 2020 leading COUNT to look for diversified funding sources.

The reduction of programme costs is due to: closing down of Agape hostels, outsourcing of JBS programme to Word and Deed India and self-support courses. The outsourcing of the JBS programme to one of the partners of Woord en Daad was possible was due to Woord en Daad linking COUNT up to their partners in India. While these initiatives were triggered by Woord en Daad phasing out their support by 2020, they were not directly an effect of any of the MFS II supported capacity building interventions.

All in all, diversification of funds and reducing programme costs can be only partly attributed to MFS II supported capacity development interventions, which have played a relatively important role in improving the funding situation of COUNT, particularly in terms of accountability towards and retention of existing donors. The other areas to which diversification of funds can be attributed (generation of income through self-help projects; and attracting new donors) can to a lesser extent be attributed to MFS II support for capacity development for the organization. In the case of generation of income through self-help projects, the link with MFS II is more indirectly through the phasing out of Woord en Daad by 2020. For attracting new donors the link is through improved communication with donors, which can be attributed to MFS II but more importantly due to COUNT strengthening its networks which can only indirectly, through the changing funding situation, be attributed to MFS II. Then there is the reduction of programme costs, which plays a less important role than the diversification of funding in terms of improving the financial sustainability of COUNT. For the reduction of programme costs there is no link to MFS II supported capacity development interventions, although the changing funding situation, also in terms of MFS II has been one of the underlying factors influencing all of these changes. The income generation through self-help projects and attracting new donors were the most important in terms of diversifying COUNT's funding. The accountability to and retention of existing donors which can be attributed to MFS II supported capacity development interventions played a less important role for diversifying COUNT's funding. The attracting of new donors can be partly attributed to MFS II supported interventions as explained above.

Improved Strategic Planning

The following MFS II capacity development interventions were mentioned by Woord en Daad and are linked to the key organisational capacity change "Improved Strategic Planning" (please also see section 4.3):

1. TVET Score Card Assessment March 2013 (planned during the baseline and mentioned as a capacity development intervention by the CFA);
2. Phase out Strategy Workshop in March 2013 (not planned during the baseline, but details provided during the endline);
3. Sustainability Strategy workshop facilitated in May 2013(not planned during the baseline, but details provided during the endline);
4. 5c workshop in December 2013 facilitated by the Regional Coordinator (not planned during the baseline, but details provided during the endline);
5. Appointment of the regional coordinator by W&D (not planned for during the baseline, not details provided during the endline);
8. External evaluation of the HIV/Aids project of COUNT by ASK, from 24 June till 2 July 2013 (not planned during the baseline, but mentioned as a capacity development intervention by the CFA during the endline);
9. Outcome studies conducted on Quality of Education by Woord en Daad, with the assistance of Help A Child of India, from 26 till 28 October 2013 (planned during the baseline and mentioned as a capacity development intervention by the CFA);
6. Methodological guidance by Woord en Daad and the Regional Coordinator (both funded by MFS II) to COUNT (not planned during the baseline, no details provided during the endline);
7. Basic spoken English training in March 2013 (not planned during the baseline and no details provided during the endline);
8. Sponsorship programme conference in May 2013 (not planned during the baseline and no details provided during the endline);
9. Training on WDCAP (a software to track children's information to give regular updates to donors) in October 2013(not planned during the baseline and no details provided during the endline).

Since the design, implementation and reaching objectives questions for the 5c workshop, external evaluation HIV/AIDS project and outcome studies for the education programme were already discussed in detail under the organisational capacity change concerning the Diversification of funds and reduction of programme costs, this was not repeated under this capacity change. However, it will be discussed in the following part of the attribution of observed results to MFS II capacity development interventions. In addition, the interventions will be discussed that were either planned during the baseline or not planned during the baseline, but details on the intervention were provided

during the endline. The capacity development interventions for which no objectives have been provided during baseline or endline will only be discussed when addressing the attribution question (here: appointment of the regional coordinator, methodological guidance, basic spoken English training, sponsorship programme conference and training on WDCAP).

TVET Score Card Assessment March 2013

Design

The CFA indicated that this score card assessment can be seen as a capacity development interventions as they envisioned that COUNT would learn from and use the results of the assessment. This intervention was planned for by the CFA during the baseline. In the TVET Score Card Assessment, every two years scores are given to a number of indicators for the quality of the programme after which there is discussion between the external evaluator and COUNT's staff and action points are formulated. The immediate expected effect that was formulated was: "Awareness of quality issues among TVET staff and management of COUNT." The long term expected effect was articulated as: "upgrade of quality in the TVET programme in a lot of aspects." The CFA has clarified that "upgrade of quality" means to raise the overall mean score for the Education score cards with at least 0.5 point between 2011 and 2015.

Being involved in the TVET Score Card Assessment, was relevant for COUNT as they wanted to strengthen their own M&E system and they could learn from the experience. Getting insights into quality issues in the TVET programme seems very relevant for staff working in that programme as well as for management. The longer term objective to upgrade the quality also seems very relevant as COUNT sees itself as a learning organisation that wants to provide quality services. It was a good moment in the programme to do this assessment, after an earlier assessment in 2011, this allowed staff to notice the changes and work on a quality improvement plan.

The immediate expected effect was not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). The long term objective, however, is formulated in a specific, measurable and time-bound way. The evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

During the baseline this assessment was planned. It has been carried out in 2011 and in March 2013, and it is planned for 2015. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation. However, what can be said is that the TVET scorecard assessment took place in March 2013 as the scorecards of 2011 and 2013 have been made available to the evaluation team.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, as explained in the detailed causal map. The TVET scorecard assessments came up in the map and narrative on the organisational capacity change: improved strategic planning. In this regard we can conclude that these assessments were useful as staff gained experience through these assessments and improved their skills in data collection and reporting.

Though not the focus of this evaluation, we can conclude to some extent whether the expected immediate and long-term objectives of this intervention as formulated during the baseline have been achieved. The immediate objective of this intervention has been reached. Staff members of COUNT were able to review the bottlenecks in the TVET programmes and take steps to further improve it during the coming year. From 2011 to 2013 there were already some improvements in COUNT's quality score. The next assessment in 2015 will have to show if the longer term objective has been reached and whether the TVET programme's quality has improved in various aspects since 2013.

Phase out Strategy Workshop in March 2013

Design

This specific intervention was not planned for during the baseline by the CFA. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. The immediate effect of this workshop that the CFA observed was "the learning being turned into action plan." The long term effect the CFA expects is: "understanding the importance of making TVET as a sustainable programme for continuation of this programme after phasing out of Woord en Daad."

These effects were relevant for COUNT, as during the baseline workshop discussions the organisation formulated the condition "strengthened resource base for sustainability" in order to become the leading organization on holistic development of the tribal belt in India in the next few years. Being involved in this strategy workshop and looking at ways to make TVET a sustainable programme is very relevant for the overall sustainability of the organisation.

These expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

This intervention was not planned for during the baseline and details about the specific design cannot be provided, since this wasn't the focus of the evaluation. Therefore, no judgement can be made on whether this intervention was implemented as designed. However, it can be said that the phase-out strategy workshop did take place in March 2013. No further details about design have been shared and can be assessed.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, as explained in the detailed causal map. The Phase-out strategy workshop came up in the map and narrative on the organisational capacity change: improved strategic planning. In this regard we can conclude that this workshop (together with other events) contributed to the development of a phase-out strategy.

Though not the focus of this evaluation, we can conclude to some extent whether the expected immediate and long-term objectives of this intervention as formulated during the endline have been achieved. The immediate objective: "the learning being turned into action plan," has been achieved as a well-discussed phasing out strategy has been developed and mutually accepted as a viable route towards 2020. The long term objective: "understanding the importance of making TVET as a sustainable programme for continuation of this programme after phasing out of Woord en Daad," has also been achieved as strategies were developed to make TVET sustainable and these were included in the Strategic Phase-out plan of COUNT. Strategies included the sourcing out of the JBS component to WDI and some income generating activities.

Sustainability strategy workshop May 2013

Design

This specific intervention was not planned for during the baseline by the CFA. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. While the Phase out Strategy Workshop in March 2013 coincided with the TVET Score Card Assessment and focussed mainly on how to make the TVET programme sustainable, the sustainability strategy workshop in May 2013 also looked at the education programme and more at the overall sustainability of the organisation. The immediate effect of this workshop that the CFA observed was "COUNT could come out with a written strategic plan document. It could objectively look at goals, various constraints, options and the way forward." The long term effect the CFA expects is: "the workshop contributes to sharpening the strategic planning skills in the SPO, especially that of the leadership."

These effects were relevant for COUNT, as during the baseline workshop discussions the organisation formulated the condition "strengthened resource base for sustainability" in order to become the

leading organization for holistic development of the tribal belt in India in the next few years. Being involved in this strategy workshop and developing a strategic plan was very relevant for the overall sustainability of the organisation.

These expected effects were to some extent formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). The immediate effect is specific, measurable and relevant: coming up with a strategic plan. Then again, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

This intervention was not planned for during the baseline and details about the specific design cannot be provided, since this wasn't the focus of the evaluation. Therefore, no judgement can be made on whether this intervention was implemented as designed. However, it can be said that the sustainability strategy workshop did take place in May 2013. No further details about design have been shared and can be assessed.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, as explained in the detailed causal map. The sustainability strategy workshop came up in the map and narrative on the organisational capacity change: improved strategic planning. In this regard we can conclude that this workshop (together with other events) led to the development of a phase-out strategy.

Though not the focus of this evaluation, we can conclude to some extent whether the expected immediate and long-term objectives of this intervention as formulated during the endline have been achieved. The immediate objective: "COUNT could come out with a written strategic plan document. It could objectively look at goals, various constraints, options and the way forward," of this intervention has been reached. Staff members of COUNT reviewed their achievements during 2012-2014 and gaps, risk factors and challenges were traced out. Income generation activities and action points were set that resulted in the phase out plan till 2020. It was observed by the CFA that the long term objective of the leader sharpening his strategic planning skills was achieved. He now strategises more and is more outward looking on how to obtain alternative funding. The implementation of the sustainability plan is still in its early stage. COUNT is downsizing itself to focus more on sustainability of programs and projects.

Attribution of observed results to MFS II capacity development interventions

The improved strategic planning of COUNT which also was one of the key organisational capacity changes that COUNT experienced over the last two years can to a large extent be attributed to MFS II funded organisational capacity development support. COUNT improved their strategic planning because of the development of a phase-out strategy, improved staff skills in data collection and reporting, more efficient project fund allocation and more participatory management (see also section 4.3.2).

The development of a phase-out strategy can be attributed to MFS II funded capacity development interventions. Woord en Daad organised various workshops: the 5c workshop in December 2013, phase out strategy workshop in March 2013 and the sustainability strategy workshop in May 2013 that all had the objective to identify challenges for COUNT and come up with strategies to allow the continuation of its programmes (in particular the education and TVET programme) after phasing out of W&D in 2020. Also the appointment of the regional coordinator, who was appointed and funded by W&D was an important intervention to support COUNT's organisational capacity, since he helped a lot in developing this phase-out strategy.

The second underlying reason for improved strategic planning: improved staff skills in data collection and reported can also largely be attributed to MFS II funded capacity development interventions. It was because of the methodological guidance of the regional coordinator and W&D staff trainings funded by MFS II (as mentioned above on communicating and reporting to donors) and experience gained through MFS II capacity development interventions (the TVET assessment mentioned here, and

the HIV/AIDS and Education evaluations mentioned earlier) that COUNT staff improved their data collection and reporting skills.

More efficient project allocation, which was another explaining factor for improved strategic planning , was due to the finance manager gaining skills in this through being involved in the MFS II funded HIV/AIDS programme evaluation. The finance manager was involved in the discussion of the evaluation results and learned about where the funds are most needed within this programme.

Finally the participatory management cannot be attributed to MFS II funded capacity development interventions, but was triggered by the absence of mentoring support from W&D (before the appointment of the Regional Coordinator). The leader of COUNT, in the absence of this support, formed a core group to help him in participatory planning and decision making which led to more participatory management and finally to improved strategic planning. All in all, improved strategic planning can be largely attributed to MFS II supported capacity development interventions, in the important role they played in terms of the development of a phase-out plan, improved staff skills in data collection and reporting, and more efficient project fund allocation can be attributed to MFS II funded capacity development interventions .

The development of a phase-out plan, improved staff skills in data collection and reporting, and more efficient project fund allocation were the most important in terms of improving strategic planning. The participatory management played a less important role. Therefore the role of MFS II has in these first three issues has more weight and most of the improved strategic planning can be attributed to MFS II.

CFA

Wim Blok, Manager Result management and Learning at Woord en Daad. Interviewed on 21 March 2014.

Samuel Nirmal, Regional coordinator India for Woord en Daad. Interviewed on 21 March 2014, by skype by evaluator at CDI.

Others

Bishop John, Founder member, Mentor. Interviewed on 3 June 2014.

Theeba John, Founder member, Mentor. Interviewed on 3 June 2014.

Samuel Nirmal, Regional coordinator India for Woord en Daad on 1st August 2014 by evaluators of IDF.

Appendix 1 Methodological approach & reflection

1. Introduction

This appendix describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around four key evaluation questions:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

Note: the methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report. At the end of this appendix a brief methodological reflection is provided.

2. Changes in partner organisation's capacity – evaluation question 1

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?**

This question was mainly addressed by reviewing changes in 5c indicators, but additionally a 'general causal map' based on the SPO perspective on key organisational capacity changes since the baseline

has been developed. Each of these is further explained below. The development of the general causal map is integrated in the steps for the endline workshop, as mentioned below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012.⁷ Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 4) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 5) **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

⁷ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Below each of these steps is further explained.

*Step 1. Provide the **description of indicators** in the relevant formats – CDI team*

- These formats were to be used when collecting data from SPO staff, CFA, partners, and consultants. For each of these respondents different formats have been developed, based on the list of 5C indicators, similar to the procedure that was used during the baseline assessment. The CDI team needed to add the 2012 baseline description of each indicator. The idea was that each respondent would be requested to review each description per indicator, and indicate whether the current situation is different from the baseline situation, how this situation has changed, and what the reasons for the changes in indicators are. At the end of each format, a more general question is added that addresses how the organisation has changed its capacity since the baseline, and what possible reasons for change exist. Please see below the questions asked for each indicator as well as the more general questions at the end of the list of indicators.

General questions about key changes in the capacity of the SPO

What do you consider to be the key changes in terms of how the organisation/ SPO has developed its capacity since the baseline (2012)?

What do you consider to be the main explanatory reasons (interventions, actors or factors) for these changes?

List of questions to be asked for each of the 5C indicators (The entry point is the the description of each indicator as in the 2012 baseline report):

1. *How has the situation of this indicator changed compared to the situation during the baseline in 2012? Please tick one of the following scores:*
 - -2 = Considerable deterioration
 - -1 = A slight deterioration
 - 0 = No change occurred, the situation is the same as in 2012
 - +1 = Slight improvement
 - +2 = Considerable improvement
2. *Please describe what exactly has changed since the baseline in 2012*
3. *What interventions, actors and other factors explain this change compared to the baseline situation in 2012? Please tick and describe what interventions, actors or factors influenced this indicator, and how. You can tick and describe more than one choice.*
 - Intervention, actor or factor at the level of or by **SPO**:
 - Intervention, actor or factor at the level of or by the **Dutch CFA (MFS II funding)**:
 - Intervention, actor or factor at the level of or by the **other funders**:
 - **Other** interventions, actors or factors:
 - Don't know.

Step 2. Review the descriptions per indicator – in-country team & CDI team

Before the in-country team and the CDI team started collecting data in the field, it was important that they reviewed the description for each indicator as described in the baseline reports, and also added to the endline formats for review by respondents. These descriptions are based on document review, observation, interviews with SPO staff, CFA staff and external respondents during the baseline. It was important to explain this to respondents before they filled in the formats.

Step 3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)

The CDI team was responsible for collecting data from the CFA:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet – CFA perspective.

The in-country team was responsible for collecting data from the SPO and from external respondents (except CFA). The following formats were sent before the fieldwork started:

- 5C Endline support to capacity sheet – SPO perspective.
- 5C Endline interview guides for externals: partners; OD consultants.

Step 4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team

The CDI team, in collaboration with the in-country team, collected the following documents from SPOs and CFAs:

- Project documents: project proposal, budget, contract (Note that for some SPOs there is a contract for the full MFS II period 2011-2015; for others there is a yearly or 2-yearly contract. All new contracts since the baseline in 2012 will need to be collected);
- Technical and financial progress reports since the baseline in 2012;.

- Mid-term evaluation reports;
- End of project-evaluation reports (by the SPO itself or by external evaluators);
- Contract intake forms (assessments of the SPO by the CFA) or organisational assessment scans made by the CFA that cover the 2011-2014 period;
- Consultant reports on specific inputs provided to the SPO in terms of organisational capacity development;
- Training reports (for the SPO; for alliance partners, including the SPO);
- Organisational scans/ assessments, carried out by the CFA or by the Alliance Assessments;
- Monitoring protocol reports, especially for the 5C study carried out by the MFS II Alliances;
- Annual progress reports of the CFA and of the Alliance in relation to capacity development of the SPOs in the particular country;
- Specific reports that are related to capacity development of SPOs in a particular country.

The following documents (since the baseline in 2012) were requested from SPO:

- Annual progress reports;
- Annual financial reports and audit reports;
- Organisational structure vision and mission since the baseline in 2012;
- Strategic plans;
- Business plans;
- Project/ programme planning documents;
- Annual work plan and budgets;
- Operational manuals;
- Organisational and policy documents: finance, human resource development, etc.;
- Monitoring and evaluation strategy and implementation plans;
- Evaluation reports;
- Staff training reports;
- Organisational capacity reports from development consultants.

The CDI team will coded these documents in NVivo (qualitative data analysis software program) against the 5C indicators.

Step 5. Prepare and organise the field visit to the SPO – in-country team

Meanwhile the in-country team prepared and organised the logistics for the field visit to the SPO:

- **General endline workshop** consisted about one day for the self-assessments (about ½ to ¾ of the day) and brainstorm (about 1 to 2 hours) on key organisational capacity changes since the baseline and underlying interventions, factors and actors ('general causal map'), see also explanation below. This was done with the five categories of key staff: managers; project/ programme staff; monitoring and evaluation staff; admin & HRM staff; field staff. Note: for SPOs involved in process tracing an additional 1 to 1½ day workshop (managers; program/project staff; monitoring and evaluation staff) was necessary. See also step 7;
- **Interviews with SPO staff** (roughly one day);
- **Interviews with external respondents** such as partners and organisational development consultants depending on their proximity to the SPO. These interviews could be scheduled after the endline workshop and interviews with SPO staff.

General causal map

During the 5C endline process, a 'general causal map' has been developed, based on key organisational capacity changes and underlying causes for these changes, as perceived by the SPO. The general causal map describes cause-effect relationships, and is described both as a visual as well as a narrative.

As much as possible the same people that were involved in the baseline were also involved in the endline workshop and interviews.

Step 6. Interview the CFA – CDI team

The CDI team was responsible for sending the sheets/ formats to the CFA and for doing a follow-up interview on the basis of the information provided so as to clarify or deepen the information provided. This relates to:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet - CFA perspective.

Step 7. Run the endline workshop with the SPO – in-country team

This included running the endline workshop, including facilitation of the development of the general causal map, self-assessments, interviews and observations. Particularly for those SPOs that were selected for process tracing all the relevant information needed to be analysed prior to the field visit, so as to develop an initial causal map. Please see Step 6 and also the next section on process tracing (evaluation question two).

An endline workshop with the SPO was intended to:

- Explain the purpose of the fieldwork;
- Carry out in the self-assessments by SPO staff subgroups (unless these have already been filled prior to the field visits) - this may take some 3 hours.
- Facilitate a brainstorm on key organisational capacity changes since the baseline in 2012 and underlying interventions, factors and actors.

Purpose of the fieldwork: to collect data that help to provide information on what changes took place in terms of organisational capacity development of the SPO as well as reasons for these changes. The baseline that was carried out in 2012 was to be used as a point of reference.

Brainstorm on key organisational capacity changes and influencing factors: a brainstorm was facilitated on key organisational capacity changes since the baseline in 2012. In order to kick start the discussion, staff were reminded of the key findings related to the historical time line carried out in the baseline (vision, mission, strategies, funding, staff). This was then used to generate a discussion on key changes that happened in the organisation since the baseline (on cards). Then cards were selected that were related to organisational capacity changes, and organised. Then a 'general causal map' was developed, based on these key organisational capacity changes and underlying reasons for change as experienced by the SPO staff. This was documented as a visual and narrative. This general causal map was to get the story of the SPO on what they perceived as key organisational capacity changes in the organisation since the baseline, in addition to the specific details provided per indicator.

Self-assessments: respondents worked in the respective staff function groups: management; programme/ project staff; monitoring and evaluation staff; admin and HRM staff; field staff. Staff were assisted where necessary so that they could really understand what it was they were being asked to do as well as what the descriptions under each indicator meant.

Note: for those SPOs selected for process tracing an additional endline workshop was held to facilitate the development of detailed causal maps for each of the identified organisational change/ outcome areas that fall under the capability to act and commit, and under the capability to adapt and self-renew, and that are likely related to capacity development interventions by the CFA. See also the next section on process tracing (evaluation question two). It was up to the in-country team whether this workshop was held straight after the initial endline workshop or after the workshop and the follow-up interviews. It could also be held as a separate workshop at another time.

Step 8. Interview SPO staff – in-country team

After the endline workshop (developing the general causal map and carrying out self-assessments in subgroups), interviews were held with SPO staff (subgroups) to follow up on the information that was provided in the self-assessment sheets, and to interview staff that had not yet provided any information.

Step 9. Fill-in observation sheets_ – in-country team

During the visit at the SPO, the in-country team had to fill in two sheets based on their observation:

- 5C Endline observation sheet;
- 5C Endline observable indicators.

Step 10. Interview externals – in-country team & CDI team

The in-country team also needed to interview the partners of the SPO as well as organisational capacity development consultants that have provided support to the SPO. The CDI team interviewed the CFA.

Step 11. Upload and auto-code all the formats collected by in-country team and CDI team – CDI team

The CDI team was responsible for uploading and auto-coding (in Nvivo) of the documents that were collected by the in-country team and by the CDI team.

Step 12. Provide the overview of information per 5C indicator to in-country team – CDI team

After the analysis in NVivo, the CDI team provided a copy of all the information generated per indicator to the in-country team for initial analysis.

Step 13. Analyse the data and develop a draft description_of the findings per indicator and for the general questions – in-country team

The in-country team provided a draft description of the findings per indicator, based on the information generated per indicator. The information generated under the general questions were linked to the general causal map or detailed process tracing related causal map.

Step 14. Analyse the data and finalize the description of the findings per indicator, per capability and general – CDI team

The CDI team was responsible for checking the analysis by the in-country team with the Nvivo generated data and to make suggestions for improvement and ask questions for clarification to which the in-country team responded. The CDI team then finalised the analysis and provided final descriptions and scores per indicator and also summarize these per capability and calculated the summary capability scores based on the average of all indicators by capability.

Step 15. Analyse the information in the general causal map –in-country team & CDI team

The general causal map based on key organisational capacity changes as perceived by the SPO staff present at the workshop, was further detailed by in-country team and CDI team, and based on the notes made during the workshop and where necessary additional follow up with the SPO. The visual and narrative was finalized after feedback by the SPO. During analysis of the general causal map relationships with MFS II support for capacity development and other factors and actors were identified. All the information has been reviewed by the SPO and CFA.

3. Attributing changes in partner organisation's capacity – evaluation question 2

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?***

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process. The box below provides some background information on process tracing.

Background information on process tracing

The essence of process tracing research is that scholars want to go beyond merely identifying correlations between independent variables (Xs) and outcomes (Ys). Process tracing in social science is commonly defined by its addition to trace causal mechanisms (Bennett, 2008a, 2008b; Checkle, 2008; George & Bennett, 2005). A causal mechanism can be defined as "a complex system which produces an outcome by the interaction of a number of parts" (Glennan, 1996, p. 52). Process tracing involves "attempts to identify the intervening causal process – the causal chain and causal mechanism – between an independent variable (or variables) and the outcome of the dependent variable" (George & Bennett, 2005, pp. 206-207).

Process tracing can be differentiated into three variants within social science: theory testing, theory building, and explaining outcome process tracing (Beach & Pedersen, 2013).

Theory testing process tracing uses a theory from the existing literature and then tests whether evidence shows that each part of hypothesised causal mechanism is present in a given case, enabling within case inferences about whether the mechanism functioned as expected in the case and whether the mechanism as a whole was present. No claims can be made however, about whether the mechanism was the only cause of the outcome.

Theory building process tracing seeks to build generalizable theoretical explanations from empirical evidence, inferring that a more general causal mechanism exists from the fact of a particular case.

Finally, explaining outcome process tracing attempts to craft a minimally sufficient explanation of a puzzling outcome in a specific historical case. Here the aim is not to build or test more general theories but to craft a (minimally) sufficient explanation of the outcome of the case where the ambitions are more case centric than theory oriented.

Explaining outcome process tracing is the most suitable type of process tracing for analysing the causal mechanisms for selected key organisational capacity changes of the SPOs. This type of process tracing can be thought of as a single outcome study defined as seeking the causes of the specific outcome in a single case (Gerring, 2006; in: Beach & Pedersen, 2013). Here the ambition is to craft a minimally sufficient explanation of a particular outcome, with sufficiency defined as an explanation that accounts for all of the important aspects of an outcome with no redundant parts being present (Mackie, 1965).

Explaining outcome process tracing is an iterative research strategy that aims to trace the complex conglomerate of systematic and case specific causal mechanisms that produced the outcome in question. The explanation cannot be detached from the particular case. Explaining outcome process tracing refers to case studies whose primary ambition is to explain particular historical outcomes, although the findings of the case can also speak to other potential cases of the phenomenon. Explaining outcome process tracing is an iterative research process in which 'theories' are tested to see whether they can provide a minimally sufficient explanation of the outcome. Minimal sufficiency is defined as an explanation that accounts for an outcome, with no redundant parts. In most explaining outcome studies, existing theorisation cannot provide a sufficient explanation, resulting in a second stage in which existing theories are re-conceptualised in light of the evidence gathered in the preceding empirical analysis. The conceptualisation phase in explaining outcome process tracing is therefore an iterative research process, with initial mechanisms re-conceptualised and tested until the result is a theorised mechanism that provides a minimally sufficient explanation of the particular outcome.

Below a description is provided of how SPOs are selected for process tracing, and a description is provided on how this process tracing is to be carried out. Note that this description of process tracing provides not only information on the extent to which the changes in organisational development can be attributed to MFS II (evaluation question 2), but also provides information on other contributing factors and actors (evaluation question 4). Furthermore, it must be noted that the evaluation team has developed an adapted form of 'explaining outcome process tracing', since the data collection and analysis was an iterative process of research so as to establish the most realistic explanation for a particular outcome/ organisational capacity change. Below selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for

different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

ETHIOPIA

For Ethiopia the capabilities that are mostly targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 1

The extent to which the Dutch NGO explicitly targets the following capabilities – Ethiopia

Capability to:	AMREF	CARE	ECFA	FSCE	HOA- REC	HUND EE	NVEA	OSRA	TTCA
Act and commit	5	4	5	5	5	3	4	4	3
Deliver on development objectives	2	1	1	1	2	1	1	2	1
Adapt and self-renew	4	2	3	4	2	5	3	3	3
Relate	3	1	2	2	3	2	1	3	1
Achieve coherence	2	2	1	1	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Ethiopia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: AMREF, ECFA, FSCE, HUNDEE. In fact, six SPOs would be suitable for process tracing. We just selected the first one per CFA following the criteria of not including more than one SPO per CFA for process tracing

Table 2

SPOs selected for process tracing – Ethiopia

Ethiopia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
AMREF	Dec 2015	Yes	Yes	Yes	Yes	AMREF NL	Yes
CARE	Dec 31, 2015	Partly	Yes	Yes	Yes – slightly	CARE Netherlands	No - not fully matching
ECFA	Jan 2015	Yes	Yes	Yes	Yes	Child Helpline International	Yes
FSCE	Dec 2015	Yes	Yes	Yes	Yes	Stichting Kinderpostzegels Netherlands (SKN); Note: no info from Defence for Children – ECPAT Netherlands	Yes
HOA-REC	Sustainable Energy project (ICCO Alliance): 2014 Innovative WASH (WASH Alliance): Dec 2015	Yes	Yes	Yes	Yes - slightly	ICCO	No - not fully matching
HUNDEE	Dec 2014	Yes	Yes	Yes	Yes	ICCO & IICD	Yes
NVEA	Dec 2015 (both)	Yes	Yes	Yes	Yes	Edukans Foundation (under two consortia); Stichting Kinderpostzegels Netherlands (SKN)	Suitable but SKN already involved for process tracing FSCE
OSRA	C4C Alliance project (farmers marketing): December 2014 ICCO Alliance project (zero grazing): 2014 (2 nd phase)	Yes	Yes	Yes	Yes	ICCO & IICD	Suitable but ICCO & IICD already involved for process tracing - HUNDEE
TTCA	June 2015	Partly	Yes	No	Yes	Edukans Foundation	No - not fully matching

INDIA

For India the capability that is mostly targeted by CFAs is the capability to act and commit. The next one in line is the capability to adapt and self-renew. See also the table below in which a higher score means that the specific capability is more intensively targeted.

Table 3

The extent to which the Dutch NGO explicitly targets the following capabilities – India⁸

Capability to:	BVHA	COUNT	DRISTI	FFID	Jana Vikas	Samar thak Samiti	SMILE	SDS	VTRC
Act and commit	5	3	4	4	4	4	4	3	5
Deliver on development objectives	1	5	1	1	1	1	1	2	1
Adapt and self-renew	2	2	1	3	1	1	4	1	4
Relate	3	1	1	1	1	1	2	1	2
Achieve coherence	1	1	1	4	1	1	1	1	2

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, India.

Below you can see a table describing when the contract with the SPO is to be ended and whether SPO and the CFA both expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BVHA, COUNT, FFID, SMILE and VTRC. Except for SMILE (capability to act and commit only), for the other SPOs the focus for process tracing can be on the capability to act and commit and on the capability to adapt and self-renew.

Table 4

SPOs selected for process tracing – India

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BVHA	2014	Yes	Yes	Yes	Yes	Simavi	Yes; both capabilities
COUNT	2015	Yes	Yes	Yes	Yes	Woorden Daad	Yes; both capabilities
DRISTI	31-03-2012	Yes	Yes	No	no	Hivos	No - closed in 2012
FFID	30-09-2014	Yes	Yes	Yes	Yes	ICCO	Yes

⁸ RGVN, NEDSF and Women's Rights Forum (WRF) could not be reached timely during the baseline due to security reasons. WRF could not be reached at all. Therefore these SPOs are not included in Table 1.

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew –by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Jana Vikas	2013	Yes	Yes	Yes	No	Cordaid	No - contract is and the by now; not fully matching focus
NEDSF							No – delayed baseline
RGVN							No - delayed baseline
Samarthak Samiti (SDS)	2013 possibly longer	Yes	Yes	Yes	No	Hivos	No - not certain of end date and not fully matching focus
Shivi Development Society (SDS)	Dec 2013 intention 2014	Yes	Yes	Yes	No	Cordaid	No - not fully matching focus
Smile	2015	Yes	Yes	Yes	Yes	Wilde Ganzen	Yes; first capability only
VTRC	2015	Yes	Yes	Yes	Yes	Stichting Red een Kind	Yes; both capabilities

INDONESIA

For Indonesia the capabilities that are most frequently targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 5

The extent to which the Dutch NGO explicitly targets the following capabilities – Indonesia

Capability to:	ASB	Daya ikologi	ECPAT	GSS	Lem bage Kita	Pt. PPMA	Rifka Annisa	WIIP	Yad upa	Yayasan Kelola	YPI	YRBI
Act and commit	4	4	4	5	4	4	5	3	3	2	5	4
Deliver on development objectives	1	1	1	2	2	1	2	1	1	1	1	1
Adapt and self-renew	3	1	2	4	2	3	4	4	1	1	4	3
Relate	1	1	2	3	3	2	1	2	2	2	3	2
Achieve coherence	1	1	1	2	1	1	2	2	1	1	2	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Indonesia.

The table below describes when the contract with the SPO is to be ended and whether both SPO and the CFA expect to focus on these two selected capabilities (MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: ASB, ECPAT, Pt.PPMA, YPI, YRBI.

Table 6

SPOs selected for process tracing – Indonesia

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
ASB	February 2012; extension Feb,1, 2013 – June,30, 2016	Yes	Yes	Yes	Yes	Hivos	Yes
Dayakologi	2013; no extension	Yes	Yes	Yes	No	Cordaid	No: contract ended early and not matching enough
ECPAT	August 2013; Extension Dec 2014	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	Yes
GSS	31 December 2012; no extension	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	No: contract ended early
Lembaga Kita	31 December 2012; no extension	Yes	Yes	No	Yes	Free Press Unlimited - Mensen met een Missie	No - contract ended early
Pt.PPMA	May 2015	Yes	Yes	No	Yes	IUCN	Yes, capability to act and commit only
Rifka Annisa	Dec, 31 2015	No	Yes	No	Yes	Rutgers WPF	No - no match between expectations CFA and SPO
WIIP	Dec 2015	Yes	Not MFS II	Yes	Not MFS II	Red Cross	No - Capacity development interventions are not MFS II financed. Only some overhead is MFS II

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Yayasan Kelola	Dec 30, 2013; extension of contract being processed for two years (2014-2015)	Yes	Not really	Yes	Not really	Hivos	No - no specific capacity development interventions planned by Hivos
YPI	Dec 31, 2015	Yes	Yes	Yes	Yes	Rutgers WPF	Yes
YRBI	Oct, 30, 2013; YRBI end of contract from 31st Oct 2013 to 31st Dec 2013. Contract extension proposal is being proposed to MFS II, no decision yet.	Yes	Yes	Yes	Yes	ICCO	Yes
Yadupa	Under negotiation during baseline; new contract 2013 until now	Yes	Nothing committed	Yes	Nothing committed	IUCN	No, since nothing was committed by CFA

LIBERIA

For Liberia the situation is arbitrary which capabilities are targeted most CFA's. Whilst the capability to act and commit is targeted more often than the other capabilities, this is only so for two of the SPOs. The capability to adapt and self-renew and the capability to relate are almost equally targeted for the five SPOs, be it not intensively. Since the capability to act and commit and the capability to adapt and self-renew are the most targeted capabilities in Ethiopia, India and Indonesia, we choose to focus on these two capabilities for Liberia as well. This would help the synthesis team in the further analysis of these capabilities related to process tracing. See also the table below.

Table 7

The extent to which the Dutch NGO explicitly targets the following capabilities – Liberia

Capability to:	BSC	DEN-L	NAWOCOL	REFOUND	RHRAP
Act and commit	5	1	1	1	3
Deliver on development objectives	3	1	1	1	1
Adapt and self-renew	2	2	2	2	2
Relate	1	2	2	2	2
Achieve coherence	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Liberia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Also, for two of the five SPOs capability to act and commit is targeted more intensively compared to the other capabilities. Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BSC and RHRAP.

Table 8

SPOs selected for process tracing – Liberia

Liberia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BSC	Dec 31, 2015	Yes	Yes	Yes	Yes	SPARK	Yes
DEN-L	2014	No	No	Unknown	A little	ICCO	No – not matching enough
NAWOCOL	2014	Yes	No	No	A little	ICCO	No – not matching enough
REFOUND	At least until 2013 (2015?)	Yes	No	Yes	A little	ICCO	No – not matching enough
RHRAP	At least until 2013 (2014?)	Yes	Yes	Yes	Yes	ICCO	Yes

Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ' general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

Some definitions of the terminology used for this MFS II 5c evaluation

Based upon the different interpretations and connotations the use of the term causal mechanism we use the following terminology for the remainder of this paper:

A detailed causal map (or model of change) = the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change.

A causal mechanism = is the combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome (Beach and Pedersen, 2013, p. 176).

Part or cause = one actor with its attributes carrying out activities/ producing outputs that lead to change in other parts. The final part or cause is the change/ outcome.

Attributes of the actor = specificities of the actor that increase his chance to introduce change or not such as its position in its institutional environment.

*Step 1. Identify the **planned MFS II supported capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

Chapter 4.1 and 4.2 in the baseline report were reviewed. Capacity development interventions as planned by the CFA for the capability to act and commit and for the capability to adapt and self-renew were described and details inserted in the summary format. This provided an overview of the capacity development activities that were originally planned by the CFA for these two capabilities and assisted in focusing on relevant outcomes that are possibly related to the planned interventions.

*Step 2. Identify the **implemented capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

The input from the CFA was reviewed in terms of what capacity development interventions have taken place in the MFS II period. This information was found in the 'Support to capacity development sheet - endline - CFA perspective' for the SPO, based on details provided by the CFA and further discussed during an interview by the CDI team.

The CFA was asked to describe all the MFS II supported capacity development interventions of the SPO that took place during the period 2011 up to now. The CDI team reviewed this information, not only the interventions but also the observed changes as well as the expected long-term changes, and

then linked these interventions to relevant outcomes in one of the capabilities (capability to act and commit; and capability to adapt and self-renew).

*Step 3. Identify **initial changes/ outcome areas** in these two capabilities – by CDI team & in-country team*

The CDI team was responsible for coding documents received from SPO and CFA in NVivo on the following:

- 5C Indicators: this was to identify the changes that took place between baseline and endline. This information was coded in Nvivo.
- Information related to the capacity development interventions implemented by the CFA (with MFS II funding) (see also Step 2) to strengthen the capacity of the SPO. For example, the training on financial management of the SPO staff could be related to any information on financial management of the SPO. This information was coded in Nvivo.

In addition, the response by the CFA to the changes in 5C indicators format, was auto-coded.

The in-country team was responsible for timely collection of information from the SPO (before the fieldwork starts). This set of information dealt with:

- MFS II supported capacity development interventions during the MFS II period (2011 until now).
- Overview of all trainings provided in relation to a particular outcome areas/organisational capacity change since the baseline.
- For each of the identified MFS II supported trainings, training questionnaires have been developed to assess these trainings in terms of the participants, interests, knowledge and skills gained, behaviour change and changes in the organisation (based on Kirkpatrick's model), one format for training participants and one for their managers. These training questionnaires were sent prior to the field visit.
- Changes expected by SPO on a long-term basis ('Support to capacity development sheet - endline - SPO perspective').

For the selection of change/ outcome areas the following criteria were important:

- The change/ outcome area is in one of the two capabilities selected for process tracing: capability to act and commit or the capability to adapt and self-renew. This was the first criteria to select upon.
- There was a likely link between the key organisational capacity change/ outcome area and the MFS II supported capacity development interventions. This also was an important criteria. This would need to be demonstrated through one or more of the following situations:
 - In the 2012 theory of change on organisational capacity development of the SPO a link was indicated between the outcome area and MFS II support;
 - During the baseline the CFA indicated a link between the planned MFS II support to organisational development and the expected short-term or long-term results in one of the selected capabilities;
 - During the endline the CFA indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities;
 - During the endline the SPO indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities.

Reviewing the information obtained as described in Step 1, 2, and 3 provided the basis for selecting key organisational capacity change/ outcome areas to focus on for process tracing. These areas were to be formulated as broader outcome areas, such as 'improved financial management', 'improved monitoring and evaluation' or 'improved staff competencies'.

Note: the outcome areas were to be formulated as intermediates changes. For example: an improved monitoring and evaluation system, or enhanced knowledge and skills to educate the target group on

climate change. Key outcome areas were also verified - based on document review as well as discussions with the SPO during the endline.

*Step 4. Construct the **detailed, initial causal map** (theoretical model of change) – CDI & in-country team*

A detailed initial causal map was developed by the CDI team, in collaboration with the in-country team. This was based on document review, including information provided by the CFA and SPO on MFS II supported capacity development interventions and their immediate and long-term objectives as well as observed changes. Also, the training questionnaires were reviewed before developing the initial causal map. This detailed initial causal map was to be provided by the CDI team with a visual and related narrative with related references. This initial causal map served as a reference point for further reflection with the SPO during the process tracing endline workshop, where relationships needed to be verified or new relationships established so that the second (workshop-based), detailed causal map could be developed, after which further verification was needed to come up with the final, concluding detailed causal map.

It's important to note that organisational change area/ outcome areas could be both positive and negative.

For each of the selected outcomes the team needed to make explicit the theoretical model of change. This meant finding out about the range of different actors, factors, actions, and events etc. that have contributed to a particular outcome in terms of organisational capacity of the SPO.

A model of change of good quality includes:

- The causal pathways that relate the intervention to the realised change/ outcome;
- Rival explanations for the same change/ outcome;
- Assumptions that clarify relations between different components or parts;
- Case specific and/or context specific factors or risks that might influence the causal pathway, such as for instance the socio-cultural-economic context, or a natural disaster;
- Specific attributes of the actors e.g. CFA and other funders.

A model of change (within the 5C study called a 'detailed causal map') is a complex system which produces intermediate and long-term outcomes by the interaction of other parts. It consists of parts or causes that often consist of one actor with its attributes that is implementing activities leading to change in other parts (Beach & Pedersen, 2013). A helpful way of constructing the model of change is to think in terms of actors carrying out activities that lead to other actors changing their behaviour. The model of change can be explained as a range of activities carried out by different *actors* (including the CFA and SPO under evaluation) that will ultimately lead to an outcome. Besides this, there are also '*structural*' elements, which are to be interpreted as external factors (such as economic conjuncture); and *attributes* of the actor (does the actor have the legitimacy to ask for change or not, what is its position in the sector) that should be looked at (Beach & Pedersen, 2013). In fact Beach and Pedersen, make a fine point about the subjectivity of the actor in a dynamic context. This means, in qualitative methodologies, capturing the changes in the actor, acted upon area or person/organisation, in a non sequential and non temporal format. Things which were done recently could have corrected behavioural outcomes of an organisation and at the same time there could be processes which incrementally pushed for the same change over a period of time. Beach and Pedersen espouse this methodology because it captures change in a dynamic fashion as against the methodology of logical framework. For the MFS II evaluation it was important to make a distinction between those paths in the model of change that are the result of MFS II and rival pathways.

The construction of the model of change started with the identified key organisational capacity change/ outcome, followed by an inventory of all possible subcomponents that possibly have caused the change/ outcome in the MFS II period (2011-up to now, or since the baseline). The figure below presents an imaginary example of a model of change. The different colours indicate the different types of support to capacity development of the SPO by different actors, thereby indicating different pathways of change, leading to the key changes/ outcomes in terms of capacity development (which in this case indicates the ability to adapt and self-renew).

Figure 1 An imaginary example of a model of change

Step 5. Identify **types of evidence** needed to verify or discard different causal relationships in the model of change – in-country teams with support from CDI team

Once the causal mechanism at theoretical level were defined, empirical evidence was collected so as to verify or discard the different parts of this theoretical model of change, confirm or reject whether subcomponents have taken place, and to find evidence that confirm or reject the causal relations between the subcomponents.

A key question that we needed to ask ourselves was, "What information do we need in order to confirm or reject that one subcomponent leads to another, that X causes Y?". The evaluation team needed to agree on what information was needed that provides empirical manifestations for each part of the model of change.

There are four distinguishable types of evidence that are relevant in process tracing analysis: *pattern*, *sequence*, *trace*, and *account*. Please see the box below for descriptions of these types of evidence.

The evaluation team needed to agree on the types of evidence that was needed to verify or discard the manifestation of a particular part of the causal mechanism. Each one or a combination of these different types of evidence could be used to confirm or reject the different parts of the model of change. This is what is meant by robustness of evidence gathering. Since causality as a concept can bend in many ways, our methodology, provides a near scientific model for accepting and rejecting a particular type of evidence, ignoring its face value.

Types of evidence to be used in process tracing

Pattern evidence relates to predictions of statistical patterns in the evidence. For example, in testing a mechanism of racial discrimination in a case dealing with employment, statistical patterns of employment would be relevant for testing this part of the mechanism.

Sequence evidence deals with the temporal and spatial chronology of events predicted by a hypothesised causal mechanism. For example, a test of the hypothesis could involve expectations of the timing of events where we might predict that if the hypothesis is valid, we should see that the event B took place after event A took place. However, if we found that event B took place before event A took place, the test would suggest that our confidence in the validity of this part of the mechanism should be reduced (disconfirmation/ falsification).

Trace evidence is evidence whose mere existence provides proof that a part of a hypothesised mechanism exists. For example, the existence of the minutes of a meeting, if authentic ones, provide strong proof that the meeting took place.

Account evidence deals with the content of empirical material, such as meeting minutes that detail what was discussed or an oral account of what took place in the meeting.

Source: Beach and Pedersen, 2013

Below you can find a table that provides guidelines on what to look for when identifying types of evidence that can confirm or reject causal relationships between different parts/ subcomponents of the model of change. It also provides one example of a part of a causal pathway and what type of information to look for.

Table 9

Format for identifying types of evidence for different causal relationships in the model of change (example included)

Part of the model of change	Key questions	Type of evidence needed	Source of information
Describe relationship between the subcomponents of the model of change	Describe questions you would like to answer so as to find out whether the components in the relationship took place, when they took place, who was involved, and whether they are related	Describe the information that we need in order to answer these questions. Which type of evidence can we use in order to reject or confirm that subcomponent X causes subcomponent Y? Can we find this information by means of : Pattern evidence; Sequence evidence; Trace evidence; Account evidence?	Describe where you can find this information
Example: Training workshops on M&E provided by MFS II funding and other sources of funding	Example: What type of training workshops on M&E took place? Who was trained? When did the training take place? Who funded the training? Was the funding of training provided before the training took place? How much money was available for the training?	Example: Trace evidence: on types of training delivered, who was trained, when the training took place, budget for the training Sequence evidence on timing of funding and timing of training Content evidence: what the training was about	Example: Training report SPO Progress reports interviews with the CFA and SPO staff Financial reports SPO and CFA

Please note that for practical reasons, the 5C evaluation team decided that it was easier to integrate the specific questions in the narrative of the initial causal map. These questions would need to be addressed by the in country team during the process tracing workshop so as to discover, verify or discard particular causal mechanisms in the detailed, initial causal map. Different types of evidence was asked for in these questions.

*Step 6. **Collect data** to verify or discard causal mechanisms and develop workshop-based, detailed causal map – in-country team*

Once it was decided by the in-country and CDI evaluation teams what information was to be collected during the interaction with the SPO, data collection took place. The initial causal maps served as a basis for discussions during the endline workshop with a particular focus on process tracing for the identified organisational capacity changes. But it was considered to be very important to understand from the perspective of the SPO how they understood the identified key organisational capacity change/outcome area has come about. A new detailed, workshop-based causal map was developed that included the information provided by SPO staff as well as based on initial document review as described in the initial detailed causal map. This information was further analysed and verified with other relevant information so as to develop a final causal map, which is described in the next step.

*Step 7. **Assess the quality** of data and **analyse data**, and develop the **final detailed causal map** (model of change) – in-country team and CDI team*

Quality assurance of the data collected and the evidence it provides for rejecting or confirming parts of causal explanations are a major concern for many authors specialised in contribution analysis and process-tracing. Stern et al. (2012), Beach and Pedersen (2013), Lemire, Nielsen and Dybdal (2012), Mayne (2012) and Delahais and Toulemonde (2012) all emphasise the need to make attribution/contribution claims that are based on pieces of evidence that are rigorous, traceable, and credible. These pieces of evidence should be as explicit as possible in proving that *subcomponent X causes subcomponent Y* and ruling out other explanations. Several tools are proposed to check the nature and the quality of data needed. One option is, Delahais and Toulemonde's Evidence Analysis Database, which we have adapted for our purpose.

Delahais and Toulemonde (2012) propose an Evidence Analysis Database that takes into consideration three criteria:

Confirming/ rejecting a causal relation (yes/no);

Type of causal mechanism: intended contribution/ other contribution/ condition leading to intended contribution/ intended condition to other contribution/ feedback loop;

Strength of evidence: strong/ rather strong/ rather weak/ weak.

We have adapted their criteria to our purpose. The in-country team, in collaboration with the CDI team, used the criteria in assessing whether causal relationships in the causal map, were strong enough. This has been more of an iterative process trying to find additional evidence for the established relationships through additional document review or contacting the CFA and SPO as well as getting their feedback on the final detailed causal map that was established. Whilst the form below has not been used exactly in the manner depicted, it has been used indirectly when trying to validate the information in the detailed causal map. After that, the final detailed causal map is established both as a visual as well as a narrative, with related references for the established causal relations.

<i>Example format for the adapted evidence analysis database (example included)</i>	Confirming/ rejecting a causal relation (yes/no)	Type of information providing the background to the confirmation or rejection of the causal relation	Strength of evidence: strong/ rather strong/ rather weak/ weak	Explanation for why the evidence is (rather) strong or (rather) weak, and therefore the causal relation is confirmed/ rejected
Description of causal relation				
e.g. Training staff in M&E leads to enhanced M&E knowledge, skills and practice	e.g. Confirmed	e.g. Training reports confirmed that staff are trained in M&E and that knowledge and skills increased as a result of the training		

Step 8. Analyse and conclude on findings– in-country team and CDI team

The final detailed causal map was described as a visual and narrative and this was then analysed in terms of the evaluation question two and evaluation question four: "To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?" and "What factors explain the findings drawn from the questions above?" It was analysed to what extent the identified key organisational capacity change can be attributed to MFS II supported capacity development interventions as well as to other related factors, interventions and actors.

4. Explaining factors – evaluation question 4

This paragraph describes the data collection and analysis methodology for answering the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This has been explained in the first section of this appendix. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information was procured for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the process of process tracing as described in the section above.

5. Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team.

Use of the 5 core capabilities framework and qualitative approach: this has proven to a be very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in

the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
- Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
- Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a

result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

Appendix 2 Background information on the five core capabilities framework

The 5 capabilities (5C) framework was to be used as a framework for the evaluation of capacity development of Southern Partner Organisations (SPOs) of the MFS II consortia. The 5C framework is based on a five-year research program on 'Capacity, change and performance' that was carried out by the European Centre for Development Policy Management (ECDPM). The research included an extensive review of the literature and sixteen case studies. The 5C framework has also been applied in an IOB evaluation using 26 case studies in 14 countries, and in the baseline carried out per organisation by the MFS II organisations for the purpose of the monitoring protocol.

The 5C framework is structured to understand and analyse (changes in) the capacity of an organization to deliver (social) value to its constituents. This introduction briefly describes the 5C framework, mainly based on the most recent document on the 5C framework (Keijzer et al., 2011).

The 5C framework sees capacity as an **outcome** of an **open system**. An organisation or collaborative association (for instance a network) is seen as a system interacting with wider society. The most critical practical issue is to ensure that relevant stakeholders share a common way of thinking about capacity and its core constituents or capabilities. Decisive for an organisation's capacity is the context in which the organisation operates. This means that **understanding context issues** is crucial. The use of the 5C framework requires a multi-stakeholder approach because shared values and results orientation are important to facilitate the capacity development process. The 5C framework therefore needs to **accommodate the different visions** of stakeholders and conceive different strategies for raising capacity and improving performance in a given situation.

The 5C framework defines capacity as '**producing social value**' and identifies five core capabilities that together result in that overall capacity. Capacity, capabilities and competences are seen as follows:

Capacity is referred to as the overall ability of an organisation or system to create value for others;

Capabilities are the collective ability of a group or a system to do something either inside or outside the system. The collective ability involved may be technical, logistical, managerial or generative (i.e. the ability to earn legitimacy, to adapt, to create meaning, etc.);

Competencies are the energies, skills and abilities of individuals.

Fundamental to developing capacity are inputs such as human, material and financial resources, technology, and information. To the degree that they are developed and successfully integrated, capabilities contribute to the overall capacity or ability of an organisation or system to create value for others. A single capability is not sufficient to create capacity. All are needed and are strongly interrelated and overlapping. Thus, to achieve its development goals, the 5C framework says that every organisation or system must have **five basic capabilities**:

- The capability to act and commit;
- The capability to deliver on development objectives;
- The capability to adapt and self-renew;
- The capability to relate (to external stakeholders);
- The capability to achieve coherence.

In order to have a common framework for evaluation, the five capabilities have been reformulated in outcome domains and for each outcome domain performance indicators have been developed.

There is some overlap between the five core capabilities but together the five capabilities result in a certain level of capacity. Influencing one capability may have an effect on one or more of the other capabilities. In each situation, the level of any of the five capabilities will vary. Each capability can become stronger or weaker over time.

Appendix 3 Changes in organisational capacity of the SPO - 5C indicators

Below you will find a description for each of the indicators under each of the capabilities, what the situation is as assessed during the endline, how this has changed since the baseline and what are the reasons for change.

Capability to act and commit

Level of Effective Leadership

1.1.Responsive leadership: 'Leadership is responsive, inspiring, and sensitive'

This is about leadership within the organisation (operational, strategic). If there is a larger body then you may also want to refer to leadership at a higher level but not located at the local organisation.

There has been a slight improvement in the leader since the baseline. While the leader continues to be passionate, sensitive and guided by the Founder members as well as the board members, the leader has become more pragmatic and proactive especially towards strengthening COUNT's resource base. He is now focussing on strengthening networks and approaching new donors. The leader has also taken up several initiatives to develop self-help projects for sustainability of the organisation as well as trying to reduce costs of the existing programmes. The leader introduced "transferred kids programme" as an experiment in 2012, whereby children who were staying in hostels left the programme after COUNT told their parents about the phase-out strategy of Woord en Daad to prepare them. The openness of the organisation did not favour COUNT as the parents dropped their children from the programme and continued their education in their own areas. COUNT continued to give them financial support until they were dropped from the sponsorship support for the year. This programme did not yield the desired results but reflects the willingness to be creative and pro-active on the part of the leadership as well as his risk taking capability. The top leadership is open to change and is taking all efforts to manage change. He has been motivating the staff to undergo trainings and increase their capacities so that they not only perform better but also have better opportunities in the future. He has formed a management core group to advise and guide him and together they work strategically to achieve their goals. There is however still a need for strengthening the second line leadership. While the core group gives inputs and feedback on plans and strategies, none of the members can step into the shoes of the leader in case of need.

The phasing out of funding by Woord en Daad (W&D) by 2020 has triggered the need for COUNT to be self-dependent and this triggered the change in leader leadership style.

Score baseline: 4

Score endline: 4.5 (slight improvement)

1.2.Strategic guidance: 'Leaders provide appropriate strategic guidance (strategic leader and operational leader)'

This is about the extent to which the leader(s) provide strategic directions

There has been a slight improvement since the baseline for this indicator. The Board members are more involved in helping the leader to make important and strategic decisions based on the founding vision and mission. The Leader conducts frequent meetings to discuss operations and strategically plan to reach the programme objectives. He also ensures that internal monitoring systems have improved and the staff is always connected with him and with each other.

The leader continues to provide clear strategic directions to his programme staff and they can call him for any clarifications. Both the director and staff are all aware of the need for change and are motivated to work on it. Steps are taken to move into a direction of more self-support and sustainability in the long run. The director participated in leadership trainings and by being involved in organisational capacity and quality assessments this has all contributed to an improvement in terms of strategic guidance.

Score baseline: 3

Score endline: 3.5 (slight improvement)

1.3.Staff turnover: 'Staff turnover is relatively low'

This is about staff turnover.

Staff turnover continues to be low. The staff is dedicated and loyal to the leader as well as the organisation. The staff continues to remain committed to the organisation because of their internal calling and love for the ministry.

Score baseline: 5

Score endline: 5 (no change)

Level of realistic strategic planning

1.4.Organisational structure: 'Existence of clear organisational structure reflecting the objectives of the organisation'

Observable indicator: Staff have copy of org structure and understand this

There has been no change in the organisational structure since the baseline except for the fact that the leader has formed a management core group. The leader realised that in absence of mentoring support from W&D NL he would have to look for help and guidance within COUNT. In 2013, he formed a core group comprising of experienced members of the staff for participatory planning and decision making.

The staff at COUNT is aware of the organisational structure. Hard copies of the organogram (separate for Agape Homes and St. John's High Schools for programme Education, Job and Income) were shared with the evaluation team during the baseline. The administrative manual which gives details of the administrative structure was also shared with the evaluation team during the endline.

Score baseline: 4

Score endline: 4 (no change)

1.5. Articulated strategies: 'Strategies are articulated and based on good situation analysis and adequate M&E'

Observable indicator: strategies are well articulated. Situation analysis and monitoring and evaluation are used to inform strategies.

In each of its programmes COUNT has articulated strategies that are based on good situational analysis and may be revised based on M&E findings. For its HIV/AIDS programme COUNT has identified, articulated and adopted certain strategies to achieve the long term goals. In this regard, the organisation developed outcomes and indicators and designed interventions. Programme participants are more or less clear on long-term goals; the programme has identified measurable indicators of success, and formulated actions to achieve goals.

Another example, from COUNT's education programme, is that the organisation based on the phase-out plan of W&D NL decided to take steps for the sustainability of this programme. In the period 2013-2014, W&D NL sponsors 604 children. The plan is to continue supporting 550 children through Churches, self-help projects and other local support after W&D NL gradually phases out in 2020. During the phase-out period, children who drop out of school will be supported by COUNT for one year with school books and stationary through COUNT's agriculture projects. They will also be encouraged to join the government school or hostel to continue their education. The plan was that each year COUNT would close down one or two homes in the different districts of Andhra Pradesh and focus on continuing the child care, whilst having the education programme only at the headquarters in Hyderabad. However, unexpectedly COUNT has had a large number of school dropouts in the last year. This led COUNT to reduce the number of children being phased out of the program.

For the TVET programme, the strategy of coping with W&D NL's phase-out plan includes letting students pay a small fee for the training and focus more on income generating activities, linked to the programme (e.g. repairing work and stitching school uniforms).

Score baseline: no information available

Score endline: 3

Level of translation of strategy into operations

1.6. Daily operations: 'Day-to-day operations are in line with strategic plans'

This is about the extent to which day-to-day operations are aligned with strategic plans.

COUNT continues to make annual plans for all programmes separately. This was evident from the hard copies of the plan for the period 2011 to 2015, which was shared with the evaluation team.

Objectives, planned results, activities, issues and approaches have been outlined in detail in the plan documents and continue to ensure that day to day operations are in line with the strategic plan. Sometimes there may be changes in the plan but these are due to circumstances that are beyond control. Further to this, there is support from the Regional coordinator, appointed by W&D NL, to develop annual plans strategically with a specific focus on sustainability. This was absent in the baseline. The improvement in the internal reporting systems, training of the staff and improvement in programme operations after the quality assessments conducted by the donor has further helped in aligning the day to day operations with the planning process.

Score baseline: 4

Score endline: 4.5 (slight improvement)

Level of Staff Capacity and Motivation

1.7. Staff skills: 'Staff have necessary skills to do their work'

This is about whether staff have the skills necessary to do their work and what skills they might they need.

Staff commitment to the organisation has not changed since the baseline. The leader has been motivating the staff to undergo trainings and increase their capacities so that they not only perform better but also have better opportunities in the future. Woord en Daad too has given capacity building trainings for further skill development: teacher training programme, training in spoken English, personality development, child psychology, child rights, and web based training for sponsorship department. Thus capable and skilled staff is available for most positions. There has been a slight improvement in the communication skills, but there continues to be a gap, which the organisation is striving hard to bridge. COUNT also needs further skills development among its staff in the area of technology. These two skills in turn, are to be imparted to the students in the current competitive environment in the job market.

Score baseline: 3

Score endline: 3.5 (slight improvement)

1.8. Training opportunities: 'Appropriate training opportunities are offered to staff'

This is about whether staff at the SPO are offered appropriate training opportunities

There has been a slight improvement in this indicator. In the baseline it was found that in the few training sessions that the staff was exposed to, the training was in English and since the training material provided to them was not in their mother tongue it became difficult for the staff to get the most out of the training. Some of these gaps were addressed in the last two years through the following:

- Even though training material is given in English, Telugu translation has been given on child protection policy and child rights;
- Basic spoken English training for the purpose of improving communication skills with the donors as well as for better report writing;
- Sponsorship programme conference in May 2013 in the Netherlands by W&D NL. The aim of the conference was to strengthen the sponsorship programme by improving communication with the donors using new methods and thereby improving accountability with the donors, to teach how to make personal development plans, to increase awareness of the changing global economic scenario and to train in WDCAP Adoption programme 2.0 version software for better reporting on the status of the children;
- Training of the house parents by adoption/sponsorship department to assist the children in writing innovative greeting letters, providing interesting information and taking pictures for a regular update of the children to the donors and for improving accountability;
- Training on WDCAP programme in October, 2013 by W&D, NL. This is software for tracking child information and enables COUNT to provide regular updates to the donor;
- In May 2014, COUNT organised a two-day seminar on "Caring Leadership" conducted by the Christian Institute of Counselling, Person to Person. The training focused on several issues, such as work ethics, commitment to their call, inter-personal relationships, stress and anger management, leadership, integrity and team work.

Trainings have been based on organisational level needs and are not based on individual capacity building plans or capacity assessments.

Score baseline: 2

Score endline: 2.5 (slight improvement)

1.9.1. Incentives: 'Appropriate incentives are in place to sustain staff motivation'

This is about what makes people want to work here. Incentives could be financial, freedom at work, training opportunities, etc.

There has been no change in the motivation levels of the staff. Most of the staff of COUNT came in as children from underprivileged families and grew up in the Agape homes. The staff are motivated by the vision and mission of COUNT. Also, they feel that by working for children they are fulfilling God's will. There is also a great degree of freedom at work. In spite of the social threat and low salaries they are working with devotion and modesty. However there is a slight improvement in terms of monetary incentives with annual increments, recognition of hard working staff and awarding them with special increments, rewarding the staff with special provisions like mobile phones, medical allowances for some etc. The staff is covered by accidental insurance and regular trainings, which add further to the motivation levels.

Score baseline: 4

Score endline: 4.5 (slight improvement)

Level of Financial Resource Security

1.9.2. Funding sources: 'Funding from multiple sources covering different time periods'

This is about how diversified the SPOs funding sources are over time, and how the level of funding is changing over time.

COUNT has been funded by W&D NL since 1991. For decades, COUNT had no need to look beyond its funding partner Woord en Daad to relate and attract resources – at least for its financial resources. This in turn, made the organisation an inward looking one and the only other relationship was with the local government and regulating authorities. However, with the phasing out of Woord en Daad and the changing donor environment, COUNT is now focussing on its financial sustainability. In the last two years there has been a slight improvement in the organisation's effort to ensure funding from multiple sources. It is doing so by approaching new donors on its own or through networks, self-help projects and by reducing costs of the existing programmes. Having said that, COUNT has started attracting funds from the Free Methodist Church, USA and it also continues to receive funds from Word & Deed Canada.

COUNT has also undertaken self-help projects such as utilising its land for agricultural and kitchen gardening purposes, cultivating their own crops and vegetables to support its interventions. Similarly, there is an ongoing dairy programme that meets institutional needs and generates resources for its interventions. COUNT has also set up schools (both English and non-English medium), a Vocational training College, a Bachelors of Education College for Teacher Training and a college for Masters of Computer Application (MCA (2006 and MBA started in 2009)). These colleges help generate resources from fees paid by non-COUNT students. In order to make the education programme more sustainable, COUNT has been motivating the parents of the children to pay a small amount in cash or kind towards the education programme annually according to their financial ability and partake in sharing responsibilities. The schools of COUNT in Secunderabad and Jala are also collecting a small amount of monthly tuition fee and transport fee from the children from surrounding villages. These amounts are being used towards the school maintenance and any other miscellaneous expenses. Some of the graduates from the higher education programme who have now found jobs are willing to contribute a small amount towards the education programme, at least for a few months. The programme also at times receives gifts in cash and kind from overseas guests, and other locals towards the education programme which will remain as a source of income. To further ensure sustainability of the Adoption/Education programme, a draft version of the sustainability plan is going to be developed for the years 2014-2020. In view of the gradual decrease in the number of children in the programme, COUNT aims to decrease the number of children in Agape homes and/or possibly close down one or two homes which are spread out in the districts of Andhra Pradesh. The profits from the agriculture projects will be used for students who are dropped out of school each year and they will be supported for one year with books, stationary and clothes and motivated to join government schools and hostels so that they will continue with their education.

Currently, COUNT is relying mostly on funding by Woord en Daad. The director realises that their donor base would reduce in due course of time and is thinking of reaching out to the corporate sector as well.

Score baseline: 2

Score endline: 2.5 (slight improvement)

1.9.3. Funding procedures: 'Clear procedures for exploring new funding opportunities'

This is about whether there are clear procedures for getting new funding and staff are aware of these procedures.

There has been a slight improvement in terms of funding procedures. The senior management is mainly involved in fundraising but there seems to be no written procedures for exploring new funding opportunities. However, the staff provides support in terms of showcasing COUNT's work which the senior management can use to approach donors. As an example the Sponsorship programme conference in May 2013 in the Netherlands by W&D NL. This conference aimed at strengthening the sponsorship programme by improving communication with the donors using new methods and thereby improving accountability with the donors. Furthermore, participants increased their awareness of the changing global economic scenario and were trained in WDCAP Adoption programme 2.0 version software⁹ for better reporting on the status of the children to donors.

Donor mapping has been done and alumni have been identified. For a certain category of students the government gives scholarships and since COUNT works with scheduled tribes' students who are entitled to receive these scholarships COUNT tried to negotiate, and make applications to the government so that the students can access these entitlements.

Score baseline: 2

Score endline: 2.5 (slight improvement)

Summary of capability to act and commit

The phasing-out of funding by Woord en Daad (W&D) by 2020 has led to a variety of changes in COUNT's capability to act and commit. First of all, the leader has become more pragmatic and proactive in terms of strengthening COUNT's resource base: he is approaching new donors, strengthening networks and takes initiative to develop new income generating projects. Board members are now more involved in helping the leader make important strategic directions. Secondly, the phasing-out plan has led to more articulated strategies directed towards the sustainability of the different programmes of COUNT after W&D funding ends. Thirdly, there has been a slight improvement in ensuring funding from multiple sources. COUNT started receiving funds from the Free Methodist Church, USA, through the Director's and Founder Member's contacts with this church. COUNT also continues to receive funding from Word and Deed Canada and has started to focus more on generating income from self-help projects. There are still no written funding procedures in place and most of it is in the hands of senior management.

Staff turnover remains low as staff of COUNT is still dedicated and loyal to the organisation, whilst monetary incentives have increased (annual increments, recognition of hard working staff, mobile phones, and medical allowances). Furthermore, some of the gaps (e.g. language barrier) in training opportunities have been addressed. For most positions capable and skilled staff is available. However, there remains to be a slight gap in communication skills in English and technological skills needed to train the students. The organisational structure of COUNT has not changed, except for the fact that

⁹WDCAP is an online programme developed by W&D, Netherland to connect all its partners in a central server to store documents, generate and save reports. Each partner has been given independent user ID and password. They have to follow the browser link (www.wdcap.woordendaad.nl) and login on the given ID and password to access and upload documents. This can facilitate the partners to avoid loss of data.

the leader has formed a management core group to assist him in planning and decision making in absence of mentoring support from W&D. There is now support from the regional coordinator, appointed by W&D, to develop annual plans with a strategic focus on sustainability. Also the internal reporting system has improved which leads to better alignment between day-to-day operations and strategic plans.

Score baseline: 3.3

Score endline: 3.6 (very slight improvement)

Capability to adapt and self-renew

Level of effective application of M&E

2.1.M&E application: 'M&E is effectively applied to assess activities, outputs and outcomes'

This is about what the monitoring and evaluation of the SPO looks at, what type of information they get at and at what level (individual, project, organisational).

The systems of planning, monitoring and reporting exist in COUNT but the monitoring and evaluation is mostly restricted to the activity level. The staff still discusses problems they encounter in their day to day operations and decisions to overcome these problems are undertaken at the organisational level by the Director. There continues to be a need for COUNT to focus on results by linking activities to outputs and outcomes. This was found not only in the baseline but also in a mid-term evaluation of the ongoing Woord en Daad supported basic needs programme being implemented by COUNT in the last three years (2010-2013).

The evaluation revealed that the programme was able to establish a few monitoring mechanisms at the management level. For example, the use of an annual activity plan, monthly and annual questionnaires filled by pastors as well as the management's visit to the field. However, at the field level there were no proper monitoring mechanisms found and community engagement in planning and monitoring of the programme is low. The follow up of the monitoring at the community level by the pastors or the Change Agents was found not to be effective. Furthermore the lack of a baseline study makes it hard to measure changes in level of HIV/AIDS awareness. This all affects the ability to understand gaps and problems in the programme and limits the scope for improving consecutive plans. In the basic needs programme the organisation is currently focussed on 'activity achievement' rather than 'result achievement'.

The Education and TVET programme, both funded by W&D, have a results framework which outlines indicators on activity, output and outcome level, including instruments for measurement. A baseline was conducted in 2011 and in October 2013 an external consultant together with Help a Child of India conducted a second round of outcome studies. Being involved in these outcome studies together with the methodological guidance of W&D has helped COUNT in its ability to collect information on outcomes.

Score baseline: 3

Score endline: 3.5 (slight change)

2.2.M&E competencies: 'Individual competencies for performing M&E functions are in place'

This is about whether the SPO has a trained M&E person; whether other staff have basic understanding of M&E; and whether they know what information to collect, how to process the information, how to make use of the information so as to improve activities etc.

There is no trained M&E person in the staff. During the baseline, COUNT and Woord en Daad were looking into the option of hiring an external PME expert whose guidance could be shared across all partners supported by Woord en Daad but this proposal to hire an expert jointly with Word and Deed India did not materialise. Though there is no change in the individual competencies since the baseline their capacity to collect and reflect on outcome information has increased due to involvement in outcome study in 2013. COUNT is willing to collaborate with local consultants to help them do part of data collection and has received methodological guidance of W&D.

Score baseline: 2

Score endline: 2.5 (slight change)

Level of strategic use of M&E

2.3.M&E for future strategies: 'M&E is effectively applied to assess the effects of delivered products and services (outcomes) for future strategies'

This is about what type of information is used by the SPO to make decisions; whether the information comes from the monitoring and evaluation; and whether M&E info influences strategic planning.

There has been a slight improvement in terms of M&E for future strategies since the baseline. Generally, advice from M&E is followed and this influences strategic planning. The regional coordinator, appointed by W&D, provides feedback on the annual plans of COUNT and tries to make sure that learning from M&E is used in these plans. For example, a discussion on the outcome study on quality of education reveals that the reasons for lack of progress, and difference in the performance of the schools in two different locations were analysed and will be used for the next phase of the programme. However, in the Basic Needs programme a lack of proper field level monitoring mechanisms makes it hard to understand the actual achievements and problems in the programme which reduces scope for M&E to be used for improving plans and future strategies.

Score baseline: 3

Score endline: 3.5 (slight improvement)

Level of openness to strategic learning

2.4.Critical reflection: 'Management stimulates frequent critical reflection meetings that also deal with learning from mistakes'

This is about whether staff talk formally about what is happening in their programmes; and, if so, how regular these meetings are; and whether staff are comfortable raising issues that are problematic.

There has been a slight improvement in this indicator. Regular department-wise staff meetings take place to plan and implement programme objectives and share concerns. Most of these meetings are documented formally and shared with the Director. At the same time there continue to be informal meetings; where and whenever a staff member has a problem he/she can discuss it with the director and other colleagues. The Director is still always accessible to the staff and can be called even in the middle of the night in case of an emergency.

The minutes of such an internal reflection meeting were shared with the evaluation team. A discussion on the outcome study on the quality of education revealed that the reasons for lack of progress, and difference in the performance of the schools in two different locations were analysed.

Score baseline: 2

Score endline: 2.5 (slight improvement)

2.5. Freedom for ideas: 'Staff feel free to come up with ideas for implementation of objectives

This is about whether staff feel that ideas they bring for implementation of the programme are welcomed and used.

The staff is always encouraged to express their ideas and this motivates staff to share their views on implementation of objectives. During both the baseline and the endline workshops, the director encouraged the staff to express their views freely. The top management is open to change and makes all efforts to hear views, ideas, experiences, concerns and grievances of their staff. The staff has access to the management at all times. However, while some ideas and suggested changes are accepted others may not be considered due to others factors.

Score baseline: 4

Score endline: 4 (no change)

Level of context awareness

2.6. System for tracking environment: 'The organisation has a system for being in touch with general trends and developments in its operating environment'

This is about whether the SPO knows what is happening in its environment and whether it will affect the organisation.

There is a slight improvement in terms of having a system to track the environment. The director keeps track of all the issues that may affect the functioning of the organisation. He gets these updates from the board members, field staff and interstate coordinators who reflect views of the beneficiaries and through the organisation's networks. The leader has developed new networks for sharing and learning and keeps regular contact with like-minded organisations. W&D informs COUNT about the changing donor environment and attitude of the international community when it comes to the development sector in India. The organisation itself also ensures keeps abreast of the latest developments in the society and at State level. There is no formal system to track trends and developments in the environment.

Score baseline: 3

Score endline: 3.5 (slight improvement)

2.7. Stakeholder responsiveness: 'The organisation is open and responsive to their stakeholders and the general public'

This is about what mechanisms the SPO has to get input from its stakeholders, and what they do with that input.

Meetings are conducted to remain in touch with stakeholders: partners, poor children (through feedback from teachers and regular visits to children in schools) and local level leaders. COUNT tries to be more open to its stakeholders for example through involving parents and teachers in quality assessment of the education programme. The staff still has a list of persons from different organisations who can be contacted in times of need. However, an evaluation of the health programme of COUNT revealed that community participation and engagement has been found to be low in the planning and monitoring of the programme. The general community's knowledge about the entire programme is also low and it is very important for COUNT to understand their perspective and needs.

Score baseline: 3

Score endline: 3 (no change)

Summary of capability to adapt and self-renew

Though there has been some learning on collecting information on output and outcome level from being involved in outcome studies for the Education and TVET programme, the monitoring and evaluation of COUNT remains to be focussed on the activity level. Intentions to hire a PMEL expert jointly with Word and Deed India did not materialise. COUNT now receives methodological guidance from the regional coordinator, appointed by W&D, and is still willing to collaborate with local consultants. While COUNT has discussions about results of evaluations to inform future phases of the programme and receives support in this from the regional coordinator, lack of proper monitoring mechanisms and community engagement at the field level lead to gaps in understanding of the actual accomplishments of the programme and thus scope for M&E informing future strategies is limited. COUNT tries to be more open to its stakeholders for example through involving parents and teachers in quality assessment of the education programme. However, an evaluation of its health programme found that community participation has been found to be low in the planning and monitoring of the programme.

Though staff has access to management at all time to informally discuss ideas, problems and be heard, there are now also regular department-wise staff meetings which are documented formally to inform the Director. The changing donor environment has triggered a need to keep abreast about the latest developments in the society, at state level and in the international community, which COUNT does through its networks and through its main funder: W&D.

Score baseline: 2.8

Score endline: 3.2 (slight change)

Capability to deliver on development objectives

Extent to which organisation delivers on planned products and services

3.1. Clear operational plans: 'Organisation has clear operational plans for carrying out projects which all staff fully understand'

This is about whether each project has an operational work plan and budget, and whether staff use it in their day-to-day operations.

Since the baseline, there has been a slight deterioration in terms of having clear operational plans which all staff fully understand. On the one hand COUNT still has operational plans per project. All the activity level, plans are worked out with the staff so that they fully know what needs to be done. The Finance manager has the responsibility of making the operational budgets for different programmes. These budgets and plans are considered in day to day work and discussed upon weekly meetings that are held with Administrative Heads and Finance Heads.

But on the other hand, an evaluation of the basic needs programme by an external evaluator, focus-group discussions and interviews with the Change Agents (field level volunteers), revealed that they have no action plan and that this creates confusion about their roles and responsibilities. There is no clear planning of their field visits, awareness activities and knowledge dissemination. In this programme the planning is done through the Annual Plan and internal quarterly meetings amongst the management team of the programme.

Score baseline: 4

Score endline: 3.5 (slight deterioration)

3.2. Cost-effective resource use: 'Operations are based on cost-effective use of its resources'

This is about whether the SPO has the resources to do the work, and whether resources are used cost-effectively.

Sufficient resources are available for the staff to carry out their work in the office in terms of upgraded computer systems, printers, scanning machine, stationery and furniture. COUNT continues to work with the same discernment to remain cost effective and efficient as in the baseline. Resources are used cost effectively. With constant pressure on budgets, the organisation keeps looking at cost saving/ efficiency improving methods. However, this cost efficiency is not at the cost of the results. For example, wherever and whenever possible they try to use technology to cut down travel/postal expenses. They are remodelling old furniture according to the needs of the school. Each Agape home has its own sheets with monthly expenditures like food, salaries and stationary. It was found that each Agape home had a small positive closing balance at the end of September 2013. However due to inflation sometimes there is overspending as happened in the TVET programme. This was due to a price increase in petrol, diesel and food items.

Score baseline: 4

Score endline: 4 (no change)

3.3. Delivering planned outputs: 'Extent to which planned outputs are delivered'

This is about whether the SPO is able to carry out the operational plans.

Generally, the agreed plans are carried out and outputs are delivered. COUNT management ensures that this happens through regular follow up. Next to the project manager there are now coordinators for each of the projects whose responsibility is to manage and monitor the progress, ensure that outputs are delivered and report this to the management. They have regular monthly meetings with the director. The annual activity report tracks progress of the programmes and helps them to take further action.

The activity report for the Basic Needs programme shows that all of the planned targets for the annual indicators were reached for the period 2012 up to September 2013, e.g. number of people reached directly with preventive services. In the education programme, COUNT is on track for most of the planned outcome results and their indicators like reaching the target groups and teacher training. There are however, difficulties in involving parents in the school's activities through Parent Teacher Associations and contributions. Migration of parents to far-away places is one of the challenges that come in the way of better results. In the TVET programme there has been an improvement in the scorecard, most activities were realised. It is however hard to track students after they leave the programme to see where they end up working and set up alumni networks, because students migrate and change their phone numbers. COUNT is working on recommendations given after the score card outcome study was done for both the TVET and Education programme.

Score baseline: 4

Score endline: 4 (no change)

Extent to which delivered products and services are relevant for target population in terms of the effect they have

3.4.Mechanisms for beneficiary needs: 'The organisation has mechanisms in place to verify that services meet beneficiary needs'

This is about how the SPO knows that their services are meeting beneficiary needs

There has been no change in terms of having mechanisms for beneficiary needs since the baseline. The link between COUNT and beneficiaries continues to be strong because of the church. The organisation is closely connected with the families and the beneficiaries through the pastor. Parents of the children in Agape homes are invited once every six months and asked for their comments and feedback. They have started an alumni association; students come back once a year and give feedback on how they are doing. The mid-term evaluation by ASK of the basic needs programme also is testimony to this. It revealed that COUNT's HIV / AIDS awareness programme has been able to address the needs of the tribal community in Andhra Pradesh. The need for HIV awareness has also been expressed in the Social Assessment Study commissioned for National Aids Control Programme (NACP) 3, where the tribal communities have been described as vulnerable due to various factors like their sexual networking patterns, migration, and inaccessibility to resources and poor penetration of media. Further, NACP 3 State Fact Sheet has categorized all the districts of AP in 'category A' (districts with high prevalence of HIV / AIDS). During the field visits evaluators of ASK came across incidences of stigma about HIV in the community and also observed poor infrastructure, medical and education facilities, little influence of the outside world in the tribal community. Existence of stigma and weak facilities in the community demands for more awareness on HIV and the COUNT programme thus stands relevant. Satisfaction questionnaires are being developed for students in the TVET programme and parents in the Education programme of COUNT.

Score baseline: 4

Score endline: 4 (no change)

Level of work efficiency

3.5.Monitoring efficiency: 'The organisation monitors its efficiency by linking outputs and related inputs (input-output ratios)'

This is about how the SPO knows they are efficient or not in their work.

There has been no change in terms of monitoring efficiency since the baseline. A Quality Check is carried out in the TVET and education programme, largely through monthly reviews. Progress reports and school records are studied by the programme staff to see if their work is benefitting the students. COUNT also takes into account the teachers' feedback. Quality checks that link input to outputs are not carried out in a structured way.

Score baseline: 3

Score endline: 3 (no change)

3.6. Balancing quality-efficiency: 'The organisation aims at balancing efficiency requirements with the quality of its work'

This is about how the SPO ensures quality work with the resources available

There has been no change in terms of balancing quality with efficiency since the baseline. COUNT aims to provide good quality services, making maximum use of available funds by finding competitive prices to reduce cost. Monthly reviews assist in assuring this. Quality check is carried out in TVET and the education programme. COUNT is a learning organisation and is trying to make improvements by using the outcomes in their strategic annual plans. They have taken several actions to review the bottle necks in their programmes and taken steps to improve further the quality of their implementation. There is no formal system of balancing quality with efficiency and inflation sometimes leads to minor overspending in the programmes.

Score baseline: 3

Score endline: 3 (no change)

Summary of capability to deliver on development objectives

COUNT still has operational plans per project. All the activity level, plans are worked out with the staff so that they fully know what needs to be done. However, in the Basic Needs programme there exists some confusion among volunteer Change Agents about their responsibilities as there is no action plan developed for them. Staff still has access to the technological and material resources they need to carry out their work. Resources are used cost effectively, for example by using technology to cut down on travel and postal expenses. Sometimes inflation leads to minor overspending. All programmes now have a coordinator that is responsible for monitoring and reporting back to the project manager. Generally planned outputs are being delivered and COUNT works on implementing recommendations after the score card outcome studies for the TVET and Education programmes. Programme staff study progress report results to check whether their work benefits the beneficiaries. Quality checks that link input to outputs are not carried out in a structured way nor is there a formal system of balancing quality with efficiency, but COUNT is a learning organisation that uses recommendations from outcome studies in their strategic annual plans.

There continues to be a strong link between COUNT and its beneficiaries because of the Church and programmes seem to be relevant for the community COUNT serves. The organisation is working on formalising feedback from students and parents through satisfaction forms.

Score baseline: 3.7

Score endline: 3.6 (no change)

Capability to relate

Level of involving external parties in internal policy/strategy development

4.1. Stakeholder engagement in policies and strategies: 'The organisation maintains relations/ collaboration/alliances with its stakeholders for the benefit of the organisation'

This is about whether the SPO engages external groups in developing their policies and strategies, and how.

There has been a slight improvement in terms of engaging stakeholders in policies and strategies. While COUNT continues to maintain relations with the community through interaction with the Pastor and parents of children in Agape homes, they are not directly engaged in developing policies and strategies. Nine regional coordinators have been appointed specifically to address the needs of the people in the interior tribal regions, helping them primarily to raise awareness and gain access to government schemes. Also opinions and inputs are taken with the active participation of stakeholders like parents, local leaders and elders for any new project. For the TVET project there is a network with other W&D partners, with meetings twice a year. COUNT is also influenced by other partners with

good policies and practices. There are also informal meetings with local bodies as well with the Integrated Tribal Development Agency (ITDA). Associations and like- faith based organisations are consulted when the need arises. Projects are discussed with the Board and the donors. COUNT is a member of the Health Bridge Alliance and VIVA network. VIVA is an international organisation that works to bring sustainable change in the lives of children by strengthening and building capacities of networks in specific organisational development areas. COUNT received the VIVA quality mark certificate from Viva in April 2013.

Score baseline: 3

Score endline: 3.5 (slight improvement)

Level of engagement of organisation in networks, alliances and collaborative efforts

4.2.Engagement in networks: 'Extent to which the organisation has relationships with existing networks/alliances/partnerships'

This is about what networks/alliances/partnerships the SPO engages with and why; with they are local or international; and what they do together, and how do they do it.

In light of the changing donor environment, COUNT has, over the last two years COUNT focussed on strengthening its networks. COUNT's programmes require it to maintain good relationships with like-minded networks and alliances. COUNT continues to be connected to local bodies like Rural Development Trust (RDT); IKP Knowledge Park; District rural development agency (DRDA) and Integrated Tribal Development Agency (ITDA).

In its Basic Needs programme COUNT works together with its sister organisation Agape Fellowship (AF) and the activities on HIV/Aids awareness and prevention are implemented by AF Church. COUNT also has linkages with other Ministries like the Global Gospel Ministry (GGM) and REACH to be able to reach out to non-Agape Church communities. COUNT has also become a member of the Health Bridge Alliance (HBA). Over the period April 2012-March 2013 they have participated in three meetings of the HBA, discussing with other alliance partners the changing context (in India and internationally), the need for fundraising and coming to an Alliance agreement.

In the TVET programme COUNT is working together with Word and Deed India (W&D India) another partner of Woord en Daad. A good example of this is that W&D India has now taken over the JBS component of the TVET/JBS programme. Within the TVET programme COUNT has regular meetings with SETWIN for getting certifications for their students, with M-tech Garments for arranging exposure visits for students, with the government Industrial Training Institute (ITI) to discuss possibilities for admissions of students for further education.

Furthermore, through Blossoms network COUNT has increased its network with 40 other faith based organisations and is learning about the latest trends concerning NGO rules and sharing views with these organisations. Through its continued membership in the VIVA network COUNT received the international organisation quality in accountability award. COUNT is also working with Adijana National Forum and the Christian Social Forum. New networks are established at the community level by the nine appointed regional coordinators. COUNT has thus become more engaged in national and international networks.

Score baseline: 3

Score endline: 3.5 (slight improvement)

Extent to which organisation is actively engaging with target groups

4.3.Engagement with target groups: 'The organisation performs frequent visits to their target groups/beneficiaries in their living environment'

This is about how and when the SPO meets with target groups.

In general, staff of COUNT continues to be in constant contact with its target group through the Church. They also visit the households once a month and schools once a week. Sometimes it may not be possible as staff is busy and cannot travel either due to geographic spread or limited budget. With better infrastructure and transport facilities this is improving, and also the appointment of regional coordinators has helped in staying connected to the field level. The staff does still face problems in communicating with the households as they speak different languages.

COUNT's programmes are such that they require regular interaction with the community. This may be either directly through field staff or indirectly through pastors, teachers or Change Agents.

In the HIV/Aids awareness part of the Basic Needs programme the target group of the program of COUNT is the tribal community living in 15 districts of AP, living in geographically inaccessible areas with poor infrastructure, poor health and poor education facilities. Awareness is being spread through seminars, rallies, workshops, posters, pamphlets, movies, door to door visits, church preaching and through folk media. The programme is working together with its sister organisation Agape Fellowship (AF), where the activities of the program are being carried out with the help of the AF church. The strategy in this programme is to work with Change Agents from the community for knowledge dissemination and awareness spreading. These Change Agents are volunteers, usually pastors, bible women or church youth. However, the community participation in the planning and monitoring of this programme is found to be low and the frequency of the Change Agents to the community is undocumented except for the information questionnaires that are sent to COUNT each month. Further, there is poor follow-up of COUNT at the community level with high level of dependence on change agents to identify People Living with HIV (PLHIV) or to undertake awareness sessions.

In the Education programme it is a challenge for COUNT to also involve fathers in the programme as Parent Teacher Association Meetings are primarily attended by the mothers. Involvement of fathers is needed for COUNT to be able to change the mind-set of early marriage and in favour of girl child education.

Score baseline: 4

Score endline: 4 (no change)

Level of effective relationships within the organisation

4.4.Relationships within organisation: 'Organisational structure and culture facilitates open internal contacts, communication, and decision-making'

How do staff at the SPO communicate internally? Are people free to talk to whomever they need to talk to? When and at what forum? What are the internal mechanisms for sharing information and building relationships?

The staff is involved in many meetings for expressing their views, the atmosphere is open and there is a learning culture. The rooms in the office are close by and the physical layout is such that it encourages dialogue and internal contacts. Staff feels free to interact with all department heads. Information is either shared through reports or orally. Weekly meetings are held with the departmental heads, monthly meetings with the managers and once-in-three month field visits & headquarters meetings. While COUNT offers an enabling environment to its staff in practice, there is predominantly a top-down culture. The only change that has occurred since the baseline is that the minutes of the meetings are being documented now and there is a follow up on those meetings.

Score baseline: 3.5

Score endline: 3.5 (no change)

Summary of capability to relate

Since the baseline COUNT has focussed more on strengthening its networks. At the community level COUNT is improving stakeholder engagement through the appointment of nine regional coordinators to address the needs of the people in the interior tribal regions. For any new project inputs are taken

from stakeholders like parents, local leaders and elders. On the local level COUNT engages with the Integrated Tribal Development Agency (ITDA) and looks at partners that adopt good policies and practices. The organisation is engaged in more national and international networks including Blossoms Network and the Health Bridge Alliance. COUNT received a quality award from the VIVA network and is reaching out to a government institute for the benefit of the students in the TVET programme. While in general the organisation continues to stay in close contact with its target group, mainly through the church, sometimes geographic spread and limited budget make regular visits difficult. High level of dependence on Change Agents in the Basic Needs programme lead to poor follow up by COUNT.

While COUNT offers an enabling environment to its staff in practice, there is predominantly a top-down culture. The only change that has occurred since baseline is that the minutes of the regular staff meetings are being documented now and there is a follow up on those meetings.

Score baseline: 3.4

Score endline: 3.6 (very slight improvement)

Capability to achieve coherence

Existence of mechanisms for coherence

5.1.Revisiting vision, mission: 'Vision, mission and strategies regularly discussed in the organisation'

This is about whether there is a vision, mission and strategies; how often staff discuss/revise vision, mission and strategies; and who is involved in this.

COUNT has a documented vision, mission and strategy. In February 2014 COUNT organised a vision casting seminar for staff, pastors and leaders, where they revisited the vision of COUNT. However, whilst the vision and mission have not changed, the strategy has been revisited. This is in response to the phasing out of Woord en Daad funding and the changing donor environment in India. COUNT developed a sustainability plan for 2014-2020. Woord en Daad staff facilitated a strategy development workshop at COUNT (May 2013) as an input for a sustainability policy. In this workshop a cross section of organisation's staff was present. The donor supported COUNT by providing feedback until the finalisation of the plan.

Score baseline: 3

Score endline: 3.5 (slight improvement)

5.2.Operational guidelines: 'Operational guidelines (technical, admin, HRM) are in place and used and supported by the management'

This is about whether there are operational guidelines, which operational guidelines exist; and how they are used.

There has been a slight improvement in terms of having operational guidelines since the baseline. COUNT has an administration, HR and financial policy. These are used by the organisation. Some (illiterate) field staff indicated they get oral instructions. As COUNT caters to the welfare of the children, all its staff, house parents, children and all others directly or indirectly associated with children must be aware of the children's rights and because of this COUNT introduced a child protection policy since the baseline. This was shared with the evaluation team.

Score baseline: 3

Score endline: 3.5 (slight improvement)

Level of coherence of various efforts of organisation

5.3.Alignment with vision, mission: 'Projects, strategies and associated operations are in line with the vision and mission of the organisation'

This is about whether the operations and strategies are line with the vision/mission of the SPO.

All operations of COUNT continue to be completely aligned with its vision and mission. In COUNT's Basic Needs programme there is a specific "Theory of Change" that is guiding the programme based on and aligned with the organisational vision, mission and beliefs to bring about change in the lives of the people in the programme.

Score baseline: 5

Score endline: 5 (no change)

5.4.Mutually supportive efforts: 'The portfolio of project (activities) provides opportunities for mutually supportive efforts'

This is about whether the efforts in one project complement/support efforts in other projects.

There is no change in terms of mutually supportive efforts since the baseline. The entire team of COUNT moves as one coherent unit. They have a shared vision in place and the strategies are discussed across the organisation at regular intervals. All the programmes and activities within the organisation are well linked and goal oriented. For example, the HIV Awareness programme has been linked with other existing COUNT programmes like, Vocational Training Centre and the COUNT High school children. In COUNT High School the activities like movies, skits and seminars are conducted to create awareness amongst children about HIV. For Vocational Training Students (VTS) also, there are awareness activities and they were also engaged during rallies, poster and pamphlet distribution. The annual seminar in the COUNT is conducted when the school summer-break starts so that the parents can also attend the seminar. Parents of COUNT Children Home also attend seminars along with the whole staff and team from all the different programme areas.

These inter-linkages help in cost-effectiveness as well as multi-tasking, although more personnel is still needed. More staff could not be recruited due to financial constraints.

Score baseline: 4

Score endline: 4 (no change)

Summary of capability to achieve coherence

COUNT has organised a vision casting seminar for staff, pastors and leaders, where they revisited their vision. While the vision and mission of COUNT continue to be the same, a new strategy for the period 2014-2020 was developed in face of the phase-out plan of W&D NL with the help of a W&D supported strategy development workshop. A cross section of the staff was involved in this process. Since the baseline a child protection policy has been introduced in COUNT which all staff that work directly or indirectly with children is made aware of. All operations of COUNT continue to be completely aligned with its vision and mission. All the programmes and activities within the organisation are well linked and mutually supportive.

Score baseline: 3.75

Score endline: 4 (very slight improvement)

Appendix 4 Results - key changes in organisational capacity - general causal map

As the changes in organisational capacity in the general causal map and the detailed causal maps overlap completely, please refer to Appendix 5 for the detailed narrative and map.

Appendix 5 Results - attribution of changes in organisational capacity - detailed causal maps

The evaluation team carried out an end line assessment at COUNT from 2 to 4 June 2014. During this workshop, the team made a recap of key features of the organisation in the baseline in 2012 (such as vision, mission, strategies, clients, partnerships). This was the basis for discussing changes that had happened to the organisation since the baseline. The three main changes that happened in the organisation since the baseline were:

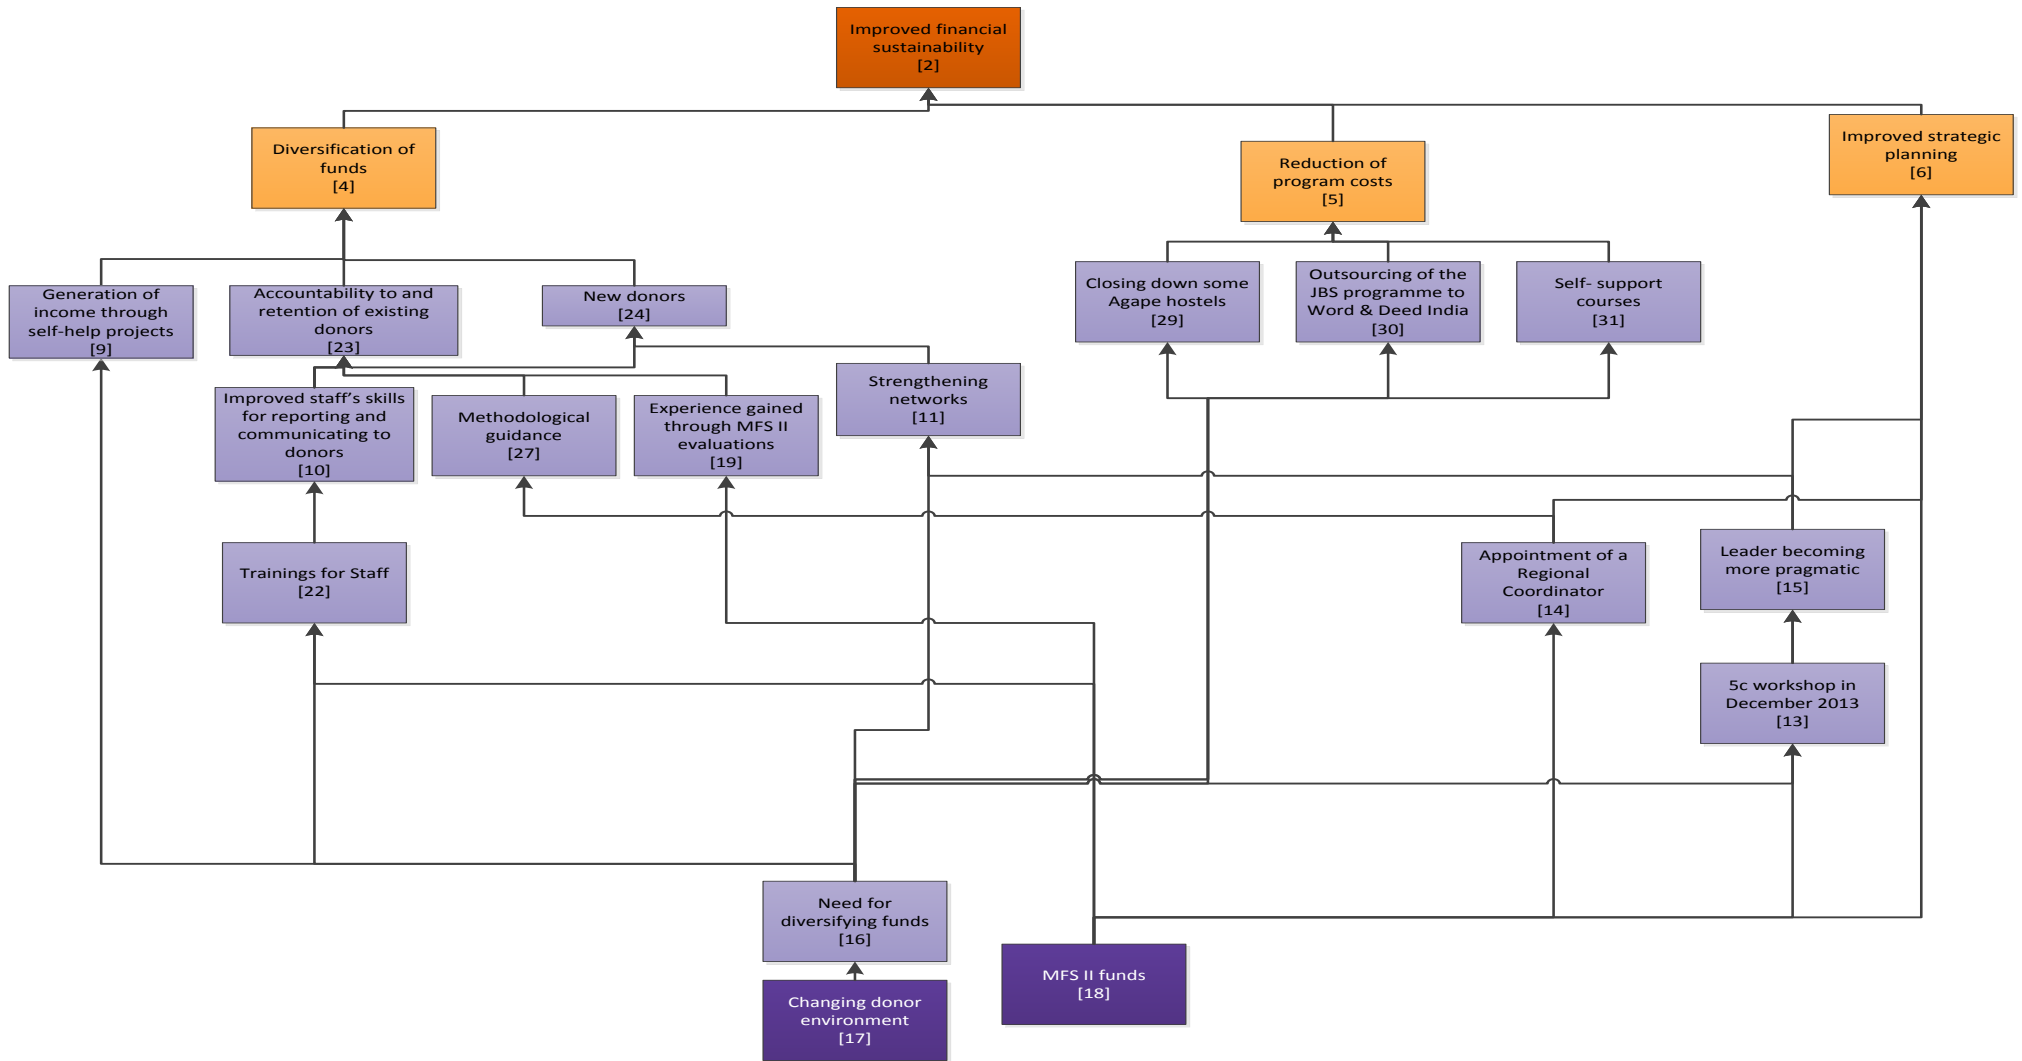

- diversification of funds [4];
- reduction of program costs [5]
- improved strategic planning [6]

These three changes are expected to lead to COUNT being more financially sustainable as an organisation [2]. They happened to coincide with the outcome areas that were chosen for process tracing, so as to get detailed information on how these changes in organisational capacity came about. Therefore the general causal map overlaps strongly with the causal maps developed for each of these outcome areas/organisational capacity changes to be analysed to during the process tracing. All the details about these changes in organisational capacity as well as the underlying factors that influenced these changes are described in the narrative and visual below.

These three key organisational capacity changes will be discussed in more detail in the related detailed causal maps, which were a result of process tracing.

The main factor that influenced these three key changes in organisational capacity is a changing donor environment [17]. The ending of MFS II funding and decision of the main funder Woord en Daad to phase out and stop funding COUNT after 2020, is important.

The three main organisational capacity changes are described in the light orange boxes and the key expected consequence (improved financial sustainability of COUNT) is noted above these cards in dark orange. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the organisation are listed at the bottom in dark purple. The narrative below describes per key organisational capacity change, the contributing factors as described from the top down. The numbers in the visual (Figure 1) correspond with the numbers in the narrative.

Diversification of funding [4]: COUNT has been funded by W&D since 1991 [Source: Historical timeline-Baseline report]. The phase out plan of W&D began in June 2010, and since then COUNT has been trying to develop and implement plans to become more self-sufficient and not be completely dependent on W&D [Source: COUNT Narrative strategic plans & budget for 2013-2020], since W&D will stop funding COUNT after 2020. Over the last two years, COUNT has diversified its funding sources by:

- *Generation of income through self-help projects [9]:* The Founders of COUNT [Source: interview with Founder cum chairman and Co-Founder cum administrator] have focused on being self-reliant ever since its inception and there have been consistent efforts by them towards raising their own income through self-help projects. In the period from 1978 to 1980, the Founder bought agricultural land at Chengicherla, Hyderabad with the financial support from a Dutch Businessman named Jacob van Rijswijk to make COUNT self-supportive [Source: Historical timeline, baseline report-COUNT, 2012]. The following efforts were made by COUNT in the last two years towards increasing income through self-help projects:
 - COUNT has developed an additional 10 acres of land for paddy cultivation in 2013 (initially only 5 acres of land was cultivated);
 - Planting tamarind, drumstick and hybrid coconut saplings in 2013. These are perennial plants and their produce is used by households throughout the year and therefore likely to be a sustainable source of income;
 - Buying 6 new buffaloes in 2013 for the purpose of selling milk;
 - Nurturing existing mango farms (1.5 acres) since 2013;
 - Growing vegetables like spinach, cauliflower etc. since 2013;
 - Buying eighty sheep in 2013 for the purpose of rearing them for meat. The idea is to rear them for 5-6 months and then sell them in the market;
 - [Source: Report Visit India May 2013.lst, Interview with the supervisor responsible for coordination of self-help projects]
 - The (edible) yield from the self-help projects is used for children in the Agape Hostels and the rest is sold either to the staff or to people in COUNT's networks since 2013 [Source: Interview with the supervisor responsible for coordination of self-help projects].
 - Two new colleges were started and will continue to raise income: (a) a teachers' training college in 2007 and, (b) a Master's programme in Business Administration in 2009. Both programmes have been initiated by the church and income raised from these colleges will mostly benefit the church/mission and their related activities mostly in the area of social and developmental issues. The set up was financed with a loan from the bank [Source: Report Visit India May 2013.lst].
- *Accountability to and retention of existing donors [23]:* This was because staff improved their skills to report and communicate to donors [10] [Source: 5C Endline Assessment Sheet_Dutch co-financing organisations India_COUNT_WoordenDaadCvB SN WB_NB_interview –response,pg 13]. Staff improved their skills in this area because of trainings [22][Source: 5C endline_support to capacity development sheet_CFAperspective_India_COUNT_WoordenDaad] methodological guidance [27] and experience gained through MFS II evaluations [19]. These are further explained below. .
- Methodological guidance [27] received by COUNT from Woord en Daad and the Regional Coordinator [14]. Both funded by MFS II [18]. Methodological guidance was provided on the data collection process for each outcome indicator. There is an Indicator Reference Sheet for each indicator that describes what each indicator means and how the data should be collected. For most of the indicators Excel sheets are created that the partner uses to collect and report data in a standardized way. This guarantees data quality. Moreover, for most of the outcome indicators a description of the entire data collection process is included. For indicators that need external facilitation or if the capacity of the partner to collect data is limited, an external consultant is hired [Source: 5C Endline Assessment Sheet_Dutch co-financing organisations_India_COUNT_WoordenDaadCvB SN WB_NB_interview –response,pg 13, Endline Evaluation workshop 2014 COUNT].
- Experience gained through MFS II evaluations [19]:ASK (Association for Stimulating Know How, based in Gurgaon, India) evaluated COUNT HIV / AIDS awareness program that addresses the

needs of the tribal community in Andhra Pradesh. Collected data was shared and findings were discussed with COUNT to identify points for learning, finding solutions, making decisions to strengthen the program. The finance manager's financial skills improved as a result of this evaluation. He was able to plan better and allocate funds more efficiently towards the project [Source: 5c endline_questionnaire_training_participant_perspective_India_COUNT_External evaluation of HIV/AIDS project 2013_Finance Manager]. Help a child of India (funded by Woord en Daad) evaluated COUNT with an aim to measure the progress of the programs for a number of outcome indicators. The study covered two schools of COUNT in Hyderabad and Jala i.e. St. John's high school and St. Zechariah's model school (both supported by Woord en Daad). Staff Members of COUNT present during discussion of the outcome study: The Program Manager, the education coordinator, Principals of both the schools, three teachers from St. Zechariah model school and one teacher from St. John's high school and the school warden) [Source: Outcome study report]. The staff members learnt about teaching methodologies, to monitor the outcomes of student performance, day to day administration of the school, impact of supervision on teachers and students, to improve quality of their work and in turn bring about improvement in quality of education [Source: 5c endline_questionnaire_training_participant_perspective_India_COUNT_Outcome studies with WoordenDaad]. These evaluations were funded by MFS II [18].

The following capacity building activities [22] were conducted in the past two years to strengthen staff's skills for communicating with donors [10], all these trainings were funded by MFS II [18]:

- Basic spoken English training [Source: Capacity Building 1, 2nd March 2013 Basic spoken English training] for the purpose of improving communication skills with the donors as well as for better report writing [Source: 10. India PDP COUNT 20-8-2013 (FINAL COPY)]. Funded by MFS II [18];
- Participation in the Sponsorship programme conference in May 2013 in the Netherlands by Woord en Daad [Source: K Samuel certificate PDP, nl]. The aim of the conference was to strengthen the sponsorship programme by improving communication with the donors using new methods and thereby improving accountability with the donors, to teach how to make personal development plans, to increase awareness of the changing global economic scenario and to train in WD CAP Adoption programme 2.0 version software for better reporting on status of the children [Source: report on NL, trip & PDP meeting with House parents, June 8th-13th, 2013]. This conference was organised by COUNT and funded by Woord en Daad, under MFS II [18];
- Training of the house parents by adoption/sponsorship department to assist the children in writing innovative greeting letters, providing interesting information and taking pictures for a regular update of the children to the donors and for improving accountability [Source: PDP Training to House Parents 2013 Pictures, report on NL, trip & PDP meeting with House parents 8th-13th, 2013]. Funded by MFS II [18];
- Training on WDCAP programme in October, 2013 by Woord en Daad. WDCAP is a software for tracking children's information and enables COUNT to provide regular updates to the donor [Source: REPORT ON WDCAP]. This training was given by Woord en Daad and also funded by MFS II [18].

A third reason for diversification of funds is that new donors were attracted [24]. For decades, COUNT had no need to look beyond its main funding partner Woord en Daad to relate and attract resources – at least for its financial requirements. This in turn, made the organisation an inward looking one and the only other “relationship” being with local government and regulating authorities. The fact that COUNT is now attracting funds from other funders like Free Methodist Churches (FMC) and Word and Deed Canada, is a consequence of COUNT strengthening its networks [11] [Source: Help a child India(HACI), TLMTI (The Leprosy Mission Trust India), Care Network, WDI, EHA; Health Bridge Alliance Meet TLM, Minutes, February 2013- Lobbying and advocacy, planning, strengthening of alliance]. The efforts to strengthen their networks are evident in the following examples:

- COUNT is a member of the Health Bridge Alliance and VIVA network. VIVA is an international organisation that works to bring sustainable change in the lives of children by strengthening and building capacities of networks in specific organisational development areas. COUNT has received the Viva quality mark certificate from Viva in April 2013 [Source: COUNT award certificate, <http://www.viva.org/model.aspx>]. In April 2014, staff of COUNT was trained in 'Quality

Improvement Systems training' by Blossoms Network together with VIVA for strengthening their networks with other organisations, on quality standards, and implementation of a child protection policy [Source: COUNT response on QIS]. COUNT also networks with other partner organisations of Woord en Daad in an effort to learn and share resources. An example is the effort made by COUNT and Word and Deed India to transfer the responsibility of getting job placements for the trained students under the TVET/JBS program, as they have more staff and hence more expertise in the field;

- In November 2012, there was a Health Bridge Alliance meet to discuss fundraising, on the need to tap both domestic and international donors. There was discussion on the need to use different strategies for approaching both these donors and not hiding their Christian identity as a lot of funding is for religious and/or charity activities in India [Source: Madurai Minutes-HBA Nov 2012].

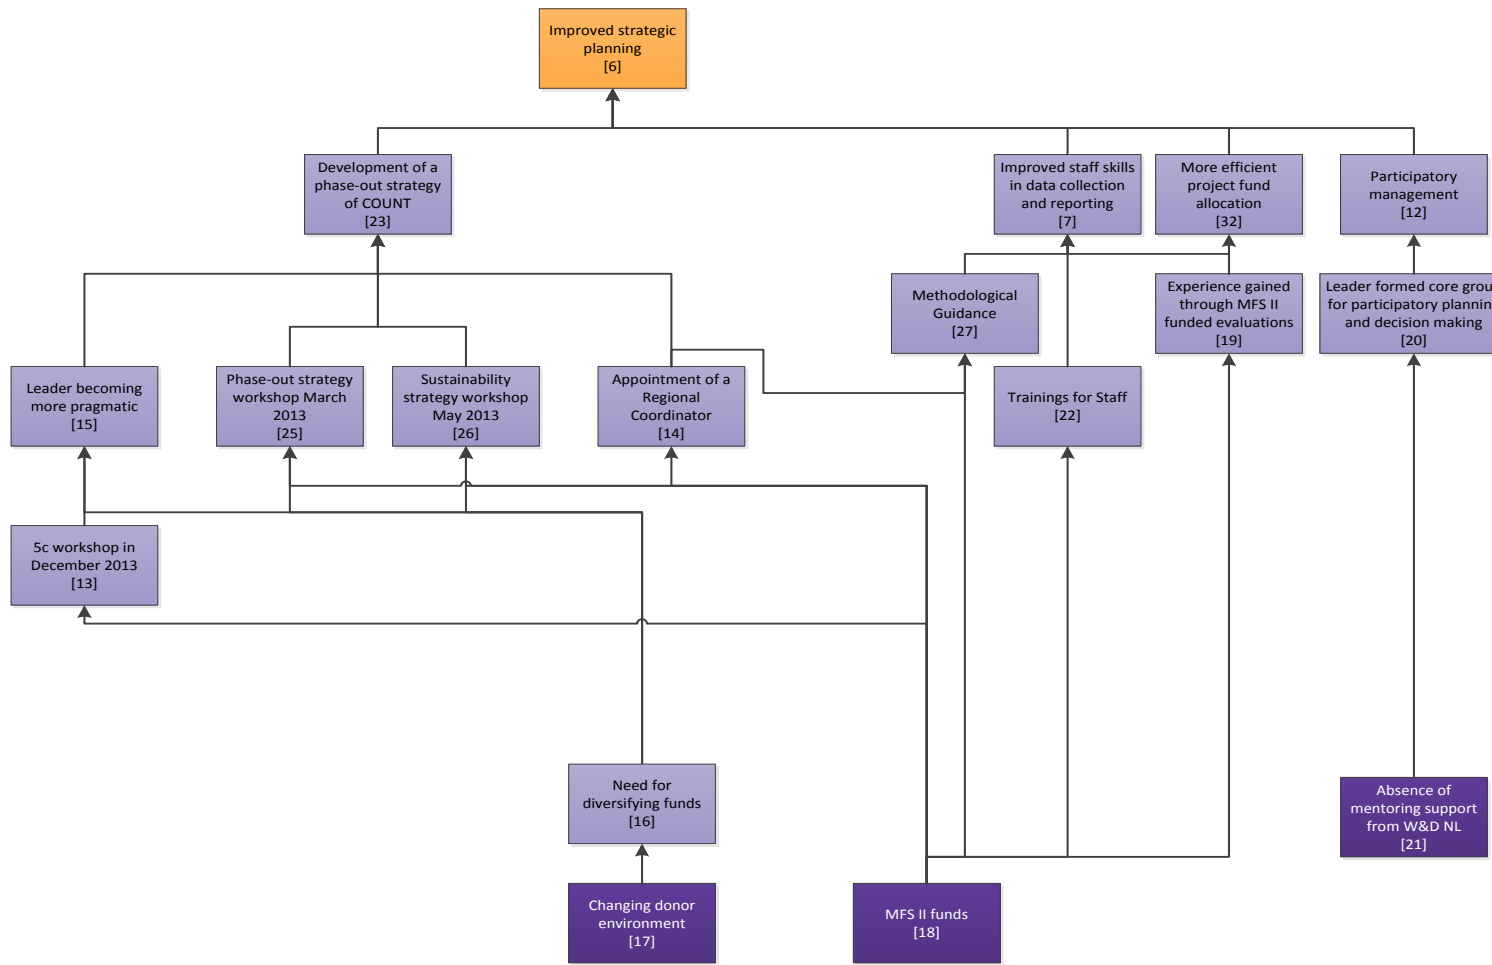

The trainings [22], the income generation self-help projects [9] and the strengthening of networks [11] were undertaken because of an increasing need to diversify funds [16], coming from a changing donor environment [17], where Woord en Daad is phasing out its support.

Reducing costs of programmes [5]: COUNT is furthermore contributing to financial sustainability of the organisation by reducing programme costs, which is done through closing down some of the smaller Agape hostels and focusing only on Agape hostels in their headquarters in Chengicherla [29] [Source: Overview WD-India sustainability strategies-count]. In 2012-2013, COUNT started a new approach called "transferred kids programme" with the aim of transferring of kids to government schools and providing some support to the parents for their children's education. COUNT wanted to ensure that the children who drop out every year, receive a minimum support for one year to meet their basic necessities like note books, stationary and a Christmas gift and the funds for these would be met by the income from the self-help projects. The children in the Agape homes will either be dropped, join government facilities or will be transferred to the Central Agape home in Hyderabad. However, unexpectedly COUNT has had a large number of school dropouts in 2013. This led COUNT to reduce the number of children being phased out of the program. [Source: COUNT Narrative strategic plans & budget for 2013-2020;1073008.2012.donor assessment; Count 2013 Education Donor assessment final].

Another way of reducing programme costs has been the outsourcing of the JBS part of the TVET programme to Word & Deed India in 2013 [30]. This decision was made because of the poor financial sustainability of the TVET Programme of COUNT [Source: Analysis TVET-JBS Quality Score Cards COUNT India; Report Visit India May 2013]. Also, COUNT did not have sufficient trained staff who could help in seeking employment opportunities for the students. [Source: Interview with TVET coordinator]. Word and Deed India is a partner of Woord en Daad NL, just like COUNT. COUNT was able to outsource the JBS part of the TVET programme to Word and Deed India because W&D NL linked them up to them [33] in the TVET programme that is funded under MFS II [18].

Furthermore, in the tribal areas, there is a pilot programme in which self- support courses [31] are run by graduate students and the trainees are required to pay a small fee to sustain this course. The aim is to reduce the expenses of board and lodging which would have been there had the students been trained at the headquarters [Source: Report Visit India May 2013.lst].

Reducing programme costs [5] through closing down some of the Agape hostels [29], outsourcing JBS to Word and Deed India [30] and the self-support courses [31], was triggered by a need to diversify funds [16] because of the changing donor environment [17].

Improved strategic planning [6] was the third key change in the organisation, which is expected to contribute to financial sustainability of COUNT. Improved strategic planning is important to contribute to financial sustainability of the organisation because COUNT developed the strategies to reduce costs and generate income.

There are four main reasons why strategic planning has improved [Source: 5C Endline Assessment Sheet_Dutch co-financing organisations_India_COUNT_WoordenDaad]: development of a phase-out strategy of COUNT [23]; improved staff skills in data collection and reporting [7]; more efficient project fund allocation [32]; and participatory management [12]. These changes are further described below.

Development of a phase-out strategy of COUNT [23]: COUNT is aware that W&D will phase out their funding of the TVET and education programme of COUNT in 2020, and therefore, since 2010, together they have been working on the development of a phase-out strategy. COUNT has been trying to develop and implement plans to become more self-sufficient and not be completely dependent on W&D. The phase-out strategies were thought out for different programmes which further helped in the strategic planning. According to the exit phase out strategy of W&D, the education program of COUNT will have a gradual decrease at the rate of 10% in the number of children and in the budget every year. As of now in 2013- 2014, W&D, NL is sponsoring 604 children and COUNT envision that even after the gradual phase out in 2020 they will continue supporting 550 children through Churches, self-help projects and other local support. During the phase out of children, who are dropped each school year, COUNT will support them for one year with school books and stationary through our agriculture projects. They will also be assisted, encouraged to join the government school or hostel to continue their education. To focus on developing infrastructure facilities in the Agape centre for accommodating 550 children in the agape homes and school. As of now there is enough room to accommodate 300 children. Funds will be raised to develop facilities through the agriculture self-help projects, collection of fees, contributions from graduates, donations, etc. At the Agape centre, Hyderabad, Andhra Pradesh, by the end of 2020 COUNT will be having 360 sponsorships supported from FMC (60 children each year) and another 190 new children will slowly phase in and will be supported through the self-help projects of COUNT [Source: COUNT Narrative strategic plans & budget for 2013-2020].

In the TVET programme students from surrounding areas will pay and learn in the centre. The students will pay a small fee and enrol into the course for training. Both long term (1 year) and short term (3-6 months) training courses will be introduced. The focus would be more on sustainability of the program through income generation from each department through sales and providing services. E.g.: electrical contract works, take up job orders, servicing bikes, repairing works from auto mobile course, stitching clothes, school uniforms, embroidery works on sarees, dresses, etc. [Source: COUNT Narrative strategic plans & budget for 2013-2020].

Through income generating resources programme COUNT has been able to raise a small income on a regular basis through its self-help agriculture projects. The agriculture, self-help projects is spread out in all the regions where COUNT is having its own land for Agape homes (5 centres) and church ministry. Through the years COUNT has been planting various seasonal crops, fruits and vegetables which are sold and a regular income came in, which was used for children, investments, and church ministry [Source: COUNT Narrative strategic plans & budget for 2013-2020].

This **development** of this phase-out strategy was mainly a result of:

- The **leader becoming more pragmatic** [15]. Another important factor that has led to the development of the phase out plan, in which strategies for diversifying funds are included, is that the leader became more pragmatic in his thinking, he now strategizes more in the long term and thinks about how to obtain alternative funds. It is said that the need to be more outward looking, and regular interaction with staff during meetings, mainly on strategic and operational plans have contributed to this change in the leader [Source: 5C endline_support to capacity development sheet_CFAperspective_India_COUNT_WoordenDaad]. The change in the leader's thinking [15] can be explained by:
 - The overall need to plan strategically and diversify funds [16] that arises from the changing donor environment [17] [Source: 5C EndlineAssessmentSheet_Dutch co-financing organisations_India_COUNT_WoordenDaadCvB SN WBNB_interview]

- The 5c workshop in December 2013 [13][Source: 5C endline_support to capacity development sheet_CFAperspective_India_COUNT_WoordenDaad SN WB_NB_interview]. This workshop was facilitated by the regional coordinator of W&D , India on 2-3 of December 2013. It gave COUNT another opportunity to review its strengths, weaknesses, skill gaps and capacity buildings opportunities. This was then used in drawing up the annual plan and the budgeting activity plan for the next year [Source: 5C Endline Assessment Sheet_Dutch co-financing organisations_India_COUNT_WoordenDaadCvB SN WB_NB_interview]. This workshop was funded by WoordenDaad under MFS II [18].
- **The Phase-out strategy workshop March 2013** [25] This workshop was held in March 2013 for COUNT by Cees van Breugel of Woord en Daad, implemented and funded by MFS II [18]. This workshop was organised in light of the need for diversifying funds [16] because of the changing donor environment [17], which includes the phasing out of the Woord en Daad support by 2020. This workshop influenced both the leader and the functional staff and helped them to understand the importance of making TVET as a sustainable programme of the phase-out plan[Source: 5C endline_support to capacity development sheet_CFAperspective_India_COUNT].
- **Sustainability strategy workshop May 2013** [26] [Source: 5C endline_support to capacity development sheet_CFAperspective_India_COUNT_WoordenDaad SN WB_NB_interview - response WB]. This workshop was held in May 2013 at COUNT, facilitated by Leen Stok (of Woord en Daad) and Samuel Nirmal (Regional Coordinator) and funded by MFS II [18]. The objective of the workshop was to discuss on strategies for education programme and TVET/JBS programme, in light of the need for diversifying funds [16] because of the changing donor environment [17], which includes the phasing out of the Woord en Daad support by 2020. The achievement during 2012-14 was reviewed. Gaps, risk factors and challenges were traced out, follow up action points were set, and capacity building of the staff and income generation activities were discussed to further improve the strategy [Source: COUNT Overview sustainability strategies - COUNT workshop May 29-30 2013].
- **Appointment of a Regional Coordinator** [14]: A Regional Coordinator has been appointed [Source: Narrative strategic plans & budget for 2013-2020] to serve as a link between India partners and W&D, to help with monitoring without the need for frequent visits from Woord en Daad people and to act as an advisor and help whenever required to do so [Source: Core group minutes, July 12]. One of the reasons of his appointment is to help with strategies; he has also been involved in the sustainability strategy workshop and in that way is contributing to the development of the sustainability plan of COUNT [23].

The second reason for improved strategic planning for financial sustainability is based **on improved staff skills in data collection and reporting**. The development of this skill was mainly a result of:

- Methodological guidance received by COUNT [27] from Woord en Daad (funded by MFS II [18]) and the Regional Coordinator [14] through for example a description of the data collection process for each outcome indicator [Source: 5C Endline Assessment Sheet_Dutch co-financing organisations_India_COUNT_WoordenDaadCvB SN WB_NB_interview -response,pg 13].
- Trainings on reporting [22] [Source: 5C endline_support to capacity development sheet_CFAperspective_India_COUNT_WoordenDaad SN WB_NB_interview]:
 - Basic spoken English training [Source: Capacity Building 1, 2nd March 2013 Basic spoken English training] for the purpose of improving communication skills with the donors as well as for better report writing [Source: 10. India PDP COUNT 20-8-2013 (FINAL COPY)]. Funded by MFS II [18].
 - Participation in the Sponsorship programme conference in May 2013 in the Netherlands by Woord en Daad [Source: K Samuel certificate PDP, nl]. The aim of the conference was to strengthen the sponsorship programme by improving communication with the donors using new methods and thereby improving accountability with the donors, to teach how to make personal development plans, to increase awareness of the changing global economic scenario and to train in WD CAP Adoption programme 2.0 version software for better reporting on status of the children [Source: report on NL, trip & PDP meeting with House parents, June 8th-13th, 2013, PDP training at Netherlands]. This conference was organised and funded by Woord en Daad, under MFS II [18].
 - Training on WDCAP programme in October, 2013 by Woord en Daad. WDCAP is a software for tracking children's information and enables COUNT to provide regular updates to the donor

[Source: REPORT ON WDCAP]. This training was given by Woord en Daad and also funded by MFS II [18].

- COUNT staff gained useful PME experiences in collecting data through MFS II funded evaluations [19] [Source: 5C endline_support to capacity development sheet_CFAperspective_India_COUNT_WoordenDaad SN WB_NB_interview]:
 - External Evaluation HIV/AIDS program by ASK (funded by W&D) June-July 2013 [Source: 12.94.004 - WDI and COUNT Midterm Evaluation report Basic Needs programs- final version; 5C endline_support to capacity development sheet_CFAperspective_India_COUNT_WoordenDaad SN WB_NB_interview - response WB]. This evaluation took place from the 24th June to 2nd July 2013 and was done by Monica Ramesh (lead evaluator) and ChayanikaKunjwal (Co-evaluator) of ASK (Association for Stimulating Know How, based in Gurgaon, India) and evaluated the COUNT HIV / AIDS awareness programme that addresses the needs of the tribal community in Andhra Pradesh. Collected data was shared and findings were discussed with COUNT to identify points for learning, to find solutions, and to make decisions to strengthen the programme.
 - Outcome study on Quality of Education October 2013 (funded by W&D) [Source: 5C endline_support to capacity development sheet_CFAperspective_India_COUNT_WoordenDaad SN WB_NB_interview - response WB,pg 16-17;COUNT-Outcome Study Report]. These outcome studies were conducted from 26-28 October 2013 by two experts: one external expert and one internal expert from Help a child India (funded by Woord en Daad), and had the aim to measure the progress of the programmes for a number of outcome indicators. The study covered two schools of COUNT in Hyderabad and Jala i.e. St. John's high school and St. Zechariah model school (both supported by Woord en Daad). Staff members of COUNT were present during discussion of outcome study: the project and programme manager, the coordinator for schools, principals of both the schools, three teachers from St. Zechariah model school and one teacher from St. John's high school and the warden [Source: Outcome study report]. The staff members learnt about teaching methodologies, how to monitor the outcomes of student performance, day to day administration of the school, impact of supervision on teachers and students, to improve quality of their work and in turn bring about improvement in quality of education [Source: 5c endline_questionnaire_training_participant_perspective_India_COUNT_Outcome studies with WoordenDaad _G. Shanthi; K.BhavyaBhavani; K.Samuel; Mrs. Susheela; N SudhirSudakar].
 - TVET Score Card Assessment March 2013 (funded by W&D) [Source: 5C Endline Assessment Sheet_Dutch co-financing organisations_India_COUNT_WoordenDaad]. A lot of issues with TVET have improved as a follow up of the score card [Source: Analysis TVET-JBS Quality Score Cards COUNT India]. A positive experience in 2013 had been that there was a considerable difference in improving COUNT's quality score at the program level. Several action plans were implemented through last year and COUNT was able to review our bottlenecks and taken steps to improve further for the coming year [Source: COUNT TVET- JBS 2012-2013 AIR end memo].

The third reason for improved strategic planning is **more efficient project fund allocation [32]**. The finance manager's financial skills improved as a result of the external evaluation of the HIV/AIDS program by ASK (funded by W&D) in June-July 2013 [19]. He was able to plan better and allocate funds more efficiently towards the project [Source: 5c endline_questionnaire_training_participant_perspective_India_COUNT_External evaluation of HIV/AIDS project 2013_Babu Rao].

The fourth reason for improved strategic planning is **participatory management [12]** [Source: Core group minutes, workshop with COUNT]. In 2013, the leader of COUNT formed a core group [20] comprising of experienced members of the staff for participatory planning and decision making. The minutes of the core group reveal that core group discussions are held regularly and some of the topics discussed are approaches to reach new funders, and generation of internal funds. This core group was formed because the leader realised that in absence of mentoring support from W&D [21] he would have to look for help and guidance within COUNT.

Centre for Development Innovation
Wageningen UR
P.O. Box88

www.wageningenUR.nl/cdi

Report CDI-15-003

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Final Report MFS II Joint Evaluations

Country	India
Consortium	ICCO Alliance
Responsible Dutch NGO	ICCO
Project (if applicable)	COFA (Chetna Organic Farmers Association) Institution Building
Southern partner organisation	Forum for Integrated Development (FFID)

The project/partner is part of the sample for the following evaluation component(s):

	X
Achievement of MDGs and themes	X
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

1. Introduction

This report presents the findings of the evaluation of a project funded and supported by ICCO and implemented by COFA in rural areas of Andhra Pradesh and Orissa, India. The project was initiated to alleviate the poverty of cotton farmers in rain-fed regions in India. We begin the report by describing the context of the project and provide a description. This is followed by a data description, sampling, and results. The final section contains concluding remarks.

2. Context

The COFA project was initiated to alleviate the poverty of cotton farmers in India and was initiated in the southern state of Andhra Pradesh (AP). For many farmers and their families cotton cultivation has been associated with debt, decreased food security and soil deterioration. While farmer suicide is prevalent in several states, Maharashtra remains the worst single state for farmer suicides for over a decade now¹.

AP, where this project was initiated, is made up of three regions, coastal Andhra, Rayalaseema and Telengana. These regions display vast variations in socio-economic and cultural conditions. AP has the distinction of being the first state to be created in post independent India on the basis of language in 1953. This region has a very distinct historical background. The Telengana region and part of the Rayalaseema region was under the Princely state of Hyderabad ruled by the Nizam. The rest was under the Madras Presidency of British India. Development in terms of education, institutions, tax structure and cultural values differed accordingly. Even in terms of social movements and civil society articulation, these regions continue to display contrasting trajectories. While the 'backward' Telangana region has seen mobilisation of the rural poor and youth by the radical left on the basis of class, the developed coastal region has witnessed an emotional mobilisation on the socio-cultural identity of caste. Broadly, two aspects can be identified in the State's response to these movements: i) public policy initiatives addressing the issues raised by them; and ii) repressive measures on them. During the early 1950s, the Telengana movement by the Communist party of India was strongly suppressed by the state by using armed forces. The State's response to the agrarian movements was predominantly one of addressing the causes of rural discontent.

¹ <http://www.thehindu.com/opinion/columns/sainath/article3595351.ece>

We therefore see measures such as land ceiling acts and anti-poverty initiatives. This can be called the strategy of co-option. In the post-Emergency period, a clear shift towards a coercive strategy took place.

The Scheduled Castes and Scheduled Tribes account respectively for 16.2% and 6.6% of the total population of AP. About one-tenth of the state population belongs to a religious minority community. Together, the population belonging to disadvantaged castes and minority communities accounts to about one-third of the state population. AP is also the third largest economy in India in terms of Gross State Domestic Product (GSDP). Andhra Pradesh's economic growth path has been commendable especially during the last three decades. Starting from a relatively lower per capita income, Andhra Pradesh has surpassed the national average about a decade ago. Although the state's performance is impressive in terms of economic growth when compared to its past and when compared to rest of the states in India, its overall development is judged as moderate. Its performance in terms of social sector indicators such as literacy and skills has not been impressive enough on a comparative scale.

COFA is now active in three states of India, Andhra Pradesh (2 districts-Adilabad and Karimnagar), Odisha (5 districts-Kalahandi, Bolangir, Rayagada, Nuapada, and Koraput) and Maharashtra (3 districts- Akola, Amravathi, and Yavatmal). The evaluation of this project was done in Odisha (in Kalahandi district) which is the poorest of the three states in which COFA is active.

Of the five districts in which COFA is active, Bolangir has a poverty rate of 55 percent, Rayagada 72 percent, Kalahandi 72 percent, Nuapada 86.55 percent, and Koraput 84 percent². In comparison, AP has a poverty rate of 6.93 percent (rural) and 17.25 percent (urban). In contrast to these sharply different figures, five yearly growth rate of gross domestic product (2007-2011) are not very different across these three states. For instance, AP had a growth rate of 6.6 percent; Odisha had a growth rate of 6.95 percent, while Maharashtra had a growth rate of 8.28 percent.

² Small Area Estimation (SAE) results by IDF using NSSO 2004-05 and Census of India 2001 data. For more details refer to the report by IDF on Generating Poverty Estimates using SAE submitted to Planning Commission in July 2011.

Odisha is in the eastern coast of India and comprises 3.47 percent of India's population (11th largest). According to 2011 census, Odisha has 16.5 percent Schedules Caste population and 22 percent Scheduled Tribe population³. The southern part of Odisha is one of the poorest regions. The districts of Koraput, Bolangir and Kalahandi (popularly known as KBK districts) in Odisha have been further divided into eight districts since 1992-93. These are Koraput, Malkangiri, Nawrangpur, Rayagada, Bolangir, Sonepur, Kalahandi and Nuapada. The KBK districts account for 19.8 percent of the population of the state. Tribal communities dominate this region.⁴ The state also faces left-wing extremism.

In addition to focusing on impoverished regions, COFA has also concentrated on cotton farming in rain-fed regions by small-holder farmers which is beset with its own set of challenges. Cotton cultivation in rain-fed areas is fertilizer-intensive, and farmers have little choice over seed inputs. Farmers are also faced with problems such as soil degeneration, eco-system imbalance, increasing costs and uncertainty over the international price of cotton. Features of rain-fed agriculture include 1) Non-access to Irrigation, 2) dependence on rains 3) uncertain harvest, 4) risks such as floods/drought. Such issues are particularly relevant for small holder farmers who also face issues such as 1) land fragmentation, acute poverty, social exploitation, food vs. cash crop dilemma, increased labor costs, forced migration and the psychological consequences of debt and poverty.

With this as backdrop, the COFA project is aimed at improving livelihood options for smallholding cotton growers in rain-fed regions in India. The capacity of small farmers is strengthened by helping them to make the right investments in agriculture, arrive at the right formula for the costs of organic crops and by making technology extension services available to them. To make organic farming profitable, market facilitation and linkages were also made mainly with the organic and fair trade markets. Chetna Organic Agriculture Producer Company Limited (COAPCL), a farmers owned company was incorporated in 2009 to facilitate all activities pertaining to the supply chain from farming to market and then on to the ultimate consumer.

³ Calculated using SC/ST proportions to total population of the state in 2001 census

3. Project description

a. Project duration and budget

COFA is an ongoing organic & fair-trade supply chain development project in cotton which was initiated in Solidaridad in 2004 in partnership with various governmental, non-governmental and private agencies. The project was supposed to be completed in 30 September 2011. The initial budget was €700,000.00. They received a no cost extension until March 2012. After this, they applied for extension of this funding and an additional EUR 134,215 from MFS II funding was granted to them for the period between 1 April 2012 and 30 September 2014. Therefore, for the purpose of this evaluation and the research design, we have treated this as an ongoing project.

b. Project objectives, activities, theory of change

The COFA project aims to improve the livelihood options of Indian small farm holding households involved in cotton cultivation through making their farming systems more sustainable and more profitable.

The inputs for this project are financial resources from ICCO which are used towards institution building. As this is an outgrowth of an on-going project, the rapidly increasing number of participating farmers resulted in the need for building institutional resources within COFA. Actions have been undertaken to build institutions. Examples of such actions are trainings to farmers, organizing farmers into self-help groups (SHGs), support to farmer groups to develop a spirit of entrepreneurship, organizing exposure visits, writing and dissemination of training manuals in vernacular languages, maintaining functional certification (for organic cotton) and full functionality of the COFA website.

Stylized result chain

Input:

Financial resources from ICCO which are used for institution building. As this is an outgrowth of an on-going project, COFA anticipated the need for building institutional resources within COFA to service the rapidly increasing number of participating farmers.

Activities:

Activities are focussed on building institutions. Examples of such actions are trainings to farmers, organizing farmers into self-help groups (SHGs), support to farmer groups to develop a spirit of entrepreneurship, organizing exposure visits, writing and dissemination of training manuals in vernacular languages, maintaining functional certification (for organic cotton) and full functionality of the COFA website.

Output:

There are three main outputs of the COFA project:

1. At the end of the project, 15,000 farmers participate for one year or longer in organic farming and produce cotton and/or other crops for local and/or international markets.
2. Through participating for one year or longer in organic farming, the farmers have increased income with 40% in relation to income from farming in the course of the programme.
3. At least 1/3 of the participating farmers are female.

Impact/outcomes:

Through the above mentioned outputs, the final outcome of poverty alleviation would be achieved by having the farmers participate in organic farming practices which leads to achieving more sustainable and profitable farming practices. Organic farming also leads to reduced input costs for the farmers in terms of fertilisers, pesticides, etc. as compared to conventional non-organic farming. The market linkages facilitated by COFA allow for the organic cotton grown by farmers to be sold profitably through cooperatives.

4. Data Collection

a. Household Survey

Given that one of the aims of COFA that farmers experience an increase in income by 40% in relation to farming, we have tried to identify the effect of COFA's intervention on

socio-economic well-being by measuring changes in socio-economic indicators from a household survey administered at two points in time (in 2012 and 2014). The main focus of the evaluation is on measuring the increase in income as a result of participating in this program. To this end, we compare household-level outcomes in treatment and control villages at two points of time - that is, in 2012 and in 2014 and calculate difference-in-differences estimates. Since measuring income is fraught with measurement issue problems in this setting and there is very little saving, we instead measure monthly household consumption.

With a view to get an idea of the sustainability of the project in terms by examining the views of farmers, we asked questions relating to attitudes towards organic farming among farmers both in control and treatment groups. To this end, we included a short set of questions in both the baseline and end line surveys on organic farming attitudes.

Sampling Design

Two rounds of data have been collected. The first of these was collected in 2012 and the second round of data in 2014 in the month of October (we ensured that we interviewed the households in the same month in the baseline and endline as these were agricultural/rural households and consumption is more likely to be determined by calendar than in the case of suburban/service sector households. We surveyed 1200 households in Kalahandi district of Orissa for the study (600 households in treatment groups and 600 households in control groups).

The sample decided by the project implementation team for this project was a total of 1200 observations. Given this total sample size, we opted for a balanced split between controls and treatment (600 controls and 600 treatment groups). The survey collected a range of information on socio-economic characteristics and demographic structure of households.

We divided our sample into treatment groups and control groups as follows in the baseline:

Treatment groups

We divided the treatment group into three types of small and marginal farmers in Kalahandi district of Odisha.

1. **200** new farmers who had just started in the program in 2012 in Nishanpur GP (Gram Panchayat) of Narla block (T1)
2. **200** farmers (those were in the first year of conversion to organic status) in Bhawanipatna block (T2) in 2012.
3. **200** fully Organic farmers in Bhawanipatna block (T3) in 2012.

Control groups

1. **300** small and marginal farmers (who were practicing non-organic cotton farming) in a nearby area where COFA is planning to provide an intervention in the future (Ullikuppa GP of Narla block) (C1)
2. **300** small and marginal farmers in the current area of intervention who have opted not to join the COFA intervention in Nishanpur GP of Narla block-**300** (C2)

The table below lists the distribution of the sample into control and treatment groups in the baseline.

Treatment and control groups	Definition	Sample size
T1	New farmers who have received the COFA intervention this year	200
T2	farmers (those who are in the first year of conversion to organic status)	200
T3a	Fully Organic farmers (3 years of conversion to organic) (Matrubhumi-1)	100
T3b	Fully Organic farmers (3 years of conversion to organic) (Matrubhumi-2)	100

C1	Farmers in a nearby area where COFA plans to intervene next year	300
C2	Farmers in the current area of intervention who have not joined the COFA intervention	300
Total		1200

Matrubhumi-1 and Matrubhumi-2 are two groups corresponding to two different cooperatives (an organizational unit at a higher level than an SHG). On the basis of t-tests, we find that mean consumption is not significantly different between these two groups. Similarly, statistical tests show that they do not differ in terms of socio-demographic characteristics. For this reason we pool the groups originating from these two different cooperatives and treat them as one. We were fortunate that there was no attrition in the data. We did not experience any data problems (except due to some delay due to festivals and rain); the local COFA representatives were very cooperative and we were able to re-interview both treatment and control groups in October 2014.

Since we have different control groups and different treatment groups, we are able to make a number of comparisons. We might expect that there are spillover effects on the control group (C2) as these farmers have been exposed to information about COFA and have chosen not to join COFA. C1 is a group that is likely to be less contaminated by spillover effects as they are in another gram panchayat (Ullikuppa) where there is no intervention as yet.

Description of the Data

We now briefly describe some features of the socio-demographic characteristics collected in the household survey. In the regions in which both the control and treatment groups were surveyed, both control and treatment groups were almost 99% Hindu, so it was not meaningful to include religion as a control variable. Almost all households in both treatment and control groups are self-employed in agriculture and own their homes. This is not surprising for the treatment group as COFA targets self-employed farmers who have decision-

making power over agricultural decisions (i.e. in terms of opting for organic vs. non-organic farming). Similarly with the emphasis on social upliftment, COFA focuses on backward classes and tribes. Therefore, 99% of the sampled households belong to scheduled castes/tribes or other backward classes. This percentage is very similar for the control groups, most likely as they are in either the same gram panchayats or nearby ones and there is substantial geographical segregation prevalent among classes in India. The only variation we found was in the source of lighting, some households seem to have access to electricity while others state that the kerosene lamp is their main source of light. For other categories such as 'kucha/pucca' (temporary vs. solid/concrete constructed) homes, the use of woodchips and firewood as cooking fuel and toilet usage (open defecation in almost all cases), we could not reject the null hypothesis that the population means for these categories were equal across treatment and control groups when we conducted t-tests. For this reason we include only household characteristics which varied significantly across treatment and control groups.

b. Field Visits and Documentation

Additional Data was collected through discussions with project staff and field visits. We first visited the local ICCO representative in New Delhi and next visited the COFA head office in Hyderabad where we interacted extensively with project staff and collected documentation.

Two field visits were made to villages in the vicinity of Karimnagar and Adilabad in Andhra Pradesh. These are villages where COFA has been introducing organic farming practices for some years now. During these visits, we visited field sites where organic cotton was being cultivated, grain repositories, vermiculture installation pits and a watershed installation (as these are rain-fed regions). In addition, as some villages had invested the gains to organic farming in village specific assets, we visited a water purification plant, a center for cleaning and repackaging of rice and lentils, and a vocational center for computer training for youth. We interacted with members of two SHGs and spoke with training staff. These field visits gave us insights on the practicalities of how trainings are administered. We were also able to view documentation on trainings, membership registers and schedules of meetings/trainings.

We now present some descriptive statistics on our main outcome variable.

**Table 1. Summary Statistics on Monthly Consumption Across Different Groups
measured at the time of the Baseline Survey**

Treatment and control groups	Definition (Monthly Household Consumption)	Sample size	Mean (std. dev) in Rs.
T1	New farmers who have received the COFA intervention this year	200	3100.46 (1564.30)
T2	farmers (those who are in the first year of conversion to organic status)	200	2880.45 (1319.11)
T3a	Fully Organic farmers (3 years of conversion to organic) (Matrubhumi-1)	100	2809.47 (1051.30)
T3b	Fully Organic farmers (3 years of conversion to organic (Matrubhumi-2)	100	3433.69 (1498.66)
C1	Farmers in a nearby area where COFA plans to intervene next year	300	2577.98 (1456.72)
C2	Farmers in the current area of intervention who have not joined the COFA intervention	300	2822.30 (1373.43)
Total	All farmers in Baseline (both Control and Treatment groups)	1200	2867.14 (1424.44)

**Table 2. Summary Statistics on Monthly Consumption Across Different Groups
measured at the time of the Endline Survey**

Treatment and control groups	Definition (Monthly Household Consumption)	Sample size	Mean (std. dev) in Rs.
T1	New farmers who have received the COFA intervention this year	200	2988.05 (1873.39)
T2	farmers (those who are in the first year of conversion to organic status)	200	3396.46 (1936.88)
T3a	Fully Organic farmers (3 years of conversion to organic) (Matrubhumi-1)	100	3808.76 (2033.96)
T3b	Fully Organic farmers (3 years of conversion to organic) (Matrubhumi-2)	100	3704.403 (1802.063)
C1	Farmers in a nearby area where COFA plans to intervene next year	300	2806.87 (1659.46)
C2	Farmers in the current area of intervention who have not joined the COFA intervention	300	3114.94 (1954.40)
Total	All farmers (both Control and Treatment groups)	1200	3170.57 (1886.73)

From the summary statistics we see that farmers who are in the first year of conversion to organic farming can sometimes even have lower average monthly consumption than new farmers who are just starting the program. We see this in the summary statistics from the baseline. We see that even T3a farmers have a lower monthly consumption than farmers as they start in the program. However, these same group of farmers (T3a) have much higher monthly consumption at the endline reaffirming evidence from earlier research that the gains

to organic farming to farmers are visible in the long-term (Eyhorn, Ramakrishnan and Mäder, 2007).

Regarding the other output of COFA, that 1/3 of the participating farmers should be female, we are not able to determine to what extent this outcome has been reached on the basis of the survey data that has been collected in the two rounds of data collection. Since we interviewed households we found that in almost all cases the reported head of household was male. Among the 600 treatment group households in the baseline, only 18 households reported a female head while among the 600 control group households, 31 reported a female head of household. Given that there was no attrition, this is the same in the endline. We know that almost all the surveyed household heads (predominantly male) were self-employed in agriculture. Among the women in the household, the majority (43%) stated that their primary activity was household duties while 31% reported to be self-employed in agriculture. Another 7% were gave their primary occupation as other labour activities with the remainder spread across other occupations. This distribution is almost the same between control and treatment groups. We have concluded that we cannot address this question within the framework of a household survey over the short time interval of the MFS-II evaluation. Given the status of women in the Indian village setting, this is a difficult question to collect information about. A long-term measurement of the participation of women in the treated areas in agriculture would be more appropriate.

Based on the household surveys conducted as part of the MDG evaluation, it is difficult to judge how an output such as increasing female representation achieves poverty alleviation. Certainly improving the decision-making power of women is a worthy goal in and of itself particularly in the Indian setting. However, if women participate in trainings but revert to their main occupation which is household duties, the trainings given to these women may not be the most efficient use of resources. Of course, some of the women are engaged in agriculture and may be involved in decision making regarding the choice of organic vs. non-organic agriculture. For such women, the trainings would be useful. Perhaps if the well-being of women is to be addressed, an alternative goal that explicitly addresses this issue might be set and evaluated. A numerical goal per se in terms of participating female farmers, unless it translates into the well-being of women and families, is in our view difficult to evaluate.

In order to evaluate the third output which is a 40% increase in income as a result of participating in organic farming, we assess this via difference-in-difference estimations which we discuss next.

Difference in Difference Estimates

We present difference-in-difference estimation results for the treatment group vs. the control group. Our estimations are presented in the tables in the appendix (Tables A1 through A4).

In these estimations, we compare the treatment group to a control group. Note that there are actually two sets of control groups (C1 and C2). C1 is a group of farmers from an area where COFA plans to intervene in the future while C2 comprises farmers in the current area of intervention who have opted *not* to join COFA. We find that the monthly consumption of C2 farmers is significantly higher than those of C1 farmers. That is, farmers who have opted not to join COFA have a higher monthly consumption than the control group of farmers in an area that COFA plans to intervene in the future. The difference amounts to approximately Rs. 245 in the baseline and Rs 300 per month in the endline. This is not surprising, as it is likely that the very reason that C2 farmers have not joined COFA is because they are more well-off, and are less likely to see the benefits of joining an organic farming initiative given the stringent requirements on inputs/land use, multiple year commitment etc. For the diff-in-diff estimations reported here we have chosen to pool these two control groups and treat them as a single control group. We present the results without any covariates included.

In Table A1, we present the results of a diff-in-diff estimation in which we pool all treatment groups into one and compare it to the control group. From this we find that although the treatment effect is approximately Rs. 90, it is statistically insignificant. On this basis alone, we cannot conclude that participating in the COFA program yields any benefits in terms of increased monthly consumption. However, if we disaggregate the treatment groups into T1, T2 and T3 and compare these to the control groups, a different picture emerges.

In Table A2, we present results of a diff-in-diff estimation of the treatment group T1 in comparison to the control group. Note that the treatment group T1 is a group of farmers who have in that period just joined the program. They have yet to engage in organic farming and

begin the whole organic farming trajectory. This implies that T1 in the baseline constitutes a *different* group of farmers than T1 in the endline. Therefore, the last column in Table A2 is not meaningful in this case. Although these are presented in the form of a diff-in-diff estimation, the purpose of comparing these two groups across the two time periods is to measure if indeed the two treatment groups (T1) in the baseline and endline are substantially different from each other. We notice from this table that T1 farmers (those who have opted to join the program) are somewhat better off in the baseline than those in the control group with a monthly consumption that is Rs. 400 greater. In the endline, the difference in monthly consumption between the T1 group and the control group is insignificant.

In Table A3, we present diff-in-diff estimates for the treatment group T2 vs. controls. These farmers were in the first stage of organic farming in the baseline and transitioned to the second year of organic farming in the endline. These farmers are compared to the control group. We see that while the diff-in-diff estimate is positive (Rs. 269.26), it is not statistically significant.

In Table A4, we present results for the group of farmers who at the time of the baseline had just become fully organic farmers. They had completed the organic farming trajectory at the time of the baseline and are at the time of the endline in their second year as organic farmers. These farmers were in effect, fully organic farmers at the time of the baseline and at the time of the endline have one more year of experience as fully organic farmers. For these farmers we see a positive and significant treatment effect of Rs. 374.24 which is the largest treatment effect compared to the treatment effects in the previous tables.

In results not reported here, we also computed the difference in difference estimator with covariates included in the model. We included socio-demographic characteristics such as household size, number of children in the household, the education level of the head of the household (illiterate or primary education), whether the head of household was female and if the spouse of the head of household was also self-employed in agriculture.

We found that some of these covariates had some explanatory power in explaining the dependent variable (monthly consumption). Not surprisingly, larger households tended to

have higher consumption. The education level of the household head, whether or not the head of the household was a woman and whether the household head had a bank account were insignificant. Somewhat surprisingly, households in which the spouse reported being self-employed in agriculture had lower income than those household in which spouses did not. It is likely that in this setting that women work outside the home only if there is financial need and that this is associated with poorer households (which report lower monthly consumption).

The difference in difference estimates changed somewhat when the covariates were included in the model but these changes were small. On average, the difference in difference estimator was Rs 100 lower implying that socio-demographic characteristics explain some of the variance in monthly income. For example, with the socio-demographic covariates, the monthly gain to the program for fully organic farmers is Rs. 279.63 with the socio-demographic covariates included instead of Rs. 374.24 without covariates.

Efficiency of the Project

To assess the efficiency of the project, we use the benchmarks provided by the Synthesis Team (AIID, 2014) which are based on the studies of Tearfund (2013), Isern (2007) and Harper (2002). The estimated costs of such intervention based on these studies range from USD 105 to USD 1670 (based on studies on lending and empowering communities). We apply the efficiency calculation to one of the outputs of COFA which was to have 15,000 farmers participate for one or more years in organic farming. We feel that applying an efficiency type calculation to the other output, that 1/3 of the farmers should be female is less meaningful and we have no benchmark as to what it 'costs' to have a certain proportion of women participants. We defer the discussion of the attainment of the other output of COFA that the income of farmers should have increased by 40% in relation to income from farming over the course of the program to the Discussion section.

COFA states that 9647 farmers are now organically certified. Given that the entire organic farming trajectory takes three years, this translates into 9647 X 3 farmer years which is 28,941 farmer years spent in the trajectory into fully certified organic farming. The MFS-II funding was an initial EUR 700,000 and an additional EUR 134,215 was granted for the period 1

April 2012 to 30 September 2014. This implies a total budget of EUR 814,215. This budget was used for capacity building as well but as an estimate, if we calculate how much one farmer year costs, this is then EUR 814,215 divided by 28,941. This comes to a cost of EUR 28.23 per farmer year. It is likely of course that the costs per year may differ. The intensity of trainings etc. may be higher in the initial and intermediate year and involve much more handholding. Even if we treat the entire 3 year organic farming trajectory as a one shot process, the cost of the conversion of the 9641 farmers into organic farmers (so EUR 814,215 divided by 9647) is EUR 84.40. Even with the conversion to USD, this is at the lower range of the estimates based on previous studies. Also, besides the conversion into full organic status, COFA is states that it works on community building. The 15,279 farmers in COFA are organized into 978 farmer Self Help Groups (SHGs). Since the estimates from Tearfund (2013), Harper (2002) and Isern (2007) mentioned in the literature review (AIID 2014) are not specific to organic farming interventions, we could also use these estimates to compare the costs of organizing the 15,279 farmers into SHGs. Again treating this organizing into SHGs as single process, this implies that the cost of converting these farmers into SHGs amounts to EUR 53.28 per farmer. One issue to note is that COFA is funded not only by MFS-II but also by a local partner to the amount of EUR 241,545 and by Solidaridad to the amount of EUR 614,346. If we include these amounts as well, we the cost one farmer year in the organic farming trajectory to be EUR 173.12 which is still on the low end of the range of the estimates from past studies. From these calculations, we can infer that the project is efficient.

6. Discussion and Conclusion

In this paper, we have assessed the impact of the capacity building project of COFA funded by MFS II (through ICCO). The project had three outputs. Regarding the output of reaching 15,000 farmers, we infer that although this output has not yet been reached, that COFA appears to be making progress on this as it started with only 234 farmers in 2004. According to the Chetna Organic website, “Among a total number of 15,279 farmers covered as on August 2012, 9647 farmers are administered in organic certification from the group of small and marginalized farmers. The website also states that 15,279 farmers in Chetna are organized into 978 farmer Self Help Groups which are federated into 13 cluster level cooperatives. During the current phase, all cooperatives engaged in aggregation of their members, produce and collect sales through the Chetna Organic Agriculture Producer

Company Limited.” From this we infer that the initial steps which is to form SHGs and cooperatives has been achieved for a large enough sample of 15,279, and that there is progress towards meeting the output of 15,000. The second output of COFA is formulated as “farmers should experience increased with 40% from farming in the course of the programme.” To assess this output, one would have to compare the income of farmers at the initiation of the program and to the income of the same set of farmers after they have completed the organic farming trajectory. Given the time schedule of the MFS-II evaluation, we could not measure this as this would mean that we measure income for new farmers starting in the program and then again three years later. However, on the basis of the diff-in-diff estimates presented in the Appendix, we can make the following comparisons. We can compare the income (or to be precise, consumption) of a control group of farmers to a group of fully organic farmers. On the basis of the diff-in-diff estimates we see that in the baseline, fully organic farmers earned Rs. 3121.58 vs. a control group farmer who earned Rs. 2700.14 (a difference of approximately 15.61%). Similarly, in the endline, a fully organic farmer earned on average Rs. 3756.58 in contrast to a control group farmer who earned Rs. 2960.91 (a difference of 26.87%). The diff-in-diff estimate of the program effect measured between 2012 and 2014 while statistically significant is Rs. 374.24 (a difference of approximately 13.69%). While these differences are much lower than the output set by COFA of 40%, we question if an income increase of 40% may not be too ambitious given the fluctuation in cotton prices, weather conditions etc.

In addition to the standard questions included in both the baseline and endline survey, we included a short set of questions on views about organic farming (we drew from the literature on organic farming practices in developing this set of questions). These questions were in the form of a set of statements and the respondents had to agree or disagree along a Likert scale. The questions were a mix of both positive and negatively phrased questions such as “Chemical pesticides are more suitable to control pests (rather than using organic farming techniques)” and “Organic farming decreases production costs by reducing input purchases such as seeds, chemical fertilisers and pesticides.” What was interesting from this set of questions on views about organic farming is that there is little difference between the treatment and control groups along certain dimensions. Both treatment and control groups agree that using chemicals does not help very much against pests and both groups are neutral about whether it helps against weeds. Farmers in the treatment group are more likely than the

control group to have the view that farmers and their families are healthier when they engage in organic farming and that the quality of land is better preserved through organic farming. Both treatment and control groups feel that organic farming is more time consuming than conventional farming and that consumers benefit more from organic farming than farmers. However, what is telling is that it is the *treatment* group members that feel more strongly that organic farming is difficult to implement because of the difficulty in obtaining organic inputs. The treatment and control groups differ significantly along this dimension. This could be because it is the treatment group which is currently engaged in organic farming practices and is faced with difficulties in obtaining organic inputs. This is an important issue to note as it implies that this aspect of the supply chain needs to be paid attention to if organic farming is to be sustained. The responses to this question reinforce the findings of an earlier study done by COFA in which farmers with medium holdings of land (rather than small holder farmers) are less likely to remain in organic farming because of the difficulty in obtaining sufficient quantities of organic inputs.

Based on the quantitative analyses of the household level data, and the qualitative evidence based on our fieldwork, it is our conclusion that the project is well-designed and suitable for the environment in which it is being implemented. It is because of the linkages to the producer company and international linkages that organically farmed cotton is viable. On the basis of our experience, we would advise to fund a similar project (or continue funding this one). The changes we would recommend would be in terms of greater support in the intermediate stages of organic farming. When we examine the data on monthly consumption, we notice that farmers in their first year of organic farming experience much lower monthly consumption than at the end of the trajectory and also in comparison to some control group farmers. It is our view that COFA's efforts maybe well used in assisting farmers in obtaining organic inputs. From their own research and published research on this topic, it appears this is a stumbling block in completing the organic farming trajectory.

Regarding improvements to the impact evaluation, one issue we could not address because of the short-time frame is to really follow farmers from different cohorts in their organic farming trajectory. A three year time window at least in the case of this project may have yielded additional insights which we have not been able to obtain in this study.

The project was well-designed 10

The project was implemented as designed 10

The project reached all its objectives 7

The observed results are attributable to the project interventions 7

The observed results are relevant to the project beneficiaries 7

The project was implemented efficiently 10

Note that the score on “The observed results are attributable to the project interventions” reflects how well we could evaluate the program. Therefore, it is not a score of the program. The objectives used to score on this aspect are given in the country summary.

Kusters, C., Mohapatra, B.P., Sethi, S., Buizer, N., Das, A., Bhatra, R.W., Sen, P., 2015. *Endline report – India, FFID Foundation. MFS II country evaluations; Capacity of Southern Partner Organisations (5C) component*. Centre for Development Innovation, Wageningen UR (University & Research centre). Report CDI-15-002. Wageningen.

This report presents the findings of the endline of the evaluation of the organisational capacity component of the MFS II country evaluations. The focus of this report is India, FFID. The format is based on the requirements by the synthesis team and NWO/WOTRO. The endline was carried out in 2014. The baseline was carried out in 2012.

Key words: 5C (five core capabilities); attribution; baseline; causal map; change; CFA (Co-financing Organisation) endline; organisational capacity development; SPO (Southern Partner Organisation).

Acknowledgements

We are grateful to all the people that have contributed to this report. We particularly would like to thank the Southern Partner Organisation Forum for Integrated Development (FFID) and the Co-Financing Agency ICCO for their endless patience and support during this challenging task of collecting the endline data. We hope that this endline report will provide useful insights to FFID, ICCO, the synthesis team, IOB and NWO/Wotro.

1 Introduction & summary

1.1 Purpose and outline of the report

The Netherlands has a long tradition of public support for civil bi-lateral development cooperation, going back to the 1960s. The Co-Financing System (*Medefinancieringsstelsel*, or 'MFS') is its most recent expression. MFS II is the 2011-2015 grant framework for Co-Financing Agencies (CFAs), which is directed at achieving a sustainable reduction in poverty. A total of 20 consortia of Dutch CFAs have been awarded €1.9 billion in MFS II grants by the Dutch Ministry of Foreign Affairs (MoFA).

The overall aim of MFS II is to help strengthen civil society in the South as a building block for structural poverty reduction. CFAs receiving MFS II funding work through strategic partnerships with Southern Partner Organisations.

The MFS II framework stipulates that each consortium is required to carry out independent external evaluations to be able to make valid, evaluative statements about the effective use of the available funding. On behalf of Dutch consortia receiving MFS II funding, NWO-WOTRO has issued three calls for proposals. Call deals with joint MFS II evaluations of development interventions at country level. Evaluations must comprise a baseline assessment in 2012 and a follow-up assessment in 2014 and should be arranged according to three categories of priority result areas as defined by MoFA:

- Achievement of Millennium Development Goals (MDGs) & themes;
- Capacity development of Southern partner organisations (SPO) (5 c study);
- Efforts to strengthen civil society.

This report focuses on the assessment of capacity development of southern partner organisations. This evaluation of the organisational capacity development of the SPOs is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

The purpose of this report is to provide endline information on one of the SPOs involved in the evaluation: FFID in India. The baseline report is described in a separate document.

Chapter 2 describes general information about the Southern Partner Organisation (SPO). Here you can find general information about the SPO, the context in which the SPO operates, contracting details and background to the SPO. In chapter 3 a brief overview of the methodological approach is described. You can find a more detailed description of the methodological approach in appendix 1. Chapter 4 describes the results of the 5c endline study. It provides an overview of capacity development interventions of the SPO that have been supported by MFS II. It also describes what changes in organisational capacity have taken place since the baseline and why (evaluation question is 1 and 4). This is described as a summary of the indicators per capability as well as a general causal map that provides an overview of the key organisational capacity changes since the baseline, as experienced by the SPO. The complete overview of descriptions per indicator and how these have changed since the baseline is described in appendix 3. The complete visual and narrative for the key organisational capacity changes that have taken place since the baseline according to the SPO staff present at the endline workshop is presented in appendix 4.

For those SPOs involved in process tracing a summary description of the causal maps for the identified organisational capacity changes in the two selected capabilities (capability to act and commit; capability to adapt and self-renew) is provided (evaluation questions 2 and 4). These causal maps describe the identified key organisational capacity changes that are possibly related to MFS II

interventions in these two capabilities, and how these changes have come about. More detailed information can be found in appendix 5.

Chapter 5 presents a discussion on the findings and methodology and a conclusion on the different evaluation questions.

The overall methodology for the endline study of capacity of southern partner organisations is coordinated between the 8 countries: Bangladesh (Centre for Development Studies, University of Bath; INTRAC); DRC (Disaster Studies, Wageningen UR); Ethiopia (CDI, Wageningen UR); India (CDI, Wageningen UR; Indonesia (CDI, Wageningen UR); Liberia (CDI, Wageningen UR); Pakistan (IDS; MetaMeta); (Uganda (ETC). Specific methodological variations to the approach carried out per country where CDI is involved are also described in this document.

This report is sent to the Co-Financing Agency (CFA) and the Southern Partner Organisation (SPO) for correcting factual errors and for final validation of the report.

1.2 Brief summary of analysis and findings

Since the baseline, two years ago, FFID has seen no change in its overall capability to act and commit, though there was deterioration in staff turnover and funding procedures improved. FFID has very slightly improved in its capability to adapt and self-renew, which was mainly due to more focussed data collection and better reports after an effective communications and a financial management workshop by ICCO. The organisation also very slightly improved in terms of the capability to deliver on development objectives, as operational plans are informed by better M&E, feedback mechanisms improved, and balancing quality and efficiency improved. There has been a very slight improvement in FFID's capability to relate because they are working more with the government, are more involved in different networks, interact more with the field and there is more internal sharing of learnings from trainings. There have been no changes in the indicators under the capability to achieve coherence.

The evaluators considered it important to also note down the SPO's story in terms of changes in the organisation since the baseline, and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provide by the evaluation team. During the endline workshop some key organisational capacity changes were brought up by FFID's staff: improved planning, monitoring and evaluation; diversification of funding; and improved compliances with HR and financial norms. These changes happened to overlap with the key organisational capacity changes that were selected for process tracing because they were linked to MFS II funded capacity development interventions. Under improved PME, improved planning can be partly attributed to MFS II funded interventions and partly to internal factors within FFID and their improved M&E system can almost completely be attributed to MFS II funded capacity development interventions. In diversifying FFID's funding base, only one MFS II funded capacity development intervention (an effective communications workshop in 2013) has played a role and this role was minor in terms of FFID's diversification of funding. External factors like the changing climate and demand for organic cotton; internal factors like the strategic change and projects and trainings with other funders have played a more important role in stimulating the organisation to diversify its FFID's funding base. Finally for FFID's improved compliances with HR and financial norms, only the compliance to financial norms can to a large extent be attributed to an MFS II funded capacity development intervention (a financial management workshop). The compliance to HR norms was because of internal developments at FFID.

2 Context and General Information about the SPO – FFID

2.1 General information about the Southern Partner Organisation (SPO)

Country	India
Consortium	ICCO Alliance
Responsible Dutch NGO	ICCO
Project (if applicable)	COFA – Strengthening Institutional Arrangements (1 April 2012 – 30 September 2014)
Southern partner organisation	Forum for Integrated Development (FFID)

The project/partner is part of the sample for the following evaluation component(s):

Achievement of MDGs and themes	X
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

2.2 The socio-economic, cultural and political context in which the partner operates

Forum for Integrated Development (FFID) is an organisation that works among the poor rural (disadvantaged) communities of the undivided Andhra Pradesh (comprising Seemandhra¹ and Telangana), Odisha and Maharashtra to empower them, enhance their livelihood and food security. In June 2014, after a protracted struggle, the state of Andhra Pradesh was divided into Seemandhra and Telangana.² Telangana region is the part of the erstwhile state which was under the princely rule of Nizam of Hyderabad, while Seemandhra region was part of British India, Madras Province. The Telangana region is mostly forested and rich with cultural, social and geological wealth which leads to a diverse economy. Though undivided Andhra Pradesh was the largest producer of rice in India and called 'The Rice Bowl of India,' it still remains one of the backward regions in the country. According to a study by the Planning Commission nine out of the ten districts in the Telangana state fall under the Backward Regions Grant Fund (BRGF)³. Telangana is spread over 114,84 lakh hectares and with a

¹ Formerly known as Coastal Andhra and Rayalaseema.

² On 2nd June 2014 Telangana emerged out of the existing state of Andhra Pradesh and became a new state of India. Due to the bifurcation of Andhra Pradesh, most of the areas under FFID's operation now fall under Telangana, though the some do exist in Andhra Pradesh, Odisha and Maharashtra.

³ The Backward Regions Grant Fund is designed to redress regional imbalances in development. The fund provides financial resources for supplementing and converging existing developmental inflows into 250 identified districts, so as to: bridge critical gaps in local infrastructure and other development requirements that are not being adequately met through existing inflows and empower the local government through capacity building exercises. These districts also have been selected on the basis of a higher concentration of STs and SCs and primitive tribes.

population of 35 million (2011 Census) is the 12th most populous state of India. About 39% (by 2011) of the state population is Urban and rest is Rural. The literacy rate of the State is 66.46 per cent (72.99 per cent in India) and that in the rural and urban areas are 57.25 per cent and 81.08 percent respectively. The Scheduled Castes and Scheduled Tribes account respectively for 15.4% and 9.3% (2011 census) of the total population in the state. There are about 55.7% (2011 census) agricultural workers which are slightly higher than all India at 54.6%.⁴ There is around 57.77 lakh hector rain fed area.⁵

Agriculture

Agriculture remains an important part of the economy for Telangana region. The agriculture sector recorded average growth rate of 7.2% (at constant price) compared to national average of 4.0% during 2005-13⁶. However, this sector witnessed major changes in the production of crops; for instance, in 1980s there was a shift from traditional cereal-based system to commercial commodities such as oil seeds, cotton and sugarcane. In 1990s, due to droughts, there was a shift towards high-value commodities: fruits, vegetables, milk, meat, poultry and fish. In the period from 2010 to 2011 the sector gradually improved. In 2012-13 Telangana region contributes for about 19.46% (at current price) from the agriculture to the state GSDP⁷. However, according to the 2012-13 economic survey, the growth in Telangana is mainly driven by the industry and services sectors.⁸ There is sharp increase in the cotton production from 53.50 lakh bales in 2011-12 to 77.50 lakh bales in 2012-13.⁹ However, in 2011-13 there is more than 35% decline in the organic cotton production in India. Considering the fact that agriculture is an important part of state economy and three fourth of rural populations are predominantly agricultural, improving farm incomes and ensuring sustainable growth in agriculture and allied sectors are of top priority for the state.

Over the years higher cotton yields gradually transformed into a mono-cropping culture. With the fluctuation in the climatic conditions there is a shift toward mixed crop production and non-agricultural production such as livestock. The government of Telangana in vision 2014 has planned for sustainable growth of agriculture and its allied sector. Increased diversification of cropping pattern, community managed sustainable agriculture (cost reducing technologies with collective institutional setting), adaption of SRI (system of rice intensification) technology, interest free credit to farmers, ensuring quality input supplies to the farmers, developing seed banks etc., are some of the aspects of government strategy to sustainable growth in agriculture and its allied sector.¹⁰ The greatest challenge for the government is to make the programmes and schemes accessible to the poor and marginal farmers.

In the last two years considering the decline in the demand and production of organic cotton and frequent fluctuation in the climatic condition compelled FFID/Chetna to shift to diversified cropping and mixed cropping practices along with allied agricultural production and non-agricultural production. Also it is looking forward to make the cooperatives self-sustainable by building institutional and financial linkages between cooperatives and Self Help Groups with Government departments, NABARD Financial Services Limited (NABFINS), and other private players. FFID/Chetna's vision and strategy being well aligned to that of the government creates a better hope for the sustainable livelihood for the poor and marginal farmers of the region.

2.3 Contracting details

When did cooperation with this partner start: 2007

What is the MFS II contracting period: April 1, 2012 until September 30, 2014.

Did cooperation with this partner end: Yes, but ICCO is planning an evaluation of the project now and they are still awaiting the final reports.

If yes, when did it finish: 30 September 2014.

What is the reason for ending the cooperation with this partner: The partner has scaled up its intervention, their funding has diversified and government has picked up some of their models.

Is there expected collaboration after 30 September 2014: Not in the current context. ICCO might look at a different partnership once they come across any such opportunity.

2.4 Background to the Southern Partner Organisation

History

The Forum for Integrated Development (FFID) was established on 10th march, 1995 as non-profit organization under the Andhra Pradesh Telangana areas/Societies Act 1350 Fasli (Act of 1350F). This was a result of a group of likeminded people from different professional background (including Technology, Agriculture, Social Sciences, Journalists/Writers, etc.) joining hands with an aim to work towards reducing rural distress through empowering and strengthening rural communities (especially small and marginal farmers and disadvantaged communities). FFID's emphasis is to develop, promote and popularize alternative models in agriculture, natural resources management, soil and water conservation, agro-ecology and non-conventional energy sources leading to sustainability in social, economic and ecological development.

In 2004-07 ICCO and Solidaridad jointly initiated the Chetna Organic & Fair Trade Cotton Supply Chain Intervention Program India as a composite pilot on developing an entire supply chain in Organic/NPM¹¹ & Fair Trade Cotton. This incidentally rolled out as a natural spin off to the then just concluding FAO-EU Cotton Integrated Pest Management (IPM) Project in India and mainly to address the agrarian crisis faced by smallholder cotton farmers in the rain fed regions in India.

In 2008, ICCO & Solidaridad roped in and partnered with the Forum for Integrated Development (FFID), to implement the second phase of the Chetna program (2008 – 2011/12) and to support COFA in the process to deliver efficient services. COAPCL is currently represented on its board by 14¹² cotton farmers' cooperatives which was 9 in 2011-12 as equity shareholders. COAPCL was incorporated with the main objective of developing sustainable market linkages for farmer's produce in the national and the international markets, apart from offering capacity building support to farmers on quality control, certification and value addition.

FFID continues to provide guardianship support to both Chetna Organic Farmers Association (COFA) and Chetna Organic Agriculture Producer Company Ltd (COAPCL) to evolve into professional and well established farmers' support organizations. COFA was registered by representative farmers of Chetna as a multi-state society (under the Andhra Pradesh Societies Registration Act 2001) in June 2007. Owing to lack of a FCRA clearance (regulatory clearance required for receiving foreign funds), project COFA was merged with another NGO FFID, which now acts as the guardian body for COFA. As a result, all funds are routed through FFID to a project account called FFID-COFA and are used for the purpose of COFA, which is indicated as a project of FFID. COFA works towards sustainable & diversified agriculture, water & soil conservation, enhancement of livelihood options and food security, socio-

¹¹ Non-pesticide Management

¹² Annual Report_ICCO_01 April 2013- 31 March 2014

technical extension, research, policy advocacy & campaigning for the smallholder farmers from rain fed regions. COAPCL a producer company was registered under part IX A of the company's act 1956. It is small farmers owned commodity marketing company promoted by regional cooperatives from the three operational states as mentioned above. It supports these farmers in marketing their cotton, non-cotton agriculture and Non-Tariff Forest (NTF) produce and certification.

Chetna is an organic cotton program that works with 40,197 (till December 2013)¹³ farmers and landless labourers in all three States – Telangana (Adilabad & Karimnagar districts), Maharashtra (Amravathi, Akola & Yavatmal districts) and Odisha (Kalahandi, Bolangir, Koraput and Rayagada districts) through organic, in-conversion and Non Pesticide Management programmes. It has been working with the farmers for the past seven years with the aim of promoting the use of organic farming amongst its farmers (particularly in cotton and since last year diversified into multi-cropping system), in addition to putting in efforts towards empowerment of farmers by organizing them into Self Help Groups/FGs & CBOs while promoting cooperatives at cluster level and brings them on its board as member institutions. Further COFA strives to put in place various participatory and decentralized processes to build the capacities of the SHGs, member cooperatives and other forms of producer institutions in all aspects of governance, operational management and business planning.

FFID/COFA during 2012-13 traversed towards evolving into a vibrant farmers' support organization that works towards addressing the multidimensional challenges encountered by the smallholder farmers from rain fed regions. The interventions range from natural resource management, promotion of sustainable agriculture, conservation of germplasm, diversification of livelihood portfolio of farmer households, value chain development beyond cotton, food and nutrition security, gender mainstreaming and child welfare. During this period FFID/COFA entered into new collaboration/partners or renewed with various supporting and promoting agencies while rolling out the large scale expansion of the COFA programme in convergence with mainstream government and bi-lateral projects. Some of the convergence programmes are: Integrated Watershed Management Program (IWMP) in Adilabad district supported by the Ministry of Rural Development (MoRD), Govt. of India, Convergence of Agriculture Initiatives in Maharashtra (CAIM), supported by Govt. of Maharashtra and International Fund for Agricultural Development (IFAD), the Orissa Tribal Empowerment and Livelihoods project (OTELP) supported by Govt. of Odisha and Department for International Development (DFID) and Mahila Kisan Sashaktikaran Pariyojana (MKSP) a women farmers' empowerment project supported by National Rural Livelihood Mission (NRLM) initiated in 2013 in the Rayagada district of Odisha. In this project ICCO is supporting the value chain development of Pigeon Pea and turmeric through SODI cooperative partner.

Over the last two years, a decrease in the demand for organic cotton and fluctuation in the climatic condition forced FFID/Chetna to focus and change its strategy from mono-cropping to diversified cropping and mixed cropping practices where food crops like jowar, paddy, red gram, vegetables, maize, green gram and others could be grown alongside cotton. Legumes, vegetables like tomato, brinjal, chilli, gourds, beans, onion, garlic and leafy vegetables and oil seed crops are also being grown; along with non-agricultural productions such as livestock. This would not only ensure food security for the farmer but also improve soil health. Further change in climatic conditions (heavy rains, Phailin¹⁴ cyclone) also triggered diversified programme implementation and expansion of activities to newer locations. The staff felt that in the changing scenario there was a need for revisiting the organisation's vision and in June 2013 the vision, mission and strategies of the organisation was re-articulated.

Vision

To promote economically and socially viable agrarian based livelihoods in rain-fed and other ecologically depressed regions through sustainable agriculture.

Mission

¹³ FFID-Annual_Report_2013

¹⁴ A very severe cyclone that originated in Southern China Sea on October 2013, that affected Andhra Pradesh, Odisha, Jharkhand and other Indian States

Develop and promote alternative models in agriculture, agro-ecology and non-conventional energy sources for sustainability in social, economic and ecological environmental development.

Strategies

- To support, empower and strengthen rural communities (esp. small holder farmers and disadvantaged communities) in coping with adverse situation and attaining self-sufficiency.
- To develop, promote and popularize alternative models in agriculture, agro-ecology, non-conventional energy sources natural resources management, soil and water conservation, agro-ecology and non-conventional energy sources leading to sustainability in social, economic and ecological development.
- To engage in policy, advocacy and campaigns aimed towards re-orientation policies in favour of sustainable agriculture and agro-ecology.
- Encourage all the institutions in generating their own resources and manage affairs with little external support. Towards this, convergence with government and non-government agencies.
- Enhancing productivity and reducing costs of cultivation. A holistic approach with ecologically aligned technical interventions and internalized inputs for production in rain-fed and other ecologically depressed regions.

Unit of analysis

FFID is supporting the Chetna Organic & Fair Trade Cotton Intervention Programme which spawns the twin farmer owned organisations Chetna Organic Farmers Association (COFA) and Chetna Organic Agriculture Producer Company Ltd (COAPCL) to evolve into professional and well established farmers' support organizations. Although ICCO is supporting COFA, FFID has been selected as the unit of analysis as COFA is prohibited by Indian laws to receive foreign funding. FFID is also involved in setting up COFA's organisational structure. COFA staff is on the payroll of FFID.

3 Methodological approach and reflection

3.1 Overall methodological approach and reflection

This chapter describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

Note: this methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, and Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report a detailed overview of the approach is described in appendix 1.

The first (changes in organisational capacity) and the fourth evaluation question are addressed together through:

- **Changes in the 5C indicators since the baseline:** standard indicators have been agreed upon for each of the five capabilities of the five capabilities framework (see appendix 2) and changes between the baseline and the endline situation have been described. For data collection a mix of data collection methods has been used, including self-assessments by SPO staff; interviews with SPO staff and externals; document review; observation. For data analysis, the Nvivo software program for qualitative data analysis has been used. Final descriptions per indicator and per capability with corresponding scores have been provided.
- **Key organisational capacity changes – 'general causal map':** during the endline workshop a brainstorm has been facilitated to generate the key organisational capacity changes as perceived by the SPO since the baseline, with related underlying causes. For this purpose, a visual as well as a narrative causal map have been described.

In terms of the attribution question (2 and 4), '**process tracing**' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to

focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

At the end of this appendix a brief methodological reflection is provided.

3.2 Assessing changes in organisational capacity and reasons for change - evaluation question 1 and 4

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?** And the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This is explained below. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

The evaluators considered it important to also note down a consolidated SPO story and this would also provide more information about what the SPO considered to be important in terms of organisational capacity changes since the baseline and how they perceived these key changes to have come about. Whilst this information has not been validated with sources other than SPO staff, it was considered important to understand how the SPOs has perceived changes in the organisation since the baseline.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information is provided for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the next session on the evaluation question on attribution, as described below and in the appendix 1.

How information was collected and analysed for addressing evaluation question 1 and 4, in terms of description of changes in indicators per capability as well as in terms of the general causal map, based on key organisational capacity changes as perceived by the SPO staff, is further described below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012¹⁵.

¹⁵ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 4) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 5) **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Please see appendix 1 for a description of the detailed process and steps.

3.3 Attributing changes in organisational capacity - evaluation question 2 and 4

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*** and the fourth evaluation question: ***“What factors explain the findings drawn from the questions above?”***

In terms of the attribution question (2), ‘process tracing’ is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Below, the selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

3.3.1 Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

For the detailed results of this selection, in the four countries that CDI is involved in, please see appendix 1. The following SPOs were selected for process tracing:

- Ethiopia: AMREF, ECFA, FSCE, HUNDEE (4/9)
- India: BVHA, COUNT, FFID, SMILE, VTRC (5/10)
- Indonesia: ASB, ECPAT, PtPPMA, YPI, YRBI (5/12)
- Liberia: BSC, RHRAP (2/5).

3.3.2 Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ‘general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop

have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained. More information can be found in Appendix 1.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

3.3.3 Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team. These can also be found in appendix 1.

Use of the 5 core capabilities framework and qualitative approach: this has proven to be a very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified

organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
 - Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
 - Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

4 Results

4.1 MFS II supported capacity development interventions

Below an overview of the different MFS II supported capacity development interventions of FFID that have taken place since 2011 are described. The information is based on the information provided by ICCO.

Table 1

Information about MFS II supported capacity development interventions since baseline

Title of the MFS II supported capacity development intervention	Objectives	Activities	Timing and duration	Budget
A workshop on Effective Communication	<ul style="list-style-type: none"> • Provided to enable partners to understand and practice effective communication components as represented by crisp, complete and consistent project reports, emotive and evidence-based case studies and descriptive photographs. • In order to bring parity in reporting between all SPOs and also to ensure quality in reporting, this workshop was undertaken. It was important because proper communication and reporting is lacking with not only FFID/Chetna, but with many other organizations in MFS-II. 	<ul style="list-style-type: none"> • Alina Sen, the Strategic Communication Lead of Plan B Communication Partners, designed the workshops jointly with the communications team of ICCO Cooperation-SCA. • Improved reporting quality for MFS has been observed by the Regional Manager and other agencies too. 	18-19 July 2013	€ 300
A workshop on Financial Management and Compliances	<ul style="list-style-type: none"> • Ensure a common goal and accountability for all partners working in MFS-II • Common understanding on financial management and the laws • Set minimum standards and good practices • Need to leverage the learnings of both ICCO and its partners' long ground level experience • Need to ensure effective utilization of MFS funds by partners 	<ul style="list-style-type: none"> • Finance Officers from ICCO and other consultants engaged by ICCO gave this workshop • Detailed guidelines from ICCO on programme and finance management were provided • Stringent norms governing the NGO sector in India were discussed 	11-12 March 2014	€ 300

4.2 Changes in capacity and reasons for change - evaluation question 1 and 4

Below you can find a description of the changes in each of the five core capabilities. This information is based on the analysis of the information per each of the indicators. This detailed information for each of the indicators describes the current situation, and how and why it has changed since the baseline. See also appendix 3.

4.2.1 Changes in the five core capabilities

Capability to act and commit

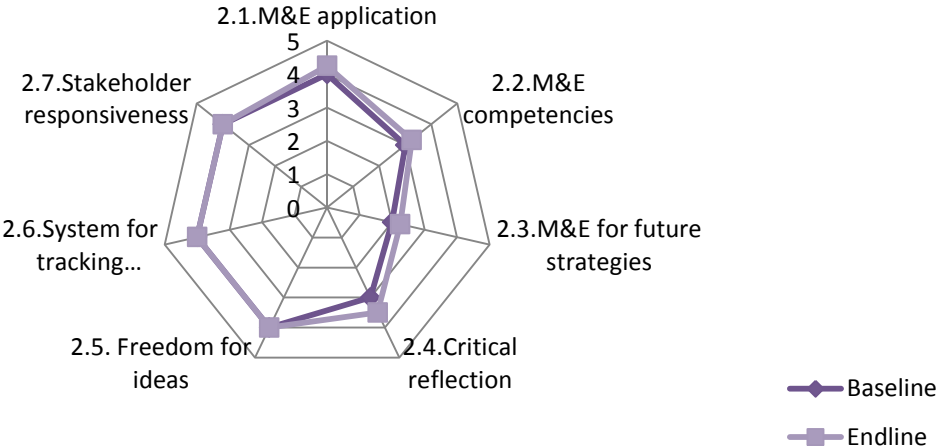

The two organisations promoted under the FFID/Chetna project are Chetna Organic Farmers Association (COFA) and Chetna Organic Agriculture Producer Co. Ltd (COAPCL). FFID continues to provide guardianship support to both COFA and COAPCL for their programmes. There is an increased engagement of the Board Members and Executive Director through meetings and field visits. They are working towards a more sustainable organization by changing their strategy to diversified cropping instead of focusing on cotton. Staff played a significant role in the revision of the vision and strategies of FFID/Chetna during the Annual Strategy Meeting in June 2013. Though there were changes in the top management (new leadership at COAPCL in 2013 and COFA in 2012) the core team at the Head Office pitched in to share the responsibility without affecting the operations at all levels. Over the last two years climatic, market and donor conditions have been changing rapidly. Due to this, leadership decided to change the vision and strategy of the organisation. Before, FFID/Chetna was more cotton-centric. By taking the field level teams suggestions on the farmer's needs into account, leadership decided to broaden the scope of work and give strategic direction to the team towards this. Lack of funding in certain states and better opportunities in the corporate sector have made it hard to retain staff. While staff turnover at the field and programme level remains low, some key senior staff have left the organisation which has led to a backlash in organisational learning and to staff taking up more responsibilities. There have been some changes in the organisational structure of FFID/Chetna. Leadership at COAPCL (2013) and COFA (2012) changed and with senior staff leaving the organisation. Some staff has been promoted while other staff is taking up more responsibilities. Staff are aware of these changes. During the Annual Strategy Meeting in 2013 all staff laid out their expectations and aspirations for their roles and responsibilities, these were taken up to be included in a clarity on roles document. FFID/Chetna articulates its strategies on the basis of good situational analysis. With the drop in demand for organic cotton and climate conditions affecting crops, the strategies were changed to include more diversified cropping: growing food crops alongside cotton and improving water and soil management. With the resource crunch due to the changing donor

environment, more efforts were directed towards making cooperatives generate their own income and linking up to government projects. M&E results are however, not yet used to articulate strategies. FFID's daily operations are still in line with the adjusted strategic plan. Systems in place to ensure this have not changed. Management has become more active in guiding daily operations, but because of staff leaving the organisation for better deals elsewhere, the burden on staff to multi-task has increased. Staff still have necessary skills to do their work. FFID/COFA has professionals with post-graduation in various relevant fields. Senior staff have ample experience and keep up to date through interaction with other practitioners. Skills in financial management and report writing and communication the work have improved, as well as commodity specific skills for community development and organic agriculture of vegetables and pulses. However, some of the experienced senior staff has left and there is still a need for a structured approach to capacity building. Staff is still given considerable opportunities to undergo trainings, workshops and exposure visits at both national and international level which has helped to improve their skills. FFID still has progressive HR policies in place that incentivise staff and include training, freedom at work, performance based incentives and absence of hierarchy. Staff turnover is however high because FFID cannot keep up with the private sector and the salaries do not match increasing responsibilities of staff. Given the changing donor environment in which funds are decreasing, board members have shown their concern for the funding situation. FFID has improved its capacity in writing proposals (at all levels) and in showcasing their work through communication and reports. Also through its network both with government, private sector and in research, FFID is tapping into new funding possibilities. FFID/Chetna has been successful at diversifying its funds since the baseline, as they are now linked to more major government programmes and also started receiving funds from the Indian private sector. This was because of improved capacity in proposal writing, showcasing work and improved networking. It remains however, a challenge to secure core funding, as most funding is for specific projects.

Score baseline: 3.7

Score endline: 3.7 (no change)

Capability to adapt and self-renew

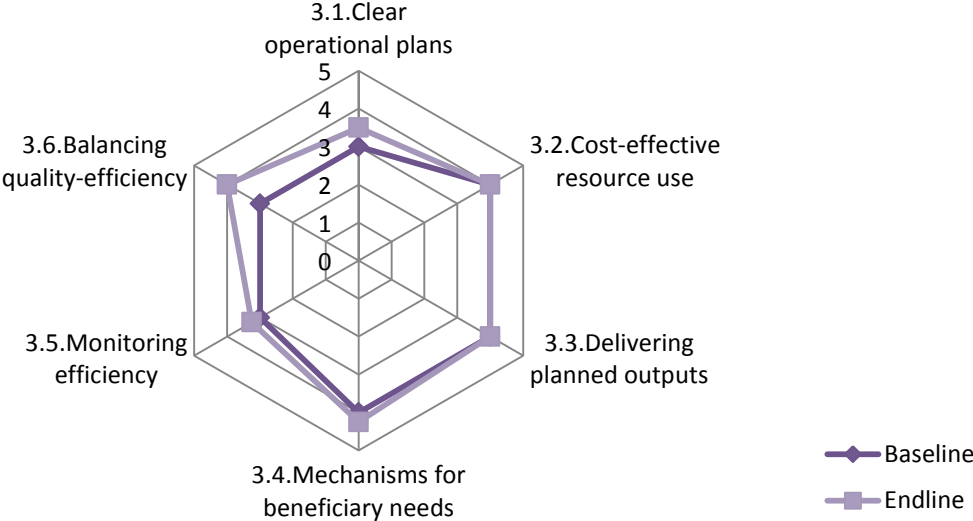

FFID still has an M&E system is still in place. Projects are monitored and evaluated at the outcome level. FFID is now making use of digital technology to collect data. To enhance the application of M&E, communication training has been given to their staff by ICCO which covered a wide range of topics including using the new MIS format, photos as visual evidence, formatting tips and case studies as qualitative evidence. This is now been put to practice by the communication manager and the help of other team members and reports have improved. FFID is collecting data in a more systematic way through improved MIS and more regular meetings, which leads to better operational plans and better reporting to ICCO. There is however still no dedicated person for M&E who can compile the information and do analysis to use M&E for future strategies. However, reporting to ICCO has improved and FFID is getting more systematic in its MIS review. FFID now has more regularly

organised moments for critical reflection and staff is more engaged in discussions because strategic meetings are now held in the field. Staff is encouraged to come up with ideas and these are taken into account, e.g. discussions during the Annual Strategy Retreat staff's opinions informed the new strategic vision of FFID. Staff is also taking initiative to incorporate their ideas in drafting proposals for local projects. FFID still keeps itself up to date on both the ecological as well as the donor environment. It keeps track of relevant government schemes and the market situation through its networks, e.g. the 3DP&L (Three Dimensional Profit and Loss Accounting) network. FFID/Chetna also does case studies and receives information from field staff through emails and social media to keep track of its operating environment. FFID is still open and responsive to its stakeholders. They organise for instance, discussions with member cooperatives on self-sufficiency. They do however still sometimes take up too much responsibilities from their network partners which increases the burden on staff.

Score baseline: 3.4

Score endline: 3.6 (very slight improvement)

Capability to deliver on development objectives

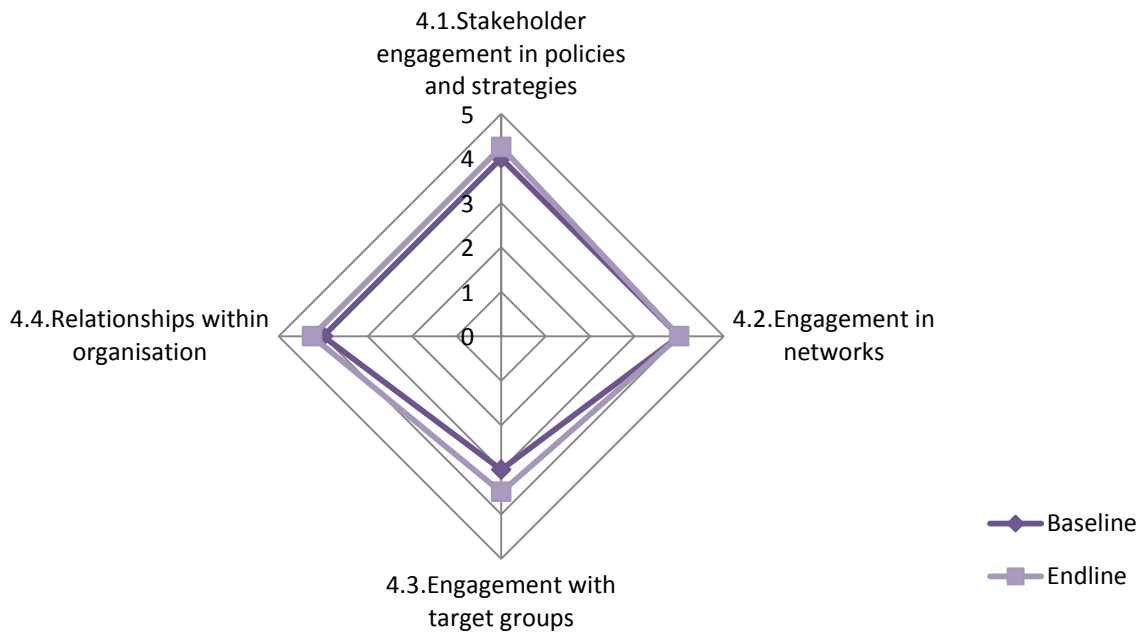

Operational plans have improved because of an improved M&E system and systematic documentation of annual strategic meetings that inform these plans. An operational manual is still pending, but staff have quarterly operational plans to guide them in their work. Now more so than ever FFID uses its resources cost-effectively because of the changes in the donor environment, including ICCO ending its funding in October 2014. The Executive Director has cut back on his travel costs and FFID has diversified funds by accessing local project funds to support the smooth functioning of the project offices. FFID/Chetna continues to deliver well on planned output, even despite the decrease in demand for organic cotton and contradictory finance policies. FFID still uses tools for different stakeholders for quality of certification. There are now also systems in place for balancing efficiency with quality of work, these include: training staff in budget planning and monitoring, designated team leader for each programme to ensure efficiency and not scaling up but focusing on consolidated gains of existing programmes. There are still no formal mechanisms for calculating input/output ratios in place but staff links its efficiency with deliverables. Staff has gotten better at reporting and outputs are still being reached. The farmer representation in the board of COFA and COAPCL still helps assess whether the project meets the beneficiary's needs. Senior management is now engaging directly with beneficiaries and formats to collect data on whether beneficiaries needs were fulfilled are now redrafted and reduced from 30 to 12 pages.

Score baseline: 3.5

Score endline: 3.8 (very slight improvement)

Capability to relate

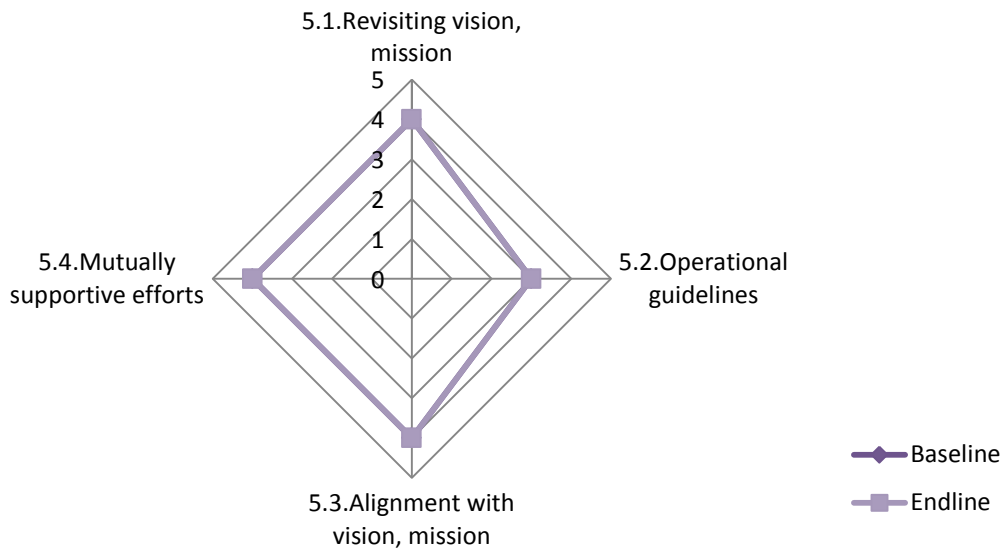

FFID continues to maintain strategic partnerships with various stakeholders (incl. agencies/networks) towards contributing in its strategic planning and development. It developed convergence with agriculture and allied departments, research institutes, various community based organisations and other rural developmental departments for better strategic planning. For example, the joint research programme of FFID, The Research Institute of Organic Agriculture (FiBL), Switzerland and the University of Agriculture Sciences, Dharwad (UASD) on Seed management, Water and soil conservation and management work, meetings with the cooperative members, The 3 Dimension profit and loss network. FFID/Chetna is very well connected and part of various old and new national and international networks. They work with research institutes, like-minded NGOs and Chetna government developmental departments for the benefit of their programmes and to provide access to all relevant schemes existing for the farmers. After the baseline evaluation the frequency of interaction with the target group of FFID/Chetna increased. Field visits increased and strategic state level meetings are now held in the field instead of at the Head Office. FFID has had the chance to look into the relationships within the organisation through the donor-driven evaluations it has been involved with. As a consequence a clarity of role document was circulated and a quality control cell was developed for concerns and complaints. Staff continues to meet on a monthly basis to discuss plans. These meetings have become more focussed because of the donor demand to have better reports and the communication training provided by ICCO. Sharing after trainings is now encouraged and organised and formal and informal dialogue improved among team members.

Score baseline: 3.7

Score endline: 4.0 (very slight improvement)

Capability to achieve coherence

FFID still revisits its vision during annual meetings. In 2013 the decrease in the demand for organic cotton and the change in climatic conditions triggered FFID/Chetna to re-articulate their vision from cotton mono-cropping to diversified cropping practices. The new vision is: to promote economically and socially viable agrarian based livelihoods in rain-fed and other ecologically depressed regions through sustainable agriculture. Consequently FFID/Chetna adjusted its strategies in line with the new vision. FFID works on different projects and thematic activities that are still complimentary and mutually supportive to one another. FFID is looking at a holistic approach with ecologically aligned technical interventions. While working in rain-fed areas, they lay emphasis on soil and water conservation, sufficient manure and compost for maintaining the soil fertility and different seed conservation and multiplication projects – cotton, food and other. FFID still only takes up projects that are aligned with its vision and mission. Since they have rearticulated their vision they have also revised their strategies towards more diversified programme implementation instead of just focusing on cotton farming.

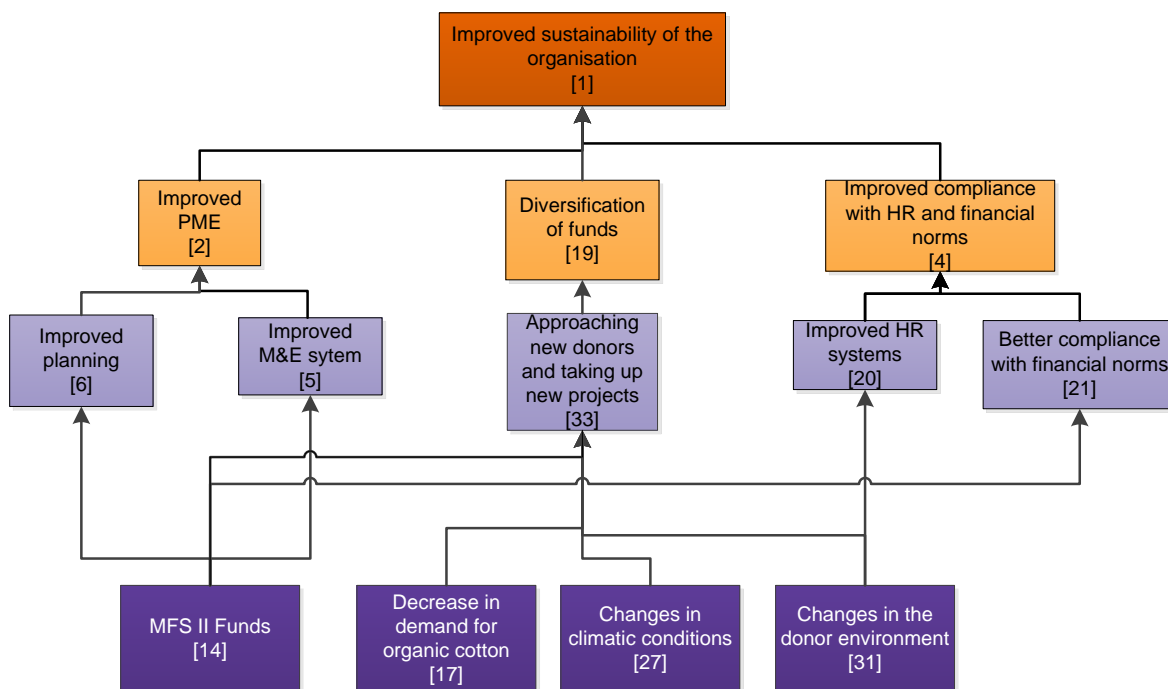

FFID still has an organisational policy in place, whilst HR and accounts policy are not uniform across states. Gender equity has improved by more female representatives in the organisations. Strengthening the understanding of the policies and periodic revision of the administration and HR policies is still required (the documented HR policy was last revised in 2009).

Score baseline: 3.7

Score endline: 3.7 (no change)

4.2.2 General changes in the organisational capacity of the SPO

During the endline workshop at FFID, a discussion was held around what were the main changes in organisational capacity since the baseline and why these changes have taken place. The discussion was visualised in a general causal map as can be seen below. The narrative for the general causal map is also described below. It gives a more general picture of what was seen as important changes in the organisation since the baseline, and how these changes have come about, and that tells the more general story about the organisational changes in FFID since the baseline in 2012. The evaluators considered it important to also note down the SPO's story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provide by the evaluation team.

The evaluation team carried out the endline assessment at FFID from 15 to 17 July 2014. During this workshop, the team made a recap of key features of the organisation in the baseline in 2012 (such as vision, mission, strategies, clients, partnerships). This was the basis for discussing changes that had happened to the organisation since the baseline. FFID continues to provide guardianship support to the Chetna Organic & Fair Trade Cotton Intervention Programme which spawn the twin farmer owned organisations Chetna Organic Farmers Association (COFA) and Chetna Organic Agriculture Producer Company Ltd (COAPCL) to evolve into professional and well established farmers’ support organizations.

Keeping in line with the changed vision over the last two years, FFID/Chetna has been focusing on sustainability for the organisation and for the small and marginal farmers. The key organisational capacity changes made towards sustainability of FFID [1] are:

1. Improved planning, monitoring and evaluation (PME) [2]
2. Diversification of funds [19]
3. Improved compliance with HR and financial norms [4]

These changes happened to coincide partly with the outcome areas that were chosen for process tracing, so as to get detailed information on how these changes in organisational capacity came about. Therefore, the general causal map overlaps strongly with the causal maps developed for each of these outcome areas/organisational capacity changes to be analysed during the process tracing. All the details about these changes in organisational capacity as well as the underlying factors that influenced these changes are described in the narrative and visual in appendix 4. A summary is provided below.

The three main organisational capacity changes are described in the light orange boxes and some of their key consequences are noted above these cards in dark orange. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the organisation are listed at the bottom in dark purple. The narrative describes per organisational capacity change, the contributing factors as described from the top down. The numbers in the visual correspond with the numbers in the narrative.

1. Improved planning, monitoring and evaluation (PME) [2]

According to FFID staff present at the endline workshop, over the last two years FFID has improved its planning, monitoring and evaluation (PME) system [2], and this is also evident in the endline assessment sheet CFA perspective and management FFID perspective. Improved PME [2] was due to:

- *Improved planning [6]:* According to the CFA it is evident that operational plans and overall planning is becoming better, the management and the endline evaluation team have observed the same.

- *Improved M&E system [5]:* According to ICCO, FFID/Chetna has improved their M&E system in terms of identifying the number of people who are involved and how to involve them .

2. Diversification of funds [19]

Over the last two years the organisation had to explore new funding opportunities as some of the projects have come to an end (for e.g. with the Rabobank Foundation and Hivos) and some funding is about to end (for e.g. with ICCO). Also, in absence of a core grant and delayed transfer of payments from the donors, working capital is always at stake. Therefore, there is a continuous need to approach new donors. In the process FFID/COFA is focussing on networking, forming partnerships, convergence with government programmes and emphasizing on staff capacity development in writing proposals to approach new donors. FFID was able to diversify its funds because:

- *They approached new donors and took up new projects [33].* Some of the new projects funded by new donors were: Seed Guardians project funded by Textile Exchange and Inditex, Government convergence programmes like Convergence of Agriculture Initiatives in Maharashtra (CAIM) in Maharashtra, which is funded by the International Fund for Agricultural Development (IFAD), Sir Ratan Tata Trust (SRTT) and the government of Maharashtra.

3. Improved compliance with HR and financial norms [4]

In the last two years FFID/Chetna improved compliances with the HR and financial norms triggered by the need to retain their staff and the demand by ICCO for better financial reporting. Compliance improved because of:

- *Improved HR systems [20]:* FFID introduced new HR initiatives to improve its HR system: such as a five day working week (trial basis), increase in daily sustenance allowance while travelling, provisions for a family health insurance , an increment of 8-15 per cent in the salaries with effect from April 2014 and staff promotions under the revised HR systems
- *Improved compliance with financial norms [21]:* FFID improved its compliance with financial norms to fulfil the requirement of ICCO as well as the government under the FCRA Act.

The main underlying causes for these three key organisational changes were:

- *MFS II funding [14]:* funds from MFS II were used for trainings and feedback that helped to improve planning [6], the M&E system [5], approaching new donors and taking up new projects [33] and improving the compliance with financial norms [21].
- *Decrease in demand for organic cotton [17]:* Over the last two years, decrease in the demand for organic cotton forced FFID/Chetna to focus and change its strategy from mono-cropping to diversified cropping and mixed cropping practices where food crops could be grown alongside cotton. This would not only ensure food security for the farmer but also improve soil health. This change in strategy has led to FFID approaching new donors and taking up new projects [33].
- *Further change in climatic conditions (heavy rains, Phailin cyclone) [27]* also triggered diversified programme implementation and expansion of activities to newer locations. The staff felt that in the changing scenario there was a need for revisiting the organisation's vision, which also led to FFID approaching new donors and taking up new projects [33].
- *Changes in the donor environment [31]:* these include the fact that some funding is coming to an end (e.g. from ICCO), some funding has already ended (e.g. Hivos) and the government of India is becoming more strict in its regulations, e.g. the FCRA. This triggered the need for FFID to approach new donors and start new projects [33], but also to better comply to the financial norms of the government [21].

4.3 Attributing changes in organisational capacity - evaluation question 2 and 4

Note: for each country about 50% of the SPOs has been chosen to be involved in process tracing, which is the main approach chosen to address evaluation question 2. For more information please also see chapter 3 on methodological approach. For each of these SPOs the focus has been on the

capability to act and commit and the capability to adapt and self-renew, since these were the most commonly addressed capabilities when planning MFS II supported capacity development interventions for the SPO.

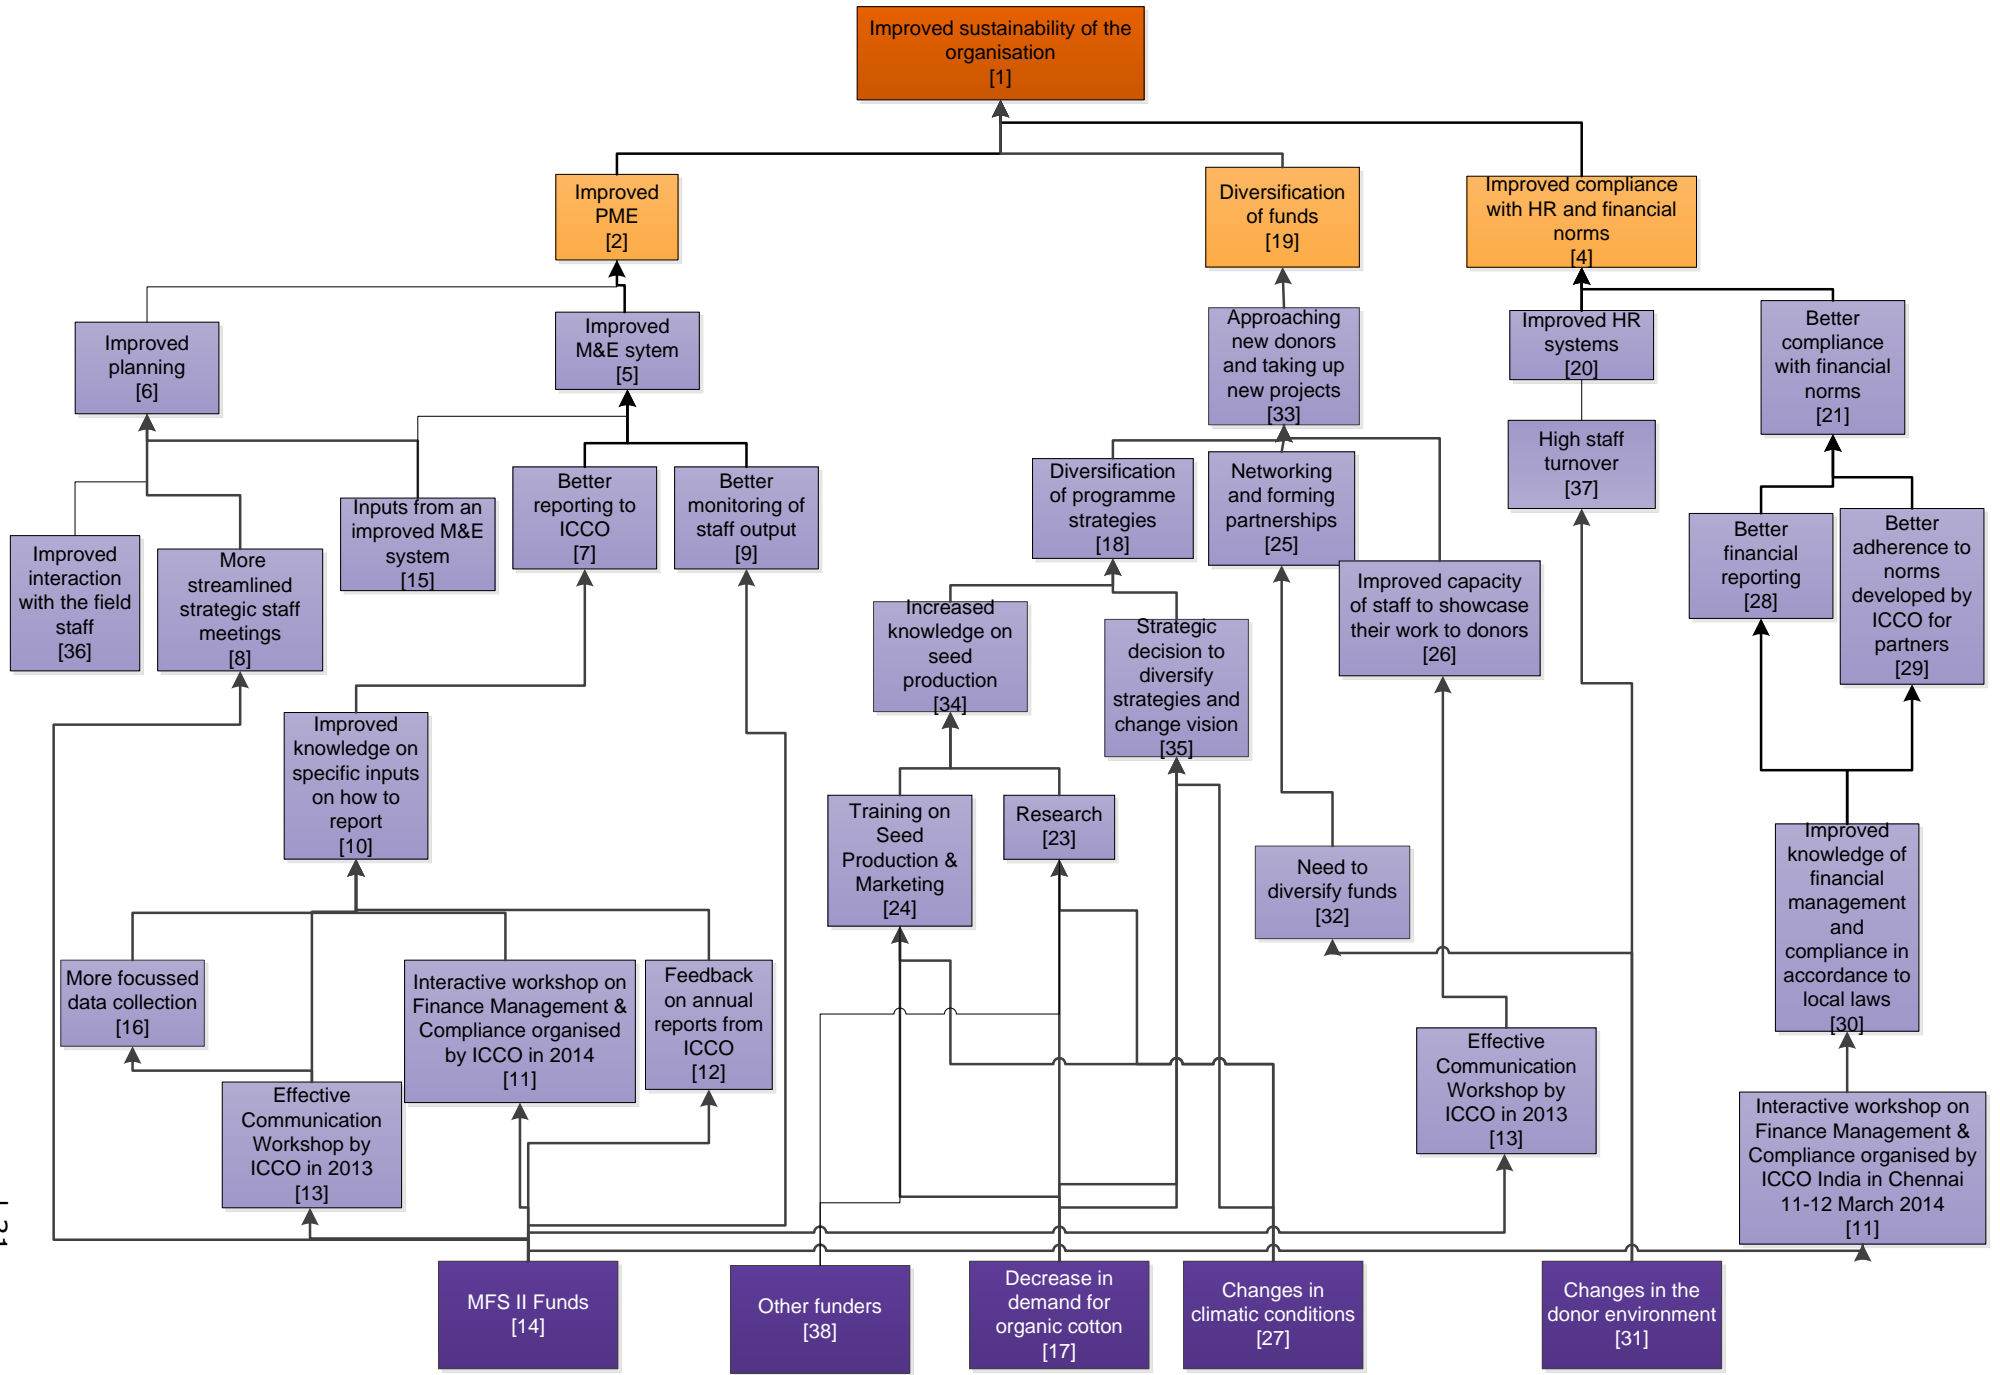

For each of the MFS II supported capacity development interventions -under these two capabilities- an outcome area has been identified, describing a particular change in terms of organisational capacity of the SPO. Process tracing has been carried out for each outcome area. The outcome areas that have been identified under the capability to act and commit and the capability to adapt and self-renew and the MFS II capacity development interventions that could possibly be linked to these outcome areas are described in the table below.

Table 2
Information on selected capabilities, outcome areas and MFS II supported capacity development interventions since the baseline

Capability	Outcome area	MFS II supported capacity development intervention(2)
Capability to act and commit	Diversification of funds	Effective communication workshop by ICCO in 2013
Capability to adapt and self-renew	Improved planning, monitoring and evaluation	Interactive workshop on Finance Management & Compliance organised by ICCO in 2014 and Effective communication workshop by ICCO in 2013.
	Improved compliance with financial and HR norms	Interactive workshop on Finance Management & Compliance organised by ICCO in 2014 and Effective communication workshop by ICCO in 2013.

The next sections will describe the results of process tracing for each of the outcome areas, and will describe to what extent these outcome areas have taken place as a result of MFS II supported capacity development interventions and/or other related factors and actors.

Two of the three key organisational capacity changes that were identified during the general map exercise happen to coincide with the outcome areas selected for process tracing: diversification of funds, and improved PME. Each of these two areas is described more in detail below, and a full description of these changes and how they have come about is provided in Appendix 5. In the descriptions the numbers refer to the visual which includes both organisational capacity changes and can be found below.

4.3.1 Improved planning, monitoring and evaluation

For the complete narrative with sources see Appendix 5.

According to FFID staff present at the endline workshop, over the last two years FFID has improved its planning, monitoring and evaluation (PME) system [2], and this is also evident in the endline assessment sheet CFA perspective and management FFID perspective. This was keeping in line with its rearticulated vision which required a revision in strategic plans Improved PME [2] was due to improved planning [6] and an improved M&E system [5]. These issues are further discussed below.

Improved planning [6]

According to the CFA it is evident that operational plans and overall planning is becoming better [6]. It is also evident from the self-assessment sheet of management and the observation of endline evaluation team that the strategic and operational planning has improved. Improved planning was due to:

- *Improved interaction with the field staff [36]*

As was indicated in the baseline report, earlier the interaction of the senior management with the field staff was not frequent. As a result of this the practical problems and ground realities contributed little to the planning process. In the past two years, the senior management has increased their field visits and have also formed a project intervention committee looking at operationalization of projects and therefore working closely with the field staff. Their inputs have improved planning at FFID/Chetna.

- *More streamlined strategic staff meetings [8]*

Staff meetings are now more regular and there are cohesive discussions not only around operational issues but also around strategic issues. Their operational plans are becoming better, partly because of meeting more regularly. Senior management has become more involved in ensuring programme and organizational sustainability because of changes in the donor environment and climatic conditions. Thus meetings are more streamlined, their minutes are documented and decisions taken during meetings are reflected upon and later finalised by the senior management. The annual strategic meetings are funded by MFS II [14].

- *Inputs from an improved M&E system [15]*

The FFID's plans are now better informed by the inputs of an improved M&E system, which is further discussed below. For example an organic farm MIS has a detailed data base on farmers, type of farms, and production on seasonal basis. This is reviewed regularly to revise or fine tune plans and thus improves the performance of the programme.

Improved M&E System [5]

PME also improved due to a strengthened M&E system. According to ICCO, FFID/Chetna has improved their M&E system in terms of identifying the number of people who are involved and how to involve them. The M&E system of FFID improved [5] because of:

- *Better reporting to ICCO [7]: Reports are more timely and crisp.* "The reporting to ICCO has been streamlined and this has helped the organization be more systematic in their analysis and MIS review". Better Reporting to ICCO [7] was mainly due to:

- Improved knowledge on specific inputs on how to report [10]. The staff improved knowledge on how to write better reports by incorporating feedback, specific data and statistics as evidence, image description and also linking narrative and financial reporting. Knowledge on specific inputs on how to report [10] improved because of:

- More focussed data collection [16]: There are set formats to collect focused data from the field. For better data collection from the field FFID has redrafted the formats and templates and reduced the formats from 30 pages to 12 pages Data collection became more focussed because of staff participating in the Effective Communication Workshop [13]. The learning of this workshop was shared with the field staff, the format for data collection was redrafted leading to focused data collection from the field.

- Interactive workshop on Finance Management & Compliance [11]: A two-day interactive workshop was organised by ICCO India in Chennai on 11-12 March 2014. The objective was to help ICCO India and its partners to mutually share the good practices and experiential learning and also have a common understanding on the financial management and the law, and ensure effective utilization of the funds. This workshop was funded by MFS II [14].
 - Feedback on annual reports from ICCO [12]: The OD consultant of ICCO provides feedback on the annual report including the financial part. He asks FFID/Chetna to incorporate feedback and they do that. He sees that reports are getting better. The support from the consultant was funded by MFS II [14].
 - Effective Communication Workshop [13]: a two day workshop on effective communication was organised by ICCO Cooperation-SCA with Plan B Communication Partners in Bangalore on 18-19 July 2013. It was aimed at streamlining the reports submitted by the partners to ICCO. Components of the annual report were set out and explained. It helped the Manager (Communications and PR) to improve his skill in structured and focused report writing and case study writing.
- *Better monitoring of staff output [9] also supported the improve M&E system.* Staff output is monitored through specific operational mechanisms that are now in place. Quarterly Review meetings of all staff where they will be monitored on alignment to the agreed objectives planned for the year is funded by MFS II [14].

4.3.2 Diversification of funds

For the complete narrative with sources see Appendix 5.

Over last two years the organisation had to explore new funding opportunities as some of the projects have come to an end (for e.g. with the Rabobank Foundation and Hivos) and some funding is about to end (for e.g. with ICCO). Therefore, there is a continuous need to approach new donors. In the process FFID/COFA is focussing on networking, forming partnerships, convergence with government programmes and emphasizing on staff capacity development in writing proposals to approach new donors. In the last two years it has mobilised funding mostly for specific projects. Though serious efforts have been put in raising core funding, securing it still remains a challenge.

FFID was able to diversify its funds because they approached new donors and took up new projects [33]. Some of the new projects funded by new donors were:

- Seed Guardians Project: an initiative supported by Textile Exchange (USA) & Inditex (Spain) from January 2013 to December 2015.
- Green Cotton Project: The project runs from 2013 till 2016, it is a joint research project of bio-Re Association India, Kasarwad, Madhya Pradesh, Chetna organic, Hyderabad, University of agricultural sciences, Dharwad and Research institute of organic agriculture FiBL, Switzerland
- Eco-farmers Market Portal (Web-based) in collaboration with PRAVAH & ASHA General, running from January 2014 till June 2014.
- Promoting house hold level food & nutritional security: funded by ICCO & Kerk in Actie Netherland from 1st Nov, 2013 to 31st Oct, 2015
- Government convergence programmes: such as, Convergence of Agriculture Initiatives in Maharashtra (CAIM) in Maharashtra. The project receives financial assistance from the International Fund for Agricultural Development (IFAD), Sir Ratan Tata Trust (SRTT) and government of Maharashtra from June 2013 to June 2016

FFID was able to approach and get new donors for new projects [33] because of diversification of programme strategies [18], networking and forming partnerships [25] and improved staff capacity to showcase their work to donors [26]:

- *Diversification of programme strategies [18]*
FFID/Chetna is no longer only working on cotton, but is now including mixed cropping strategies that include food crops. In this way they were able to link up to new government funded programmes outside the cotton sector and they were also able to attract other funders to work e.g. on nutrition security and seed production. FFID was able to diversify its programme strategies [18] because of

increased knowledge on seed production [34] and the strategic decision to diversify strategies and change the vision [35]:

- Increased knowledge on seed production and conservation [34] was due to:
 - *Training on Seed Production & Marketing 2013, CSA, Wardha [24]* for FFID staff. In order to be able to conserve and share traditional seed varieties in food crops, staff of FFID received training on Seed Production & Marketing in December 2013, organized and funded by the Centre for Sustainable Agriculture (CSA), Wardha [38].
 - *Research [23]*. With regard to the cotton seed research initiative in collaboration with and funded by the Research Institute of Organic Agriculture (FiBL), Switzerland and the University of Agriculture Sciences, Dharwad (UASD) [38], research continued for the third continuous year.
- The strategic decision to diversify strategies and change the vision [35]. The staff felt that in the changing scenario there was a need for revisiting the organization's vision. Consequently, a vision building workshop was organized in June 2013 with senior staff. The re-articulated vision is as follows: *To promote economically and socially viable agrarian based livelihoods in rain-fed and other ecologically depressed regions through sustainable agriculture*. Aligned to this vision the six main objectives of FFID/Chetna now are: enhancing productivity and reducing cost of cultivation, promoting Viable institutions, Creating market through value addition, natural resource management, food and nutrition security and women and child development.

The training in seed production [24], research [23] and the strategic decision [35] were triggered by changing climatic conditions [27] and due a decrease in demand for organic cotton [17].

- *Networking and forming partnerships [25]:*
FFID started focusing more on networking because of the need to diversify funds [32], which came from changes in the donor environment [31]. There is a continuous need to approach new donors. FFID/Chetna for this reason is focusing on networking, forming partnerships, emphasizing on staff capacity development in writing proposals. The improved interaction allows them to bid for projects together as well as improve their visibility which is important from the donor perspective. FFID has been associating itself with different international and national level organizations, networks and government agencies to undertake and implement various projects.
- *Improved capacity of staff to showcase their work to donors [26].*
This is the third reason for being able to approach new donors and take up new projects. Staff capacity was improved because the Communications and PR Manager of FFID attended the *Effective Communication Workshop [13]*.

4.3.3 Improved compliance with HR and financial norms

For the complete narrative with sources see Appendix 5.

In the last two years FFID/Chetna improved compliances with the HR and financial norms triggered by the need to retain their staff and the demand by ICCO for better financial reporting. Compliance improved because of:

- Improved HR systems [20];
- Improved compliance with financial norms [21].

Improved HR Systems [20]

FFID introduced new HR initiatives to improve its HR system: such as a five day working week (trial basis), increase in daily sustenance allowance while travelling, provisions for a family health insurance, an increment of 8-15 per cent in the salaries with effect from April 2014 and staff promotions under the revised HR systems. These changes were triggered by *a high staff turnover in the last two years [37]* as staff in key senior positions left the organisation for better opportunities (while staff turnover at the field and programme level remained relatively low).

Improved compliance with financial norms [21]

FFID improved its compliance with financial norms to fulfil the requirement of ICCO as well as the government under the FCRA Act. This compliance improved due to:

- *Better financial reporting [28] and better adherence to norms developed by ICCO for partners [29]*. Both these developments were because of improved knowledge of financial management and

compliance in accordance to local laws [30]. This knowledge improved because of the *interactive workshop on Finance Management & Compliance organised by ICCO India in Chennai 11-12 March 2014 [11]*, which was funded by MFS II [14]. This was a two days interactive workshop. The objective was to help ICCO India and its partners to mutually share the good practices and experiential learning and also have a common understanding on the financial management and the law, and to ensure effective utilization of the funds. It resulted in improved knowledge of the staff on linking narrative and financial reporting, develop budget plans, to make reports more communicative and innovative, and to integrate finance and program.

5 Discussion and conclusion

5.1 Methodological issues

FFID is supporting the Chetna Organic & Fair Trade Cotton Intervention Programme which spawns the twin farmer owned organisations Chetna Organic Farmers Association (COFA) and Chetna Organic Agriculture Producer Company Ltd (COAPCL). Although ICCO is supporting COFA, FFID has been selected as the unit of analysis as COFA is prohibited by Indian laws to receive foreign funding. COFA is the operational wing through which FFID works. Hence, even though ICCO supports COFA and mandates its organisational activities, FFID is the body which is responsible for strategic guidance and steering COFA's activities. Though COFA has COAPCL as a section 25 company, it is still FFID which is answerable for the performance of the organisation. COFA staff is on FFID payroll.

FFID was well versed with the 5C model, with the endline workshop being attended by the management (Sr. Manager – Programs), programme staff (Technical Head cum Team leader, Communication Manager, Certification Manager), HR/Admin (Finance Manager, Sr. Accountant, Admin Officer), field staff (Program Officer cum State Coordination–Odisha, Junior Program Officer cum Marketing & Certification–Odisha, Program Officer cum State Coordination–Maharashtra, Program Officer cum State Coordination–Telangana) who were part of the baseline evaluation, except for Program Officer cum State Coordination–Odisha.

There was a difference between the initial causal map (based on initial document review) and the causal map developed during the workshop. In the end, the causal map developed at the workshop was complemented by information from document review. Though there was very little communication barrier, it was noticed that one of the newly appointed Directors, the previous CEO, was answering most of the questions, which made most of the others look as if they were less informed about the process.

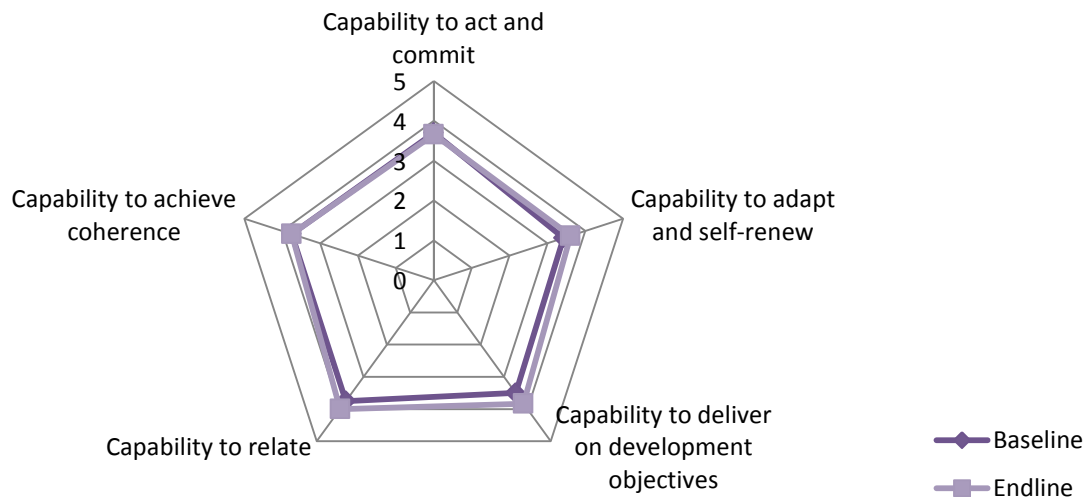

Two Board members were interviewed together; they gave an in-depth view of the organisational sustainability plan of the organisation and the strategic change from organic cotton to multi-cropping. FFID does not have an Organisational Development (OD) consultant. The CEO cum Director is extremely capable and takes care of that side of the organisational necessities. FFID does not work with partners. The farmers organisations that they work with are loose groups who agree to work on organic farming. FFID is part of networks where it does marketing and branding lobbying. This activity is carried out by the CEO. Hence the question of interviewing partners did not arise.

In relation to process tracing, training questionnaires were filled in for all the trainings and events under MFS II supported funding. However, for the staff it was sometimes difficult to recall what they learnt during a specific training as the staff was exposed to various training programmes and exposure visits (both under MFSII programme and others). Therefore, often the observed changes can be attributed to various factors beyond a specific training programme. However, the training questionnaires formed the basis of distinguishing the changes which resulted from a particular training over others. It provided details such as who participated in the training and the consequent changes, ability of the participant to influence other staff, application of training.

5.2 Changes in organisational capacity

This section aims to provide an answer to the first and fourth evaluation questions:

1. *What are the changes in partner organisations' capacity during the 2012-2014 period?*
4. *What factors explain the findings drawn from the questions above?*

Whilst changes took place within four of the five core capabilities, in some indicators the improvements or deterioration were more pronounced than in others. Below the changes in each of the capabilities are further explained, by referring to the specific indicators that changed.

Over the last two years some improvements took place in the indicators under the capability to act and commit. Over the last two years climatic, market and donor conditions have been changing rapidly. Due to this, leadership decided to change the vision and strategy of the organisation. Before the baseline in 2012, FFID/Chetna was more cotton-centric, now they also work on food crops. Changes in the donor environment have led to FFID not being able to offer salaries that are up to par with the market. While FFID is able to secure some funding for specific projects, it is really hard to secure core funding. Due to this senior key staff members have left the organisation for better opportunities and this meant a slight deterioration in the indicator on staff turnover. Board members are now more constructively engaged in the efforts to look for new funding. The last two years, financial compliance, showcasing and reporting to donors, and working with the government have improved. While during the baseline there were no data available on how FFID articulated its strategies, now during the annual strategy meetings a situational analysis is done and strategies are based on developments in the donor, cotton market and climatic environment.

In the capability to adapt and self-renew FFID has improved slightly in various indicators. As FFID modified its M&E formats, data collection from the field became more focussed and training on effective communication and financial compliances also led to better reports. It is hard for FFID to find and hire the right person with M&E skills because of the low salaries they can offer. Staff have basic M&E skills and evaluations are done by donors or fair trade organisations. The improved reports that are now more punctual have helped in improving the performance in the programmes, but M&E findings are not yet used strategically. Critical reflection improved as a strategic annual retreat now involves field staff more as they are held in the field offices. Reflection meetings are held more regularly, because ICCO and other donors insisted on this.

In terms of the capability to deliver on development objectives, there have been some improvements. Operational plans have improved as they are informed by better M&E, research and minutes from annual strategic meetings. Data collection to trace whether FFID's services meet their beneficiaries needs is now more focussed and board members also visit the field to verify this. There is more interaction with the target groups through visits and their input in reports. In terms of balancing quality and efficiency, FFID slightly improved because they focussed on better financial compliance through trainings on budget planning and the FCRA. There are now team leaders for all programmes who are responsible for and skilled in budget planning. Also the decision has been made to not scale up programmes but to focus on consolidating the existing ones.

In the capability to relate FFID has somewhat improved. They have worked more on organisational visibility, for example through working on convergence programmes with the government. Market information to inform their policies is obtained through e.g. their involvement in the network: three dimension profit & loss. As mentioned earlier, interaction with the field level increased and many meetings and in-house trainings are now held in the field instead of at the head office. In terms of

internal relations within FFID, there is more sharing after trainings and because a middle level manager became team leader informal communication improved.

There have been no changes in the indicators under the capability to achieve coherence.

During the endline workshop some key organisational capacity changes were brought up by FFID's staff: improved planning, monitoring and evaluation; diversification of funding and improved compliances with HR and financial norms. The evaluators considered it important to also note down the SPO's story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provide by the evaluation team. These changes happened to overlap with the key changes that were selected for process tracing. The underlying causes of the drop in demand for organic cotton, worsening climatic conditions and changing donor environment led to many of the above mentioned changes in FFID's organisational capacity as it led them to make a strategic decision to no longer only focus on cotton and work more diligently on financial compliances and attractive reports for donors. MFS II played a role in funding trainings that led to improved PME, but also the ending of MFS II funding in 2014 triggered the need to diversify funding. This will further be discussed below in 5.3.

5.3 Attributing changes in organisational capacity to MFS II

This section aims to provide an answer to the second and fourth evaluation questions:

2. *To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*

4. *What factors explain the findings drawn from the questions above?*

To address the question of attribution it was agreed that for all the countries in the 5C study, the focus would be on the capability to act and commit and the capability to adapt and self-renew, with a focus on MFS II supported organisational capacity development interventions that were possibly related to these capabilities. 'Process tracing' was used to get more detailed information about the changes in these capabilities that were possibly related to the specific MFS II capacity development interventions. The organisational capacity changes that were focused on were:

- Improved planning, monitoring and evaluation (PME); and
- Diversification of funds.
- Improved compliance with HR and financial norms

The first organisational capacity change falls under the fall under the capability to adapt and self-renew. The last two organisational capacity changes fall under the capability to act and commit. The organisational capacity change areas that were chosen are based on document review as well as discussions with the SPO and CFA. Each of these organisational capacity changes is further discussed below.

The following issues are discussed for the MFS II funded activities that are related to the above mentioned organisational capacity changes:

- a. Design: the extent to which the MFS II supported capacity development intervention was well-designed. (Key criteria: relevance to the SPO; SMART objectives)
- b. Implementation: the extent to which the MFS II supported capacity development was implemented as designed (key criteria: design, according to plans during the baseline);
- c. Reaching objectives: the extent to which the MFS II capacity development intervention reached all its objectives (key criteria: immediate and long-term objectives, as formulated during the baseline);
- d. the extent to which the observed results are attributable to the identified MFS II supported capacity development intervention (reference made to detailed causal map, based on 'process tracing').

Please note that whilst (d) addresses the evaluation question related to attribution (evaluation question 2), the other three issues (a, b and c) have been added by the synthesis team as additional reporting requirements, and therefore there is inadequate information available on this. Then again, this wasn't the purpose of this 5c evaluation.

Improved planning, monitoring and evaluation (PME)

The following MFS II funded capacity development interventions were linked to the key organisational capacity change "Improved planning, monitoring and evaluation (PME);"

1. Workshop on Effective communication, 18-19 July 2013 (not planned during the baseline, but details provided during the endline)
2. Workshop on Financial Management and Compliances, 11-12 March 2014 (not planned during the baseline; but details provided during the endline)
3. More streamlined strategic staff meetings during annual retreats (planned during the baseline; no details provided during the endline)
4. Feedback on annual reports from ICCO (not planned during the baseline and no details provided during the endline)
5. Quarterly Review meetings with all staff to better monitor staff output (planned during the baseline, but no details provided during the endline)

The above-mentioned MFS II funded capacity development interventions will be discussed below. These interventions were either planned during the baseline and on which details were provided during the baseline and endline or were not planned during the baseline, but details on the intervention were provided during the endline. The capacity development interventions for which no objectives have been provided during baseline or endline will only be discussed when addressing the attribution question (in this case strategic annual retreats, the feedback on annual reports from ICCO and the quarterly review meetings).

Workshop on Effective communication, 18-19 July 2013

Design

This intervention was not planned during the baseline. The immediate objectives of this workshop, which were formulated during the endline by the CFA was "to enable partners to understand and practice effective communication components as represented by crisp, complete and consistent project reports, emotive and evidence-based case studies and descriptive photographs" and "to bring parity in reporting between all SPOs and also to ensure quality in reporting." The long term expected objective was that FFID would have the capacity to report better to other donor agencies and to develop crisp reports in line with the requirements of the private sector.

During the baseline workshop FFID formulated a number of conditions that needed to be in place in order for them to emerge as "a resource to enhance sustainable agriculture based livelihood options in rain feds" (their goal). The conditions that they set are all interrelated and linked to the objective of the effective communications workshop: having a robust MIS (to provide inputs for reports) and increased visibility of the organisation. The objectives, both immediate and long term, were therefore very relevant for FFID.

These objectives were not formulated in a very SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

This intervention was not planned for during the baseline and details about the specific design cannot be provided, since this wasn't the focus of the evaluation. Therefore, no judgement can be made on whether this intervention was implemented as designed. However the workshop did take place on 18-19 July 2013 in Bangalore. The communications and PR manager of FFID attended this workshop.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, as explained in the detailed causal map. The effective communications workshop came up in the map and narrative on the organisational capacity change 'improved PME'. In this regard we can conclude that this workshop led to more

focussed data collection and improved knowledge on specific inputs on how to report. These two changes together led to better reporting to ICCO, which contributed to an improved M&E system and finally to improved PME.

Though not the focus of this evaluation, we can provide an indication of the extent to which the objectives as formulated during the baseline and endline, have been achieved,. The short term objective of having more crisp, complete and consistent reports with case-studies and photographs, has been achieved. ICCO observed that FFID's reports got more timely and crisp after this workshop. Also the communications and PR manager of FFID improved his skill in structured and focused report and case study writing. FFID now has a database of 10.000 photographs, 100 hours of video footage and 100 case studies. The short term objective of bringing more parity between all SPOs also has been achieved as ICCO mentioned that it was easier for them to consolidate the reports from various SPOs because of the standardised reports that they all used. The long term objective of having better reports for other funders and reports in line with the requirements of the private sector has been achieved to some extent. From the causal map and narrative we concluded that improved staff capacity to showcase their work (because of this effective communications workshop) contributed to FFID approaching and getting new donors for new projects.

Workshop on Financial Management and Compliances, 11-12 March 2014

Design

This intervention was not planned during the baseline. The immediate objectives of this workshop were, as described by the CFA during the endline: "to ensure a common goal and accountability for all partners working in MFS-II; common understanding on financial management and the laws; to set minimum standards and good practices; to leverage the learnings of both ICCO and its partners' long ground level experience; and to ensure effective utilization of MFS funds by partners. The long term objective was: "improved financial performance and better finance management systems."

During the baseline workshop FFID formulated a number of conditions that needed to be in place in order for them to emerge as "a resource to enhance sustainable agriculture based livelihood options in rain fed" (their goal). The condition that is most linked to the objectives of this interventions in relation to improved PM&E (and in particular financial reporting requirements by funders) is a focus on, among other things, training staff in how to meet donor compliances through improved financial reporting. These areas in which FFID wanted to develop during the baseline are very much linked to the immediate and long term objective of this intervention. The objectives of the interventions are therefore very relevant for FFID.

These expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

This intervention was not planned for during the baseline and details about the specific design cannot be provided, since this wasn't the focus of the evaluation. Therefore, no judgement can be made on whether this intervention was implemented as designed. However the workshop did take place on 11-12 March 2014 in Chennai. The Manager Finance and Admin of FFID, who is in charge of accounts and financial management in Chetna, attended this workshop.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, as explained in the detailed causal map. The financial management workshop came up in the map and narrative on the organisational capacity change 'improved PME'. In this regard we can conclude that this workshop contributed to better (financial) reporting to ICCO, which contributed to an improved M&E system and finally to improved PME.

Though not the focus of this evaluation, we can provide an indication of the extent to which the objectives as formulated during the baseline and endline, have been achieved. The short term objectives of this intervention to ensure accountability for all partners, common understanding of financial management and laws, to set minimum standards and to ensure effective utilisation of MFS funds, were reached. The CFA observed that FFID had better financial reporting, was not in risk levels (with regards to their financial management), was evaluated better financially (i.e. not in a fraudulent category), better adhered to the Annex 4A and B norms developed by ICCO for partners and had

better knowledge of and compliance with local laws. FFID agrees with this. The long term objective "improved financial performance and better finance management systems" has not yet been achieved, but it is in process.

Attribution of observed results to MFS II capacity development interventions

Improved planning, monitoring and evaluation was due to improved planning and an improved M&E system (also see 4.3.1). Improved planning can be attributed to improved interaction with field staff, more streamlined strategic staff meetings and inputs from an improved M&E system. The field staff interaction developed over the last two years as the senior management increased their field visits and formed a project intervention committee that looked at the operationalization of projects, working closely with field staff. This can thus be attributed to internal factors within FFID and not to MFS II funding. The strategic staff meetings take place once a year and are funded by MFS II. The inputs from an improved M&E system can also be attributed to MFS II funded capacity development interventions as will be described in the next paragraph. All in all, improved planning can be partly attributed to MFS II funded interventions and partly to internal factors within FFID.

The improved M&E system can be attributed to better reporting to ICCO and better monitoring of staff outputs. Better reporting to ICCO can be completely attributed to MFS II funded capacity development interventions. Reporting to ICCO became better because FFID staff had better knowledge on specific inputs on how to report. This knowledge had been acquired during the MFS II funded interactive workshop on finance management and compliance on 11-12 March 2014 and the effective communications workshop on 18-19 July 2013 (both described above). FFID's knowledge on which inputs were needed for the reports can also be attributed to more focused data collection, which was the result of the effective communications workshop. Finally the improved knowledge on inputs on how to report can be attributed to feedback that ICCO provided on annual reports. The M&E system improve not only in relation to improved reporting, but also better monitoring of staff outputs. Staff monitoring mainly took place during quarterly review meetings of all staff. These meetings are funded by MFS II. All in all, the improved M&E system of FFID can almost completely be attributed to MFS II funded capacity development interventions.

Diversification of funds

The following MFS II capacity development intervention supported by ICCO are linked to the key organisational capacity change "diversification of funds" (please also see section 4.3):

1. Workshop on Effective communication, 18-19 July 2013 (not planned during the baseline, but details provided during the endline; already described above).

The MFS II capacity development intervention that was mentioned by ICCO and is linked to the key organisational capacity change "diversification of funds" has been described under the previous key change (improved PME), and will be described here shortly for how it relates to diversification of funding.

Workshop on Effective communication, 18-19 July 2013

Design

This intervention was not planned during the baseline. The immediate objectives of this workshop, which were formulated during the endline by the CFA was "to enable partners to understand and practice effective communication components as represented by crisp, complete and consistent project reports, emotive and evidence-based case studies and descriptive photographs" and "to bring parity in reporting between all SPOs and also to ensure quality in reporting." The long term expected objective was that FFID would have the capacity to report better to other donor agencies and to develop crisp reports in line with the requirements of the private sector.

During the baseline workshop FFID formulated a number of conditions that needed to be in place in order for them to emerge as "a resource to enhance sustainable agriculture based livelihood options in rain feds" (their goal). The conditions that they set are all interrelated and linked to the objective of the effective communications workshop and are linked to diversification of funds: increased visibility of the organisation and a strong financial resource base (because of better internal and external communication to existing and potential donors). The objectives, both immediate and long term, were therefore very relevant for FFID.

These objectives were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically,

but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

This intervention was not planned for during the baseline and details about the specific design cannot be provided, since this wasn't the focus of the evaluation. Therefore, no judgement can be made on whether this intervention was implemented as designed. However the workshop did take place on 18-19 July 2013 in Bangalore. The communications and PR manager of FFID attended this workshop.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, as explained in the detailed causal map. The effective communications workshop came up in the map and narrative on the organisational capacity change 'diversification of funding'. In this regard we can conclude that this workshop contributed to improved staff capacity to showcase work to donors which led to approaching new donors and taking up new projects which finally led to diversification of funding.

Though not the focus of this evaluation, under the organisational capacity change "improved PME" it has already been discussed to what extent the objectives that were formulated during the endline have been achieved.

Attribution of observed results to MFS II capacity development interventions

FFID was able to diversify its funds because they were approaching new donors and taking up new projects. Taking up new projects and be able to approach new donors can be attributed to diversification of programme strategies, networking and forming partnerships and improved capacity of staff to showcase their work to donors.

Diversification of programme strategies can be attributed to increased knowledge on seed production and the strategic decision to diversify strategies and change the vision. The increased knowledge on seed production can be attributed to a training on seed production and marketing in December 2013 that was funded by the Centre for Sustainable Agriculture; and a research initiative that FFID has been involved in with a research institute in Switzerland and a University in Dharwad, India (both non-MFS II). Going to this training and starting this research were triggered by the external factors of changing climatic conditions (including Phailin cyclone) and a decrease in the demand for organic cotton. The diversification of programme strategies can furthermore be attributed to the strategic decision to diversify strategies and change the vision. was an internal development within FFID which was triggered by again the external factors: changing climatic conditions and a drop in the demand for organic cotton. All in all, the diversification of programme strategies cannot be attributed to MFS II funded capacity development interventions.

FFID worked on networking and forming partnerships because of a need to diversify funds. The need to diversify funds can be attributed to changes in the donor environment. Changes in the donor environment include the more strict regulations of the Indian Government on foreign funding and the ending of MFS II funding by September 2014. The improved networking and formations of new partnerships cannot be attributed to MFS II funded interventions. The partnerships are furthermore with government programmes and e.g. partners through a project called 3DPNL (three dimensional profit and loss), which are not related to MFS II. There is no link to MFS II funded capacity development interventions.

Finally, FFID's improved capacity to showcase their work to donors can be attributed to the effective communications workshop on 18-19 July 2013, which was funded by MFS II and is described above. As far as the evaluation team knows there have not been any other trainings by other funders on the same topic. FFID's improved staff capacity to showcase their work can therefore be completely attributed to this MFS II funded capacity development intervention.

All in all, only one MFS II funded capacity development intervention (and effective publications workshop in 2013) has played a role and his role was minor in terms of FFID's diversification of funding. External factors like the changing climate and demand for organic cotton; internal factors like the strategic change and projects and trainings with other funders have played a more important role in stimulating the organisation to diversify its FFID's funding base.

Improved compliance with HR and financial norms

The following MFS II capacity development interventions were linked to the key organisational capacity change "Improved compliance with HR and financial norms"

1. Workshop on Financial Management and Compliances, 11-12 March 2014 (not planned during the baseline; but details provided during the endline)

Workshop on Financial Management and Compliances, 11-12 March 2014

Design

This intervention was not planned during the baseline. The immediate objectives of this workshop were, as described by the CFA during the endline: "to ensure a common goal and accountability for all partners working in MFS-II; common understanding on financial management and the laws; to set minimum standards and good practices; to leverage the learnings of both ICCO and its partners' long ground level experience; and to ensure effective utilization of MFS funds by partners". The long term objective was: "improved financial performance and better finance management systems."

During the baseline workshop FFID formulated a number of conditions that needed to be in place in order for them to emerge as "a resource to enhance sustainable agriculture based livelihood options in rain feds" (their goal). The condition that is most linked to the objectives of this interventions in relation to improved compliance with financial norms is training staff in how to comply with donor requirements and to define a model for reinvesting the cooperatives' profit. These areas in which FFID wanted to develop during the baseline are very much linked to the immediate and long term objective of this intervention. The objectives of the interventions are therefore very relevant for FFID.

These expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

As described above under improved PME, this workshop took place on 11-12 March 2014 in Chennai. The Manager Finance and Admin of FFID, who is in charge of accounts and financial management in Chetna, attended this workshop.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, and as described in the detailed causal map. The financial management workshop came up in the map and narrative on the organisational capacity change: improved compliance with HR and financial norms. In this regard we can conclude that this workshop contributed to improved knowledge of financial management and compliance according to local laws, which contributed to better financial reporting and better adherence to norms developed by ICCO for partners, which together led to better compliance to financial norms.

Though not the focus of this evaluation, under the organisational capacity change "improved PME" it has already been discussed to what extent the objectives that were formulated during the endline have been achieved.

Attribution of observed results to MFS II capacity development interventions

FFID improved its compliance with HR and financial norms because of improved HR systems and improved compliance with financial norms.

The improved HR systems were triggered by a high staff turnover in the last two years. FFID introduced some new HR initiatives like provisions for family health insurance and higher salaries in order to retain staff. This was an organisational capacity change that happened due to internal factors (high staff turnover) and this cannot be attributed to MFS II funded capacity development interventions.

The compliance with financial norms to fulfil the requirement of ICCO as well as the government under the FCRA Act improved because of better financial reporting and better adherence to norms developed by ICCO for partners. Both these developments were because of improved knowledge of financial management and compliance in accordance to local laws. This knowledge can be attributed to the MFS

II funded interactive workshop on Finance Management & Compliance organised by ICCO India in Chennai 11-12 March 2014. The improved compliance with financial norms can therefore to a large extent be attributed to MFS II funded capacity development interventions.

All in all, FFID's improved compliance with HR and financial norms can partly be attributed to MFS II supported capacity development interventions.

Appendix 1 Methodological approach & reflection

Introduction

This appendix describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around four key evaluation questions:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

Note: the methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report. At the end of this appendix a brief methodological reflection is provided.

Changes in partner organisation's capacity – evaluation question 1

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?**

This question was mainly addressed by reviewing changes in 5c indicators, but additionally a 'general causal map' based on the SPO perspective on key organisational capacity changes since the baseline has been developed. Each of these is further explained below. The development of the general causal map is integrated in the steps for the endline workshop, as mentioned below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012.¹⁶ Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

1. **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
2. **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
3. **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
4. **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
5. **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

¹⁶ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Below each of these steps is further explained.

*Step 1. Provide the **description of indicators** in the relevant formats – CDI team*

- These formats were to be used when collecting data from SPO staff, CFA, partners, and consultants. For each of these respondents different formats have been developed, based on the list of 5C indicators, similar to the procedure that was used during the baseline assessment. The CDI team needed to add the 2012 baseline description of each indicator. The idea was that each respondent would be requested to review each description per indicator, and indicate whether the current situation is different from the baseline situation, how this situation has changed, and what the reasons for the changes in indicators are. At the end of each format, a more general question is added that addresses how the organisation has changed its capacity since the baseline, and what possible reasons for change exist. Please see below the questions asked for each indicator as well as the more general questions at the end of the list of indicators.

General questions about key changes in the capacity of the SPO

What do you consider to be the key changes in terms of how the organisation/ SPO has developed its capacity since the baseline (2012)?

What do you consider to be the main explanatory reasons (interventions, actors or factors) for these changes?

List of questions to be asked for each of the 5C indicators (The entry point is the the description of each indicator as in the 2012 baseline report):

1. *How has the situation of this indicator changed compared to the situation during the baseline in 2012? Please tick one of the following scores:*
 - -2 = Considerable deterioration
 - -1 = A slight deterioration
 - 0 = No change occurred, the situation is the same as in 2012
 - +1 = Slight improvement
 - +2 = Considerable improvement
2. *Please describe what exactly has changed since the baseline in 2012*

3. *What interventions, actors and other factors explain this change compared to the baseline situation in 2012? Please tick and describe what interventions, actors or factors influenced this indicator, and how. You can tick and describe more than one choice.*
- Intervention, actor or factor at the level of or by **SPO**:
 - Intervention, actor or factor at the level of or by the **Dutch CFA (MFS II funding)**:
 - Intervention, actor or factor at the level of or by the **other funders**:
 - **Other** interventions, actors or factors:
 - Don't know.

Step 2. Review the descriptions per indicator – in-country team & CDI team

Before the in-country team and the CDI team started collecting data in the field, it was important that they reviewed the description for each indicator as described in the baseline reports, and also added to the endline formats for review by respondents. These descriptions are based on document review, observation, interviews with SPO staff, CFA staff and external respondents during the baseline. It was important to explain this to respondents before they filled in the formats.

Step 3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)

The CDI team was responsible for collecting data from the CFA:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet – CFA perspective.

The in-country team was responsible for collecting data from the SPO and from external respondents (except CFA). The following formats were sent before the fieldwork started:

- 5C Endline support to capacity sheet – SPO perspective.
- 5C Endline interview guides for externals: partners; OD consultants.

Step 4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team

The CDI team, in collaboration with the in-country team, collected the following documents from SPOs and CFAs:

- Project documents: project proposal, budget, contract (Note that for some SPOs there is a contract for the full MFS II period 2011-2015; for others there is a yearly or 2-yearly contract. All new contracts since the baseline in 2012 will need to be collected);
- Technical and financial progress reports since the baseline in 2012;.
- Mid-term evaluation reports;
- End of project-evaluation reports (by the SPO itself or by external evaluators);
- Contract intake forms (assessments of the SPO by the CFA) or organisational assessment scans made by the CFA that cover the 2011-2014 period;
- Consultant reports on specific inputs provided to the SPO in terms of organisational capacity development;
- Training reports (for the SPO; for alliance partners, including the SPO);
- Organisational scans/ assessments, carried out by the CFA or by the Alliance Assessments;
- Monitoring protocol reports, especially for the 5C study carried out by the MFS II Alliances;
- Annual progress reports of the CFA and of the Alliance in relation to capacity development of the SPOs in the particular country;
- Specific reports that are related to capacity development of SPOs in a particular country.

The following documents (since the baseline in 2012) were requested from SPO:

- Annual progress reports;
- Annual financial reports and audit reports;
- Organisational structure vision and mission since the baseline in 2012;
- Strategic plans;

- Business plans;
- Project/ programme planning documents;
- Annual work plan and budgets;
- Operational manuals;
- Organisational and policy documents: finance, human resource development, etc.;
- Monitoring and evaluation strategy and implementation plans;
- Evaluation reports;
- Staff training reports;
- Organisational capacity reports from development consultants.

The CDI team will code these documents in NVivo (qualitative data analysis software program) against the 5C indicators.

Step 5. Prepare and organise the field visit to the SPO – in-country team

Meanwhile the in-country team prepared and organised the logistics for the field visit to the SPO:

- **General endline workshop** consisted about one day for the self-assessments (about ½ to ¾ of the day) and brainstorm (about 1 to 2 hours) on key organisational capacity changes since the baseline and underlying interventions, factors and actors ('general causal map'), see also explanation below. This was done with the five categories of key staff: managers; project/ programme staff; monitoring and evaluation staff; admin & HRM staff; field staff. Note: for SPOs involved in process tracing an additional 1 to 1½ day workshop (managers; program/project staff; monitoring and evaluation staff) was necessary. See also step 7;
- **Interviews with SPO staff** (roughly one day);
- **Interviews with external respondents** such as partners and organisational development consultants depending on their proximity to the SPO. These interviews could be scheduled after the endline workshop and interviews with SPO staff.

General causal map

During the 5C endline process, a 'general causal map' has been developed, based on key organisational capacity changes and underlying causes for these changes, as perceived by the SPO. The general causal map describes cause-effect relationships, and is described both as a visual as well as a narrative.

As much as possible the same people that were involved in the baseline were also involved in the endline workshop and interviews.

Step 6. Interview the CFA – CDI team

The CDI team was responsible for sending the sheets/ formats to the CFA and for doing a follow-up interview on the basis of the information provided so as to clarify or deepen the information provided. This relates to:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet - CFA perspective.

Step 7. Run the endline workshop with the SPO – in-country team

This included running the endline workshop, including facilitation of the development of the general causal map, self-assessments, interviews and observations. Particularly for those SPOs that were selected for process tracing all the relevant information needed to be analysed prior to the field visit, so as to develop an initial causal map. Please see Step 6 and also the next section on process tracing (evaluation question two).

An endline workshop with the SPO was intended to:

- Explain the purpose of the fieldwork;
- Carry out in the self-assessments by SPO staff subgroups (unless these have already been filled prior to the field visits) - this may take some 3 hours.
- Facilitate a brainstorm on key organisational capacity changes since the baseline in 2012 and underlying interventions, factors and actors.

Purpose of the fieldwork: to collect data that help to provide information on what changes took place in terms of organisational capacity development of the SPO as well as reasons for these changes. The baseline that was carried out in 2012 was to be used as a point of reference.

Brainstorm on key organisational capacity changes and influencing factors: a brainstorm was facilitated on key organisational capacity changes since the baseline in 2012. In order to kick start the discussion, staff were reminded of the key findings related to the historical time line carried out in the baseline (vision, mission, strategies, funding, staff). This was then used to generate a discussion on key changes that happened in the organisation since the baseline (on cards). Then cards were selected that were related to organisational capacity changes, and organised. Then a 'general causal map' was developed, based on these key organisational capacity changes and underlying reasons for change as experienced by the SPO staff. This was documented as a visual and narrative. This general causal map was to get the story of the SPO on what they perceived as key organisational capacity changes in the organisation since the baseline, in addition to the specific details provided per indicator.

Self-assessments: respondents worked in the respective staff function groups: management; programme/ project staff; monitoring and evaluation staff; admin and HRM staff; field staff. Staff were assisted where necessary so that they could really understand what it was they were being asked to do as well as what the descriptions under each indicator meant.

Note: for those SPOs selected for process tracing an additional endline workshop was held to facilitate the development of detailed causal maps for each of the identified organisational change/ outcome areas that fall under the capability to act and commit, and under the capability to adapt and self-renew, and that are likely related to capacity development interventions by the CFA. See also the next section on process tracing (evaluation question two). It was up to the in-country team whether this workshop was held straight after the initial endline workshop or after the workshop and the follow-up interviews. It could also be held as a separate workshop at another time.

Step 8. Interview SPO staff – in-country team

After the endline workshop (developing the general causal map and carrying out self-assessments in subgroups), interviews were held with SPO staff (subgroups) to follow up on the information that was provided in the self-assessment sheets, and to interview staff that had not yet provided any information.

Step 9. Fill-in observation sheets – in-country team

During the visit at the SPO, the in-country team had to fill in two sheets based on their observation:

- 5C Endline observation sheet;
- 5C Endline observable indicators.

Step 10. Interview externals – in-country team & CDI team

The in-country team also needed to interview the partners of the SPO as well as organisational capacity development consultants that have provided support to the SPO. The CDI team interviewed the CFA.

Step 11. Upload and auto-code all the formats collected by in-country team and CDI team – CDI team

The CDI team was responsible for uploading and auto-coding (in Nvivo) of the documents that were collected by the in-country team and by the CDI team.

*Step 12. Provide the **overview of information** per 5C indicator to in-country team – CDI team*

After the analysis in NVivo, the CDI team provided a copy of all the information generated per indicator to the in-country team for initial analysis.

*Step 13. **Analyse the data and develop a draft description** of the findings per indicator and for the general questions – in-country team*

The in-country team provided a draft description of the findings per indicator, based on the information generated per indicator. The information generated under the general questions were linked to the general causal map or detailed process tracing related causal map.

*Step 14. **Analyse the data and finalize the description** of the findings per indicator, per capability and general – CDI team*

The CDI team was responsible for checking the analysis by the in-country team with the Nvivo generated data and to make suggestions for improvement and ask questions for clarification to which the in-country team responded. The CDI team then finalised the analysis and provided final descriptions and scores per indicator and also summarize these per capability and calculated the summary capability scores based on the average of all indicators by capability.

*Step 15. **Analyse the information** in the general causal map –in-country team & CDI team*

The general causal map based on key organisational capacity changes as perceived by the SPO staff present at the workshop, was further detailed by in-country team and CDI team, and based on the notes made during the workshop and where necessary additional follow up with the SPO. The visual and narrative was finalized after feedback by the SPO. During analysis of the general causal map relationships with MFS II support for capacity development and other factors and actors were identified. All the information has been reviewed by the SPO and CFA.

Attributing changes in partner organisation's capacity – evaluation question 2

This section describes the data collection and analysis methodology for answering the second evaluation question: **To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?**

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process. The box below provides some background information on process tracing.

Background information on process tracing

The essence of process tracing research is that scholars want to go beyond merely identifying correlations between independent variables (Xs) and outcomes (Ys). Process tracing in social science is commonly defined by its addition to trace causal mechanisms (Bennett, 2008a, 2008b; Checkle, 2008; George & Bennett, 2005). A causal mechanism can be defined as "a complex system which produces an outcome by the interaction of a number of parts" (Glennan, 1996, p. 52). Process tracing involves "attempts to identify the intervening causal process – the causal chain and causal mechanism – between an independent variable (or variables) and the outcome of the dependent variable" (George & Bennett, 2005, pp. 206-207).

Process tracing can be differentiated into three variants within social science: theory testing, theory building, and explaining outcome process tracing (Beach & Pedersen, 2013).

Theory testing process tracing uses a theory from the existing literature and then tests whether evidence shows that each part of hypothesised causal mechanism is present in a given case, enabling within case inferences about whether the mechanism functioned as expected in the case and whether the mechanism as a whole was present. No claims can be made however, about whether the mechanism was the only cause of the outcome.

Theory building process tracing seeks to build generalizable theoretical explanations from empirical evidence, inferring that a more general causal mechanism exists from the fact of a particular case.

Finally, explaining outcome process tracing attempts to craft a minimally sufficient explanation of a puzzling outcome in a specific historical case. Here the aim is not to build or test more general theories but to craft a (minimally) sufficient explanation of the outcome of the case where the ambitions are more case centric than theory oriented.

Explaining outcome process tracing is the most suitable type of process tracing for analysing the causal mechanisms for selected key organisational capacity changes of the SPOs. This type of process tracing can be thought of as a single outcome study defined as seeking the causes of the specific outcome in a single case (Gerring, 2006; in: Beach & Pedersen, 2013). Here the ambition is to craft a minimally sufficient explanation of a particular outcome, with sufficiency defined as an explanation that accounts for all of the important aspects of an outcome with no redundant parts being present (Mackie, 1965).

Explaining outcome process tracing is an iterative research strategy that aims to trace the complex conglomerate of systematic and case specific causal mechanisms that produced the outcome in question. The explanation cannot be detached from the particular case. Explaining outcome process tracing refers to case studies whose primary ambition is to explain particular historical outcomes, although the findings of the case can also speak to other potential cases of the phenomenon. Explaining outcome process tracing is an iterative research process in which 'theories' are tested to see whether they can provide a minimally sufficient explanation of the outcome. Minimal sufficiency is defined as an explanation that accounts for an outcome, with no redundant parts. In most explaining outcome studies, existing theorisation cannot provide a sufficient explanation, resulting in a second stage in which existing theories are re-conceptualised in light of the evidence gathered in the preceding empirical analysis. The conceptualisation phase in explaining outcome process tracing is therefore an iterative research process, with initial mechanisms re-conceptualised and tested until the result is a theorised mechanism that provides a minimally sufficient explanation of the particular outcome.

Below a description is provided of how SPOs are selected for process tracing, and a description is provided on how this process tracing is to be carried out. Note that this description of process tracing provides not only information on the extent to which the changes in organisational development can be attributed to MFS II (evaluation question 2), but also provides information on other contributing factors and actors (evaluation question 4). Furthermore, it must be noted that the evaluation team has developed an adapted form of 'explaining outcome process tracing', since the data collection and analysis was an iterative process of research so as to establish the most realistic explanation for a particular outcome/ organisational capacity change. Below selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

ETHIOPIA

For Ethiopia the capabilities that are mostly targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 1

The extent to which the Dutch NGO explicitly targets the following capabilities – Ethiopia

Capability to:	AMREF	CARE	ECFA	FSCE	HOA- REC	HUND EE	NVEA	OSRA	TTCA
Act and commit	5	4	5	5	5	3	4	4	3
Deliver on development objectives	2	1	1	1	2	1	1	2	1
Adapt and self-renew	4	2	3	4	2	5	3	3	3
Relate	3	1	2	2	3	2	1	3	1
Achieve coherence	2	2	1	1	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Ethiopia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: AMREF, ECFA, FSCE, HUNDEE. In fact, six SPOs would be suitable for process tracing. We just selected the first one per CFA following the criteria of not including more than one SPO per CFA for process tracing

Table 2

SPOs selected for process tracing – Ethiopia

Ethiopia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
AMREF	Dec 2015	Yes	Yes	Yes	Yes	AMREF NL	Yes
CARE	Dec 31, 2015	Partly	Yes	Yes	Yes – slightly	CARE Netherlands	No - not fully matching
ECFA	Jan 2015	Yes	Yes	Yes	Yes	Child Helpline International	Yes
FSCE	Dec 2015	Yes	Yes	Yes	Yes	Stichting Kinderpostzegels Netherlands (SKN); Note: no info from Defence for Children – ECPAT Netherlands	Yes
HOA-REC	Sustainable Energy project (ICCO Alliance): 2014 Innovative WASH (WASH Alliance): Dec 2015	Yes	Yes	Yes	Yes - slightly	ICCO	No - not fully matching
HUNDEE	Dec 2014	Yes	Yes	Yes	Yes	ICCO & IICD	Yes
NVEA	Dec 2015 (both)	Yes	Yes	Yes	Yes	Edukans Foundation (under two consortia); Stichting Kinderpostzegels Netherlands (SKN)	Suitable but SKN already involved for process tracing FSCE
OSRA	C4C Alliance project (farmers marketing): December 2014 ICCO Alliance project (zero grazing): 2014 (2 nd phase)	Yes	Yes	Yes	Yes	ICCO & IICD	Suitable but ICCO & IICD already involved for process tracing - HUNDEE
TTCA	June 2015	Partly	Yes	No	Yes	Edukans Foundation	No - not fully matching

INDIA

For India the capability that is mostly targeted by CFAs is the capability to act and commit. The next one in line is the capability to adapt and self-renew. See also the table below in which a higher score means that the specific capability is more intensively targeted.

Table 3

The extent to which the Dutch NGO explicitly targets the following capabilities – India¹⁷

Capability to:	BVHA	COUNT	DRISTI	FFID	Jana Vikas	Samar thak Samiti	SMILE	SDS	VTRC
Act and commit	5	3	4	4	4	4	4	3	5
Deliver on development objectives	1	5	1	1	1	1	1	2	1
Adapt and self-renew	2	2	1	3	1	1	4	1	4
Relate	3	1	1	1	1	1	2	1	2
Achieve coherence	1	1	1	4	1	1	1	1	2

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, India.

Below you can see a table describing when the contract with the SPO is to be ended and whether SPO and the CFA both expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BVHA, COUNT, FFID, SMILE and VTRC. Except for SMILE (capability to act and commit only), for the other SPOs the focus for process tracing can be on the capability to act and commit and on the capability to adapt and self-renew.

Table 4

SPOs selected for process tracing – India

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BVHA	2014	Yes	Yes	Yes	Yes	Simavi	Yes; both capabilities
COUNT	2015	Yes	Yes	Yes	Yes	Woorden Daad	Yes; both capabilities
DRISTI	31-03-2012	Yes	Yes	No	no	Hivos	No - closed in 2012
FFID	30-09-2014	Yes	Yes	Yes	Yes	ICCO	Yes

¹⁷ RGVN, NEDSF and Women's Rights Forum (WRF) could not be reached timely during the baseline due to security reasons. WRF could not be reached at all. Therefore these SPOs are not included in Table 1.

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew –by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Jana Vikas	2013	Yes	Yes	Yes	No	Cordaid	No - contract is and the by now; not fully matching focus
NEDSF							No – delayed baseline
RGVN							No - delayed baseline
Samarthak Samiti (SDS)	2013 possibly longer	Yes	Yes	Yes	No	Hivos	No - not certain of end date and not fully matching focus
Shivi Development Society (SDS)	Dec 2013 intention 2014	Yes	Yes	Yes	No	Cordaid	No - not fully matching focus
Smile	2015	Yes	Yes	Yes	Yes	Wilde Ganzen	Yes; first capability only
VTRC	2015	Yes	Yes	Yes	Yes	Stichting Red een Kind	Yes; both capabilities

INDONESIA

For Indonesia the capabilities that are most frequently targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 5

The extent to which the Dutch NGO explicitly targets the following capabilities – Indonesia

Capability to:	ASB	Daya ikologi	ECPAT	GSS	Lem bage Kita	Pt. PPMA	Rifka Annisa	WIIP	Yad upa	Yayasan Kelola	YPI	YRBI
Act and commit	4	4	4	5	4	4	5	3	3	2	5	4
Deliver on development objectives	1	1	1	2	2	1	2	1	1	1	1	1
Adapt and self-renew	3	1	2	4	2	3	4	4	1	1	4	3
Relate	1	1	2	3	3	2	1	2	2	2	3	2
Achieve coherence	1	1	1	2	1	1	2	2	1	1	2	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Indonesia.

The table below describes when the contract with the SPO is to be ended and whether both SPO and the CFA expect to focus on these two selected capabilities (MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: ASB, ECPAT, Pt.PPMA, YPI, YRBI.

Table 6

SPOs selected for process tracing – Indonesia

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
ASB	February 2012; extension Feb,1, 2013 – June,30, 2016	Yes	Yes	Yes	Yes	Hivos	Yes
Dayakologi	2013; no extension	Yes	Yes	Yes	No	Cordaid	No: contract ended early and not matching enough
ECPAT	August 2013; Extension Dec 2014	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	Yes
GSS	31 December 2012; no extension	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	No: contract ended early
Lembaga Kita	31 December 2012; no extension	Yes	Yes	No	Yes	Free Press Unlimited - Mensen met een Missie	No - contract ended early
Pt.PPMA	May 2015	Yes	Yes	No	Yes	IUCN	Yes, capability to act and commit only
Rifka Annisa	Dec, 31 2015	No	Yes	No	Yes	Rutgers WPF	No - no match between expectations CFA and SPO
WIIP	Dec 2015	Yes	Not MFS II	Yes	Not MFS II	Red Cross	No - Capacity development interventions are not MFS II financed. Only some overhead is MFS II

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Yayasan Kelola	Dec 30, 2013; extension of contract being processed for two years (2014-2015)	Yes	Not really	Yes	Not really	Hivos	No - no specific capacity development interventions planned by Hivos
YPI	Dec 31, 2015	Yes	Yes	Yes	Yes	Rutgers WPF	Yes
YRBI	Oct, 30, 2013; YRBI end of contract from 31st Oct 2013 to 31st Dec 2013. Contract extension proposal is being proposed to MFS II, no decision yet.	Yes	Yes	Yes	Yes	ICCO	Yes
Yadupa	Under negotiation during baseline; new contract 2013 until now	Yes	Nothing committed	Yes	Nothing committed	IUCN	No, since nothing was committed by CFA

LIBERIA

For Liberia the situation is arbitrary which capabilities are targeted most CFA's. Whilst the capability to act and commit is targeted more often than the other capabilities, this is only so for two of the SPOs. The capability to adapt and self-renew and the capability to relate are almost equally targeted for the five SPOs, be it not intensively. Since the capability to act and commit and the capability to adapt and self-renew are the most targeted capabilities in Ethiopia, India and Indonesia, we choose to focus on these two capabilities for Liberia as well. This would help the synthesis team in the further analysis of these capabilities related to process tracing. See also the table below.

Table 7

The extent to which the Dutch NGO explicitly targets the following capabilities – Liberia

Capability to:	BSC	DEN-L	NAWOCOL	REFOUND	RHRAP
Act and commit	5	1	1	1	3
Deliver on development objectives	3	1	1	1	1
Adapt and self-renew	2	2	2	2	2
Relate	1	2	2	2	2
Achieve coherence	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Liberia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Also, for two of the five SPOs capability to act and commit is targeted more intensively compared to the other capabilities. Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BSC and RHRAP.

Table 8

SPOs selected for process tracing – Liberia

Liberia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BSC	Dec 31, 2015	Yes	Yes	Yes	Yes	SPARK	Yes
DEN-L	2014	No	No	Unknown	A little	ICCO	No – not matching enough
NAWOCOL	2014	Yes	No	No	A little	ICCO	No – not matching enough
REFOUND	At least until 2013 (2015?)	Yes	No	Yes	A little	ICCO	No – not matching enough
RHRAP	At least until 2013 (2014?)	Yes	Yes	Yes	Yes	ICCO	Yes

Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ' general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

Some definitions of the terminology used for this MFS II 5c evaluation

Based upon the different interpretations and connotations the use of the term causal mechanism we use the following terminology for the remainder of this paper:

A **detailed causal map** (or **model of change**) = the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change.

A **causal mechanism** = is the combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome (Beach and Pedersen, 2013, p. 176).

Part or **cause** = one actor with its attributes carrying out activities/ producing outputs that lead to change in other parts. The final part or cause is the change/ outcome.

Attributes of the actor = specificities of the actor that increase his chance to introduce change or not such as its position in its institutional environment.

*Step 1. Identify the **planned MFS II supported capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

Chapter 4.1 and 4.2 in the baseline report were reviewed. Capacity development interventions as planned by the CFA for the capability to act and commit and for the capability to adapt and self-renew were described and details inserted in the summary format. This provided an overview of the capacity development activities that were originally planned by the CFA for these two capabilities and assisted in focusing on relevant outcomes that are possibly related to the planned interventions.

*Step 2. Identify the **implemented capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

The input from the CFA was reviewed in terms of what capacity development interventions have taken place in the MFS II period. This information was be found in the 'Support to capacity development sheet - endline - CFA perspective' for the SPO, based on details provided by the CFA and further discussed during an interview by the CDI team.

The CFA was asked to describe all the MFS II supported capacity development interventions of the SPO that took place during the period 2011 up to now. The CDI team reviewed this information, not only the interventions but also the observed changes as well as the expected long-term changes, and

then linked these interventions to relevant outcomes in one of the capabilities (capability to act and commit; and capability to adapt and self-renew).

*Step 3. Identify **initial changes/ outcome areas** in these two capabilities – by CDI team & in-country team*

The CDI team was responsible for coding documents received from SPO and CFA in NVivo on the following:

- 5C Indicators: this was to identify the changes that took place between baseline and endline. This information was coded in Nvivo.
- Information related to the capacity development interventions implemented by the CFA (with MFS II funding) (see also Step 2) to strengthen the capacity of the SPO. For example, the training on financial management of the SPO staff could be related to any information on financial management of the SPO. This information was coded in Nvivo.

In addition, the response by the CFA to the changes in 5C indicators format, was auto-coded.

The in-country team was responsible for timely collection of information from the SPO (before the fieldwork starts). This set of information dealt with:

- MFS II supported capacity development interventions during the MFS II period (2011 until now).
- Overview of all trainings provided in relation to a particular outcome areas/organisational capacity change since the baseline.
- For each of the identified MFS II supported trainings, training questionnaires have been developed to assess these trainings in terms of the participants, interests, knowledge and skills gained, behaviour change and changes in the organisation (based on Kirkpatrick's model), one format for training participants and one for their managers. These training questionnaires were sent prior to the field visit.
- Changes expected by SPO on a long-term basis ('Support to capacity development sheet - endline - SPO perspective').

For the selection of change/ outcome areas the following criteria were important:

- The change/ outcome area is in one of the two capabilities selected for process tracing: capability to act and commit or the capability to adapt and self-renew. This was the first criteria to select upon.
- There was a likely link between the key organisational capacity change/ outcome area and the MFS II supported capacity development interventions. This also was an important criteria. This would need to be demonstrated through one or more of the following situations:
 - In the 2012 theory of change on organisational capacity development of the SPO a link was indicated between the outcome area and MFS II support;
 - During the baseline the CFA indicated a link between the planned MFS II support to organisational development and the expected short-term or long-term results in one of the selected capabilities;
 - During the endline the CFA indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities;
 - During the endline the SPO indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities.

Reviewing the information obtained as described in Step 1, 2, and 3 provided the basis for selecting key organisational capacity change/ outcome areas to focus on for process tracing. These areas were to be formulated as broader outcome areas, such as 'improved financial management', 'improved monitoring and evaluation' or 'improved staff competencies'.

Note: the outcome areas were to be formulated as intermediates changes. For example: an improved monitoring and evaluation system, or enhanced knowledge and skills to educate the target group on

climate change. Key outcome areas were also verified - based on document review as well as discussions with the SPO during the endline.

*Step 4. Construct the **detailed, initial causal map** (theoretical model of change) – CDI & in-country team*

A detailed initial causal map was developed by the CDI team, in collaboration with the in-country team. This was based on document review, including information provided by the CFA and SPO on MFS II supported capacity development interventions and their immediate and long-term objectives as well as observed changes. Also, the training questionnaires were reviewed before developing the initial causal map. This detailed initial causal map was to be provided by the CDI team with a visual and related narrative with related references. This initial causal map served as a reference point for further reflection with the SPO during the process tracing endline workshop, where relationships needed to be verified or new relationships established so that the second (workshop-based), detailed causal map could be developed, after which further verification was needed to come up with the final, concluding detailed causal map.

It's important to note that organisational change area/ outcome areas could be both positive and negative.

For each of the selected outcomes the team needed to make explicit the theoretical model of change. This meant finding out about the range of different actors, factors, actions, and events etc. that have contributed to a particular outcome in terms of organisational capacity of the SPO.

A model of change of good quality includes:

- The causal pathways that relate the intervention to the realised change/ outcome;
- Rival explanations for the same change/ outcome;
- Assumptions that clarify relations between different components or parts;
- Case specific and/or context specific factors or risks that might influence the causal pathway, such as for instance the socio-cultural-economic context, or a natural disaster;
- Specific attributes of the actors e.g. CFA and other funders.

A model of change (within the 5C study called a 'detailed causal map') is a complex system which produces intermediate and long-term outcomes by the interaction of other parts. It consists of parts or causes that often consist of one actor with its attributes that is implementing activities leading to change in other parts (Beach & Pedersen, 2013). A helpful way of constructing the model of change is to think in terms of actors carrying out activities that lead to other actors changing their behaviour. The model of change can be explained as a range of activities carried out by different *actors* (including the CFA and SPO under evaluation) that will ultimately lead to an outcome. Besides this, there are also '*structural*' elements, which are to be interpreted as external factors (such as economic conjuncture); and *attributes* of the actor (does the actor have the legitimacy to ask for change or not, what is its position in the sector) that should be looked at (Beach & Pedersen, 2013). In fact Beach and Pedersen, make a fine point about the subjectivity of the actor in a dynamic context. This means, in qualitative methodologies, capturing the changes in the actor, acted upon area or person/organisation, in a non sequential and non temporal format. Things which were done recently could have corrected behavioural outcomes of an organisation and at the same time there could be processes which incrementally pushed for the same change over a period of time. Beach and Pedersen espouse this methodology because it captures change in a dynamic fashion as against the methodology of logical framework. For the MFS II evaluation it was important to make a distinction between those paths in the model of change that are the result of MFS II and rival pathways.

The construction of the model of change started with the identified key organisational capacity change/ outcome, followed by an inventory of all possible subcomponents that possibly have caused the change/ outcome in the MFS II period (2011-up to now, or since the baseline). The figure below presents an imaginary example of a model of change. The different colours indicate the different types of support to capacity development of the SPO by different actors, thereby indicating different pathways of change, leading to the key changes/ outcomes in terms of capacity development (which in this case indicates the ability to adapt and self-renew).

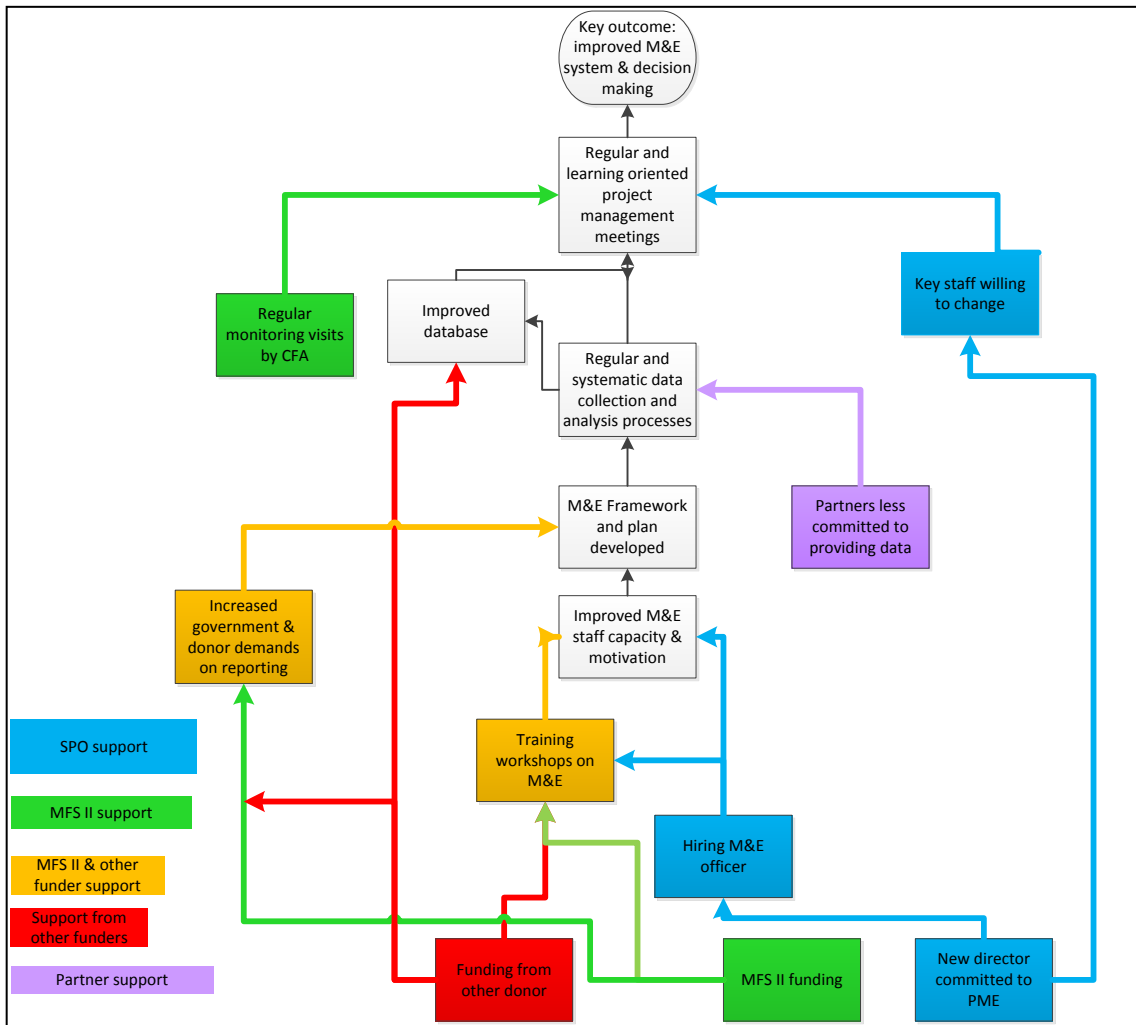

Figure 1 An imaginary example of a model of change

Step 5. Identify **types of evidence** needed to verify or discard different causal relationships in the model of change – in-country teams with support from CDI team

Once the causal mechanism at theoretical level were defined, empirical evidence was collected so as to verify or discard the different parts of this theoretical model of change, confirm or reject whether subcomponents have taken place, and to find evidence that confirm or reject the causal relations between the subcomponents.

A key question that we needed to ask ourselves was, "What information do we need in order to confirm or reject that one subcomponent leads to another, that X causes Y?". The evaluation team needed to agree on what information was needed that provides empirical manifestations for each part of the model of change.

There are four distinguishable types of evidence that are relevant in process tracing analysis: *pattern*, *sequence*, *trace*, and *account*. Please see the box below for descriptions of these types of evidence.

The evaluation team needed to agree on the types of evidence that was needed to verify or discard the manifestation of a particular part of the causal mechanism. Each one or a combination of these different types of evidence could be used to confirm or reject the different parts of the model of change. This is what is meant by robustness of evidence gathering. Since causality as a concept can bend in many ways, our methodology, provides a near scientific model for accepting and rejecting a particular type of evidence, ignoring its face value.

Types of evidence to be used in process tracing

Pattern evidence relates to predictions of statistical patterns in the evidence. For example, in testing a mechanism of racial discrimination in a case dealing with employment, statistical patterns of employment would be relevant for testing this part of the mechanism.

Sequence evidence deals with the temporal and spatial chronology of events predicted by a hypothesised causal mechanism. For example, a test of the hypothesis could involve expectations of the timing of events where we might predict that if the hypothesis is valid, we should see that the event B took place after event A took place. However, if we found that event B took place before event A took place, the test would suggest that our confidence in the validity of this part of the mechanism should be reduced (disconfirmation/ falsification).

Trace evidence is evidence whose mere existence provides proof that a part of a hypothesised mechanism exists. For example, the existence of the minutes of a meeting, if authentic ones, provide strong proof that the meeting took place.

Account evidence deals with the content of empirical material, such as meeting minutes that detail what was discussed or an oral account of what took place in the meeting.

Source: Beach and Pedersen, 2013

Below you can find a table that provides guidelines on what to look for when identifying types of evidence that can confirm or reject causal relationships between different parts/ subcomponents of the model of change. It also provides one example of a part of a causal pathway and what type of information to look for.

Table 9

Format for identifying types of evidence for different causal relationships in the model of change (example included)

Part of the model of change	Key questions	Type of evidence needed	Source of information
Describe relationship between the subcomponents of the model of change	Describe questions you would like to answer so as to find out whether the components in the relationship took place, when they took place, who was involved, and whether they are related	Describe the information that we need in order to answer these questions. Which type of evidence can we use in order to reject or confirm that subcomponent X causes subcomponent Y? Can we find this information by means of : Pattern evidence; Sequence evidence; Trace evidence; Account evidence?	Describe where you can find this information
Example: Training workshops on M&E provided by MFS II funding and other sources of funding	Example: What type of training workshops on M&E took place? Who was trained? When did the training take place? Who funded the training? Was the funding of training provided before the training took place? How much money was available for the training?	Example: Trace evidence: on types of training delivered, who was trained, when the training took place, budget for the training Sequence evidence on timing of funding and timing of training Content evidence: what the training was about	Example: Training report SPO Progress reports interviews with the CFA and SPO staff Financial reports SPO and CFA

Please note that for practical reasons, the 5C evaluation team decided that it was easier to integrate the specific questions in the narrative of the initial causal map. These questions would need to be addressed by the in country team during the process tracing workshop so as to discover, verify or discard particular causal mechanisms in the detailed, initial causal map. Different types of evidence was asked for in these questions.

*Step 6. **Collect data** to verify or discard causal mechanisms and develop workshop-based, detailed causal map – in-country team*

Once it was decided by the in-country and CDI evaluation teams what information was to be collected during the interaction with the SPO, data collection took place. The initial causal maps served as a basis for discussions during the endline workshop with a particular focus on process tracing for the identified organisational capacity changes. But it was considered to be very important to understand from the perspective of the SPO how they understood the identified key organisational capacity change/outcome area has come about. A new detailed, workshop-based causal map was developed that included the information provided by SPO staff as well as based on initial document review as described in the initial detailed causal map. This information was further analysed and verified with other relevant information so as to develop a final causal map, which is described in the next step.

*Step 7. **Assess the quality** of data and **analyse data**, and develop the **final detailed causal map** (model of change) – in-country team and CDI team*

Quality assurance of the data collected and the evidence it provides for rejecting or confirming parts of causal explanations are a major concern for many authors specialised in contribution analysis and process-tracing. Stern et al. (2012), Beach and Pedersen (2013), Lemire, Nielsen and Dybdal (2012), Mayne (2012) and Delahais and Toulemonde (2012) all emphasise the need to make attribution/contribution claims that are based on pieces of evidence that are rigorous, traceable, and credible. These pieces of evidence should be as explicit as possible in proving that *subcomponent X causes subcomponent Y* and ruling out other explanations. Several tools are proposed to check the nature and the quality of data needed. One option is, Delahais and Toulemonde's Evidence Analysis Database, which we have adapted for our purpose.

Delahais and Toulemonde (2012) propose an Evidence Analysis Database that takes into consideration three criteria:

Confirming/ rejecting a causal relation (yes/no);

Type of causal mechanism: intended contribution/ other contribution/ condition leading to intended contribution/ intended condition to other contribution/ feedback loop;

Strength of evidence: strong/ rather strong/ rather weak/ weak.

We have adapted their criteria to our purpose. The in-country team, in collaboration with the CDI team, used the criteria in assessing whether causal relationships in the causal map, were strong enough. This has been more of an iterative process trying to find additional evidence for the established relationships through additional document review or contacting the CFA and SPO as well as getting their feedback on the final detailed causal map that was established. Whilst the form below has not been used exactly in the manner depicted, it has been used indirectly when trying to validate the information in the detailed causal map. After that, the final detailed causal map is established both as a visual as well as a narrative, with related references for the established causal relations.

<i>Example format for the adapted evidence analysis database (example included)</i>	<i>Confirming/ rejecting a causal relation (yes/no)</i>	<i>Type of information providing the background to the confirmation or rejection of the causal relation</i>	<i>Strength of evidence: strong/ rather strong/ rather weak/ weak</i>	<i>Explanation for why the evidence is (rather) strong or (rather) weak, and therefore the causal relation is confirmed/ rejected</i>
<i>Description of causal relation</i>				
e.g. Training staff in M&E leads to enhanced M&E knowledge, skills and practice	e.g. Confirmed	e.g. Training reports confirmed that staff are trained in M&E and that knowledge and skills increased as a result of the training		

Step 8. Analyse and conclude on findings– in-country team and CDI team

The final detailed causal map was described as a visual and narrative and this was then analysed in terms of the evaluation question two and evaluation question four: "To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?" and "What factors explain the findings drawn from the questions above?" It was analysed to what extent the identified key organisational capacity change can be attributed to MFS II supported capacity development interventions as well as to other related factors, interventions and actors.

Explaining factors – evaluation question 4

This paragraph describes the data collection and analysis methodology for answering the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This has been explained in the first section of this appendix. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information was procured for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the process of process tracing as described in the section above.

Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team.

Use of the 5 core capabilities framework and qualitative approach: this has proven to a be very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation

and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
- Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
- Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people

change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

Appendix 2 Background information on the five core capabilities framework

The 5 capabilities (5C) framework was to be used as a framework for the evaluation of capacity development of Southern Partner Organisations (SPOs) of the MFS II consortia. The 5C framework is based on a five-year research program on 'Capacity, change and performance' that was carried out by the European Centre for Development Policy Management (ECDPM). The research included an extensive review of the literature and sixteen case studies. The 5C framework has also been applied in an IOB evaluation using 26 case studies in 14 countries, and in the baseline carried out per organisation by the MFS II organisations for the purpose of the monitoring protocol.

The 5C framework is structured to understand and analyse (changes in) the capacity of an organization to deliver (social) value to its constituents. This introduction briefly describes the 5C framework, mainly based on the most recent document on the 5C framework (Keijzer et al., 2011).

The 5C framework sees capacity as an **outcome** of an **open system**. An organisation or collaborative association (for instance a network) is seen as a system interacting with wider society. The most critical practical issue is to ensure that relevant stakeholders share a common way of thinking about capacity and its core constituents or capabilities. Decisive for an organisation's capacity is the context in which the organisation operates. This means that **understanding context issues** is crucial. The use of the 5C framework requires a multi-stakeholder approach because shared values and results orientation are important to facilitate the capacity development process. The 5C framework therefore needs to **accommodate the different visions** of stakeholders and conceive different strategies for raising capacity and improving performance in a given situation.

The 5C framework defines capacity as '**producing social value**' and identifies five core capabilities that together result in that overall capacity. Capacity, capabilities and competences are seen as follows:

Capacity is referred to as the overall ability of an organisation or system to create value for others;

Capabilities are the collective ability of a group or a system to do something either inside or outside the system. The collective ability involved may be technical, logistical, managerial or generative (i.e. the ability to earn legitimacy, to adapt, to create meaning, etc.);

Competencies are the energies, skills and abilities of individuals.

Fundamental to developing capacity are inputs such as human, material and financial resources, technology, and information. To the degree that they are developed and successfully integrated, capabilities contribute to the overall capacity or ability of an organisation or system to create value for others. A single capability is not sufficient to create capacity. All are needed and are strongly interrelated and overlapping. Thus, to achieve its development goals, the 5C framework says that every organisation or system must have **five basic capabilities**:

- The capability to act and commit;
- The capability to deliver on development objectives;
- The capability to adapt and self-renew;
- The capability to relate (to external stakeholders);
- The capability to achieve coherence.

In order to have a common framework for evaluation, the five capabilities have been reformulated in outcome domains and for each outcome domain performance indicators have been developed.

There is some overlap between the five core capabilities but together the five capabilities result in a certain level of capacity. Influencing one capability may have an effect on one or more of the other

capabilities. In each situation, the level of any of the five capabilities will vary. Each capability can become stronger or weaker over time.

Appendix 3 Changes in organisational capacity of the SPO - 5C indicators

Below you will find a description for each of the indicators under each of the capabilities, what the situation is as assessed during the endline, how this has changed since the baseline and what are the reasons for change.

Capability to act and commit

Level of Effective Leadership

1.1.Responsive leadership: 'Leadership is responsive, inspiring, and sensitive'

This is about leadership within the organisation (operational, strategic). If there is a larger body then you may also want to refer to leadership at a higher level but not located at the local organisation.

The two organisations promoted under the FFID/Chetna project are Chetna Organic Farmers Association (COFA) and Chetna Organic Agriculture Producer Co.Ltd (COAPCL). FFID continues to provide guardianship support to both COFA and COAPCL for their programmes. In 2013 the chief of COAPCL quit and in 2012 the leader of COFA left the organisation. As the grant environment is decreasing, motivation is going down and it is hard to hold on to senior staff. New members in the COFA and COAPCL boards were recruited. The leaders plan to decentralise operational and functional decision-making and distribute workload both at head office and field office. The Executive Director of FFID continues to be articulate, effective and task oriented with good experience and knowledge. There is an increased engagement of the Board Members and Executive Director through meetings and field visits. They are working towards a more sustainable organization by changing their strategy to diversified cropping instead of focusing on cotton only and have also rearticulated their vision keeping in tandem with the changing climate and changing donor environment. Leadership is very responsive as staff played a significant role in the revision of the vision and strategies of FFID/Chetna during the Annual Strategy Meeting in June 2013. Field staff are now more involved in the planning process as most strategic planning meetings are held in the states themselves instead of the head office. Second line leadership was also strengthened as the new Programme Manager of Chetna streamlined monitoring and mentoring processes to achieve project activities.

Score baseline: 4.0

Score endline: 4.0 (no change)

1.2.Strategic guidance: 'Leaders provide appropriate strategic guidance (strategic leader and operational leader)'

This is about the extent to which the leader(s) provide strategic directions

Though there were changes in the top management (new leadership at COAPCL in 2013 and COFA in 2012) the core team at the Head Office pitched in to share the responsibility without affecting the operations at all levels.

The General Secretary (GS) and the Executive Director (ED) of FFID, who have considerable experience in the development sector, continue to work together closely on strategy development and operationalization. Over the last two years climatic, market and donor conditions have been changing rapidly. Due to this, leadership decided to change the vision and strategy of the organisation. Before, FFID/Chetna was more cotton-centric. By taking the field level teams suggestions on the farmer's needs into account, leadership decided to broaden the scope of work and provided strategic direction

to the team towards it. During the Annual Strategy Meeting in June 2013 there was a discussion on the suggestions received from staff about on the vision for FFID/Chetna. Based on this, the Executive director drafted a vision statement which was later fine-tuned and together with the coordinators the ED arrived at six main objectives to guide the work of FFID/Chetna in the coming years. During the same meeting the ED discussed various future strategies and important issues for the organisation: diversified cropping /sustainable agriculture vs. cotton based work; seed to market issues; technical standards in organic farming; and how to tap into corporate social responsibility activities. Over the last two years project designs have become more integrated and board members visit the field more often in order to inform, update and take stock of challenges in the field.

Score baseline: 4.0

Score endline: 4.0 (no change)

1.3. Staff turnover: 'Staff turnover is relatively low'

This is about staff turnover.

FFID continues to provide a good working environment to its employees and staff turnover among field and programme staff is relatively low. The salary structure, however, remains a cause of concern, and has led to staff members getting attracted to corporate jobs. In the last two years since the baseline there has been a slight deterioration as senior staff in key positions left the organisation for better opportunities. This has slowed the organisation down for some time, as insights from organisational learning left with the leaving staff. Internal vacancies are filled through internal adjustments: promoting staff or giving existing staff more responsibilities. The major challenges came from Maharashtra and Telangana where retaining field staff became a challenge, because of lack of funding in these states that are considered to be better off.

Score baseline: 4.0

Score endline: 3.5 (slight deterioration)

Level of realistic strategic planning

1.4. Organisational structure: 'Existence of clear organisational structure reflecting the objectives of the organisation'

Observable indicator: Staff have copy of org structure and understand this

There has been a change in the organizational structure with a focus on strengthening second line leadership: the leadership at COAPCL (2013) and at COFA (2012) changed. Consequent to key staff leaving the organization both at the field level and head office staff have been promoted and been given additional responsibilities. There is a new state coordinator for Maharashtra and a new national level coordinator for Chetna Organic in the watershed related programmes. The staff is aware of the revised changes. During the Annual Strategy meeting in 2013 a discussion was organised around roles and responsibilities of various individuals and teams in the organisation. The staff was divided into six groups Maharashtra; Andhra Pradesh; Odisha; Technical team; Marketing and Certification; and Finance, Administration and Communication. Each group discussed their roles and responsibilities together with their aspirations and expectations. As a consequence roles and responsibilities were redesigned and a Clarity on role was circulated by the end of June.

Score baseline: 3.0

Score endline: 3.0 (no change)

1.5. Articulated strategies: 'Strategies are articulated and based on good situation analysis and adequate M&E'

Observable indicator: strategies are well articulated. Situation analysis and monitoring and evaluation are used to inform strategies.

In 2013, the head office and field office staff of Chetna Organic congregated in Hyderabad to participate in the Annual Strategy Review meeting. The purpose of the meeting was to review block level, state level and national level status of all programmes, discuss the adopted plan and strategy, identify gaps in planning and execution, suggest alternatives, and to chalk out the plan and strategy for 2014. Taking into account climate change adaptation, strategies were articulated that included adopting changes in crops (to more resilient ones) and promotion of traditional and hybrid seeds.

Over the last decades higher cotton yields gradually transformed into a mono-cropping culture. With the decreasing demand for organic cotton and crop failures due to climate conditions, FFID/Chetna changed its strategy to include diversified cropping and mixed cropping practices where food crops like jowar, paddy, red gram, vegetables, maize, green gram and others could be grown alongside cotton, while encouraging farmers to take soil and water measures.

Considering the changing donor environment and resulting resource crunch, FFID has articulated strategies to support the cooperatives in generating their own resources and managing their affairs independently with little support from FFID/Chetna. Towards this, FFID/Chetna Organic explored the ways to build institutional and financial linkages to cooperatives and SHGs with Government departments, NABARD Financial Services Limited (NABFINS), and other private players. For example, the red gram activity will be converged with Mahila Kisan Sashaktikaran Pariyojana (MKSP) under NRLM of the Government of India. In Andhra Pradesh and Odisha the programme will be continued with the existing farmers. However, in Maharashtra FFID/Chetna Organic program will be scaled down and the cooperatives will be supported to converge with CAIM and other programs to continue the work independently.

While FFID/Chetna is using good situational analysis to formulate its strategies, it is not at the point yet to make use of its M&E strategically.

Score baseline: no information available

Score endline: 3.0

1.6. Daily operations: 'Day-to-day operations are in line with strategic plans'

This is about the extent to which day-to-day operations are aligned with strategic plans.

FFID's daily operations are still in line with the core areas identified by the organisation. Annual planning exercises have been carried out in the baseline and long term (4-5 years) strategic thrust areas were identified involving cooperatives, field staff and the core team. In their Annual Strategy review meeting on 5-6 March, 2013, programmes at the block-level, state-level and national-level were reviewed, gaps in the planning and execution were identified, alternatives were suggested and the plan for the coming year was chalked out. Monthly review meetings are conducted at all levels—cluster, state and programme levels. In order to achieve its target, daily operations have to be in line with the strategic plan. As FFID/Chetna's vision and strategies changed from focusing on mono-cropping in cotton to diverse crops, the new projects and daily operations are in line with this. New projects include the Seed Guardian Project, the Green Cotton Project, a proposal for a seed festival and the Peace by Peace project on soil improvement. The systems in place to ensure that daily operations are in line with strategic plans are unchanged. FFID still conducts quarterly board meetings. Monthly reports are generated by the staff and reviewed by their respective line managers and field outcomes are assessed against plans. Management has been more active in guiding daily operations since the change in leadership at COAPCL (2013) and at COFA (2012). However, due to some staff leaving the organisation for better opportunities and salary packages elsewhere, the burden of multi-tasking for staff has increased.

Score baseline: 3.0

Score endline: 3.0 (no change)

Level of Staff Capacity and Motivation

1.7. Staff skills: 'Staff have necessary skills to do their work'

This is about whether staff have the skills necessary to do their work and what skills they might they need.

Staff still have necessary skills to do their work. FFID/COFA has professionals with post-graduation in agriculture (soil sciences, entomology, agronomy and seed breeding), social work, development studies, business and financial management. Staff have longstanding experience of dealing with issues such as institutional development, mobilisation, audit and accounting, documentation, promoting cooperatives and other producer organizations, certification processes, marketing, communications and monitoring and evaluation. The majority of the senior professionals have diverse experiences of working with organisations such as the Food and Agriculture Organisation of the United Nations (FAO), APMAS (technical resource organization in Andhra Pradesh), Centre for Sustainable Agriculture (CSA), Regional Centre for Development Cooperation (RCDC) and Save the Children. Senior staff has undergone professional training at various national and international institutions. They also interact with practitioners of other organisations to update their information. Some of the skills that were lacking during the baseline have been strengthened in the last two years especially related to financial management and report writing. Staff capacity to showcase their work has improved, especially through the Effective Communication workshop organised by ICCO. With the change in vision and strategies from cotton to mixed crops staff has changed their skill set on community development and organic agriculture to include specific commodity skills, i.e. vegetables and pulses. Improved staff skills have led them to engage in different projects: CAIM, NABARD, SODI, Government of Andhra Pradesh, as well as, write proposals for state level projects. Some of the senior staff with good experience and expertise have left the organisation and there is still a need for a structured approach and plan to assess individual staff needs for capacity building.

Score baseline: 4.0

Score endline: 4.0 (no change)

1.8. Training opportunities: 'Appropriate training opportunities are offered to staff'

This is about whether staff at the SPO are offered appropriate training opportunities

Staff is still given considerable opportunities to undergo trainings, workshops and exposure visits at both national and international level which has helped to improve their skills. During the last two years the trainings that were given, included:

- Seed Production & Marketing, December 2013, organised by Centre for Sustainable Agriculture (CSA), Wardha. Training was given on: importance of seed in sustainable agriculture; community seed banks and producer company; planning for seed production; hybrid seed production in cotton and maize; participatory approaches of seed management; documentation on value for cultivation and use etc.;
- Effective Communication Workshop: A two-day workshop on effective communication was organised by ICCO Cooperation-SCA with Plan B Communication Partners in Bangalore on 18-19 July 2013. It was aimed at streamlining the reports submitted by the partners to ICCO. It taught them how to make the report reader-friendly using thought provoking images, improving visual appeal of reports as well as use of data and statistics as evidence. The learnings from the workshop were shared with the staff and especially the field staff were trained in writing reports and taking photographs;
- Interactive workshop on Finance Management & Compliance: Two days interactive workshop was organised by ICCO India in Chennai on 11-12 March 2014. The objective was to help ICCO India and its partners to mutually share the good practices and experiential learning and also have a common understanding on the financial management and the law, and ensure effective utilization of the funds. It resulted in improved knowledge of the staff on linking narrative and financial reporting, develop budget plan, to make the reports more communicative and innovative, and to integrate finance and program issues.

In general, more field level staff have participated in trainings and exposure visits to key places and forums. For example the staff member that looks after one of the regions visited the Fair Trade Forum

in London, UK. Field staff is sent regularly to represent COFA and COAPCL in forums. Most of the time FFID/Chetna staff are sponsored to participate in these events by the forums that invite them. Since the baseline, the organisation has gained more visibility and prominence in the organic farming sector and is therefore invited more to these forums.

As part of the Convergence of Agricultural Interventions in Maharashtra's (CAIM) capacity building programme, a trainers' training was conducted to all the field staff in August 2013. Being the first year of implementation, the training programme was very important for the field staff who would further train the farmers in the field. In addition to these the staff got an opportunity to participate in international education programmes at Wageningen University, the Netherlands (sponsored by Nuffic) and the Coady International Institute from Canada. Staff also participated in a Textile Sustainable training in Istanbul, the Farmers' Mela (Festival) in Hyderabad, a workshop on Fair trade Standards Orientation, July 2014. FFID/Chetna recommends appropriate courses to the staff and leaves for attending the courses are paid. Field staff were given scholarships to improve their skills and enroll themselves in long distance education.

Score baseline: 4.0

Score endline: 4.0 (no change)

1.9.1. Incentives: 'Appropriate incentives are in place to sustain staff motivation'

This is about what makes people want to work here. Incentives could be financial, freedom at work, training opportunities, etc.

The organization has progressive HR policies such as fairly good emoluments, performance based incentives, space for dissent, freedom at work, opportunities to take up assignments out of the scope of the organization, opportunities to enhance learning through (international and national) training and absence of hierarchy. All this motivates the staff to work in FFID. New initiatives were discussed and introduced during the Annual Strategic Retreat and included: a five day working week (trial basis), increase in daily sustenance allowance while travelling, provisions for a family health insurance, an increment of 8-15 per cent in the salaries with effect from April 2014 and staff promotions. This is however not sufficient to meet the expectations of the staff especially in the new and emerging markets scenario and increased job responsibilities. The private sector has entered the development space in a large way and the general salary scales have suddenly shot up. The funding constraints have led to higher staff turnover in the organisation.

Score baseline: 4.0

Score endline: 4.0 (no change)

1.9.2. Funding sources: 'Funding from multiple sources covering different time periods'

This is about how diversified the SPOs funding sources are over time, and how the level of funding is changing over time.

The organisation had to explore new funding opportunities as some of the projects have come to an end (for e.g. with the Rabobank Foundation and Hivos) and some funding is about to end (for e.g. with ICCO). Also, in absence of a core grant and delayed transfer of payments from the donors working capital is always at stake. As a consequence taking new and experienced staff on for certain positions becomes a challenge for the organisation. Therefore, there is a continuous need to approach new donors. FFID/Chetna for this reason is focusing on networking, forming partnerships, and emphasizing on staff capacity development in writing proposals. About 8 smaller ethical brands came together recently to put some investment in Chetna operational areas by adopting some villages and attempting to build a strong supply chain for Chetna cotton farmers through a project called 3DP&L (Three Dimensional Profit and Loss). FFID/Chetna continues to receive funding from: Solidaridad; ICCO; G-Star Foundation; Ford Foundation; Jackpot Foundation; Government of India's flagship programme MKSP; Government of Maharashtra: Convergence of Agriculture Initiatives (CAIM); Felissimo Corporation, Japan; NABARD. FFID/Chetna is now also receiving funding from: Textile Exchange (USA); Inditex (Spain); FiBL Switzerland; University of Agriculture Sciences, Dharwad

(UASD); Central Integrated Cotton Research (CICR), Nagpur; BioRe, India; Government of Andhra Pradesh: IWMP and IGWDP programme; Government of Odisha, DFID; SDTT; and IFAD. Some of these funds come from major government programmes including NABARD-IGWDP and Integrated Watershed Management Programme (IWMP) projects in Andhra Pradesh, Convergence of Agriculture Initiatives in Maharashtra (CAIM) in Maharashtra, Mahila Kisan Sasaktikaran Pariyojna (MKSP) and OTELP+ in Odisha. All these programmes are directed towards empowerment of the poor, specifically women, small farmers, labour and the tribal poor. The overall emphasis is on sustainable & diversified agriculture, water & soil conservation, enhancement of livelihood options and food security. While OTELP+ project facilitates for basic entitlements of tribal households as well, CAIM took one step ahead towards market development. While government funding for state level projects increased, FFID/Chetna has also started tapping into the Indian private sector (NABARD and SDTT). Most of the funding received is for specific projects. Though serious efforts have been put in raising core funding, securing it still remains a challenge.

Score baseline: 4.0

Score endline: 4.25 (very slight improvement)

1.9.3. Funding procedures: 'Clear procedures for exploring new funding opportunities'

This is about whether there are clear procedures for getting new funding and staff are aware of these procedures.

With an external environment of shrinking sources of funding, depending on a single funding agency could impede the possibility of scaling up its programmes. During the last two years, there have been more constructive engagements by the board members. The board members have shown their concerns for the funding situation. Board members have also given inputs on changing trends in the external environment that have a bearing on the funding procedures of FFID. Thus, FFID had to look into new channels for funding opportunities, and attracting new funders required them to put their (financial and legal) systems in place and have proper documentation of the work done by them. One of the procedures for reaching out to the funders remains communication, which is the ability to showcase the organisation's capabilities and abilities. Staff capacity to showcase their work has improved, especially through the Effective Communication workshop organised by ICCO. FFID/Chetna is now developing case studies with photographs, videos, stories and farmer profiles across states. These farmer stories and initiatives have been feature in local, national and international media. Regular updates are also posted on the website and in social media. Improved certification and marketing have also contributed to increased visibility of FFID/Chetna for future donors. Capacity to write proposals (especially of the field staff) has improved because of the communication workshop and continuous feedback. Senior team and state level teams are attempting to develop proposals for small projects with companies like ITC for organic soya and wheat and Field Fresh Foods Private Limited for baby corn. The network with the government has been strengthened and FFID has been linking up with government projects at state level. FFID has been associating itself with different international and national level organizations, networks and government agencies to undertake and implement various projects. During 2013-14, FFID's main emphasis was on building convergence with different government programmes through COFA and the cooperatives. Raising funds for the projects in Maharashtra and Telangana has become a challenge as these states are considered better off. Being part of the Three Dimension Profit and Loss accounting network has also helped in acquiring a supply value chain project. FFID/Chetna will continue to explore the opportunities for new sources of funding. Discussions are going on with Traidcraft Exchange, Unilever, IOCL and the RRA network towards this.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

Summary of capability to act and commit

The two organisations promoted under the FFID/Chetna project are Chetna Organic Farmers Association (COFA) and Chetna Organic Agriculture Producer Co.Ltd (COAPCL). FFID continues to provide guardianship support to both COFA and COAPCL for their programmes. There is an increased

engagement of the Board Members and Executive Director through meetings and field visits. They are working towards a more sustainable organization by changing their strategy to diversified cropping instead of focusing on cotton. Staff played a significant role in the revision of the vision and strategies of FFID/Chetna during the Annual Strategy Meeting in June 2013. Though there were changes in the top management (new leadership at COAPCL in 2013 and COFA in 2012) the core team at the Head Office pitched in to share the responsibility without affecting the operations at all levels. Over the last two years climatic, market and donor conditions have been changing rapidly. Due to this, leadership decided to change the vision and strategy of the organisation. Before, FFID/Chetna was more cotton-centric. By taking the field level teams suggestions on the farmer's needs into account, leadership decided to broaden the scope of work and give strategic direction to the team towards this. Lack of funding in certain states and better opportunities in the corporate sector have made it hard to retain staff. While staff turnover at the field and programme level remains low, some key senior staff have left the organisation which has led to a backlash in organisational learning and to staff taking up more responsibilities. There have been some changes in the organisational structure of FFID/Chetna. Leadership at COAPCL (2013) and COFA (2012) changed and with senior staff leaving the organisation. Some staff has been promoted while other staff is taking up more responsibilities. Staff are aware of these changes. During the Annual Strategy Meeting in 2013 all staff laid out their expectations and aspirations for their roles and responsibilities, these were taken up to be included in a clarity on roles document. FFID/Chetna articulates its strategies on the basis of good situational analysis. With the drop in demand for organic cotton and climate conditions affecting crops, the strategies were changed to include more diversified cropping: growing food crops alongside cotton and improving water and soil management. With the resource crunch due to the changing donor environment, more efforts were directed towards making cooperatives generate their own income and linking up to government projects. M&E results are however, not yet used to articulate strategies. FFID's daily operations are still in line with the adjusted strategic plan. Systems in place to ensure this have not changed. Management has become more active in guiding daily operations, but because of staff leaving the organisation for better deals elsewhere, the burden on staff to multi-task has increased. Staff still have necessary skills to do their work. FFID/COFA has professionals with post-graduation in various relevant fields. Senior staff have ample experience and keep up to date through interaction with other practitioners. Skills in financial management and report writing and communication the work have improved, as well as commodity specific skills for community development and organic agriculture of vegetables and pulses. However, some of the experienced senior staff has left and there is still a need for a structured approach to capacity building. Staff is still given considerable opportunities to undergo trainings, workshops and exposure visits at both national and international level which has helped to improve their skills. FFID still has progressive HR policies in place that incentivise staff and include training, freedom at work, performance based incentives and absence of hierarchy. Staff turnover is however high because FFID cannot keep up with the private sector and the salaries do not match increasing responsibilities of staff. Given the changing donor environment in which funds are decreasing, board members have shown their concern for the funding situation. FFID has improved its capacity in writing proposals (at all levels) and in showcasing their work through communication and reports. Also through its network both with government, private sector and in research, FFID is tapping into new funding possibilities. FFID/Chetna has been successful at diversifying its funds since the baseline, as they are now linked to more major government programmes and also started receiving funds from the Indian private sector. This was because of improved capacity in proposal writing, showcasing work and improved networking. It remains however, a challenge to secure core funding, as most funding is for specific projects.

Score baseline: 3.7

Score endline: 3.7 (no change)

Capability to adapt and self-renew

Level of effective application of M&E

2.1.M&E application: 'M&E is effectively applied to assess activities, outputs and outcomes'

This is about what the monitoring and evaluation of the SPO looks at, what type of information they get at and at what level (individual, project, organisational).

An M&E system is still in place. Projects are monitored and evaluated at the outcome level. FFID is now making use of digital technology to collect data from the field for example through email or phone but also through use of social networking sites like Facebook. Project specific formats for data collection were modified, redrafted and reduced from 30 to 12 pages to allow for better data collection at the field level. Review meetings are also used for collecting the data. To enhance the application of M&E, communication training has been given to their staff by ICCO which covered a wide range of topics including using the new MIS format, photos as visual evidence, formatting tips and case studies as qualitative evidence. The Communication Manager of FFID with the help of other team members, developed case studies and video stories as per the programme requirements. In 2014, a template has been designed for future monitoring of programmes to take all information; however, it is still in the process of finalisation. Furthermore, after a training on report writing, staff, particularly the field staff, is being encouraged by the senior management to write proposals based on their experience in the field. These proposals are then finalised by the senior management. Improved MIS and better operational plans, more regular staff meetings and better monitoring of staff output are in place in FFID. This ensures better reporting to ICCO and the quality of reports to ICCO has improved over the last two years. Reports are now more timely and crisp. Quarterly Review meetings of all staff where they will be monitored on alignment to the agreed objectives planned for the year is funded by MFS II. FFID is working towards putting in place an effective monitoring system. However, appointing the right person with the required skill sets has become a challenge because of financial constraints.

Score baseline: 4.0

Score endline: 4.25 (very slight improvement)

2.2.M&E competencies: 'Individual competencies for performing M&E functions are in place'

This is about whether the SPO has a trained M&E person; whether other staff have basic understanding of M&E; and whether they know what information to collect, how to process the information, how to make use of the information so as to improve activities etc.

Improved MIS and better operational plans, more regular staff meetings and better monitoring of staff output are in place in FFID. This ensures better reporting to ICCO. These were made possible due to the effective communication workshop and the interactive workshop on finance management and compliance organised by ICCO. While FFID/Chetna is collecting data to organic farmers on a regular basis this data is not analysed properly. This is because FFID has still not employed any person trained in MIS, instead their certification manager and field ICS persons are partially looking after the M&E activities. The senior management and board members have increased their monitoring visits. One of the reasons for not being able to employ a person trained in M&E is because of the salary offered by FFID. Different donors, Fairtrade organisations and research scholars have been conducting evaluations.

Score baseline: 3.0

Score endline: 3.25 (very slight improvement)

Level of strategic use of M&E

2.3.M&E for future strategies: 'M&E is effectively applied to assess the effects of delivered products and services (outcomes) for future strategies'

This is about what type of information is used by the SPO to make decisions; whether the information comes from the monitoring and evaluation; and whether M&E info influences strategic planning.

There is still no dedicated team for M&E who can compile the information, do analysis to use M&E for future strategies. The organisation is trying to hire a qualified M&E person, but nobody is willing to join for the remuneration they are offering. The reporting to ICCO has been streamlined and this has helped the organization to be more systematic in their analysis and MIS review. Trainings received from ICCO have led to punctuality in report submission. The field staff understands the formats well and submits their reports regularly. Senior management and at times board members are also making monitoring visits. As an example, an organic farm monitoring MIS has a detailed data base on

farmers, type of farms, and production on seasonal basis. This is reviewed regularly to improve performance of the programme, but is not being used strategically yet.

Score baseline: 2.0

Score endline: 2.25 (very slight improvement)

Level of openness to strategic learning

2.4.Critical reflection: 'Management stimulates frequent critical reflection meetings that also deal with learning from mistakes'

This is about whether staff talk formally about what is happening in their programs; and, if so, how regular these meetings are; and whether staff are comfortable raising issues that are problematic.

FFID through its annual staff retreats reflect on the working of the organisation. In these retreats sessions are organised by FFID to engage key staff in reflecting on the strategy and programme approaches. These sessions have also been used to discuss challenges in the field, working with network partners and creating points for policy advocacy. As these strategic meetings are now held in the field, staff are more involved in the discussions. In addition, the leadership interacts with the core team to reflect and learn. Inputs from the field staff are now being taken more frequently. The Board members also visit the field staff regularly to understand their problems and find solutions. Seasonal conditions, market conditions, cooperative status etc., are discussed frequently in monthly team meetings, half-yearly state level meetings and annual strategy meetings. Reflection moments are now more regular than during the baseline. ICCO and other funders insisted on FFID staff gathering more regularly.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

2.5. Freedom for ideas: 'Staff feel free to come up with ideas for implementation of objectives

This is about whether staff feel that ideas they bring for implementation of the program are welcomed and used.

As stated in the baseline, FFID is still open to ideas shared by their staff. Staff are encouraged to come up with ideas. During the Annual Strategy Retreat staff members are asked to share their opinions about the strategic vision. It was only after discussions with the staff and mutual agreement that the vision of the organization was rearticulated. Staff is feeling more responsible and is taking initiative to write proposals for some local projects. Staff share draft proposals with the team leaders and team leaders take decision on it.

Score baseline: 4.0

Score endline: 4.0 (no change)

Level of context awareness

2.6.System for tracking environment: 'The organisation has a system for being in touch with general trends and developments in its operating environment'

This is about whether the SPO knows what is happening in its environment and whether it will affect the organization.

FFID keeps itself updated on the ecological as well as the donor environment. It keeps track of new government and NABARD schemes that are being rolled out in the agriculture sector. FFID/Chetna is a member of several networks and alliances. It is a member of the 3DP&L (Three Dimensional Profit and Loss Accounting) network. Through this network it gets inputs related to environmental and social indicators in business and about the changes in the market situation. FFID/Chetna does case studies to understand the changes in its operational environment. It is through these case studies it was able

to demonstrate the risks of climate change and the need to promote a more diversified range of products rather than focussing on a single crop. This actually led to rearticulating the vision of FFID/Chetna. Further the organisation tracks the development in its operational environment by getting information from the field staff through emails and social media.

Score baseline: 4.0

Score endline: 4.0 (no change)

2.7. Stakeholder responsiveness: 'The organisation is open and responsive to their stakeholders and the general public'

This is about what mechanisms the SPO has to get input from its stakeholders, and what they do with that input.

FFID is still open and responsive to views from stakeholders. It is involved in various alliances and networks. An example of this is when FFID/Chetna organized a series of discussions with its member cooperatives on attainment of institutional and financial self-sufficiency. The outcome of this process was, a 'way forward' with the five cooperatives taking up responsibilities for the operations of their office with limited financial assistance and support from FFID/Chetna. Sometimes FFID still tends to get over influenced by its network partners and takes up responsibilities that increase the pressure on staff.

Score baseline: 4.0

Score endline: 4.0 (no change)

Summary of capability to adapt and self-renew

FFID still has an M&E system is still in place. Projects are monitored and evaluated at the outcome level. FFID is now making use of digital technology to collect data. To enhance the application of M&E, communication training has been given to their staff by ICCO which covered a wide range of topics including using the new MIS format, photos as visual evidence, formatting tips and case studies as qualitative evidence. This is now been put to practice by the communication manager and the help of other team members and reports have improved. FFID is collecting data in a more systematic way through improved MIS and more regular meetings, which leads to better operational plans and better reporting to ICCO. There is however still no dedicated person for M&E who can compile the information and do analysis to use M&E for future strategies. However, reporting to ICCO has improved and FFID is getting more systematic in its MIS review. FFID now has more regularly organised moments for critical reflection and staff is more engaged in discussions because strategic meetings are now held in the field. Staff is encouraged to come up with ideas and these are taken into account, e.g. discussions during the Annual Strategy Retreat staff's opinions informed the new strategic vision of FFID. Staff is also taking initiative to incorporate their ideas in drafting proposals for local projects. FFID still keeps itself up to date on both the ecological as well as the donor environment. It keeps track of relevant government schemes and the market situation through its networks, e.g. the 3DP&L (Three Dimensional Profit and Loss Accounting) network. FFID/Chetna also does case studies and receives information from field staff through emails and social media to keep track of its operating environment. FFID is still open and responsive to its stakeholders. They organise for instance, discussions with member cooperatives on self-sufficiency. They do however still sometimes take up too much responsibilities from their network partners which increases the burden on staff.

Score baseline: 3.4

Score endline: 3.6 (very slight improvement)

Capability to deliver on development objectives

Extent to which organisation delivers on planned products and services

3.1. Clear operational plans: 'Organisation has clear operational plans for carrying out projects which all staff fully understand'

This is about whether each project has an operational work plan and budget, and whether staff use it in their day-to-day operations.

The operational plans have improved since the baseline evaluation. This is due to the fact that the plans are informed by inputs from an improved monitoring and evaluation system and research activities related to soil and seed on the ground. There is now systematic documentation of minutes of annual strategic review meetings which provide a platform for identifying gaps in planning and execution, looking for alternatives and, in light of these, making plans and strategies for the next year. They have quarterly operational plans available for the staff, developed jointly by the staff with senior management. The idea to develop an operational manual is kept pending as the Chetna programme itself is in transition phase.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

3.2. Cost-effective resource use: 'Operations are based on cost-effective use of its resources'

This is about whether the SPO has the resources to do the work, and whether resources are used cost-effectively.

Changes in the donor environment had a direct impact on the cost-effective resource use. In order to secure funding, FFID has diversified its funding base to include multiple funding agencies. Funding from ICCO is now a minority, most funding comes from local and government funds. Funds are being reserved for the rainy days especially for after October 2014, when ICCO funding will end. Travel costs of the organisation have been minimised. The Executive Director makes use of local transport to travel instead of a plane or a car. New projects in newer areas brought needs for office space and computers. The project offices are equipped with laptops and cameras for smooth functioning. Local project funds are used for this. However, very few branch offices are fully furnished. Old furniture, computers and vehicles could not be replaced due to the resource crunch.

Score baseline: 4.0

Score endline: 4.0 (no change)

3.3. Delivering planned outputs: 'Extent to which planned outputs are delivered'

This is about whether the SPO is able to carry out the operational plans.

The Chetna Organic programme of FFID is clearly progressing towards achieving the articulated outcomes and indicators in the approved proposal despite the slump in the cotton markets and contradictory policies to access trade finance for the COAPCL. Chetna was always good at delivering planned outputs. For example, Chetna Organic planned to impact 30,000 farming households by the end of the project period (March 2013), by then Chetna had a direct coverage of 40,197 farming households. Monthly reports are still generated by the staff and reviewed by the respective line managers. These are compiled and discussed in staff meetings involving staff from head office and then reported back to the senior management. A monthly review is conducted at organization level involving the senior management to assess the field outcomes against plans and as well as self-review. These regular meetings and reporting assist staff in keeping on track.

Score baseline: 4.0

Score endline: 4.0 (no change)

Extent to which delivered products and services are relevant for target population in terms of the effect they have

3.4.Mechanisms for beneficiary needs: 'The organisation has mechanisms in place to verify that services meet beneficiary needs'

This is about how the SPO knows that their services are meeting beneficiary needs

Farmer representation on the board of COFA and COAPCL and institutional relationship between FFID and COFA/COAPCL still helps assess the effectiveness and efficiency of the programs from time to time and to ensure the project meets the beneficiary needs. In comparison to the baseline, senior management has been engaging directly with beneficiaries providing inputs to team members to engage with the beneficiaries and consult them with their needs. Data collection to trace whether beneficiaries needs are fulfilled, has become more focused at the field and is done in a set format that was redrafted and reduced from 30 to 12 pages.

Score baseline: 4.0

Score endline: 4.25 (very slight improvement)

Level of work efficiency

3.5.Monitoring efficiency: 'The organisation monitors its efficiency by linking outputs and related inputs (input-output ratio's)'

This is about how the SPO knows they are efficient or not in their work.

There are still no formal mechanisms for calculating input/output ratios but the staff links its efficiency with deliverables. The staff is being strictly monitored and specific operational mechanisms are in place now for monitoring the staff output. Donor deadlines are still made but FFID's reports are now better as staff has been trained on how to collect data and report. Regular field visits by the senior management and interaction with the field staff have slightly improved the outputs.

Score baseline: 3.0

Score endline: 3.25 (very slight improvement)

3.6.Balancing quality-efficiency: 'The organisation aims at balancing efficiency requirements with the quality of its work'

This is about how the SPO ensures quality work with the resources available

The organisation has systems in place for balancing efficiency with quality of work. The mechanisms are present for staff within the organisation and for its stakeholders (most cooperatives and producer company) outside the organisation. The staff was given training in budget planning, budget implementation, budget monitoring budgetary control, report writing, information related to FCRA and reporting as per its requirements. The organisation has designated a team leader for each programme to ensure better functioning and increased efficiency. The organisation is now trying to consolidate the gains achieved in the previous years and not focussing on scaling up programmes at present.

FFID still has tools in place for different stakeholders for quality of certification, processes related to institution building, technical protocols and communication tools. By using these tools it tries to ensure quality.

Score baseline: 3.0

Score endline: 4.0 (improvement)

Summary of capability to deliver on development objectives

Operational plans have improved because of an improved M&E system and systematic documentation of annual strategic meetings that inform these plans. An operational manual is still pending, but staff have quarterly operational plans to guide them in their work. Now more so than ever FFID uses its resources cost-effectively because of the changes in the donor environment, including ICCO ending its funding in October 2014. The Executive Director has cut back on his travel costs and FFID has diversified funds by accessing local project funds to support the smooth functioning of the project offices. FFID/Chetna continues to deliver well on planned output, even despite the decrease in demand for organic cotton and contradictory finance policies. FFID still uses tools for different stakeholders for quality of certification. There are now also systems in place for balancing efficiency with quality of work, these include: training staff in budget planning and monitoring, designated team leader for each programme to ensure efficiency and not scaling up but focusing on consolidated gains of existing programmes. There are still no formal mechanisms for calculating input/output ratios in place but staff links its efficiency with deliverables. Staff has gotten better at reporting and outputs are still being reached. The farmer representation in the board of COFA and COAPCL still helps assess whether the project meets the beneficiary's needs. Senior management is now engaging directly with beneficiaries and formats to collect data on whether beneficiaries needs were fulfilled are now redrafted and reduced from 30 to 12 pages.

Score baseline: 3.5

Score endline: 3.75 (very slight improvement)

Capability to relate

Level of involving external parties in internal policy/strategy development

4.1. Stakeholder engagement in policies and strategies: 'The organisation maintains relations/ collaboration/alliances with its stakeholders for the benefit of the organisation'

This is about whether the SPO engages external groups in developing their policies and strategies, and how.

Over the period FFID continues to maintain strategic partnerships with various stakeholders (incl. agencies/networks) that contribute in its strategic planning and development. It developed convergence with agriculture and allied departments, research institutes, various community based organisations and other rural developmental departments for better strategic planning. For example, the joint research programme of FFID, the Research Institute of Organic Agriculture (FiBL) in Switzerland, and the University of Agriculture Sciences, Dharwad (UASD) on seed management, water and soil conservation and management work facilitated in giving technical and research inputs from for better strategic planning. FFID/Chetna organized a number of meetings with the cooperative members in all the three states (Telangana, Maharashtra and Odisha) on the role of transformation in order to attain institutional and financial self-sufficiency. The members were involved in the process to work out a 'way forward' for better cooperative management, business development and self-sufficiency by establishing convergence with Government and other projects. The 3 Dimension profit and loss network also provides market related information for better planning of the organisation. The relationship with the stakeholders range from simple coalition alliance to collaboration to networking to direct cooperation. In the last two years promoting organisational visibility has increased. Some examples include:

- COFA conducted a convergence meeting with Government officials in Integrated Watershed Management Programme (IWMP) Dandepally in the month of April 2013 for their collaboration and support to improvement of livelihoods of communities within the Watershed Programme;
- Chetna team participated in a workshop related to organic farming policy at Xavier's Institute of Management, Bhubaneswar organised by ASHA along with the Organic Farming Association of India where Chetna presented the challenges in organic cotton production, marketing, certification and how a good policy can help the cause of Organic Farming in Odisha. The workshop was attended by policy makers, academics, activists, officers from state and national institutes connected to organic farming. The workshop resulted in evolving a draft policy framework for Organic Farming in Odisha.

Score baseline: 4.0

Score endline: 4.25 (very slight improvement)

Level of engagement of organisation in networks, alliances and collaborative efforts

4.2.Engagement in networks: 'Extent to which the organization has relationships with existing networks/alliances/partnerships'

This is about what networks/alliances/partnerships the SPO engages with and why; with they are local or international; and what they do together, and how do they do it.

During baseline FFID already had a strong network. It has worked with both national and international organisations to take forward their aim of empowering the farmers. FFID's Chetna programme has partnered with Government of Odisha, towards initiating watershed activities covering 3562 hectares in Boipariguda block of Koraput district. FFID is still part of the networks: Revitalizing Rainfed Agriculture Network (RRA), supported by HIVOS & FORD Foundation; Non-Pesticide Management Initiative (NPMI) (supported by FORD Foundation), founding member of South Odisha Development Initiative (SODI); ASHA (Alliance for Holistic Agriculture) and most other partnerships continued.

Now FFID/Chetna also partners with The Research Institute of Organic Agriculture of Switzerland and Central Institute for Cotton Research, Nagpur on different seed conservation/multiplication projects.

During 2013-2014, FFID's main emphasis was on building convergence with different Government programmes through COFA and the cooperatives. Engagements with the following networks were initiated by FFID/COFA programme since the baseline in 2012: National Bank for Agriculture and Rural Development (NABARD)- Indo-German Watershed Development Programmes (IGWDP) & Integrated Watershed Management Program (IWMP) projects in Andhra Pradesh; Convergence of Agriculture Initiatives in Maharashtra (CAIM) in Maharashtra; Mahila Kisan Sasaktikaran Pariyojna (MKSP) and OTELP+ (Odisha Tribal Empowerment & Livelihood Programme) in Odisha; Traidcraft Exchange and new project partners were found with the establishment of 3DP&L (Three Dimensional Profit and Loss). FFID/COFA realises that it is important for Chetna to work in coordination with all government developmental departments and research institutes as all relevant schemes existing in the departments can be directly accessed by the farmers.

Chetna Organic continues to play a major role in supporting reforms and changes in the fair-trade systems by taking up positions as Board of Trustees on different institutions such as Network of Asian Producers and Fair-trade Foundation, UK. Apart from this, Chetna is involved in different domestic networks and forums as well to influence the national and state policies. COFA together with other well-known NGOs and established cooperatives in Andhra Pradesh (AP) have filed a Public Interest Litigations in the AP High Court to ensure autonomy of the cooperatives. FFID/COFA's engagement with its network has been rewarded. Some examples of such rewards are: COFA was rated and awarded as the Best Project Facilitating agency among the partner NGOs of Indo-German Watershed Development Program (IGWDP) supported by NABARD and KfW, Germany; Chetna received the Global Pro-Climate Adaptation Award for its work on Cotton Farming Systems; Chetna & its partnership Program (Peace BY Peace Cotton Project) received the Good Design Award in Japan.

The networks of which FFID/Chetna is a part, especially SODI network and RRA have responded positively to Chetna's new plan and vision. Both have adopted the type of agriculture practices which Chetna professes. Chetna forays into advocacy and campaigning on the issues around rain-fed agriculture in general and on integration of the National Rural Employment Generation Scheme (NREGS) into agriculture, seed issues, and anti-GM in specific apart from the fair trade and supply chain issues. It has expanded its sphere of influence through representation on the Boards of Fair Trade Federation (FTF), UK, and Shop for Change Fair Trade (SFC), National Produce Marketing Inc. NPMi, Fairtrade Label Organisations, Made-By (NL & UK), Steering Committee of MKSP (MoRD, GoI).

Score baseline: 4.0

Score endline: 4.0 (no change)

Extent to which organisation is actively engaging with target groups

4.3.Engagement with target groups: 'The organisation performs frequent visits to their target groups/beneficiaries in their living environment'

This is about how and when the SPO meets with target groups.

During the baseline evaluation field staff raised the issue that interaction with the field was reducing. After the baseline FFID/Chetna restructured and the frequency of interactions with the community and their organisations has increased. There are field offices in place and management also regularly visits the field. The number of state level meetings to prepare strategic plans has increased. These strategic plan meetings, as well as in-house trainings have moved from the Head Office to the field. As a result the interaction with the target groups has improved. Two senior technical staff from the Head Office were designated as team leaders for Odisha and Telangana. Field staff reports to them on the progress and they work in coordination. FFID/Chetna's unique engagement with the wider market and direct links with customers provides its members with better understanding of the requirements of the market and how to participate in it.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

Level of effective relationships within the organisation

4.4.Relationships within organisation: 'Organisational structure and culture facilitates open internal contacts, communication, and decision-making'

How do staff at the SPO communicate internally? Are people free to talk to whomever they need to talk to? When and at what forum? What are the internal mechanisms for sharing information and building relationships?

FFID by following their donor-driven mandate of implementing M&E has been able to look into the relationships within the organisation. By following the changes articulated in the past evaluations of the organisation, a clarity on role document was circulated and a quality control cell was developed for concerns and complaints. Regular monthly meetings and sharing of monthly plans are continued. Monthly and annual meetings became more focused because of the donor demand to have better reports and the communication training provided by ICCO. Sharing after trainings is now encouraged and organised. In this way innovative ideas are discussed to create more opportunities in existing projects and build on earlier positive results in project implementation. A middle level manager was promoted to the position of team leader. Formal and informal dialogue improved among team members as there is less hesitation to talk with the team leader as they feel more comfortable. The team frequently has discussions not only related to the work, but also related to environment, politics, culture, gender equity issues, etc. Such discussions mainly happen during the lunch time.

Score baseline: 4.0

Score endline: 4.25 (very slight improvement).

Summary of capability to relate

FFID continues to maintain strategic partnerships with various stakeholders (incl. agencies/networks) towards contributing in its strategic planning and development. It developed convergence with agriculture and allied departments, research institutes, various community based organisations and other rural developmental departments for better strategic planning. For example, the joint research programme of FFID, The Research Institute of Organic Agriculture (FiBL), Switzerland and the University of Agriculture Sciences, Dharwad (UASD) on Seed management, Water and soil conservation and management work, meetings with the cooperative members, The 3 Dimension profit and loss network. FFID/Chetna is very well connected and part of various old and new national and international networks. They work with research institutes, like-minded NGOs and Chetna government developmental departments for the benefit of their programmes and to provide access to all relevant

schemes existing for the farmers. After the baseline evaluation the frequency of interaction with the target group of FFID/Chetna increased. Field visits increased and strategic state level meetings are now held in the field instead of at the Head Office. FFID has had the chance to look into the relationships within the organisation through the donor-driven evaluations it has been involved with. As a consequence a clarity of role document was circulated and a quality control cell was developed for concerns and complaints. Staff continues to meet on a monthly basis to discuss plans. These meetings have become more focussed because of the donor demand to have better reports and the communication training provided by ICCO. Sharing after trainings is now encouraged and organised and formal and informal dialogue improved among team members.

Score baseline: 3.7

Score endline: 4 (very slight improvement)

Capability to achieve coherence

Existence of mechanisms for coherence

5.1.Revisiting vision, mission: 'Vision, mission and strategies regularly discussed in the organisation'

This is about whether there is a vision, mission and strategies; how often staff discuss/revise vision, mission and strategies; and who is involved in this.

Over the last two years, decrease in the demand for organic cotton forced FFID/Chetna to focus and change its vision and strategy from mono-cropping to diversified and mixed cropping practices where food crops like jowar, paddy, red gram, vegetables, maize, green gram and others could be grown alongside cotton. This would not only ensure food security for the farmer but also improve soil health. Further changes in climatic conditions (heavy rains, Phailin cyclone) also triggered diversified programme implementation and expansion of activities to newer locations. The staff felt that in the changing scenario there was a need for revisiting the organisation's vision. Consequently, a vision building workshop was organized in June 2013 with senior staff. The re-articulated vision is to promote economically and socially viable agrarian based livelihoods in rain-fed and other ecologically depressed regions through sustainable agriculture.

Based on this new vision FFID/Chetna revisited its strategy to give a broader scope for holistic development of agriculture dependent families in rain-fed and other ecologically depressed regions while continuing its core work with small and marginal cotton farmers. In-situ soil and water conservation, gender equity, food security and value chain development of other products were also made integral part of the programme.

Score baseline: 4.0

Score endline: 4.0 (no change)

5.2.Operational guidelines: 'Operational guidelines (technical, admin, HRM) are in place and used and supported by the management'

This is about whether there are operational guidelines, which operational guidelines exist; and how they are used.

FFID still has an organisational policy in place, however HR and accounts policy are not uniform at all state levels. The organisation has incorporated the change of bringing gender equity in the organisation by improving the representation of female staff. Staff understanding of the policy still has to be strengthened and periodic revision of the administration and HR policies is still required (the documented HR policy was last revised in 2009).

Score baseline: 3.0

Score endline: 3.0 (no change)

Level of coherence of various efforts of organisation

5.3. Alignment with vision, mission: 'Projects, strategies and associated operations are in line with the vision and mission of the organisation'

This is about whether the operations and strategies are in line with the vision/mission of the SPO.

FFID still only takes up projects that are aligned with its vision and mission. Since they have rearticulated their vision they have also revised their strategies towards more diversified programme implementation instead of just focusing on cotton farming. Involvement with the Integrated Watershed Management Programme (IWMP) and OTELP+ has helped FFID/Chetna expand its activities to newer areas. All these projects have the potential to implement an integrated approach in agriculture and livelihood activities and have the ability to build value chains.

Score baseline: 4.0

Score endline: 4.0 (no change)

5.4. Mutually supportive efforts: 'The portfolio of project (activities) provides opportunities for mutually supportive efforts'

This is about whether the efforts in one project complement/support efforts in other projects.

In general, the different projects (incl. sub-projects) and thematic activities are still complimentary to one another. FFID is looking at a holistic approach with ecologically aligned technical interventions and internalized inputs for production. Since FFID is working in rain-fed areas, it lays emphasis on soil and water conservation. It therefore focusses on generation of sufficient manure and compost for maintaining the soil fertility. It is also working on different seed conservation and multiplication projects – cotton, food and other - and field level demonstrations in partnership with the Research Institute of Organic Agriculture, Switzerland; University of Agriculture Sciences, Dharwad and other stakeholders like the Central Institute for Cotton Research, Nagpur. As part of this initiative, participatory seed evaluations are carried out in 40 locations.

FFID has been working on developing sustainable market linkages for farmer's produce, predominantly organic and fair-trade in national and international markets through COAPCL and member cooperatives. During 2013, capacity building activities were carried out for farmer communities on issues such as quality management, local level market development, maintenance of organic standards and certification and developing local markets.

Further FFID/Chetna strengthened the activities around production of diverse and chemical free food, aiming to make farmers self-sufficient with safe and healthy food. Towards this, it is working with farmers/groups to conserve traditional seed varieties in food crops like rice, millets and pulses. Also, to empower women/farmer groups as nodal points for seed sharing, about 90 women and men from Andhra Pradesh and Odisha were identified as seed guardians and trained on seed conservation and the management of seed banks.

FFID has also made efforts to expand livelihood options for the poor such as nursery raising, horticulture, vegetable cultivation, seed banks, micro-irrigation, machinery, fodder development, and agri-based enterprises such as dairy, poultry, goatry, fishery, seed production and other non-farm activities and skill development trainings like motor-repairs, diesel engine repairs, driving, electrician training etc. in all the three regions. It has also focused on promoting education among the children of smallholder cotton farming and farm labor households by involving the village elders, teachers, children and local media and reenrolling out-of-school children into mainstream education.

Thus FFID/COFA brought in much more than just sustainable agriculture. While mixed cropping, integrated approach, crop rotation, sustainable and biological practices and self-consumption-first were the focus, they also brought in very valuable principles like natural resources management, food and nutrition security, seed sovereignty, child welfare and education. Thus the whole idea of improving livelihoods with sustainable agriculture was approached in a holistic fashion.

Score baseline: 4.0

Score endline: 4.0 (no change)

Summary of capability to achieve coherence

FFID still revisits its vision during annual meetings. In 2013 the decrease in the demand for organic cotton and the change in climatic conditions triggered FFID/Chetna to re-articulate their vision from cotton mono-cropping to diversified cropping practices. The new vision is: to promote economically and socially viable agrarian based livelihoods in rain-fed and other ecologically depressed regions through sustainable agriculture. Consequently FFID/Chetna adjusted its strategies in line with the new vision. FFID works on different projects and thematic activities that are still complimentary and mutually supportive to one another. FFID is looking at a holistic approach with ecologically aligned technical interventions. While working in rain-fed areas, they lay emphasis on soil and water conservation, sufficient manure and compost for maintaining the soil fertility and different seed conservation and multiplication projects – cotton, food and other. FFID still only takes up projects that are aligned with its vision and mission. Since they have rearticulated their vision they have also revised their strategies towards more diversified programme implementation instead of just focussing on cotton farming.

FFID still has an organisational policy in place, whilst HR and accounts policy are not uniform across states. Gender equity has improved by more female representatives in the organisations. Strengthening the understanding of the policies and periodic revision of the administration and HR policies is still required (the documented HR policy was last revised in 2009).

Score baseline: 3.7

Score endline: 3.7 (no change)

Appendix 4 Results - key changes in organisational capacity - general causal map

As the changes in organisational capacity in the general causal map and the detailed causal maps overlap completely, please refer to Appendix 5 for the detailed narrative and map.

Appendix 5 Results - attribution of changes in organisational capacity - detailed causal maps

During the endline process, key organisational capacity changes have been identified in the following capabilities: capability to act and commit; capability to adapt and self-renew. These two capabilities have been chosen for the purpose of process tracing since these are the two capabilities that have most frequently been targeted by the CFAs. The organisational capacity changes that have been identified are based on a potential link with MFS II supported capacity development activities in these two capabilities, and on a variety of sources (secondary data as well as endline workshop data). The process tracing methodology has been adapted to the purpose of this evaluation and to investigate closely the underlying causes for these identified organisational capacity changes, and the extent to which these changes can be attributed to MFS II supported organisational capacity strengthening activities .

The key organisational capacity changes made towards sustainability of FFID are:

1. Improved planning, monitoring and evaluation
2. Diversification of funds
3. Improved compliances

These changes happened to coincide partly with the outcome areas that were chosen for process tracing, so as to get detailed information on how these changes in organisational capacity came about. Therefore, the general causal map overlaps strongly with the causal maps developed for each of these outcome areas/organisational capacity changes to be analysed during the process tracing. All the details about these changes in organisational capacity as well as the underlying factors that influenced these changes are described in the narrative and visual below.

The evaluation team carried out the endline assessment at FFID from 15 to 17 July 2014. During this workshop, the team made a recap of key features of the organisation in the baseline in 2012 (such as vision, mission, strategies, clients, partnerships). This was the basis for discussing changes that had happened to the organisation since the baseline. FFID continues to provide guardianship support to the Chetna Organic & Fair Trade Cotton Intervention Programme which spawn the twin farmer owned organisations Chetna Organic Farmers Association (COFA) and Chetna Organic Agriculture Producer Company Ltd (COAPCL) to evolve into professional and well established farmers' support organizations.

Over the last two years, decrease in the demand for organic cotton forced FFID/Chetna to focus and change its strategy from mono-cropping to diversified cropping and mixed cropping practices where food crops like jowar, paddy, red gram, vegetables, maize, green gram and others could be grown alongside cotton. Legumes, vegetables like tomato, brinjal, chilli, gourds, beans, onion, garlic and leafy vegetables and oil seed crops are also being grown. This would not only ensure food security for the farmer but also improve soil health [Source: A sustainable model for small and marginal ryots - The Hindu; interaction with the ED]. Further change in climatic conditions (heavy rains, Phailin cyclone) also triggered diversified programme implementation and expansion of activities to newer locations. The staff felt that in the changing scenario there was a need for revisiting the organisation's vision. Consequently, a vision building workshop was organized in June 2013 with senior staff [Source: FFID-Annual_Report_2013; 5c endline self-assessment sheet_management_India_FFID]. The re-articulated vision is as follows: To promote economically and socially viable agrarian based livelihoods in rain-fed and other ecologically depressed regions through sustainable agriculture. Thus FFID/Chetna

revisited its strategy to give a broader scope for holistic development of agriculture dependent families in rain-fed and other ecologically depressed regions while continuing its core work with small and marginal cotton farmers. In-situ soil and water conservation, gender equity, food security and value chain development of other products were also made integral part of the program [Source: FFID-Annual_Report_2013; 5c endline self-assessment sheet_management_India_FFID].

Keeping in line with the changed vision over the last two years, FFID/Chetna has been focusing on sustainability for the organisation and for the small and marginal farmers.

The three main organisational capacity changes are described in the light orange boxes and some of their key consequences are noted above these cards in dark orange. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the organisation are listed at the bottom in dark purple. The narrative describes per organisational capacity change, the contributing factors as described from the top down. The numbers in the visual correspond with the numbers in the narrative.

Improved sustainability of the organisation [1]

Improved PME [2]

Diversification of funds [19]

Improved compliance with HR and financial norms [4]

Improved planning [6]

Improved M&E system [5]

Approaching new donors and taking up new projects [33]

Improved HR systems [20]

Better compliance with financial norms [21]

Improved interaction with the field staff [36]

More streamlined strategic staff meetings [8]

Inputs from an improved M&E system [15]

Better reporting to ICCO [7]

Better monitoring of staff output [9]

Diversification of programme strategies [18]

Networking and forming partnerships [25]

High staff turnover [37]

Better financial reporting [28]

Better adherence to norms developed by ICCO for partners [29]

Improved knowledge on specific inputs on how to report [10]

Increased knowledge on seed production [34]

Strategic decision to diversify strategies and change vision [35]

Improved capacity of staff to showcase their work to donors [26]

Improved knowledge of financial management and compliance in accordance to local laws [30]

More focussed data collection [16]

Interactive workshop on Finance Management & Compliance organised by ICCO in 2014 [11]

Feedback on annual reports from ICCO [12]

Training on Seed Production & Marketing [24]

Research [23]

Need to diversify funds [32]

Effective Communication Workshop by ICCO in 2013 [13]

Interactive workshop on Finance Management & Compliance organised by ICCO India in Chennai 11-12 March 2014 [11]

MFS II Funds [14]

Other funders [38]

Decrease in demand for organic cotton [17]

Changes in climatic conditions [27]

Changes in the donor environment [31]

Key organisational change 1: Improved planning, monitoring and evaluation (PME)

According to FFID staff present at the endline workshop, over the last two years FFID has improved its planning, monitoring and evaluation (PME) system [2], and this is also evident in the endline assessment sheet CFA perspective and management FFID perspective. This was keeping in line with its rearticulated vision which required a revision in strategic plans [Source: 5c endline_assessment sheet_Dutch co-financing organisations_India_FFID_ICCO, 5c endline self-assessment sheet_management_India_FFID].

Improved PME [2] was due to improved planning [6] and an improved Management Information System (MIS) [5]. These issues are further discussed below.

Improved planning [6]

According to the CFA it is evident that operational plans and overall planning is becoming better [6] [Source: 5c endline_assessment sheet_Dutch co-financing organisations_India_FFID_ICCO]. It is also evident from the self-assessment sheet of management and the observation of endline evaluation team that the strategic and operational planning has improved [Source: 5c endline self-assessment sheet_management_India_FFID, Discussion during the endline workshop].

Improved planning was due to: improved interaction with the field staff [36]; more streamlined strategic staff meetings [8] and inputs from an improved M&E system [15]. Each of these issues are further discussed below.

Improved interaction with the field staff [36]

Two years ago, the organisation was more cotton-centric. By taking inputs from the field staff, the leadership decided to broaden the scope of work and to give strategic direction to the team towards it. As was indicated in the baseline report, earlier the interaction of the senior management with the field staff was not frequent. As a result of this the practical problems and ground realities contributed little to the planning process. In the past two years, the senior management has increased their field visits and have also formed a project intervention committee looking at operationalization of projects and therefore working closely with the field staff [Source: 5c endline self-assessment sheet_management_India_FFID]. Their inputs have improved planning at FFID/Chetna.

More streamlined strategic staff meetings [8]

Staff meetings are now more regular and there are cohesive discussions not only around operational issues but also around strategic issues. Their operational plans are becoming better, partly because of meeting more regularly [Source: 5c endline_assessment sheet_Dutch co-financing organisations_India_FFID_ICCO]. The staff meetings provide a platform for internal reflection. In these meetings there is review of status of all programmes at the block level, state level and national level, discussion on the adopted plan and strategy, through SWOT analysis gaps are identified in planning and execution, alternatives are suggested, future plans and strategies are chalked out for the coming year. The information thus obtained is used to fine tune the MIS formats. There is now a systematic documentation of minutes of annual strategic review meetings [Source: Strategy meeting report Mar 5-6, Hyd 2013 with pix compressed-1, Annual Strategy Meeting Odisha March 2014 with pix compressed-additions, Annual Strategy Meet-Araku June1-2 2013 with pix compressed; Discussion during the workshop]. Senior management has become more involved in ensuring programme and organizational sustainability because of changes in the donor environment and climatic conditions. Thus meetings are more streamlined, their minutes are documented and decisions taken during meetings are reflected upon and later finalised by the senior management [Source: Interview with OD consultant, Annual Strategy Meet-Araku June1-2 2013 with pix compressed]. The annual strategic meetings are funded by MFS II [14] [Source: Interview with OD consultant].

Inputs from an improved M&E system [15]

The FFID's plans are now better informed by the inputs of an improved M&E system, which is further discussed below. For example an organic farm MIS has a detailed data base on farmers, type of farms, and production on seasonal basis. This is reviewed regularly to revise or fine tune plans and thus improve performance of the programme [Source: 5c endline_assessment sheet_Dutch co-financing organisations_India_FFID_ICCO, 5c endline self-assessment sheet_management_India_FFID]. This also includes research activities related to soil and seed on the ground. FFID is involved in a joint

research project of bioRe Association India, Kasarwad, MP, Chetna organic, Hyderabad, University of agricultural sciences, Dharwad and Research institute of organic agriculture FiBL, Switzerland with an aim of developing low input high quality seeds to organic cotton farmers [Source: <http://www.chetnaorganic.org.in/programs/green-cotton>].

Improved M&E System [5]

PME also improved due to a strengthened M&E system. According to ICCO, FFID/Chetna has improved their M&E system in terms of identifying the number of people who are involved and how to involve them [Source: 5c endline_assessment sheet_Dutch co-financing organisations_India_FFID_ICCO, 5c endline self-assessment sheet_management_India_FFID]. The M&E system of FFID improved [5] because of better reporting to ICCO [7] and better monitoring of staff outputs [9].

- *Better reporting to ICCO [7]:* Reports are more timely and crisp. "The reporting to ICCO has been streamlined and this has helped the organization be more systematic in their analysis and MIS review" [Source: 5c endline_assessment sheet_Dutch co-financing organisations_India_FFID_ICCO]. Better Reporting to ICCO [7] was mainly due to:
 - *Improved knowledge on specific inputs on how to report [10].* The staff improved knowledge on how to write better reports by incorporating feedback, specific data and statistics as evidence, image description and also linking narrative and financial reporting [Source: 5c endline_support to capacity development sheet_CFA perspective_India_FFID_ICCO, Communication Workshop_Report_India]. Knowledge on specific inputs on how to report [10] improved because of:
 - *More focussed data collection [16]:* There are set formats to collect focused data from the field. For better data collection from the field FFID has redrafted the formats and templates and reduced the formats from 30 pages to 12 pages [Source: 5c endline self-assessment sheet_management_India_FFID]. Data collection became more focussed because of staff participating in the Effective Communication Workshop [13]. The learning of this workshop was shared with the field staff, the format for data collection was redrafted leading to focused data collection from the field [Source: 5c endline_questionnaire_training_participant_perspective_India_FFID_EffectiveCommunicationsworkshop2013, 5c endline self-assessment sheet_management_India_FFID].
 - *Interactive workshop on Finance Management & Compliance [11]:* A two-day interactive workshop was organised by ICCO India in Chennai on 11-12 March 2014. The objective was to help ICCO India and its partners to mutually share the good practices and experiential learning and also have a common understanding on the financial management and the law, and ensure effective utilization of the funds. It resulted in improved knowledge of the staff on linking narrative and financial reporting, develop budget plans, make reports more communicative and innovative, and integrate finance and program [Source: An Interactive Workshop on Finance Management Chennai- final -1]. This workshop was funded by MFS II [14].
 - *Feedback on annual reports from ICCO [12]:* The OD consultant of ICCO provides feedback on the annual report including the financial part. He asks FFID/Chetna to incorporate feedback and they do that. He sees that reports are getting better. The support from the consultant was funded by MFS II [14] [Source: 5c endline_assessment sheet_Dutch co-financing organisations_India_FFID_ICCO]
 - *Effective Communication Workshop [13]:* a two day workshop on effective communication was organised by ICCO Cooperation-SCA with Plan B Communication Partners in Bangalore on 18-19 July 2013. It was aimed at streamlining the reports submitted by the partners to ICCO. Components of the annual report were set out and explained. It helped the Manager (Communications and PR) to improve his skill in structured and focused report writing and case study writing. After coming back from the workshop, he shared the learnings with the staff which resulted the staff improve in data capturing, writing structured and focused case studies and reports. They also could prepare uniform template/formats to capture information systematically and introduced new initiatives to collect data over phone and through Facebook [Source: 5c endline_questionnaire_training_Manager perspective_India_FFID_EffectiveCommunicationsworkshop2013]. This workshop was funded by MFS II [14]. A consequence of this was that by the end of the March 2014, Chetna Organic's archives number more than 10,000 photographs, about 100 hours of video footage, about 100

case studies, stories and farmer profiles from across the states. Chetna's farmer stories and initiatives have been featured in local (Eenadu, Saakshi, ETV, OTV, IBN7 etc.), national (The Hindu, Down to Earth, Apparel India, etc.) and international media (Austria, Germany, UK, and Japan) (both electronic and print). Regular updates are also posted on the website www.chetnaorganic.org.in and the social media – Facebook and twitter. In terms of print communications material, posters on Seed Guardians, Green Cotton, and Chetna's Fair-trade initiatives have already been printed. A newsletter encapsulating the activities was developed in end 2013 [Source: Annual Report_ICCO_01 April 2013- 31 March 2014].

Better monitoring of staff output [9] also supported the improve M&E system.

Staff output is monitored through specific operational mechanisms that are now in place. E.g. the organisation is now making use of digital technology to collect data from the field through email or phone and also through use of social networking sites like Facebook which gives better picture of the outcome of the project. Project specific formats for data collection were modified, redrafted and reduced from 30 to 12 pages to allow for better data collection at the field level. Review meetings are also used for collecting the data. The Communication Manager with the help of other team members developed case studies and video stories as per the programme requirements. All these mechanism facilitate better monitoring of the staff output [Source: 5c endline_assessment sheet_Dutch co-financing organisations_India_FFID_ICCO, 5c endline self-assessment sheet_management_India_FFID]. Quarterly Review meetings of all staff where they will be monitored on alignment to the agreed objectives planned for the year is funded by MFS II [14] [Source: Interview with OD consultant].

Key organisational change 2: Diversification of funds [19]

Over last two years the organisation had to explore new funding opportunities as some of the projects have come to an end (for e.g. with the Rabobank Foundation and Hivos) and some funding is about to end (for e.g. with ICCO). Also, in absence of a core grant and delayed transfer of payments from the donors, working capital is always at stake. As a consequence taking on new staff and retaining experienced staff for certain positions becomes a challenge for the organisation [Source: 5c endline self-assessment sheet_management_India_FFID]. Therefore, there is a continuous need to approach new donors [Source: Chetna Status Evolution & Future_MFS]. In the process FFID/COFA is focussing on networking, forming partnerships, convergence with government programmes and emphasizing on staff capacity development in writing proposals to approach new donors. In the last two years it has mobilised funding mostly for specific projects. Though serious efforts have been put in raising core funding, securing it still remains a challenge. About 8 smaller ethical brands came together in 2014 [Source: <http://chetnaorganic.org.in/News#282>] to invest in Chetna operational areas by adopting some villages and attempting to build a strong supply chain for Chetna cotton farmers through a project called 3DP&L (Three Dimensional Profit and Loss).

FFID was able to diversify its funds_because they approached new donors and took up new projects [33]. Some of the new projects funded by new donors were:

- Seed Guardians Project: The Seed Guardians project adopted in India by Chetna Organic is primarily an initiative supported by Textile Exchange (USA) & Inditex (Spain) from December 2012 to December 2015. The project is being implemented in 5 clusters spread over three districts of Kalahandi, Bolangir and Rayagada in Odisha. The aim is to reduce farmers' dependence and exploitation by market forces for seeds, Chetna is working with farmers/women groups to promote conservation and sharing of traditional seed varieties in food crops like rice, millets and pulses. Seed production of food crops is being carried out in about 500 hectares across clusters. Seed programmes have been mainly taken up in convergence with local Governments and are partly supported through Chetna [Source: Annual Report_ICCO_01 April 2013- 31 March 2014, <http://www.chetnaorganic.org.in/programs/seed-guardians>].
- Green Cotton Project: The project is a joint research project of bio-Re Association India, Kasarwad, Madhya Pradesh, Chetna organic, Hyderabad, University of agricultural sciences, Dharwad and Research institute of organic agriculture FiBL, Switzerland on farm cultivar testing and participatory breeding for organic and low input cropping systems in central India. The project runs from 2013 till 2016 [Source: Annual Report_ICCO_01 April 2013- 31 March 2014, <http://www.chetnaorganic.org.in/programs/seed-guardians>].

- Eco-farmers Market Portal (Web-based) in collaboration with PRAVAH & ASHA General, running from January 2014 till June 2014 [Source: Annual Report_ICCO_01 April 2013- 31 March 2014].
- Engendering seed and food security/sovereignty project: This project focuses on improving seed, food, nutritional and income security among small and marginal farmers of South Odisha through SODI Network anchored by Madhyam Foundation. Also aimed at equipping women's organic cotton cooperatives to become seed guardian. This is funded by Textile Exchange (TE) USA and Inditex, Spain from October 2012 to June 2015 [Source: Annual Report_ICCO_01 April 2013- 31 March 2014, FFID Chetna VISION]
- Promoting house hold level food & nutritional security: funded by ICCO & Kerk in Actie Netherland from 1st Nov, 2013 to 31st Oct, 2015 [Source: Annual Report_ICCO_01 April 2013- 31 March 2014].
- Government convergence programmes: COFA established convergence with various government programs for better sustainable livelihood for the poor and marginal farmers, such as, Convergence of Agriculture Initiatives in Maharashtra (CAIM) in Maharashtra. The project receives financial assistance from the International Fund for Agricultural Development (IFAD), Sir Ratan Tata Trust (SRTT) and government of Maharashtra from June 2013 to June 2016 [Source: Annual Report_ICCO_01 April 2013- 31 March 2014, FFID-Annual_Report_2013, <http://www.chetnaorganic.org.in/programs/seed-guardians>]. Mahila Kisan Sasaktikaran Pariyojna (MKSP) in Odisha. This programme aims at empowerment of women farmer in collaboration with National Rural Livelihood Mission (NRLM) project. It is implemented in Rayagada of Southern Odisha. The main objective the programme is food and nutrition security and sustainable agriculture [Source: Annual Report_ICCO_01 April 2013- 31 March 2014, FFID Chetna VISION]. Odisha Tribal Empowerment and Livelihood Programme plus (OTELP+) is supported by government of Odisha and Department for International Development (DFID) from 2012-2018. The objective of the program is to provide food security, secure income and quality livelihood. ICCO is supporting in this project through SODI network to organize sustainable cultivation of pigeon pea and turmeric cultivation by smallholder farming households since 2012 [Source: Annual Report_ICCO_01 April 2013- 31 March 2014, FFID Chetna VISION, FFID_Annual_Report_2012].

FFID was able to approach and get new donors for new projects [33] because of diversification of programme strategies [18], networking and forming partnerships [25] and improved staff capacity to showcase their work to donors [26].

Diversification of programme strategies [18]

FFID/Chetna is no longer only working on cotton, but is now including mixed cropping strategies that include food crops. In this way they were able to link up to new government funded programmes outside the cotton sector and they were also able to attract other funders to work e.g. on nutrition security and seed production. For example, to reduce farmers' dependence and exploitation by market forces for seeds, Chetna is working with farmers/women groups to promote conservation and sharing of traditional seed varieties in food crops like rice, millets and pulses. Seed production of food crops is being carried out in about 500 hectares across clusters. Seed programmes have been mainly taken up in convergence with local governments and are partly supported by GSRD Foundation, Jackpot, Textile Exchange and Felissimo. As a result of this seed bank during 2013, Chetna Organic has conserved about 163 traditional varieties that include cereals (63), vegetables (38), pulses (25), spices (7), fruit crops, medicinal and others (30) in Odisha itself, ready to be exchanged with farmers in the coming season. It is assumed that these seeds conserved in seed banks will be sufficient for 300 acres for the coming season [Source: Annual Report_ICCO_01 April 2013- 31 March 2014]. FFID was able to diversify its programme strategies [18] because of increased knowledge on seed production [34] [Source: 5c endline self-assessment sheet_management_India_FFID, FFID-Annual_Report_2013] and the strategic decision to diversify strategies and change the vision [35]:

- Increased knowledge on seed production and conservation [34] was due to:
 - Training on Seed Production & Marketing 2013, CSA, Wardha [24] for FFID staff. In order to be able to conserve and share traditional seed varieties in food crops, staff of FFID received training on Seed Production & Marketing in December 2013, organised and funded by the Centre for Sustainable Agriculture (CSA), Wardha [38]. Training was given on: importance of seed in sustainable agriculture; community seed banks and producer company; planning for seed production, assessing demand, procurement, selection of seed farmers; seed production practices

in self-pollinated crops, cross often pollinated crops and cross pollinated crops; hybrid seed production in cotton and maize; participatory approaches of seed management; documentation on value for cultivation and use etc. [Source: 5c endline self-assessment sheet_field staff_India_FFID]

- Research [23]. With regard to the cotton seed research initiative in collaboration with and funding of the Research Institute of Organic Agriculture (FiBL), Switzerland and the University of Agriculture Sciences, Dharwad (UASD) [38], research continued for the third continuous year. As a part of the research, suitability of different Indian, American and Egyptian varieties in the local conditions and quality parameters were tested. After a third year of controlled research and participatory evaluations, the team found that Barbadosense and Herbaceum are not very suitable to local soils and climatic conditions. Of the total, 33 cotton varieties, 18 hybrids American /Hirsutum varieties and 9 hybrids and 6 Indian /Arboreum varieties have been shortlisted for further evaluation on field trial basis at farmer level [Source: Annual Report_ICCO_01 April 2013- 31 March 2014].
- The strategic decision to diversify strategies and change the vision [35]. The staff felt that in the changing scenario there was a need for revisiting the organization's vision. Consequently, a vision building workshop was organized in June 2013 with senior staff [Source: FFID-Annual_Report_2013; 5c endline self-assessment sheet_management_India_FFID]. The re-articulated vision is as follows: *To promote economically and socially viable agrarian based livelihoods in rain-fed and other ecologically depressed regions through sustainable agriculture.* Aligned to this vision the six main objectives of FFID/Chetna now are: enhancing productivity and reducing cost of cultivation, promoting Viable institutions, Creating market through value addition, natural resource management, food and nutrition security and women and child development. During the baseline the vision was: *To improve the livelihood options of small farm holding households involved in cotton cultivation through making their farming systems more profitable and more sustainable.* Thus FFID/Chetna revisited its strategy to give a broader scope for holistic development of agriculture dependent families in rain-fed and other ecologically depressed regions while continuing its core work with small and marginal cotton farmers. In-situ soil and water conservation, gender equity, food security and value chain development of other products were also made an integral part of the programme [Source: FFID-Annual_Report_2013; 5c endline self-assessment sheet_management_India_FFID]. Keeping in line with the changed vision since June 2013 FFID/Chetna has been focusing on sustainability be it for the organisation or for the small and marginal farmers.

The training in seed production [24], research [23] and the strategic decision [35] were triggered by changing climatic conditions [27] [Source: : U.S. Organic Cotton Production & Marketing Trends January 2014 , Accessed from: https://ota.com/sites/default/files/indexed_files/2012%20and%202013%20Organic%20Cotton%20Report.pdf] and due a decrease in demand for organic cotton [17] which was due to increased production of non-organic cotton because of multi-fold adoption of Bt¹⁸ seeds in India and a fall in the production of non-genetically modified cotton seed over the past three years [Source: Ministry of Textile India, Accessed from: www.organiccotton.org/oc/]. Thus FFID/Chetna was forced to focus and change its strategy from mono-cropping to diversified cropping and mixed cropping practices [35] where food crops like jowar, paddy, red gram, vegetables, maize, green gram and others could be grown alongside cotton. This would not only ensure food security for the farmer but also improve soil health [Source : A sustainable model for small and marginal ryots - The Hindu; interaction with the Arun]. Further change in climatic conditions [27] (heavy rains, Phailin¹⁹ cyclone) also triggered diversification of strategies and expansion to newer locations [Source: Annual Report_ICCO_01 April 2013- 31 March 2014, discussion during endline workshop].

¹⁸ Bt cotton is a genetically modified variety of cotton producing an insecticide.

¹⁹ A very severe cyclone that originated in Southern China Sea on October 2013, that affected Andhra Pradesh, Odisha, Jharkhand and other Indian States

Networking and forming partnerships [25]:

FFID started focusing more on networking because of the need to diversify funds [32], which came from changes in the donor environment [31]. There is a continuous need to approach new donors. FFID/Chetna for this reason is focusing on networking, forming partnerships, emphasizing on staff capacity development in writing proposals [Source: Chetna Status Evolution & Future_MFS]. The improved interaction allows them to bid for projects together as well as improve their visibility which is important from the donor perspective.

FFID has been associating itself with different international and national level organizations, networks and government agencies to undertake and implement various projects. During 2013-14, FFID's main emphasis was on building convergence with different government programmes through COFA and the cooperatives. Some of the major government programmes that COFA associated with include NABARD-IGWDP and Integrated Watershed Management Programme (IWMP) projects in Andhra Pradesh; Convergence of Agriculture Initiatives in Maharashtra (CAIM) in Maharashtra; Mahila Kisan Sasaktikaran Pariyojna (MKSP) and OTELP+ in Odisha. All these programs are directed towards empowerment of the poor, specifically women, small farmers, labour and the tribal poor. The overall emphasis is on sustainable and diversified agriculture, water and soil conservation, enhancement of livelihood options and food security. While the OTELP+ project facilitates for basic entitlements of tribal households as well, CAIM took one step ahead towards market development [Source: FFID-Annual_Report_2013]. International Organizations like Solidaridad, Textile Exchange and Traidcraft Exchange have been funding for Chetna. Brands like Felissimo, Jackpot, etc. have also been funding Chetna and providing support. About 8 smaller ethical brands came together in 2014 invest in Chetna's operational areas by adopting some villages and attempting to build a strong supply chain for Chetna cotton farmers through a project called 3DPNL (Three Dimensional Profit and Loss) [Source: 5c endline self-assessment sheet_management_India_FFID, <http://chetnaorganic.org.in/News#282>]. FFID/COFA 's involvement in advocacy has improved its visibility both internationally and with the government. Thus when a donor is looking for funding projects it recognises FFID/COFA [Source: Discussion during the workshop]. Chetna forays into advocacy and campaigning on the issues around rain fed agriculture in general and integration of NREGS into agriculture, revitalization of rain fed agriculture, seed issues, and anti-GM in specific apart from the fair trade and supply chain issues. Chetna efforts so far brought in favourable policy changes related to marketing rights of smallholder farmers, integration of agriculture in National Rural Employment Generation Scheme (NREGS), GMO seeds, SPOs role and involvement in Fair Trade. Chetna expanded its sphere of influence through representation on the Boards of Fair Trade Federation UK, Shop for Change Fair Trade, National Produce Marketing Inc., Fairtrade Labelling Organizations International, Made-By (NL & UK) and in the Steering Committee of Mahila Kisan Sashaktikaran Pariyojana (MKSP), a subcomponent of the National Livelihood Rural Mission (NRLM) of the Indian Ministry of Rural Development.

Improved capacity of staff to showcase their work to donors [26].

This is the third reason for being able to approach new donors and take up new projects. Staff capacity was improved because the Communications and PR Manager of FFID attended the *Effective Communication Workshop* [13]. This was a two day workshop on effective communication, organised by ICCO Cooperation-SCA with Plan B Communication Partners in Bangalore on 18-19 July 2013. It was aimed at streamlining the reports submitted by the partners to ICCO (funded by MFS II [14]) and train the staff on new MIS format, photos as visual evidence, formatting tips and case studies as qualitative evidence. It helped the Communications and PR Manager to improve his skill in structured and focused report writing and case study writing. Further to improve the M&E capacity of the field staff he shared the learning in the in-house training. This resulted in improved staff capacity in data capturing, photographs and video capturing, writing structured and focused case studies and reports. They also redrafted template/formats to capture information systematically. Due to improved skills in the ICCO Communication workshop and systematic data from the field capacitated the communication manager with the help of other staff members of FFID to develop case studies with photographs, videos, stories and farmer profiles across states to showcase the work/activities to donors [Source: 5c endline_questionnaire_training_participant_perspective_India_FFID_Effective Communicationsworkshop2013.docx, Communication Workshop_Report_India, Annex C_5c endline_support to capacity development sheet_SPO perspective_India_FFID, Annual Report_ICCO_01 April 2013- 31 March 2014].

Improved compliance with HR and financial norms [4]

In the last two years FFID/Chetna improved compliances with the HR and financial norms triggered by the need to retain their staff and the demand by ICCO for better financial reporting [Source: Annual Strategy Meeting Odisha March 2014 with pix compressed-additions]. Compliance improved because of:

- Improved HR systems [20];
- Improved compliance with financial norms [21].

Improved HR Systems [20]

FFID introduced new HR initiatives to improve its HR system: such as a five day working week (trial basis), increase in daily sustenance allowance while travelling, provisions for a family health insurance, an increment of 8-15 per cent in the salaries with effect from April 2014 and staff promotions under the revised HR systems [Source: Self-Assessments]. These changes were triggered by a *high staff turnover in the last two years [37]* as staff in key senior positions left the organisation for better opportunities (while staff turnover at the field and programme level remained relatively low).

Improved compliance with financial norms [21]

FFID improved its compliance with financial norms to fulfil the requirement of ICCO as well as the government under the FCRA Act. This compliance improved due to:

- *Better financial reporting [28] and better adherence to norms developed by ICCO for partners [29].*

Both these developments were because of improved knowledge of financial management and compliance in accordance to local laws [30]. This knowledge improved because of the *interactive workshop on Finance Management & Compliance organised by ICCO India in Chennai 11-12 March 2014 [11]*, which was funded by MFS II [14]. This was a two days interactive workshop. The objective was to help ICCO India and its partners to mutually share the good practices and experiential learning and also have a common understanding on the financial management and the law, and to ensure effective utilization of the funds. It resulted in improved knowledge of the staff on linking narrative and financial reporting, develop budget plans, to make reports more communicative and innovative, and to integrate finance and program [Source: An Interactive Workshop on Finance Management Chennai- final -1].

Centre for Development Innovation
Wageningen UR
P.O. Box 88
6700 AB Wageningen
The Netherlands
T +31 (0)317 48 68 00
www.wageningenUR.nl/cdi

Report CDI-15-002

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Final Report MFS II Joint Evaluations

Country	India

Responsible Dutch NGO	CORDAID
Project (if applicable)	India People's Participation in Development
Southern partner organisation	Jana Vikas

The project/partner is part of the sample for the following evaluation component(s):

	X
Achievement of MDGs and themes	X
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

1. Introduction

This report presents the findings of the evaluation of a project funded and supported by CORDAID and implemented by Jana Vikas, an NGO which has been operating for more than two decades in the rural areas of Kandhamal district in Odisha, a state in Eastern India. The project was conceived with the aim of revitalizing a women's co-operative organization (Mahila Vikas multi-purpose co-operative) and its affiliated self-help groups (SHGs). In broad terms the aim of the project is to help generate sustainable income/livelihoods through effective management of the SHGs affiliated to the cooperative. The project focuses on women from scheduled tribes, schedule caste and other backward caste in 5 gram panchayats located in Phiringia block (Kandhamal district). The report begins by setting out the context and providing a description of the project. This is followed by a discussion of the evaluation—its methods, sampling strategy and the data. Estimates are presented in Section 6 and the final section contains concluding remarks.

2. Context

Odisha is one of India's poorest states and Kandhamal is one of the state's poorest districts. Kandhamal district is ranked 29th out of the state's 30 districts in terms of Human Development and 88 percent of the population is estimated to be below the poverty line. The district has a population of about 6.5 million of which 18 percent are Scheduled Castes, 52 percent are Scheduled Tribes and the rest belong to Other Backward Castes/General Castes. The district has a low population density (88 persons per square kilometre) and is primarily rural (more than 90 percent of the population lives in villages). The district is located in the mountain ranges of the Eastern Ghats and is characterized by hilly, forested areas which make it relatively inaccessible. About 12 percent of the district's land area is cultivable, 71 percent consists of forests and the

rest is barren land. The district is organized into 20 Blocks and the project is located in Phiringia block.

According to the 2011 census, tribals are the predominant group (58 percent) in the block followed by scheduled castes (17 percent). Phiringia is listed amongst the most backward blocks of the state based on 14 socio-economic and health indicators. About a fifth of the total geographical area of the block is under cultivation while about three-quarters of the land is either uncultivable or forested. Agriculture is the primary occupation of the inhabitants (44 percent of the working population) followed by wage labour (29 percent), cottage industry (21 percent) and petty business (3 percent).

An important element in terms of appreciating the context is that the block where the project is located was affected by communal violence (Christian versus Hindu) in August 2008. These riots sparked by the killing of Swami Lakshmanananda Saraswati, a Hindu religious leader, along with four of his disciples, led to communal riots as a Hindu right-wing organization blamed the murder on “extremist Christian groups”. According to Government figures, during the violence from August to December 2008, in Kandhamal district alone, more than 600 villages were ransacked, 5,600 houses were looted and burnt, 54,000 people were left homeless and 38 people were murdered. Human right groups estimate that over 100 people were killed, including disabled and elderly persons, children and women. A un-estimated number suffered severe physical injuries and mental trauma. While there are reports of a few women being sexually assaulted, many more such victims are believed to have been intimidated into silence. 295 churches and other places of worship, big and small, were destroyed. 13 schools, colleges, and offices of several non-profit organizations were damaged. About 30,000 people were uprooted and lived in relief camps and continue to be displaced. During this period about 2000

people were forced to renounce their Christian faith. More than 10,000 children had their education severely disrupted due to displacement and fear

During these riots the offices of the Mahila Vikas Multi-Purpose Co-operative (MVMPC) Limited, an organization set up with the help of Jana Vikas, the main project intermediary in the current project, were destroyed. In addition, small businesses, livestock and other activities supported by NGOs and government Self Help Groups (SHGs) were negatively affected. Inter-caste and especially inter-religious trust was damaged.¹The riots also led to loss of valuable records including baptism certificates, ration cards, voter ID, educational/job certificates, marriage certificates, church property records and land titles. The current project was conceived with the aim of revitalizing MVMPC and its affiliated SHGs.

3. Project description

a. Project duration and budget

While CORDAID and Jana Vikas have worked together for a number of years (the first contract was signed on January 1, 1998), the project under review started on May 1, 2010 and was expected to end on April 30, 2013. The project is new in the sense that it focuses on new locations. The three year project budget is Euro 164,065 of which 20 percent or Euro 32,462 is funded through MFS II.

b. Project objectives, activities, theory of change

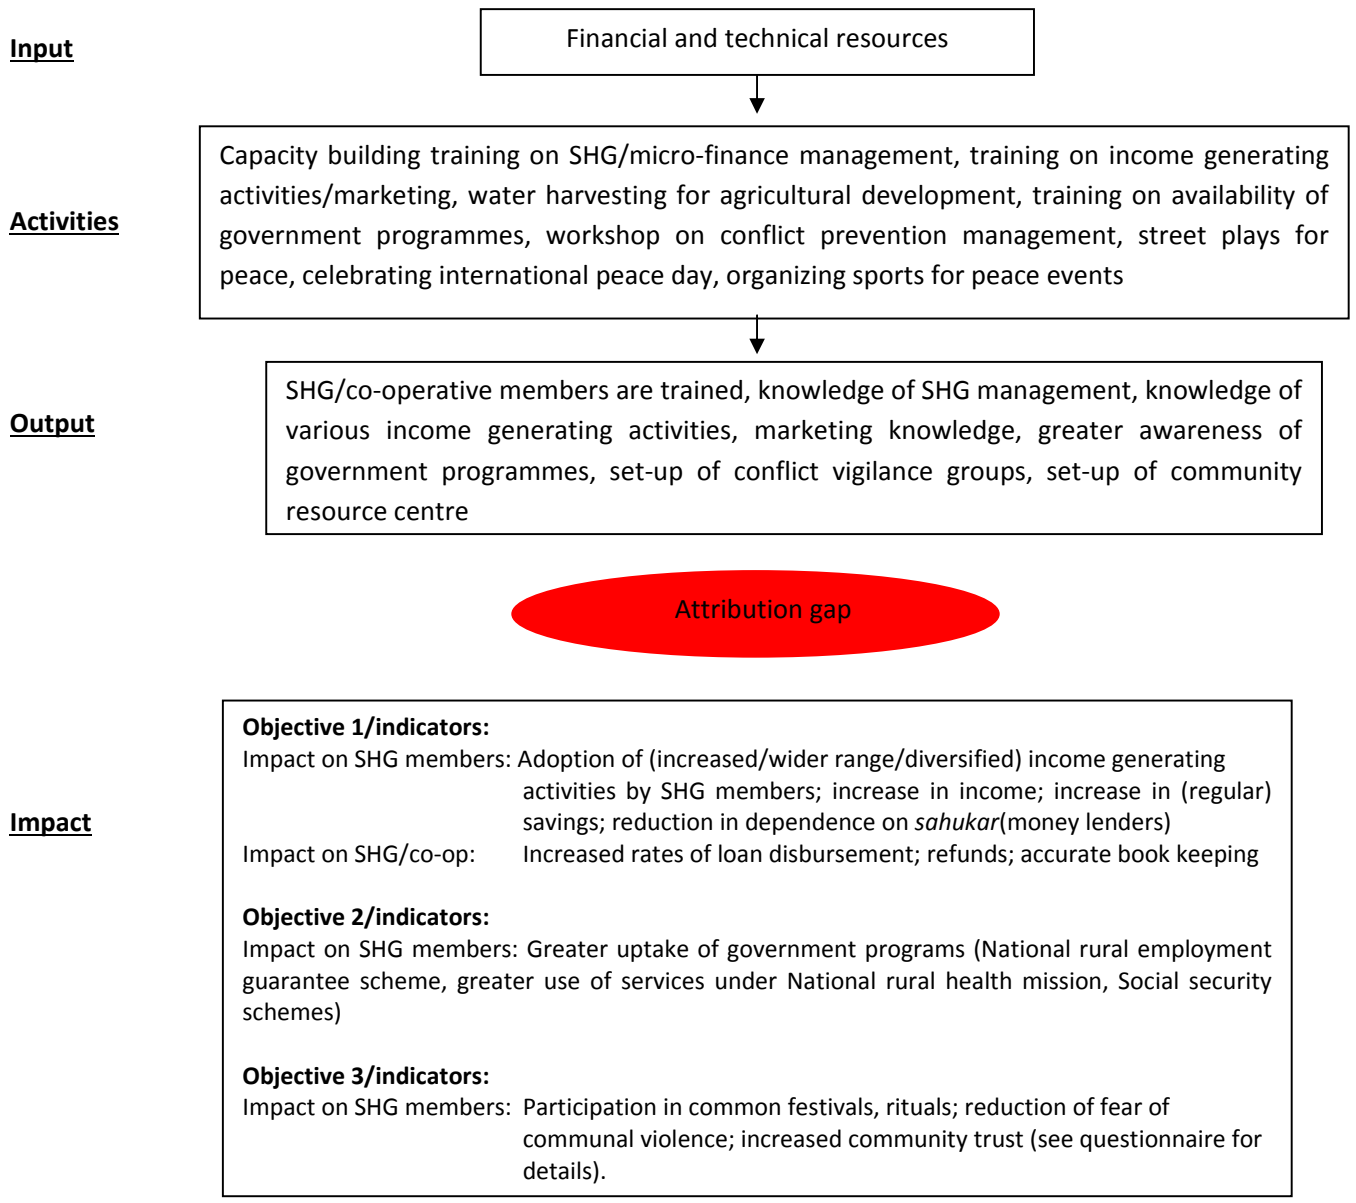

As mentioned in the introduction, the project was conceived with the aim of revitalizing a woman's co-operative organization (Mahila Vikas multi-purpose co-operative) and its affiliated self-help groups (SHGs). The project has three objectives in addition to strengthening the management capacity of the co-operative. These are:

¹Socio-psycho spiritual damage included loss of confidence, lack of trust, insecurity, reduced tolerance and increased suspicion.

- (i) Strengthening of the SHGs affiliated to the co-operative
- (ii) Increasing awareness of and access to government programs
- (iii) Promoting peace and harmony amongst different castes, religious and cultural groups.

A stylized result chain linking the inputs and activities to output and outcome indicators is provided below.

Stylized result chain:

4. Analytical approach and methods

The main aim of the evaluation is to identify the effect of the intervention on the three sets of indicators listed above. Specifically, to identify the impact of the programme on the economic outcomes of SHG members affiliated to MVMPC, their access to and knowledge of government programs, and their attitudes towards inter-caste/inter-religious interactions.

The key target group for the intervention is the set of women's self-help groups (SHG) affiliated to the women's co-operative in five gram panchayats (GP) located in one block of the district. The block has a total of 20 GP. The treatment group for the intervention is SHG members as individuals and also the SHG as a unit. At project inception there were 373 SHG affiliated to the co-operative spread over 13 GP while the intervention focuses on five of these GP with 93 self-help groups and 648 members. Thus, we have in the same block five "treated GP", eight GP where the co-operative operates but which are not part of the intervention, and seven GP where the co-operative does not operate.

The first point to be noted is that the project is being evaluated after it has already commenced and hence it is not possible to conduct a before-after analysis or a difference-in-difference analysis. Essentially, the analysis focuses on comparing outcomes between SHG households affiliated to MVMPC and SHG households which are not affiliated to MVMPC, after using statistical techniques (ordinary least squares) to control for differences in observed attributes. The evaluation draws on two rounds of data gathered in 2012 and in 2014. The evaluation based on the 2014 data may be thought of as an assessment of the sustainability of the intervention.

Second, according to the project documentation the five treated GPs were selected as they experienced the worst effects of the communal riots implying that the evaluation design and the sampling strategy need to be sensitive to the possibility of purposive program placement. Third, the nature of the intervention (training and knowledge dissemination) is likely to lead to spillovers and contaminate estimates of programme impact. While the intervention focuses on five GPs it is quite likely that information and knowledge spills over to SHG located in other areas and to SHG unaffiliated with MVMPC.

To mitigate some of the effects of these challenges we constructed two different control groups (C1 and C2). The control group C1 consists of SHG households living in a block where the project is not active but where MVMPC does operate. It is likely that such groups are similar in terms of the treated

group (affected by violence) but are more likely to be susceptible to spill over effects. The control group C2 consists of households living in a block where the project is not active and MVMPC does not operate. This control group is less likely to have experienced violence and less likely to be susceptible to spill overs.

Treatment and control groups	
Treated Gram Panchayats (5)	SHG members/SHG affiliated to MVMPC (Treatment group – population consists of 648 members, 93 groups)
C1: Control Gram Panchayats (8) MVMPC operates in these GP but does not use the CORDAID approach/funds	SHG members/SHG not affiliated to MVMPC (Population consists of 1,842 members, 163 groups)
C2: Control Gram Panchayats (7) MVMPC does not operate here	SHG members/SHG not affiliated to MVMPC (Population consists of 1,278 members, 114 groups)

5. Data

a. Household Survey Data

Two rounds of data were collected. The first round was gathered in 2012 and the second in 2014.² Keeping financial and statistical considerations in mind the surveys covered 375 treated households (T) and 200 for each of the two sets of control households (C1 and C2). The 375 treated

² The sample sizes were determined on the basis of a minimum expected effect size of 10 percent. This figure in turn is based on a study which claims that the increase in income due to SHGs is 23 percent (Rath, B. (2007), *Post Evaluation Study of the Scheme of Micro-Credit Help to Women Self Help Groups (WSHG) in KBK Districts of Orissa*, Mimeo. Indian Institute of Technology, Kanpur. Report submitted to the Government of Orissa. With an effect size of 10 percent, an alpha of 0.05 and a power of 80 percent we arrived at a sample size of about 775.

households were randomly chosen from a list of all beneficiaries provided by Jana Vikas while the control samples were chosen from a list of all members of self-help groups that are not supported by Jana Vikas/MVMPC but operate in the same area where MVMPC operates or from areas where MVMPC does not operate. These lists were procured with the help of Jana Vikas.

The surveys collected a range of information designed to control for differences in socio-economic characteristics and demographic structure across households. In addition, information was also gathered on awareness of and participation in government programmes, participation in peace building activities and attitudes towards inter-religious interactions.³ There were no attrition problems and we were able to interview all 775 households in the follow-up survey in 2014.

Descriptive statistics, based on the first round survey, for the entire sample as well as for the treatment and control groups are provided in Table 1 and Table 2. Table 1 compares the treated group with control group C1 and Table 2 compares the treated group with control group C2. The statistics presented in Table 1 show that the two groups are different in terms of three characteristics. Heads of households in the treated groups tend to be less educated with illiteracy rates of 46 versus 36 percent; they tend to be older (48 versus 44 years of age) and are more likely to be Christian (19 versus 4 percent). Along other dimensions such as demographic composition of the households, housing infrastructure, and access to public infrastructure, except for access to electricity, the two groups have characteristics that are statistically the same. As compared to households belonging to control group 2 (see Table 2), treated households are headed by older individuals (48 versus 45 years of age), and are more likely to be Christian. There are no educational differences across the two groups but it does seem that the treated households have access to better quality housing. The overall impression emerging

³ We drew upon a document put together by Care International to help design the module on promoting peace and harmony: Care International UK (2012) *Guidance for designing, monitoring and evaluating peace building projects: Using theories of change*.

from the comparisons is that differences between the treated and control households are pronounced along three dimensions – age of household head, religious composition of the groups and in the case of one of the control groups, the treated households are less likely to be educated. While control group C1 maybe expected to display greater similarity as compared to group C2 this does not seem to be case.

b. Other sources of data/information

Prior to visiting the project site information was gathered from CORDAID. This information included:

- Contract document between Jana Vikas and CORDAID
- Annual reports from Jana Vikas for the years 2008-09, 2009-10, 2010-11.
- Excel sheets with budget data for the project
- Project profile document from CORDAID
- Financial statements/reports
- Half-yearly activity progress reports

A field visit was undertaken between June 9 and June 11, 2012 to understand the intervention and to gather required documents/information. During the visit the evaluation team met with several staff members of the SPO/Jana Vikas. These included meetings with all the staff members involved in the project and especially with Father Manoj Nayak (the project responsible), Mr. Jugal Kishore (overall project manager) and Ms. Tapaswini (local project manager). In addition, discussions were held with the members of the MVMPC co-operative board and with the Block level peace building committee.

These meetings were followed by field visits to:

- Village Rugudisahi, located 1 km from the co-operative in Pabingia Gram Panachayat, (Phiringia block, district Kandhamal). In the village, discussions took place with 11 members of a self-help group called Maa Mary.

- Village Saitingia, located 4 km from the co-operative in the Pabingia Gram Panachayat, (Phringia block, district Kandhamal). In the village discussions took place with 8 members of a self-help group called Maa Pitabali.
- Village Padarsahi, located 40 km from the co-operative in Jajespanga Gram Panchayat, (Phiringia block, district Kandhmal). In the village discussions took place with 10 members of the Matta Mary self-help group.
- Village Sata Kusu, located 30 km from the co-operative in Jajespanga Gram Panchayat, (Phiringia block, district Kandhmal). In the village discussions took place with 17 members of the Maa Narayani self-help group.
- Visit to the information centre set up by the SPO in Village Saitingia/Malla.

6. Estimates and Discussion

We estimated a number of linear probability/regression models to identify the effect of the intervention on the outcomes of interest. These were estimated over different samples (T and C1, T and C2) of treated and control households. These models were first estimated using data collected in 2012 and subsequently using data collected in 2014. We also pooled the data and estimated models which allowed us to explicitly test whether there were differences in outcomes between 2012 and 2014. An assessment of the estimates based on different cuts of the data and different years revealed that the results were for the most part robust to the use of different control groups. Detailed estimates for both samples and for both years have been provided. The discussion below focuses on the estimates for the year 2012 and the comparisons between treated and C2 households as these estimates are less likely to be contaminated by spill over effects. The discussion begins by examining differences in the functioning of SHGs affiliated to MVMPC and SHGs that are not affiliated to MVMPC. This is followed by an

examination of the effect of belonging to an MVMPC affiliated SHG on economic outcomes and outcomes related to inter-community attitudes and trust.

a. Functioning of the Self-Help Groups

Tables 3 and 4 provide a comparative assessment of the functioning of the SHGs affiliated to MVMPC and SHGs which are affiliated to the government run ICDS (Integrated Child Development Services). In 2012, across all parameters the two groups are different. While the MVMPC-SHGs have been operating for a longer time period as compared to ICDS-SHGs they are considerably smaller as measured by number of members per group (11 Versus 12), group savings (Rupees. 6400 Versus Rupees.17,000), outstanding loans (Rupees. 8000 Versus Rupees. 32,000) and the proportion of members who have availed of a loan (45 Versus 66 percent). Problems regarding repayments are less prevalent (21 Versus 29 percent of the SHGs report a problem) in MVMPC-SHGs as compared to the ICDS-SHGs. In 2014, the differences between the two groups persist with regard to savings, outstanding loans and proportion of borrowers. The key differences over time are that the number of members per group in the MVMPC-SHGs and ICDS-SHGs are now the same (12) and the proportion of SHGs facing repayment problems is now the same across the two groups.

Based on individual response both SHGs groups appear to be quite active with regular meetings attended by almost all members. However, there are statistically significant differences across the two groups which show that in 2012, members of ICDS-SHGs were more likely to have monthly meeting (88 Versus 93 percent) compared to MVMPC-SHGs. In the case of both groups almost all members attend meeting – 10 out of 11 in the case of the MVMPC-SHGs and 11 out of 12 in the case of the ICDS-SHGs. These patterns persist in 2014. Overall, a year after the commencement of the intervention and a year after the intervention there are limited changes in the functioning of the MVMPC-SHGs as compared to the ICDS-SHGs. The main difference is that the MVMPC-SHGs appear to have added an additional member.

b. Economic effects of belonging to an MVMPC-SHG

Tables 5 and 6 contain estimates of belonging to different SHGs on expenditure and savings in 2012 and 2014, respectively. In 2012, both, monthly expenditure and savings are higher for households belonging to MVMPC-SHGs as compared to other SHGs, although the differences are not statistically significant. The same patterns tend to prevail in 2014. Households belonging to the treatment group recorded higher monthly savings as compared to control groups but the differences are once again not statistically significant. We also considered the effect of belonging to MVMPC-SHGs on the amount of loans and source of loans – there were no statistically significant differences. Furthermore, although not reported here, we examined the effect of belonging to treatment and control households on access to a range of government programs including the incidence of and the number of days of work obtained through the Mahatma Gandhi National Rural Employment Guarantee Scheme (MGNREGS). Across all these outcomes we found no statistically significant differences between treatment and control households. The lack of any impact is perhaps not surprising as, on average, households have belonged to MVMPC affiliated SHGs for about six to seven years prior to the current intervention and it is possible that pre-existing differences between households have already been bridged and hence there are no discernible effects. In any case, the prima facie interpretation is that there are no additional economic benefits associated with belonging to a MVMPC-SHG as compared to other SHGs which are supported by government agencies.

c. Participation and trust

Tables 7 and 8 provide an assessment of being affiliated to MVMPC-SHGs on participation in peace-building activities and on inter-religious interactions and trust in 2012 and 2014, respectively. With regard to participation, the estimates show that in both years, participation in inter-caste/inter-religious activities is quite low with only 4 to 5 percent of households in the treated areas participating in such activities. In 2012, there are no differences in participation across treated and control areas. However, in

2014 households in areas where MVMPC operates are 3 percentage points more likely to participate in such activities as compared to households where MVMPC does not operate (comparing treated and C2 households). Similar patterns prevail with regard to participation in international peace day celebrations and Ambedkar Jayanti—in 2012, there are no statistically significant differences in participation rates between treatment and C2 households. However, in 2014, as compared to C2 households, SHG households affiliated to MVMPC are 4 to 5 percentage points more likely to participate in peace day celebrations and about 3 percentage points more likely to participate in Ambedkar Jayanti activities. These patterns are consistent with the notion of spill over effects between treated and C1 households as MVMPC operates in both sets of blocks but does not operate in blocks where C2 households are located.

The remainder of the outcomes in the two tables examine whether participation in such activities translated into greater inter-caste/religious trust by examining willingness to eat with members of other castes/religions, willingness to attend inter-caste/religious marriages, inter-caste/religious fear, attitudes towards conversion and willingness to live next to families of other castes/religions.

Prima facie, the estimates for 2012, column 4 and 6, suggest that treated households are far more tolerant and are 8-9 percentage points more likely to be willing to eat meals with members of other social groups, are 9-10 percentage points more likely to attend inter-caste/religious marriages and are also more willing to live in mixed neighbourhoods (only treated versus C2). However, estimates which control for the caste and religious composition of the treated and control households reveal a different picture. The estimates, except for willingness to live next to other castes, are no longer statistically different. This change indicates that greater tolerance exhibited by the treated group is not because of the treatment but maybe attributed to the differences in religious composition between the two groups. The detailed estimates (not reported) show that the differences emanate from the higher

percentage of Christians in the treated group who tend to be more willing to eat meals, attend marriages and live next to other social groups. This is despite the fact that the treated households tend to be more nervous as compared to C2 households when approached by members of other castes/religions.

In 2014, perhaps due to lack of inter-community violence in the years preceding the survey, across the board, there is a greater willingness to attend inter-caste/religious marriages and to live next to other social groups. For instance, in 2012, 36 percent of treated household were willing to attend inter-caste/religious marriages while in 2014 the figure had jumped to 43 percent. Similarly, in the case of willingness to live next to each other, for treated households, the figure jumped from 19 to 39 percent. Similar increases are recorded by control households with the result that in 2014 there are no statistically significant differences in these outcomes between treated and control households. Since the change in attitudes is similar across groups it cannot be attributed to the intervention but due to other factors that have universally affected attitudes across social groups.

d. Efficiency of the project

The three year project budget is Euro 164,065 or an annual budget of Euro 54,688 to support the MVMPC and the self-help groups associated with it. Based on data collected in 2014, there were 150 groups affiliated to MVMPC in the project area with about 1,490 members. Keeping in mind the expansion of membership between 2012 and 2014, on average, the total number of women affiliated to MVMPC-SHG groups in the project area is likely to have been close to a 1,000 per year. This translates into an annual project expenditure of Euro 54 per person or Rupees 4,212.⁴ While we do not have a benchmark against which to judge whether this is efficient or not, the per capita expenditure may be contextualized by considering the size of the SHG groups supported by the project. As shown in Table 4,

⁴In mid-2013, the exchange rate was Rupees 78 to a Euro.

total group savings of MVMPC-SHG in the project area in 2014 was around Rupees 7,600 or Rupees 633 per member while the annual support provided by the project amounts to about Rupees 4,212 per member.

With regard to effectiveness, the analysis presented above shows that in terms of the three project objectives, that is, strengthening of the SHG affiliated to MVMPC, greater access to government programs and building peace and trust we found limited differences between treatment and control groups. While MVMPC affiliated SHGs did record a 10 percent increase in members between 2012 and 2014, on all other outcomes that were evaluated there were no notable changes over time. Nor were there any statistically significant differences in terms of knowledge of and access to government programs. With regard to participation in and trust of other social groups, it did seem that treated households were more tolerant, however, this is not due to the project but due to differences in the religious composition of the treated and control households. The limited project effects combined with the annual project expenditure per SHG member (Rupees 4,212) and the size of the SHGs are measured by the average savings of a member in 2014 (Rupees 633), suggests that the allocation of project resources and the project approach needs to be reconsidered.

7. Concluding remarks

The paper assessed the impact of a project implemented by Jana Vikas and funded by Cordaid. The aim of the project was to strengthen a women's co-operative and the functioning of SHGs affiliated to it, to increase their access to government programs and to promote inter-caste/religious peace and harmony. The analysis relied on two rounds of data collected in 2012 and 2014 and a comparison between the functioning of SHGs affiliated to the co-operative and SHGs affiliated to a government program.

The estimates are robust to variations in control group and the year of evaluation. The main findings are that over time there has been a ten percent increase in the membership of SHGs affiliated to the co-operative and that there are no statistically discernible differences in economic or social

outcomes across treated and control households which may be attributed to the intervention. In short, the affiliation of a self-help group to a non-governmental organization supported by the project or to a government program has no bearing on economic outcomes or social attitudes.

The project was set up in the aftermath of inter-community riots which disproportionately affected MVMPC and SHGs affiliated to it and the evaluation took place about 4 to 6 years after the violence, hence, it is possible that the zero project effect may be due to the timing of the evaluation which took place after gaps had already been bridged. It may well have been that there were differences between the economic circumstances of MVMPC-SHG households and households belonging to other SHGs in the initial years but this is no longer the case.

Overall, the project had a focused approach (limited to 5 blocks/Panchayats) and given the difficult circumstances preceding the project the focus on peace building and harmony and strengthening of the MVMPC was clearly justified. However, based on the results presented above it seems that at the moment there is no difference in the effectiveness of SHGs affiliated with MVMPC or whether affiliated with government programs, at least in terms of the outcomes considered above. This suggests that future editions of the project should reconsider whether resources need to be spent on peace building activities or whether greater attention should be paid to the traditional activities expected to be carried out by self-help groups.

Table 1

Kusters, C., Mohapatra, B.P., Sethi, S., Buizer, N.N., Das, A., Bhatra R.W, Sen P., 2015. *Endline report – India, Jana Vikas. MFS II country evaluations; Capacity of Southern Partner Organisations (5C) component*. Centre for Development Innovation, Wageningen University & Research centre. Report CDI-15-016. Wageningen.

This report presents the findings of the endline of the evaluation of the organisational capacity component of the MFS II country evaluations. The focus of this report is India, Jana Vikas. The format is based on the requirements by the synthesis team and NWO/WOTRO. The endline was carried out in 2014. The baseline was carried out in 2012.

Key words: 5C (five core capabilities); attribution; baseline; causal map; change; CFA (Co-financing Organisation) endline; organisational capacity development; SPO (Southern Partner Organisation).

Acknowledgements

We are grateful to all the people that have contributed to this report. We particularly would like to thank the Southern Partner Organisation Jana Vikas and the Co-Financing Agency Cordaid for their endless patience and support during this challenging task of collecting the endline data. We hope that this endline report will provide useful insights to Jana Vikas, Cordaid, the synthesis team, IOB and NWO/Wotro.

The India 5C evaluation team

List of abbreviations and acronyms

5 C	Capacity development model which focuses on 5 core capabilities
ASHA	Accredited Social Health Activist
AWW	Aganwadi workers
BDO	Block Development Officer
Causal map	Map with cause-effect relationships. See also 'detailed causal map'.
Causal mechanisms	The combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome
CDI	Centre for Development Innovation, Wageningen UR
CFA	Co-Financing Agency
CRS	Catholic Relief Services
Detailed causal map	Also 'model of change'. the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change. In the 5C evaluation identified key organisational capacity changes and underlying reasons for change (causal mechanisms) are traced through process tracing (for attribution question).
DWO	District Welfare Officer
EPF	Employee Provident Fund
General causal map	Causal map with key organisational capacity changes and underlying reasons for change (causal mechanisms), based on SPO perception.
GRS	Gram Rozgar Sevak Sanghas
ICDS	Integrated Child Development Services

1 Introduction & summary

1.1 Purpose and outline of the report

The Netherlands has a long tradition of public support for civil bi-lateral development cooperation, going back to the 1960s. The Co-Financing System (*Medefinancieringsstelsel*, or 'MFS') is its most recent expression. MFS II is the 2011-2015 grant framework for Co-Financing Agencies (CFAs), which is directed at achieving a sustainable reduction in poverty. A total of 20 consortia of Dutch CFAs have been awarded €1.9 billion in MFS II grants by the Dutch Ministry of Foreign Affairs (MoFA).

The overall aim of MFS II is to help strengthen civil society in the South as a building block for structural poverty reduction. CFAs receiving MFS II funding work through strategic partnerships with Southern Partner Organisations.

The MFS II framework stipulates that each consortium is required to carry out independent external evaluations to be able to make valid, evaluative statements about the effective use of the available funding. On behalf of Dutch consortia receiving MFS II funding, NWO-WOTRO has issued three calls for proposals. Call deals with joint MFS II evaluations of development interventions at country level. Evaluations must comprise a baseline assessment in 2012 and a follow-up assessment in 2014 and should be arranged according to three categories of priority result areas as defined by MoFA:

Achievement of Millennium Development Goals (MDGs) & themes;

Capacity development of Southern partner organisations (SPO) (5 c study);

Efforts to strengthen civil society.

This report focuses on the assessment of capacity development of southern partner organisations. This evaluation of the organisational capacity development of the SPOs is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

The purpose of this report is to provide endline information on one of the SPOs involved in the evaluation: Samarthak Samiti in India. The baseline report is described in a separate document.

Chapter 2 describes general information about the Southern Partner Organisation (SPO). Here you can find general information about the SPO, the context in which the SPO operates, contracting details and background to the SPO. In chapter 3 a brief overview of the methodological approach is described. You can find a more detailed description of the methodological approach in appendix 1. Chapter 4 describes the results of the 5c endline study. It provides an overview of capacity development interventions of the SPO that have been supported by MFS II. It also describes what changes in organisational capacity have taken place since the baseline and why (evaluation question is 1 and 4). This is described as a summary of the indicators per capability as well as a general causal map that provides an overview of the key organisational capacity changes since the baseline, as experienced by the SPO. The complete overview of descriptions per indicator, and how these have changed since the baseline is described in appendix 3. The complete visual and narrative for the key organisational capacity changes that have taken place since the baseline according to the SPO staff present at the endline workshop is presented in appendix 4.

Chapter 5 presents a discussion on the findings and methodology and a conclusion on the different evaluation questions.

The overall methodology for the endline study of capacity of southern partner organisations is coordinated between the 8 countries: Bangladesh (Centre for Development Studies, University of

Bath; INTRAC); DRC (Disaster Studies, Wageningen UR); Ethiopia (CDI, Wageningen UR); India (CDI, Wageningen UR; Indonesia (CDI, Wageningen UR); Liberia (CDI, Wageningen UR); Pakistan (IDS; MetaMeta); Uganda (ETC). Specific methodological variations to the approach carried out per country where CDI is involved are also described in this document.

This report is sent to the Co-Financing Agency (CFA) and the Southern Partner Organisation (SPO) for correcting factual errors and for final validation of the report.

1.2 Brief summary of analysis and findings

Over the last two years JV has slightly improved in its capability to act and commit. The main improvements were that the director is more responsive to field staff, to target groups and involves staff more in strategic planning. Clarity on roles and responsibility, financial incentives and funding procedures also improved. In the capability to adapt and self-renew JV improved slightly as they now have an operational PME unit (funded by Cordaid), the PME policy has been revised, staff increase PME skills, M&E findings are used for operations, there is more critical reflection and JV is more responsive to stakeholders. In terms of the capability to deliver on development objectives, there has been a very slight improvement because JV works more cost-effectively and has a better feedback mechanism for meeting beneficiaries needs. In the capability to relate, JV showed improvement: they are more open for input from stakeholders for developing their strategies, networks for resource mobilisation improved, relationship with target groups improved and internally they are organised in a more clear and less hierarchical way. Finally, JV slightly improved in its capability to achieve coherence because they revised their strategic plan and HR, Finance and Gender policies were approved by the board.

The evaluators considered it important to also note down the SPO's perspectives on the most important organisational capacity changes since the baseline. During the endline workshop the key organisational capacity changes that were brought up by JV's staff were: improved networking with government, NGOs and CBOs; and improved systems of programme monitoring in place. It is expected that both these areas will contribute to improve its capacity for resource mobilisation. Improved networking with government, NGOs and CBOs was because of building of a trust relationship with the government after the cyclone in October 2013, and because of JV's involvement in the REHNUMA alliance with other NGO and CBO partners. Both of these developments can be attributed to JV's improved capacity to lobby and advocate on government entitlements which was a result of trainings and exposure visits funded by MFS II and MISEREOR. The systems of programme monitoring in place improved because of an accountability mechanism that is now in place, improved PME and better compliance. According to JV staff, improved PME is due to MFS II funded trainings on RBM, PME, strategic planning and SHG management. JV improved its compliance to its operational guidelines because of the revision of operational policies and the formation of thematic committees to see to the implementation of policies. The policies were revised during a Policy development workshop that was funded by MFS II. All in all, MFS II funded capacity development interventions, according to JV, had an effect on the organisation's capacity to lobby and advocate on government entitlements, knowledge on RBM and PME; and revision of policies. Other underlying factors relate to restructuring of the organisation, and stricter government policies on foreign funding, changing donor priorities and natural calamities.

2 General Information about the SPO – Jana Vikas

2.1 General information about the Southern Partner Organisation (SPO)

Country	
Consortium	Communities of Change
Responsible Dutch NGO	Cordaid
Project (if applicable)	India People's Participation in Development through coop management CMDRR Pilot Study Kandhamal (Orissa) People's Participation in Community Development
Southern partner organisation	Jana Vikas

The project/partner is part of the sample for the following evaluation component(s):

Achievement of MDGs and themes	
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

2.2 The socio-economic, cultural and political context in which the partner operates

Jana Vikas works in Kandhamal district one of the most backward and tribal dominated districts of Odisha inhabited by dalits, tribals, and other backward communities. It is committed to inform, empower, and uplift these communities through sustainable livelihood programmes, social values, peace, social justice and harmony. It receives MFS II funding for the project 'Sustainable Livelihood enhancement of SHGs through people's participation in community development' to create sustainable livelihood for the poor and marginalised by capacitating SHGs and strengthening the communities.

Kandhamal¹ was governed by various royal dynasties since 10th century till the advent of British East India Company in 1830 to this region. With the formation of the new province of Odisha in 1936 Kandhamal (then called Boudh and Kandhamal) was merged with Odisha from the erstwhile Madras Presidency of British India.

In the present context, Kandhamal is among the most backward districts of the 69 identified most backward districts of India having a population of 7.33 lakhs (2011 census). Almost 66% of the land area of the district is covered with dense forest and towering mountains. As per the 2011 census report Scheduled Tribe population of Kandhamal consists of 53.6% and rest belongs to Scheduled caste, other backward castes and general category. Average literacy rate as per 2011 census is 64.13% out of which male and female literacy were 78.41 and 52.46 respectively.

Socio-economic condition: Kandhamal is a tribal majority district inhabited by the Kandha tribe. The inhabitants have rich cultural values and practices since centuries, maintaining their identity over ways of resolving village disputes over marriage and divorce, land ownership and distribution of resources. The tribal groups suffer due to various common causes such as poverty, exploitation,

¹ Hills of the Konds (a predominant tribal community)

health hazards, diseases etc., therefore they help each other to resolve the problems. However, addiction to illicit liquor, HIV/AIDS, human trafficking, migration, political parties who have often see the tribal problem from the point of view of their religious practices over addressing their developmental needs, are major threat to the cultural norms of the people.

With the advance of Christian mission in Kandhamal, part of its population converted into Christianity. This led to a rise in Hindu fundamentalism as a counter to the Christian movement. Unfortunately, the communal flares during and aftermath of the riots of 2008 gripped the entire district which disturbed the socio-economic condition of the people at large. However, over the years the situation has slightly improved and peace gradually restored in the region.

Agriculture is the Primary occupation of the people and backbone of their economy. In the tribal dominated areas before the implementation of the British land laws community owned all the land. But these laws recognised only individual land ownership and turned all community owned land into state property. With that, the tribals became encroachers on the land that was their habitat for centuries.

The rich and varied forests of the district have a considerable NTFP (Non-Timber Forest Products) potential. Although Kandhamal is enriched with forest based products but NTFP are still not optimally used for livelihood. Even there is no data or plan available at panchayat level to use NTFP. Further data shows that out of 100 workers, 69 of them are agricultural workers. Kandhamal has good production of turmeric but the major portion of profit has been taken by middlemen as there are not much facilities for marketing the final product. Due to lack of information and knowledge of different programmes, farmers are not able to tap various govt. schemes and benefits from different institutions like NABARD, Horticulture dept. etc.

The source of economy in Kandhamal is mainly agricultural or forest based. It has been declared as an industry-free district and the state has not acquired much land for development projects. Therefore, the majority of youth migrate for employment towards other states. When they migrate, youth earn more than they would at home, but at the same time they are often exploited by employers or contractors. Furthermore, their aspirations are largely for government jobs but due to lack of skills, higher education forces them to work as casual or unskilled or daily wage labour.

The scope of the public sector is very limited to provide employment opportunities to a large section of unemployed persons in the district. However, over the years various employment-generating programmes such as the Prime Minister Rozgar Yozona scheme, the Swarnjayanti Gram Swarozgar Yajona (SGSY) scheme, MNREGA etc., are implemented in the district to generate self/wage/salary employment for the unemployed youths. The benefits of the employment generating programmes are often not delivered to the people due to manipulations, delays and corrupt practices, etc.

Health Status: The infant mortality rate is (88 per 1000 live births). Female child mortality rate (106 per 1000 live births) is higher than male child (76 per 1000 live birth). The neo-natal death is 41 per 1000 live births.² Kandhamal has a high incidence of IMR, CMR, malaria, diarrhoea, measles, skin diseases, sickle cell disease and thalassemia. In terms of the Reproductive Health Index (RHI), it is among the bottom five districts (at 0.462).³ The district has been categorized under high focus districts of Odisha, having the privilege of getting priority in almost all health care planning, resource allocation and service delivery mechanism undertaken by the State. However, accessing health is still an issue due to remoteness and inaccessibility of the region and also lack of awareness among people.

Education: Though educational status has improved compared to previous years, but most of the children dropped out either after finishing 10th standard or 12 standards due to poor affordability on of higher education, non-availability of educational institutions, and poor economic conditions forcing them to go for work. Girl child education is a concern as they largely get dropped out at secondary and higher secondary level.

² http://www.censusindia.gov.in/vital_statistics/AHSBulletins/files2012/Odisha_Bulletin%202011-12.pdf

³ District Human Development Report 2011-12.

Women in governance: Lack of participation of women in governance from this region has remained an issue. Increase in attendance of women in meetings of Gram Sabha and Pali Sabha could not ensure their active participation in governance.

Jana Vikas' operational area is the Phiringia Block in Kandhamal district, which is further backward in every aspect in comparison to the other Blocks in the district.

Considering the above mentioned situation, Jana Vikas is committed to uplift the poor and marginalized communities by informing, organizing, developing and empowering through strengthening the cooperatives to take up micro enterprises management, generating awareness among women, and capacity building of progressive groups and providing Handholding support-aiming at attainment of self-reliance of the progressive members.

2.3 Contracting details

When did cooperation with this partner start: 1998

What is the MFS II contracting period: the following contracts fall under MFSII:

- India People's Participation in Development through coop management: 1 May 2010-30 April 2013 (funded under MFS II from 1 January 2011-30 April 2013)
- CMDRR Pilot Study Kandhamal (Orissa): 1 August 2012 to 31 January 2013
- People's Participation in Community Development 01-05-2013 to 30-04-2015

Did cooperation with this partner end? No

If yes, when did it finish? NA

What is the reason for ending the cooperation with this partner: NA

If not, is there an expected end date for the collaboration? 30 April 2015, there is no expected collaboration after this date.

2.4 Background to the Southern Partner Organisation

Jana Vikas has been committed for self-sustainable development of the poor and marginalized social ethnic groups such as Dalit, Advasi and Other Backward Communities of Kandhamal district in Odisha. Father Augustine founded Jana Vikas in 1988 and became its Director. It was a project of Catholic Charities focusing on basic amenities for all communities. Efforts were also made to identify the needs of local communities in relation to livelihoods and health. The focus was on creating access to government schemes for the tribals.

Under Catholic Charities, the organization started its community based activities with Community Health programme in the year 1988, in 30 villages of Sonapur and Tajungi Gram Panchayat of Daringabadi Block. This project was funded by MISEREOR (Germany). The programme focused on health education, creating awareness, environmental management and sanitation. Jana Vikas targeted the schools for its messages, along with a strategic cluster level approach to build awareness amongst the communities.

In 1992, the organisation got registered as Jana Vikas under the Societies Registration Act. Its strategy changed to Education and Health. In Education the focus was on non-formal teachers. Under health, induction of health workers and medicine kits for common diseases were introduced. There was also the initiative to promote and make available generic drugs which were much cheaper than the ones available in bigger towns. The target continued to be the schools. The program was expanded to Daringbadi, Nuagam & Baliguda.

In 1995, Jana Vikas started its work with Panchayati Raj Institutions. Leadership trainings were carried out at village level. Some of these leaders were successful in Panchayat elections. It was also seen as a failure because women complained that the new Panchayat leaders were demanding money.

1996 marked the beginning of the cooperative movement in Kandhamal district. A poverty analysis carried out in the area which prompted the initiative of forming cooperatives. The SHGs began trading in consumer goods. Cooperatives were mainly concentrated in Daringbadi. In 1997 Jana Vikas support to SHGs hit a major milestone. The cooperatives made profits worth 18%. A central godown (warehouse) was also established. Cooperatives were formed in new areas. Cooperatives bought at wholesale rates and sold consumer goods to local communities. At the same time, stealing from the godown started. This brought crisis in the Cooperative management.

In 1998, a major strategic shift took place. The cooperatives were closed after evaluation and the conclusion that it was too risky for the godown to be managed by cooperatives.

In 1999, SHGs started getting women together. Mahila Vikas cooperative started during this year. In this, the women were involved in sales of products. Seeds worth of INR 3000 for cultivating turmeric were given to the SHGs. Sales were managed through wholesalers; there was no investment made by Jana Vikas on this. These SHGs played a vital role in protecting people from the exploitation of the local business traders and dominant section of the society. It created jobs and contributed in economic growth of the society. Over the years two more cooperatives were registered such as, Vikas Jyoti Multi-purpose Cooperative Ltd, Jeeban Vikas Multi-purpose Cooperative Ltd. Jana Vikas facilitates these cooperatives for regular meetings, business planning, getting loan for investment in various Income Generation Activities (IGA).

In 1999 Odisha faced the wrath of Super Cyclone and large scale devastation on life and property. Catholic Charities and Jana Vikas' focus became relief and rehabilitation. The strategy was to cover health, education and livelihoods through SHGs. An evaluation was conducted by CENDERET. CORDAID consortium (MEMISA as founding member of the consortium) wanted to fund projects. The key influencing factors were the CENDERET evaluation and Paul Shiromani's analysis which brought about a strategic shift on the part of donors. He recommended shifting base from Nuagam to Phulbani.

In 2000, Jana Vikas initiated an issue based movement and began creating awareness starting with bidis (hand rolled smoking tobacco), roads etc. ICDS (Integrated Child Development Service) Centre, evening schools and low cost housing for tribal children were initiated. These were joint programs by Government and Jana Vikas. Social analysis approach started which enabled communities to identify their own issues and problems.

Fr. Ajay joined Jana Vikas as Assistant Director in year 2001 and took over as Director of Catholic Charities in 2005. He started with an analysis of poverty indicators of Kandhamal. He found the health indicators to be very low. Phiringia (where 90% were non-Christians) had an inclusive approach. Phulbani Action Group (PAG) was created. The strategy focused on Management of SHGs/Cooperatives. Jana Vikas at that time had a team of 4 people.

In 2004 the Orissa Human Development report showed Kandhamal had lowest indicators. Its population below the poverty line had increased from 71 per cent in 1975 to 75 per cent in 1993. There was an increasing trend of deterioration. Jana Vikas developed strategies to focus on building self-reliant cooperatives to strengthen the livelihood of the people. Staff strength was increased to 19.

In 2005, the first strategic planning process for Jana Vikas was carried out. In this strategy programmes included were Livelihoods, governance & strengthening people's movements, promoting SHGs, awareness of rights and responsibilities, Human Rights, implementation of government programs, Watershed project with people's participation, creating micro enterprise models, market linkages with IDE support (CORDAID) with focus on turmeric. There was also a move to explore export of turmeric. Staff strength was increased to 36.

2007-2010 - Father Ajay's vision was to make Jana Vikas a professionally run organization. He initiated an analysis of organisation processes and organizational development process. An HR (Human Resources) manual was drafted along with a gender policy. New staff was recruited with new skills. The staff strength grew between 70-80. While Jana Vikas had embarked on strengthening the organization, tough challenges emerged in the field - governance had failed, Cooperatives were attacked, even by traders including non-Christian cooperatives as SHGs became a threat to local traders.

In 2008, there was an outbreak of communal violence between Hindu rights groups and Christians. Jana Vikas' documentation process got affected. The office was burnt. Normal development process

took a back seat. Most activities were stopped. Response with relief measures with NGOs was undertaken. Local government did not want dalit/tribal NGOs in relief operations. Committees were formed to carry out relief operations and others to look at human rights violations. Fr. Divya Parichha handled legal issues (from within the church). In 2009, there was resumption of activities. Interventions were designed through proper risk analysis.

In 2010, Fr Ajay and his successor Fr. Manoj took up confidence building measures by sleeping in the Phiringia office which had only two people. Then slowly other staff came back. Jana Vikas' intervened through relief/rehabilitation programmes. The cooperatives' activities remained suspended for almost a year. The members did not come forward for work. Exposure/trainings were carried out on Coop Management in Andhra Pradesh. Training on trauma counselling (NIMHANS) was also organized for staff and for their work. In this period Jana Vikas had gradually taken up various programmes included coordination between different needs of the community like health, livelihoods and legal aspects. During the year Jana Vikas made effort to re-settlement and rehabilitation of the displaced and riot affected people by providing emergency relief, trauma counselling and legal aid. In this year MFS II support came through the peace building project. This included peace in action activities like cultural programs, sports activities, street plays, as well as working with the government. It realised that understanding human and social capital is essential for development. Under this project Jana Vikas established Peace Committees to disseminate peace messages among the communities, promoted village task force to identify and resolve various issues in the villages, organized trainings on advocacy and lobbying for staff etc., to create harmony and bring development in the region.

Community Managed Disaster Risk Reduction (CMDRR) process was initiated. Disasters included human made disasters like conflicts and communal violence. Jana Vikas initiated study to understand conflict from a DRR perspective by talking to all stakeholders including district administration. NGOs have now applied for government funding for some projects. It is a conscious way to involve the government. Staff strength in 2012 stands at 82.

Jana Vikas in 2013 developed a specific strategy to engage with the government departments, participate in the government funded projects and programmes. This was linked to its strategy to niche out Jana Vikas's work beyond any religious affiliations. As a result Jana Vikas severed its ties with the Catholic charity and became an independent unit. Father Manoj took over as the new director of the Jana Vikas. Under his leadership Jana Vikas looks forward to bring overall development of the marginalised communities in the region through peace building, sustainable livelihood, empowerment of women, etc.

Since 2014 the National Foundation of India is funding Jana Vikas to implement the pilot project called REHNUMA. The objective of this project is to create entitlement centres to provide the minority communities with information and guidance on government entitlements and schemes of the government and give them handholding support to access these benefits. In 2014 the staff grew to 92.

In the changing local context and donor environment and surveillance over funding from foreign donors Jana Vikas made strategic change to continue to work for the development of the region.

In 2013 it drafted a new strategic plan for 2014-2018 focusing more towards sustainable livelihood, Educational development, governance women empowerment and peace building to empower the unreached people into the mainstreaming development process. Along with sustainable livelihood it initiate people centred advocacy for changing into humanitarian standard of policies, programs and provisions in favour of poor, indigenous and marginalized sections of the society. Also promotes human values, culture, peace, social justice and harmonization.

Vision

Jana Vikas visualises a holistic and sustainable society where people live in unity amidst diversity based on social and human values of justice and equity. (Source: Strategic plan 2014-2018)

Mission

Our mission is to sensitise, organise, enable, empower and develop the poor and the marginalized, especially the Adivasi, Dalit and OBCs, to respond to their issues, needs, problems, vulnerabilities and bring forth changes for common goal and interest by using their existing potential, strength and resources, through collective reflection, decision and action. (Source: Strategic plan 2014-2018)

Strategies (Source: Strategic plan 2014-2018)

Jana Vikas in its strategic plan for 2014-18 has emphasised to focus on 5 key programmes such as Livelihood Development, Education, Governance and rights, Women empowerment and violence against women, Peace building. It has developed specific strategies for each programme as follows:

Livelihood Development:

- Strengthening of optimal utilization of natural resources/forest product for sustainable livelihood.
- Enhancing productivity of agriculture and other allied component for sustainable livelihood.
- Enhancing the access & utilization of government schemes & resources for income enhancement.
- Employment generation for Youth & Women through Enterprise Development.
- Strengthening the youth for gainful & safe employment out of district.

Education:

- Facilitating CBOs and community to participate, monitor and demand for quality education
- Strengthening the School Management Committee and Janch (investigation) Committees of both residential and non-residential schools
- Prevention of dropout, education for Adivasi and Dalit and Girl child
- Facilitate to avail stipend (minority)
- Lobby with Church leadership for making availability of hostels for Adivasi and Dalit students for higher and professional studies
- Facilitate girls from minority communities to get the quota of 30% at KGVV
- Facilitating the students from SC, ST and minority to avail the benefit of free coaching scheme from Central Govt.

Governance and rights:

- Awareness building of community on different schemes, programmes and their rights and entitlements
- Capacity building of staff on good governance and entitlements of different target communities,
- Facilitate communities and CBOs to participate in Palli Sabha and Gram Sabha, improve capacities of community on conducting social audit
- Become active members of different committees at different levels and bring forth issues of governance and rights to the notice of officials and influence them to act upon the issues
- Facilitate the barefoot communicators to identify and document issues of miss-governance and non-fulfillment of rights and entitlement
- Link up the barefoot communicators with media to take up issues and highlight them

Women empowerment and violence against women:

- Awareness building of women and men on the issues affecting women
- Sensitization of youth on sexual harassment/abuse
- Link the victim with available legal and justice delivery bodies/systems
- Building networking and alliances with organizations working on women issues to influence policies and its implementation.
- Capacity building of Women PRI members on their roles and responsibilities, rights, powers & duties as a PRI.
- Strengthening women capacities for active participation in Palli Sabha, Gram Sabha, and in decision making bodies at gram panchayat, panchayat samiti and zila parishad (district council).

Peace building:

- Peace education in the schools, colleges, and villagers
- Celebration and observation of different important days, occasions, festivals to enhance harmony and brotherhood
- Organizing inter religious dialogue with intellectuals, religious leaders, influential persons

-
- Developing CBOs as peace messengers
 - Building peace cadre involving youth from GP and block
 - Activation of peace committee in village, panchayat, block and district level
 - Engaging administration, politicians, PRI representatives, media and other influential people from different levels in the peace building process

3 Methodological approach and reflection

3.1 Overall methodological approach and reflection

This chapter describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

Note: this methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report A detailed overview of the approach is described in appendix 1.

The first (changes in organisational capacity) and the fourth evaluation question are addressed together through:

- **Changes in the 5C indicators since the baseline:** standard indicators have been agreed upon for each of the five capabilities of the five capabilities framework (see appendix 2) and changes between the baseline, and the endline situation have been described. For data collection a mix of data collection methods has been used, including self-assessments by SPO staff; interviews with SPO staff and externals; document review; observation. For data analysis, the Nvivo software program for qualitative data analysis has been used. Final descriptions per indicator and per capability with corresponding scores have been provided.
- **Key organisational capacity changes – 'general causal map':** during the endline workshop a brainstorm has been facilitated to generate the key organisational capacity changes as perceived by the SPO since the baseline, with related underlying causes. For this purpose, a visual as well as a narrative causal map have been described.

In terms of the attribution question (2 and 4), '**process tracing**' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to

focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

At the end of this appendix a brief methodological reflection is provided.

3.2 Assessing changes in organisational capacity and reasons for change - evaluation question 1 and 4

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?** And the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This is explained below. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

The evaluators considered it important to also note down a consolidated SPO story and this would also provide more information about what the SPO considered to be important in terms of organisational capacity changes since the baseline and how they perceived these key changes to have come about. Whilst this information has not been validated with sources other than SPO staff, it was considered important to understand how the SPOs has perceived changes in the organisation since the baseline.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information is provided for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the next session on the evaluation question on attribution, as described below and in the appendix 1.

How information was collected and analysed for addressing evaluation question 1 and 4, in terms of description of changes in indicators per capability as well as in terms of the general causal map, based on key organisational capacity changes as perceived by the SPO staff, is further described below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012⁴.

⁴ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

1. **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
2. **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
3. **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
4. **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
5. **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Please see appendix 1 for a description of the detailed process and steps.

3.3 Attributing changes in organisational capacity - evaluation question 2 and 4

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*** and the fourth evaluation question: ***“What factors explain the findings drawn from the questions above?”***

In terms of the attribution question (2), ‘process tracing’ is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Below, the selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

3.3.1 Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

For the detailed results of this selection, in the four countries that CDI is involved in, please see appendix 1. The following SPOs were selected for process tracing:

- Ethiopia: AMREF, ECFA, FSCE, HUNDEE (4/9)
- India: BVHA, COUNT, FFID, SMILE, VTRC (5/10)
- Indonesia: ASB, ECPAT, PtPPMA, YPI, YRBI (5/12)
- Liberia: BSC, RHRAP (2/5).

3.3.2 Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change.

Those SPOs selected for process tracing had a separate endline workshop, in addition to the ' general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained. More information can be found in Appendix 1.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

3.3.3 Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team. These can also be found in appendix 1.

Use of the 5 core capabilities framework and qualitative approach: this has proven to be a very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II

supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
 - Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
 - Difficulty of assessing changes in knowledge and behaviour: training questionnaire has been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the

Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

4 Results

4.1 MFS II supported capacity development interventions

Below an overview of the different MFS II supported capacity development interventions of Jana Vikas that have taken place since 2011 are described. The information is based on the information provided by Cordaid.

Table 1

Information about MFS II supported capacity development interventions since baseline

Title of the MFS II supported capacity development intervention	Objectives	Activities	Timing and duration	Budget	
Assessment of organisational HR manual and capacity building of the staff (Food and logistic expenses)	The objective of this intervention was to improve on the HR manual and improve staffs knowledge and training in relation to food and logistic expenses.	Assessment and training	1 May – 31 October 2013	30.000 Rs	
Capacity building of key staffs holding responsibilities of respective departments (Human Resource, PME, Finance)	The objective of this intervention was to further train staff on project formulation and management, strategic planning, peacebuilding & preservation of the indigenous tribal culture	Training, workshops & assessments	From 1st May 2013- 31st October 2013	90.000 Rs	People's Participation in Community Development Project (#109568), total budget for organisational development: +/- € 2.209
Organisational strategic planning (food and logistic expenses)	The objective of this intervention was to further train staff on collective marketing, better understanding towards development of the district Kandhamal, organizational development processes & strategic planning.	Training, workshops & assessment	From 1st May 2013- 31st October 2013	60.000 Rs	
Midterm Review by ASK of the project: Community Managed Disaster Risk Reduction	This intervention was undertaken as a means of support and training for Jana Vikas for their operation and management processes. Via ASK Jana Vikas are shown where improvements can be made within their organization.	Assessments, reports, feedback	17-21 September 2013	€ 4839	
Support & visits by ASK	This intervention was undertaken so ASK can see first-hand how Jana Vikas is operating, and look at their administration in order to make reports and highlight areas that can be improved.	Assessments, feedback , meetings	17-21 September 2013	€ 3678	
From baseline report:	This intervention was	Facilitating	April 2013 – June	€ 6666	

IDE, one of Cordaid's partner supports Jana Vikas with the development of the turmeric value chain	undertaken as IDE is an expert in value chain and Jana Vikas project - turmeric value chain - was thought to greatly benefit from their expertise. Objective was to improve farming of turmeric	market linkages between farmers and traders/markets. Facilitate farmer meetings. Document learnings & other relevant processes for future reflection, replication and scalability.	2013
From baseline report: Training of staff 1. peace building and conflict resolution 2. mainstreaming HIV/Aids 3. Gender and Social Advocacy 4. Psycho-social trauma counselling 5. Public Interest Litigation 6. Human Rights 7. Rural Employment Guarantee Act 8. Lobby and Advocacy 9. Micro finance management.	These interventions were undertaken due to the situation in the area at the time. There were dangerous ethnic conflicts which caused many disruptions. Trainings, especially in peace building and conflict resolution were the only real possibilities at the time, which were very relevant and needed given the situation.	Trainings	From 1st May 2013- 31st October 2013 Unknown

4.2 Changes in capacity and reasons for change - evaluation question 1 and 4

Below you can find a description of the changes in each of the five core capabilities. This information is based on the analysis of the information per each of the indicators. This detailed information for each of the indicators describes the current situation, and how and why it has changed since the baseline. See also annex 3.

4.2.1 Changes in the five core capabilities

Capability to act and commit

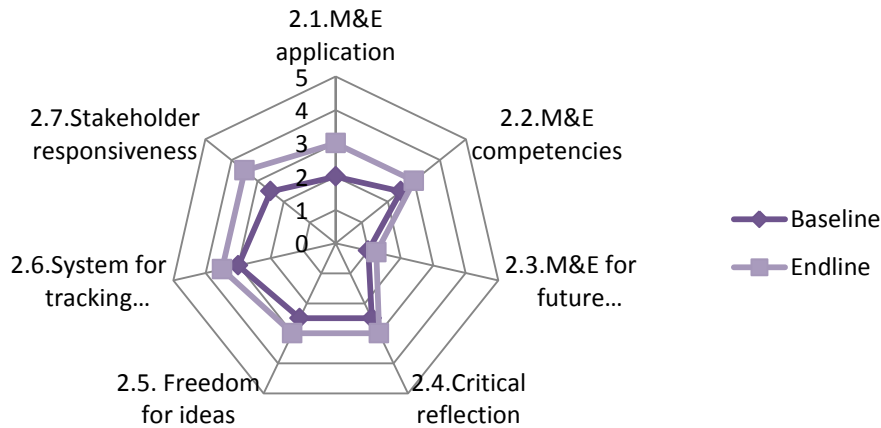

Since the baseline, the two-way communication between the director and the (field) staff and target groups has improved. The leader has become very innovative in strengthening his relationship with the staff and the target groups. The communication gap between the leadership and the staff members was closed as now there is increased collective involvement of staff in decision making and discussion. Since an external evaluation in 2013, the relationship between the board members and the leader has strengthened and in the strategic plan for 2014-2018 the responsibilities of the governing board and the director were clarified. Since the baseline there has been an organisational restructuring, to ensure the clarity for all staff members in terms of their roles and responsibilities that was lacking during the baseline. The hierarchical structure, while this was strong two years ago, now the level of hierarchy in the organization has blurred. There are now seven thematic committees in place that ensure that the policies of Jana Vikas are followed and implemented. The organisation now has a new strategic plan in place for 2014-2018, which was based on the situational and context analysis done by ASK to adapt it to the changing environment. There is still no systematic use of M&E findings in the strategic plan and also an explicit financing strategy linked to the strategic plan is lacking. Jana Vikas' daily operations are still in line with this new strategic plan. There are clear monthly plans for each staff member to implement their project activities, but they need to improve their planning capacities in terms of timely submission of monitoring reports to Cordaid. Jana Vikas has been able to keep staff turnover low over the last two years. Of the 92 staff members, 6 have left due to better opportunities and family matters. It has become easier to recruit new staff as the project area (Kandhamal) is now better connected and concerns about Naxalites are less. This together with a better recruitment process has led to the recruitment of two new skilled staff who joined the new resource mobilisation unit and the PME unit. Also while during the baseline there was no social security, this is now in place. This was made possible by MFS II funding from Cordaid. Over the last two years Jana Vikas has worked on several gaps in staff skills that were mentioned during the baseline. They have improved their skills in business process, communication on government schemes, results based managed and SHG management to name a few. There is, however, still a need for handholding support for a longer period on improving documentation. Over the last two years JV has implemented more trainings for its staff and most of the trainings are facilitated by ASK India, Hennery Martin Institute Hyderabad, SFDC, Trocaire, CSFHR. Trainings are felt to be held at more regular intervals, but training on the emerging issue of the Forest Rights Act is still required. These trainings are one of the motivational factors of JV's staff. Since the baseline the salaries have increased with 10 percent per year for Cordaid funded project staff and with 5 percent for other staff. Provisions have been made to continue paying staff when on health leave and for Employment Provident Fund and Life Insurance Policy. New committees were formed to deal with staff issues in a timely manner, such as the grievance shell, staff council and the sexual harassment committee. Regarding JV's funding situation, they have expanded their donor base, which existed of 6 donors during the baseline with new funders such as the National Foundation of India, New Delhi for the REHNUMA project, the Young Women Christian Association and the Indo-Global Social Service Society (IGSSS). Proposals to funders such as NABARD, KNH Germany, Restless Development International, Ministry of Minority affairs, are in the pipeline. While during the baseline there were no funding procedures and there was no discussions on exploring new funding, now in the new strategic plan funding procedures are included and staff discuss more openly about this topic. The establishment of a resource mobilisation department, improved capacity of staff to write proposals, improved networking and training on the FCRA have further helped Jana Vikas in streamlining its activities to explore new funding opportunities.

Score baseline: 3.1

Score endline: 3.8 (slight improvement)

Capability to adapt and self-renew

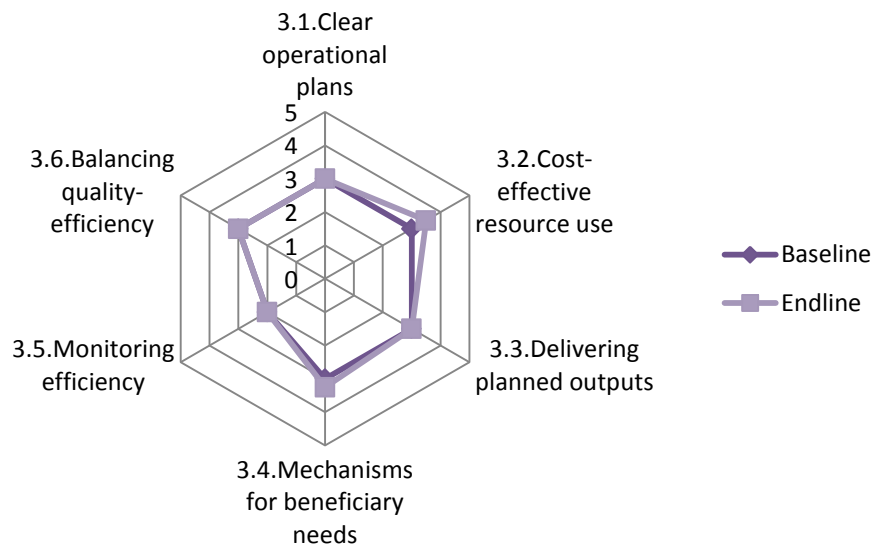

Jana Vikas has improved its M&E application. Their PME unit is now functional and meets quarterly to review the progress and discuss on strategic planning. Some efforts have been made to modify the MIS tool to link it to results based management (RBM) and to collect focused data from stakeholders. Jana Vikas still needs to improve its reports planning capacities in terms of timely submission of monitoring reports to Cordaid. Staff has received training in results based monitoring and skilled M&E staff has been hired. Field staff is trained in developing monitoring tools and documenting case studies. During the organisational assessment in July 2013, ASK noted that Jana Vikas needs a PME policy to help maintain the quality of the M&E process and involvement of community members which was negligible then. A start has been made during a workshop in February 2014, but this PME policy is still in the pipeline. Staff still needs to undergo training on M&E for better exercise in the field for data collection and analysis. Since the baseline, a separate PME unit has become operational to streamline the monitoring of the projects. In this way monitoring information is used operationally by the core team to guide suitable actions, but ASK found that the recommendations from the last two evaluations were not implemented and that staff members shared that they did not know about the findings. This implies that monitoring and evaluation is mainly focused on activities and outputs and not about outcomes and impact and used for strategic decision-making. While during the baseline there was a communication gap between the field staff and (middle) management, now by shifting its office from Bhubaneswar to the project area, the relationship with the field staff has strengthened. In 2013 the organisation critically reflected on its strategic plan and did a SWOT analysis before formulating its new strategic plan for 2014-2018. With the restructuring of the organisation seven thematic committees were formed who discuss problematic issues, grievances and needs address them within 21 days. While there continues to be some hierarchy in the organisation as per the organogram, there is continuous sharing and feedback giving among staff. In comparison with the baseline situation Jana Vikas now has more sources of information to track its operating environment. They no longer only get this information through local organisations, but also use their networks and government institutions. Jana Vikas is responsive to the opinions of their stakeholders. This manifests itself in different ways. During the baseline it was mentioned that Jana Vikas had to be very cautious as some groups may not respond very well to the organisation. Now they have become a separate entity and are no longer tied to the Catholic Church, which has made it easier to involve stakeholders from different religious and caste groups.

Score baseline: 2.3

Score endline: 2.9 (slight improvement)

Capability to deliver on development objectives

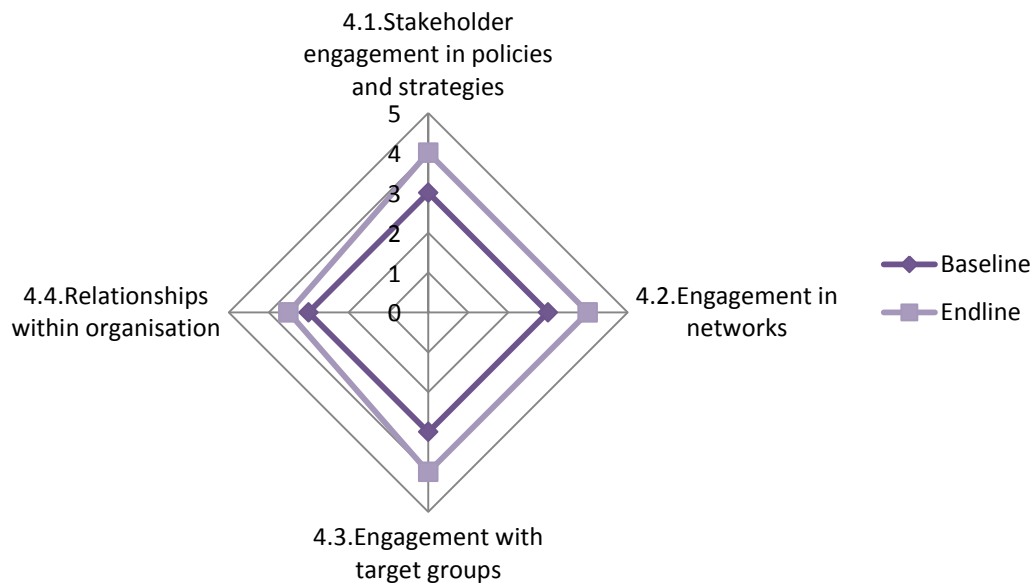

In Jana Vikas, all the programmes continue to have a detailed implementation plan that is made by the staff at the start of the project. Attempts are now made to monitoring the operations not only based on activities but based on results. The CFA finds that planning at Jana Vikas is still weak and the time plans are not always realistic. Jana Vikas has become more cost-effective in its resource use over the last two years because of reduction in travelling costs by moving the office to the project area, combining monitoring visits, giving joint trainings, making conscious use of water and electricity and recycling. Jana Vikas delivers most of its outputs because of its motivated staff, which was facilitated by active monitoring when they moved their office to the project area. Working in a volatile environment, their activities are often interrupted to carry out relief measures as was the case in 2013 with the Phailin cyclone. Jana Vikas continues to rely to a great extent on its field staff to provide the organisation with information related to beneficiary needs. A new initiative to find out whether services meet beneficiary needs is the complaint box in the pilot project on Safeguarding programme participant policy. Participants are asked to put forward their suggestions, appreciation or grievances application or letter in this box, everything is registered and the response is given to each person. There is still no system in place that links outputs to related inputs to monitor the organisation's efficiency. Jana Vikas continues to seek to balance quality with efficiency through collaboration between its motivated and the community, PRI members, government official and community block officers, even in adverse situations.

Score baseline: 2.8

Score endline: 3.0 (very slight improvement)

Capability to relate

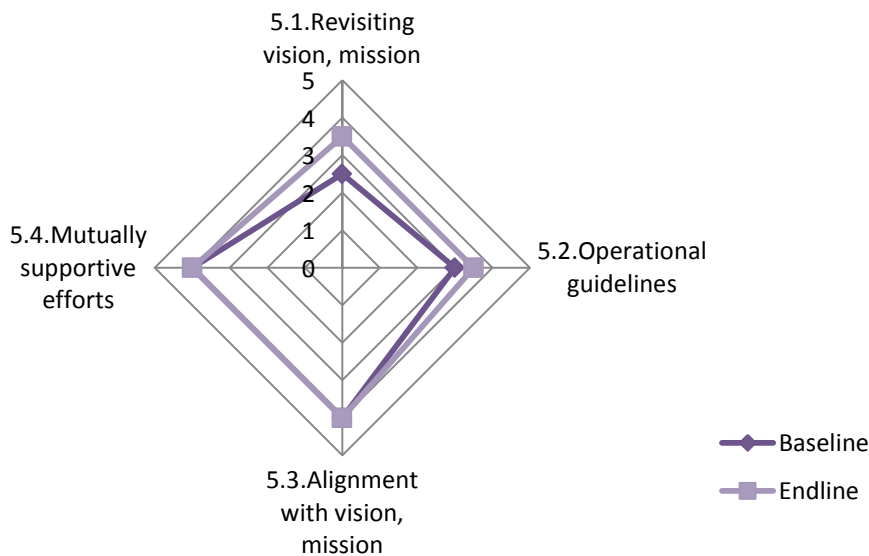

Jana Vikas now takes inputs from its partners, target groups, government organisations at local, district and state level, before preparing their new strategic plan (2014-2018) and has improved its collaboration with the government. They improved their proactive collaboration with the government through asking the input of local government officers for the strategic plan and by becoming involved in the REHNUMA project of Ministry of Minorities Affairs (MoMA). Jana Vikas has strengthened and expanded its network with many local level organisations but has also to partner up with national level organisation for advocacy initiatives. In the last two years, Jana Vikas has also strengthened its relationship with media by inviting them for various events, allowing them to cover all major activities undertaken by them. It is easier for JV to visit their target groups as there are no more religious threats due to involvement of community stakeholders of different religious groups in different platforms working for peace building and a mini vehicles were inaugurated by the state government in 2014 to connect the inaccessible areas to town. The interaction with the target group also improved because JV's office moved to the project area and Jana Vikas worked together with their target group to provide humanitarian emergency assistance after the cyclone Phailin. Over the last two years there has been an organisational restructuring and Jana Vikas' management has consciously formed different committees to oversee the administrative processes and implementation of policies of the organisation. While during the baseline there was a definite hierarchy amongst the staff, now JV has created space and scope for all levels of staff to interact without experiencing hierarchy, except for the hierarchy laid down in the organogram. With the better available facilities of internet and mobile communication the interaction between the staff became more frequent and this built their relationships.

Score baseline: 3.0

Score endline: 3.9 (improvement)

Capability to achieve coherence

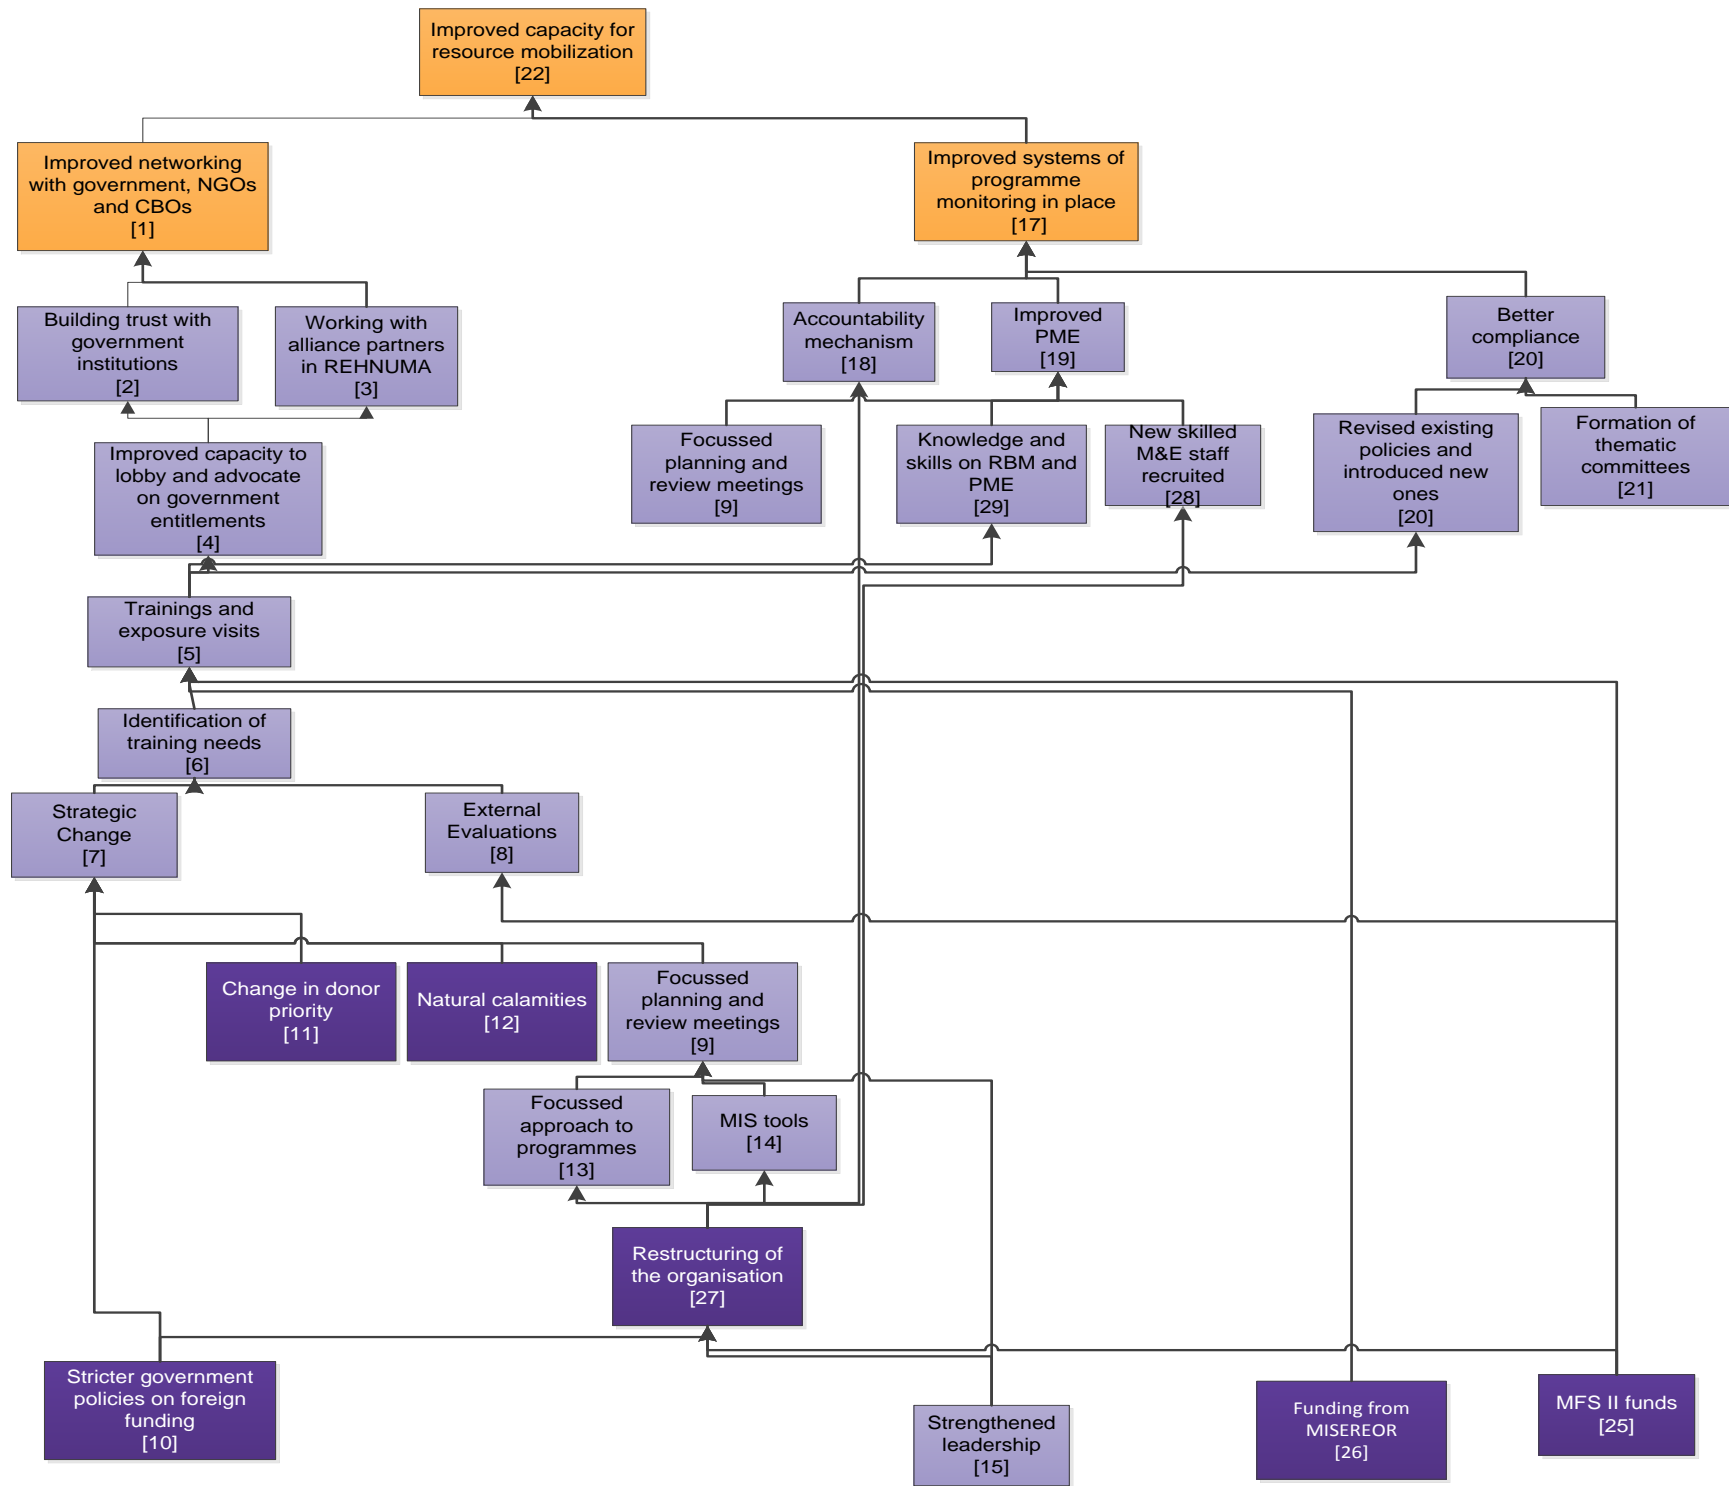

Jana Vikas now gives new staff orientation on the organisational vision, mission and strategy through an induction process using the local language. Revisiting the organizational vision and mission is done annually and its strategy is revisited half yearly. A new strategic plan has been development for 2014-18 in alignment with its vision and mission. In the strategic planning process which was carried out in August 2013, all staff was involved. Jana Vikas has had a workshop on policy development. In this process they revisited the HR, gender, finance and HIV/AIDS policy and created new policies on child protection, disability, environment and PME. All these policies are approved informally but the formal approval is still in process. Jana Vikas has improved upon the social security of its staff. Jana Vikas' strategies and project activities are still in line with the organisation's vision and mission. Jana Vikas' projects continue to be complementary: efforts in one project support those in another project. Jana Vikas' main approach is empowerment work but during emergencies (natural or manmade calamities) immediate support is required. Only in such cases, Jana Vikas will get involved in welfare or relief activities.

Score baseline: 3.4

Score endline: 3.8 (slight improvement)

4.2.2 General changes in the organisational capacity of the SPO

During the endline workshop at the SPO, a discussion was held around what were the main changes in organisational capacity since the baseline and why these changes have taken place. The discussion was visualised in a general causal map as can be seen below. The narrative for the general causal map is also described below. It gives a more general picture of what was seen as important changes in the organisation since the baseline, and how these changes have come about, and that tells the more general story about the organisational changes in the SPO. The evaluators considered it important to also note down the SPO's story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provide by the evaluation team. The detailed narrative can be found in Annex 4.

The evaluation team carried out an endline assessment at Jana Vikas (JV) from 21 to 22 August 2014. During this workshop, the team made a recap of key features of the organisation in the baseline in 2012 (such as vision, mission, strategies, clients, partnerships). This was the basis for discussing changes that had happened to the organisation since the baseline. According to staff present at the endline workshop Jana Vikas has improved its capacity to mobilize resources [22] in the last two years since the baseline. This was primarily due to the following key changes:

1. Improved networking with government, NGOs and CBOs [1]
2. Improved systems of programme monitoring in place [17].

During the endline workshop it was discussed what the reasons were for each of these organisational capacity changes. The two main organisational capacity changes are described in the light orange boxes. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the organisation are listed at the bottom in dark purple. The narrative describes per organisational capacity change, the contributing factors as described from the top down. The numbers in the visual correspond with the numbers in the narrative.

Improved its capacity to mobilize resources [22]

Over the last two years Jana Vikas has been actively working on different aspects to bridge the trust gap through peace building activities, livelihood promotion and improved capacity to mobilize resources [22]. They managed to get new funders such as the National Foundation of India, Young Women Christian Association, and Indo-Global Social Service Society (IGSSS). There are some more funders that have been approached and for which proposals are in the pipe line: NABARD, KNH Germany, Restless International and the Ministry of Minority affairs on Projects on minorities. The following projects of Jana Vikas are funded by the following new funders:

1. Improved networking with government, NGOs and CBOs [1]

It is evident from the mid-term review report of the Community Managed Disaster Risk Reduction project, that Jana Vikas has strengthened its network/linkages with government institutions at local, state and national level and also with other likeminded NGOs like PAG (Phulbani Action Group), DAVI (Dalit, Adivasi Vikas Initiative) and the alliance partner of REHNUMA⁵. Networking with government, NGOs and CBOs [1] improved because of:

- **Building trust with government institutions [2]:** In the post-riot period the trust relationship between Jana Vikas and the government institutions had been greatly affected in an adverse way. Over the period JV continuously made efforts to restore trust relationship with government institutions at local, state and national level. Jana Vikas actively worked for the victims irrespective of caste and religion through relief and rehabilitation activities in collaboration with government line departments and other civil society organisations. It caused harmony and integration among different ethnic groups in Kandhamal. This not only enhanced the visibility of the organisation but it helped to improve the relationship with government line departments. Most important in this was the existing perception that JV worked for one particular community alone. Sometimes relief works done by Jana Vikas in post natural disaster periods improve the popular perception and the government's perception of Jana Vikas.

- **Working together with alliance partners of REHNUMA [3]:** The Ministry of Minorities Affairs (MoMA) started a multi-sectorial development programme (MSDP) in 2014 called REHNUMA, a Minority Concentrated Districts (MCDs) project. This is a consortium of four NGOs: Jana Vikas, SFDC, NAWO and theCentre for the Sustainable Use of Natural and Social Resources - Civil Society Forum on Human Rights (CSNR-CSFHR). The National Foundation for India (NFI) in collaboration with the Institute for Development Education and Learning (IDEAL) as technical partners envisaged to pilot this project across MCDs and blocks in 10 states of India where Entitlement Centres are being set up. There are 13 partners across the country, who have come together to create awareness among the minorities and provide information about government schemes and entitlements for minorities. Under this umbrella the objective is to do research, map and list minorities, litigation and grievance redressal

⁵ The Ministry of Minorities Affairs (MoMA) started a multi-sectorial development programme (MSDP) in 2014 called REHNUMA (a Minority Concentrated Districts (MCDs) project).

services, capacity building of minorities, monitoring, documentation and recommendations, so that social justice is delivered to the minorities.

-

Improved systems of programme monitoring in place [17]

Over the last two years, Jana Vikas improved its systems of programme monitoring [17] due to an accountability mechanism that is now in place [18], improved PME [19] and better compliance [20].

- **Accountability mechanism [18]:** the restructuring of the organogram resulted in clarity of roles and responsibility of the staff which further streamlined the accountability mechanism. Since last year quarterly meetings are organised where all the program managers, coordinators, assistant director and director participate. The program managers of each project present the progress report of the project.

- **Improved PME [19]:** MIS formats and indicators are fine-tuned to have better data from the field. The data are then analysed by the PME team to further use it for program development, report and proposal writing. Each project monitors and evaluates its program independently and submits the report to the coordinators. Then the report is reviewed in the monthly meetings by program managers and coordinators and finally it is reviewed and discussed by the core team in every quarterly meeting. When gaps are identified the core team further develops plans to address it. Jana Vikas also improved from activity based monitoring to results based management (RBM) and proper documentation of the data. The organisation also is looking forward to develop software to maintain MIS to generate information. The organisational assessment by ASK India in July 2013 helped Jana Vikas to identify the gaps in the PME system. Based on this finding a strategic plan for 2014-18 was formulated which further strengthened the PME system. In the light of this strategic plan a full time personnel is appointed to work for a separate PME unit being established with the support from Cordaid. Jana Vikas also shifted its monitoring process from activity based monitoring to results based management (RBM).

- **Better compliance [20]:** Jana Vikas improved its compliance to its operational guidelines because of the revision of its operational policies and the formation of thematic committees.

Underlying factors:

- **Stricter government policies on foreign funding [10]:** the government of India perceives that some NGOs are engaged in stalling development activities in the country which negatively affects the GDP growth of the country. Therefore, stricter policies have been brought by successive governments to restrict foreign funding to the NGOs in India. This led Jana Vikas to make strategic changes so that it could profile itself as a secular organisation and to leverage more funds to be self-sustained. This has had an effect, through JV's strategic change and the identification of training needs on all the changes discussed above.

- **Change in donor priority [11]:** Internationally donors are revising their funding policies and shifting their priorities. Most of the donors have changed their priority and are now funding agriculture based programs. In the light of the changing donor priority and other contextual issues Jana Vikas has changed its strategic plan. In the strategic plan for 2014-2018 it has emphasised the livelihood programme which includes agriculture and other. This has had an effect, through JV's strategic change and the identification of training needs on all the changes discussed above.

- **Natural calamities [12]:** Since 2011 Orissa was shattered down twice with severe floods and once with the cyclone Phailin. This caused massive loss of property and human lives. The Kandhamal district is situated 3000 feet above the sea level, however due to heavy rain and wind (at a speed of around 200 kmph) caused huge destruction in this district both in terms of property and human lives. In the post Phailin period Jana Vikas actively participated in the relief and rehabilitation works. This resulted in improved trust relationships with government and also helped Jana Vikas to profile itself as a secular organisation. This also caused Jana Vikas to make a strategic change to focus on the livelihoods of the affected people. New funders could be approached for the relief and rehabilitation work. This has had an effect, through JV's strategic change and the identification of training needs on all the changes discussed above.

- **Strengthened leadership [15]:** In 2013 Jana Vikas got separated from the Catholic charity and became a separate entity. This was primarily done to profile Jana Vikas as a secular organisation in relation to the riot prone area and following the government's stricter policies towards NGOs [10] which affected restructuring of the organisation [27]. There has been a reshuffle in the board

members and the organisation got restructured. The director took initiative [15] in decentralizing the organisational structure by establishing separate departments and putting each department under a program manager. This has had an effect, through more focussed planning and review meetings and identification of training needs on all the changes discussed above.

- MFS II funds [25] and MISEREOR funds [26]: were used for the trainings that led to Improved capacity to lobby and advocate on government entitlements (underlying the improved networking), knowledge on how to improve policies for better compliance and knowledge on RBM for improved PME and accountability.

-

5 Discussion and conclusion

5.1 Methodological issues

In order to get detailed information on the capacity development of the staff, self-assessment forms were filled in by the management (Secretary), Programme staff (Programme manager, programme cum M&E officer, program officer, programme coordinator, senior facilitator, gender coordinator, assistant coordinator, marketing officer), HR/Admin staff (Assistant Director cum HR, Accountant) and field staff (four community organisers).

Jana Vikas depends mainly on key staff which performs multiple tasks. Their financial condition is also not so that it would allow them to have a separate team for M&E and programme coordination. Due to this multifaceted roles played by the same category of staff, the evaluators had to put Programme cum M&E officer under programme staff; and assistant director cum HR under HR/Administration. The agreed questionnaire was aimed at teasing out information from various levels of staff without putting them in any awkward situation. The modified and nuanced repetition of questions when translated to an audience not properly exposed to the English language, created a sense of repetitiveness. Evaluators tried to resolve this, by clarifying the responses by follow-up interviews after studying the responses.

In order to ensure a deeper insight, the programme staff was divided into two groups. Small groups ensured effective participation. At the same time it helped the evaluation team to assess any discrepancies in the reporting of the same level of staff.

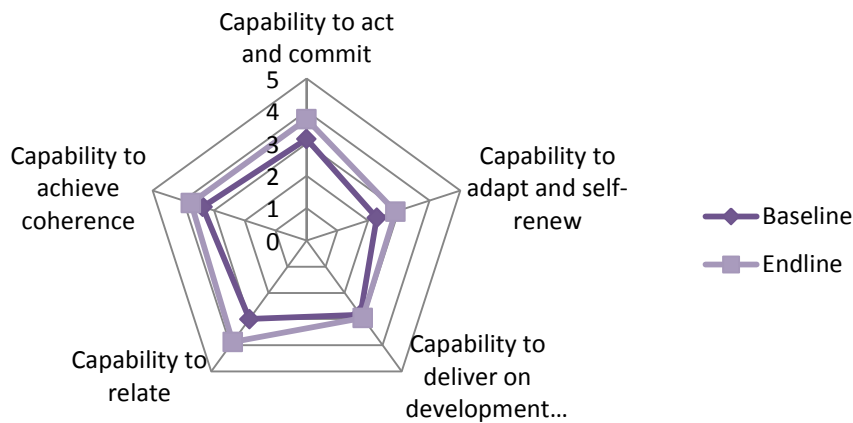

Jana Vikas was well versed with the 5C model, with the endline workshop being attended by the same staff as during the baseline except for the Programme manager, programme cum M&E officer, marketing officer, Assistant director cum HR and one community organiser. The management had discussed the baseline report and had sincerely tried to address those points to the best of their abilities. Therefore, staff faced no difficulty in identifying the key organisational capacity changes since the baseline and developing the general causal map. Jana Vikas filled in the capacity development sheet for the interventions under MFS II supported funding.

Jana Vikas does not have an Organisation Development Consultant. In their baseline assessment, it was pointed out that Jana Vikas should reduce its overdependence on an external Organisation Development Consultant. Since the baseline Jana Vikas has hired trained M&E and strategic organisational development personnel. They formed the middle management and core advisory team to the Director in the arena of documentation, M&E, reporting formats and programme coordination. This is a positive response from the SPO regarding its organisational strengthening.

5.2 Changes in organisational capacity development

This section aims to provide an answer to the first and fourth evaluation questions:

1. *What are the changes in partner organisations' capacity during the 2012-2014 period?*
4. *What factors explain the findings drawn from the questions above?*

Improvements took place in all of the five core capabilities. Below the changes in each of the capabilities are further explained, by referring to the specific indicators that changed.

Over the last two years many improvements took place in the indicators under the capability to act and commit. There is now more two way communication between the director and the field staff. The director also improved his relationships with the board and the target groups. There is less hierarchy in the organisation and the leader has created a sharing platform. In terms of strategic guidance, the director improved as he involved all staff in the drafting of a new strategic plan and is looking into resource mobilisation. The staff turnover remained low and staff were more eager to stay because the office was moved to the project area (less traveling) and accommodation improved. The organisational restructuring led to more clarity for staff on their roles and responsibility. Two new skilled staff were hired and some gaps in skills that were mentioned during the baseline are now addressed, e.g. in value chains and business plans. There now is an operational HR policy that ensures that trainings for staff are more regular. The salaries are increased by 10 percent every year in the Cordaid funded project and by 5 percent for the staff involved in other projects. Also provisions have been made for an Employment Provident Fund and Life Insurance policy for staff. New funders have been attracted, including the National Foundation of India, Young Women Christian Association and IGSSS. JV moved from having no funding procedures whatsoever to having a resource mobilisation department and PME unit that together track funding opportunities. Proposals are now written and there are open discussions about funding opportunities.

In the capability to adapt and self-renew JV improved in all indicators. They now have an operational PME unit and a core committee that reviews progress. This unit is funded by Cordaid under MFS II. The PME policy has been developed (but has to be approved by the board). Staff skills increased as they had training in M&E and has started working with results based monitoring instead of activity based monitoring. There was a very slight improvement in using M&E strategically as monitoring findings are now used for operations. Collected data is used for report and proposal writing. In 2013 there was an important moment for critical reflection when staff did a SWOT analysis for their organisation and drafted the strategic plan. The change in the organogram allows for more democratic decision making and more freedom for ideas of staff. The gap between the management and field staff has been closed, because the director decided to spend every other week in the field. On top of that the office was moved to the field which allowed JV to track their operating environment more directly. They also now have more sources of information about their operating environment, not just local sources but also from networks and the government on higher levels. The responsiveness to different stakeholders improved because the image of JV improved when they separated from the Catholic Charities.

In terms of the capability to deliver on development objectives, there has been a slight improvement in the cost-effectiveness of JV. They have reduced travel costs by moving the office to the field and are cutting costs by letting staff multi-task. There has been a very slight improvement in having mechanisms to ensure that beneficiary needs are being met. They now have a pilot programme with placing a complaint box in the project areas where stakeholders can enter their feedback and grievances. This is then taken up by project staff.

In the capability to relate, JV improved in all the indicators. They are now more open to inputs from partners, target groups and government organisations as they invited them to share their views on the new strategic plan (2014-2018). Networks and linkages for resource mobilisation improved. They have new partners and are working more with government institutions and the media. Relations with the target group have also improved because there are no longer religious threats in the area and a bus line was opened. This makes it easier to visit the target groups. Moving the office to the field has also helped in this. JV work in rehabilitation after the cyclone in October 2013 has also made their trust relationship with the target group better. Finally, the relations within JV increased slightly because of organisational restructuring. There is now less hierarchy and the working environment is more friendly.

Finally, JV slightly improved in its capability to achieve coherence. JV improved in terms of revisiting mission, vision and strategies because in 2013 they revised their strategic plan. New staff are now made familiar with the vision and mission of the organisations and there are regular discussions on vision and mission (annually) and strategies (biannually). The HR, Finance and Gender policies now are approved by the board. After a policy development workshop by ASK, new policies on PME, Child Protection, environment, Disability and Sexual Harassment are in the making.

During the endline workshop some key organisational capacity changes were brought up by JV's staff, these have been captured in the general causal map in 4.2.2: improved networking with government, NGOs and CBOs; and improved systems of programme monitoring in place. It is expected that both these areas will contribute to improve its capacity for resource mobilisation. The evaluators considered it important to also note down the SPO's story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provide by the evaluation team.

Improved networking with government, NGOs and CBOs was because of building of a trust relationship with the government after the cyclone in October 2013, and because of JV's involvement in the REHNUMA alliance with other NGO and CBO partners. Both of these developments can be attributed to JV's improved capacity to lobby and advocate on government entitlements which was a result of trainings and exposure visits. These include: training on Lobby Right to Information Act (funded by MFS II), training in Government Entitlements (funded by MFS II), Internal exposure on People Led Development (PLD) (funded by MISEREOR). Staff attended these trainings after an identification of gaps and training needs which was done after JV's strategic change and the input from external evaluations on this issue. The strategic change was a move from being an implementing organisation to becoming a resource centre. This change was mostly due to natural calamities (focus on livelihood affected people) and focussed planning and review meetings. Planning and review meetings became more focussed because of a focussed approach towards programmes, strengthened MIS (because of organisational restructuring) and strengthened leadership. The systems of programme monitoring in place improved because of an accountability mechanism that is now in place, improved PME and better compliance. The accountability mechanism was a result of the restructuring of the organisation: it is now much more clear who reports to who. PME improved because of focussed review and planning meetings, knowledge on RBM and PME because of trainings and recruitment of new skilled M&E staff. Trainings were all funded by MFS II: training on RBM, training on PME, training on strategic planning and on SHG management. JV improved its compliance to its operational guidelines because of the revision of operational policies and the formation of thematic committees to see to the implementation of policies. The policies were revised during a Policy development workshop that was funded by MFS II. All in all, MFS II funded capacity development interventions, according to JV, had an effect on the organisation's capacity to lobby and advocate on government entitlements, knowledge on RBM and PME; and revision of policies.

Appendix 1 Methodological approach & reflection

Introduction

This appendix describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around four key evaluation questions:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

Note: the methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report. At the end of this appendix a brief methodological reflection is provided.

Changes in partner organisation's capacity – evaluation question 1

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?**

This question was mainly addressed by reviewing changes in 5c indicators, but additionally a 'general causal map' based on the SPO perspective on key organisational capacity changes since the baseline has been developed. Each of these is further explained below. The development of the general causal map is integrated in the steps for the endline workshop, as mentioned below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012.⁶ Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

1. **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
2. **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
3. **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
4. **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
5. **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

⁶ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map – in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Below each of these steps is further explained.

*Step 1. Provide the **description of indicators** in the relevant formats – CDI team*

- These formats were to be used when collecting data from SPO staff, CFA, partners, and consultants. For each of these respondents different formats have been developed, based on the list of 5C indicators, similar to the procedure that was used during the baseline assessment. The CDI team needed to add the 2012 baseline description of each indicator. The idea was that each respondent would be requested to review each description per indicator, and indicate whether the current situation is different from the baseline situation, how this situation has changed, and what the reasons for the changes in indicators are. At the end of each format, a more general question is added that addresses how the organisation has changed its capacity since the baseline, and what possible reasons for change exist. Please see below the questions asked for each indicator as well as the more general questions at the end of the list of indicators.

General questions about key changes in the capacity of the SPO

What do you consider to be the key changes in terms of how the organisation/ SPO has developed its capacity since the baseline (2012)?

What do you consider to be the main explanatory reasons (interventions, actors or factors) for these changes?

List of questions to be asked for each of the 5C indicators (The entry point is the the description of each indicator as in the 2012 baseline report):

1. *How has the situation of this indicator changed compared to the situation during the baseline in 2012? Please tick one of the following scores:*
 - -2 = Considerable deterioration
 - -1 = A slight deterioration
 - 0 = No change occurred, the situation is the same as in 2012
 - +1 = Slight improvement
 - +2 = Considerable improvement

2. *Please describe what exactly has changed since the baseline in 2012*
3. *What interventions, actors and other factors explain this change compared to the baseline situation in 2012? Please tick and describe what interventions, actors or factors influenced this indicator, and how. You can tick and describe more than one choice.*
 - Intervention, actor or factor at the level of or by **SPO**:
 - Intervention, actor or factor at the level of or by the **Dutch CFA (MFS II funding)**:
 - Intervention, actor or factor at the level of or by the **other funders**:
 - **Other** interventions, actors or factors:
 - Don't know.

Step 2. Review the descriptions per indicator – in-country team & CDI team

Before the in-country team and the CDI team started collecting data in the field, it was important that they reviewed the description for each indicator as described in the baseline reports, and also added to the endline formats for review by respondents. These descriptions are based on document review, observation, interviews with SPO staff, CFA staff and external respondents during the baseline. It was important to explain this to respondents before they filled in the formats.

Step 3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)

The CDI team was responsible for collecting data from the CFA:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet – CFA perspective.

The in-country team was responsible for collecting data from the SPO and from external respondents (except CFA). The following formats were sent before the fieldwork started:

- 5C Endline support to capacity sheet – SPO perspective.
- 5C Endline interview guides for externals: partners; OD consultants.

Step 4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team

The CDI team, in collaboration with the in-country team, collected the following documents from SPOs and CFAs:

- Project documents: project proposal, budget, contract (Note that for some SPOs there is a contract for the full MFS II period 2011-2015; for others there is a yearly or 2-yearly contract. All new contracts since the baseline in 2012 will need to be collected);
- Technical and financial progress reports since the baseline in 2012;.
- Mid-term evaluation reports;
- End of project-evaluation reports (by the SPO itself or by external evaluators);
- Contract intake forms (assessments of the SPO by the CFA) or organisational assessment scans made by the CFA that cover the 2011-2014 period;
- Consultant reports on specific inputs provided to the SPO in terms of organisational capacity development;
- Training reports (for the SPO; for alliance partners, including the SPO);
- Organisational scans/ assessments, carried out by the CFA or by the Alliance Assessments;
- Monitoring protocol reports, especially for the 5C study carried out by the MFS II Alliances;
- Annual progress reports of the CFA and of the Alliance in relation to capacity development of the SPOs in the particular country;
- Specific reports that are related to capacity development of SPOs in a particular country.

The following documents (since the baseline in 2012) were requested from SPO:

- Annual progress reports;
- Annual financial reports and audit reports;
- Organisational structure vision and mission since the baseline in 2012;

- Strategic plans;
- Business plans;
- Project/ programme planning documents;
- Annual work plan and budgets;
- Operational manuals;
- Organisational and policy documents: finance, human resource development, etc.;
- Monitoring and evaluation strategy and implementation plans;
- Evaluation reports;
- Staff training reports;
- Organisational capacity reports from development consultants.

The CDI team will coded these documents in NVivo (qualitative data analysis software program) against the 5C indicators.

Step 5. Prepare and organise the field visit to the SPO – in-country team

Meanwhile the in-country team prepared and organised the logistics for the field visit to the SPO:

- **General endline workshop** consisted about one day for the self-assessments (about ½ to ¾ of the day) and brainstorm (about 1 to 2 hours) on key organisational capacity changes since the baseline and underlying interventions, factors and actors ('general causal map'), see also explanation below. This was done with the five categories of key staff: managers; project/ programme staff; monitoring and evaluation staff; admin & HRM staff; field staff. Note: for SPOs involved in process tracing an additional 1 to 1½ day workshop (managers; program/project staff; monitoring and evaluation staff) was necessary. See also step 7;
- **Interviews with SPO staff** (roughly one day);
- **Interviews with external respondents** such as partners and organisational development consultants depending on their proximity to the SPO. These interviews could be scheduled after the endline workshop and interviews with SPO staff.

General causal map

During the 5C endline process, a 'general causal map' has been developed, based on key organisational capacity changes and underlying causes for these changes, as perceived by the SPO. The general causal map describes cause-effect relationships, and is described both as a visual as well as a narrative.

As much as possible the same people that were involved in the baseline were also involved in the endline workshop and interviews.

Step 6. Interview the CFA – CDI team

The CDI team was responsible for sending the sheets/ formats to the CFA and for doing a follow-up interview on the basis of the information provided so as to clarify or deepen the information provided. This relates to:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet - CFA perspective.

Step 7. Run the endline workshop with the SPO – in-country team

This included running the endline workshop, including facilitation of the development of the general causal map, self-assessments, interviews and observations. Particularly for those SPOs that were selected for process tracing all the relevant information needed to be analysed prior to the field visit, so as to develop an initial causal map. Please see Step 6 and also the next section on process tracing (evaluation question two).

An endline workshop with the SPO was intended to:

- Explain the purpose of the fieldwork;
- Carry out in the self-assessments by SPO staff subgroups (unless these have already been filled prior to the field visits) - this may take some 3 hours.
- Facilitate a brainstorm on key organisational capacity changes since the baseline in 2012 and underlying interventions, factors and actors.

Purpose of the fieldwork: to collect data that help to provide information on what changes took place in terms of organisational capacity development of the SPO as well as reasons for these changes. The baseline that was carried out in 2012 was to be used as a point of reference.

Brainstorm on key organisational capacity changes and influencing factors: a brainstorm was facilitated on key organisational capacity changes since the baseline in 2012. In order to kick start the discussion, staff were reminded of the key findings related to the historical time line carried out in the baseline (vision, mission, strategies, funding, staff). This was then used to generate a discussion on key changes that happened in the organisation since the baseline (on cards). Then cards were selected that were related to organisational capacity changes, and organised. Then a 'general causal map' was developed, based on these key organisational capacity changes and underlying reasons for change as experienced by the SPO staff. This was documented as a visual and narrative. This general causal map was to get the story of the SPO on what they perceived as key organisational capacity changes in the organisation since the baseline, in addition to the specific details provided per indicator.

Self-assessments: respondents worked in the respective staff function groups: management; programme/ project staff; monitoring and evaluation staff; admin and HRM staff; field staff. Staff were assisted where necessary so that they could really understand what it was they were being asked to do as well as what the descriptions under each indicator meant.

Note: for those SPOs selected for process tracing an additional endline workshop was held to facilitate the development of detailed causal maps for each of the identified organisational change/ outcome areas that fall under the capability to act and commit, and under the capability to adapt and self-renew, and that are likely related to capacity development interventions by the CFA. See also the next section on process tracing (evaluation question two). It was up to the in-country team whether this workshop was held straight after the initial endline workshop or after the workshop and the follow-up interviews. It could also be held as a separate workshop at another time.

Step 8. Interview SPO staff – in-country team

After the endline workshop (developing the general causal map and carrying out self-assessments in subgroups), interviews were held with SPO staff (subgroups) to follow up on the information that was provided in the self-assessment sheets, and to interview staff that had not yet provided any information.

Step 9. Fill-in observation sheets – in-country team

During the visit at the SPO, the in-country team had to fill in two sheets based on their observation:

- 5C Endline observation sheet;
- 5C Endline observable indicators.

Step 10. Interview externals – in-country team & CDI team

The in-country team also needed to interview the partners of the SPO as well as organisational capacity development consultants that have provided support to the SPO. The CDI team interviewed the CFA.

Step 11. Upload and auto-code all the formats collected by in-country team and CDI team – CDI team

The CDI team was responsible for uploading and auto-coding (in Nvivo) of the documents that were collected by the in-country team and by the CDI team.

*Step 12. Provide the **overview of information** per 5C indicator to in-country team – CDI team*

After the analysis in NVivo, the CDI team provided a copy of all the information generated per indicator to the in-country team for initial analysis.

*Step 13. **Analyse the data and develop a draft description** of the findings per indicator and for the general questions – in-country team*

The in-country team provided a draft description of the findings per indicator, based on the information generated per indicator. The information generated under the general questions were linked to the general causal map or detailed process tracing related causal map.

*Step 14. **Analyse the data and finalize the description** of the findings per indicator, per capability and general – CDI team*

The CDI team was responsible for checking the analysis by the in-country team with the Nvivo generated data and to make suggestions for improvement and ask questions for clarification to which the in-country team responded. The CDI team then finalised the analysis and provided final descriptions and scores per indicator and also summarize these per capability and calculated the summary capability scores based on the average of all indicators by capability.

*Step 15. **Analyse the information** in the general causal map –in-country team & CDI team*

The general causal map based on key organisational capacity changes as perceived by the SPO staff present at the workshop, was further detailed by in-country team and CDI team, and based on the notes made during the workshop and where necessary additional follow up with the SPO. The visual and narrative was finalized after feedback by the SPO. During analysis of the general causal map relationships with MFS II support for capacity development and other factors and actors were identified. All the information has been reviewed by the SPO and CFA.

Attributing changes in partner organisation's capacity – evaluation question 2

This section describes the data collection and analysis methodology for answering the second evaluation question: **To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?**

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process. The box below provides some background information on process tracing.

Background information on process tracing

The essence of process tracing research is that scholars want to go beyond merely identifying correlations between independent variables (Xs) and outcomes (Ys). Process tracing in social science is commonly defined by its addition to trace causal mechanisms (Bennett, 2008a, 2008b; Checkle, 2008; George & Bennett, 2005). A causal mechanism can be defined as "a complex system which produces an outcome by the interaction of a number of parts" (Glennan, 1996, p. 52). Process tracing involves "attempts to identify the intervening causal process – the causal chain and causal mechanism – between an independent variable (or variables) and the outcome of the dependent variable" (George & Bennett, 2005, pp. 206-207).

Process tracing can be differentiated into three variants within social science: theory testing, theory building, and explaining outcome process tracing (Beach & Pedersen, 2013).

Theory testing process tracing uses a theory from the existing literature and then tests whether evidence shows that each part of hypothesised causal mechanism is present in a given case, enabling within case inferences about whether the mechanism functioned as expected in the case and whether the mechanism as a whole was present. No claims can be made however, about whether the mechanism was the only cause of the outcome.

Theory building process tracing seeks to build generalizable theoretical explanations from empirical evidence, inferring that a more general causal mechanism exists from the fact of a particular case.

Finally, explaining outcome process tracing attempts to craft a minimally sufficient explanation of a puzzling outcome in a specific historical case. Here the aim is not to build or test more general theories but to craft a (minimally) sufficient explanation of the outcome of the case where the ambitions are more case centric than theory oriented.

Explaining outcome process tracing is the most suitable type of process tracing for analysing the causal mechanisms for selected key organisational capacity changes of the SPOs. This type of process tracing can be thought of as a single outcome study defined as seeking the causes of the specific outcome in a single case (Gerring, 2006; in: Beach & Pedersen, 2013). Here the ambition is to craft a minimally sufficient explanation of a particular outcome, with sufficiency defined as an explanation that accounts for all of the important aspects of an outcome with no redundant parts being present (Mackie, 1965).

Explaining outcome process tracing is an iterative research strategy that aims to trace the complex conglomerate of systematic and case specific causal mechanisms that produced the outcome in question. The explanation cannot be detached from the particular case. Explaining outcome process tracing refers to case studies whose primary ambition is to explain particular historical outcomes, although the findings of the case can also speak to other potential cases of the phenomenon. Explaining outcome process tracing is an iterative research process in which 'theories' are tested to see whether they can provide a minimally sufficient explanation of the outcome. Minimal sufficiency is defined as an explanation that accounts for an outcome, with no redundant parts. In most explaining outcome studies, existing theorisation cannot provide a sufficient explanation, resulting in a second stage in which existing theories are re-conceptualised in light of the evidence gathered in the preceding empirical analysis. The conceptualisation phase in explaining outcome process tracing is therefore an iterative research process, with initial mechanisms re-conceptualised and tested until the result is a theorised mechanism that provides a minimally sufficient explanation of the particular outcome.

Below a description is provided of how SPOs are selected for process tracing, and a description is provided on how this process tracing is to be carried out. Note that this description of process tracing provides not only information on the extent to which the changes in organisational development can be attributed to MFS II (evaluation question 2), but also provides information on other contributing factors and actors (evaluation question 4). Furthermore, it must be noted that the evaluation team has developed an adapted form of 'explaining outcome process tracing', since the data collection and analysis was an iterative process of research so as to establish the most realistic explanation for a particular outcome/ organisational capacity change. Below selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

ETHIOPIA

For Ethiopia the capabilities that are mostly targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 1

The extent to which the Dutch NGO explicitly targets the following capabilities – Ethiopia

Capability to:	AMREF	CARE	ECFA	FSCE	HOA- REC	HUND EE	NVEA	OSRA	TTCA
Act and commit	5	4	5	5	5	3	4	4	3
Deliver on development objectives	2	1	1	1	2	1	1	2	1
Adapt and self-renew	4	2	3	4	2	5	3	3	3
Relate	3	1	2	2	3	2	1	3	1
Achieve coherence	2	2	1	1	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Ethiopia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: AMREF, ECFA, FSCE, HUNDEE. In fact, six SPOs would be suitable for process tracing. We just selected the first one per CFA following the criteria of not including more than one SPO per CFA for process tracing

Table 2

SPOs selected for process tracing – Ethiopia

Ethiopia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
AMREF	Dec 2015	Yes	Yes	Yes	Yes	AMREF NL	Yes
CARE	Dec 31, 2015	Partly	Yes	Yes	Yes – slightly	CARE Netherlands	No - not fully matching
ECFA	Jan 2015	Yes	Yes	Yes	Yes	Child Helpline International	Yes
FSCE	Dec 2015	Yes	Yes	Yes	Yes	Stichting Kinderpostzegels Netherlands (SKN); Note: no info from Defence for Children – ECPAT Netherlands	Yes
HOA-REC	Sustainable Energy project (ICCO Alliance): 2014 Innovative WASH (WASH Alliance): Dec 2015	Yes	Yes	Yes	Yes - slightly	ICCO	No - not fully matching
HUNDEE	Dec 2014	Yes	Yes	Yes	Yes	ICCO & IICD	Yes
NVEA	Dec 2015 (both)	Yes	Yes	Yes	Yes	Edukans Foundation (under two consortia); Stichting Kinderpostzegels Netherlands (SKN)	Suitable but SKN already involved for process tracing FSCE
OSRA	C4C Alliance project (farmers marketing): December 2014 ICCO Alliance project (zero grazing): 2014 (2 nd phase)	Yes	Yes	Yes	Yes	ICCO & IICD	Suitable but ICCO & IICD already involved for process tracing - HUNDEE
TTCA	June 2015	Partly	Yes	No	Yes	Edukans Foundation	No - not fully matching

INDIA

For India the capability that is mostly targeted by CFAs is the capability to act and commit. The next one in line is the capability to adapt and self-renew. See also the table below in which a higher score means that the specific capability is more intensively targeted.

Table 3

The extent to which the Dutch NGO explicitly targets the following capabilities – India⁷

Capability to:	BVHA	COUNT	DRISTI	FFID	Jana Vikas	Samar thak Samiti	SMILE	SDS	VTRC
Act and commit	5	3	4	4	4	4	4	3	5
Deliver on development objectives	1	5	1	1	1	1	1	2	1
Adapt and self-renew	2	2	1	3	1	1	4	1	4
Relate	3	1	1	1	1	1	2	1	2
Achieve coherence	1	1	1	4	1	1	1	1	2

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, India.

Below you can see a table describing when the contract with the SPO is to be ended and whether SPO and the CFA both expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BVHA, COUNT, FFID, SMILE and VTRC. Except for SMILE (capability to act and commit only), for the other SPOs the focus for process tracing can be on the capability to act and commit and on the capability to adapt and self-renew.

Table 4

SPOs selected for process tracing – India

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BVHA	2014	Yes	Yes	Yes	Yes	Simavi	Yes; both capabilities
COUNT	2015	Yes	Yes	Yes	Yes	Woorden Daad	Yes; both capabilities
DRISTI	31-03-2012	Yes	Yes	No	no	Hivos	No - closed in 2012
FFID	30-09-2014	Yes	Yes	Yes	Yes	ICCO	Yes

⁷ RGVN, NEDSF and Women's Rights Forum (WRF) could not be reached timely during the baseline due to security reasons. WRF could not be reached at all. Therefore these SPOs are not included in Table 1.

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew –by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Jana Vikas	2013	Yes	Yes	Yes	No	Cordaid	No - contract is and the by now; not fully matching focus
NEDSF							No – delayed baseline
RGVN							No - delayed baseline
Samarthak Samiti (SDS)	2013 possibly longer	Yes	Yes	Yes	No	Hivos	No - not certain of end date and not fully matching focus
Shivi Development Society (SDS)	Dec 2013 intention 2014	Yes	Yes	Yes	No	Cordaid	No - not fully matching focus
Smile	2015	Yes	Yes	Yes	Yes	Wilde Ganzen	Yes; first capability only
VTRC	2015	Yes	Yes	Yes	Yes	Stichting Red een Kind	Yes; both capabilities

INDONESIA

For Indonesia the capabilities that are most frequently targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 5

The extent to which the Dutch NGO explicitly targets the following capabilities – Indonesia

Capability to:	ASB	Daya ikologi	ECPAT	GSS	Lem bage Kita	Pt. PPMA	Rifka Annisa	WIIP	Yad upa	Yayasan Kelola	YPI	YRBI
Act and commit	4	4	4	5	4	4	5	3	3	2	5	4
Deliver on development objectives	1	1	1	2	2	1	2	1	1	1	1	1
Adapt and self-renew	3	1	2	4	2	3	4	4	1	1	4	3
Relate	1	1	2	3	3	2	1	2	2	2	3	2
Achieve coherence	1	1	1	2	1	1	2	2	1	1	2	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Indonesia.

The table below describes when the contract with the SPO is to be ended and whether both SPO and the CFA expect to focus on these two selected capabilities (MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: ASB, ECPAT, Pt.PPMA, YPI, YRBI.

Table 6

SPOs selected for process tracing – Indonesia

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
ASB	February 2012; extension Feb,1, 2013 – June,30, 2016	Yes	Yes	Yes	Yes	Hivos	Yes
Dayakologi	2013; no extension	Yes	Yes	Yes	No	Cordaid	No: contract ended early and not matching enough
ECPAT	August 2013; Extension Dec 2014	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	Yes
GSS	31 December 2012; no extension	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	No: contract ended early
Lembaga Kita	31 December 2012; no extension	Yes	Yes	No	Yes	Free Press Unlimited - Mensen met een Missie	No - contract ended early
Pt.PPMA	May 2015	Yes	Yes	No	Yes	IUCN	Yes, capability to act and commit only
Rifka Annisa	Dec, 31 2015	No	Yes	No	Yes	Rutgers WPF	No - no match between expectations CFA and SPO
WIIP	Dec 2015	Yes	Not MFS II	Yes	Not MFS II	Red Cross	No - Capacity development interventions are not MFS II financed. Only some overhead is MFS II

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Yayasan Kelola	Dec 30, 2013; extension of contract being processed for two years (2014-2015)	Yes	Not really	Yes	Not really	Hivos	No - no specific capacity development interventions planned by Hivos
YPI	Dec 31, 2015	Yes	Yes	Yes	Yes	Rutgers WPF	Yes
YRBI	Oct, 30, 2013; YRBI end of contract from 31st Oct 2013 to 31st Dec 2013. Contract extension proposal is being proposed to MFS II, no decision yet.	Yes	Yes	Yes	Yes	ICCO	Yes
Yadupa	Under negotiation during baseline; new contract 2013 until now	Yes	Nothing committed	Yes	Nothing committed	IUCN	No, since nothing was committed by CFA

LIBERIA

For Liberia the situation is arbitrary which capabilities are targeted most CFA's. Whilst the capability to act and commit is targeted more often than the other capabilities, this is only so for two of the SPOs. The capability to adapt and self-renew and the capability to relate are almost equally targeted for the five SPOs, be it not intensively. Since the capability to act and commit and the capability to adapt and self-renew are the most targeted capabilities in Ethiopia, India and Indonesia, we choose to focus on these two capabilities for Liberia as well. This would help the synthesis team in the further analysis of these capabilities related to process tracing. See also the table below.

Table 7

The extent to which the Dutch NGO explicitly targets the following capabilities – Liberia

Capability to:	BSC	DEN-L	NAWOCOL	REFOUND	RHRAP
Act and commit	5	1	1	1	3
Deliver on development objectives	3	1	1	1	1
Adapt and self-renew	2	2	2	2	2
Relate	1	2	2	2	2
Achieve coherence	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Liberia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Also, for two of the five SPOs capability to act and commit is targeted more intensively compared to the other capabilities. Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BSC and RHRAP.

Table 8

SPOs selected for process tracing – Liberia

Liberia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BSC	Dec 31, 2015	Yes	Yes	Yes	Yes	SPARK	Yes
DEN-L	2014	No	No	Unknown	A little	ICCO	No – not matching enough
NAWOCOL	2014	Yes	No	No	A little	ICCO	No – not matching enough
REFOUND	At least until 2013 (2015?)	Yes	No	Yes	A little	ICCO	No – not matching enough
RHRAP	At least until 2013 (2014?)	Yes	Yes	Yes	Yes	ICCO	Yes

Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ' general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

Some definitions of the terminology used for this MFS II 5c evaluation

Based upon the different interpretations and connotations the use of the term causal mechanism we use the following terminology for the remainder of this paper:

A **detailed causal map (or model of change)** = the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change.

A **causal mechanism** = is the combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome (Beach and Pedersen, 2013, p. 176).

Part or cause = one actor with its attributes carrying out activities/ producing outputs that lead to change in other parts. The final part or cause is the change/ outcome.

Attributes of the actor = specificities of the actor that increase his chance to introduce change or not such as its position in its institutional environment.

*Step 1. Identify the **planned MFS II supported capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

Chapter 4.1 and 4.2 in the baseline report were reviewed. Capacity development interventions as planned by the CFA for the capability to act and commit and for the capability to adapt and self-renew were described and details inserted in the summary format. This provided an overview of the capacity development activities that were originally planned by the CFA for these two capabilities and assisted in focusing on relevant outcomes that are possibly related to the planned interventions.

*Step 2. Identify the **implemented capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

The input from the CFA was reviewed in terms of what capacity development interventions have taken place in the MFS II period. This information was be found in the 'Support to capacity development sheet - endline - CFA perspective' for the SPO, based on details provided by the CFA and further discussed during an interview by the CDI team.

The CFA was asked to describe all the MFS II supported capacity development interventions of the SPO that took place during the period 2011 up to now. The CDI team reviewed this information, not only the interventions but also the observed changes as well as the expected long-term changes, and

then linked these interventions to relevant outcomes in one of the capabilities (capability to act and commit; and capability to adapt and self-renew).

*Step 3. Identify **initial changes/ outcome areas** in these two capabilities – by CDI team & in-country team*

The CDI team was responsible for coding documents received from SPO and CFA in NVivo on the following:

- 5C Indicators: this was to identify the changes that took place between baseline and endline. This information was coded in Nvivo.
- Information related to the capacity development interventions implemented by the CFA (with MFS II funding) (see also Step 2) to strengthen the capacity of the SPO. For example, the training on financial management of the SPO staff could be related to any information on financial management of the SPO. This information was coded in Nvivo.

In addition, the response by the CFA to the changes in 5C indicators format, was auto-coded.

The in-country team was responsible for timely collection of information from the SPO (before the fieldwork starts). This set of information dealt with:

- MFS II supported capacity development interventions during the MFS II period (2011 until now).
- Overview of all trainings provided in relation to a particular outcome areas/organisational capacity change since the baseline.
- For each of the identified MFS II supported trainings, training questionnaires have been developed to assess these trainings in terms of the participants, interests, knowledge and skills gained, behaviour change and changes in the organisation (based on Kirkpatrick's model), one format for training participants and one for their managers. These training questionnaires were sent prior to the field visit.
- Changes expected by SPO on a long-term basis ('Support to capacity development sheet - endline - SPO perspective').

For the selection of change/ outcome areas the following criteria were important:

- The change/ outcome area is in one of the two capabilities selected for process tracing: capability to act and commit or the capability to adapt and self-renew. This was the first criteria to select upon.
- There was a likely link between the key organisational capacity change/ outcome area and the MFS II supported capacity development interventions. This also was an important criteria. This would need to be demonstrated through one or more of the following situations:
 - In the 2012 theory of change on organisational capacity development of the SPO a link was indicated between the outcome area and MFS II support;
 - During the baseline the CFA indicated a link between the planned MFS II support to organisational development and the expected short-term or long-term results in one of the selected capabilities;
 - During the endline the CFA indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities;
 - During the endline the SPO indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities.

Reviewing the information obtained as described in Step 1, 2, and 3 provided the basis for selecting key organisational capacity change/ outcome areas to focus on for process tracing. These areas were to be formulated as broader outcome areas, such as 'improved financial management', 'improved monitoring and evaluation' or 'improved staff competencies'.

Note: the outcome areas were to be formulated as intermediates changes. For example: an improved monitoring and evaluation system, or enhanced knowledge and skills to educate the target group on

climate change. Key outcome areas were also verified - based on document review as well as discussions with the SPO during the endline.

*Step 4. Construct the **detailed, initial causal map** (theoretical model of change) – CDI & in-country team*

A detailed initial causal map was developed by the CDI team, in collaboration with the in-country team. This was based on document review, including information provided by the CFA and SPO on MFS II supported capacity development interventions and their immediate and long-term objectives as well as observed changes. Also, the training questionnaires were reviewed before developing the initial causal map. This detailed initial causal map was to be provided by the CDI team with a visual and related narrative with related references. This initial causal map served as a reference point for further reflection with the SPO during the process tracing endline workshop, where relationships needed to be verified or new relationships established so that the second (workshop-based), detailed causal map could be developed, after which further verification was needed to come up with the final, concluding detailed causal map.

It's important to note that organisational change area/ outcome areas could be both positive and negative.

For each of the selected outcomes the team needed to make explicit the theoretical model of change. This meant finding out about the range of different actors, factors, actions, and events etc. that have contributed to a particular outcome in terms of organisational capacity of the SPO.

A model of change of good quality includes:

- The causal pathways that relate the intervention to the realised change/ outcome;
- Rival explanations for the same change/ outcome;
- Assumptions that clarify relations between different components or parts;
- Case specific and/or context specific factors or risks that might influence the causal pathway, such as for instance the socio-cultural-economic context, or a natural disaster;
- Specific attributes of the actors e.g. CFA and other funders.

A model of change (within the 5C study called a 'detailed causal map') is a complex system which produces intermediate and long-term outcomes by the interaction of other parts. It consists of parts or causes that often consist of one actor with its attributes that is implementing activities leading to change in other parts (Beach & Pedersen, 2013). A helpful way of constructing the model of change is to think in terms of actors carrying out activities that lead to other actors changing their behaviour. The model of change can be explained as a range of activities carried out by different *actors* (including the CFA and SPO under evaluation) that will ultimately lead to an outcome. Besides this, there are also '*structural*' elements, which are to be interpreted as external factors (such as economic conjuncture); and *attributes* of the actor (does the actor have the legitimacy to ask for change or not, what is its position in the sector) that should be looked at (Beach & Pedersen, 2013). In fact Beach and Pedersen, make a fine point about the subjectivity of the actor in a dynamic context. This means, in qualitative methodologies, capturing the changes in the actor, acted upon area or person/organisation, in a non sequential and non temporal format. Things which were done recently could have corrected behavioural outcomes of an organisation and at the same time there could be processes which incrementally pushed for the same change over a period of time. Beach and Pedersen espouse this methodology because it captures change in a dynamic fashion as against the methodology of logical framework. For the MFS II evaluation it was important to make a distinction between those paths in the model of change that are the result of MFS II and rival pathways.

The construction of the model of change started with the identified key organisational capacity change/ outcome, followed by an inventory of all possible subcomponents that possibly have caused the change/ outcome in the MFS II period (2011-up to now, or since the baseline). The figure below presents an imaginary example of a model of change. The different colours indicate the different types of support to capacity development of the SPO by different actors, thereby indicating different pathways of change, leading to the key changes/ outcomes in terms of capacity development (which in this case indicates the ability to adapt and self-renew).

Figure 1 An imaginary example of a model of change

Step 5. Identify **types of evidence** needed to verify or discard different causal relationships in the model of change – in-country teams with support from CDI team

Once the causal mechanism at theoretical level were defined, empirical evidence was collected so as to verify or discard the different parts of this theoretical model of change, confirm or reject whether subcomponents have taken place, and to find evidence that confirm or reject the causal relations between the subcomponents.

A key question that we needed to ask ourselves was, "What information do we need in order to confirm or reject that one subcomponent leads to another, that X causes Y?". The evaluation team needed to agree on what information was needed that provides empirical manifestations for each part of the model of change.

There are four distinguishable types of evidence that are relevant in process tracing analysis: *pattern*, *sequence*, *trace*, and *account*. Please see the box below for descriptions of these types of evidence.

The evaluation team needed to agree on the types of evidence that was needed to verify or discard the manifestation of a particular part of the causal mechanism. Each one or a combination of these different types of evidence could be used to confirm or reject the different parts of the model of change. This is what is meant by robustness of evidence gathering. Since causality as a concept can bend in many ways, our methodology, provides a near scientific model for accepting and rejecting a particular type of evidence, ignoring its face value.

Types of evidence to be used in process tracing

Pattern evidence relates to predictions of statistical patterns in the evidence. For example, in testing a mechanism of racial discrimination in a case dealing with employment, statistical patterns of employment would be relevant for testing this part of the mechanism.

Sequence evidence deals with the temporal and spatial chronology of events predicted by a hypothesised causal mechanism. For example, a test of the hypothesis could involve expectations of the timing of events where we might predict that if the hypothesis is valid, we should see that the event B took place after event A took place. However, if we found that event B took place before event A took place, the test would suggest that our confidence in the validity of this part of the mechanism should be reduced (disconfirmation/ falsification).

Trace evidence is evidence whose mere existence provides proof that a part of a hypothesised mechanism exists. For example, the existence of the minutes of a meeting, if authentic ones, provide strong proof that the meeting took place.

Account evidence deals with the content of empirical material, such as meeting minutes that detail what was discussed or an oral account of what took place in the meeting.

Source: Beach and Pedersen, 2013

Below you can find a table that provides guidelines on what to look for when identifying types of evidence that can confirm or reject causal relationships between different parts/ subcomponents of the model of change. It also provides one example of a part of a causal pathway and what type of information to look for.

Table 9

Format for identifying types of evidence for different causal relationships in the model of change (example included)

Part of the model of change	Key questions	Type of evidence needed	Source of information
Describe relationship between the subcomponents of the model of change	Describe questions you would like to answer a so as to find out whether the components in the relationship took place, when they took place, who was involved, and whether they are related	Describe the information that we need in order to answer these questions. Which type of evidence can we use in order to reject or confirm that subcomponent X causes subcomponent Y? Can we find this information by means of : Pattern evidence; Sequence evidence; Trace evidence; Account evidence?	Describe where you can find this information
Example: Training workshops on M&E provided by MFS II funding and other sources of funding	Example: What type of training workshops on M&E took place? Who was trained? When did the training take place? Who funded the training? Was the funding of training provided before the training took place? How much money was available for the training?	Example: Trace evidence: on types of training delivered, who was trained, when the training took place, budget for the training Sequence evidence on timing of funding and timing of training Content evidence: what the training was about	Example: Training report SPO Progress reports Interviews with the CFA and SPO staff Financial reports SPO and CFA

Please note that for practical reasons, the 5C evaluation team decided that it was easier to integrate the specific questions in the narrative of the initial causal map. These questions would need to be addressed by the in-country team during the process tracing workshop so as to discover, verify or discard particular causal mechanisms in the detailed, initial causal map. Different types of evidence was asked for in these questions.

*Step 6. **Collect data** to verify or discard causal mechanisms and develop workshop-based, detailed causal map – in-country team*

Once it was decided by the in-country and CDI evaluation teams what information was to be collected during the interaction with the SPO, data collection took place. The initial causal maps served as a basis for discussions during the endline workshop with a particular focus on process tracing for the identified organisational capacity changes. But it was considered to be very important to understand from the perspective of the SPO how they understood the identified key organisational capacity change/outcome area has come about. A new detailed, workshop-based causal map was developed that included the information provided by SPO staff as well as based on initial document review as described in the initial detailed causal map. This information was further analysed and verified with other relevant information so as to develop a final causal map, which is described in the next step.

*Step 7. **Assess the quality** of data and **analyse data**, and develop the **final detailed causal map** (model of change) – in-country team and CDI team*

Quality assurance of the data collected and the evidence it provides for rejecting or confirming parts of causal explanations are a major concern for many authors specialised in contribution analysis and process-tracing. Stern et al. (2012), Beach and Pedersen (2013), Lemire, Nielsen and Dybdal (2012), Mayne (2012) and Delahais and Toulemonde (2012) all emphasise the need to make attribution/contribution claims that are based on pieces of evidence that are rigorous, traceable, and credible. These pieces of evidence should be as explicit as possible in proving that *subcomponent X causes subcomponent Y* and ruling out other explanations. Several tools are proposed to check the nature and the quality of data needed. One option is, Delahais and Toulemonde's Evidence Analysis Database, which we have adapted for our purpose.

Delahais and Toulemonde (2012) propose an Evidence Analysis Database that takes into consideration three criteria:

Confirming/ rejecting a causal relation (yes/no);

Type of causal mechanism: intended contribution/ other contribution/ condition leading to intended contribution/ intended condition to other contribution/ feedback loop;

Strength of evidence: strong/ rather strong/ rather weak/ weak.

We have adapted their criteria to our purpose. The in-country team, in collaboration with the CDI team, used the criteria in assessing whether causal relationships in the causal map, were strong enough. This has been more of an iterative process trying to find additional evidence for the established relationships through additional document review or contacting the CFA and SPO as well as getting their feedback on the final detailed causal map that was established. Whilst the form below has not been used exactly in the manner depicted, it has been used indirectly when trying to validate the information in the detailed causal map. After that, the final detailed causal map is established both as a visual as well as a narrative, with related references for the established causal relations.

<i>Example format for the adapted evidence analysis database (example included)</i>	<i>Confirming/ rejecting a causal relation (yes/no)</i>	<i>Type of information providing the background to the confirmation or rejection of the causal relation</i>	<i>Strength of evidence: strong/ rather strong/ rather weak/ weak</i>	<i>Explanation for why the evidence is (rather) strong or (rather) weak, and therefore the causal relation is confirmed/ rejected</i>
<i>Description of causal relation</i>				
e.g. Training staff in M&E leads to enhanced M&E knowledge, skills and practice	e.g. Confirmed	e.g. Training reports confirmed that staff are trained in M&E and that knowledge and skills increased as a result of the training		

Step 8. Analyse and conclude on findings– in-country team and CDI team

The final detailed causal map was described as a visual and narrative and this was then analysed in terms of the evaluation question two and evaluation question four: "To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?" and "What factors explain the findings drawn from the questions above?" It was analysed to what extent the identified key organisational capacity change can be attributed to MFS II supported capacity development interventions as well as to other related factors, interventions and actors.

Explaining factors – evaluation question 4

This paragraph describes the data collection and analysis methodology for answering the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This has been explained in the first section of this appendix. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information was procured for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the process of process tracing as described in the section above.

Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team.

Use of the 5 core capabilities framework and qualitative approach: this has proven to a be very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation

and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
- Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
- Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and

how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-

assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

Appendix 2 Background information on the five core capabilities framework

The 5 capabilities (5C) framework was to be used as a framework for the evaluation of capacity development of Southern Partner Organisations (SPOs) of the MFS II consortia. The 5C framework is based on a five-year research program on 'Capacity, change and performance' that was carried out by the European Centre for Development Policy Management (ECDPM). The research included an extensive review of the literature and sixteen case studies. The 5C framework has also been applied in an IOB evaluation using 26 case studies in 14 countries, and in the baseline carried out per organisation by the MFS II organisations for the purpose of the monitoring protocol.

The 5C framework is structured to understand and analyse (changes in) the capacity of an organization to deliver (social) value to its constituents. This introduction briefly describes the 5C framework, mainly based on the most recent document on the 5C framework (Keijzer et al., 2011).

The 5C framework sees capacity as an **outcome** of an **open system**. An organisation or collaborative association (for instance a network) is seen as a system interacting with wider society. The most critical practical issue is to ensure that relevant stakeholders share a common way of thinking about capacity and its core constituents or capabilities. Decisive for an organisation's capacity is the context in which the organisation operates. This means that **understanding context issues** is crucial. The use of the 5C framework requires a multi-stakeholder approach because shared values and results orientation are important to facilitate the capacity development process. The 5C framework therefore needs to **accommodate the different visions** of stakeholders and conceive different strategies for raising capacity and improving performance in a given situation.

The 5C framework defines capacity as '**producing social value**' and identifies five core capabilities that together result in that overall capacity. Capacity, capabilities and competences are seen as follows:

Capacity is referred to as the overall ability of an organisation or system to create value for others;

Capabilities are the collective ability of a group or a system to do something either inside or outside the system. The collective ability involved may be technical, logistical, managerial or generative (i.e. the ability to earn legitimacy, to adapt, to create meaning, etc.);

Competencies are the energies, skills and abilities of individuals.

Fundamental to developing capacity are inputs such as human, material and financial resources, technology, and information. To the degree that they are developed and successfully integrated, capabilities contribute to the overall capacity or ability of an organisation or system to create value for others. A single capability is not sufficient to create capacity. All are needed and are strongly interrelated and overlapping. Thus, to achieve its development goals, the 5C framework says that every organisation or system must have **five basic capabilities**:

- The capability to act and commit;
- The capability to deliver on development objectives;
- The capability to adapt and self-renew;
- The capability to relate (to external stakeholders);
- The capability to achieve coherence.

In order to have a common framework for evaluation, the five capabilities have been reformulated in outcome domains and for each outcome domain performance indicators have been developed.

There is some overlap between the five core capabilities but together the five capabilities result in a certain level of capacity. Influencing one capability may have an effect on one or more of the other capabilities. In each situation, the level of any of the five capabilities will vary. Each capability can become stronger or weaker over time.

Appendix 3 Changes in organisational capacity of the SPO - 5C indicators

Below you will find a description for each of the indicators under each of the capabilities, what the situation is as assessed during the endline, how this has changed since the baseline and what are the reasons for change.

Capability to act and commit

Level of Effective Leadership

1.1. Responsive leadership: 'Leadership is responsive, inspiring, and sensitive'

This is about leadership within the organisation (operational, strategic). If there is a larger body then you may also want to refer to leadership at a higher level but not located at the local organisation.

Jana Vikas leadership is approachable and responsive. The director is an MBA graduate in rural management and has served in Jana Vikas as assistant director before becoming the director in 2013. During the baseline there was a lack of two-way communication between the director and the (field) staff. Since the baseline he has improved his relationship and communication with the board members, staff and members of the target groups. The leader has become very innovative in strengthening his relationship with the staff and the target groups. For e.g. after becoming the director he decided to spend one week in the field and one week in the office, throughout the year, to get better interaction with the staff and target groups. The leadership of the organization has established open sharing platforms during meetings. Staff can approach and share their concern with the director at any point of time. Staff indicate that the level of hierarchy in the organization has blurred. Field staff can directly communicate with the director. This has led to increased transparency and mutual trust between the director and other staff.

The leadership takes initiative in planning strategies and policies for resource mobilisation and for implementing their programme. The leadership responded to the feedback given by external evaluators appointed by Cordaid, regarding the need to overhaul the organisational structure which resulted in a change in the organogram. This external evaluation in 2013 flagged that there was space for improvement for JV's leader to engage with board members through presenting project updates and propose new ideas for the development of Jana Vikas, as most staff don't even know who the board members are and what their role is in the organisation. The external evaluator also observed that the board approves policies but that there is no follow up whether the policies are being implemented or not. To address this, in the strategic plan for 2014-18 the responsibilities of the governing board and the director were outlined. Since this evaluation in 2013, the leader's relationship with the board members has strengthened, so that the leadership faced no hurdle in making Jana Vikas an independent organisation, separate from the Catholic Charity.

Score baseline: 2.5

Score endline: 3.5 (improvement)

1.2. Strategic guidance: 'Leaders provide appropriate strategic guidance (strategic leader and operational leader)'

This is about the extent to which the leader(s) provide strategic directions

Jana Vikas has a competent and active board comprising nine members from the field of administration, social sector, academics and priests. The Board meets at least once in the year and if needed twice a year. Leadership is in charge of the overall monitoring of the organisation. However,

approval for new projects is dependent on the board, that also looks into policy formulation/amendments required for bidding for new projects. The leader takes initiative in developing strategic planning and policies, for example: he took appropriate steps when there was a change in the national and local context and government policies. With this change a new strategic plan has been drafted in alignment with the mission and vision for the 2014-18 period. He also initiated a change in the organogram to have a more focused approach toward the programs and has been involved in developing new policies in alignment with mission and vision such as the child protection policy and disability policy. The leader took initiative in developing strategic planning for resource mobilization and led from the front in delivering services. For example, in the post Phailin relief work the director led from the front in distributing relief aids, mobilising resources for relief, lobbying government to declare some blocks of Kandhamal as Phailin affected area etc. While during the baseline there was a communication gap between the leadership and the staff members, now there is increased collective involvement of staff in decision making and discussion. Role clarity and milestone setting in which guidance is provided by the leadership have helped with this.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

1.3. Staff turnover: 'Staff turnover is relatively low'

This is about staff turnover.

Jana Vikas has been able to keep the staff turnover low, which is attributed to shifting of their office to the project area. During the baseline it was mentioned that it was difficult to recruit new staff in Kandhamal because of its remoteness and presence of Naxalites (militant groups). Now, communication in Kandhamal has increased and the connectivity with the state capital has improved. There has been a slight decrease in the concerns related to the Naxalites within the district. More people with professional degree are available within the job market. During the baseline accommodation for the staff was a problem in after the riots in 2008, but this has improved now. Better internet access also makes working easier. Independence to work and take decisions has increased and there has been a more positive image of Jana Vikas both within community and with the government. This has helped the staffs at different levels. Over the last two years of the 92 staff, six have left due to getting a government job, a job closer to home and to care for their new born babies. There has been recruitment of two skilled professional staff to the organisation. This has been due to a better recruitment process through a recruitment committee, better HR policy, staff social security as motivating factor (MFS II funded the social security of staff) and staff are allowed to take leave for examination preparation if pursuing higher education.

Score baseline: 3.0

Score endline: 3.25 (very slight improvement)

Level of realistic strategic planning

1.4. Organisational structure: 'Existence of clear organisational structure reflecting the objectives of the organisation'

Observable indicator: Staff have copy of org structure and understand this

Jana Vikas has a well-defined and documented organogram. The organisational structure provides for proper devolution of work and accountability at all levels. Since the baseline there has been an organisational restructuring, to ensure the clarity for all staff members in terms of their roles and responsibilities that was lacking during the baseline. For instance, the Executive Director has to report to the Governing Body and is in turn supported by the Assistant Director. The Assistant Director is further in charge of the programme unit, HRD (Human Resource Development) unit, Resource unit, Administration Unit and Finance unit. He is further helped by the programme staff, coordinator and accountants. Jana Vikas' management has consciously formed different committees (the Core committee, Grievance committee, Gender and sexual harassment committee, Staff council and Resource mobilization committee, Procurement committee) to oversee the administrative processes

and implementation of policies of the organisation. These committees take decisions on important issues. Grievances of the staffs can be easily brought to the notice and addressed within 21 days. Another issue that has improved since the baseline is the hierarchical structure. While this was strong two years ago now the level of hierarchy in the organization has blurred and field staff can directly communicate with the director.

There are now seven thematic committees in place that consist of staff of different departments. These committees ensure that the policies of Jana Vikas are followed and implemented.

Score baseline: 3.0

Score endline: 4.0 (improvement)

1.5. Articulated strategies: 'Strategies are articulated and based on good situation analysis and adequate M&E'

Observable indicator: strategies are well articulated. Situation analysis and monitoring and evaluation are used to inform strategies.

After Jana Vikas' strategic plan for 2007-2012, the organisation decided to develop a new strategic plan that would be relevant and effective in the changing scenario. To assist in this, the Association for Stimulating Know How (ASK) was given the responsibility to conduct a situational and context analysis to understand the progress and change in the environment in July 2013. There is now a strategic plan for 2014-2018 in place which is based on the situational analysis done by ASK. Several strategies were developed to strengthen Jana Vikas' position as a direct implementer, capacity building and resource organisation. In Jana Vikas there is an Annual Quarterly Review meeting to analyse the progress of the organisation and for preparing strategic planning. There are monthly-review meetings as well as, mid-term reviews. The overall approach of Jana Vikas has changed from activity based monitoring to results based monitoring, but systematic analysis from the data collected is still lacking. This new strategic plan seems to still lack an explicit financing strategy, as was the case in the baseline. Therefore there has been no change in this indicator.

Score baseline: 3.5

Score endline: 3.5 (no change)

Level of translation of strategy into operations

1.6. Daily operations: 'Day-to-day operations are in line with strategic plans'

This is about the extent to which day-to-day operations are aligned with strategic plans.

Daily operations of Jana Vikas are in line with its strategic plan. There is a clear monthly plan for each staff member to implement their project activities. Staff is given regular orientation in monthly and annual review and planning meetings. There is increase in the frequency of the meetings and feedback with the shift of the office to the project area. Also the Director's presence in the field for one week also helps in operationalizing the strategic plan. The activities have become more result oriented. Field level staff is able to take more ownership and is able to deal with problems independently at their level as their confidence has increased. There is a clear monitoring and evaluation system by program managers and coordinators and give hand-holding support to field level staffs for result based work. The new PME unit monitor, evaluate and analyse the data and this gives clear direction for the implementation of the plan. The changes in the daily operations are aligned to the feedback from the donor and its external evaluator. Though there is a clear monthly implementation plan for each staff and regular orientation of the staff in programme implementation, Jana Vikas still needs to improve its planning capacities in term of timely submission of monitoring reports to Cordaid.

Score baseline: 4.0

Score endline: 4.0 (no change)

Level of staff capacity and motivation

1.7. Staff skills: 'Staff have necessary skills to do their work'

This is about whether staff have the skills necessary to do their work and what skills they might they need.

There has been a very slight improvement in the indicator. Jana Vikas continues to have well-qualified and professionally competent staff and has hired two new skilled staff over the last two years. During the baseline the staff could further enhance their skills in business planning, addressing social issues, communication on government schemes, strategic planning, results based management, reporting and business processes. Some of these gaps have been worked on. Senior staff now give trainings to communities and NGO staff on different government schemes and provisions as they have become better in communicating about this. From Cordaid they have received input on value chains, marketing and business plans in the value chain project, and this has improved their skills in business processes. There have been various trainings through which staff have improved their skills on micro-entrepreneurship, communication, networking, advocacy, writing proposal, results based monitoring, training of trainers, data collection, report writing, SHG management. These skills are then used in training the SHGs, cooperative members and CBOs on these topics. There is, however, still a need for handholding support for a longer period on improving documentation.

Score baseline: 4.0

Score endline: 4.5 (slight improvement)

1.8. Training opportunities: 'Appropriate training opportunities are offered to staff'

This is about whether staff at the SPO are offered appropriate training opportunities

Staff of Jana Vikas is continued to be offered a range of training opportunities both internally as well as externally. Cordaid has continued to fund services and trainings provided by ASK for improving Jana Vikas' capacity. Trainings continue to be needs based. Over the last two years JV has implemented more trainings for its staff. Most of the trainings are facilitated by ASK India, Hennery Martin Institute Hyderabad, SFDC, Trocaire, CSFHR and have been on topics such as government schemes, FRA, Minority provision, Sexual Assault for women, Micro-Plan, Land productivity, Effect Base Monitoring, RTI, Child Protection Act, RBM, PME, business planning, report writing, policy development, etc.

Some of the specific trainings that were given to Jana Vikas staff over the last two years:

- Training on Lobby Right to Information (RTI) Act: In 2012 training on Lobby Right to Information Act was organised by Jana Vikas with the help of an external resource person from ASK India and was funded by MFS II, Cordaid. As a result of this training staff emerged as RTI activists. The training imparted knowledge to staff and improved confidence in lobby and advocacy activities. Five Information centres at five Gram Panchayats have been set up to facilitate the communities to access different news, forms, current affairs and information on schemes.
- Training on PME: Four days training program was organised from 13-16 April 2013 at N. Nuagaon by Jana Vikas which was facilitated by ASK India and supported by Cordaid ((MFS II funding). The objective of the training was to capacitate the staff on situational analysis, project formation, M&E, reporting and documentation. The facilitator practically helped them to prepare result based project proposals development, problem tree analysis, impact analysis, results based monitoring etc. As a result the capacity of the staff improved to fine-tune MIS formats and indicators to collect focused data from the field and analyse it to find gaps. The findings of the data are further used to develop proposals.
- Training on SHG Management: On 30th April 2013 capacity building training was organised on SHG management facilitated by ASK India, New Delhi. The objective of the training was to train the staff on gradation of the SHGs, record keeping, format development for MIS etc. This training was funded by Cordaid.
- Training on Strategic planning: was conducted from 15th to 21th August 2013 on strategic planning was organised in two phases at K. Nuagaon which was facilitated by ASK India, New Delhi. The objective of the training was to discuss different contextual issues and train the staff to find the gaps and make strategic planning to address the issues. This training was funded by Cordaid.

- Training on Government Entitlements: On 22nd November 2013 training on Government Entitlement was organised by Jana Vikas at K. Nuagaon, facilitated by external resource person. The objective of the workshop was to train the staff on how to make people aware of government schemes, benefits of the schemes, how to apply the schemes etc. This training was funded by Cordaid.
- Workshop on Policy Development: The workshop on Policy Development was organised at K. Nuagaon, facilitated by ASK India, New Delhi in 21-26 February, 2014. The external resource person trained the staff to review and revise the policies on Human Resource, Gender, Finance and HIV/AIDS. The staffs were capacitated to develop new policies such as, Child Protection Policy, Disability Policy and Environment Policy. New Committees were also setup for better and faster implementation of the projects. This training was funded by Cordaid.
- FCRA Outreach Seminar: One day outreach seminar was organised and funded by the Ministry of Home Affairs (Foreign Division) on 8th May 2014 at Bhubaneswar. The object of the training was to train the participants on various provisions of Foreign Contribution Regulation Act, 2010 and FCRA Rules 2011. This resulted in exchanging ideas and views on FCRA related issues.
- 'Women atrocity' in BBSR conducted by NAWO on July, 2014. This training was funded by the government of Odisha and Trocaire, India.

During the baseline there was a felt need for a HR department to deal with HR related issues and plan training initiatives on regular intervals. After the baseline a HR policy has been put in place and the staff felt that the trainings have helped a lot in putting better systems in place. Also staff feel that trainings are held at more regular intervals. As the Forest Rights Act is an emerging issue in context to Kandhamal, intensive trainings on this topic are still required for staff.

Score baseline: 4.0

Score endline: 4.5 (slight improvement)

1.9.1. Incentives: 'Appropriate incentives are in place to sustain staff motivation'

This is about what makes people want to work here. Incentives could be financial, freedom at work, training opportunities, etc.

While during the baseline staff enjoyed freedom at work and got satisfaction from doing good, their salaries were low and they had no social security. Over the last two years, Jana Vikas has worked towards implementing an organisational policy of increasing the salary of its employees by ten percent every year for those working in the Cordaid funded projects; and for the rest the increase is five percent. Salaries are inflation adjusted. Salaries are given to staff during leave on health grounds. Furthermore, staff have been provided with motorcycles and bicycles to visit the fields, whilst the government has put a lot of emphasis in constructing roads to improve the connectivity between interior villages and the state highways. This not only motivated the staff but helped them to visit fields with ease and frequently. Mobile and internet facilities are also provided during field visits. Another motivational factor are the skill building for staff through providing them trainings and exposure visits.

The organisational assessment by ASK in July 2013 found that although JV is registered under the Employment Provident Fund (EPF) Act, the organisation is not providing provident fund to their staff. As discussed with the Director and Assistant Director, the organisation is working under project mode and are therefore unable to provide EPF. Under government norms, every institution that employs 20 or more employees should provide this provident fund. The HR and administrative staff of JV indicated that provisions have been made for the Employment Provident Fund and Life Insurance Policy. New committees were formed to deal with staff issues in a timely manner, such as the grievance shell, staff council and the sexual harassment committee.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

Level of Financial Resource Security

1.9.2. Funding sources: 'Funding from multiple sources covering different time periods'

This is about how diversified the SPOs funding sources are over time, and how the level of funding is changing over time.

Jana Vikas continues to receive funding from the funders that were there during the baseline: MISEREOR, ENTRIDE, Trocaire, Manos Unidas, Diocese Mangalore and Cordaid. Cordaid funding runs until May 2015. In addition to the existing donors, JV has mobilised funds from new donors such as the National Foundation of India, New Delhi for the REHNUMA project, the Young Women Christian Association and the Indo-Global Social Service Society (IGSSS). Proposals to funders such as NABARD, KNH Germany, Restless Development International, Ministry of Minority affairs for a Projects on minorities, are in the pipeline. Jana Vikas has been able to approach these new donors because of various reasons including, better proposal writing and better networking with the government and NGOs also because of their involvement in the relief and humanitarian assistance following the floods and the cyclone Phailin.

Score baseline: 3.5

Score endline: 4.0 (slight improvement)

1.9.3. Funding procedures: 'Clear procedures for exploring new funding opportunities'

This is about whether there are clear procedures for getting new funding and staff are aware of these procedures.

During the baseline there were no procedures for exploring new funding and there were no discussions within the organisation on this topic. Now there is a resource mobilisation department and a PME unit that together track contextual issues and funding opportunities. The resource mobilization department has been restructured to nurture and leverage new funding sources both at national and international level. Cordaid provided funding to establish these different departments. New skilled and professional staff was hired for these departments. Existing staff improved their capacity in reporting, proposal development and case study writing to increase visibility of the organisation. Jana Vikas' website development is in progress to increase visibility of the organisation and mobilise funds.

The new strategic plan 2014-2018 keeps in mind the contextual issues to better mobilize funds from different sources, keeping in mind donor priorities. Within this strategic plan strategies and procedures to leverage funds from state, national and international donors are included. There is now also more open discussion among staff about exploring funding opportunities. The governing board has approved the organisation to explore new funding opportunities. Jana Vikas has been exposed to and updated about funding opportunities through their alliance partners in the REHNUMA project funded, being a member of the Civil Society Forum for Human Rights, and through the FCRA seminar organized by the Ministry of home affairs, and now they are better aware of the government regulations for receiving foreign contributions.

Score baseline: 1.0

Score endline: 3.0 (considerable improvement)

Summary of capability to act and commit

Since the baseline, the two-way communication between the director and the (field) staff and target groups has improved. The leader has become very innovative in strengthening his relationship with the staff and the target groups. The communication gap between the leadership and the staff members was closed as now there is increased collective involvement of staff in decision making and discussion. Since an external evaluation in 2013, the relationship between the board members and the leader has strengthened and in the strategic plan for 2014-2018 the responsibilities of the governing board and the director were clarified. Since the baseline there has been an organisational restructuring, to ensure the clarity for all staff members in terms of their roles and responsibilities that was lacking during the baseline. The hierarchical structure, while this was strong two years ago, now

the level of hierarchy in the organization has blurred. There are now seven thematic committees in place that ensure that the policies of Jana Vikas are followed and implemented. The organisation now has a new strategic plan in place for 2014-2018, which was based on the situational and context analysis done by ASK to adapt it to the changing environment. There is still no systematic use of M&E findings in the strategic plan and also an explicit financing strategy linked to the strategic plan is lacking. Jana Vikas' daily operations are still in line with this new strategic plan. There are clear monthly plans for each staff member to implement their project activities, but they need to improve their planning capacities in terms of timely submission of monitoring reports to Cordaid. Jana Vikas has been able to keep staff turnover low over the last two years. Of the 92 staff members, 6 have left due to better opportunities and family matters. It has become easier to recruit new staff as the project area (Kandhamal) is now better connected and concerns about Naxalites are less. This together with a better recruitment process has led to the recruitment of two new skilled staff who joined the new resource mobilisation unit and the PME unit. Also while during the baseline there was no social security, this is now in place. This was made possible by MFS II funding from Cordaid. Over the last two years Jana Vikas has worked on several gaps in staff skills that were mentioned during the baseline. They have improved their skills in business process, communication on government schemes, results based managed and SHG management to name a few. There is, however, still a need for handholding support for a longer period on improving documentation. Over the last two years JV has implemented more trainings for its staff and most of the trainings are facilitated by ASK India, Hennerly Martin Institute Hyderabad, SFDC, Trocaire, CSFHR. Trainings are felt to be held at more regular intervals, but training on the emerging issue of the Forest Rights Act is still required. These trainings are one of the motivational factors of JV's staff. Since the baseline the salaries have increased with 10 percent per year for Cordaid funded project staff and with 5 percent for other staff. Provisions have been made to continue paying staff when on health leave and for Employment Provident Fund and Life Insurance Policy. New committees were formed to deal with staff issues in a timely manner, such as the grievance shell, staff council and the sexual harassment committee. Regarding JV's funding situation, they have expanded their donor base, which existed of 6 donors during the baseline with new funders such as the National Foundation of India, New Delhi for the REHNUMA project, the Young Women Christian Association and the Indo-Global Social Service Society (IGSSS). Proposals to funders such as NABARD, KNH Germany, Restless Development International, Ministry of Minority affairs, are in the pipeline. While during the baseline there were no funding procedures and there was no discussions on exploring new funding, now in the new strategic plan funding procedures are included and staff discuss more openly about this topic. The establishment of a resource mobilisation department, improved capacity of staff to write proposals, improved networking and training on the FCRA have further helped Jana Vikas in streamlining its activities to explore new funding opportunities.

Score baseline: 3.1

Score endline: 3.8 (slight improvement)

Capability to adapt and self-renew

Level of effective application of M&E

2.1.M&E application: 'M&E is effectively applied to assess activities, outputs and outcomes'

This is about what the monitoring and evaluation of the SPO looks at, what type of information they get at and at what level (individual, project, organisational).

In the last two years, the PME (Planning Monitoring and Evaluation) unit has become operational and has developed a checklist for each project activity to enable better monitoring. This helps to collect data for review and analysis of a programme which is then used for preparing reports and for proposal writing for upcoming projects. The PME team meets quarterly to review the progress and discuss on strategic planning. Along with this, a core committee has been formed to review and monitor the progress of the projects. Some efforts have been made to modify the MIS tool to link it to result based management (RBM) and to collect focused data from the community members, project coordinators, Panchayati Raj Institution (PRI) members, and other government institutions. The PME policy has been revised and is awaiting governing board's approval.

The organisational assessment by ASK India in July 2013 helped Jana Vikas to identify the gaps in the PME system. Based on this finding a strategic plan for 2014-18 was formulated which further strengthened the PME system. In the light of this strategic plan a full time personnel is appointed to work for a separate PME unit is established with the support from Cordaid. Jana Vikas also shifted its monitoring process from activity based monitoring to results based management (RBM). It is also looking forward to develop software to maintain MIS to generate information.

Score baseline: 2.0

Score endline: 3.0 (improvement)

2.2.M&E competencies: 'Individual competencies for performing M&E functions are in place'

This is about whether the SPO has a trained M&E person; whether other staff have basic understanding of M&E; and whether they know what information to collect, how to process the information, how to make use of the information so as to improve activities etc.

During the baseline the Program and Monitoring Unit was formally in place, but not operational. This unit is now called the PME unit and has skilled staff that works on streamlining the M&E system. Cordaid funding has made this possible. It was also noted during the baseline that staff needed training in results based monitoring. Staff have received training in this (funded by Cordaid) and new skilled M&E staff has been hired. The programme managers now have checklists and formats to guide them in the M&E process.

They now use excel sheets to collect and analyse the data and in future they look forward to implement software to maintain MIS to generate information. PME staff are better skilled to monitor, collect and analyse the data. After analysing the data they use it for program development, proposal and report writing, but it is still not used strategically for future plans. Field staff is trained in developing monitoring tools and documenting case studies, which are facilitated by PME staff. For effective functioning of PME, some of the experienced and senior professionals are involved in planning, monitoring and evaluation process.

In JV's strategic plan for 2014-2018 it is noted that the organisational assessment from 2013 found that result oriented PME systems are not developed, reporting from the field is not in line with the indicators, systematic documentation for field interventions need to be strengthened and that follow up on findings and recommendations from evaluations is needed. Now a structural arrangement has been made and a full time personnel is dedicated for the strengthening of PME system. There is, thus, still a need for other staff to undergo training on it for better exercise in the field for data collection and analysis which is in the process.

Score baseline: 2.5

Score endline: 3.0 (slight improvement)

Level of strategic use of M&E

2.3.M&E for future strategies: 'M&E is effectively applied to assess the effects of delivered products and services (outcomes) for future strategies'

This is about what type of information is used by the SPO to make decisions; whether the information comes from the monitoring and evaluation; and whether M&E info influences strategic planning.

There has been a very slight improvement in this indicator. Since the baseline, a separate PME unit has become operational to streamline the monitoring of the projects. Data collection is said to have improved and the PME unit uses the data for report and proposal writing. They have improved somewhat in their MIS as they now make use of excel to enter collected data and analyse it. An improved MIS system still needs to be established. Lessons from the present M&E results can help in problem analysis and better data collection from the field level. The core team of Jana Vikas continues to meet frequently to review and analyse the data once every two months to take suitable action. In this way monitoring information is used operationally.

However in the strategic plan for 2014 – 2018 among the issues that are highlighted that came out of the organization assessment done by ASK, “to improve the concrete level of planning and follow up on findings and recommendations of evaluations” is mentioned. This is an issue that Jana Vikas is working on and is trying to implement. For example, Jana Vikas indicates that findings and recommendations from Cordaid are shared among the staffs of the concerned project and that they have taken actions based on evaluations.

Score baseline: 1.0

Score endline: 1.25 (very slight improvement)

Level of openness to strategic learning

2.4. Critical reflection: 'Management stimulates frequent critical reflection meetings that also deal with learning from mistakes'

This is about whether staff talk formally about what is happening in their programs; and, if so, how regular these meetings are; and whether staff are comfortable raising issues that are problematic.

Jana Vikas continues to have monthly meetings with the programme managers to get an update of the progress of the programmes. While during the baseline there was a communication gap between the field staff and (middle) management, now by shifting its office from Bhubaneswar to the project area, the relationship with the field staff has strengthened and this is important for having critical reflection meetings.

In 2013 the organisation critically reflected on its strategic plan and did a SWOT analysis before formulating its new strategic plan for 2014-2018. In general, in the annual general meetings all staff gather to discuss their programme and review its progress. In the meetings the senior level management is approachable, responsive and supportive which motivated the staff to openly and freely discuss their problems and resolve those issues. Critical questioning across programmes activities is now encouraged and team members can openly discuss their problems and resolve those issues.

With the restructuring of the organisation seven thematic committees were formed. In the committee meetings problematic issues, grievances and needs are discussed and within 21 days efforts are made to address these issues. One of these committees is the staff council. Any staff issues are brought to the knowledge of the staff council. The committees meet at least once in a month but basically as per the need the team sits to handle the issues. These developments were the effect of the baseline evaluation report, feedback from Cordaid and the development and revision of JV's policies. The setting up Jana Vikas as an independent organisation, separate from Catholic Charity has been an outcome of these critical reflections.

Score baseline: 2.5

Score endline: 3.0 (slight improvement)

2.5. Freedom for ideas: 'Staff feel free to come up with ideas for implementation of objectives'

This is about whether staff feel that ideas they bring for implementation of the program are welcomed and used.

Jana Vikas' organogram has undergone a change. This has impacted the interaction among staff within the organisation. The staff of Jana Vikas expresses their views in their meetings and there is a participatory way of decision making. Staffs are part of issue identification, proposal development, planning, implementation and evaluation. There is a democratic way of expressing one's own idea in the planning and general meetings by staffs. Staff are not only asked to give opinions but are also involved in a participatory way of decision making.

There is no longer a communication gap between management and the field as the interaction between the field staff and the management has improved because the director spends time in the field. This further motivated the field staff to come with ideas in the meetings; their views are incorporated in the strategic planning. While drafting the strategic planning for 2014-18 field staff

shared their ideas on the local context and the views were incorporated. Leadership of organization has established open sharing platforms during meetings. Staff can approach and share their concern with Director at any point of time. While there continues to be some hierarchy in the organisation as per the organogram, there is continuous sharing and feedback giving among staff.

Score baseline: 2.5

Score endline: 3.0 (slight improvement)

Level of context awareness

2.6. System for tracking environment: 'The organisation has a system for being in touch with general trends and developments in its operating environment'

This is about whether the SPO knows what is happening in its environment and whether it will affect the organization.

Jana Vikas shifted its office to the project area and as a result the staff is better informed about the local context. This led to better communication with the beneficiaries and government line department in the area. Jana Vikas staff regularly visits the concerned government departments at local, district and state level, builds network with the officials and invites them for various activities taken up by the organisation. The organisation also participates in government programmes and in this way gets better informed about the local context and government policies. Jana Vikas became a member of Civil Society Forum on Human Rights which also attributed to their increased knowledge of the issues taken up by them.

Jana Vikas gets information about its operating environment from its partners in the alliance REHNUMA and has started to network with the private sector, which also helps in this. Jana Vikas piloted a program 'Safeguarding program participant policy' where they set up complaint boxes in the villages. This facilitated in getting information on the local context. Through the People Led Development workshop and the Civil Society Empowerment project, Jana Vikas also tracked its environment. All in all, in comparison with the baseline Jana Vikas now has more sources of information, no longer only local organisations, but they also use their networks and government institutions.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

2.7. Stakeholder responsiveness: 'The organisation is open and responsive to their stakeholders and the general public'

This is about what mechanisms the SPO has to get input from its stakeholders, and what they do with that input.

Jana Vikas is responsive to the opinions of their stakeholders. This manifests itself in different ways:

- The staff of Jana Vikas participated in the Ambedkar samata mancha at block level to get inputs and share their views.
- The project coordinators and the management meet every 1st week of the month and the core team meets once in two months to discuss and make a plan to address the inputs provided by the stakeholders and partners.
- With the support of Trocaire, Jana Vikas has undertaken a pilot study on "safeguarding Programme Participants Policy"(SPPP) to ensure the feedbacks, inputs, and opinions of the stakeholders. Complaint boxes in its operational area to get responses and feedback from the stakeholders are now also used. The information that is collected from the stakeholders, is incorporated in proposal development, planning and other strategic decision making processes.
- REHNUMA project alliance partners meet to share and discuss issues related to peace and justice.

During the baseline it was mentioned that Jana Vikas had to be very cautious as some groups may not respond very well to the organisation. This had much to do with the image of Jana Vikas being a catholic organisation that only represented and defended a particular group in the volatile

environment of Khamandhal. Now they have become a separate entity and are no longer tied to the Catholic Church. This has helped Jana Vikas to increase its involvement with the local community and stakeholders from different religious and caste groups.

Score baseline: 2.5

Score endline: 3.5 (improvement)

Summary of capability to adapt and self-renew

Jana Vikas has improved its M&E application. Their PME unit is now functional and meets quarterly to review the progress and discuss on strategic planning. Some efforts have been made to modify the MIS tool to link it to results based management (RBM) and to collect focused data from stakeholders. Jana Vikas still needs to improve its reports planning capacities in terms of timely submission of monitoring reports to Cordaid. Staff has received training in results based monitoring and skilled M&E staff has been hired. Field staff is trained in developing monitoring tools and documenting case studies. During the organisational assessment in July 2013, ASK noted that Jana Vikas needs a PME policy to help maintain the quality of the M&E process and involvement of community members which was negligible then. A start has been made during a workshop in February 2014, but this PME policy is still in the pipeline. Staff still needs to undergo training on M&E for better exercise in the field for data collection and analysis. Since the baseline, a separate PME unit has become operational to streamline the monitoring of the projects. In this way monitoring information is used operationally by the core team to guide suitable actions. However in the strategic plan for 2014 – 2018 among the issues that are highlighted that came out of the organization assessment done by ASK, “to improve the concrete level of planning and follow up on findings and recommendations of evaluations” is mentioned. This is an issue that Jana Vikas is working on and is trying to implement. While during the baseline there was a communication gap between the field staff and (middle) management, now by shifting its office from Bhubaneshwar to the project area, the relationship with the field staff has strengthened. In 2013 the organisation critically reflected on its strategic plan and did a SWOT analysis before formulating its new strategic plan for 2014-2018. With the restructuring of the organisation seven thematic committees were formed who discuss problematic issues, grievances and needs address them within 21 days. While there continues to be some hierarchy in the organisation as per the organogram, there is continuous sharing and feedback giving among staff. In comparison with the baseline situation Jana Vikas now has more sources of information to track its operating environment. They no longer only get this information through local organisations, but also use their networks and government institutions. Jana Vikas is responsive to the opinions of their stakeholders. This manifests itself in different ways. During the baseline it was mentioned that Jana Vikas had to be very cautious as some groups may not respond very well to the organisation. Now they have become a separate entity and are no longer tied to the Catholic Church, which has made it easier to involve stakeholders from different religious and caste groups.

Score baseline: 2.3

Score endline: 2.9 (slight improvement)

Capability to deliver on development objectives

Extent to which organisation delivers on planned products and services

3.1. Clear operational plans: 'Organisation has clear operational plans for carrying out projects which all staff fully understand'

This is about whether each project has an operational work plan and budget, and whether staff use it in their day-to-day operations.

In Jana Vikas, all the programmes continue to have a detailed implementation plan that is made by the staff at the start of the project. The progress of the project is monitored and reviewed in monthly meetings and core committee meetings. In each review meeting the targets are reviewed and new targets are given in accordance with the annual strategic plan. During the baseline the monitoring of operations was merely based on activities, attempts have now been made to implement results based

monitoring. Each project has its operational plan and budget. Jana Vikas practices total transparency and the approved proposal and budget are given to the staff to make operational plans fully understandable for staff. The CFA, however, finds that planning at Jana Vikas is still weak and the time plans are not always realistic.

Score baseline: 3.0

Score endline: 3.0 (no change)

3.2. Cost-effective resource use: 'Operations are based on cost-effective use of its resources'

This is about whether the SPO has the resources to do the work, and whether resources are used cost-effectively.

While Jana Vikas was already using its resources quite cost-effectively during the baseline, now Jana Vikas has shifted its office to the project area thereby reducing the travel cost from Bhubaneswar to the project area. To save costs staff also multi-task. When there are trainings on similar themes, these are conducted for all the staff together. When going on monitoring visits, staff visit multiple projects in the same area. The organisation also makes conscious use of water and electricity and has recycling processes in practice for certain items.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

3.3. Delivering planned outputs: 'Extent to which planned outputs are delivered'

This is about whether the SPO is able to carry out the operational plans.

At Jana Vikas, the programme staff and the field staff are still motivated to work for the local people of their community in a spirited and a coordinated manner and therefore try to complete the assigned tasks as much as possible. Moving the office to the project area further motivated staff and allowed for more active monitoring of the programme. Given the volatility of the external environment of Jana Vikas many a times, the organisation had to modify its plans in order to carry out relief measures, as a result of which planned outputs had to be surrendered. This also happened in the 2012-2014 period. Apart from its ongoing programme activities, Jana Vikas worked on emergency response issues, relief and rehabilitation as the people in its operational areas faced the Phailin cyclone. Its work during this period has helped JV build good rapport and trust within the operational areas and it allows them to carry forward their initiatives for successful implementation of their ongoing programmes.

Score baseline: 3.0

Score endline: 3.0 (no change)

Extent to which delivered products and services are relevant for target population in terms of the effect they have

3.4. Mechanisms for beneficiary needs: 'The organisation has mechanisms in place to verify that services meet beneficiary needs'

This is about how the SPO knows that their services are meeting beneficiary needs

Jana Vikas continues to rely to a great extent on its field staff to provide the organisation with information related to beneficiary needs. Formats and indicators of the MIS has been modified to have better and focused data from the field and to identify whether the services meet beneficiary needs. Also the community leaders began to maintain records of the services they receive and do not receive. The organization still conducts SHG meetings, midterm evaluations and focussed group discussions that are used by field staff to get better feedback.

In the pilot project of "Safeguarding programme participant policy," there is a complaint box set up by the organization in the project areas to receive feedback and grievances from the field and to respond quickly through local staff and management. Participants are asked to put forward their suggestion,

appreciation or grievances application or letter in this box, for people who are illiterate, they can file their complaint over the phone. All the complaints are registered and written in a register and the response is given to each person.

Score baseline: 3.0

Score endline: 3.25 (very slight improvement)

Level of work efficiency

3.5. Monitoring efficiency: 'The organisation monitors its efficiency by linking outputs and related inputs (input-output ratio's)'

This is about how the SPO knows they are efficient or not in their work.

During the baseline there was no dedicated M&E department, now the PME unit is operational. Staff has been trained in results based monitoring and has started with the performance matrix framework. There is however still no mechanism that links outputs to related inputs to monitor the organisation's efficiency.

Score baseline: 2.0

Score endline: 2.0 (no change)

3.6. Balancing quality-efficiency: 'The organisation aims at balancing efficiency requirements with the quality of its work'

This is about how the SPO ensures quality work with the resources available

During the baseline it was noted that Jana Vikas needed to expand its set of professional staff. Since then, the organisation has recruited two new skilled professional staff to ensure quality results. Furthermore with the support of Cordaid and through the handholding support by ASK, Jana Vikas tried to strengthen the capacity of the staff and management. Jana Vikas continues to have very motivated staff, so that even when working in an adverse situations like when the cyclone Phailin hit, they are committed to the marginalised and vulnerable population in the area and their work is being appreciated and the team is very well known in the community. The implementation of need based programmes has been influencing and motivating stakeholders at all levels. In this way Jana Vikas continues to seek to balance quality with efficiency through collaborating with the community, PRI members, government official and community block officers.

Score baseline: 3.0

Score endline: 3.0 (no change)

Summary of capability to deliver on development objectives

In Jana Vikas, all the programmes continue to have a detailed implementation plan that is made by the staff at the start of the project. Attempts are now made to monitoring the operations not only based on activities but based on results. The CFA finds that planning at Jana Vikas is still weak and the time plans are not always realistic. Jana Vikas has become more cost-effective in its resource use over the last two years because of reduction in travelling costs by moving the office to the project area, combining monitoring visits, giving joint trainings, making conscious use of water and electricity and recycling. Jana Vikas delivers most of its outputs because of its motivated staff, which was facilitated by active monitoring when they moved their office to the project area. Working in a volatile environment, their activities are often interrupted to carry out relief measures as was the case in 2013 with the Phailin cyclone. Jana Vikas continues to rely to a great extent on its field staff to provide the organisation with information related to beneficiary needs. A new initiative to find out whether services meet beneficiary needs is the complaint box in the pilot project on Safeguarding programme participant policy. Participants are asked to put forward their suggestions, appreciation or grievances application or letter in this box, everything is registered and the response is given to each person. There is still no system in place that links outputs to related inputs to monitor the organisation's

efficiency. Jana Vikas continues to seek to balance quality with efficiency through collaboration between its motivated and the community, PRI members, government official and community block officers, even in adverse situations.

Score baseline: 2.8

Score endline: 3.0 (very slight improvement)

Capability to relate

Level of involving external parties in internal policy/strategy development

4.1. Stakeholder engagement in policies and strategies: 'The organisation maintains relations/ collaboration/alliances with its stakeholders for the benefit of the organisation'

This is about whether the SPO engages external groups in developing their policies and strategies, and how.

During the baseline Jana Vikas consulted with its partner organisations like AFFRO, IDE, BASIX Indian-German Service and CRS and was involved in the Civil Society Network. These partnerships still continue. During the baseline it was also noted that JV needed to motivate its stakeholders to become involved in the planning and implementation process and to collaborate more with the government.

Now Jana Vikas takes inputs from its partners, target groups, government organisations at local, district and state level, and its REHNUMA alliance partners, before preparing their new strategic plan (2014-2018). Jana Vikas has improved its collaboration with the government as in the context analysis meeting of 2013 various stakeholders, partner NGOs, government line department, beneficiaries were asked to give their input on the activities of Jana Vikas and analyse the context. Due importance has been given to opinions and feedback of various stakeholders like the Forest department, the Health department, the Agriculture Department, PRI members, CBOs, SHG and Cooperative. Jana Vikas increases its interaction by sharing information through exchange of newsletter, IEC (Information Education and Communication) materials, diaries and annual planners.

Jana Vikas has improved their collaboration with the government over the last two years as during developing strategic plan of JV of 2014 – 2018, the local government officers from different departments: Block Development Officer, Project Administrator, Information Tribal Development Agency, Community Development Project Officer, Integrated Child Development Scheme, Medical Officer, Revenue Administrative Officer, Block Education Officer, District Welfare Officer, district collector, sub-collector, police authorities were asked to share their views, suggestions, statements and inspiring plans and ideas for better implementation of JV's programmes in order to achieve goal, objective, vision and mission of the organisation.

Score baseline: 3.0

Score endline: 4.0 (improvement)

Level of engagement of organisation in networks, alliances and collaborative efforts

4.2. Engagement in networks: 'Extent to which the organization has relationships with existing networks/alliances/partnerships'

This is about what networks/alliances/partnerships the SPO engages with and why; with they are local or international; and what they do together, and how do they do it.

Jana Vikas is still a member of the district level Phulbani Action Group (PAG) and the director became the treasurer of PAG. They also continue to collaborate with AFFRO, IDE, BASIX Indian-German Service, CRS, IDEI (International Development Enterprise India), Cordaid and ASK. They also continue to work with the human rights network called Civil Society Network. Its local partners still include as Pollishree, Pahara, Love India and Garden. New networks with NGOs that Jana Vikas has established over the last two years include Gramya Pragati, AJKA and MOOTH, NAWO, IWD, Sakal, Ajka, SFDC and so on. There are frequent meetings with these NGOs on local context and government entitlements. They became a member of a consortium known as DAVI (Dalit, Adivasi Vikas Initiative).

During the baseline the need to more proactively strengthen linkages with the government and work on (advocacy) interventions at the macro-level was flagged. Over the last two years Jana Vikas has worked on improving its network and linkages especially to mobilise resources and for advocacy initiatives. Some of the new partners are – Indo-Global Social Service Society (IGSSS) New Delhi, National Foundation of India New Delhi, YWCA Berhampur, Orissa, and the Civil Society Forum for Human Rights (CSFHR). They have formed linkages for their programmes with all 12 panchayats and 32 village ward members, Sarpanch, block chairman, local leaders, activists, civil society organisations, village level government officials like VLW (Village Level Workers), ASHA, Aganwadi workers (AWW), GRS (Gram Rozgar Sevak Sanghas), Gram Sabha, block level government officials like BDO (Block Development Officer), Tahsildar and other organisations like Antaranga Youth Clubs and with local schools. Along with this Jana Vikas has formed associations with national and state level organisations like the Henry Martyn Institute, Hyderabad, Free Press Media, AKS Vision, Chindu Group, Grassroots Comics, World Comic Arts, and Center for Social Justice, Loyola College Chennai, etc.

Jana Vikas has improved their collaboration with the government over the last two years as during developing strategic plan of JV of 2014 – 2018, the local government officers from different departments of BDO, ITDA, ICDS, Tahasil, Education, Primary Health Centre, DWO, district collector, sub-collector, local police station were asked to share their views, suggestions, statements and inspiring plans and ideas for better implementation of JV's programmes in order to achieve goal, objective, vision and mission of the organisation. In 2014 it became the alliance partner of REHNUMA in a project of the Ministry of Minorities Affairs (MoMA). There are altogether 11 partners in this project, who discuss, share and make strategic plans for capacity building of minorities and peace initiatives. It is supported by National Foundation for India (NFI) in collaboration with the Institute for Development Education and Learning (IDEAL) to pilot this project across MCDs (Minority Concentrated Districts) and blocks in 10 states of India where Entitlement Centres are already set up.

In the last two years, Jana Vikas has also strengthened its relationship with media by inviting them for various celebrations, programmes and events, allowing them to cover all major activities undertaken by them. They provide the media with various issues prevalent in the area, shared a documentary known as 'Barefoot'.

Score baseline: 3.0

Score endline: 4.0 (improvement)

Extent to which organisation is actively engaging with target groups

4.3.Engagement with target groups: 'The organisation performs frequent visits to their target groups/beneficiaries in their living environment'

This is about how and when the SPO meets with target groups.

During the baseline threats by religious extremists, inaccessibility and lack of proper transports hindered the frequent visiting of JV's target groups. Now there are no more religious threats due to involvement of community stakeholders of different religious groups in different platforms working for peace building and the Biju gaon gadi (bus line) was inaugurated by the state government in 2014 to connect inaccessible areas to towns.

The interaction with the target groups has improved as office and management staff moved to the project area. Through the SPPP program (Safeguarding program participant policy) the organization could place complaint boxes in different field areas to get feedback, suggestions, grievances etc. This process also improved the communication with the target group. Other opportunities for staff and the target group to meet were during the Ambedkardkar samata mancha at block level which provided a platform to discuss several issues, during the cultural meet in district level organised to revive traditional culture and peace, a seed mela (festival) where different target groups participated and interacted, peace day celebration and women's day celebration where 200 women participated

In October 2013 Orissa was severely hit by the cyclone Phailin. During the recent humanitarian emergency assistance that Jana Vikas provided after the cyclone their target group was the direct participant in the beneficiary selection and distribution process so that right beneficiaries were

selected and benefitted. Jana Vikas actively worked for the victims irrespective of caste and religion through relief and rehabilitation activities in collaboration with government line departments and other civil society organisations. It caused harmony and integration among different ethnic groups in Kandhamal. This not only enhanced the visibility of the organisation but it helped improve relationship with government line departments. Besides this convergence with the government programme helped the community to access their entitlements. This has created confidence among the existing leaders (traditional leaders) to once again exercise their leadership and regain their self-esteem which they had lost. They have once again taken control over forest and forest products. Still communities' needs to go long way to go to market their produce in remunerative market and earn deserved amount.

Jana Vikas is working towards ensuring handholding support to communities working towards accessing these facilities by creating awareness among them. It was their work of efforts to re-establish and revive the SHGs that led to increasing confidence among the staff members. Women have actively participated for the first time in panchayat and Gram Sabha the lowest decision making body of the government for village development.

Score baseline: 3.0

Score endline: 4.0 (improvement)

Level of effective relationships within the organisation

4.4. Relationships within organisation: 'Organisational structure and culture facilitates open internal contacts, communication, and decision-making'

How do staff at the SPO communicate internally? Are people free to talk to whomever they need to talk to? When and at what forum? What are the internal mechanisms for sharing information and building relationships?

Over the last two years there has been an organisational restructuring. Jana Vikas' management has consciously formed different committees (the Core committee, Grievance committee, Gender and sexual harassment committee, Staff council and Resource mobilization committee, Procurement committee) to oversee the administrative processes and implementation of policies of the organisation. These committees take decisions on important issues. Grievances of the staffs can be easily brought to the notice and addressed within 21 days. Monthly review and planning meetings, quarterly meetings, core committee meetings and once in every two months facilitated the staff and the leader to interact frequently and freely. Shifting of the staff and the office to the project area enhanced the interaction among the field staff and management. As the director spends time in the field and in the office the interaction between the staff and the director has also improved.

While during the baseline there was a definite hierarchy amongst the staff which had the result that some staff did not feel free to speak out in front of higher level staff, now JV has created space and scope for all level of staff to interact without experiencing hierarchy, except for the hierarchy laid down in the organogram. A friendly working culture has been developed in the organisation as well as in at the community level working fields where all staff are equally respected. With the better available facilities of internet and mobile communication the interaction between the staff became more frequent and this built their relationships.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

Summary of capability to relate

Jana Vikas now takes inputs from its partners, target groups, government organisations at local, district and state level, before preparing their new strategic plan (2014-2018) and has improved its collaboration with the government. They improved their proactive collaboration with the government through asking the input of local government officers for the strategic plan and by becoming involved in the REHNUMA project of Ministry of Minorities Affairs (MoMA). Jana Vikas has strengthened and expanded its network with many local level organisations but has also to partner up with national level organisation for advocacy initiatives. In the last two years, Jana Vikas has also strengthened its

relationship with media by inviting them for various events, allowing them to cover all major activities undertaken by them. It is easier for JV to visit their target groups as there are no more religious threats due to involvement of community stakeholders of different religious groups in different platforms working for peace building and a bus line was inaugurated by the state government in 2014 to connect the inaccessible areas to town. The interaction with the target group also improved because JV's office moved to the project area and Jana Vikas worked together with their target group to provide humanitarian emergency assistance after the cyclone Phailin. Over the last two years there has been an organisational restructuring and Jana Vikas' management has consciously formed different committees to oversee the administrative processes and implementation of policies of the organisation. While during the baseline there was a definite hierarchy amongst the staff, now JV has created space and scope for all levels of staff to interact without experiencing hierarchy, except for the hierarchy laid down in the organogram. With the better available facilities of internet and mobile communication the interaction between the staff became more frequent and this built their relationships.

Score baseline: 3.0

Score endline: 3.9 (improvement)

Capability to achieve coherence

Existence of mechanisms for coherence

5.1.Revisiting vision, mission: 'Vision, mission and strategies regularly discussed in the organisation'

This is about whether there is a vision, mission and strategies; how often staff discuss/revise vision, mission and strategies; and who is involved in this.

Jana Vikas visualises a holistic, sustainable and developed society where people live united in diversity based on social and human values of justice and equity. The mission of Jana Vikas is to sensitize, organize, enable, empower and develop the poor and the marginalized. This has not changed since the baseline. During the baseline future plans were not discussed with (field) staff and discussions on vision, mission and strategies were not conducted on a regular basis. Now new staff are given orientation on the organisational vision, mission and strategy through an induction process using the local language and revisiting the organizational vision, mission is done annually and its strategy is revisited half yearly. A new strategic plan has been developed for 2014-2018 in alignment with its vision and mission. For this Jana Vikas asked the Association for Stimulating Know How (ASK) to conduct a situational analysis and context analysis to understand the progress and change in the environment in 2013. All in all, Jana Vikas has always tried to be relevant and effective in its work and working style. As a result Jana Vikas continuously reflects, analyses, decides and acts upon its decisions to become a strong organisation. In line with this, a Strategic Planning process was carried out in August 2013 in which all staff was involved. In this strategic plan it is laid out that Jana Vikas will continue with its role in direct implementation of projects and programmes, but also work towards strengthening its role as a capacity building organisation and becoming a resource organisation. The focus of Resource organisation would be to enhance NGO partnership implementation, cultural emancipation and preservation of indigenous practices.

Score baseline: 2.5

Score endline: 3.5 (improvement)

5.2.Operational guidelines: 'Operational guidelines (technical, admin, HRM) are in place and used and supported by the management'

This is about whether there are operational guidelines, which operational guidelines exist; and how they are used.

During the baseline policies on HR, gender, admin, technical and finance these policies were not approved by the Governing Board and were not implemented. Now JV has a revisited policy on HR, Finance, Gender and has made new policies like Sexual harassment policy at workplace, Child protection policy, PME policy, Disability safeguarding policy, Environment protection policy. There has

been a workshop on Policy Development which was organised at K. Nuagaon, facilitated by ASK India, New Delhi in 21-26 February, 2014. The external resource person trained the staff to review and revise the policies on Human Resource, Gender, Finance and HIV/AIDS. The staff was capacitated to develop new policies such as, Child Protection Policy, Disability Policy and Environment Policy. New Committees were also setup for better and faster implementation of the projects. The PME policy has been developed but it needs to be further refined as per the current contextual needs and emerging issues. Informally the approvals for these new and revisited policies have been obtained but the formal approval is still in process. The HR, grievance and finance policies have been in track of effective implementation. Some of the senior staff and experienced professionals have managed to exercise the policies along with their individual project programs. All policies will be published in Oriya and English and it is mandatory for all the staff to go through these policies and to exercise them where needed. Jana Vikas has also looked into the social security of the staffs by implementing Employment Provident Fund and Life Insurance.

Score baseline: 3.0

Score endline: 3.5 (slight improvement)

Level of coherence of various efforts of organisation

5.3. Alignment with vision, mission: 'Projects, strategies and associated operations are in line with the vision and mission of the organisation'

This is about whether the operations and strategies are line with the vision/mission of the SPO.

Jana Vikas' strategies and project activities are still in line with the organisation's vision and mission. The locally recruited staff at the field level are very experienced, focussed and motivated in their work to improve the lives of the people in their communities.

Score baseline: 4.0

Score endline: 4.0 (no change)

5.4. Mutually supportive efforts: 'The portfolio of project (activities) provides opportunities for mutually supportive efforts'

This is about whether the efforts in one project complement/support efforts in other projects.

Jana Vikas' projects continue to be complementary: efforts in one project support those in another project. For example the project "Socio-economic development through civil society empowerment" has helped the organization to understand the in-depth function of the governance systems at the grassroots and the reasons for lack of access to government provisions and programs for the communities. This has helped the staff to understand the contextual issues better and incorporate it in the new strategic planning for 2014-18. Good practices in one programme are replicated in other programmes. The staff learns about the best practices and the failures of the programs during the general body meetings and carries forward the good ones. Establishment of SPPP (Safeguarding program participant policy) project helped learn the method of setting up complaint boxes among the target population so to collect proper feedback and report from the beneficiaries. This can be used in the strategic planning for other programmes. Jana Vikas' main approach is empowerment work but during emergencies (natural or manmade calamities) immediate support is required. Only in such cases, Jana Vikas will get involved in welfare or relief activities.

Score baseline: 4.0

Score endline: 4.0 (no change)

Summary of capability to achieve coherence

Jana Vikas now gives new staff orientation on the organisational vision, mission and strategy through an induction process using the local language. Revisiting the organizational vision and mission is done annually and its strategy is revisited half yearly. A new strategic plan has been development for 2014-

18 in alignment with its vision and mission. In the strategic planning process which was carried out in August 2013, all staff was involved. Jana Vikas has had a workshop on policy development. In this process they revisited the HR, gender, finance and HIV/AIDS policy and created new policies on child protection, disability, environment and PME. All these policies are approved informally but the formal approval is still in process. Jana Vikas has improved upon the social security of its staff. Jana Vikas' strategies and project activities are still in line with the organisation's vision and mission. Jana Vikas' projects continue to be complementary: efforts in one project support those in another project. Jana Vikas' main approach is empowerment work but during emergencies (natural or manmade calamities) immediate support is required. Only in such cases, Jana Vikas will get involved in welfare or relief activities.

Appendix 4 Results - key changes in organisational capacity - general causal map

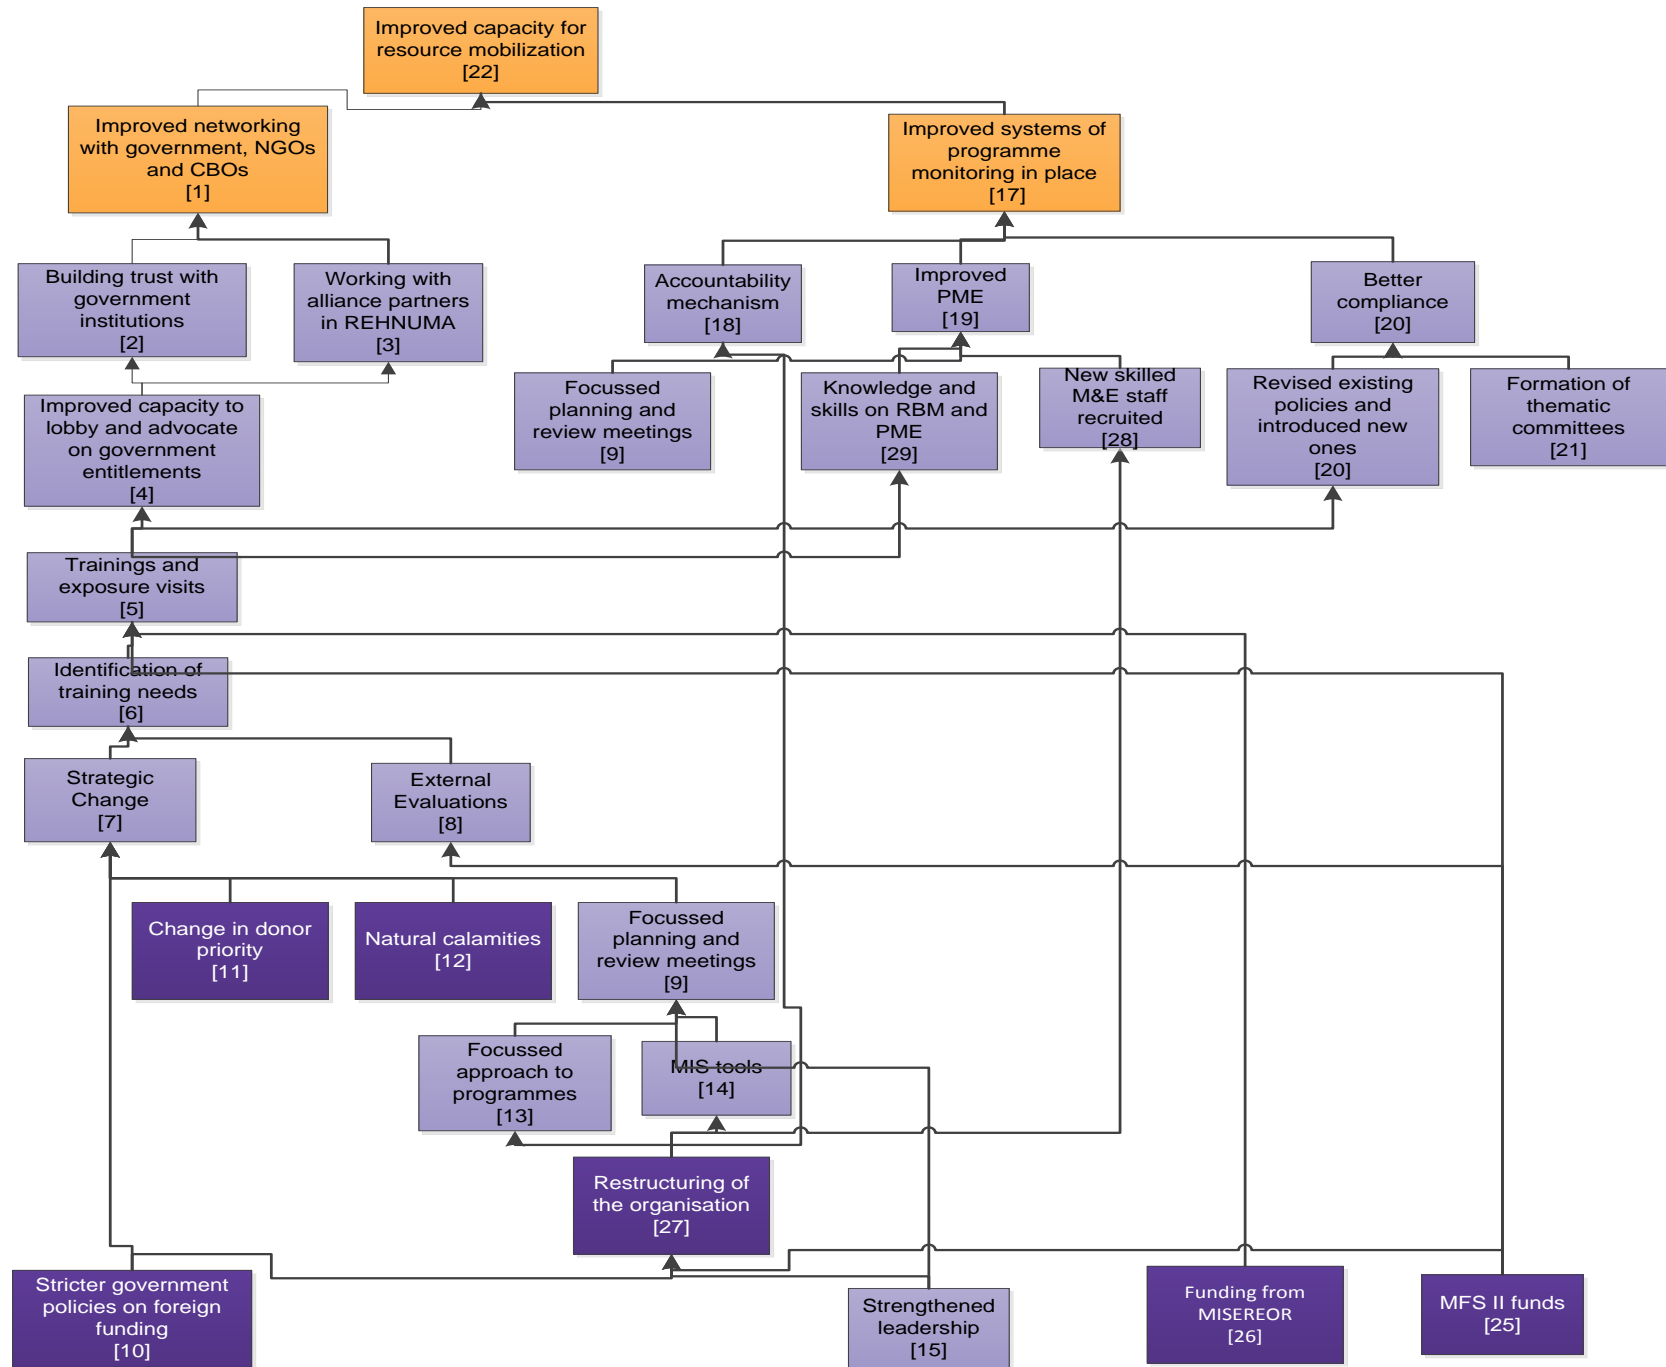

Below you will find a description of the general causal map that has been developed for the SPO during the endline workshop. Key changes in organisational capacity since the baseline as identified by the SPO during this endline workshop are described as well as the expected effects and underlying causal factors, actors and events. This is described in both a visual as well as a narrative.

The evaluation team carried out an endline assessment at Jana Vikas (JV) from 21 to 22 August 2014. During this workshop, the team made a recap of key features of the organisation in the baseline in 2012 (such as vision, mission, strategies, clients, partnerships). This was the basis for discussing changes that had happened to the organisation since the baseline. According to staff present at the endline workshop Jana Vikas has improved its capacity to mobilize resources [22] in the last two years since the baseline. This was primarily due to the following key changes:

1. Improved networking with government, NGOs and CBOs [1]
2. Improved systems of programme monitoring in place [17].

During the endline workshop it was discussed what the reasons were for each of these organisational capacity changes. The two main organisational capacity changes are described in the light orange boxes. Light purple boxes represent factors and aspects that influence the key organisational capacity changes (in light orange). Key underlying factors that have impacted the organisation are listed at the bottom in dark purple. The narrative describes per organisational capacity change, the contributing factors as described from the top down. The numbers in the visual correspond with the numbers in the narrative.

Since its inception, Jana Vikas has been committed to its mission to inform, organise, enable, empower and develop the poor and the marginalized, especially the Adivasi, Dalit and OBCs, to strengthen their livelihood. During the 2008 Kandhamal communal riot and post-riot period Jana Vikas has undergone severe challenges. The crucial aspect of this communal riot was that Jana Vikas was perceived as a religious organisation, working for the benefit of a particular community. It took several years after the riots to regain the trust of the community and embark on strengthening the organisation. Over the last two years it has been actively working on different aspects to bridge the trust gap through peace building activities, livelihood promotion and improved capacity to mobilize resources [22]. This is substantiated by the project completion report 2010-2013 submitted to Cordaid and its strategic plan for 2014-18 [[Source: CORDAID COMPLETION REPORT-2010-2013, strategic plan_Edited Version](#)].

Jana Vikas' improved capacity for resource mobilisation [22] is evident from the fact that within last two years they managed to get new funders such as the National Foundation of India, Young Women Christian Association, and Indo-Global Social Service Society (IGSSS). There are some more funders that have been approached and for which proposals are in the pipe line: NABARD, KNH Germany, Restless International and the Ministry of Minority affairs on Projects on minorities. The following projects of Jana Vikas are funded by the following new funders:

- National Foundation of India (NFI): Since 2014 the National Foundation of India is funding Jana Vikas to implement the pilot project called REHNUMA. The objective of this project is to create entitlement centres to provide the minority communities with information and guidance on government entitlements and schemes of the government and give them handholding support to access these benefits [Source: 5c endline self-assessment of the SPO on organisational capacity - management_India_JanaVikas, REHNUMA CENTRE]. This project was acquired through Jana Vikas' networking with the Ministry of Minority Affairs [2].
- Indo-Global Social Service Society (IGSSS): Jana Vikas undertook successful relief measures in the Phailin cyclone affected areas. It provided a clear picture of the contextual issues and enabled the staff to develop proposals for funds for the rehabilitation of the victims and their sustainable livelihood aspects. IGSSS was one of the few funders who responded to the proposal. Its vision is to build resilient and empowered communities in the most vulnerable regions, accessing services and entitlements, ensuring dignity and protecting lives, livelihoods and assets in assets in natural disaster and conflict situations. Since 2014 Jana Vikas is funded by IGSSS for the Disaster management and risk reduction project [Source: Annual-Report- 2013-14 IGSSS].
- Young Women Christian Association: YWCA of Berhampur is working on Sexual and Reproductive Health Rights (SRHR) at Kandhamal in collaboration with Jana Vikas since January 2014. The vision and objective are to establish peace and communal harmony amidst the varied communities. The project addresses the issues of Reproductive Health Care and Rights, Adolescent Health, dealing with cross cutting issues, especially on women trafficking, programmes on self-determination, economic and socio-cultural empowerment [Source: YWCA PROJECTS].

Jana Vikas' improved capacity for resource mobilisation is primarily because of its improved networking with government, NGOs and CBOs [1] and improved systems of programme monitoring in place [17] [Source: Endline Evaluation Workshop 2014, Six Month Reports – 2014, 5c endline self-assessment of the SPO on organisational capacity - management_India_JanaVikas, 5c endline self-assessment of the SPO on organisational capacity – admin HRM staff_India_JanaVikas]. Jana Vikas was able to get these projects funded by new donors because on the one hand their improved networking [1] which brought them in contact with different government institutions, NGOs and CBOs to work with, and on the other hand by improved programme monitoring systems in place [17]. The training on PME [5] specifically addressed this issue specifically as it helped staff to develop results based and systematic project proposals to approach new donors. These changes are further explained below.

1. Improved networking with government, NGOs and CBOs [1]

It is evident from the mid-term review report of the Community Managed Disaster Risk Reduction project, that Jana Vikas has strengthened its network/linkages with government institutions at local, state and national level and also with other likeminded NGOs like PAG (Phulbani Action Group), DAVI (Dalit, Adivasi Vikas Initiative) and the alliance partner of REHNUMA⁸ [Source: Cordaid completion report 2010-2013 and self-assessment sheet programme staff perspective, CORDAID COMPLETION REPORT-2010-2013, REHNUMA CENTRE, 5c endline self-assessment of the SPO on organisational capacity -programme staff_India_JanaVikas]. Networking with government, NGOs and CBOs [1] improved because of building trust with government institutions [2] and working together with alliance partners of REHNUMA [3]. These are further described below.

- **Building trust with government institutions [2]:** In the post-riot period the trust relationship between Jana Vikas and the government institutions had been greatly affected in an adverse way

⁸ The Ministry of Minorities Affairs (MoMA) started a multi-sectorial development programme (MSDP) in 2014 called REHNUMA (a Minority Concentrated Districts (MCDs) project).

[Source: 5C_baseline_report_India_JanaVikas_12122012]. Over the period JV continuously made efforts to restore trust relationship with government institutions at local, state and national level. In 2013 it developed a specific strategy based on the results of the context analysis done by ASK in July 2013 and NWO/Wotro MFS II 5C baseline report comments to strengthen relationship with government institutions. The strategies are to pay regular visits to the concerned government departments and build relationships with the officials, invite them for various activities taken up by the organisation, to be part of different government department committees, take up small or big government projects, participate in government programmes, etc. [Source: Report on Organizational Assessment and Context Analysis Jan Vikas 08.07.2013]. In October 2013 Orissa was severely hit by the Phailin cyclone and this disrupted both human life and property. Jana Vikas actively worked for the victims irrespective of caste and religion through relief and rehabilitation activities in collaboration with government line departments and other civil society organisations. It caused harmony and integration among different ethnic groups in Kandhamal. This not only enhanced the visibility of the organisation but it helped to improve the relationship with government line departments. Most important in this was the existing perception that JV worked for one particular community alone. Sometimes relief works done by Jana Vikas in post natural disaster periods improve the popular perception and the government's perception of Jana Vikas. Along with civil society organisations Jana Vikas initiated in forming Ambedkar Samata Mancho at block levels to address the issues and needs of various communities for peace building. This further enhanced the trust of the government at local, district and state levels. The improved relationship is evident from the fact that Jana Vikas sought inputs from the local government line departments and incorporated their views while preparing the strategic plan for 2014-18 [Source: 5c endline self-assessment of the SPO on organisational capacity - programme staff 2_India_JanaVikas, 5c endline self-assessment of the SPO on organisational capacity - programme staff_India_JanaVikas, Jana Vikas Project_Proposal-2013-2016 (1)]. In June, 2013, the state government had promulgated the Odisha Self-Help Co-operatives Ordinance 2013 by repealing Odisha Self-Help Cooperatives Act, 2001, and bringing all cooperative societies under Orissa Co-operative Act, 1962. This was done in order to regulate all non-banking financial companies, including the co-operative credit societies operating under the Orissa Self-Help Co-operative Act, 2001. Several non-banking financial companies, including co-operative credit societies operating under the 2001 Act had been found to be misappropriating/cheating depositors' money. There was public outcry due to these fraud. Therefore government decided to repeal the act. With the repeal of the 2001 Act, the government was trying to increase its control over these co-operative credit societies and curb their independent functioning. With the repeal of the 2001 Act, the government increased its control over these co-operative credit societies and curbed their independent functioning. For example, the business transactions of these societies would be regularly audited either by a panel of independent auditors or by government auditors on a regular basis, amend their laws and report to the Registrar of Co-operative Society within three months, election of its board members in every five years failing which the Board of Directors of such Co-operatives shall stand dissolved and the management of the Co-operatives shall vest in the Registrar of Co-operative Societies to amend such changes in the organisations as per the provisions of the Odisha Cooperative Societies Act, 1962. This Act was challenged in the high court of Odisha and the court put a stay on it. However, on 12th September 2013 it vacated the stay making the Act functional. Following this Act Jana Vikas re-registered its cooperatives, conducted regular audit of business transactions of the cooperatives by government authorities or by a panel of independent auditors and submitted the progress reports to the government on a regular basis which facilitated the organisation to have transparent management systems in place, regular financial auditing and monitoring and participation of members in decision making process. Such steps increased Jana Vikas' visibility as a transparent and efficient organization and interaction with local and state level government officials increased manifolds [Source: EDITED CORDAID REPORT to be sent].

- **Working together with alliance partners of REHNUMA [3]:** The Ministry of Minorities Affairs (MoMA) started a multi-sectorial development programme (MSDP) in 2014 called REHNUMA, a Minority Concentrated Districts (MCDs) project. The National Foundation for India (NFI) in collaboration with the Institute for Development Education and Learning (IDEAL) as technical partners envisaged to pilot this project across MCDs and blocks in 10 states of India where Entitlement Centres are being set up. There are 13 partners across the country, who have come together to create awareness among the minorities and provide information about government

schemes and entitlements for minorities. Under this umbrella the objective is to do research, map and list minorities, litigation and grievance redressal services, capacity building of minorities, monitoring, documentation and recommendations, so that social justice is delivered to the minorities. [Source: REHNUMA CENTRE, 5c endline self-assessment of the SPO on organisational capacity - programme staff_India_JanaVikas, 5c endline self-assessment of the SPO on organisational capacity - management_India_JanaVikas].

Building trust with government institutions [2] and working together with alliance partners of REHNUMA [3] were both due to Jana Vikas' improved capacity to lobby and advocate on government entitlements [4].

- **Improved capacity for lobby and advocate on government entitlements [4].** Jana Vikas has worked and strengthened its advocacy and lobby capacity from micro to macro level in the last two years. While implementing the Civil Society Empowerment project, the staff could get better knowledge and understanding on government policies and programs. This also informed them about the bottlenecks of the system. As a result it encouraged them to make strategic plans to create awareness among the communities and facilitate them to avail the provisions. There is frequent interaction among the staff of Jana Vikas, government line departments and other civil society organisations [Source: 5c endline self-assessment of the SPO on organisational capacity - programme staff_India_JanaVikas, CORDAID COMPLETION REPORT-2010-2013]. Following are some of the lobby and advocacy activities carried out by Jana Vikas:

- The Government of India enacted the Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA) and Forest Rights Act (FRA) for the poor, which guaranteed 100 days of wage labour and rights and entitlement of livelihood to people residing in or dependent upon forests, respectively. People from the community are unable to access the schemes under these Acts either due to ignorance or gaps in the governance process. These gaps include an inappropriate system to monitor whether the schemes are reaching the target groups. Moreover, mismanagement in the government institutions at the grassroots level due to corruption affects the delivery of the schemes. Finally there is a lack of initiative by the government institutions at the grassroots level to create awareness among the people regarding various government schemes. Jana Vikas staff has created awareness through workshops and provided handholding support to the communities in accessing facilities under these Acts. Also with the active involvement of Jana Vikas staff government officials ensured their duty and responsibility in providing justice to the people. For instance, people could access jobs for 100 days under this program [Source: CORDAID COMPLETION REPORT-2010-2013, Six Month Reports – 2014, MGNREGA-COMPENSATION, MGNREGA-DUE PAYMENT, People work under MGNREGA Scheme, Case study].
- Under the Forest Rights Act (FRA) the tribal people can get patta (legal land title) to cultivate and construct houses in the forest land. The government also assists financially to construct houses. Jana Vikas staff with the help of village development committees (VDC) has created awareness and provided handholding in filing application, filing Right to Information (RTI), that is submitting an application in the government institutions to access information, and getting the money sanctioned.⁹ RTI is an act of the parliament of India under which the citizens of the country can have access to information from the institutions under the control of public authorities. This is in order to provide transparency and accountability in the working of the government institutions [Source: CORDAID COMPLETION REPORT-2010-2013, Six Month Reports – 2014, RTI- Response, RTI-1.a, RTI-1.c].

Improved capacity for lobby and advocacy on government entitlements [4] are due to training and exposure visits [5] [Source: 5c endline self-assessment of the SPO on organisational capacity - programme staff_India_JanaVikas].

In the last two years the staff has undertaken different capacity building trainings [5] supported by Cordaid under MFS II [25] and by MISEREOR [26]. The following are some of the trainings that led to JV's improved capacity for lobby and advocacy on government entitlements [4]:

⁹ This is evident from the RTI filled, and Baleswar Kanhar from village Ladumaska, Nuapadar got benefit under this act.

-
- **Training on Lobby Right to Information Act:** In 2012 a training on Lobby Right to Information (RTI) Act was organised by Jana Vikas with the help of an external resource person from ASK India and funded by MFS II, Cordaid [25]. As a result of this training staff emerged as RTI activists who regularly apply for information at government offices for making the services transparent and accountable to the people. The village development committee could ask the copies of Gram Sabha and Polli Sabha (local government administrative bodies). In this way these local government administrative bodies reach out to the grassroots level for decisions on village development with consensus from their communities. The training imparted knowledge to staff and improved their confidence to lobby and advocate. Five information centres at 5 Gram Panchayats have been setup to facilitate the communities to access different news, forms, current affairs and information on schemes [Source: CORDAID COMPLETION REPORT-2010-2013].
 - **Training in Government Entitlements:** On 22nd November 2013 Jana Vikas organised one day training programme in Government Entitlements for the staff which was facilitated by an external resource person. This training was funded by MFS II, Cordaid [25]. The objective of the workshop was to train the staff on how to make people aware of government schemes, benefits of the schemes, how to apply the schemes etc. This resulted in the staff having an improved understanding of various government entitlements and their benefits for the people. This further aided JV's staff to develop a clear strategy for lobby and advocacy on government entitlements [Source: 5c endline self-assessment of the SPO on organisational capacity - field staff_India_JanaVikas, 5c endline self-assessment of the SPO on organisational capacity - admin HRM staff_India_JanaVikas, discussed during endline evaluation 2014].
 - **Internal exposure on People Led Development (PLD):** PLD is a process where the marginalized communities are strengthened to be the stewards of their own developments. In this process Jana Vikas is working to stimulate the communities, motivate, mobilize, organize, and capacitate to empower them. Theatre promotion is one of the medium through which they mobilize, motivate and create awareness among people on PLD. The success of this program brought other dioceses of India to learn from Jana Vikas. It has developed a module to help others learn the model. In one of the meeting of the dioceses the director of Jana Vikas facilitated all the participants on PLD. This resulted in the visibility and internal exposure of Jana Vikas and contributed to JV's improved capacity for lobby and advocacy on government entitlements. This exposure was funded by MISEREOR [Source: strategic plan_Edited Version, Progress report may - oct 2013, 5c endline self-assessment of the SPO on organisational capacity - management_India_JanaVikas].

Jana Vikas' staff attended these trainings after the identification of training needs [6]. Jana Vikas undertook a need assessment of the staff on the basis of the context analysis that ASK did for JV on July 2013. During the organizational assessment and context analysis prior to the drafting of the new strategic plan for 2014-18 the organisation identified gaps and the need of training for its staff [Source: strategic plan_Edited Version, 5c endline self-assessment of the SPO on organisational capacity - program staff_India_JanaVikas].

These trainings needs assessment [6] was done in light of the strategic changes [7] the organisation made in 2013 and the feedback they received from donors and external evaluators [8]. These are further discussed below.

- **Strategic change [7]:** Jana Vikas in its strategic plan for 2007-2012 had planned to be an implementing organization (which refers to implementation of various projects and programs for the development of Kandhamal people) and as a resource centre to provide capacity building support to other grassroots organizations such as CBOs and NGOs. Due to the 2008 Kandhamal riot the organisation could not achieve its strategic plan. Since the baseline on August 2012, Jana Vikas has been working to revive and reorganize its work to implement its programs successfully. During the last two years Jana Vikas successfully implemented its programmes which rejuvenated the staff. After its success as an implementing organisation it made a strategic change in 2014 to focus in strengthening the organisation to be a resource centre. By being a resource centre it wants to provide capacity building support to partner organisations such as CBOs and NGOs in the grassroots level, doing research on various issues to better identify and address the problems, creating funding

opportunities or channelling funds for CBOs and NGOs through networks, etc. While assessing the context and drafting the strategic plan it identified the requirements of the staff in terms of capacity to achieve these objectives. Therefore, on August 2013 Jana Vikas started the process of drafting a new strategic plan for 2014-2018. In this strategic plan they clearly planned the capacity building of the staff to strengthen the organisation as a better implementing organisation along with a resource centre [Source: strategic plan_Edited Version, 5c endline self-assessment of the SPO on organisational capacity - program staff_India_JanaVikas, 5c endline self-assessment of the SPO on organisational capacity - management_India_JanaVikas, 2014-03-26 5c endline_assessment sheet_Dutch co-financing organisations_India_JanaVikas_Cordaid_NB]. The strategic change [7] for Jana Vikas was due to stricter government policy on foreign funding [10], a change in donor priority [11], natural calamities [12] and focussed planning and review meetings [9]:

- *Stricter government policy on foreign funding [10]*: the government of India in general admits that NGOs are essential for the extended work of the government to provide feedback and to serve as harbingers of change which are vital for economy. However, the government perceives that some NGOs are engaged in stalling development activities in the country which negatively affects the GDP growth of the country. Therefore, stricter policies have been brought by successive governments to restrict foreign funding to the NGOs in India. This led Jana Vikas to make strategic changes [7] so that it could profile itself as a secular organisation and to leverage more funds to be self-sustained.
 - *Change in donor priority [11]*: Internationally donors are revising their funding policies and shifting their priorities. Most of the donors have changed their priority and are now funding agriculture based programs. In the light of the changing donor priority and other contextual issues Jana Vikas has changed its strategic plan. In the strategic plan for 2014-2018 it has emphasised the livelihood programme which includes agriculture and other. It has planned to strengthen optimal utilisation of the natural resources/forest products for sustainable livelihood, enhance productivity of agriculture and other allied agriculture such as guttery, fishery, poultry, piggery; revival of traditional agricultural system, sustainable use of organic farming practices, marketing linkages of organic product, promotion of grain bank, seed bank, encourage the farmers for herbal garden and linkage in the market and other business groups etc.
 - *Natural calamities [12]*: Since 2011 Orissa was shattered down twice with severe floods and once with the cyclone Phailin. This caused massive loss of property and human lives. The Kandhamal district is situated 3000 feet above the sea level, however due to heavy rain and wind (at a speed of around 200 kmph) caused huge destruction in this district both in terms of property and human lives. In the post Phailin period Jana Vikas actively participated in the relief and rehabilitation works. This resulted in improved trust relationships with government and also helped Jana Vikas to profile itself as a secular organisation. This also caused Jana Vikas to make a strategic change to focus on the livelihoods of the affected people. New funders could be approached for the relief and rehabilitation work [Source: Progress report may - oct 2013, 5c endline self-assessment of the SPO on organisational capacity - programme staff_India_JanaVikas, Phailin Achievement Meet Report].
 - *Focused planning and review meetings [9]*: In the Annual General meetings all the staff of Jana Vikas gather to share their achievements, review the progress and discuss the strategic plan in alignment with the mission and vision. This focused planning, review and monitoring of the programs strengthened organisational capacity and presented a better picture of the local contextual issues which further helped in strategic planning for better deliver the objectives. It was during these meetings that Jana Vikas was able to work on its new strategic plan for 2014-2018 [Source: 5c endline self-assessment of the SPO on organisational capacity - management_India_JanaVikas, 5c endline self-assessment of the SPO on organisational capacity - Program staff_India_JanaVikas, Endline evaluation Workshop 2014]. Planning and review meetings became more focussed [9] due to a focussed approach towards programmes [13], MIS tools [14] and strengthened leadership [15].
- **Focused approach toward programs [13]**: Since the baseline the approach towards implementing the programmes became more focussed. This was because of the restructuring of the organisation [27]. The decision of the leader to shift the office and the core staff to the project area not only motivated the field staff but also strengthened the implementation process. With the restructuring of the organogram and setting up of new departments there is clarity of roles and

responsibilities of the staff to carry out the program. The monitoring and reporting structure has been streamlined which further improved the accountability. Though hierarchy still continues, the approachability of the staff with the senior management has increased. With the establishment of a core team of staff from different departments, sharing and learning from each other and also decision making processes became easier and faster. This is evident from the fact that the staff has better relationships with the government line departments. Earlier communities couldn't access government schemes either due to ignorance and corruption but now they could access it and women have actively participated for the first time in panchayat and Gram Sabha because of Jana Vikas' intervention. Also in another instance it was difficult to stage any public program at phiringia head quarter as there were challenges in holding any program but with the intervention of Ambedkar Samata Mancha it has come down to the level of understanding. This resulted in free mobility of the staffs to carry out the programs [Source: CORDAID COMPLETION REPORT-2010-2013, Progress report may - oct 2013, Endline Evaluation Workshop 2014, 5c endline self-assessment of the SPO on organisational capacity - programme staff_India_JanaVikas, 5c endline self-assessment of the SPO on organisational capacity - management_India_JanaVikas].

- **MIS tools [14]:** The MIS has been strengthened by the restructuring of the organisation [27]. In the restructuring process a separate PME unit, HR unit, Finance unit and Service unit were created which were all under one PME unit during the baseline (August 2012). Also new skilled staff were hired for the PME unit [Source: 5c endline self-assessment of the SPO on organisational capacity - management_India_JanaVikas, JV-ORGANOGRAM-FINAL, discussion during endline evaluation workshop 2014]. Cordaid provided funding to establish separate units under MFS II [25]. Through capacity building training on PME, the staff were further capacitated to fine-tune the MIS formats and indicators to collect focused data from the field. Due to better data collection and analysis of the data the monthly, quarterly and annual review and planning meetings improved [9] [Source: 5c endline self-assessment of the SPO on organisational capacity - programme staff_India_JanaVikas, 5c endline self-assessment of the SPO on organisational capacity - management_India_JanaVikas, Report on PME].
- **Strengthened leadership [15]:** In 2013 Jana Vikas got separated from the Catholic charity and became a separate entity. This was primarily done to profile Jana Vikas as a secular organisation in relation to the riot prone area and following the government's stricter policies towards NGOs [10] which affected restructuring of the organisation [27]. There has been a reshuffle in the board members and the organisation got restructured [27]. The director took initiative [15] in decentralizing the organisational structure by establishing separate departments and putting each department under a program manager [27]. The finance and HR departments are under the assistant director who reports directly to the director. This resulted in a clear division of responsibility and accountability. The core team was established with six members including the director. This showed the strengthened leadership which resulted in faster decision making and more focussed planning and review meetings [Source: compare between present and previous organogram, JANA VIKAS PROJECT_PROPOSAL-2013-2016 (1), 5c endline self-assessment of the SPO on organisational capacity - programme staff_India_JanaVikas, 5c endline self-assessment of the SPO on organisational capacity - management_India_JanaVikas].
- **External evaluations [8]:** an external evaluation was conducted at mid-term to evaluate the progress of Jana Vikas in the Cordaid funded project in agreement with Cordaid. In its review report both strengths and areas of concern for the organisation which still needed to be improved are reported. Also the NWO/Wotro MFS II baseline report has helped the organisation in identifying training needs for its staff. Both these evaluations were funded by MFS II [25]. All this feedback helped the organisation to identify the gaps and train the staff for further improvement of their competences [Source: 5c endline self-assessment of the SPO on organisational capacity - management_India_JanaVikas, 2014-03-26].

2. Improved systems of programme monitoring in place [17]

Over the last two years, Jana Vikas improved its systems of programme monitoring [17] due to an accountability mechanism that is now in place [18], improved PME [19] and better compliance [20].

-
- **Accountability mechanism [18]:** the restructuring of the organogram [27] resulted in clarity of roles and responsibility of the staff which further streamlined the accountability mechanism. Since last year quarterly meetings are organised where all the program managers, coordinators, assistant director and director participate. The program managers of each project present the progress report of the project. After each presentation the staff engages in a debate on successes, failures, challenges and different issues of the project. In this process they cross examine each other in regard to project implementation and achievement. As a result it created a mechanism to cross check responsibility and accountability [Source: 5c endline self-assessment of the SPO on organisational capacity - programme staff_India_JanaVikas, Endline Evaluation Workshop 2014].

 - **Improved PME [19]:** MIS formats and indicators are fine-tuned to have better data from the field. The data are then analysed by the PME team to further use it for program development, report and proposal writing. Each project monitors and evaluates its program independently and submits the report to the coordinators. Then the report is reviewed in the monthly meetings by program managers and coordinators and finally it is reviewed and discussed by the core team in every quarterly meeting. When gaps are identified the core team further develops plans to address it. Jana Vikas also improved from activity based monitoring to results based management (RBM) and proper documentation of the data. The organisation also is looking forward to develop software to maintain MIS to generate information. The organisational assessment by ASK India in July 2013 helped Jana Vikas to identify the gaps in the PME system. Based on this finding a strategic plan for 2014-18 was formulated which further strengthened the PME system. In the light of this strategic plan a full time personnel is appointed to work for a separate PME unit being established with the support from Cordaid. Jana Vikas also shifted its monitoring process from activity based monitoring to results based management (RBM). It is also looking forward to develop software to maintain MIS to generate information. The PME policy has been revised and is awaiting governing board's approval [Source: CORDAID COMPLETION REPORT-2010-2013, 5c endline self-assessment of the SPO on organisational capacity - programme staff_India_JanaVikas, 5c endline self-assessment of the SPO on organisational capacity - Program staff 2 _India_JanaVikas, PME Indicator, Report on PME]. Jana Vikas improved in its planning monitoring and evaluation because of:
 - *Focussed planning and review meetings [9]:* Annual, quarterly, monthly meetings are further strengthened due to better monitoring and data analysis. In the Annual General meeting projects are reviewed and strategic plans are developed. Every first week of the month program managers and coordinators meet to review the plans and progress. The core committees meeting is held once in three months. The core committee members along with director and assistant director participate and discuss on the progress of the programs, address the grievances, make strategic plan on the progress report of the monthly meetings in alignment with the annual strategic plan. Also with the formation of a separate PME unit this further strengthened the planning and review meetings. It plays an active role in analysing the data and documentation to facilitate it for better strategic planning and proposal writing [Source: Endline Evaluation Workshop 2014, Six Month Reports – 2014, 5c endline self-assessment of the SPO on organisational capacity - programme staff_India_JanaVikas, 5c endline self-assessment of the SPO on organisational capacity - management_India_JanaVikas].
 - *Knowledge and skills on RBM and PME [29] because of:*
 - **Trainings [5]:**
 - Training on RBM: Training on RBM (Result Based Management) was organized at Baleshwar in 2013 by Odisha Regional Organisation for Social Action (OROSA). The documentation officer from the Cordaid project attended the training. This strengthened the staff to carry out the operational plan on results based monitoring system. This training was funded by MFS II [25][Source: Six Month Reports – 2014, Endline Evaluation Workshop 2014, 5c endline self-assessment of the SPO on organisational capacity - programme staff_India_JanaVikas, 5c endline self-assessment of the SPO on organisational capacity - Program staff 2 _India_JanaVikas].
 - Training on PME: Four days training program was organised at N. Nuagoan from 13 to 16 April 2013 facilitated by ASK India, New Delhi. The objective was to train the staff on context analysis, problem tree analysis, monitoring and evaluation, project proposal development, report writing and documentation. The training also helped staff to develop results based project proposals. This resulted in the staff strengthening the PME unit in designing a better results

-
- based program, developing systematic project proposals, fine-tuning of the MIS formats, developing proper PME guidelines and policy. This training was funded by MFS II [25][Source: Report on PME, Six Month Reports – 2014, Endline Evaluation Workshop 2014, 5c endline self-assessment of the SPO on organisational capacity - programme staff_India_JanaVikas].
- Training on Strategic planning: on 15-21 August 2013 a training on strategic planning was organised in two phases at K. Nuagaon which was facilitated by Mr. Saiju Chako of ASK India, New Delhi. The objective of the training was to discuss on different contextual issues and train the staff to find the gaps and make strategic planning to address the issues. This training was funded by MFS II, Cordaid [Source: Progress report may - oct 2013, Six Month Reports – 2014].
 - Training on SHG Management: on 30th April 2013 capacity building training was organised on SHG management facilitated by ASK India, New Delhi. The objective the training was to train the staff on gradation of the SHGs, record keeping, format development for MIS etc. This training was funded by MFS II, Cordaid [Source: Progress report may - oct 2013, Six Month Reports – 2014].
 - Recruitment of new skilled M&E staff [28]: Jana Vikas established a separate PME department when restructuring the organisation [27] to have a comprehensive PME system in place. As a need for skilled M&E staff was identified new M&E staff was recruited [28] from within the community in Kandhamal where Jana Viaks works. With the appointment of skilled staff and capacity building training [5] provided by Cordaid, the PME unit was further strengthened.
- **Better compliance [20]:** Jana Vikas improved its compliance to its operational guidelines because of the revision of its operational policies [30] and the formation of thematic committees [21].
 - To further strengthen and profile the organisation it revised the existing policies [30] and introduced certain new policies. This was due to a training [5] from 21 to 26 February 2014 was conducted on Policy Development at K. Nuagoan. Sixteen senior staff and four Board members of the organization participated in the workshop. Mr. Manos Bhattacharya from ASK, New Delhi facilitated the workshop. It resulted in revising existing policies like the Human Resource policy, Finance Management policy, PME policy, Gender policy and the HIV/AIDS work place policy. Also new organizational policies were introduced like the Child Protection policy, Disability policy and Environment policy. ASK India provided a frame and staff of Jana Vikas worked on it to revise old policies and develop new policies. This training was funded by MFS II, Cordaid [Source: CORDAID COMPLETION REPORT-2010-2013, EDITED CORDAID REPORT to be sent, policy development, Endline Evaluation Workshop 2014, Staff_development_policy, Work_Place_Policy_JV_CC, 5c endline self-assessment of the SPO on organisational capacity - programme staff_India_JanaVikas].
 - Seven thematic committees [21] have been formed involving staff of the organisation to look into the various issues. These committees were present during the baseline but after the baseline, these committees were merged into seven committees: the core committee, grievances, gender and sexual harassment, staff counsel and resource mobilization and procurement, cooperative management. Next to the core committee, some of the themes on which committees have been formed include: grievances, gender and sexual harassment, staff counsel and resource mobilization, procurement, cooperative management, human rights, lobby and advocacy etc. These committees were consciously formed to oversee the administrative processes of the organization. These committees take decisions on important issues which makes the decision making process faster and the compliance of the organisation to its operational guidelines better. The grievances of the staff are reported to the committees and when issues are identified, within 21 days steps are initiated to address the issues. The organization has agreed to comply with Humanitarian Accountability Practices (HAP). Acquiring the required documents is under process.

Centre for Development Innovation
Wageningen UR

www.wageningenUR.nl/cdi

Report CDI-15-016

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

Evaluation of RGVN

Country	India
Consortium	Hivos Alliantie (People Unlimited 4.1)
Responsible Dutch NGO	Hivos
Project (if applicable)	Graduating NGOs into Micro finance Institution in Orissa-Phase 2
Southern partner organisation	RGVN

The project/partner is part of the sample for the following evaluation component(s):

	X
Achievement of MDGs and themes	X
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

Abstract

This report contains the evaluation of RGVN's project "Graduating NGOs into Micro finance Institution in Orissa-Phase 2". It provides information on the measured impact of the project as well as details on its "efficiency". The findings are based on data collected in 2012 and in 2014 together with accounting data. The general findings are that the project may have an impact on the individual outcome (i.e. increasing the socio-economic status of a treated family), yet, the project fails to deliver some of its outputs. Especially the increase in the number of extra clients is not met. Therefore the general outcome of improving the socio-economic conditions of disadvantaged families is not as high as expected. Measuring the efficiency of the program is challenging, but the analysis indicates that the program is cost effective.

1. Introduction

This report evaluates a program that enhances the institutional capacities of micro finance institutions (MFIs) in Orissa, India, in order to improve socio-economic conditions of the disadvantaged families. The project is conducted by RGVN, a southern-partner organization (SPO) of HIVOS. RGVN is a national level multi-state development and support organization operating in India. For this program, RGVN has selected four non-governmental organizations (NGOs) to be graduated to the next level of micro finance institutions under the project title of “Graduating NGOs into micro finance institutions” with the support of HIVOS over a period of five years. This would mean that the NGOs would be registered as Section 25 companies by the end of the funding period. These institutions would become sustainable MFIs to serve a large number of clients with appropriate & reasonable financial products / services.

The evaluation considers whether the aimed goals are achieved in terms of outputs and outcomes. The evaluation also conducts an efficiency analysis. The impact evaluation focuses on the impact on livelihoods and female empowerment. There is some indication that the project has a positive effect on the livelihood of the families, measured by their expenditures. However, we don’t find any evidence that the project improved the position of women. A basic financial analysis suggests that the programme is cost effective.

The remainder of this report is as follows: the next section will give some background about RGVN and the local context. Section 3 gives details about the project, its budget, duration, objectives, outcomes, as well as the theory of change. Section 4 describes the sampling process, and provides some descriptive statistics. Section 5 explains the methodology, and presents the main results of the impact and cost-effectiveness evaluation. A discussion of the results is provided in section six. Section seven concludes.

2. Context

The project we consider is located in Orissa. Orissa is one of India's poorest states. About 85 percent of Orissa’s 37 million population is rural, and a vast majority of the state’s poor live in rural areas (World Bank). This group of poor people has in general no access to regular financial services nor do they have any financial training. In order to provide access to financial services for these people, microfinance institutions (MFIs) became active in this region.

RGVN India was established in 1990 as a not-for-profit organization. RGVN is a partner of HIVOS since 2000. RGVN has been supporting livelihood generation of rural poor (focus on women) through soft loan assistance and strengthening local community groups. They selected four NGOs to be graduated to the next level of micro finance institutions under the project title of “Graduating NGOs into micro finance institutions” with the support of HIVOS over a period of five years. This implies that the NGOs will be registered as Section 25 companies by the end of the funding period. These institutions would become sustainable MFIs to serve a large number of clients with appropriate & reasonable financial products / services.

The NGOs selected already dealt with livelihood creating activities (agriculture based livelihood sources, promotion of forest based livelihood, skill development etc.). They also provided microfinance services to the poor. The NGO-MFIs help to form self-help groups (SHGs) and joint

liability groups (JLGs) of the poor in the villages where they operate. The NGO-MFIs also provide loans to these SHGs/JLGs as and when required. Some MFIs also form cooperatives of the members. JLGs are dissolved once the loan is repaid while the SHGs continue for a longer time. The NGO-MFIs provide training to SHG members on basic record keeping and accounting, hold workshops on identification of alternative livelihood opportunities, interface with bankers, and provide exposure of SHOG members to bank officials, other SHGs, etc.

Current situation: Because of the 2005-2006 MFI crisis, which led to over lending, the funding to MFIs reduced drastically. The NGO-MFIs have already formed SHG/JLG groups. However, because of a lack of funding, they are not able to provide loans to everybody. There are active clients who are currently receiving loans from the NGO-MFI. They are given priority on the basis of their credit history, duration of being members, etc. The inactive members are those who are formed into SHG groups by the NGO-MFIs but are not given loans by the MFI. Some of the SHG groups have been dissolved, while some of the other existing ones are either being promoted by some other organization such as ICDS or are availing loans from some other MFIs.

In Orissa several MFIs and SHGs are promoted by other organizations as well. To evaluate the impact of being a member of an MFI, we need to take the non-members of any MFI/SHG/JLG as a comparison group. However, it is very difficult to find non-members of any SHG/JLG or MFI in these villages. According to the NGO-MFI project coordinators, most of the non-members would be from villages that are remote and where it is difficult for the MFIs to reach because of low accessibility.

Microfinance is an actively researched theme in the field of development economics (see e.g. Hermes and Lensink; 2007) and while some papers do find evidence (e.g. Khandker; 2005) the first randomized evaluation on the impact of microfinance, by Banerjee et al. (2013), did not find an impact on consumption. There are theories that microfinance may harm society by crowding out the formal sector (see e.g. Bateman. 2010)

3. Project Description

The project was focusing on enhancing institutional capacities of four Micro Finance Institutions (NGO MFIs) located in Orissa, to improve socio-economic conditions of the disadvantaged families (giving priority to women). The current project has started on July 1, 2009 and ran to June 2012. The project is a sequel to the earlier project that ran from April 2006 – March 2009. The total budget of the project is 117,848 Euro. This budget is for 100% funded by HIVOS with MFS funds.¹ In order to achieve the objective of improving socio-economic conditions of disadvantaged families several activities were planned at three levels. The first level concerns the agency level. Activities at this level are: 1) Providing 80% financial support to cover costs of 27 key staff from 4 organizations (20% to be met by the concerned organizations). 2) Organizing 40 training programs on basic accounting and record keeping for group members of the 4 NGO MFIs to develop skills of 800 group leaders and 4 NGOs in a period 3 years. 3) 24 workshops on alternative livelihood opportunities for a period of 2 years for groups to initiate viable IGPs. 4) Provide interface with banks by organizing 12 programs to bridge gaps between NGOs and Financial Institutions.

¹ 80,742 Euros are MFS I funds (i.e. disbursed in 2009 and 2010) and 37,106 Euros are MFS II funds (disbursed in 2011 and 2012) .

The second level contains activities at the central level. These include: 1) Workshops on result orientation and finalization of monitoring indicators for 4 NGO staff. 2) Orientation programs on macro level changes in the MF sector and the recent IT legislation. 3) Legal transformation and road map preparation for the 4 NGOs. 4) Process mapping of MF operations, basic accounting and ratio analysis. 5) Interface with banks and financial institutions. 6) Training programs on delinquency management, monitoring of MF programs and monitoring tools.

Finally, activities directly dealing with RGVN level were planned, these are: 1) Training to RGVN staff on process mapping, portfolio audit, value chain analysis etc. with a view to develop skills for efficient. 2) Facilitation of micro finance programs, and also organizing exposure visits to facilitate learning from best practices.

These activities should lead to four outputs: 1) an increase in the scale of outreach of the 4 NGO partners. 2) The internal capacities of all 4 MFIs in computerized MIS operational systems, product design, business plan development, social security measures will increase substantially thereby helping them to leverage support from mainstream financial institutions. 3) Sustainability of programs (OSS and FSS). And 4) Additional credit made available to members for consumption and health.

The increase in outreach of four MFIs is supposed to lead to more funds available for disadvantaged women. The aim is to improve the position of the disadvantaged women by using the funds to start new businesses, conduct investments, etcetera. An important part of the activities of RGVN focus on developing skills on basic accounting and record keeping for group members of the 4 NGO MFIs. RGVN organizes 40 training programs to develop skills of 800 group leaders of the 4 NGOs. An increase in the basic accounting and record keeping skills will help to improve business skills of the members (the disadvantaged women), and help to raise profits of their businesses, and hence ultimately improve the position of disadvantaged women. If there are trainings conducted on basic accounting and record keeping, this will help ensure smooth functioning and sustainability of the SHGs that are formed by the MFIs, as well as the businesses of the members. Also, the trainings on alternative livelihood opportunities would help provide livelihood to the members as well as enable them to repay loans on time. For example the NGO-MFIs provide training of sustainable agriculture and forest based livelihood sources. Once an alternative livelihood is identified, the member is able to increase her income and thereby repay loans on time.

The computerization of records and MIS are supposed to enable loan portfolio tracking and delinquency management. Interface with banks and financial institutions is expected to provide the NGO-MFIs with better funding opportunities. Registration of NGOs as Section 25 companies is again expected to enable them to access larger amounts of funds.

In general, the interventions aim to improve the socio economic condition of disadvantaged families (with a priority on women), through four local NGO-MFIs.

More precisely, the project aims to achieve the following, in terms of outcomes: :

- 85,000 clients will have access to credit at their door step.
- At least 85% of the clients will stop borrowings from money lenders.
- Increase in household income by 25%.
- Household assets will increase with at least 10% being in the name of women.
- Four MFIs are formally recognized by various financial institutions.

4. Data and Sampling

The data for the analysis of RGVN is obtained in two rounds of questionnaires. The first round of questionnaires took place in November 2012 and the second round in December and January 2013/2014. Note that the project started in July 2009, and is a continuation of a project that started in 2006, so that we lack a pre-intervention baseline.

We focus our evaluation on two of the four MFIs that the project focuses on: SARC located in Sambalpur and SCRS located in Nayagarh. In these regions we have collected data based on questionnaires in two rounds. The data from the first round (the “baseline”) were sampled from three groups: a treatment group (600 families), a control group (C1) with families that are not a member of any SHG/MFI (500 families) and a control group (C2) that contains families that are member of a different MFI and/or SHG (350 families). During the “endline” we were able to again survey the 600 families of the treatment group, and the 350 families of control group C2. However, concerning our group C1, some families became a member of a SHG/MFI, and/or received a loan from another organization. Since our C1 group thus turned out to be very similar to C2, we decided to merge C1 and C2. It should be noticed therefore that our control group is to some extent contaminated with loans from other organizations, which may lead to an underestimate of the impact of micro finance as such. Yet, the analysis enables to see to what extent RGVN does better or worse than other MFIs in the neighborhood.

During the evaluation period, we were faced with a typhoon in the Nayagarh region. The typhoon obviously affected clients of the MFIs that are operating in this region. However, we can compare the results of the Nayagarh region with the Sambalpur region, which is not affected by the typhoon) and see if there are differences between the two regions. These differences may be contributed to the effect of the program given being stricken by a typhoon.

Table 1 gives an overview of the descriptive statistics for the outcome variables taken from the baseline questionnaires. Table A1 in the appendix shows descriptive statistics about the control variables.

Other sources of information are narrative annual reports, financial statements, and action plans.

5. Analysis and Results

This section analyzes the impact of the program of RGVN. Firstly the actual outputs and some outcomes that can be observed directly are compared with the planned outputs and outcomes. Secondly, the methodology that is applied in order to evaluate the impact is discussed, together with the tradeoffs and reasons why this particular setup has been chosen. Subsequently the results of this examination are analyzed. Finally this section discusses the “efficiency” of the project.

Outputs

Table 2 gives an overview of the outputs and some of the outcomes of the program. The table clearly shows that not all output goals are met. Yet for the outputs that are under direct control of the program, the goals are achieved. For all MFIs the management information system is into place and all MFIs also have a policy paper. The ambitious goal of having a portfolio at risk (PAR) of zero is achieved for one MFI, while the other three MFIs have a PAR just above zero. The number of branches is however much lower than the set goal. Also the operating costs are not as low as the set goal, although all operational costs have decreased. The goal with respect to financial literacy is not met. So, it is not likely that an eventual increase in livelihood is generated by financial literacy.

The project document specified several aims with respect to outcomes. The first aim is that members of the MFIs should avoid lending money from money lenders. The usage of money lenders in our sample is below the set goal. Yet, this also holds for the control group, although spillovers may be the cause of this effect. The project clearly fails with respect to the number of clients. The cause of this failure is that the funding for microfinance dried up in India. This risk has not been addressed by the

program. The registration of the MFIs has met the goal if we assume that the submission of the last 2 MFIs will pass the evaluation. The other outcomes will be discussed below after the methodology.

Table 2: Outputs and Outcome indicators

Output/Outcome	Indicator	Goal	Achieved
Increase Capacity	MIS	Yes	Yes (4/4)
Increase Capacity	Policy papers	Yes	Yes (4/4)
Sustainability	PAR	0	0 (1/4) and 1 (3/4) ¹⁾
Outreach	No. of branches	21-31 ²⁾	7
Sustainability	Operating costs	10 %	> 15% ³⁾
Extra credit	For consumption	Up to 7.5 %	⁴⁾
Literacy	Literacy	75%	24%-28% ⁵⁾
Outcome	Increase in assets	10 %	⁴⁾
Outcome	Usage of money lender	< 15 %	< 5 % (> 6%) ⁶⁾
Outcome	Number of Clients	85,000 by 2012.	18,922 (31-03-2012)
Outcome	MFIs registered	4	2 (2 submitted)
Outcome	Increase in Income	25 %	⁷⁾

Sources: Narrative_Report_2011-2012_MFIB_.doc; Country specific information – India; Narrative Action Plan April01 – June 30, 2012; Own calculations.

Notes:

- 1) Only one MFI achieved the goal of a PAR of 0 the other 3 MFIs had a PAR just above 0. Since the PAR can easily change over time this is only a snap shot indicator.
- 2) The goal of number of branches differs between the documents. The Country specific information – India document lists 31 just like our baseline reports. The Narrative Report 2011-2012 lists 21.
- 3) The operational cost were taken in the last year of the project (book year 2011). They range from 15 to 20 percent, which implies that for most MFIs there was a reduction but the goal of 10 percent was not met.
- 4) The rise in credit for extra consumption and the increase in assets is not tested since there is no proper baseline and thus we do not have information how much credit was used for consumption before the project has started.
- 5) Results are based on two simple financial questions two times on 600 members. If the threshold is 2 question the percentage increased from 24% to 28% over the estimation period. If answering one question correctly is seen as financial literate the percentage dropped from 78% to 64 %.
- 6) Results are based on 600 members. The number between parentheses is the number based on the control group.
- 7) The size of the increase income has not been detected since there is no proper baseline. There are indications that there is an increase in income

Methodology

The main challenge of every impact evaluation is to determine to what extent certain changes can be attributed to the intervention. An impact evaluation tries to disentangle impacts of the project from impacts due to other causes, which is not an easy task. Impact evaluations also suffer from self-selection and program placement biases. The preferred approach to measure impact is to conduct a randomized controlled trial as this automatically generates comparable control and treatment groups. However, RCTs are often not possible in practice, as is the case for this project.

In this project we will use two alternative approaches to measure impact. First, we will conduct a so-called double difference (DD) methodology. The main advantage of this approach is that it enables to

control for selection biases due to unobserved heterogeneity that does not change over time, the so-called fixed effects. A disadvantage of the DD approach in our setting is that the DD analysis basically measures whether changes in outcomes over the evaluation period of the treatment group are bigger or smaller than those of the control group. The DD approach does not measure the average impact of the project as such for a pre-intervention baseline is lacking. Second, in order to be able to also measure average impacts of the interventions that took place before the abelian survey, we also use a propensity score method (PSM). The advantage of a PSM methodology is that it helps to ensure that treatment and control groups are comparable in terms of observed characteristics. The main disadvantage of PSM is that it cannot control for unobserved heterogeneity, one of the main features of a DD approach. For our analysis, DD and PSM complement each other.

Our DD approach works as follows. We estimate the following equation with fixed effects.

$$Y_{ijt} = \alpha_i + \beta_1 Post_t + \beta_2 Post_t D_j^T + \beta_3 D_j^T + \gamma X_{ijt} + \varepsilon_{ijt} \quad (1)$$

where Y_{ijt} denotes an outcome variable for respondent i in group j at time t , α_i is the fixed effect, $Post_t$ is a binary variable that takes the value one if the observation corresponds to the second time period, D_j^T is a binary variable equal to one if the respondent belonged to the treatment group. X is a vector of controls. ε_{ijt} denotes the error term. β_2 in (1) is the estimate of the impact of one extra time period in the intervention on outcome Y .² β_3 measures the impact of the program.

In order to improve matching between controls and treatments, before applying DD, we use PSM to match treatments and controls during the baseline. More specifically, we run a logit regression using baseline data, and determine probabilities of “being in the treatment or the control group”. Based on this analysis we are able to determine a so-called common space, which defines an area within which controls and treatments do not differ too much. We subsequently deleted all observations outside the common space, and applied the DD analysis only on observations within the common space.

Impact

The main objective of the project is to improve the socio economic condition of disadvantaged families (giving priority on women), through four local NGO-MFIs. Therefore the first focus is on total monthly consumption. Total monthly consumption proxies the income as the respondents do not save much, as revealed below.

As shown in Table 3, panel A, we do find some evidence that the project improves consumption during the project period. Moreover, the size of this effect is about twenty percent of the general time effect, which is highly significant. This implies that although all respondents have improved over time, the respondents who are in the program have improved twenty percent extra. This result is robust for all the specifications, like the fixed effects (FE) difference-in-difference (DD) estimation (column 1), the FE DD estimation with controls (column 2), the FE DD estimation with common support restriction (column 3), and the FE DD estimation with controls and common support restriction (column 4).

² This time period is measured by the time between the baseline and follow-up survey.

We also consider the analysis per MFI; see Panel B and C in Table 3. This analysis suggests that the MFI located in Nayagarh is accountable for the positive effect of the intervention. The effect for this MFI is significant at the five and one percent level dependent on the specification. The size of the effect is about fifty percent of the general time effect. This implies that the consumption of the treatment group has increased fifty percent more than the consumption of the control group for the members located in Nayagarh. However, we don't find any evidence for a positive effect during the project period for the MFI located in Sambalpur. It should be noticed once again, that due to the absence of pre-intervention data, our analyses only indicates whether the treatment group "grows" faster during the evaluation period than the control group. A non-significant effect does not necessarily imply that the program has no impact for most interventions may be done before we started out evaluation. In other words, our evaluation considers the "sustainability" of the impacts.

One reason for this finding may lie in the fact that the Nayagarh region was hit by a typhoon between the two survey rounds. If the typhoon indeed causes this result, it reveals that being a member of a MFI is especially beneficial during times of misfortune. E.g. households who are a member of an MFI may have access to sources, monetary, knowledge, and/or a social network which help them to alleviate the setbacks that a natural disaster may cause. Yet, this reasoning can explain the difference in the effect between the two subsamples; it cannot explain the outcome in the overall sample.

To examine the average impacts of the entire program the average treatment effect (ATE) and the average treatment effect of the treated (ATET) have been estimated using PSM. The results are given in Table 4. The results of ATE and ATET of the total sample are both highly significant. This differs from the DD estimates, which measure the impact of being one extra year a member of the treatment group.

Table 4: PSM estimates on total consumption

Total Consumption	Total Sample	Nayagarh	Sambalpur
Panel A: First Round			
ATET	237.60472 (83.15)***	80.21721 (130.87)	477.16619 (119.74)***

We also use PSM to measure the impact of the program in the different regions. Again the PSM results differ from the DD results. PSM suggests that the program in Sambalpur has a positive impact, while the program in Nayagarh does not seem to have a positive impact. The DD estimates suggested the opposite.

The results of the PSM method applied on the data of the second survey round show a slightly different picture. In this case only the ATE is significant for the entire sample and for the Nayargarh sample (at the five percent level). All these results, the DD as well as the PSM, reveal that it is quite likely that the program has an impact on the total consumption of the members, yet, as the results differ from the DD estimations, it also shows the possible influence of non-observed heterogeneity. Therefore, the size of the effects should be taken with care.

Since the MFIs especially focus on women the influence of intervention on female empowerment is examined. The indicator for female empowerment is based upon the number of decisions that females are making about savings, purchases of land/property, investments in jewelry, regular household expenditure on food, household expenditure on children's education, and borrowing. The indicator runs from 0 to 6. An increase indicates an improvement in female empowerment. Although being a crude proxy, it may reveal the impact of the intervention on female decision making. The results of the DD analyses are given in Table 5.

The most striking result in Table 5 is that the number of decisions that females are involved in has decreased by more than one decision in the period of our analysis for the entire sample. This result holds for all specifications and is highly significant (much smaller than one percent). This decreasing effect seems to be even larger in the Sambalpur region where the number of decisions has decreased with about two. The intervention does not overcome this time effect, in fact the opposite is true as the members in the treatment group have an extra decrease of about 0.3 and 0.4 decisions over the time period (significant at the five and ten percent level). Splitting the sample per region reveals that this effect is mainly driven by the Sambalpur region. Although the results on female empowerment are negative in the DD model, this does not imply that the treatment may not have an overall positive effect. It only shows that there is a decrease in the period between the first and second round of surveying.

In order to examine the overall effect of the program on female empowerment a PSM has been applied on the first and second round of the surveys. The results are given in Table 6. From Table 6 it is clear that in the first round of surveying no effect of the program on female empowerment can be found. This relaxes a bit the findings of the DD model that clearly showed that there is negative effect. If the PSM is applied to the end line data, the effect is even significantly positive in the Nayargarh region at the five percent level, whereas it still is insignificant for the total sample and the Sambalpur region. Although the results of the PSM analysis are a bit more positive with respect to the influence of the program on female empowerment, they still do not offset the deterioration of female empowerment over time as shown in the DD method.

Since the program provides loans to members and also train the member with financial knowledge, it may be informative to see if the program has an influence on the saving behavior. Therefore the impact of the program on savings is estimated. The results are given in Table 7.

Table 7 clearly shows that the general time effect is positive on savings and is highly significant, this implies that all respondents in our sample have increased their savings over time. Moreover, Table 7 shows that the program does not have a significant impact on the saving behavior. These results do not only hold for the entire sample but also for each region individually.

Efficiency/Cost Effectiveness

In order to determine the efficiency of a project one needs a benchmark project that is fully efficient and uses about the same inputs as the project under evaluation. One can compare the outputs of both projects in order to determine how efficient the assessed project is. Since such a benchmark is lacking, the determination of efficiency is problematic. Therefore the focus will be on the price per output calculated from the amount of outputs delivered for the given budget of the project and these are compared with prices per output of similar projects found in the literature on MFIs. Yet, before focusing on the cost effectiveness, a crude measure for the beneficiaries' gain of the project will be calculated and be compared with the budget of the project. Since we only find a significant effect in the fixed effects DD model for the Nayagargh region, we will focus on this region only. The number of members of the program in this region is about 2350. The average amount of extra monthly expenditures for being one extra time period (in this case about 16 months) in the treated group is about € 4.67 (350 IRP / 75 INR/EUR). If we assume that these expenditures are accumulated equally over the last 16 months the amount of extra expenditures for this group is just below € 87,750.³ Given the budget of € 117,848 this is quite a large return. Of course not all of the extra expenditure can directly be attributed to the project as the MFI also needs to have funds for the loans to provide. Yet, one should keep in mind that this return is generated after the project already has been ended, while still generating returns.

Table 8: Outputs and costs

Training	No. of Trainings	Total Trainees	Total Costs	Cost per Training	Cost per Trainee
Book keeping	40	1366	240,000 INR 4,304.72 Int\$	6,000 INR 107.62 Int\$	175.70 INR 3.15 Int\$
Livelihood	24	873	144,000 INR 2,593.43 Int\$	6,000 INR 108.06 Int\$	164.95 INR 2.97 Int\$

Sources: Training workshop details.xls, Budget data (RGVN & ADARSA.jpg, RGVN & CARR.jpg, RGVN & SCRS (4 staff).jpg, and RGVN & SARC.jpg)

Note: Int\$ Are 2011 international dollars calculated using the methodology in AIID (2014)

The initial plan of RGVN was to provide 40 trainings on book keeping, training 800 members, and to organize 24 workshops on alternative livelihood. Table 8 shows information about these trainings. From this table it is clear that the number of trainees has increased by almost 75% without an increase of the budget. Since an extensive literature review resulted in information about the average cost of a self-help group (SHG) only, the figures from Table 8 have to be translated to the SHG level. The initial plan was to train only group leaders. Since the number of trainees has been increased, it may be that some non-leaders also received training, yet, the cost per trainee should give a reasonable estimate of the cost per SHG. The average cost of an SHG (including the cost of launching, training and monitoring), is estimated around Int\$ 976.00 (Isern, 2007 via AIID, 2014). This implies that the training on book keeping and livelihood together are less than 1 percent of the

³ $(350/75)*2350*16*0.5=87,733.33$

average total cost of a SHG. This looks cost effective, especially since the unit cost of SHGs that also aim to empower are more costly (AIID, 2014).

Discussion

Given the findings of the analysis the program of RGVN was reasonably well designed. The biggest shortcoming in the design of the program is in the theory of change. The risk of non-available funding for the loans was ignored. During the evaluation period the funding indeed dried up which resulted in the program not reaching the goal with respect to the on number of clients reached. This is in line with the finding of capacity development analysis of RGVN (See 5C evaluation of RGVN), which states “In the overall capability to adapt and self-renew RGVN [...] showed no change”. Another aspect of the program that stayed behind is the financial literacy of the members. Although the members did receive some training on this aspect, the goal of 75 percent financial literate members was not met. Sayinzoga et al. (2014) show that financial training can lead to financial literacy. Yet, the training they considered lasted for one entire week. It may well be the case that the training organized by RGVN was not intensive enough. A longer training period may be beneficial, especially since the training of RGVN appears to be relatively inexpensive. This finding is backed up by the 5C evaluation of RGVN as well as it also finds that RGVN has only improved very slightly in balancing quality and efficiency.

We report some evidence that the project has led to an increase in livelihood of its members. Therefore, we value the project as successful. However, it should be noticed that the evidence is somewhat mixed.

An interesting outcome on which the evaluation points is that members of RGVN seem to be less hit by the typhoon, than non-members. This suggests that MFIs play an important role in terms of reducing the vulnerability to disasters. It may well be so, that MFIs have a more important role to play in terms of reducing the vulnerability to shocks, than to increase welfare in normal circumstances.

We have to recall that the evaluation was faced with some severe shortcomings. Most importantly, we lack pre-intervention data, the interventions ended almost immediately after the baseline data collection, and it turned out to be very difficult to select a proper control group for most households in the concerned regions have access to credit in one or another way. These problems imply that our evaluation is not as rigorous as we had hoped this evaluation to be.

Since the project mainly focused on women, the impact on female empowerment has been examined as well. A significant decrease of female empowerment over time is observed. This does not directly imply that the project failed on this aspect, especially since there is some indication that the overall effect of the program on female empowerment may be positive. Yet, it seems clear that the project did not achieve the intended female empowerment goals. One may argue, though, that it is not one of the main goals of the program since it is not explicitly mentioned. Yet, since the program states as its main objective that it focuses on women, we think it should be included.

Conclusion

Given the above findings of the impact evaluation the following scores are given to the program:

Table 7: Scoring the program

Statement:	Score:
On a scale of 1 to 10, with 1 being “not at all” and 10 being “completely”	
The project was well designed	8
The project was implemented as designed	10
The project reached all its objectives	7
The observed results are attributable to the project interventions	7
The observed results are relevant to the project beneficiaries	8
The project was implemented efficiently	9

Scores are on a scale of 1 to 10, with 1 being “not at all” and 10 being “completely”

Note that the score on “The observed results are attributable to the project interventions” reflects how well we could evaluate the program. Therefore, it is not a score of the program. The objectives used to score on this aspect are given in the country summary.

Report CDI-15-021

Kusters, C., Mohapatra, B.P., Sethi, S., Buizer, N.N., Das, A., Bhatra R. W., Sen P., 2014. *Endline report – India, RGVN Foundation. MFS II country evaluations; Capacity of Southern Partner Organisations (5C) component*. Centre for Development Innovation, Wageningen University & Research centre. Report CDI-15-021. Wageningen.

This report presents the findings of the endline of the evaluation of the organisational capacity component of the MFS II country evaluations. The focus of this report is India, RGVN. The format is based on the requirements by the synthesis team and NWO/WOTRO. The endline was carried out in 2014. The baseline workshop was carried out in 2012 (interview with director in 2013).

Key words: 5C (five core capabilities); attribution; baseline; causal map; change; CFA (Co-financing Organisation) endline; organisational capacity development; SPO (Southern Partner Organisation).

Acknowledgements

We are grateful to all the people that have contributed to this report. We particularly would like to thank the Southern Partner Organisation Rashtriya Gramin Vikas Nidhi (RGVN) and the Co-Financing Agency Hivos for their endless patience and support during this challenging task of collecting the endline data. We hope that this endline report will provide useful insights to RGVN, Hivos, the synthesis team, IOB and NWO/Wotro.

The India 5C evaluation team

List of abbreviations and acronyms

5 C	Capacity development model which focuses on 5 core capabilities
BRLF	Bharat Rural Livelihoods Foundation
Causal map	Map with cause-effect relationships. See also 'detailed causal map'.
Causal mechanisms	The combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome
CDI	Centre for Development Innovation, Wageningen UR
CFA	Co-Financing Agency
CPSE	Central Public Sector Enterprise
CSR	Corporate Social Responsibility
CU	Concern Universal
Detailed causal map	Also 'model of change'. the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change. In the 5C evaluation identified key organisational capacity changes and underlying reasons for change (causal mechanisms) are traced through process tracing (for attribution question).
EU	European Union
General causal map	Causal map with key organisational capacity changes and underlying reasons for change (causal mechanisms), based on SPO perception.
HR	Human Resources
IDF	India Development Foundation
IFHD	India Foundation for Humanistic Development

1 Introduction & summary

1.1 Purpose and outline of the report

The Netherlands has a long tradition of public support for civil bi-lateral development cooperation, going back to the 1960s. The Co-Financing System (*Medefinancieringsstelsel*, or 'MFS') is its most recent expression. MFS II is the 2011-2015 grant framework for Co-Financing Agencies (CFAs), which is directed at achieving a sustainable reduction in poverty. A total of 20 consortia of Dutch CFAs have been awarded €1.9 billion in MFS II grants by the Dutch Ministry of Foreign Affairs (MoFA).

The overall aim of MFS II is to help strengthen civil society in the South as a building block for structural poverty reduction. CFAs receiving MFS II funding work through strategic partnerships with Southern Partner Organisations.

The MFS II framework stipulates that each consortium is required to carry out independent external evaluations to be able to make valid, evaluative statements about the effective use of the available funding. On behalf of Dutch consortia receiving MFS II funding, NWO-WOTRO has issued three calls for proposals. Call deals with joint MFS II evaluations of development interventions at country level. Evaluations must comprise a baseline assessment in 2012 and a follow-up assessment in 2014 and should be arranged according to three categories of priority result areas as defined by MoFA:

Achievement of Millennium Development Goals (MDGs) & themes;

Capacity development of Southern partner organisations (SPO) (5 c study);

Efforts to strengthen civil society.

This report focuses on the assessment of capacity development of southern partner organisations. This evaluation of the organisational capacity development of the SPOs is organised around **four key evaluation questions**:

1. *What are the changes in partner organisations' capacity during the 2012-2014 period?*
2. *To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*
3. *Were the efforts of the MFS II consortia efficient?*
4. *What factors explain the findings drawn from the questions above?*

The purpose of this report is to provide endline information on one of the SPOs involved in the evaluation: RGVN in India. The baseline report is described in a separate document.

Chapter 2 describes general information about the Southern Partner Organisation (SPO). Here you can find general information about the SPO, the context in which the SPO operates, contracting details and background to the SPO. In chapter 3 a brief overview of the methodological approach is described. You can find a more detailed description of the methodological approach in appendix 1. Chapter 4 describes the results of the 5c endline study. It provides an overview of capacity development interventions of the SPO that have been supported by MFS II. It also describes what changes in organisational capacity have taken place since the baseline and why (evaluation question is 1 and 4). This is described as a summary of the indicators per capability as well as a general causal map that provides an overview of the key organisational capacity changes since the baseline, as experienced by the SPO. The complete overview of descriptions per indicator, and how these have changed since the baseline is described in appendix 3. The complete visual and narrative for the key organisational capacity changes that have taken place since the baseline according to the SPO staff present at the endline workshop is presented in appendix 4.

Chapter 5 presents a discussion on the findings and methodology and a conclusion on the different evaluation questions.

The overall methodology for the endline study of capacity of southern partner organisations is coordinated between the 8 countries: Bangladesh (Centre for Development Studies, University of Bath; INTRAC); DRC (Disaster Studies, Wageningen UR); Ethiopia (CDI, Wageningen UR); India (CDI, Wageningen UR; Indonesia (CDI, Wageningen UR); Liberia (CDI, Wageningen UR); Pakistan (IDS; MetaMeta); Uganda (ETC). Specific methodological variations to the approach carried out per country where CDI is involved are also described in this document.

This report is sent to the Co-Financing Agency (CFA) and the Southern Partner Organisation (SPO) for correcting factual errors and for final validation of the report.

1.2 Brief summary of analysis and findings

Over the last two years, RGVN has seen no change in its overall capability to act and commit. The main improvements were the daily operations, staff skills, trainings and RGVN's proposal writing capacity. There was however a slight deterioration in staff incentives and RGVN's funding situation. In the overall capability to adapt and self-renew RGVN also showed no change, though management became more responsive to critical reflection and there was a very slight improvement in M&E application. In terms of the overall capability to deliver on development objectives, there has been no change. RGVN has only improved very slightly in balancing quality and efficiency. In the overall capability to relate there was again no change. RGVN very slightly improved its relations with government departments and the private sector. Finally, RGVN showed no change in the overall capability to achieve coherence but has revisited their strategies which are still in line with their vision and mission.

The evaluators considered it important to also note down the SPO's perspectives on the most important changes in in the organisation since the baseline. During the endline workshop the key organisational capacity changes that were brought up by RGVN's staff were: improved staff capacity to train partners on technology and other issues; and improved relationships with networks. According to RGVN their capacity in training their partners improved partly because of the field experience that they gained and trainings and exposure visits they went on that were funded by Hivos (MFS II), SIDBI and SDTT. RGVN staff got more access to trainings and visits because of gap identification and a change in the strategic plan which required staff to develop new skills. The gaps were identified as a result of fortnightly meetings and strengthened M&E because of donor (Hivos) requirements. RGVN improved its relationships with the government, market, PSUs and private sector. The relations with the government improved because of the new programmes RGVN is involved in and because of some trainings of government department that they attended. The linkages with the market improved because of new programmes and trainings by Hivos, SDTT and SIDBI. The relations with PSUs and the private sector improved because of new programmes and RGVN obtaining a CSR eligibility certificate. RGVN improved its network with government, market, PSUs and the private sector also because of working on new programmes that fitted their new sustainable livelihood strategic focus of RGVN, which was triggered by floods, the Phailin cyclone, the microfinance crisis and the changes in donor's priorities (from microfinance to agriculture/livelihoods). According to RGVN, MFS II funded capacity development interventions have played a role in the key organisational capacity changes, particularly in terms of improving their staff capacity to train partners on technology and other issues and improved linkages with the market.

2 General Information about the SPO – RGVN

2.1 General information about the Southern Partner Organisation (SPO)

Country	India
Consortium	People Unlimited
Responsible Dutch NGO	Hivos
Project (if applicable)	<ul style="list-style-type: none"> • Graduating NGOs in Micro Finance Institutions (MFIs) in the state of Odisha • Sustainable livelihood enhancement and enterprise promotion (SLEEP)
Southern partner organisation	Rashtriya Gramin Vikas Nidhi (RGVN)

The project/partner is part of the sample for the following evaluation component(s):

Achievement of MDGs and themes	X
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

2.2 The socio-economic, cultural and political context in which the partner operates

Rastriya Gramya Vikas Nidhi (RGVN) was established and registered in 1990 with its headquarters at Guwahati (North-East India). In 1992 the operational area was extended and RGVN regional unit Bhubaneswar was established with the aim to create sustainable livelihoods for rural poor where women are given priority. At the first hand, RGVN had tried to address the credit (in the form of soft loans) and basic capacity building (in the form of grants) needs of the rural family to ensure sustainable livelihood for them. On the other hand to make this process more effective and sustainable, RGVN had tried to deliver its support (both loan and grant) through local grassroots level civil societies (CBOs/ NGOs). This process of support not only addresses the livelihood issues of poor people but also provides adequate scope for local fledging initiatives/NGOs to be nurtured and strengthened under the ambit of RGVN'S support. RGVN Bhubaneswar operates in the tribal dominated regions of western Odisha, southern Odisha, northern Odisha and selective coastal plain areas of Odisha and six coastal districts of Andhra Pradesh. RGVN received MFS II funding for graduating NGOs in Microfinance institutions programme which was stopped in mid-2012 due to the microfinance crisis. Then the focus was shifted to Sustainable Livelihood Enhancement and Enterprise Promotion programme funded by MFS II.

The tribal population in the state of Odisha is 22.1 percent of the total population as per the Ministry of Tribal Affairs Annual Report 2013-2013. As per the report of 2013-2014¹ of the Directorate of Economics and Statistics Odisha, the percentage share of agriculture in total Gross Domestic Product at current prices is 19.61 percent and its annual growth for that year is 12.35 percent. Agriculture along with animal husbandry contributes 12.74 percent in total GSDP during the year 2013-2014. Livelihood of the tribal regions is dependent on Non-Timber Forest Produce (NTFP) also known as minor forest produce. The Tribal economy is mainly dependent on subsistence agriculture with forest

¹ http://www.odisha.gov.in/pc/Download/Economic_Survey_2013-14.pdf

forming an essential part of their livelihood.² As per the Government Estimates, a total of 100 million forest dwellers are dependent on Minor Forest Produce (MFP) for food, shelter, medicines, cash income etc. Despite being rich in NTFP products there has been gross underutilization of NTFP products which has adversely affected livelihood of the region for the poor forest dwellers. Lack of information, skill and opportunity for the tribals also makes underutilisation of NTFP products for livelihood. Poverty is further increased due to low social status of women, who comprise a substantial section working in collection of NTFP products. Forest and forest products contribute significantly to the state's economy. As part of Odisha government's Forestry Vision, 2020, The State Forest and Environment Department finalized its strategies to focus on: increased flow of Non-Timber Forest Produce NTFPs and wood, biodiversity conservation and strategies and higher allocations, investment, insurance and incentives for better forest management.

The main source of income of the people is agriculture and allied activities. Low production is further influenced by increasing cost of cultivation due to use of fertilizers, pesticides provided by private suppliers. As most of the farmers are poor and in order to sustain their livelihoods there is dependence on informal lending leading to moneylenders demanding exorbitant interest rates from the farmers. Cultivation is also affected by the natural calamities in the region especially cyclones (e.g. Phailin 2013) and flood (e.g. 2011 & 2014).

Microfinance institutions were a help for the small/poor farmers to receive loans/credits to sustain and promote their livelihood. In this regard the formal financial institutions / banks have had a remarkable contribution to bring the rural poor under the benefit of small financial services (only small credit) through SHG bank linkage program. However, SHGs/Cooperatives faced the MFI (Micro-Finance Institution) crisis due to over lending, irregularities in the operation of the cooperatives etc. Due to a sharp fall in the repayment and the MFI crisis formal financial institutions/banks stopped lending/funding SHGs/Cooperatives.

In 2013, the state government of Odisha addressed the MFI crisis by promulgating the Odisha Self-Help Co-operatives Ordinance 2013 by repealing the Odisha Self-Help Cooperatives Act 2001, and by bringing all the cooperatives under the original 1962 Act. This was done in order to regulate all non-banking financial companies, including the co-operative credit societies operating under the Orissa Self-Help Co-operative Act, 2001. It was identified that there had been irregularities in the operation of the cooperatives and misappropriation of depositors' money. With the repeal of the 2001 Act, the government increased its control over these co-operative credit societies and curbed their independent functioning. For example, the business transactions of these societies would be regularly audited either by a panel of independent auditors or by government auditors. After such an audit these societies would amend their laws and report to the Registrar of Cooperative Societies within three months. When such a society failed to elect its board members every five years, the Board of Directors of such a cooperative credit society is dissolved. In this case the management of the cooperative society is vested in the Registrar of Cooperative Societies, who can then make changes in the organisation as per the provisions of the Odisha Cooperative Societies Act, 1962.

In this situation RGVN plays a vital role in creating livelihood opportunities, particularly for women and their skill development, formation of producer groups, strengthening market linkages and supporting the marginalized access to government schemes. Government's new regulation to bring all the cooperatives and SHGs management under its control will further strengthen RGVN's effort to help poor and marginalized people to be uplift socially and economically.

2.3 Contracting details

When did cooperation with this partner start: 2000

What is the MFS II contracting period: 2011-2015

- *Graduating NGOs into Micro Finance Institutions in the state of Odisha – Phase II*: 1 July 2009 till 30 June 2012 (under MFS II from 1 January 2011 – 30 June 2012).
- *Sustainable livelihood enhancement and enterprise promotion (SLEEP) in Odisha*: 1 July 2012 till 30 June 2015.

Did cooperation with this partner end? No

If yes, when did it finish? NA

What is the reason for ending the cooperation with this partner: NA

Is there any expected collaboration after 30 June 2015? Further collaboration is not foreseen after the end date of the current contract that runs until 30 June 2015. This in relation to the changes in the nature of Hivos' work due to the reduced funding from the Dutch Ministry of Foreign Affairs. It could be that Hivos will work with RGVN in the future if the work of this partner fits well within a new programme or project of Hivos.

2.4 Background to the Southern Partner Organisation

History

Rashtriya Gramin Vikas Nidhi (RGVN) Bhubaneswar works in Odisha and two districts of Andhra Pradesh (Srikakulam and Vizianagaram) to improve the economic and social status of the poor and underprivileged rural and urban people through sustainable livelihood, skill development and graduating individual groups into entrepreneurship.

In 1988, Mr. S.N. Paliya, the executive director of IDBI bank, got together with like-minded people like Laxmi Chand Jain (Indian Ambassador to South Africa, respected Gandhian thinker and later member of the Planning Commission of India), Deep Joshi (credited for bringing professionalism to the NGO sector in India, winner of Magsaysay award for Community Leadership 2009, and co-Founder of Pradan, a network of MFI organisations), and Brij Mohan (Head of SIDBI). They wanted to establish an organisation that would strengthen grass roots level organisations and help them grow and focus on the poor to provide them with a regular source of income. They decided to choose those organisations that had the intention of helping the poor irrespective of their legal registration status. Trust was the only collateral they were looking for. They wanted to prove that the poor were credit worthy. Their priority was north-eastern states and tribal areas of India.

In 1990, RGVN was established and registered under the Society's Registration Act of 1860 with its headquarters in Guwahati. In 1992 operations were extended by establishing regional branches in Bihar, Odisha and Andhra Pradesh. The objective was to support emergent organisations and encourage income generation activities of the poor. Loans were given at 6% rate of interest with reducing balance.³ The idea of providing loans on a returnable basis was to ensure and enable ownership. RGVN pioneered this concept at a time when people were accustomed to a culture of subsidies and grants. RGVN wanted to prove that the poor were credit worthy. They offered both returnable and non-returnable grants depending upon the need of the organisation.

In 1992 there was a debate in the development sector regarding the grant based and credit based development process in India. RGVN decided to experiment with community based organisations which were not officially registered and yet were trusted by the community, in Sambalpur, Odisha, and Kanker in Chhattisgarh (5 unregistered groups).

³ Method of calculating the interest amount on the principal balance (and not on the original loan amount) that reduces with repayment of each loan instalment.

Between 1992 and 1997, the strategy of RGVN was not so much to recover the money given, but to reach the unreached people who had no alternative source of livelihood. Many times money was lost and not spent on what it was intended for as NGOs and the borrowers did not understand properly the dynamics of subsidy and credit.

In 1997-98 RGVN experimented with a model which would develop collaboration rather than competition among NGOs and for two consecutive years the network of 5 NGOs worked and it failed in the third year. The other experiment was creating a network with joint responsibilities in Baleswar district of Odisha with a mandate for joint management of credit and recovery. Selected NGOs within a minimum distance of 30 km and maximum of 60 km were chosen for this experiment and similar types of organisations were brought together under one network. One NGO appraised the other, setting up a system of mutual accountability. Such groups have been operating since the past 15 years. They apply for funds together from the government and international donors. In one such joint management program out of 5 NGOs one defaulted but the other 4 NGOs took on the responsibility of recovering loans that the defaulting organisation had disbursed.

Between 1997 and 2003, RGVN tried to find people with traditional sources of income which can be enhanced, and identify people with no access to bank loans. The strategy was to channel money in such a way that changes were visible in the lives of the clients in a short period of time. It becomes evident that RGVN wanted to expand during this period, as RGVN was convinced of the fact that the poor are not necessarily unworthy of credit. This phase of RGVN also saw major setbacks in terms of accountability within the organisation and transparency within the networks established till then. In 2003-2004 RGVN had created an inventory of dedicated NGOs and now the focus was to mobilise more funds to move from a loan range of 30,000-60,000 to 4-5 lakhs INR. In 1999, RGVN rehabilitated 500 victim families who lost their houses & livelihoods during the super cyclone which struck Odisha.

In 2005-2006, RGVN adopted the strategy of mentoring NGOs. Organisations with specific capabilities were hired and RGVN partners were systematically trained in delinquency management, risk mitigation and program strategies. In 2005, RGVN turned its Credit and Savings Programme in Odisha into a cooperative, named Utkal Mahila Swayam Sahayak Sammabaya Ltd. (UMaSS), and located in Ganjam district, Odisha. UMaSS was established and registered as a state level cooperative under the Odisha Self Help Cooperative Act, 2001. In 2006 the concept of microfinance and microcredit came to be accepted as a mode of cushioning poverty in India. Microfinance organisations like SKSS, Society for Action in Disability and Health (SADHAN) and BASIX came up, and poached employees of established organisations of the grass roots by paying higher salaries. Also they encroached upon the customer base by providing them higher loans and insurance packages.

Currently, RGVN gives loan at 15% to its partners, which in turn gives a loan at 24% interest to the SHGs. Over a period of time, partners have become long standing partners of RGVN, which has resulted in quicker and smoother disbursements. Earlier partners took 15 days to disburse 4-5 lakhs but now 40 lakhs are distributed within two days. This means that RGVN has been able to withstand the blow and its partners have survived by diversifying their activities.

In 2009 RGVN received MFS I fund from Hivos for the project "Graduating NGOs in to MF Institutions". Under this project it had outlined and piloted an action plan of institution building where four grassroots level NGOs in Odisha were selected to be graduated in to micro Finance institutions.

In 2009, MICROSOLVE conducted a training program on "Strategic Business Planning for Market led Financial Institutions" for RGVN executives. In 2010 RGVN Credit and Savings programme got the legal status of Non-banking Financial Company (NBFC) named RGVN (NE) Micro Finance Ltd.

During 2009 - 2010 while MFI was slowly gaining ground, the sudden crisis in the microfinance sector such as non-availability of funds for disbursement and sharp fall of repayment affected its operation. Due to this crisis the organisation went through a rough patch and flood in 2011 in the organisation's partner areas further worsened the situation. The partners' ability to recover loans meted out and pay back to RGVN was questionable in the face of such large scale disaster. The organization was not able to recuperate fully from the Microfinance crisis in 2009 and the floods in 2011.

In the 2011 board meeting there was a lot of debate on whether RGVN should give money that makes more money or if they should stick to their original goal of income cushioning for the poor. The MFS II

funding for graduating NGOs in MFIs stopped in mid-2012. During this time RGVN Bhubaneswar shifted its focus from microfinance to sustainable livelihood enhancement of the target group. However, at this time this strategy was in a nascent stage. It received funds from Jamsedji Tata Trust to promote sustainable rural livelihoods in sub sectors like- Goatery, Bamboo work, vermicomposting, organic farming (vegetable & paddy farming through System of Rice Intensification (SRI) technology) and cycle rickshaw/trolley at the house hold level.

After the MFS II 5c baseline in August 2012 the executive board of RGVN decided to restrict external borrowings from banks and other financial institutions anticipating the inability of the partner organisations to repay RGVN. This compelled the organisation to think of converging and linking their projects and programmes with government programmes, the market, Public Sector Units (PSUs) and the private sector to enhance the livelihood security of the target groups.

During this period (after baseline in August 2012) RGVN initiated and funded "Bazaar on Wheels", a new project to strengthen producer organizations and their access to market. The project focuses especially on access to market for the women producer groups. In the post Phailin (October 2013) period RGVN in association with ACC Limited (formerly The Associated Cement Companies Limited) supports and rehabilitates the Phailin and flood affected people of Odisha. Also in collaboration with Larsen & Toubro (L&T), RGVN has taken up the project in the post Phailin period to provide placement to the semi-skilled Phailin and Flood effected people.

Vision [Source: Startegy_Minutes]

Creating an enabling environment where the poor and underprivileged can ensure sustainable livelihood with dignity.

Mission [Source: Startegy_Minutes]

To improve the economic and social status of the poor and underprivileged rural and urban people through combining Economic and Social intervention.

Objectives and strategies [Source: Startegy_Minutes, Proposal-_HIVOS_by__RGVN-revised.doc]

In order to achieve its mission RGVN's objectives are to:

- To create enabling environment for food security of rural and urban poor, physically and socio-economically handicapped people;
- To focus on the core livelihood sub sectors mainly NTFP, Agriculture and Allied agriculture, Dairy, Handicraft etc.
- Focus attention on people which are disadvantageously placed in society, but have the potential for pursuing socially and economically productive activities;
- Assist the rural and urban poor especially tribal, scheduled caste, women, physically handicap for economic improvement
- To build the internal capacity of the NGOs/COOPs/Federations/SHGs through capacity building and skill development trainings
- To build measures for gradually moving towards social and financial sustainability in a predefined period

RGVN in its endeavour towards achieving its goals works with NGOs/CBOs by providing them with financial, technical and management support.

To achieve the objectives RGVN has the following **strategies**:

Livelihood:

Create food security through various livelihood sub sector intervention focusing on NTFP, Agriculture and Allied, Dairy, Handicraft etc. Inculcating community mobilization skills among women in agriculture, NTFP and Bell Metal thereby demonstrating and articulating the benefits of the sustainable livelihood methods to them. Facilitate access to fair and remunerative markets including linking producer groups to marketing opportunities.

Micro Enterprise Promotion:

Promotion of various livelihood development clusters and graduating those clusters in to Micro Enterprise. The model is graduating individuals (women) to SHGs to Producer federation to Producer Company/Cooperative through entrepreneurship development.

Capacity building and Skill Development:

Capacity building of SHGs and skill up-gradation through handholding, formal and vocational courses will be emphasized.

3 Methodological approach and reflection

3.1 Overall methodological approach and reflection

This chapter describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

Note: this methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report A detailed overview of the approach is described in appendix 1.

The first (changes in organisational capacity) and the fourth evaluation question are addressed together through:

- **Changes in the 5C indicators since the baseline:** standard indicators have been agreed upon for each of the five capabilities of the five capabilities framework (see appendix 2) and changes between the baseline, and the endline situation have been described. For data collection a mix of data collection methods has been used, including self-assessments by SPO staff; interviews with SPO staff and externals; document review; observation. For data analysis, the Nvivo software program for qualitative data analysis has been used. Final descriptions per indicator and per capability with corresponding scores have been provided.
- **Key organisational capacity changes – 'general causal map':** during the endline workshop a brainstorm has been facilitated to generate the key organisational capacity changes as perceived by the SPO since the baseline, with related underlying causes. For this purpose, a visual as well as a narrative causal map have been described.

In terms of the attribution question (2 and 4), '**process tracing**' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to

focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

At the end of this appendix a brief methodological reflection is provided.

3.2 Assessing changes in organisational capacity and reasons for change - evaluation question 1 and 4

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?** And the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This is explained below. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

The evaluators considered it important to also note down a consolidated SPO story and this would also provide more information about what the SPO considered to be important in terms of organisational capacity changes since the baseline and how they perceived these key changes to have come about. Whilst this information has not been validated with sources other than SPO staff, it was considered important to understand how the SPOs has perceived changes in the organisation since the baseline.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information is provided for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the next session on the evaluation question on attribution, as described below and in the appendix 1.

How information was collected and analysed for addressing evaluation question 1 and 4, in terms of description of changes in indicators per capability as well as in terms of the general causal map, based on key organisational capacity changes as perceived by the SPO staff, is further described below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012⁴.

⁴ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 4) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 5) **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Please see appendix 1 for a description of the detailed process and steps.

3.3 Attributing changes in organisational capacity - evaluation question 2 and 4

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*** and the fourth evaluation question: ***“What factors explain the findings drawn from the questions above?”***

In terms of the attribution question (2), ‘process tracing’ is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Below, the selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

3.3.1 Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

For the detailed results of this selection, in the four countries that CDI is involved in, please see appendix 1. The following SPOs were selected for process tracing:

Ethiopia: AMREF, ECFA, FSCE, HUNDEE (4/9)

India: BVHA, COUNT, FFID, SMILE, VTRC (5/10)

Indonesia: ASB, ECPAT, PtPPMA, YPI, YRBI (5/12)

Liberia: BSC, RHRAP (2/5).

3.3.2 Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ‘ general endline workshop. This workshop was carried out after the initial endline workshop and the interviews

during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained. More information can be found in Appendix 1.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

3.3.3 Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team. These can also be found in appendix 1.

Use of the 5 core capabilities framework and qualitative approach: this has proven to be a very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be a perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in

the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.
